- Use the writing process to take notes, create a draft, and prepare a published copy of the report
- Use the Internet or other library resources to conduct research
- Identify the contributions of a famous immigrant

Lesson 13: Unit Review

Objectives:
- Review the main ideas and terms from Unit 2
- Prepare for the Unit 2 test

Lesson 14: Unit Test

Unit 3: The Southeast

In this unit, your student will learn about the valuable and rich geographic features of the Southeast region of the United States. This region offers a warm climate, fertile land, and an abundance of rich natural resources. He will learn how the area appealed to the Cherokees and many European settlers, and it continues to be a desired destination for many people today. Finally, he will learn how this region played an important part in the nation's Civil War.

Objectives:
- Identify the main areas of the Southeast region
- Discuss the impact of climate and resources on the Southeast
- Explain how the Cherokee contributed to the history of the Southeast
- Describe the historical events that shaped Southeast region
- Discuss the conditions that have led to growth and change in Southeast cities

Lesson 1: Reading Social Studies: Main Ideas and Details

Objectives:
- Analyze information by identifying the main idea and details

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 2: Coastal Plains to the Mountains

Objectives:
- Identify and describe major landforms in the Southeast
- Explain how barrier islands are formed

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 3: Map and Globe Skills: Reading Elevation Maps

Objectives:
- Explain how to use an elevation map
- Use an elevation map to compare and contrast landform elevations in the Southeast

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 4: Sunlight and Storms

Objectives:
- Describe the climate of the Southeast
- Examine hurricanes in the Southeast
- Explain the function of lighthouses
- Explain how hurricanes form
- Describe the effects of hurricanes

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 5: Wildlife and Resources (two-day lesson)
Objectives:
• Describe the importance of protecting endangered species
• Identify ways in which resources of the Southeast are used
• Identify a renewable and a nonrenewable resource found in the Southeast
• Explain why coal is an important resource in the Southeast

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 6: The Cherokee

Objectives:
• Describe how the Cherokee lived before Europeans came to North America
• Evaluate how Cherokee culture changed after Europeans came to the Southeast
• Identify the Trail of Tears and describe its impact on the Cherokee
• Explain how the North Carolina Cherokee support themselves and keep their culture alive today

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 7: Early History of the Southeast

Objectives:
• Identify important explorers of the Southeast and the areas they explored
• Locate the earliest European settlements in the Southeast
• Identify early leaders from the Southeast and describe their contributions to the United States
• Evaluate the impact of agriculture in the Southeast

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 8: Citizen Heroes: Speaking Out

Objectives:
• Identify the contributions of Sarah and Angelina Grimke to the antislavery movement

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 9: The Nation Divided

Objectives:
• Identify two causes of the Civil War
• Explain the effects of the Civil War on the Southeast; describe how the Southeast changed during Reconstruction
• Analyze the development of the civil rights movement
• Describe the contributions of Rosa Parks to the civil rights movement
• Distinguish between fact and opinion

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 10: The Glittering Cities

Objectives:
• Describe the first gold rush in the United States
• Explain why Atlanta is an important transportation center
• Identify the causes of growth in Southeastern cities

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 11: The Southeast (two-day lesson)

Objectives:
• Identify characteristics of the Southeast region of the United States
Lesson 12: Unit Review

Objectives:
• Review the main ideas and vocabulary of the unit

Lesson 13: Unit Test
SOCIAL STUDIES 4 B
Social Studies 4 B

This Social Studies course focuses on the study of five unique geographic regions of the United States: the Northeast, the Southeast, the Midwest, the Southwest, and the West. The course text is Scott Foresman’s Regions. In this course, the student will explore each region in depth in order to understand the distinctive features of the regions, as well as the common threads that unite the country. The student will explore the people, land, and events that shaped the history of each region. Short stories, biographies, poetry, case studies, songs, and other resources emphasize the role of the individual in the community, as well as the concept of change over time. Multimedia resources, including Teachlet® tutorials, videos, and interactive websites, enhance and support the content. The student will learn geographic concepts such as place, location, and human interaction with the environment. Geography skills lessons are incorporated throughout the course.

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Unit 1: The Midwest

In this unit, your student will learn about the valuable geographic features that the Midwest region of the United States offers, such as rich natural resources, fertile farmlands, and key waterways. She will learn about the experiences of past and present-day groups of people who settled in this region. She will also learn how the diversity of the population has led to a rich culture in the region.

Objectives:
• Discuss the importance of the Great Lakes
• Identify and describe important geographic features of the Midwest
• Trace the historical development of the region
• Identify the different groups who have settled in the Midwest and discuss their contributions to the region
• Explain why the Midwest is an important trade and transportation center

Lesson 1: Reading Social Studies: Cause and Effect

Objectives:
• Analyze information by identifying cause-and-effect relationships

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 2: A Route to the Sea

Objectives:
• Explain how the Great Lakes were formed
• Define the words waterway, canal, lock, and barge
• Explain why the flow of the Chicago River was changed
• Explain the advantages of shipping by water
• Describe how the Great Lakes are connected to the Atlantic Ocean

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 3: Issues and Viewpoints

Objectives:
• Describe the effect of zebra mussels on the freshwater lakes in the Midwest

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 4: Badlands of South Dakota

Objectives:
• Describe the landscape and climate of the Badlands 67 million years ago
• Define erosion and describe the way it changes the land
• Define prairie and describe the types of life that live there
• Explain why the climate of the Badlands changed

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.
Lesson 5: Bountiful Midwestern Farms (two-day lesson)

Objectives:
• Explain why the Midwest is an important agricultural region
• Explain why some farmers irrigate their crops
• Identify the rainfall in the Midwest and explain how it affects the growth of crops
• List 10 crops grown in the Midwest
• Identify some crops grown in the Central Plains and the Great Plains

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 6: The Ojibwa

Objectives:
• Describe early Ojibwa culture
• Describe the ways Ojibwa culture has changed since the mid-1600s

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 7: Use a Search Engine on the Internet

Objectives:
• Use a search engine to find information on the Internet

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 8: The Fur Trade (two-day lesson)

Objectives:
• Describe why the French came to the Midwest in the 1600s
• Identify the roles of Louis Jolliet and Jacques Marquette in the fur trade
• Explain the role fur trading played in the development of towns in the Midwest

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 9: Building Farms

Objectives:
• Explain some events that forced Native American tribes in the Midwest to give up their land
• Compare and contrast a home built of sod and one built out of logs
• Explain the difficulties settlers faced in farming the land and their ultimate success
• Explain how John Deere became an entrepreneur

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 10: Hub of the Nation

Objectives:
• Describe Cahokia as the early trading center of the Midwest
• Identify the goals of the Lewis and Clark expedition
• Identify the role of the steamboat in shipping
• Explain the role that the government played in developing superhighways that became the interstate highway system
• Describe the advantages of railroads as compared to steamboats

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 11: The Midwest (two-day lesson)

Objectives:
• Compare and contrast two different groups that settled in the Midwest
• Explain how the people of the Midwest used the land and resources of the region

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.
Lesson 12: Lewis and Clark Expedition

Objectives:
- Identify the goals of the Lewis and Clark expedition
- Analyze information by identifying cause-and-effect relationships

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 13: Unit Review

Objectives:
- Analyze the meaning of the work song, "I've Been Working on the Railroad"

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 14: Unit Test

Unit 2: The Southwest

In this unit, your student will learn about the diversity of natural beauty that the Southwest region of the United States offers by taking a look at deserts, canyons, oil fields, and land features associated with different climate regions. He will learn how many of these geographic features have attracted many people of the past and present to the region. He will also understand how the Southwest region of the United States continues to grow today.

Objectives:
- Explain how the geographic features of the Southwest have influenced Southwestern culture
- Discuss the contributions of different groups who have lived in the Southwest
- Explain the importance of cattle ranching to the development of the Southwest
- Explain how people have adapted to the climate and geography of the region

Lesson 1: Drawing Conclusions

Objectives:
- Interpret print and visual material by drawing conclusions

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 2: A Land of Canyons

Objectives:
- Describe how the Grand Canyon was carved out by erosion caused by the Colorado River
- Describe how erosion by water, wind, and sand continues to shape the Grand Canyon
- Explain that the Grand Canyon is a magnificent landform that provides beauty and adventure
- Explain why the Grand Canyon has been made a national park

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 3: Making Generalizations

Objectives:
- Interpret information by making generalizations

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 4: Climates in the Southwest (two-day lesson)

Objectives:
- Describe different climates found in the Southwest
- Describe how the saguaro has adapted to a desert climate
- Explain why the saguaro is important to desert animals
- Compare and contrast climates and vegetation in different regions of the world

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.
Lesson 5: Oil and Technology

Objectives:
- Identify a nonrenewable resource in the Southwest
- Describe how the technology of the Southwest has impacted the United States

Lesson 6: The Navajo (two-day lesson)

Objectives:
- Describe the early culture of the Navajo people
- Describe The Long Walk
- Explain how the Navajo Council governs the Navajo Nation

Lesson 7: Identifying Primary and Secondary Sources

Objectives:
- Use primary and secondary sources to acquire information

Lesson 8: Spanish Influence

Objectives:
- Describe Spanish influence in the Southwest
- Describe the effects missionaries had on some Native Americans

Lesson 9: Ranches and Drivers

Objectives:
- Explain how cattle raising helped the economy of the Southwest develop
- Describe the roles of cowboys and cowgirls in the Southwest
- Identify the route of the Chisholm Trail and explain the role it played in the cattle trade
- Contrast ranching in the Southwest in the past with ranching in the present
- Describe life on ranches and cattle trails
- Explain how the work of cowboys and cowgirls has changed over time

Lesson 10: Living in the Desert (three-day lesson)

Objectives:
- Explain how irrigation has affected the economy of the Southwest
- Describe how air conditioning has impacted the economy of the Southwest
- Identify the technological contributions of inventors such as Willis Haviland Carrier

Lesson 11: Issues and Viewpoints

Objectives:
- Identify the historical significance of Route 66 to the Southwest

Lesson 12: Unit Review

Objectives:
- Review the main ideas and vocabulary of the unit
Unit 3: The West

In this unit, your student will learn about the geographic features of the Western region of the United States by taking a close look at its various mountain chains, diverse climates, and variety of rich resources. She will learn about Native Americans who settled in the region. She will also learn how the area appealed to many people, which led to later migration and settlement by explorers, missionaries, farmers, business people, and tourists.

Objectives:

- Describe the geographic features of the West
- Compare and contrast the climates of Western states
- Identify the natural resources of the West
- Trace the cultural development of the West
- Identify and describe the different communities established in the West

Lesson 1: Compare and Contrast

Objectives:

- Analyze printed information by comparing and contrasting

Lesson 2: A Land of Mountains

Objectives:

- Identify the largest system of mountains in the United States
- Compare and contrast mountain ranges of the West
- Identify mountain ranges in the West and tell where they are located
- Compare geysers to volcanoes

Lesson 3: Climates in the West (two-day lesson)

Objectives:

- Compare and contrast the climates of Hawaii and California
- Name the different climates of the West and give an example of each
- Identify states in the West with extreme weather
- Explain how the rain shadow works

Lesson 4: Resources of the West (two-day lesson)

Objectives:

- Identify some resources of the West
- Identify places where agricultural products are grown in the West
- Locate areas of the West that have important fishing industries
- Explain how people benefit from the resources of the West

Lesson 5: The Tlingit

Objectives:

- Write a summary of traditional Tlingit life
- Describe how the Tlingit make use of natural resources
- Compare and contrast Tlingit potlatches held in the past and today
- List details of modern Tlingit life
- Analyze cultural symbols and traditions of the Haida, the Moche, and the Incas

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.
Lesson 6: Exploration and Growth (two-day lesson)

Objectives:
- Draw a conclusion about changes in the West in the 1800s
- Explain why various groups explored the West
- Describe the Gold Rush of 1848 and explain how it affected the West
- Explain how a boom town might become a ghost town
- Explain when and how various territories of the West gained statehood
- Identify important inventors such as Levi Strauss and describe their accomplishments

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 7: Map Adventure: In Search of Gold

Objectives:
- Read and interpret maps

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 8: Understanding Longitude and Latitude

Objectives:
- Use latitude and longitude to find locations on maps and globes

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 9: Business and Pleasure (two-day lesson)

Objectives:
- Compare and contrast the cities of Los Angeles and Salt Lake City
- Name some of the industries found in Los Angeles, Seattle, and Salt Lake City
- Explain how climate can affect tourism in selected western cities
- Identify products that the United States exports to and imports from the Pacific Rim countries

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 10: Citizen Heroes

Objectives:
- Identify individuals such as Thomas Bradley who exemplify good citizenship

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 11: Unit Review

Objectives:
- Review the main ideas and vocabulary of the unit

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 12: Unit Test
PENNSYLVANIA STATE
HISTORY 4
Pennsylvania State History 4

This course offers an introduction to Pennsylvania state history. The student will trace the history of the state from its earliest inhabitants up through the present time. The course focuses on the state’s geography, history, economy, culture, and government. Students will be introduced to skills such as recognizing change and continuity over time, comparing and contrasting, synthesizing information from multiple sources, and identifying cause and effect.

Unit 1: Geography

In Unit 1, you’ll explore the geography and early peoples of Pennsylvania. You’ll learn about different regions of Pennsylvania, use different types of maps, identify natural resources in the state, and compare and contrast two Native American tribes from Pennsylvania. Finally, you will discuss with other students what you learned about Pennsylvania.

Help direct Boone to three geographically unique points of interest in Pennsylvania. In Unit 1, you’ll create a brochure, or set of pictorial postcards, to guide Boone’s exploration.

Objectives:
- Explore the five themes of geography
- Interpret information about Pennsylvania's geography using a variety of maps
- Explain how humans impact the environment
- Compare and contrast the cultures of indigenous groups
- Synthesize information about the culture of the native inhabitants of the state through the use of multiple resources

Lesson 1: Introduction to the State of Pennsylvania

Objectives:
- Review prior knowledge of Pennsylvania history
- Identify state symbols
- Learn the basis for the founding of Pennsylvania

Lesson 2: Geographic Tools

Objectives:
-Explore five themes of geography
-Describe how maps are used to learn about geography
-Identify different types of maps and explore how they are used in different contexts

Lesson 3: Pennsylvania's Geography: Location, Regions, Places

Objectives:
-Identify the physical characteristics of Pennsylvania's regions and explain how these features affect the state
-Draw conclusions on state geography based on interpretation of various maps and regions (physical, resources, etc.)

Lesson 4: Pennsylvania's Environment and Natural Resources

Objectives:
-Identify issues that show human interaction with the environment
-Explain how humans impact the environment in Pennsylvania
-Understand the importance of major water resources and other natural resources

Lesson 5: Pennsylvania's Early People (two-day lesson)

Objectives:
-Compare and contrast the culture of two or more indigenous groups (prior to the arrival of Europeans).
-Synthesize information about the culture of the native inhabitants of the state through the use of multiple resources
-Explain how the Native Americans used natural resources
-Describe the relationship between Native Americans and the land
Lesson 6: Unit Review and Quiz

Objectives:
- Review important facts about Pennsylvania’s geography and early history
- Consider how geography affects daily life
- Take a unit quiz

Unit 2: History

In Unit 2, your student will explore Pennsylvania’s rich history from early exploration through World War II. The study of early exploration will include the impact on the Native American peoples who inhabited the land, early settlement, and establishment as a British colony by William Penn. Your student will examine Pennsylvania’s role in the Revolutionary War, influential figures who shaped our new nation, and the impacts of the Civil War and World War II on the state.

Your student will also help Prescott to identify, research, and present one influential person from Pennsylvania to meet the portfolio requirement for this unit!

Objectives:
- Identify the economic, geographic, and religious motives of migration to the Americas and settlement in the state
- Trace the course of events in the exploration, settlement and expansion of Pennsylvania
- Describe the living conditions and daily life and how it changed over time, including how Pennsylvanians’ lives were affected by various wars
- Identify key figures who contributed to the establishment and growth of Pennsylvania
- Learn about how Pennsylvania helped to shape our nation

Lesson 1: Explorers and Settlers in Pennsylvania

Objectives:
- Identify the economic, geographic, and religious motives of migration to the Americas and settlement in the state
- Trace the course of events in the exploration and settlement of the state
- Describe the living conditions and daily life in the early settlements and cities of the state

Lesson 2: Native Americans and European Settlers

Objectives:
- Explain how European settlements impacted Native American societies
- Describe the relationship between Native Americans and the colonists
- Identify different perspectives of the different cultural groups within the colonies

Lesson 3: Pennsylvania in the Revolutionary War Era (two-day lesson)

Objectives:
- Trace the course of events that led to the establishment of Pennsylvania
- Identify key figures who contributed to the establishment and growth of Pennsylvania
- Learn more about how Pennsylvania shaped our nation and the role of the federal government
- Understand the role of Pennsylvania in helping United States gain independence from Great Britain

Lesson 4: Pennsylvania and the Civil War (two-day lesson)

Objectives:
- Understand events that led up to the Civil War
- Describe the impact of the Civil War on the people of Pennsylvania
- Explain Pennsylvania's role before, during, and after the Civil War

Lesson 5: Pennsylvania and World War II (two-day lesson)

Objectives:
- Describe the causes of World War II
- Explain how World War II affected Pennsylvanians
Lesson 6: Unit Review and Quiz

Objectives:
- Review important facts about Pennsylvania's history
- Consider how many events in history affected the lives of people in Pennsylvania
- Take the unit quiz

Unit 3: Economy

In unit 3, your student will learn about the economy of Pennsylvania, exploring how it has changed over time. Economic principles such as producer, consumer, goods, services, needs, and wants will be examined. Your student will also learn about key industries and the role that technology has played in the economy of the state. Finally, as part of the portfolio activity, your student will evaluate a business model, complete a business model analysis, and conclude whether the business would be successful in his community.

Objectives:
- Describe the major characteristics of Pennsylvania’s economy and understand how its economy has changed
- Understand and examine basic economic principles, such as producer, consumer, goods, services, needs, and wants
- Examine and analyze the role of past and present technology in Pennsylvania’s economy
- Explain key industries in Pennsylvania and how have they changed over time

Lesson 1: An Introduction to Pennsylvania’s Economy

Objectives:
- Identify the key economic industries in the state
- Describe the roles of producers and consumers
- Describe the difference between goods and services
- Evaluate the difference between basic needs and wants

Lesson 2: Pennsylvania’s Economic Changes

Objectives:
- Discuss basic ways the economic system works
- Describe factors that have changed the economy within Pennsylvania
- Evaluate how Pennsylvania’s economy has changed

Lesson 3: Railroads and Canals

Objectives:
- Trace the course of technological change in the state during the second Industrial Revolution
- Examine how canals and railroads changed the way of life for Pennsylvanians
- Identify how canals and railroads affected Pennsylvania’s economy

Lesson 4: Technological Change in Pennsylvania (two-day lesson)

Objectives:
- Compare and contrast technology of the past and technology today
- Explain how technological innovations changed life within Pennsylvania

Lesson 5: Unit Review and Quiz

Objectives:
- Identify what factors affect the economy in Pennsylvania
- Describe factors that bring about economic changes
- Explain different industries in Pennsylvania and how have they changed over the years

Unit 4: Culture

In unit 4, your student will explore the culture of Pennsylvania. Culture includes the values, beliefs, food, and dress of a particular group, but it also includes the performing arts as well. The unit will cover cultural awareness and diversity among cultures. Your student will select...
a cultural artifact that reflects the behaviors, values, and traditions shared by a group in Pennsylvania to submit for her portfolio assessment.

Objectives:
- Explain why having cultural awareness can help you be a better citizen
- Identify some of the different cultural influences evident in your community
- Explore some of the most famous landmarks in Pennsylvania and their significance
- Identify different Pennsylvania traditions and celebrations
- Describe the different kinds of art found in Pennsylvania and the differences among them

Lesson 1: Performing and Visual Arts in Pennsylvania

Objectives:
- Describe the different arts found in Pennsylvania
- Explain some of the key differences found in different forms of art

Lesson 2: Cultural Diversity in Pennsylvania

Objectives:
- Describe what it means to be culturally aware
- Explain why having cultural awareness can help you be a better citizen
- Identify practices that demonstrate cultural awareness

Lesson 3: Pennsylvania's Traditions and Celebrations

Objectives:
- Identify different Pennsylvania traditions and celebrations

Lesson 4: Pennsylvania Landmarks (two-day lesson)

Objectives:
- Explore some of the most famous landmarks in Pennsylvania
- Describe what makes landmarks special or unique
- Explain historical significance of Pennsylvania's landmarks

Lesson 5: Unit Review and Quiz

Objectives:
- Describe performing and visual arts in Pennsylvania
- Explain some of the key differences found in different kinds of art
- Identify different Pennsylvania traditions and celebrations
- Identify and describe historical landmarks in Pennsylvania
- Explain the importance of cultural awareness

Unit 5: Government

In this unit, your student will explore Pennsylvania’s government. He will learn about the different levels of government (federal, state, and local), with a major focus on key leaders and responsibilities at the state level. Additionally, he will explore the rights and responsibilities of citizens and how the government helps meet the needs of its citizens. Finally, your student will complete the final component of the portfolio assessment, identifying an issue in his community and proposing solutions to help solve the issue.

Objectives:
- Identify the roles of the three branches of government
- Explain how the branches of government work together to serve the needs of citizens
- Describe key positions of authority within the state government
- Explain why society needs rules and laws
- Identify positions of authority in Pennsylvania’s state government

Lesson 1: Introduction to Pennsylvania Government

Objectives:
- Explain the structure of Pennsylvania’s government
- Describe the different responsibilities of the three branches of government
- Explain how the three branches of government work together
Lesson 2: State and Local Government in Pennsylvania

Objectives:
- Recognize how local government differs from the state government
- Explain the difference between rules and laws
- Describe how local government meets community needs

Lesson 3: Influential People in State Government

Objectives:
- Identify positions of authority in state government
- Describe some of the services performed by different positions
- Explain the voting process

Lesson 4: Becoming a Responsible Citizen

Objectives:
- Explain what it means to be a responsible citizen
- Describe the rights of citizens as they relate to freedom, democracy, justice, and equality

Lesson 5: Unit Review and Quiz (two-day lesson)

Objectives:
- Identify the roles of the three branches of government
- Explain how the branches of government work together to serve the needs of citizens
- Describe some key positions of authority within the state government
- Explain why we need rules and laws
SOCIAL STUDIES 5 A
Social Studies 5 A

In this course, the student will trace United States history from the pre-Columbian (before 1492) period to the War of 1812. This course takes both a thematic and chronological approach to U.S. history. The course begins by describing the geography and culture of the United States. The course emphasizes the struggles and triumphs in our nation’s history. Biographies, short stories, primary sources, and songs highlight the roles that individuals have played in the economic, social, and political growth of our nation. The course textbook is Scott Foresman’s The United States. Textbook features such as Citizen Heroes, Issues and Viewpoints, Then and Now, and Here and There help build skills of historical analysis. Multimedia resources, including Teachlet® tutorials, videos, and interactive websites, enhance and support the content. The student will learn geographic concepts such as place, location, and human interaction with the environment. Geography skills lessons are incorporated throughout the course.

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Constitution Day (L)

Objectives:
- Explain the role of Independence Hall in United States history
- Explain the importance of the Declaration of Independence and the Constitution

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Unit 1: Early Life, East and West

In this unit, your student will learn about the migration of large groups of people many years ago. He will focus on how past Native American and European groups moved to and settled in different regions throughout the Americas. He will also understand those factors that encouraged Europeans to travel to unknown, distant places, far from Europe.

Objectives:
- Describe settlements in North America prior to European settlement
- Explain how Native American groups adapted to their environment
- Describe the cultural characteristics of Native American groups in North America
- Describe trade between Europe, Africa, and Asia
- Identify course of events that sparked European exploration

Lesson 1: Migration to the Americas

Objectives:
- Explain why and how early people migrated from Asia to the Americas
- Describe how the first Americans lived during the Ice Age
- Identify how the way of life of the first Americans changed as the climate became warmer

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 2: Chart and Graph Skills

Objectives:
- Interpret information about the climate of a place
- Interpret information in a graph

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 3: Early American Cultures

Objectives:
- Explain why early people living east of the Mississippi River built mounds
- Explain how the Anasazi were able to farm in the desert
- Identify ways the Inuit adapted to life in the cold climate of the Arctic

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.
Lesson 4: The Rise of Empires (two-day lesson)

Objectives:
- Identify the reasons for the development of the Mayan civilization
- Describe how the Aztec Empire grew
- Explain how roads helped unite the Incan Empire

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 5: The Eastern Woodlands

Objectives:
- Explain how decisions were made in the Iroquois League
- Describe how people of the Eastern Woodlands used forest resources
- Analyze the Iroquois relationship with nature
- Relate how some Iroquois customs are kept alive today

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 6: The Great Plains

Objectives:
- Describe the way of life of people in the Great Plains cultural region
- Analyze the effect of the horse on the lives of the Cheyenne
- Identify where in the United States the Cheyenne live today

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 7: Research and Writing Skills

Objectives:
- Use the Internet to conduct research and acquire information

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 8: The Southwest Desert

Objectives:
- Describe the environment of the Southwest Desert cultural region
- Explain how and where the Hopi built their homes
- Describe a ceremony that honored kachinas
- Identify where in the United States the Hopi live today

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 9: The Northwest Coast (two-day lesson)

Objectives:
- Analyze the purpose of the potlatches
- Explain the role of shamans in Kwakiutl culture
- Compare the Kwakiutl population of 300 years ago to today

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 10: Traveling Asia's Silk Road

Objectives:
- Explain the causes and effects of Marco Polo's journey
- Identify the location and importance of the Silk Road
- Relate the explorations of Zheng He to China's desire to trade
- Summarize how trade led to greater ties among people of different continents

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 11: Africa's Trading Empires

Objectives:
Lesson 12: European Explorers (two-day lesson)

Objectives:
- Summarize the efforts of Europeans to explore lands far from Europe
- Describe the importance of the Renaissance and relate it to advances in navigation
- Identify the effects of Prince Henry the Navigator's efforts to explore Africa

Lesson 13: Unit Review

Objectives:
- Identify significant examples of literature from various periods in U.S. history
- Explain how examples of literature reflect the times during which they were written
- Describe details about an early culture

Lesson 14: Unit Test

Unit 2: Connections Across Continents

In this unit, your student will learn how European exploration led to settlements along North America’s east coast. She will first learn how Christopher Columbus’s journeys led to the establishment of Spanish colonies in the Americas with settlements by the English, French and Dutch to soon follow. She will also understand how European settlement affected Native Americans and the worldwide impact of the Columbian exchange.

Objectives:
- Discuss the significance of Columbus’s voyages
- Explain the impact of the Columbian Exchange on world trade and culture
- Explain how American settlements impacted European nations
- Describe the conditions that motivated Europeans to develop colonies in the Americas
- Describe conditions in early English settlements

Lesson 1: The Voyages of Columbus

Objectives:
- Explain the purpose of Columbus’s voyages to the Americas and describe his first encounters with the Taino
- Define the Columbian Exchange and explain its causes and effects
- Explain the impact of Columbus's voyage on the Americas

Lesson 2: Map and Globe Skills

Objectives:
- Explain the purpose of latitude and longitude
- Use latitude and longitude to locate points on a map

Lesson 3: Different Worlds Collide

Objectives:
Lesson 4: Life in New Spain (two-day lesson)

Objectives:
- Summarize the sequence of events involved in Spain's search for gold in North America in the early to middle 1500s
- Describe the structure of society in New Spain
- Determine the effects of the Spanish conquests on native peoples
- Explain the points of view of Spanish landowners regarding slavery

Lesson 5: Hard Times in Virginia

Objectives:
- Explain why the English founded a colony on Roanoke Island
- Interpret the reasons for the conflict between Spain and England
- Analyze the problems the first Jamestown colonists encountered and how they solved them
- Describe the type of government set up in the Virginia colony

Lesson 6: New European Colonies

Objectives:
- Analyze information by identifying cause-and-effect relationships
- Evaluate the impact of the search for the Northwest Passage on the establishment of French and Dutch settlements in North America
- Explain the factors responsible for the founding and growth of New France and New Amsterdam

Lesson 7: The First Colonies

Objectives:
- Describe the motivations of the Pilgrims in coming to North America
- Summarize the difficulties encountered by the Pilgrims on their journey and in establishing Plymouth colony
- Describe how the Native Americans helped the Pilgrims and the significance of their Thanksgiving celebration
- Explain how the Puritans applied the experiences of earlier English colonists to the growth of Massachusetts Bay colony

Lesson 8: Thinking Skills

Objectives:
- Distinguish facts from opinions

Lesson 9: The 13 Colonies (two-day lesson)

Objectives:
- Compare and contrast the geography of the New England, Middle, and Southern Colonies
- Summarize the impact of religion on the founding of the New England Colonies
Lesson 10: Unit Review

Objectives:
• Identify the contributions of significant individuals during the period of early European exploration and colonization of the Americas
• Analyze information by identifying the sequence of events
• Use primary sources to acquire information

Lesson 11: Unit Test

Unit 3: Colonial Life in North America

In this unit, your student will learn how resources in the Southern, Middle, and Northern colonies helped each region prosper. He will recognize the colonists’ desire to seek additional opportunities by moving to the lands west of the colonies. He will also study the causes and effects of the French and Indian War.

Objectives:
• Describe the economic development of the English colonies
• Compare and contrast the different regions in the English colonies
• Describe conditions in the colonies
• Explain the causes and effects of the spread of slavery in the colonies
• Identify the causes and effects of the French and Indian War

Lesson 1: Working and Trading

Objectives:
• Analyze the advantages and disadvantages of working as an apprentice
• Identify the main products of each colonial region
• Describe a common triangular trade route
• Compare the different types of jobs available to colonists

Lesson 2: Research and Writing Skills

Objectives:
• Distinguish news articles from feature articles
• Identify important information in newspaper articles

Lesson 3: Cities, Towns, and Farms

Objectives:
• Describe some of Benjamin Franklin’s important contributions to the colonies
• Analyze the design of New England towns
• Identify the types of crops raised on plantations
• Compare and contrast life in cities, towns, and farms

Lesson 4: Everyday Life in the Colonies

Objectives:
• Explain what it was like to attend school in the colonies
• Describe some examples of colonial literature and newspapers
• Analyze the causes of religious diversity in the colonies
• Identify foods that were popular in the colonies
Lesson 5: Slavery in the Colonies (two-day lesson)

Objectives:
• Compare slavery in different regions of the colonies
• Describe skills that enslaved people brought to the colonies
• Explain how enslaved Africans were able to keep their traditions alive
• Analyze ways in which people resisted slavery

Lesson 6: The Spanish Move North

Objectives:
• Explain Spain’s reasons for wanting a colony in Florida
• Describe the early Spanish colonies in New Mexico
• Analyze the causes and effects of the Pueblo Revolt

Lesson 7: French Explore the Mississippi

Objectives:
• Identify ways in which French settlers learned from Native Americans
• Analyze reasons the French explored the Mississippi River
• Explain how La Salle’s explorations led to the expansion of New France
• Relate the location of New Orleans to its success as a port city

Lesson 8: Map and Globe Skills

Objectives:
• Compare and use scales to measure distance on maps

Lesson 9: The French and Indian War

Objectives:
• Identify the causes of conflicts over land among the British, French, and Native Americans
• Describe the beginning of the French and Indian War
• Explain how the British were able to win the French and Indian War
• Analyze the major effects of the French and Indian War

Lesson 10: Unit Review

Objectives:
• Identify the contributions of significant individuals during the colonial period
• Analyze information by identifying similarities and differences in information
• Use primary sources to acquire information

Lesson 11: Unit Test

Unit 4: The American Revolution

In this unit, your student will learn how British rule resulted in conflict with the colonists. She will learn about the political and economic issues between Great Britain and the colonies that ultimately led to the American Revolution. She will trace the course of the war and its impact on the colonies.
Objectives:
- Identify the sources of tension between Great Britain and the 13 English colonies
- Identify the contributions of significant individuals during the period of the American Revolution
- Analyze information by identifying cause-and-effect relationships
- Describe the significance of the Declaration of Independence
- Identify the perspectives of Loyalists and Patriots

Lesson 1: Trouble over Taxes

Objectives:
- Identify the causes of the Stamp Act and the Townshend Acts
- Identify the contributions of significant individuals during the revolutionary period, including the Sons of Liberty and the Daughters of Liberty
- Explain how British taxes led to greater cooperation among the colonies
- Evaluate the effects of colonists' protests

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 2: The Colonists Rebel

Objectives:
- Analyze the causes and effects of events prior to the American Revolution, such as the Boston Tea Party
- Identify the goal of the Committees of Correspondence
- Explain the Intolerable Acts
- Identify events (causes) in Boston and their effects on the relationship between the colonies and Britain
- Differentiate between the political ideas of Patriots and Loyalists

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 3: Research and Writing Skills

Objectives:
- Use primary sources to acquire information

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 4: The Revolution Begins (two-day lesson)

Objectives:
- Identify the effects of the first battles of the American Revolution
- Identify the contributions of significant individuals during the revolutionary period, including Paul Revere
- Identify and describe key events in the American Revolution, including the battles of Lexington, Concord, and Bunker Hill
- Analyze and interpret maps to explain historical events

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 5: Declaration of Independence

Objectives:
- Describe the decisions made by the Second Continental Congress
- Evaluate the impact of Thomas Paine's Common Sense
- Analyze the main argument in the Declaration of Independence
- Explain why signing the Declaration of Independence was a dangerous act

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 6: Patriots at War

Objectives:
- Explain how Washington was able to force the British from Boston
• Analyze the causes and effects of American victories at Trenton and Saratoga
• Summarize the contributions of African American patriots
• Describe ways in which women helped support the American Revolution

**Lesson 7: The World Turned Upside Down (two-day lesson)**

Objectives:
• Explain how other nations helped the Continental Army
• Compare the contributions of patriot heroes such as Francis Marion, George Rogers Clark, and John Paul Jones
• Describe how Washington was able to trap the British at Yorktown
• Analyze the significance of the American victory at Yorktown

**Lesson 8: Unit Review**

Objectives:
• Use primary sources to acquire information
• Identify the contributions of significant individuals during the period of the American Revolution
• Analyze information by identifying cause-and-effect relationships

**Lesson 9: Unit Test**

**Unit 5: Life in a New Nation**

In this unit, your student will examine some of the political accomplishments of the new nation. He will learn how representatives from all states met in Philadelphia to adopt a new constitution. He will also learn about the birth of political parties, various efforts taken to expand the political boundaries of the nation westward, and the War of 1812.

Objectives:
• Use primary sources to acquire information
• Identify the contributions of significant individuals during the period following the American Revolution
• Explain the significance of the U.S. Constitution and the Bill of Rights
• Describe the conditions that led to westward expansion
• Explain the causes and effects of the War of 1812

**Lesson 1: A Weak Government**

Objectives:
• List the main goals of the Articles of Confederation
• Identify the weaknesses of the Articles of Confederation
• Describe the causes of Shay's Rebellion
• Explain the purpose of the Northwest Ordinance

**Lesson 2: Debate in Philadelphia**

Objectives:
• Identify the purpose of the Constitutional Convention
• Compare the competing plans for the Constitution
• Describe the Great Compromise
• List the goals of the Constitution

**Lesson 3: Ratifying the Constitution**

Objectives:
• Compare the views of Federalists with those of Antifederalists
• Describe the Bill of Rights
• Describe the government created by the Constitution

Lesson 4: Research and Writing Skills (two-day lesson) 🎨

Objectives:
• Use a research process to gather and report factual information

Lesson 5: Washington as President 🎨

Objectives:
• Describe how President Washington organized the executive branch around the Cabinet
• Explain how political parties emerged in the American government system
• Describe how the location and design of the nation's capital was decided upon

Lesson 6: Jefferson Looks West 🎨

Objectives:
• Explain why and how the United States expanded westward
• Describe the Louisiana Purchase and tell what effect it had on the nation
• Identify reasons for and findings of the Lewis and Clark Expedition

Lesson 7: Map and Globe Skills 🎨

Objectives:
• Interpret information in visuals, including maps
• Use primary and secondary sources, such as visual information, to acquire information

Lesson 8: Another War with Britain 🎨

Objectives:
• Identify reasons why the United States went to war a second time with Britain
• Describe the main battles and the outcome of the War of 1812
• Explain why and how "The Star-Spangled Banner" was written

Lesson 9: Life in a New Nation 🎨

Objectives:
• Identify the contributions of significant individuals during the period following the American Revolution

Lesson 10: Unit Review

Objectives:
• Use primary sources to acquire information
• Identify the contributions of significant individuals during the period following the American Revolution
• Analyze information by drawing conclusions
Social Studies 5 B

In this course, the student will trace United States history from the beginning of the Jackson administration to the 21st century. This course takes both a thematic and chronological approach to U.S. history. The course emphasizes the struggles and triumphs in our nation’s history. Biographies, short stories, primary sources, and songs highlight the roles that individuals have played in the economic, social, and political growth of our nation. The course textbook is Scott Foresman’s *The United States*. Textbook features such as Citizen Heroes, Issues and Viewpoints, Then and Now, and Here and There help build skills of historical analysis. Multimedia resources, including Teachlet® tutorials, videos, and interactive websites, enhance and support the content. The student will learn geographic concepts such as place, location, and human interaction with the environment. Geography skills lessons are incorporated throughout the course.

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Unit 1: A Growing Nation

In this unit, your student will learn how the nineteenth century was marked as a time of change in the United States. She will learn how changes occurred in government, technology, and civil rights. She will also learn how the southern and western regions of the United States changed by the migration of people moving to those regions.

Objectives:
- Use primary sources to acquire information
- Identify the contributions of significant individuals to change and expansion in the United States in the early 1800s
- Analyze information by comparing and contrasting

Lesson 1: The United States Turns Fifty

Objectives:
- Describe the goal of the Monroe Doctrine
- Explain how the United States changed politically in the 1820s
- Describe the causes and effects of the Indian Removal Act of 1830

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 2: A New Kind of Revolution (two-day lesson)

Objectives:
- Explain how the Industrial Revolution changed the way goods were made
- Describe how new inventions led to increased production of both manufactured and farm goods
- Identify ways in which transportation changed in the United States in the early and middle 1800s

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 3: Chart and Graph Skills

Objectives:
- Interpret and explain information from a cross-section diagram

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 4: The Struggle for Reform (two-day lesson)

Objectives:
- Describe the historical movements that influenced the development of the United States
- Identify and analyze groups in the United States that have influenced patterns of national behavior
- Describe characteristics of groups that influenced the early development of the United States
Lesson 5: Settling the South and Texas

Objectives:
- Explain what brought settlers into the new southern frontier
- Explain how the United States gained land from Mexico
- Evaluate the reasons why United States settlers in Texas wanted independence from Mexico
- Analyze the viewpoints of people in the United States who opposed annexation of Texas and who supported it
- Relate the events that led to a United States victory in the Mexican War

Lesson 6: Trails to the West

Objectives:
- Analyze the different reasons people moved west
- Describe life on the Oregon Trail
- Identify the main trails leading west
- Explain the events that led to Mormons moving west

Lesson 7: The Golden State (three-day lesson)

Objectives:
- Identify the effects of the California gold rush on the population and development of California
- Identify routes used by people to travel to California
- Describe the successes, failures, and hardships of California's gold miners
- Describe how the gold rush increased the size and diversity of the California population

Lesson 8: Thinking Skills

Objectives:
- Evaluate the statements in written advertisements
- Identify facts, opinions, and exaggerations in written advertisements

Lesson 9: Unit Review

Objectives:
- Identify the accomplishments of notable individuals, such as Juan Seguin

Lesson 10: Unit Test

Unit 2: War Divides the Nation

In this unit, your student will examine the differences between the Northern and Southern states. He will study how these differences created tension and conflict between the two regions of the country. He will learn how such tension led to the succession of many Southern states. Your student will also understand how constant, ongoing tension escalated to the U.S. Civil War.

Objectives:
- Use primary sources to acquire information
Identify the contributions of significant individuals during the time leading up to and including the U.S. Civil War
Analyze information by using supporting details to determine the main idea

Lesson 1: North and South Grow Apart (two-day lesson)

Objectives:
- Describe the differences between the economies and populations of the North and South
- Identify the role that slavery played in the South in the mid-1800s
- Explain how and why views about slavery differed in the North and South

Lesson 2: Thinking Skills

Objectives:
- Identify facts and opinions in writing
- Consider the experiences of an individual writer and how those experiences may have shaped the writer's ideas
- Describe a writer's point of view

Lesson 3: Resisting Slavery

Objectives:
- Identify ways African Americans resisted slavery
- Describe rebellions of African Americans against slavery
- Explain how the Underground Railroad was used to free enslaved people
- Describe the lives of free African Americans in the North and South

Lesson 4: The Struggle Over Slavery

Objectives:
- Describe the causes and effects of the Missouri Compromise and the Compromise of 1850
- Explain the causes of violence in Kansas in 1854
- Draw conclusions about how Dred Scott and John Brown affected the split between the North and South
- Compare the views on slavery of Abraham Lincoln and Stephen Douglas

Lesson 5: The First Shots Are Fired (two-day lesson)

Objectives:
- Describe the reasons why Southern states seceded from the Union
- Identify the immediate cause of the start of the Civil War
- Describe the goals the North and South hoped to achieve by fighting the Civil War

Lesson 6: The Early Stages of the War

Objectives:
- Identify the resources of the North and South
- Compare the strategies of the North and South in the Civil War
- Describe early battles in the Civil War
- Explain how new military technology affected the way the war was fought
Lesson 7: Life During the War (three-day lesson)

Objectives:
• Compare and contrast life for Northern and Southern soldiers
• Analyze the effect of the Emancipation Proclamation on African Americans
• Describe the contributions of African American soldiers to the Union war effort
• Identify the different ways women contributed to the war effort in the North and South

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 8: How the North Won

Objectives:
• Describe the events of the Battle of Gettysburg
• Analyze President Lincoln's Civil War goals as expressed in the Gettysburg Address
• Identify the location and results of the major battles of the Civil War
• Explain the reasons for the use of total war and its consequences

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 9: Map and Globe Skills

Objectives:
• Apply geographic skills to interpret legends and symbols on maps

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 10: The End of Slavery

Objectives:
• Explain why Congress disagreed with Johnson’s plan for reconstruction
• Analyze the effect of the Reconstruction Acts
• Evaluate the impact of the Thirteenth, Fourteenth, and Fifteenth Amendments
• Describe life for African Americans after Reconstruction

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 11: Unit Review

Lesson 12: Unit Test

Unit 3: Expansion and Change

In this unit, your student will learn how change impacted human population. She will understand how innovations in transportation influenced settlement of the Western region of the United States, but also created tension between Native Americans and settlers. Your student will also learn how new technologies brought changes to society, including new jobs, cultural change, and immigration.

Objectives:
• Use primary sources to acquire information
• Identify the contributions of significant individuals in the United States during the late-1800s
• Analyze information by sequencing events

Lesson 1: Rails Across the Nation (two-day lesson)

Objectives:
• Analyze the developments that helped link the East and the West
• Explain why the telegraph replaced the Pony Express
• Describe the difficulties faced in building the transcontinental railroad
• Predict how the transcontinental railroad might change the United States

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.
Lesson 2: Map and Globe Skills

Objectives:

• Interpret information in maps

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 3: Farmers and Cowboys

Objectives:

• Explain how the Homestead Act worked
• Describe the hardships of farming on the Great Plains
• Analyze the reasons why different groups came to the Great Plains
• Evaluate the causes of the rise and fall of cattle drives

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 4: War in the West (two-day lesson)

Objectives:

• Describe the ways that transcontinental railroads, farmers, and ranchers changed the Great Plains
• Evaluate the reaction of Plains Indians to changes on the Great Plains
• Compare the struggles of the Lakota and the Nez Percé in the 1870s
• Explain ways in which Native Americans are keeping their traditions alive today

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 5: Inventions and Big Businesses

Objectives:

• Identify important inventions of Alexander Graham Bell and Thomas Edison
• Explain the significance of the Bessemer steel-making process
• Evaluate the accomplishments of Andrew Carnegie
• Describe the rise of the oil industry in the United States
• Explain how industry changed the American way of life

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 6: New Americans (four-day lesson)

Objectives:

• Describe several reasons why immigrants came to the United States
• Identify the hardships immigrants faced in American cities
• Explain the reasons labor unions were formed
• Analyze the accomplishments of labor unions in the United States

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 7: Expansion Overseas

Objectives:

• Evaluate the American decision to purchase Alaska
• Explain how the United States acquired Hawaii
• Describe the events leading up to the Spanish-American War
• Analyze the effects of the Spanish-American War

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 8: Thinking Skills

Objectives:

• Identify credible sources of information

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 9: Unit Review

Appendix A.2.d Social Studies Course Guides

© 2016 Connections Education LLC. All rights reserved.
Lesson 10: Unit Test

Unit 4: The United States and the World

In this unit, your student will learn how the United States increased its involvement in foreign affairs. He will focus on America’s involvement and participation in World War I and World War II. He will also explore the reasons behind the Cold War, and your student will focus on the United States’ involvement during the Cold War era. He will complete an independent research project on one of the major events of the 20th century.

Objectives:
- Use primary sources to acquire information
- Identify the accomplishments of notable individuals who have made contributions to society in civil rights, women's rights, military actions, and politics
- Analyze information by summarizing

Lesson 1: Portfolio: Modern Society (six-day lesson)

Lesson 2: A Time of Reforms (two-day lesson)

Objectives:
- Define who the muckrakers were and explain what they wanted to do
- Identify major reforms that Theodore Roosevelt spearheaded as president
- Explain how and why the United States built the Panama Canal

Lesson 3: Research and Writing Skills

Objectives:
- Interpret information in political cartoons

Lesson 4: World War I

Objectives:
- Describe why and how World War I was fought
- Explain the role of the United States in World War I
- Explain how and when women got the right to vote
- Identify the causes and effects of the Great Migration

Lesson 5: Times of Plenty, Times of Hardship

Objectives:
- Identify the effects of new industrial developments on the nation’s economy
- Describe major developments in American culture during the 1920s
- Explain how the New Deal was created to respond to the Great Depression
- Relate what life was like in the United States during the Great Depression

Lesson 6: World War II (two-day lesson)

Objectives:
- Identify the causes of World War II
• Explain how the United States was drawn into World War II and how it prepared to fight the war
• Describe how the Allies won victory in both Europe and Asia
• Analyze the costs of World War II

Lesson 7: A Dangerous World

Objectives:
• Describe the beginning of the Cold War
• Analyze the American decision to fight in the Korean War
• Explain how Cold War conflicts led to the Cuban Missile Crisis
• Evaluate the causes of the arms race

Lesson 8: Struggle for Equal Rights

Objectives:
• Evaluate the importance of Brown versus Board of Education
• Explain the major events of the Montgomery bus boycott
• Describe the efforts of Martin Luther King, Jr., in the civil rights movement
• Identify the goals of the women’s rights movement

Lesson 9: The Cold War Continues

Objectives:
• Identify some of the major events of the space race
• Analyze major causes and effects of the Vietnam War
• Evaluate President Richard Nixon’s trips to China and the Soviet Union
• Describe the level of Cold War tensions at the beginning of the 1980s

Lesson 10: Map and Globe Skills

Objectives:
• Interpret information from map projections

Lesson 11: Looking Toward the Future

Objectives:
• Describe how relations between the United States and the Soviet Union changed during the 1980s
• Explain how the Cold War ended
• Identify key post-Cold War events, including the Persian Gulf War, the Clinton impeachment, the rise of the Internet, and the struggle against terrorism
• Evaluate a variety of questions about the future of the United States

Lesson 12: Unit Review

Objectives:
• Identify significant examples of music from various periods in U.S. history
• Explain how examples of music reflect the times during which they were written
SOCIAL STUDIES 6 A
Social Studies 6 A

This course explores the question, “What is civilization?” Using Glencoe’s Journey Across Time: The Early Ages, the student will examine the birth of civilization and the transition from hunter-gatherer societies to farming communities and complex civilizations. The student will focus on multiple civilizations in ancient history including Egypt, Mesopotamia, and Greece. Primary sources, short stories, biographies, and art provide the opportunity for the student to recognize multiple perspectives in history. In addition, the student will learn about the role of the historian in uncovering the past. The student will practice historical analytical skills including recognizing bias, interpreting sources, interpreting maps and visual evidence, and distinguishing fact from opinion. Multimedia resources including Teachlet® tutorials, videos, and interactive websites enhance and support the content. The student will learn geographic concepts such as place, location, and human interaction with the environment.

Constitution Day (L)

Objectives:
- Discuss the purpose of the U.S. Constitution
- Explain how ancient civilizations, such as Rome, have influenced the creation of the Constitution

Unit 1: Early Civilizations A

In this unit, you will examine the role of the historian. Focusing on the various tools that historians use to uncover the past, you will learn how the historian is like a detective. You will learn about timelines, maps, and sources that historians analyze to learn more about civilizations and societies. You will trace the origin and development of early hunting and gathering societies along with the Mesopotamian, Assyrian, and Chaldean civilizations. You will also explore how the governments, religions, and cultures of these civilizations are both similar and different.

Objectives:
- Explain how historians measure and organize time
- Identify the tools that historians use to research and record the past
- Describe the causes and effects of the Agricultural Revolution
- Explain how geography influenced early civilizations
- Identify the characteristics of early civilizations

Lesson 1: Timelines

Objectives:
- Tell how historians rely on calendars and the dating of events to measure time

Objectives derived from The McGraw-Hill Companies, Inc. © The McGraw-Hill Companies, Inc., publishing as Glencoe. All rights reserved.

Lesson 2: How Does a Historian Work?

Objectives:
- Identify and describe the variety of sources historians use to learn about the past

Objectives derived from The McGraw-Hill Companies, Inc. © The McGraw-Hill Companies, Inc., publishing as Glencoe. All rights reserved.

Lesson 3: History and Geography

Objectives:
- Examine how climate, landforms, and human activities have shaped past events

Objectives derived from The McGraw-Hill Companies, Inc. © The McGraw-Hill Companies, Inc., publishing as Glencoe. All rights reserved.

Lesson 4: Historical Atlas (two-day lesson)

Objectives:
- Describe how maps give information about the areas of the world at different periods of history

Appendix A.2.d Social Studies Course Guides

Reach Cyber Charter School Application

Appendix A.2.d Social Studies Course Guides

Social Studies 6 A
Lesson 5: Links Across Time

Objectives:
- Examine how people and events of the past have left their mark on our world today

Lesson 6: Early Humans

Objectives:
- Explain how Paleolithic people adapted to their environment and invented many tools to help them survive
- Describe how, during the Neolithic Age, people started farming, building communities, producing goods, and trading

Lesson 7: What Is a Civilization?

Objectives:
- Identify features that make up a civilization

Lesson 8: Mesopotamian Civilizations (two-day lesson)

Objectives:
- Explain why civilizations in Mesopotamia began in the valleys of the Tigris and Euphrates Rivers
- Identify the contributions of the Sumerian civilization to later peoples
- Identify what factors contributed to the decline of the Sumerian city-states

Lesson 9: Geography and History: Two Rivers in Mesopotamia

Objectives:
- Identify the historical and geographical importance of the Tigris and Euphrates Rivers

Lesson 10: The First Empire

Objectives:
- Describe how Assyria built a vast empire in Mesopotamia
- Identify the achievements of the Chaldean Empire

Lesson 11: Early Civilizations A Unit Review

Objectives:
- Explain how the first civilizations emerged
- Describe the culture of the ancient civilization in Mesopotamia

Lesson 12: Early Civilizations A Unit Test

Unit 2: Early Civilizations B

In this unit, you will learn about the development of ancient Egyptian and ancient Israelite civilizations. You will also explore how the governments, religions, and cultures of these civilizations are both similar and different. You will learn about the achievements and legacies of both civilizations.

Objectives:
- Trace the development of Egyptian civilization
- Identify important people and events in the history of ancient Israel
Lesson 1: The Nile Valley

Objectives:
• Explain why Egyptian civilization began in the Nile River valley
• Identify the importance of the Nile's floods to the Egyptian civilization
• Describe how Upper and Lower Egypt were united
• Explain the class system in Egyptian society

Objectives derived from The McGraw-Hill Companies, Inc. © The McGraw-Hill Companies, Inc., publishing as Glencoe. All rights reserved.

Lesson 2: Egypt's Old Kingdom

Objectives:
• Identify the all-powerful pharaohs who ruled the Old Kingdom
• Describe the Egyptian belief in many gods and in life after death
• Describe how the Egyptians built pyramids as tombs for their pharaohs

Objectives derived from The McGraw-Hill Companies, Inc. © The McGraw-Hill Companies, Inc., publishing as Glencoe. All rights reserved.

Lesson 3: Geography and History: The Earliest Egyptians

Objectives:
• Identify the physical landscape and climate conditions of the Sahara Desert and their impact on settlement and migration

Lesson 4: Ancient Egyptian Literature

Objectives:
• Read and interpret an Egyptian folktale

Lesson 5: The Egyptian Empire

Objectives:
• Describe how Egypt enjoyed a golden age of culture and peace during the Middle Kingdom
• Explain the significance of the New Kingdom, during which Egypt reached its height of power, with pharaohs building a huge empire and great monuments

Objectives derived from The McGraw-Hill Companies, Inc. © The McGraw-Hill Companies, Inc., publishing as Glencoe. All rights reserved.

Lesson 6: Civilization of Kush (two-day lesson)

Objectives:
• Describe how the Nubians settled to the south of Egypt and built a civilization based on farming and trade
• Explain Kush's emergence as a leading trading power after it learned iron-making skills

Objectives derived from The McGraw-Hill Companies, Inc. © The McGraw-Hill Companies, Inc., publishing as Glencoe. All rights reserved.

Lesson 7: The Cultures of Ancient Egypt and Kush

Objectives:
• Describe Egyptian society and its values system

Lesson 8: Geography's Influence on Early Civilizations (two-day lesson)

Objectives:
• Explain how geography influenced early civilizations

Lesson 9: The First Israelites

Objectives:
• Explain that the Israelites believed in one God who set down moral laws for his people
• Describe the Israelites' fight with the Canaanites to return to their promised land

Objectives derived from The McGraw-Hill Companies, Inc. © The McGraw-Hill Companies, Inc., publishing as Glencoe. All rights reserved.
Lesson 10: The Kingdom of Israel

Objectives:
- Describe how the Israelites chose a king to unite them against their enemies
- Explain how King David built an Israelite empire and made Jerusalem his capital city
- Explain how the Israelites were conquered and forced to leave their country

Objectives derived from The McGraw-Hill Companies, Inc. © The McGraw-Hill Companies, Inc., publishing as Glencoe. All rights reserved.

Lesson 11: Geography and History: The City of Jerusalem

Objectives:
- Identify the impact the physical landforms have on the location of historic temples and palaces, and on practiced traditions

Lesson 12: The Growth of Judaism

Objectives:
- Learn how the Jews continued their religion during their exile in Babylon
- Describe how Jews spread their beliefs to the Greek world and regained control of Judah
- Describe how religion shaped the Jewish way of life
- Examine the connection between the Jewish reaction to Roman rule and the Roman response

Objectives derived from The McGraw-Hill Companies, Inc. © The McGraw-Hill Companies, Inc., publishing as Glencoe. All rights reserved.

Lesson 13: Ancient Israelite Literature and Culture (two-day lesson)

Objectives:
- Describe the culture and daily life of the Israelites

Lesson 14: Early Civilizations B Unit Review

Objectives:
- Describe the culture of the ancient civilization in Egypt
- Describe the culture of the ancient Israelites and identify their contributions to Western civilization

Objectives derived from The McGraw-Hill Companies, Inc. © The McGraw-Hill Companies, Inc., publishing as Glencoe. All rights reserved.

Lesson 15: Early Civilizations B Unit Test

Unit 3: The Ancient World A

In this unit, you will trace the origin of the Minoan, Mycenaean, and Greek civilizations and understand how geography impacted the history of each civilization. You will examine the development of Athens’ and Sparta’s civilizations and the contributions that each made. You will also understand how Athens and Sparta overcame attacks from Persia, and how Athens developed into a strong city-state under the leadership of Pericles.

Objectives:
- Discuss the rise of Greek city-states, comparing Athens and Sparta
- Identify the legacy of the ancient Greeks and the spread of Greek culture

Lesson 1: The Early Greeks

Objectives:
- Describe how the geography of Greece influenced Greece’s early civilizations—the Minoan and the Mycenaean
- Learn how colonies and trade spread Greek culture, including the idea of citizenship

Objectives derived from The McGraw-Hill Companies, Inc. © The McGraw-Hill Companies, Inc., publishing as Glencoe. All rights reserved.

Lesson 2: Sparta and Athens

Appendix A.2.d Social Studies Course Guides
Objectives:
- Explain how tyrants seized control over many city-states
- Explain why the Spartans focused on military rule, while the Athenians were more interested in democracy

Objectives derived from The McGraw-Hill Companies, Inc. © The McGraw-Hill Companies, Inc., publishing as Glencoe. All rights reserved.

Lesson 3: Persia Attacks the Greeks
Objectives:
- Describe how the Persian Empire united a large territory under a single government
- Explain how Sparta and Athens joined forces to defeat the Persians

Objectives derived from The McGraw-Hill Companies, Inc. © The McGraw-Hill Companies, Inc., publishing as Glencoe. All rights reserved.

Lesson 4: The Age of Pericles (two-day lesson)
Objectives:
- Explain how Athens became very powerful and more democratic
- Contrast the roles of Athenian men and women
- Tell how Athens and Sparta went to war over control of Greece

Objectives derived from The McGraw-Hill Companies, Inc. © The McGraw-Hill Companies, Inc., publishing as Glencoe. All rights reserved.

Lesson 5: The Culture of Ancient Greece
Objectives:
- Examine how Greek poetry and fables taught Greek values
- Learn how Greek art and architecture expressed Greek ideas of beauty and harmony
- Describe the Greek belief in gods and goddesses that controlled nature and shaped lives
- Compare Greek drama to entertainment today

Objectives derived from The McGraw-Hill Companies, Inc. © The McGraw-Hill Companies, Inc., publishing as Glencoe. All rights reserved.

Lesson 6: Geography and History: Seven Wonders
Objectives:
- Identify the location of each of the seven wonders of the ancient world
- Examine the historical significance of two of the seven wonders located in Greece

Lesson 7: Greek Philosophy and History
Objectives:
- Tell how Greek philosophers' ideas are still used today
- Explain how Greeks wrote the first real histories in Western Civilization

Objectives derived from The McGraw-Hill Companies, Inc. © The McGraw-Hill Companies, Inc., publishing as Glencoe. All rights reserved.

Lesson 8: Alexander the Great (two-day lesson)
Objectives:
- Explain how Philip II of Macedonia united the Greek states
- Describe how Alexander the Great conquered the Persian Empire and spread Greek culture throughout southwest Asia

Objectives derived from The McGraw-Hill Companies, Inc. © The McGraw-Hill Companies, Inc., publishing as Glencoe. All rights reserved.

Lesson 9: Geography and History: Alexander's March
Objectives:
- Using a map, identify the routes Alexander and his army took in his quest to expand the Greek Empire

Lesson 10: Spread of Greek Culture
Objectives:
• Describe how the Hellenistic cities became centers of learning and culture
• Identify the major discoveries in math and science made by Hellenistic scientists

Objectives derived from The McGraw-Hill Companies, Inc. © The McGraw-Hill Companies, Inc., publishing as Glencoe. All rights reserved.

Lesson 11: Ancient Greek Literature (three-day lesson)

Objectives:
• Read an example of Greek literature and describe Greek material culture and values

Lesson 12: The Ancient World A Unit Review

Objectives:
• Trace the rise of Greek city-states with an emphasis on Athens and Sparta
• Describe Greek cultural accomplishments and the spread of Greek culture

Objectives derived from The McGraw-Hill Companies, Inc. © The McGraw-Hill Companies, Inc., publishing as Glencoe. All rights reserved.

Lesson 13: The Ancient World A Unit Test
SOCIAL STUDIES 6 B
Social Studies 6 B

This course explores the question, “What is civilization?” Using Glencoe’s Journey Across Time: The Early Ages, you will examine the birth of civilization and the transition from hunter-gatherer societies to farming communities and complex civilizations. You will focus on multiple civilizations in ancient history including China, India, and Rome. Primary sources, short stories, biographies, and art provide the opportunity to recognize multiple perspectives in history. In addition, you will learn about the role of the historian in uncovering the past. You will practice historical analytical skills including recognizing bias, interpreting sources, interpreting maps and visual evidence, and distinguishing fact from opinion. Multimedia resources including Teachlet® tutorials, videos, and interactive websites enhance and support the content. You will learn geographic concepts such as place, location, and human interaction with the environment.

Unit 1: The Ancient World B

In this unit, you will explore the rise of civilizations in the river valleys of ancient China and ancient India. You will learn about the achievements of each civilization. You will learn the basic principles of Hinduism and Buddhism and trace the development of each religion.

Objectives:
- Describe the early Indian civilizations
- Explain the significance of the development of Hinduism and Buddhism
- Trace the development of civilization in ancient China from the Shang to the Han Dynasties

Lesson 1: India’s First Civilizations (two-day lesson)

Objectives:
- Describe how climate and geography influenced the rise of India’s first civilizations
- Learn how the Aryans conquered India and introduced new ideas and technology
- Describe the caste system introduced by the Aryans

Objectives derived from The McGraw-Hill Companies, Inc. © The McGraw-Hill Companies, Inc., publishing as Glencoe. All rights reserved.

Lesson 2: Geography and History: The Saraswati

Objectives:
- Describe the physical geography where early settlement occurred
- Identify causes that led to the disappearance of the Saraswati River

Lesson 3: Hinduism and Buddhism

Objectives:
- Explain how Hinduism grew out of the ancient beliefs of the Aryans
- Describe how Buddhism developed and why it appealed to many in India and other parts of Asia

Objectives derived from The McGraw-Hill Companies, Inc. © The McGraw-Hill Companies, Inc., publishing as Glencoe. All rights reserved.

Lesson 4: India’s First Empires (two-day lesson)

Objectives:
- Learn how the Mauryan dynasty built India’s first great empire
- Explain how the Gupta empire reunited much of northern India
- Identify the important contributions that the Mauryan and Gupta empires made in literature, mathematics, and science

Objectives derived from The McGraw-Hill Companies, Inc. © The McGraw-Hill Companies, Inc., publishing as Glencoe. All rights reserved.

Lesson 5: Ancient Indian Literature

Objectives:
- Interpret primary sources and literature selections to learn more about early Indian culture

Appendix A.2.d Social Studies Course Guides

Social Studies 6 B

© 2016 Connections Education LLC. All rights reserved.
© 2008 The McGraw-Hill Companies, Inc. All rights reserved.
Lesson 6: China’s First Civilizations (two-day lesson)

Objectives:

• Explain how rivers, mountains, and deserts helped shape China's civilization
• Describe why the Shang rulers became powerful
• Describe the Mandate of Heaven and its effect on Chinese rulers' right to rule

Objectives derived from The McGraw-Hill Companies, Inc. © The McGraw-Hill Companies, Inc., publishing as Glencoe. All rights reserved.

Lesson 7: Life in Ancient China

Objectives:

• Identify the three main social classes of Chinese society: landowning aristocrats, farmers, and merchants
• Explain how three Chinese philosophies, Confucianism, Daoism, and Legalism, grew out of a need for order in China

Objectives derived from The McGraw-Hill Companies, Inc. © The McGraw-Hill Companies, Inc., publishing as Glencoe. All rights reserved.

Lesson 8: Qin and Han Dynasties (two-day lesson)

Objectives:

• Describe how new inventions during the Han dynasty improved life for all Chinese
• Describe how the Chinese used the Silk Road to carry Chinese goods as far as Greece and Rome
• Make connections between the unrest in China and the spread of Buddhism

Objectives derived from The McGraw-Hill Companies, Inc. © The McGraw-Hill Companies, Inc., publishing as Glencoe. All rights reserved.

Lesson 9: Geography and History: The Ancient Silk Road (two-day lesson)

Objectives:

• Trace the location of key cities and identify the physical landscape along the Silk Road

Lesson 10: Ancient Chinese Literature (three-day lesson)

Objectives:

• Apply knowledge of innovation in ancient China

Lesson 11: The Ancient World B Unit Review

Objectives:

• Discuss early Indian civilizations and empires, including the development of Hinduism and Buddhism
• Explore China's first civilizations and the rise of the Qin and Han dynasties

Objectives derived from The McGraw-Hill Companies, Inc. © The McGraw-Hill Companies, Inc., publishing as Glencoe. All rights reserved.

Lesson 12: The Ancient World B Unit Test

Unit 2: New Empires and New Faiths A

In this unit, you will trace the origin, rise, and decline of the Roman Republic and Empire. You will examine Rome’s culture and its primary achievements. You will study Rome’s legacies in government and engineering. You will identify the key people who were responsible for the economic growth and expansion of the Roman Empire. You will examine the causes of the Western Roman Empire’s decline and fall and you will study the rise and legacies of the Byzantine Empire.

Objectives:

• Describe the conditions that led to the rise and fall of the Roman Republic
• Discuss the achievements of the Roman Empire
Lesson 1: Rome's Beginnings (two-day lesson)

Objectives:
- Explain how Rome's geographic location aided its rise to power
- Discuss how the Romans created a republic and carried out conquests by treating the people they conquered fairly

Objectives derived from The McGraw-Hill Companies, Inc. © The McGraw-Hill Companies, Inc., publishing as Glencoe. All rights reserved.

Lesson 2: Geography and History: Rome's Ideal Location

Objectives:
- Describe how the physical landscape protected and helped develop Rome into a successful empire
- Identify Rome's road system

Objectives derived from The McGraw-Hill Companies, Inc. © The McGraw-Hill Companies, Inc., publishing as Glencoe. All rights reserved.

Lesson 3: The Roman Republic

Objectives:
- Learn that Rome's republic was shaped by a struggle between wealthy landowners and regular citizens
- Explain how Rome defeated the Carthaginians and took control of the Mediterranean region

Objectives derived from The McGraw-Hill Companies, Inc. © The McGraw-Hill Companies, Inc., publishing as Glencoe. All rights reserved.

Lesson 4: The Fall of the Republic

Objectives:
- Describe how the military hero Julius Caesar seized power
- Explain why the Roman Republic, weakened by civil wars, became an empire under Augustus

Objectives derived from The McGraw-Hill Companies, Inc. © The McGraw-Hill Companies, Inc., publishing as Glencoe. All rights reserved.

Lesson 5: The Early Empire (two-day lesson)

Objectives:
- Describe how Augustus's military and political reforms brought an era of peace and prosperity
- Describe how Rome's roads, aqueducts, ports, and common currency made the empire rich

Objectives derived from The McGraw-Hill Companies, Inc. © The McGraw-Hill Companies, Inc., publishing as Glencoe. All rights reserved.

Lesson 6: Life in Ancient Rome (three-day lesson)

Objectives:
- Discuss how Roman developments in science and engineering, as well as how Roman writers and artists borrowed ideas from the Greeks
- Compare the lives of the different social classes
- Describe the different roles of men and women in the Roman Empire

Objectives derived from The McGraw-Hill Companies, Inc. © The McGraw-Hill Companies, Inc., publishing as Glencoe. All rights reserved.

Lesson 7: Geography and History: The Rhine River

Objectives:
- Identify how the location of the Rhine River was used as a political boundary and safeguard
- Describe how the Rhine River impacted trade and commerce

Objectives derived from The McGraw-Hill Companies, Inc. © The McGraw-Hill Companies, Inc., publishing as Glencoe. All rights reserved.

Lesson 8: The Fall of Rome
Objectives:

• Explain how poor leadership, a declining economy, and attacks by Germanic tribes weakened the Roman Empire until Rome fell to invaders in the AD 400s
• Identify the many achievements made by the Romans in government, law, language, and the arts

Objectives derived from The McGraw-Hill Companies, Inc. © The McGraw-Hill Companies, Inc., publishing as Glencoe. All rights reserved.

Lesson 9: The Byzantine Empire

Objectives:

• Learn how the Eastern Roman, or Byzantine, Empire, grew rich and powerful as the Western Roman Empire fell apart
• Discuss how the policies of Justinian and Theodora made the Byzantine Empire strong
• Describe Byzantine culture, which was based on Roman, Greek, and Christian ideas

Objectives derived from The McGraw-Hill Companies, Inc. © The McGraw-Hill Companies, Inc., publishing as Glencoe. All rights reserved.

Lesson 10: New Empires and New Faiths A Unit Review

Objectives:

• Describe the rise and fall of the Roman Republic
• Trace the development of the Roman Empire

Objectives derived from The McGraw-Hill Companies, Inc. © The McGraw-Hill Companies, Inc., publishing as Glencoe. All rights reserved.

Lesson 11: New Empires and New Faiths A Unit Test

Unit 3: New Empires and New Faiths B

In this unit, you will learn about the rise of Christianity and Islam, and study how both religions spread and influenced people and cultures around the world. You will learn about the key people who helped found and spread Christianity and Islam. You will also learn the basic beliefs and practices of each religion.

Objectives:

• Explain the rise of Christianity and the spread of the Christian faith
• Explain the rise of Islam and the spread of Islamic culture

Lesson 1: The First Christians (two-day lesson)

Objectives:

• Compare the different ways that Jews reacted to the Roman rule of Judea
• Explain how Jesus's life and a belief in his resurrection led to a new religion called Christianity

Objectives derived from The McGraw-Hill Companies, Inc. © The McGraw-Hill Companies, Inc., publishing as Glencoe. All rights reserved.

Lesson 2: Christian Literature (two-day lesson)

Objectives:

• Analyze primary sources and literature samples to learn more about Christianity's influence on culture

Lesson 3: The Christian Church

Objectives:

• Explain why Christianity won many followers and eventually became the official religion of the Roman Empire
• Learn how early Christians set up a church organization and explained their beliefs

Objectives derived from The McGraw-Hill Companies, Inc. © The McGraw-Hill Companies, Inc., publishing as Glencoe. All rights reserved.

Lesson 4: The Spread of Christian Ideas (two-day lesson)
Lesson 5: Geography and History: San Marino

Objectives:
- Identify the location and size of San Marino
- Describe how mountains brought additional protection and influenced the architectural style of various landmarks

Lesson 6: The Rise of Islam

Objectives:
- Describe how deserts, coastlines, and oases of Arabia helped shape the Arab way of life
- Describe how the prophet Muhammed brought the message of Islam to the people of Arabia
- Explain how the Quran provides guidelines for Muslims' lives and the governments of Muslim states

Lesson 7: Islamic Empires

Objectives:
- Describe how Arabs spread Islam through teaching, conquest, and trade
- Learn why the Muslims split into two groups
- Learn how Turks and Moguls built Muslim empires in Asia, Africa, and Europe

Lesson 8: Muslim Ways of Life (two-day lesson)

Objectives:
- Explain how the success of Muslim traders led to the growth of cities
- Identify the valuable contributions made by Muslims in math, science, and the arts

Lesson 9: Geography and History: The Bedouins

Objectives:
- Analyze the lifestyle of the Bedouins

Lesson 10: Islamic Literature

Objectives:
- Explore Islamic literature to learn more about Islamic material culture and values

Lesson 11: New Empires and New Faiths B Unit Review

Objectives:
- Discuss the beginnings and spread of Christianity
- Explain the beginnings and spread of the religion of Islam

Lesson 12: New Empires and New Faiths B Unit Test
SOCIAL STUDIES 7 A
Social Studies 7 A

In this course, the student will study the history, geography, and culture of the western hemisphere and the historical period of medieval times to today. Prentice Hall’s *Medieval Times to Today* and *World Studies: Western Hemisphere* provide the basis for the course content. In the study of world history, the student will examine political, economic, and social changes from the fifth century to modern times by exploring such topics as the growth of trade, the rise and fall of empires (including the empires in China and Africa), European exploration, and the rise of democracy. The student will make connections between historical events and understand long-term changes and recurring patterns in world history. The student will also examine the relationship between human actions and conditions on Earth. The student will examine such current issues as overpopulation, poverty in developing nations, and problems plaguing cities. All of these issues are studied within the context of world geography.

Selections from Pearson Education materials are reprinted and adapted by arrangement with Pearson Education, Inc. © 2005 Pearson Education, Inc., publishing as Pearson Prentice Hall. All rights reserved.

Constitution Day (L)

Objectives:
- Discuss the purpose of the U.S. Constitution
- Understand basic terms related to the Constitution

Unit 1: Focus on History, Part I

In this unit, you will explore the history, religion, and cultures of many parts of the world. You will learn about the rise of the Byzantine and Islamic Empires and how their influences spread throughout the globe. You will also study important African kingdoms and trading centers. You will explore the civilizations of South America, Middle America, and North America, and discover how those cultures were influenced by the arrival of European explorers. Finally, you will learn about Asian civilizations, including China, medieval Japan, and the Great Mughal Empire in India.

Objectives:
- Explain how the Byzantine and Islamic Empires grew and how their cultures spread throughout the globe
- Learn about the early history of Africa and examine some of its great civilizations
- Describe the civilizations of the Americas and examine how they were affected by European explorers
- Describe the medieval civilizations of China, Japan, and India

Lesson 1: The Byzantine Empire (two-day lesson)

Objectives:
- Find out how Constantinople and the Byzantine Empire grew powerful
- Discover the achievements of the Age of Justinian
- Learn about the later years of the Byzantine Empire

Objectives derived from Pearson Education, Inc. © Pearson Education, Inc., publishing as Pearson Prentice Hall. All rights reserved.

Lesson 2: The Beginnings of Islam

Objectives:
- Learn about the Arabian Peninsula, its nomadic people, and its centers of trade
- Find out about the life and mission of the Muslim prophet Muhammad
- Learn about Muslim beliefs

Objectives derived from Pearson Education, Inc. © Pearson Education, Inc., publishing as Pearson Prentice Hall. All rights reserved.

Lesson 3: The Golden Age of Muslim Civilization (three-day lesson)

Objectives:
- Find out how the religion of Islam spread
- Learn about the golden age of Islam under the rule of the caliphs

Objectives derived from Pearson Education, Inc. © Pearson Education, Inc., publishing as Pearson Prentice Hall. All rights reserved.
Lesson 4: Africa and the Bantu

Objectives:
• Learn about the physical geography of Africa
• Find out about the Bantu and their movement across the continent

Lesson 5: Kingdoms of West Africa

Objectives:
• Learn about the trading kingdoms of the West African savanna
• Investigate the kingdom of the West African rain forests

Lesson 6: East Africa's Great Trading Centers (two-day lesson)

Objectives:
• Learn about powerful East African civilizations whose cities included Aksum and Lalibela
• Find why the coastal cities of East Africa were important

Lesson 7: South America and the Incas

Objectives:
• Find out about the geography of the Americas
• Learn about the empire established by the Incas of South America

Lesson 8: Cultures of Middle America

Objectives:
• Learn about the Mayan culture of Middle America
• Find out about the powerful Aztec empire

Lesson 9: Cultures of North America (two-day lesson)

Objectives:
• Find out about the Mound Builders who lived in eastern North America
• Learn about the cultures of the Southwest and Great Plains
• Find out about the Woodland peoples of North America

Lesson 10: Golden Ages of China

Objectives:
• Learn about the Golden Age of the Tang dynasty
• Discover the achievements of the Song dynasty, which ruled China after the Tang

Lesson 11: Medieval Japan

Objectives:
• Learn about the geography of Japan
• Discover the changes that occurred during the Heian period of Japanese history
• Find out about feudalism and the rule of the shoguns in Japan
Lesson 12: The Great Mughal Empire in India

Objectives:
- Find out about the geography of the Indian subcontinent
- Learn about the Delhi Sultanate, a period of Muslim rule
- Learn about the founding and achievements of the Mughal Empire

Objectives derived from Pearson Education, Inc. © Pearson Education, Inc., publishing as Pearson Prentice Hall. All rights reserved.

Lesson 13: Focus on History, Part I Unit Review

Objectives:
- Review for the unit test

Lesson 14: Focus on History, Part I Unit Test

Unit 2: Focus on History, Part II

In this unit, you will explore important events in the history of the world from the Middle Ages up to today. You will learn about life in medieval Europe and explore the powerful influences of kings, the Church, and feudalism. You will also study the causes and effects of the Crusades, the Renaissance, and the Reformation. You will examine how Europeans explored the globe and conquered civilizations in the Americas and Africa. You will also explore the influences of the Enlightenment and the Industrial Revolution. You will also examine the impact of nationalism and imperialism and explore important wars and revolutions of the eighteenth, nineteenth, and twentieth centuries. You will conclude your study with a look at the modern world.

Objectives:
- Examine the social, economic, and religious factors that influenced life in medieval Europe
- Explain how Europeans explored new places and uncovered new ideas about the world
- Explain the political revolutions and revolutions in ideas that took place in Europe in the 1700s and 1800s
- Trace important events in world history from the early 1900s to today

Lesson 1: Feudalism and the Manor System

Objectives:
- Learn when the Middle Ages were and what they were like
- Find out how land and power were divided under feudalism
- Learn how the manor system worked
- Discover what life was like for peasants and serfs

Objectives derived from Pearson Education, Inc. © Pearson Education, Inc., publishing as Pearson Prentice Hall. All rights reserved.

Lesson 2: The Church and the Rise of Cities

Objectives:
- Learn why the Roman Catholic Church was so important and powerful during the Middle Ages
- Discover the connection between an increase in trade and the growth of towns
- Find out what life was like in a medieval town
- Understand the role of culture and learning in the Middle Ages

Objectives derived from Pearson Education, Inc. © Pearson Education, Inc., publishing as Pearson Prentice Hall. All rights reserved.

Lesson 3: The Crusades

Objectives:
- Learn about the causes of the Crusades
- Find out about the different Crusades and what they accomplished
- Discover the effects the Crusades had on life in Europe

Objectives derived from Pearson Education, Inc. © Pearson Education, Inc., publishing as Pearson Prentice Hall. All rights reserved.

Lesson 4: The Power of Kings (two-day lesson)
Objectives:
- Learn about the forces that led to nation building in Europe
- Find out about nation building in England
- Discover how the Hundred Years' War affected England and France

Objectives derived from Pearson Education, Inc. © Pearson Education, Inc., publishing as Pearson Prentice Hall. All rights reserved.

Lesson 5: The Renaissance and Reformation

Objectives:
- Learn about the Renaissance and why it occurred when and where it did
- Find out about Renaissance art and artists
- Discover how the Reformation changed religious life in Europe

Objectives derived from Pearson Education, Inc. © Pearson Education, Inc., publishing as Pearson Prentice Hall. All rights reserved.

Lesson 6: The Age of Exploration

Objectives:
- Discover why Europeans set out to explore the world in the 1400s
- Learn how the Portuguese reached India by sailing east and how Columbus reached the Americas by sailing west
- Find out how Magellan's expedition sailed all the way around the world

Objectives derived from Pearson Education, Inc. © Pearson Education, Inc., publishing as Pearson Prentice Hall. All rights reserved.

Lesson 7: The Age of Powerful Monarchs

Objectives:
- Learn about absolute rule in France
- Find out why the reign of Queen Elizabeth I was a golden age in England
- Discover the accomplishments of strong rulers in Spain and Russia

Objectives derived from Pearson Education, Inc. © Pearson Education, Inc., publishing as Pearson Prentice Hall. All rights reserved.

Lesson 8: Conquests in the Americas and Africa (two-day lesson)

Objectives:
- Discover how Spanish conquistadors conquered great civilizations in the Americas
- Find out why the African slave trade developed and what its effects were

Objectives derived from Pearson Education, Inc. © Pearson Education, Inc., publishing as Pearson Prentice Hall. All rights reserved.

Lesson 9: The Enlightenment

Objectives:
- Find out about the Age of Reason and how it grew out of the Renaissance and the Scientific Revolution
- Explore the Enlightenment idea of natural rights
- Learn how the French thinkers called philosophes contributed to the Enlightenment

Objectives derived from Pearson Education, Inc. © Pearson Education, Inc., publishing as Pearson Prentice Hall. All rights reserved.

Lesson 10: Political Revolutions

Objectives:
- Learn how a power struggle between English kings and Parliament led to the creation of a limited, constitutional monarchy
- Find out how the American Revolution put Enlightenment ideas into practice
- Discover how the French Revolution ended the monarchy in France

Objectives derived from Pearson Education, Inc. © Pearson Education, Inc., publishing as Pearson Prentice Hall. All rights reserved.

Lesson 11: The Industrial Revolution

Objectives:
Lesson 12: Nationalism and Imperialism (three-day lesson)

Objectives:
- Learn how Napoleon rose to power in France and conquered much of Europe
- Understand the growth of nationalism in Europe
- Find out how imperialist European nations gained control over much of the world

Lesson 13: World War I and the Russian Revolution

Objectives:
- Examine the causes and effects of World War I and the Russian Revolution

Lesson 14: The Great Depression and World War II

Objectives:
- Find out about the Great Depression
- Discover the ways in which World War II affected the world

Lesson 15: The Postwar World

Objectives:
- Learn how the Cold War pitted the United States against the Soviet Union
- Discover how dozens of former colonies gained independence

Lesson 16: The World Today (two-day lesson)

Objectives:
- Learn how modern technology has transformed the world
- Explore how migration, trade, and closer economic ties have linked different parts of the world
- Consider the new challenges that the world will face during your lifetime

Lesson 17: Focus on History, Part II Unit Review

Objectives:
- Review for the unit test

Lesson 18: Focus on History, Part II Unit Test

Unit 3: Focus on Geography, Part I

In this unit, you will begin to explore the study of geography. You will learn about the five themes of geography and discover the tools geographers use. You will also examine the planet Earth as well as climate, weather, and vegetation. Finally, you will look at aspects of human geography, including population, migration, and economic and political systems.

Objectives:
- Describe the five themes of geography and geographers' tools
- Explain planet Earth's structure, climate, and vegetation
Lesson 1: The Five Themes of Geography

Objectives:
- Learn about the study of Earth
- Discover five ways to look at Earth

Objectives derived from Pearson Education, Inc. © Pearson Education, Inc., publishing as Pearson Prentice Hall. All rights reserved.

Lesson 2: The Geographer's Tools (two-day lesson)

Objectives:
- Find out how maps and globes show information about Earth's surface
- See how mapmakers show Earth's round surface on flag maps
- Learn how to read maps

Objectives derived from Pearson Education, Inc. © Pearson Education, Inc., publishing as Pearson Prentice Hall. All rights reserved.

Lesson 3: Our Planet, Earth

Objectives:
- Learn about Earth's movement in relation to the sun
- Explore seasons and latitude

Objectives derived from Pearson Education, Inc. © Pearson Education, Inc., publishing as Pearson Prentice Hall. All rights reserved.

Lesson 4: Forces Shaping Earth

Objectives:
- Learn about the planet Earth
- Explore the forces inside Earth
- Explore the forces on Earth's surface

Objectives derived from Pearson Education, Inc. © Pearson Education, Inc., publishing as Pearson Prentice Hall. All rights reserved.

Lesson 5: Climate and Weather

Objectives:
- Learn about weather and climate
- Explore latitude, landforms, and precipitation
- Discover how oceans affect climate

Objectives derived from Pearson Education, Inc. © Pearson Education, Inc., publishing as Pearson Prentice Hall. All rights reserved.

Lesson 6: How Climate Affects Vegetation (three-day lesson)

Objectives:
- Investigate the relationship between climate and vegetation
- Explore Earth's vegetation regions
- Study vertical climate zones

Objectives derived from Pearson Education, Inc. © Pearson Education, Inc., publishing as Pearson Prentice Hall. All rights reserved.

Lesson 7: Population

Objectives:
- Learn about population distribution
- Explore population density
- Investigate population growth

Objectives derived from Pearson Education, Inc. © Pearson Education, Inc., publishing as Pearson Prentice Hall. All rights reserved.

Lesson 8: Migration

Objectives:
- Learn about migration, or people's movement from one region to another
Lesson 9: Economic Systems

Objectives:
- Examine different kinds of economies
- Investigate levels of economic development
- Study global trade patterns

Lesson 10: Political Systems (two-day lesson)

Objectives:
- Examine different types of states
- Investigate types of government
- Learn about alliances and international organizations

Lesson 11: Focus on Geography, Part I Unit Review

Objectives:
- Review for the unit test

Lesson 12: Focus on Geography, Part I Unit Test

Unit 4: Focus on Geography, Part II

In this unit, you will continue your study of geography. You will take a closer look at the relationship between humans and the Earth. You will explore culture, society, and cultural change. You will also learn about natural resources, land use, and people’s effect on the environment.

Objectives:
- Explore culture, society and cultural change
- Describe Earth’s natural resources and energy
- Explain humans’ land use and their effect on the environment

Lesson 1: Understanding Culture

Objectives:
- Learn about culture
- Explore how culture has developed

Lesson 2: Culture and Society

Objectives:
- Learn how people are organized into groups
- Investigate language
- Explore the role of religion

Lesson 3: Cultural Change (two-day lesson)

Objectives:
- Explore how cultures change
- Learn how ideas spread from one culture to another

Lesson 4: Natural Resources

Objectives:
- Learn about natural resources

Reach Cyber Charter School Application

Appendix A.2.d Social Studies Course Guides

© 2016 Connections Education LLC. All rights reserved.
Lesson 5: Land Use (two-day lesson)

Objectives:
- Study the relation between land use and culture
- Investigate the relation between land use and economic activity
- Explore changes in land use

Lesson 6: People's Effect on the Environment (two-day lesson)

Objectives:
- Investigate how first-level activities affect the environment
- Explore how second and third-level activities affect the environment
SOCIAL STUDIES 7 B
Social Studies 7 B

In this course, the student will study the history, geography, and culture of the western hemisphere. Prentice Hall's World Studies: Western Hemisphere provides the basis for the course content. The student will complete a comprehensive study of the history, geography, and cultures of the United States, Canada, and the countries of Latin America. These countries will be studied with regard to their political divisions, natural resources, economies, population distribution, climates, and landforms. The student will also examine the relationship between human actions and conditions on Earth. The student will examine such current issues as overpopulation, poverty in developing nations, and problems plaguing cities. All of these issues are studied within the context of world geography.

Selections from Pearson Education materials are reprinted and adapted by arrangement with Pearson Education, Inc. © 2005 Pearson Education, Inc., publishing as Pearson Prentice Hall. All rights reserved.

Unit 1: Build a Regional Background: The U.S. and Canada

In this unit, you will begin your study of the United States and Canada. You will explore the geographical features of the countries of North America. You will also examine the histories of the United States and Canada, from European exploration to independence, to the status of world powers. Finally, you will learn about the cultures of the United States and Canada.

Objectives:
• Explain the physical geography of the United States and Canada and describe how geography affects the people of North America
• Trace the histories of the United States and Canada from European exploration to the present
• Describe the cultures of the United States and Canada

Lesson 1: Land and Water

Objectives:
• Learn where the United States and Canada are located
• Find out about the major landforms of the United States and Canada
• Explore major bodies of water that are important in the United States and Canada

Objectives derived from Pearson Education, Inc. © Pearson Education, Inc., publishing as Pearson Prentice Hall. All rights reserved.

Lesson 2: Climate and Vegetation

Objectives:
• Learn what climate zones the United States and Canada have
• Identify the natural vegetation zones of the United States and Canada

Objectives derived from Pearson Education, Inc. © Pearson Education, Inc., publishing as Pearson Prentice Hall. All rights reserved.

Lesson 3: Resources and Land Use (three-day lesson)

Objectives:
• Learn about the major resources of the United States
• Learn about the major resources of Canada

Objectives derived from Pearson Education, Inc. © Pearson Education, Inc., publishing as Pearson Prentice Hall. All rights reserved.

Lesson 4: The Arrival of the Europeans

Objectives:
• Learn who the first Americans were
• Discover the effects the arrival of Europeans had on Native Americans
• Find out how the United States won its independence from Great Britain

Objectives derived from Pearson Education, Inc. © Pearson Education, Inc., publishing as Pearson Prentice Hall. All rights reserved.

Lesson 5: Growth and Conflict in the United States

Objectives:

Appendix A.2.d Social Studies Course Guides
Lesson 6: The U.S. on the Brink of Change

Objectives:
• Explore what happened in the United States from 1865 to 1914
• Find out what happened during the World Wars
• Explore the challenges the United States faces at home and abroad

Lesson 7: The History of Canada

Objectives:
• Learn about why France and Britain were rivals in Canada
• Discover how Canada became an independent nation
• Explore how Canada became a world power in the 1900s

Lesson 8: The United States and Canada Today

Objectives:
• Identify the environmental concerns the United States and Canada share today
• Find out about the economic ties the United States and Canada have to each other and to the world

Lesson 9: A Heritage of Diversity and Exchange (two-day lesson)

Objectives:
• Explain how cultural patterns developed in the United States and Canada
• Discuss the cultural patterns that exist today in the United States and Canada

Lesson 10: The United States: A Nation of Immigrants

Objectives:
• Learn about the people of the United States
• Find out about the culture of the United States

Lesson 11: The Canadian Mosaic (two-day lesson)

Objectives:
• Find out about the people of Canada
• Learn about Canadian culture

Lesson 12: The U.S. and Canada Unit 1 Review

Objectives:
• Review for the unit test

Lesson 13: The U.S. and Canada Unit 1 Test

Unit 2: Focus on Countries: The U.S. and Canada

In this unit, you will continue your study of the United States and Canada. You will take a more in-depth look at the geography and history of four regions of the United States: the
Northeast, the South, the Midwest, and the West. You will also explore geographical and cultural characteristics of Canada’s provinces and territories, specifically Ontario and Quebec, the Prairie Provinces, British Columbia, the Atlantic Provinces, and the Northern Territories.

Objectives:
- Describe the geography, culture, and history of the United States’ Northeast, South, Midwest, and West
- Explain the geography, history, and culture of Canada’s provinces and territories

Lesson 1: The Northeast: An Urban Center

Lesson 2: The South: The Growth of Industry

Objectives:
- Learn how the South’s land is important to its economy
- Read about how the growth of industry is changing the South

Lesson 3: The Midwest: Leaving the Farm

Objectives:
- Read about how technology is changing life on farms
- Learn how changes in farming are affecting the development of cities

Lesson 4: The West: Using and Preserving Resources (three-day lesson)

Objectives:
- Learn about the natural resources of the West
- Read about the challenges facing the urban West

Lesson 5: Ontario and Quebec: Bridging Two Cultures

Objectives:
- Read about the seat of the Canadian government in Ontario
- Learn about the French cultural influence in Quebec

Lesson 6: The Prairie Provinces: Canada’s Breadbasket

Objectives:
- Learn why many immigrants came to the Prairie Provinces in the 1800s
- Read about how Canadians celebrate their cultural traditions

Lesson 7: British Columbia: Economic and Cultural Changes

Objectives:
- Find out about the people and cultures of the Canadian West
- Learn what the economy and culture of British Columbia are like

Lesson 8: The Atlantic Provinces: Relying on the Sea (two-day lesson)

Objectives:
- Learn what life is like on the Atlantic coast
- Discover how maritime industries affect the provinces

Lesson 9: The Northern Territories: New Frontiers (two-day lesson)
Objectives:
• Discover what life is like for people in Canada's far north
• Find out about the remote region of the Yukon Territory
• Understand how the new territory of Nunavut was formed

Lesson 10: The U.S. and Canada Unit 2 Review

Objectives:
• Review for the unit test

Lesson 11: The U.S. and Canada Unit 2 Test

Unit 3: Build a Regional Background: Latin America

In this unit you will begin your study of Latin America. You will explore the geographical features of the countries of Latin America. You will also examine the histories of South and Central America, from the height of their early civilizations, to European exploration and conquest, to the achievement of independence. Finally, you will learn about the cultures of Mexico, the Caribbean, and Central and South America.

Objectives:
• Explain the physical geography of Latin America and describe how geography affects the people of Central and South America
• Trace the history of Latin America before European exploration up to the present
• Describe the cultures of Latin American countries

Lesson 1: Land and Water

Objectives:
• Learn where Latin America is located
• Discover the important landforms of Latin America
• Find out how Latin America's waterways have affected the region

Lesson 2: Climate and Vegetation

Objectives:
• Find out what kinds of climates Latin America has
• Learn what factors influence climate in Latin America
• Understand how climate and vegetation influence the ways people live

Lesson 3: Resources and Land Use (two-day lesson)

Objectives:
• Find out what Latin America's most important natural resources are
• Learn why depending on a one-resource economy has been a problem for Latin American nations

Lesson 4: Early Civilizations of Middle America

Objectives:
• Find out what Mayan civilization was like
• Learn how the Aztecs built their empire and understand what kind of society they created

Lesson 5: The Incas: People of the Sun

Objectives:
• Find out how the Incas created their empire
• Understand what Incan civilization was like
- Learn how the descendants of the Incas live today

**Lesson 6: European Conquests**

Objectives:
- Learn why Europeans sailed to the Americas
- Find out how the conquistadors conquered the Aztecs and the Incas
- Understand how the Spanish empire was organized and how colonization affected the Americas

**Lesson 7: Independence (two-day lesson)**

Objectives:
- Learn what events inspired revolutions in Latin America
- Find out how Mexico gained its independence
- Discover how Bolivar and San Martin helped bring independence to South America

**Lesson 8: From Past to Present (two-day lesson)**

Objectives:
- Learn how Latin American caudillos and foreign involvement contributed to the region’s troubled past
- Find out how Latin American nations are struggling to improve their economies and the welfare of their people

**Lesson 9: Cultures of Mexico and Central America**

Objectives:
- Discover the cultural heritage of the people of Middle America
- Find out why many people in this region have been moving away from the countryside

**Lesson 10: The Cultures of the Caribbean (three-day lesson)**

Objectives:
- Find out what ethnic groups make up the people of the Caribbean
- Learn how the different cultures of the region blended to create Caribbean food, music, and celebrations

**Lesson 11: The Cultures of South America**

Objectives:
- Find out what ethnic groups are represented in the four cultural regions of South America
- Learn what life is like in the countryside and in the cities of South America

**Lesson 12: Latin America Unit Review**

Objectives:
- Review for the unit test

**Lesson 13: Latin America Unit 3 Test**
Unit 4: Focus on Countries: Latin America

In this unit, you will continue your study of Latin America. You will take a more in-depth look at the geography and history of several countries that make up Latin America. You will study the Central American nations of Mexico, Guatemala, and Panama. You will also explore the history and current events affecting the people in the Caribbean countries of Cuba, Haiti, and Puerto Rico. Finally, you will examine the South American nations of Brazil, Peru, Chile, and Venezuela.

Objectives:
- Describe the geography, culture, and history of Central America
- Explain the geography, culture, and history of the Caribbean
- Explore the geography, culture, and history of South America

Lesson 1: Mexico: Moving to the City

Objectives:
- Learn what life is like for people in rural Mexico
- Find out why many Mexicans have been moving from the countryside to the cities
- Understand why the growth of Mexico City presents challenges for the people and the environment

Lesson 2: Guatemala: Descendants of an Ancient People (two-day lesson)

Objectives:
- Learn why there is a struggle for land in Guatemala
- Find out how the Mayas lost their land
- Discover how groups are working to improve the lives of Guatemala's indigenous people

Lesson 3: Panama: An Important Crossroads (two-day lesson)

Objectives:
- Find out why people wanted to build a canal across the Isthmus of Panama
- Learn how the Panama Canal was built
- Understand how the canal has affected the nation of Panama

Lesson 4: Cuba: Clinging to Communism (three-day lesson)

Objectives:
- Find out how Cuba’s history led to thousands of Cubans leaving their homeland
- Discover how Cuban exiles feel about their lives in the United States and about their homeland
- Learn what changes have recently come to Cuba

Lesson 5: Haiti: A Democracy in Progress

Objectives:
- Find out how democracy has been threatened in Haiti
- Learn what life is like for the people of Haiti, both in the countryside and in the cities

Lesson 6: Puerto Rico: An American Commonwealth (two-day lesson)

Objectives:
Lesson 7: Brazil: Geography Shapes a Nation

Objectives:
- Learn about the geography of Brazil
- Discover why the rain forests are important to Brazil and to the whole world
- Find out what groups make up the people of Brazil and how they live

Lesson 8: Peru: An Ancient Land Looks to the Future

Objectives:
- Learn how geography has affected the way people live in the three regions of Peru
- Discover what life is like in the cities and towns of the Altiplano

Lesson 9: Chile: Land of Contrasts

Objectives:
- Find out how the geography of Chile creates regions where people live very differently
- Learn how Chile's people live and what products they produce
- Find out how Chile restored democracy

Lesson 10: Venezuela: Oil Powers the Economy (two-day lesson)

Objectives:
- Find out how Venezuela was made wealthy by oil
- Learn how the ups and downs of oil prices affected the economy and people of Venezuela
- Understand how Venezuela is changing

Lesson 11: Latin America Unit Review

Objectives:
- Review for the unit test

Lesson 12: Latin America Unit 4 Test
SOCIAL STUDIES 8 A
Social Studies 8 A

This course offers a broad survey of United States history from the pre-colonial period to the War of 1812. The course examines U.S. political, economic, and social history from a chronological point of view. Throughout the course, the student will make connections between historical events and their impact on the American people and landscape. The student will enhance his social studies skills by completing activities that teach understanding primary sources, reading time lines and graphs, comparing and contrasting, recognizing bias, and more. Lessons are designed to develop the student's abilities to question, read, analyze, interpret, and evaluate different forms of information. The student will also practice geography skills as he explores the evolution of America's geography and its historical impact. Glencoe's The American Republic to 1877 provides the basis for instruction.

The student's grade in Social Studies will include periodic assessments that include quizzes, unit tests, and portfolio assignments. Enrichment activities are optional and will never be assessed.

Constitution Day (L)

Objectives:
- Explain why Americans recognize Constitution Day

Unit 1: Different Worlds Meet

In this unit, you will learn about the people and places that existed in the Americas before the arrival of Europeans. You will examine how these civilizations were affected by European exploration and conquest of the continent. You will also explore the influences of religion and technology on Europeans' exploration of the globe. Finally, you will study the roles of Spain and Portugal on the New World and learn about early European settlements in North America.

Objectives:
- Describe the cultures that lived in North America prior to the arrival of Europeans
- Examine how the civilizations of the Americas were affected by European exploration and conquest
- Describe the factors that brought about European exploration of the globe
- Explain Spain and Portugal's influences on the civilizations of the Americas
- Describe early European settlements in North America

Lesson 1: Early Peoples

Objectives:
- Understand how the first people arrived in the Americas
- Cite the discovery that changed the lives of the early Native Americans

Objectives derived from The McGraw-Hill Companies, Inc. © The McGraw-Hill Companies, Inc., publishing as Glencoe. All rights reserved.

Lesson 2: Cities and Empires

Objectives:
- Compare the achievements of the Maya, Aztec, and Inca civilizations
- Evaluate the role of religion in early American empires
- Explore how native cultures developed customs based on their physical environments

Objectives derived from The McGraw-Hill Companies, Inc. © The McGraw-Hill Companies, Inc., publishing as Glencoe. All rights reserved.

Lesson 3: North American Peoples (two-day lesson)

Objectives:
- Explore what early people lived in North America
- Examine how different Native American groups adapted to their environments

Objectives derived from The McGraw-Hill Companies, Inc. © The McGraw-Hill Companies, Inc., publishing as Glencoe. All rights reserved.

Lesson 4: A Changing World
Objectives:
- Examine how technology made long sea voyages possible
- Explore the factors that allowed great civilizations in Africa to flourish

Lesson 5: Early Exploration

Objectives:
- Explain Portugal's leadership roles in exploration
- Understand Columbus's plan for sailing to Asia

Lesson 6: Spain in America (four-day lesson)

Objectives:
- Evaluate the decline of the Aztec and Inca empires in the Americas
- Explore how Spain governed its empire in the Americas

Lesson 7: Exploring North America (three-day lesson)

Objectives:
- Explain how the Protestant Reformation affected North America
- Evaluate why the activities of early traders encouraged exploration

Lesson 8: Different Worlds Meet Virtual Field Trip

Objectives:
- Explore topics in U.S. history through Web research

Lesson 9: Different Worlds Meet Unit Review and Test (two-day lesson)

Objectives:
- Review material in preparation for the unit test
- Take the unit test

Unit 2: Colonial Settlement

In this unit, you will learn how North America was colonized by European nations. You will explore what life was like in Early English settlements and compare and contrast the colonies in different regions of North America. You will also study the impact of government, religion, and culture on colonists in America. Finally, you will examine the impact of the French and Indian War on England and France's struggle for control of the continent.

Objectives:
- Describe what Early English settlements in North America were like
- Compare and contrast the colonies in different regions of North America
- Examine the impact of government, religion, and culture on English colonists in America
- Describe the impact of the French and Indian War on England and France's struggle for control of the continent

Lesson 1: Early English Settlements

Objectives:
- Identify the crop that saved the people of Jamestown
- Explain how the colonists received political rights

Lesson 2: New England Colonies

Objectives:
- Explain why the Pilgrims and the Puritans came to America
Lesson 3: Middle Colonies

Objectives:
- Explain why the Middle Colonies had the most diverse populations in colonial America
- Identify America's first town planner

Lesson 4: Southern Colonies (two-day lesson)

Objectives:
- Understand why the Southern Colonies were established
- Compare and contrast France’s colony in North America with the English colonies

Lesson 5: Life in the Colonies (three-day lesson)

Objectives:
- Define the triangular trade and explain how it affected American society
- Understand how the regions in the colonies differed from one another
- Understand what the use of enslaved workers increased in the colonies

Lesson 6: Government, Religion, and Culture

Objectives:
- Understand why the Navigation Acts angered the colonies
- Identify the people who had the right to vote in colonial legislatures

Lesson 7: France and Britain Clash

Objectives:
- Explain how wars in Europe spread to the American colonies
- Understand the purpose of the Albany Plan of Union

Lesson 8: The French and Indian War (two-day lesson)

Objectives:
- Explain how British fortunes improved after William Pitt took over direction of the war
- Describe how Chief Pontiac united his people to fight for their land

Lesson 9: Colonial Settlement Virtual Field Trip

Objectives:
- Explore topics in U.S. history through Internet research

Lesson 10: Colonial Settlement Unit Review and Test (two-day lesson)

Objectives:
- Review material in preparation for the unit test

Unit 3: Creating a Nation
In this unit, you will explore the creation of the United States as a new nation. You will examine the reasons colonists demanded independence from England and why they were willing to wage a war to achieve freedom from King George III. You will take an in-depth look at the Revolutionary War and learn about important people of that time. You will also learn about the plans of government the nation's founders experimented with and how they finally agreed on the Constitution. Finally, you will examine the Constitution, the federal government of the United States, and read about the rights and responsibilities of American citizens.

Objectives:
- Explore the origins of the American Revolution and understand the colonists' complaints against England
- Describe the major battles and leaders of the Revolutionary War
- Describe the Articles of Confederation and explain how the nation's founders agreed on the Constitution
- Understand aspects of the United States government, including the Constitution and citizenship

Lesson 1: Taxation without Representation

Objectives:
- Describe why the British had problems in North America after the French and Indian War
- Explain how the colonists responded to unpopular British laws

Lesson 2: Building Colonial Unity

Objectives:
- Identify the causes of the Boston Massacre
- Explain how Britain tried to maintain its control over the colonies

Lesson 3: A Call to Arms

Objectives:
- Identify the events that took place at the Continental Congress
- Describe the early skirmishes of the American Revolution

Lesson 4: Moving Toward Independence (two-day lesson)

Objectives:
- Understand what happened at the Second Continental Congress
- Explore why the Declaration of Independence was drafted

Lesson 5: The Early Years

Objectives:
- Understand why some Americans supported the British
- Explain how the Battle of Saratoga marked a turning point in the war

Lesson 6: The War Continues

Objectives:
- Understand why other nations helped the Patriots
- Describe how Washington’s troops survived the winter at Valley Forge
- Recognize the challenges Americans faced at home as a result of the war

Lesson 7: The War Moves West and South
Lesson 8: The War is Won (two-day lesson)

Objectives:
- Describe how George Washington changed his military strategy
- Explain how the Americans won the Revolutionary War despite many disadvantages

Lesson 9: The Articles of Confederation (five-day lesson)

Objectives:
- Examine how the weaknesses of the Articles led to instability
- Explain how the Confederation Congress dealt with the western lands

Lesson 10: Convention and Compromise

Objectives:
- Describe how the Constitutional Convention broke the deadlock over the form the new government would take
- Understand how the delegates answered the question of representation

Lesson 11: A New Plan of Government (three-day lesson)

Objectives:
- Understand the roots of the Constitution
- Explain how the Constitution limits the power of government

Lesson 12: The Constitution

Objectives:
- Explain why the Constitution is the nation's most important document
- Identify the goals of the Constitution
- Describe the principles that form the basis of the Constitution

Lesson 13: The Federal Government

Objectives:
- Explain the goals of the three branches of government
- Identify the powers of the three branches of government

Lesson 14: Citizens' Rights and Responsibilities

Objectives:
- Identify where the rights of U.S. citizens come from
- Explain the rights and responsibilities of U.S. citizens

Lesson 15: Creating a Nation Virtual Field Trip

Objectives:
- Explore topics in U.S. history through web research
Lesson 16: Creating a Nation Unit Review and Test (two-day lesson)

Objectives:
- Review material in preparation for the unit test

Unit 4: The New Republic Part I

In this unit, you will explore the early years of the American Republic up to 1825. You will learn about early challenges and conflicts faced by the new Union. You will examine the development of the first political parties in the United States. You will also read about the War of 1812 and military struggles with Native Americans as settlers moved west. You will study the factors that made westward expansion possible, such as the Louisiana Purchase, economic growth, and technological innovation. Finally, you will look at the development of regional differences in the United States and examine the foreign policies the nation adopted in the early nineteenth century.

Objectives:
- Examine the role of the first president and the development of political parties in the United States
- Describe the causes and consequences of the War of 1812
- Explain the effect the westward expansion of the United States had on Native Americans
- Describe the factors that made it possible for American settlers to move west
- Explain regional differences in the United States and the nation’s early foreign policy

Lesson 1: The First President

Objectives:
- Describe what actions were taken to launch the new government
- Explain how Hamilton proposed to strengthen the economy

Objectives derived from The McGraw-Hill Companies, Inc. © The McGraw-Hill Companies, Inc., publishing as Glencoe. All rights reserved.

Lesson 2: Early Challenges

Objectives:
- Understand how the federal government asserted its power in the West
- Examine how the United States tried to stay out of European conflicts

Objectives derived from The McGraw-Hill Companies, Inc. © The McGraw-Hill Companies, Inc., publishing as Glencoe. All rights reserved.

Lesson 3: The First Political Parties (two-day lesson)

Objectives:
- Describe how political parties got started and what positions they supported
- Explain how John Adams and Thomas Jefferson became candidates of opposing parties in the election of 1796

Objectives derived from The McGraw-Hill Companies, Inc. © The McGraw-Hill Companies, Inc., publishing as Glencoe. All rights reserved.

Lesson 4: The Republicans Take Power

Objectives:
- Discuss how the election of 1800 was resolved
- Explain how the Supreme Court was strengthened

Objectives derived from The McGraw-Hill Companies, Inc. © The McGraw-Hill Companies, Inc., publishing as Glencoe. All rights reserved.

Lesson 5: The Louisiana Purchase (two-day lesson)

Objectives:
- Discuss how the United States expanded in the early 1800s
- Review the expeditions of explorers such as Lewis and Clark

Objectives derived from The McGraw-Hill Companies, Inc. © The McGraw-Hill Companies, Inc., publishing as Glencoe. All rights reserved.

Lesson 6: A Time of Conflict (three-day lesson)
Lesson 7: The War of 1812

Objectives:
- Explain why Tecumseh built a Native American confederacy
- Discuss why the War Hawks wanted to go to war

Lesson 8: The New Republic 1789–1825 Unit Review and Test (two-day lesson)

Objectives:
- Review material in preparation for the unit test
SOCIAL STUDIES 8 B
Social Studies 8 B

This course offers a broad survey of United States history from the end of the War of 1812 to the Reconstruction Era. The course examines U.S. political, economic, and social history from a chronological point of view. Throughout the course, the student will make connections between historical events and their impact on the American people and landscape. The student will enhance his social studies skills by completing activities that teach understanding primary sources, reading time lines and graphs, comparing and contrasting, recognizing bias, and more. Lessons are designed to develop the student's abilities to question, read, analyze, interpret, and evaluate different forms of information. The student will also practice geography skills as he explores the evolution of America's geography and its historical impact. Glencoe's *The American Republic to 1877* provides the basis for instruction.

The student's grade in Social Studies will include periodic assessments that include quizzes, unit tests, and portfolio assignments. Enrichment activities are optional and will never be assessed.

Unit 1: The New Republic Part II

In this unit you will explore the early years of the American Republic up to 1825. You will learn about early challenges and conflicts faced by the new Union. You will examine the development of the first political parties in the United States. You will also read about the War of 1812 and military struggles with Native Americans as settlers moved west. You will study the factors that made westward expansion possible, such as the Louisiana Purchase, economic growth, and technological innovation. Finally, you will look at the development of regional differences in the United States and examine the foreign policies the nation adopted in the early nineteenth century.

Objectives:
- Examine the role of the first president and the development of political parties in the United States
- Describe the causes and consequences of the War of 1812
- Explain the effect the westward expansion of the United States had on Native Americans
- Describe the factors that made it possible for American settlers to move west
- Explain regional differences in the United States and the nation's early foreign policy

Lesson 1: Economic Growth

Objectives:
- Describe how the Industrial Revolution began in the United States
- Describe how the United States changed as it became more economically independent

Objectives derived from The McGraw-Hill Companies, Inc. © The McGraw-Hill Companies, Inc., publishing as Glencoe. All rights reserved.

Lesson 2: Westward Bound

Objectives:
- Explain how transportation improved in the early 1800s
- Understand how western settlements affected the nation's economy and politics

Objectives derived from The McGraw-Hill Companies, Inc. © The McGraw-Hill Companies, Inc., publishing as Glencoe. All rights reserved.

Lesson 3: Unity and Sectionalism (two-day lesson)

Objectives:
- Describe why sectional differences grew in the 1820s
- Identify the effect the Monroe Doctrine had on foreign policy

Objectives derived from The McGraw-Hill Companies, Inc. © The McGraw-Hill Companies, Inc., publishing as Glencoe. All rights reserved.

Lesson 4: The New Republic Virtual Field Trip

Objectives:
- Explore topics in U.S. history through Internet research
Lesson 5: The New Republic Unit Review and Test (two-day lesson)

Objectives:
• Review material in preparation for the unit test

Unit 2: The Growing Nation

In this unit, you will continue to explore the growth of the United States between 1820 and 1860. You will examine challenges and changes to the fragile political system. You will also read about America's continued westward expansion, as well as the effect this had on Native Americans. You will examine the United States' acquisition of new states and territories, including the Oregon Country, Texas, California, and Utah. You will also study the causes and consequences of the United States' war with Mexico. You will compare and contrast the northern and southern regions of the country. Finally, you will examine calls for social reform in the mid-nineteenth century and how ideas about education, women, and slavery changed during this period.

Objectives:
• Describe political and social challenges faced by the United States between 1820 and 1860
• Explain how the United States continued to grow and acquire new states and territories
• Describe the causes and consequences of the Mexican War
• Compare and contrast the North and South

Lesson 1: Jacksonian Democracy

Objectives:
• Explain why the nation's sixth president was chosen by the House of Representatives
• Identify the changes President Jackson brought to the American political system

Objectives derived from The McGraw-Hill Companies, Inc. © The McGraw-Hill Companies, Inc., publishing as Glencoe. All rights reserved.

Lesson 2: Conflicts Over Land (two-day lesson)

Objectives:
• Understand how Native Americans were forced off their lands in the Southeast
• Explain how President Jackson defied the Supreme Court

Objectives derived from The McGraw-Hill Companies, Inc. © The McGraw-Hill Companies, Inc., publishing as Glencoe. All rights reserved.

Lesson 3: Jackson and the Bank (two-day lesson)

Objectives:
• Examine the reasons why Jackson wanted to destroy the Bank of the United States
• Understand why the Whigs came to power in 1840

Objectives derived from The McGraw-Hill Companies, Inc. © The McGraw-Hill Companies, Inc., publishing as Glencoe. All rights reserved.

Lesson 4: The Oregon Country

Objectives:
• Explain why large numbers of settlers headed for the Oregon country
• Understand how the idea of Manifest Destiny contributed to the nation's growth

Objectives derived from The McGraw-Hill Companies, Inc. © The McGraw-Hill Companies, Inc., publishing as Glencoe. All rights reserved.

Lesson 5: Independence for Texas

Objectives:
• Understand why problems arose between the Mexican government and American settlers in Texas
• Describe how Texas achieved independence from Mexico and later became a state
Lesson 6: War with Mexico

Objectives:
- Explain why Americans began to settle in the Southwest
- Describe how the United States acquired New Mexico and California

Lesson 7: New Settlers in California and Utah (two-day lesson)

Objectives:
- Understand how the hopes of getting rich quick drew thousands of people to California
- Describe how the search for religious freedom led to the settlement of Utah

Lesson 8: The North’s Economy

Objectives:
- Understand how advances in technology shaped the economy of the North
- Explain how new kinds of transportation and communication spurred economic growth

Lesson 9: The North’s People (two-day lesson)

Objectives:
- Summarize how working conditions in industries changed
- Compare and contrast how immigration affected American economic, political, and cultural life

Lesson 10: Southern Cotton Kingdom

Objectives:
- Explore how settlement expanded in the South
- Determine why the economy of the South relied on agriculture

Lesson 11: The South’s People (two-day lesson)

Objectives:
- Describe what life was like on Southern plantations
- Understand how enslaved workers maintained strong family and cultural ties

Lesson 12: Social Reform

Objectives:
- Understand how religious and philosophical ideas inspired various reform movements
- Explain why educational reformers thought all citizens should attend school

Lesson 13: The Abolitionists (three-day lesson)
Lesson 14: The Women's Movement (three-day lesson)

Objectives:
• Examine how the antislavery and the women's rights movement were related
• Evaluate what progress women made toward equality during the 1800s

Lesson 15: The Growing Nation Virtual Field Trip

Objectives:
• Explore topics in U.S. history through Internet research

Lesson 16: The Growing Nation Unit Review and Test (two-day lesson)

Objectives:
• Review material in preparation for the unit test

Unit 3: Civil War and Reconstruction

In this unit, you will explore the history of the United States from 1846 to 1896. You will examine how different ideas about slavery and politics worsened regional tensions in the nation. You will also explore why many southern states seceded and how their actions and the government's response led to the Civil War. You will study what life was like during the Civil War and compare the Union's and Confederacy's goals and strategies. You will read about how the Union won the Civil War and explore plans for healing the nation. Finally, you will examine the period of Reconstruction and describe its effects on both the North and the South.

Objectives:
• Describe how differing ideas about politics and slavery contributed to sectional tensions
• Explain why some southern states seceded and how the federal government responded
• Describe what life was like during the Civil War and identify major battles and leaders on both sides
• Explain how the Union won the Civil War and explore plans for healing the nation
• Describe the period of Reconstruction and its effects on the newly united nation

Lesson 1: Slavery and the West (two-day lesson)

Objectives:
• Describe how the debate over slavery was related to the admission of new states
• Understand what the Compromise of 1850 accomplished

Lesson 2: A Nation Dividing

Objectives:
• Explain how the Fugitive Slave Act and the Kansas-Nebraska Act further divided the North and South
• Describe how popular sovereignty led to violence

Lesson 3: Challenges to Slavery (two-day lesson)

Objectives:
• Understand why the Republican Party formed
• Describe how the Dred Scott decision, the Lincoln-Douglas debates, and John Brown's raid affected Americans
Lesson 4: Secession and War (two-day lesson)

Objectives:
- Explain how the 1860 election led to the breakup of the Union
- Understand why secession led to the Civil War

Lesson 5: The Two Sides

Objectives:
- Explain why the border states played an important part in the war
- Compare Northern and Southern populations, industries, resources, and war aims

Lesson 6: Early Years of the War

Objectives:
- Identify Northern and Southern successes and failures in the early years of war
- Explain how the North's naval blockade hurt the South

Lesson 7: A Call for Freedom

Objectives:
- Describe why Lincoln issued the Emancipation Proclamation
- Understand the role that African Americans played in the Civil War

Lesson 8: Life During the Civil War (two-day lesson)

Objectives:
- Describe what life was like for soldiers during the Civil War
- Identify the role that women played in the war
- Compare how the war affected the economies of the North and the South

Lesson 9: The Way to Victory (two-day lesson)

Objectives:
- Identify the battles that turned the tide of the war in 1863
- Cite the events that led to the South's surrender in 1865

Lesson 10: Reconstruction Plans (three-day lesson)

Objectives:
- Compare Lincoln's plan for Reconstruction and the plan of the Radical Republicans
- Explain Andrew Johnson's proposal for handling Reconstruction

Lesson 11: Radicals in Control

Objectives:
- Identify what some southerners did to deprive freed people of their rights, and explain how Congress responded
- Cite the main features of Radical Reconstruction
Lesson 12: The South During Reconstruction

Objectives:
- Identify what groups participated in the South's Reconstruction
- Explain how Southern life changed during Reconstruction

Lesson 13: Change in the South (three-day lesson)

Objectives:
- Cite the changes that occurred in the South during the last years of Reconstruction
- Describe how African Americans were denied their rights

Lesson 14: Civil War and Reconstruction Virtual Field Trip

Objectives:
- Explore topics in U.S. history through Web research

Lesson 15: Civil War and Reconstruction Unit Review and Test (two-day lesson)

Objectives:
- Review material in preparation for the unit test

Unit 4: Modern America Emerges

In this unit, you will preview and explore the history of the United States from 1877 to the present. You will examine the continued exploration of the West and the effect of the United States' expansion on Native Americans. You will also explore how the United States began to expand its influence in world affairs. You will study how technological advances and immigration influenced life in late nineteenth-century America. You will read about calls for political and social reform. You will also explore the causes and effects of World War I, World War II, and the Cold War period. Finally, you will examine modern America and its war on terrorism.

Objectives:
- Describe the expansion of America into the west and around the globe
- Describe political, social, and technological changes in late nineteenth-century America
- Explain the causes and consequences of World War I, World War II, and the Cold War
- Describe major events in American history since the Cold War up to and including the war on terrorism

Lesson 1: The Western Frontier

Objectives:
- Explain why settlers moved west
- Discuss the reasons why settlers came into conflict with Native Americans

Lesson 2: Invention and Industry

Objectives:
- Analyze how American cities and industries changed at the turn of the century
- Describe the challenges immigrants to the United States faced

Lesson 3: Reform at Home, Expansion Abroad
Lesson 4: World War I and Its Aftermath

Objectives:
- Understand what role the United States played in World War I
- Summarize how the nation changed during the 1920s

Lesson 5: Depression and a Second World War

Objectives:
- Explain how President Roosevelt responded to the Great Depression
- Understand the actions that led to the outbreak of World War II

Lesson 6: Turning Points

Objectives:
- Examine the ways the United States attempted to stop the spread of communism
- Review the actions African Americans took to secure their rights

Lesson 7: Modern America (two-day lesson)

Objectives:
- Analyze the ways in which the Watergate scandal affected the nation
- Summarize how the Cold War ended

Lesson 8: The War on Terrorism

Objectives:
- Describe how Americans responded to terrorism
- Discuss the actions the government took to fight terrorism
U.S. HISTORY A
United States History A

This is the first of two courses that comprise United States History. This course will explore the growth of American society and the emergence of the United States as a world power. The course covers the significant developments in America's past from Reconstruction to World War I with a brief review of early settlement, colonization, and the development of America as an independent nation. The student will focus on American political, economic, and social history from a chronological point of view. Activities in this course are designed to develop the student's abilities to question, read, analyze, interpret, and evaluate different forms of information, as well as to communicate his or her ideas to others. Geography skills will be interwoven in the lessons, as the student makes connections between the evolution of America's geography and its historical impact.

Unit 1: The Early American Republic

In this unit, you will review your knowledge of early American history by surveying key events from the Revolutionary War to the Civil War. You will investigate the causes of the American Revolution, including the influence of the Enlightenment. You will analyze America's founding documents. You will trace the growing sectionalism during the 1800s, ending in the Civil War. Finally, you will determine the effects of the Civil War and Reconstruction on the United States.

Objectives:
- Identify the influences on the founders of the United States
- Describe the effects of the Civil War and Reconstruction on the United States

Lesson 1: Conflict with Great Britain

Objectives:
- Explain the colonists' reaction to new taxes
- Describe the methods the colonists used to protest British taxes
- Understand the significance of the First Continental Congress in 1774

Lesson 2: The American Revolution (two-day lesson)

Objectives:
- Describe the Loyalists' view of the Patriots
- Assess why Congress declared independence and the ideas underlying the Declaration of Independence
- Explain how the war and the peace treaty affected minority groups and women
- Assess the impact of the American Revolution on other countries

Lesson 3: The Constitution (two-day lesson)

Objectives:
- Summarize the rival plans of government proposed at the Convention
- Describe the compromises made in order to reach agreement on the Constitution
- Summarize the arguments for and against ratification of the Constitution
- Explain the principles of the Constitution

Lesson 4: Enlightenment's Influence

Objectives:
- Describe the main philosophies of the Enlightenment
- Identify the influence of the Enlightenment on American colonists
- Identify influences of the Enlightenment in America's founding documents

Lesson 5: Sectional Differences

Objectives:
- Analyze why industrialization took root in the northern part of the United States
- Describe the impact of industrialization on northern life
- Analyze the reasons that agriculture and slavery became entrenched in the South
Lesson 6: Anti-Slavery Movement

Objectives:
• Describe the lives of enslaved African Americans in the 1800s
• Identify the leaders and tactics of the abolition movement
• Summarize the opposition to abolition

Lesson 7: The Union in Crisis (two-day lesson)

Objectives:
• Describe the events that led the North and the South to distrust each other
• Compare the perspectives of Northerners and Southerners on the events of the first half of the 1800s
• Identify the steps that led to the Southern states seceding and the outbreak of the Civil War

Lesson 8: The Civil War (two-day lesson)

Objectives:
• Describe the major turning points of the Civil War
• Analyze why Lincoln decided to issue the Emancipation Proclamation and what it achieved
• Analyze how the war changed the economy and society in the North and South
• Assess the impact of the Civil War on the North and South

Lesson 9: Reconstruction (two-day lesson)

Objectives:
• Explain why a plan was needed for Reconstruction of the South
• Discuss how freedmen adjusted to freedom and the South's new economic system
• Evaluate the successes and failures of Reconstruction

Lesson 10: The Early American Republic Portfolio (two-day lesson)

Objectives:
• Compare and contrast the United States in 1776 with the United States in 1870
• Support an opinion by using two or more specific facts

Lesson 11: The Early American Republic Unit Review

Objectives:
• Review key words from the unit's lessons
• Review key concepts from the unit's lessons

Lesson 12: The Early American Republic Unit Test

Unit 2: Industrialization of the United States

In this unit, you will study key historical events from the Gilded Age. Studying inventions, business practices and labor unions, you will trace the effects of the Second Industrial Revolution. You will learn about the effect of immigration and urbanization on America's landscape. You will examine the changes in the South and the West during this period, and growing political and social movements throughout the country.

Objectives:
• Describe ways that industrialization, immigration, and urbanization changed the United States
• Describe the events of American westward expansion

Lesson 1: Technology and Industrial Growth

Objectives:
• Analyze the factors that led to the industrialization of the United States in the late 1800s
Lesson 2: The Rise of Big Business

Objectives:
- Analyze different methods that businesses used to increase their profits
- Describe the public debate over the impact of big business
- Explain how the government took steps to block abuses of corporate power

Lesson 3: The Organized Labor Movement

Objectives:
- Assess the problems that workers faced in the late 1800s
- Compare the goals and strategies of different labor organizations
- Analyze the cause and effects of strikes

Lesson 4: The New Immigrants

Objectives:
- Compare the "new immigration" of the late 1800s to earlier immigration
- Explain the push and pull factors leading immigrants to America
- Describe the challenges that immigrants faced in traveling to America
- Analyze how immigrants adapted to American life while trying to maintain familiar cultural practices

Lesson 5: Cities Expand and Change

Objectives:
- Analyze the causes of urban growth in the late 1800s
- Explain how technology improved city life
- Evaluate how city dwellers solved the problems caused by rapid growth

Lesson 6: Industrialization of the United States Portfolio (three-day lesson)

Objectives:
- Create a storyboard
- Relate the story of an immigrant in creative and historically accurate ways

Lesson 7: Social and Cultural Trends (two-day lesson)

Objectives:
- Explain how new types of stores and marketing changed American life
- Analyze the ways in which Americans developed a mass culture
- Describe the new forms of popular entertainment in the late 1800s

Lesson 8: The New South

Objectives:
- Explain how the southern economy changed in the late 1800s
- Analyze how southern farmers consolidated their political power
- Describe the experience of African Americans in the changing South

Lesson 9: Westward Expansion and the American Indians (three-day lesson)
Lesson 10: Transforming the West (two-day lesson)

Objectives:
• Analyze the impact of mining and railroads on the settlement of the West
• Explain how ranching affected western development
• Discuss the ways various peoples lived in the West and their impact on the environment

Lesson 11: Segregation and Social Tensions

Objectives:
• Assess how whites created a segregated society in the South and how African Americans responded
• Analyze efforts to limit immigration and the effects
• Compare the situations of Mexican Americans and of women to those of other groups

Lesson 12: Political and Economic Challenges

Objectives:
• Analyze the issue of corruption in national politics in the 1870s and 1880s
• Discuss civil service reform during the 1870s and 1880s
• Assess the importance of economic issues in the politics of the Gilded Age

Lesson 13: Farmers and Populism

Objectives:
• Analyze the problems farmers faced and the groups they formed to address them
• Assess the goals of the Populists and explain why the Populist Party did not last

Lesson 14: Industrialization of the United States Unit Review

Objectives:
• Review essential vocabulary for unit lessons
• Review key ideas from unit lessons

Lesson 15: Industrialization of the United States Unit Test

Unit 3: Emergence of the Modern United States

This unit covers the United States during the Progressive Era, from the late 1800s to the end of World War I. In this unit, you will learn about the reforms enacted during the Progressive Era. You will explore the United States' first steps toward imperialism. The unit will finish with your study of the causes, events, and effects of World War I.

Objectives:
• Describe the reforms of the Progressive Era
• Identify the steps the United States took to become an imperialist power
• Determine the causes and effects of World War I

Lesson 1: The Drive for Reform

Objectives:
• Identify the causes of Progressives and compare Progressivism to Populism
• Analyze the role that journalists played in the Progressive movement
• Evaluate some of the social reforms that Progressives tackled
• Explain what the Progressives hoped to achieve through political reforms
Lesson 2: Muckrakers in Depth

Objectives:
• Describe the work of specific muckrakers
• Analyze the effects of the work of muckrakers

Lesson 3: Women Make Progress

Objectives:
• Analyze the impact of changes in women's roles in society
• Explain what women did to win workers' rights and improve family life
• Evaluate the tactics women used to win passage of the Nineteenth Amendment

Lesson 4: The Struggle against Discrimination

Objectives:
• Analyze Progressives’ attitudes toward minority rights
• Explain why African Americans organized
• Examine the strategies used by members of other minority groups to defend their rights

Lesson 5: Roosevelt's Square Deal (two-day lesson)

Objectives:
• Discuss Theodore Roosevelt's ideas on the role of government
• Analyze how Roosevelt changed the government's role in the economy
• Explain the impact of Roosevelt's actions on natural resources
• Compare and contrast Taft’s policies with Roosevelt's

Lesson 6: Wilson's New Freedom (two-day lesson)

Objectives:
• Evaluate what Wilson hoped to do with his "New Freedom" program
• Describe Wilson's efforts to regulate the economy
• Assess the legacy of the Progressive Era

Lesson 7: The Roots of Imperialism

Objectives:
• Identify key factors that prodded America to expand
• Explain how the United States took its first steps toward increased global power
• Summarize the chain of events leading up to the U.S. annexation of Hawaii

Lesson 8: The Spanish-American War

Objectives:
• Explain the causes of the Spanish-American War
• Identify the major battles of the war
• Describe the consequences of the war, including the debate over imperialism

Lesson 9: The United States and East Asia

Objectives:
• Examine the causes and consequences of the Philippine insurrection
Lesson 10: The United States and Latin America (two-day lesson)

Objectives:
- Examine what happened to Puerto Rico and Cuba after the Spanish-American War
- Analyze the effects of Roosevelt's "big stick" diplomacy
- Compare Wilson's "moral diplomacy" with the foreign policies of his predecessors

Objectives derived from Pearson Education, Inc. © Pearson Education, Inc., publishing as Pearson Prentice Hall. All rights reserved.

Lesson 11: Emergence of the Modern United States Portfolio (three-day lesson)

Objectives:
- View a historical event from multiple perspectives
- Identify both pros and cons of America's imperialism in the early 1900s
- Support viewpoints with at least two accurate historical facts

Objectives derived from Pearson Education, Inc. © Pearson Education, Inc., publishing as Pearson Prentice Hall. All rights reserved.

Lesson 12: From Neutrality to War

Objectives:
- Analyze the causes of World War I
- Describe the course and character of the war
- Explain why the United States entered the conflict on the side of the Allies

Objectives derived from Pearson Education, Inc. © Pearson Education, Inc., publishing as Pearson Prentice Hall. All rights reserved.

Lesson 13: The Home Front

Objectives:
- Analyze how the American government mobilized the public to support the war effort
- Describe opposition to the war
- Outline significant social changes that occurred during the war

Objectives derived from Pearson Education, Inc. © Pearson Education, Inc., publishing as Pearson Prentice Hall. All rights reserved.

Lesson 14: Life in the Trenches

Objectives:
- Analyze primary sources, such as letters and memoirs, to learn more about the experiences of soldiers during World War I
- Describe conditions for American soldiers during World War I

Objectives derived from Pearson Education, Inc. © Pearson Education, Inc., publishing as Pearson Prentice Hall. All rights reserved.

Lesson 15: Wilson, War, and Peace

Objectives:
- Understand how the United States military contributed to the Allied victory in the war
- Describe the aims of the Fourteen Points
- Analyze the decisions made at the Paris Peace Conference
- Explain why the United States Senate refused to ratify the treaty ending World War I

Objectives derived from Pearson Education, Inc. © Pearson Education, Inc., publishing as Pearson Prentice Hall. All rights reserved.

Lesson 16: Effects of the War

Objectives:
- Describe the problems Americans faced immediately after the war
- Analyze how these problems contributed to the Red Scare
- Understand how the war changed America's role in world affairs

Objectives derived from Pearson Education, Inc. © Pearson Education, Inc., publishing as Pearson Prentice Hall. All rights reserved.
Lesson 17: Emergence of the Modern United States Unit Review

Objectives:
• Explain important unit ideas
• Define key terms for the unit

Objectives derived from Pearson Education, Inc. © Pearson Education, Inc., publishing as Pearson Prentice Hall. All rights reserved.

Lesson 18: Emergence of the Modern United States Unit Test

Unit 4: Prosperity and Depression

This unit focuses on the United States during the 1920s, and the 1930s. You will examine the cultural, economic, and political trends of the 1920s. You will learn about the causes of the Great Depression, its effect on everyday Americans and efforts to bring the country back to prosperity. You will particularly evaluate the effects of Franklin Delano Roosevelt’s New Deal on the United States.

Objectives:
• Describe the social, economic, and political environment of the 1920s
• Describe the causes and effects of the Great Depression
• Determine the effects of the New Deal

Lesson 1: A Booming Economy

Objectives:
• Explain the impact of Henry Ford and the automobile
• Analyze the consumer revolution and the bull market of the 1920s
• Compare the different effects of the economic boom in urban and rural America

Objectives derived from Pearson Education, Inc. © Pearson Education, Inc., publishing as Pearson Prentice Hall. All rights reserved.

Lesson 2: The Business of Government

Objectives:
• Analyze how the policies of Presidents Harding and Coolidge favored business growth
• Discuss the most significant scandals during Harding's presidency
• Explain the role that the United States played in the world during the 1920s
• Discuss the successes and failures of the Eighteenth Amendment

Objectives derived from Pearson Education, Inc. © Pearson Education, Inc., publishing as Pearson Prentice Hall. All rights reserved.

Lesson 3: Social and Cultural Tensions

Objectives:
• Compare economic and cultural life in rural America to that in urban America
• Discuss the changes in U.S. immigration policy in the 1920s
• Analyze the motives of the Ku Klux Klan in the 1920s

Objectives derived from Pearson Education, Inc. © Pearson Education, Inc., publishing as Pearson Prentice Hall. All rights reserved.

Lesson 4: A New Mass Culture

Objectives:
• Trace the reasons that leisure increased during the 1920s
• Analyze how the development of popular culture united Americans and created new activities and heroes
• Discuss the advancements of women in the 1920s
• Analyze the concept of modernism and its impact on writers and painters in the 1920s

Objectives derived from Pearson Education, Inc. © Pearson Education, Inc., publishing as Pearson Prentice Hall. All rights reserved.

Lesson 5: The Harlem Renaissance (two-day lesson)

Objectives:
• Analyze the racial and economic philosophies of Marcus Garvey
• Trace the development and impact of jazz
• Discuss the themes explored by the writers of the Harlem Renaissance

Objectives derived from Pearson Education, Inc. © Pearson Education, Inc., publishing as Pearson Prentice Hall. All rights reserved.
Lesson 6: Prosperity and Depression Portfolio (three-day lesson)

Objectives:
• Examine a historical issue from multiple perspectives
• Portray a historical issue from multiple perspectives by writing a two-voice poem

Objectives derived from Pearson Education, Inc. © Pearson Education, Inc., publishing as Pearson Prentice Hall. All rights reserved.

Lesson 7: Causes of the Depression

Objectives:
• Discuss the weakness in the economy of the 1920s
• Explain how the stock market crash contributed to the coming of the Great Depression
• Describe how the Great Depression spread overseas

Objectives derived from Pearson Education, Inc. © Pearson Education, Inc., publishing as Pearson Prentice Hall. All rights reserved.

Lesson 8: Americans Face Hard Times

Objectives:
• Examine the spread of unemployment in America's cities
• Discuss the impact of the Great Depression on rural America
• Explain the human and geographical factors that created the Dust Bowl

Objectives derived from Pearson Education, Inc. © Pearson Education, Inc., publishing as Pearson Prentice Hall. All rights reserved.

Lesson 9: Hoover's Response Fails (two-day lesson)

Objectives:
• Discuss how Hoover's initial conservative response to the Great Depression failed
• Explain the changes in the president's policies as the crisis continued
• Describe how Americans reacted to Hoover's relief programs

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 10: FDR Offers Relief and Recovery

Objectives:
• Analyze the impact Franklin D. Roosevelt had on the American people after becoming president
• Describe the programs that were part of the first New Deal and their immediate impact
• Identify critical responses to the New Deal

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 11: The Second New Deal

Objectives:
• Discuss the programs of social and economic reform in the Second New Deal
• Explain how the New Deal legislation affected the growth of organized labor
• Describe the impact of Roosevelt's court-packing plan on the course of the New Deal

Objectives derived from Pearson Education, Inc. © Pearson Education, Inc., publishing as Pearson Prentice Hall. All rights reserved.

Lesson 12: Effects of the New Deal (two-day lesson)

Objectives:
• Describe how the New Deal affected different groups in American society
• Analyze how the New Deal changed the shape of American party politics
• Discuss the impact of Franklin D. Roosevelt on the presidency

Objectives derived from Pearson Education, Inc. © Pearson Education, Inc., publishing as Pearson Prentice Hall. All rights reserved.

Lesson 13: Culture of the 1930s

Objectives:
• Trace the growth of radio and the movies in the 1930s and the changes in popular culture
• Describe the major themes of literature of the New Deal era

Objectives derived from Pearson Education, Inc. © Pearson Education, Inc., publishing as Pearson Prentice Hall. All rights reserved.

Lesson 14: Prosperity and Depression Unit Review
Lesson 15: Prosperity and Depression Unit Test

Objectives:
- Define key terms of the unit
- Explain important concepts in the unit

Objectives derived from Pearson Education, Inc. © Pearson Education, Inc., publishing as Pearson Prentice Hall. All rights reserved.

Unit 5: Review & Final
You will review information from Units 1–4 and take your Semester A Exam.

Lesson 1: Semester Review (two-day lesson)

Objectives:
- Review main ideas of the semester
- Review key terms of the semester
U.S. HISTORY B
United States History B

This is the second of two courses that comprise United States History. This course will continue the study of American history, tracing the changes in American society from World War II through the present. This course will continue to follow the chronology of American political, economic, and social history. Every unit will provide practice with critical social studies skills, including analyzing primary sources, recognizing point of view, identifying cause and effect, evaluating different forms of information, and communicating ideas to others. Geography skills are interwoven in the lessons, as the student makes connections between the evolution of America’s geography and its impact on historical events.

Unit 1: World War II and Postwar America

This unit focuses on the events of World War II and the beginning of the Cold War. You will learn about the causes, events, and effects of World War II. You will learn about changes in the United States as World War II ended and the Cold War began. You will examine how tensions developed between the Soviet Union and United States and how those tensions affected foreign policies and life at home. In this unit, you will also start a semester-long project, the writing of a research paper.

Objectives:
• Describe the causes, events, and effects of World War II
• Detail the steps that led to the Cold War
• Describe the main events, internationally and domestically, that marked the beginning of the Cold War

Lesson 1: Dictators and Wars 1

Objectives:
• Explain how dictators and militarist regimes arose in several countries in the 1930s
• Summarize the actions taken by aggressive regimes in Europe and Asia
• Analyze the responses of Britain, France, and the United States to aggressive regimes

Objectives derived from Pearson Education, Inc. © Pearson Education, Inc., publishing as Pearson Prentice Hall. All rights reserved.

Lesson 2: From Isolationism to Involvement

Objectives:
• Understand the course of the early years of World War II in Europe
• Describe Franklin Roosevelt’s foreign policy in the mid-1930s and the great debate between interventionists and isolationists
• Explain how the United States became more involved in the conflict

Objectives derived from Pearson Education, Inc. © Pearson Education, Inc., publishing as Pearson Prentice Hall. All rights reserved.

Lesson 3: America Enters the War (two-day lesson)

Objectives:
• Explain why Japan decided to attack Pearl Harbor and describe the attack itself
• Outline how the United States mobilized for war after the attack on Pearl Harbor
• Summarize the course of the war in the Pacific throughout the summer of 1942

Objectives derived from Pearson Education, Inc. © Pearson Education, Inc., publishing as Pearson Prentice Hall. All rights reserved.

Lesson 4: The Allies Turn the Tide

Objectives:
• Analyze the reasons for and the impact of the Allies “Europe First” strategy
• Explain why the battles of Stalingrad and Midway were major turning points in the war

Appendix A.2.d Social Studies Course Guides
United States History B
© 2011 Connections Education LLC. All rights reserved.
Lesson 5: The Home Front

Objectives:
• Explain how World War II increased opportunities for women and minorities
• Analyze the effects of war on civil liberties for Japanese-Americans and others
• Examine how the need to support the war effort changed American lives

Lesson 6: Victory in Europe and the Pacific

Objectives:
• Analyze the planning and impact of the D-Day invasion of France
• Understand how the Allies achieved final victory in Europe
• Explore the reasons President Truman decided to use the atomic bomb against Japan

Lesson 7: The Holocaust

Objectives:
• Trace the roots and progress of Hitler's campaign against the Jews
• Explore the goals of Hitler's "final solution" and the nature of the Nazi death camps
• Examine how the United States responded to the Holocaust

Lesson 8: Effects of the War (two-day lesson)

Objectives:
• Evaluate the goals that Allied leaders set for the postwar world
• Describe the steps that the United States and other nations took toward international cooperation
• Explain the impact of World War II on the postwar United States

Lesson 9: World War II through Primary Sources

Objectives:
• Describe the experiences of everyday Americans during World War II
• Examine primary sources to learn more about World War II

Lesson 10: Research Portfolio: Choosing a Topic and Resources (three-day lesson)

Objectives:
• Determine a topic for a research paper
• Evaluate and choose resources
• Write a works cited page

Lesson 11: The Cold War Begins

Objectives:
• Trace the reasons that the wartime alliance between the United States and the Soviet Union unraveled
• Explain how President Truman responded to Soviet domination of eastern Europe
Lesson 12: The Korean War

Objectives:
- Explain how Mao Zedong and the communists gained power in China
- Describe the causes and progress of the war in Korea
- Identify the long-term effects of the Korean War

Lesson 13: The Cold War Expands (two-day lesson)

Objectives:
- Describe the causes and results of the arms race between the United States and the Soviet Union
- Explain how Eisenhower’s response to communism differed from that of Truman
- Analyze worldwide Cold War conflicts that erupted in eastern Europe, the Middle East and other places

Lesson 14: The Cold War at Home

Objectives:
- Describe the efforts of President Truman and the House of Representatives to fight communism at home
- Explain how domestic spy cases increased fears of communist influence in the U.S. government
- Analyze the rise and fall of Senator Joseph McCarthy and the methods of McCarthyism

Lesson 15: An Economic Boom

Objectives:
- Describe how the United States made the transformation to a peacetime economy
- Discuss the accomplishments of Presidents Harry Truman and Dwight Eisenhower
- Analyze the 1950s economic boom

Lesson 16: A Society on the Move

Objectives:
- Examine the rise of the suburbs and the growth of the Sunbelt
- Describe changes in the U.S. economy and education in the postwar period

Lesson 17: Mass Culture and Family Life

Objectives:
- Explain why consumer spending increased in the 1950s
- Describe the rise of new forms of mass culture in the 1950s
- Discuss postwar changes in family life

Lesson 18: Dissent and Discontent

Objectives:
Lesson 19: Research Portfolio: Conduct and Analyze Research (four-day lesson)

Objectives:
- Take notes from a variety of sources

Lesson 20: World War II and Postwar America Unit Review

Objectives:
- Review key words
- Review main ideas

Lesson 21: World War II and Postwar America Unit Test

Unit 2: Challenges and Change: Part 1

This unit focuses on the major changes in the United States during the 1950s, 1960s, and 1970s. You will begin the unit by examining the events of the civil rights movement. You will learn about the policies of Presidents Kennedy and Johnson, including the war in Vietnam. Finally, you will learn about the protests that swept the nation for women’s and minorities’ rights and against the Vietnam War. Throughout the unit, you will continue to work on your major research project.

Objectives:
- Describe the causes and effects of the Civil Rights movement
- Describe the main policies of the Kennedy and Johnson administrations
- Describe the causes and effects of the Vietnam War
- Describe the protest movements of the 1960s and 1970s

Lesson 1: Early Demands for Equality

Objectives:
- Describe efforts to end segregation in the 1940s and 1950s
- Explain the importance of Brown v. Board of Education
- Describe the controversy over school desegregation in Little Rock, Arkansas
- Discuss the Montgomery bus boycott

Lesson 2: Civil Disobedience and the Civil Rights Movement

Objectives:
- Describe the actions of Mahatma Gandhi in India’s independence movement
- Explain the effect of Gandhi’s nonviolent tactics on civil rights leaders such as Martin Luther King, Jr. and James Farmer

Lesson 3: The Movement Gains Ground

Objectives:
- Describe the sit-ins, freedom rides, and the actions of James Meredith in the early 1960s
- Explain how the protests at Birmingham and the March on Washington were linked to the Civil Rights Act of 1964
- Summarize the provisions of the Civil rights Act of 1964
Lesson 4: New Successes and Challenges

Objectives:
• Explain the significance of Freedom Summer, the march on Selma, and why violence erupted in some American cities in the 1960s
• Compare the goals and methods of African American leaders
• Describe the social and economic situation of African Americans by 1975

Objectives derived from Pearson Education, Inc. © Pearson Education, Inc., publishing as Pearson Prentice Hall. All rights reserved.

Lesson 5: Research Portfolio: Writing an Outline (four-day lesson)

Objectives:
• Accurately identify topics and subtopics for a research paper
• Complete an outline for a research paper

Objectives derived from Pearson Education, Inc. © Pearson Education, Inc., publishing as Pearson Prentice Hall. All rights reserved.

Lesson 6: Kennedy and the Cold War

Objectives:
• Explain the steps Kennedy took to change American foreign policy
• Analyze the causes and effects of the Bay of Pigs invasion and the Cuban Missile Crisis
• Assess the results of the Berlin Crisis and other foreign policy events of the 1960s

Objectives derived from Pearson Education, Inc. © Pearson Education, Inc., publishing as Pearson Prentice Hall. All rights reserved.

Lesson 7: Kennedy’s New Frontier

Objectives:
• Evaluate Kennedy’s domestic policies
• Assess the impact of the Kennedy assassination

Objectives derived from Pearson Education, Inc. © Pearson Education, Inc., publishing as Pearson Prentice Hall. All rights reserved.

Lesson 8: Johnson’s Great Society (two-day lesson)

Objectives:
• Evaluate Johnson’s policies up to his victory in the 1964 presidential election
• Analyze Johnson’s goals and actions as seen in his Great Society programs
• Assess the achievements of the Great Society

Objectives derived from Pearson Education, Inc. © Pearson Education, Inc., publishing as Pearson Prentice Hall. All rights reserved.

Lesson 9: Origins of the Vietnam War (two-day lesson)

Objectives:
• Describe the reasons that the United States helped the French fight the Vietnamese
• Identify ways in which the United States opposed communism in Southeast Asia
• Analyze how the United States increased its involvement in Vietnam

Objectives derived from Pearson Education, Inc. © Pearson Education, Inc., publishing as Pearson Prentice Hall. All rights reserved.

Lesson 10: U.S. Involvement Grows

Objectives:
• Identify the factors that caused President Johnson to increase American troop strength in Vietnam
• Assess the nature of the war in Vietnam and the difficulties faced by both sides
• Evaluate the effects of low morale on American troops and on the home front

Objectives derived from Pearson Education, Inc. © Pearson Education, Inc., publishing as Pearson Prentice Hall. All rights reserved.
Lesson 11: Vietnam through Primary Sources

Objectives:
• Describe the experiences of Vietnam War soldiers
• Analyze primary sources to learn about the Vietnam War

Lesson 12: The War Divides America

Objectives:
• Describe the divisions within American society over the Vietnam War
• Analyze the Tet Offensive and the American reaction to it
• Summarize the factors that influenced the outcome of the 1968 presidential election

Lesson 13: The War’s End and Impact

Objectives:
• Assess Nixon's new approach to the war, and explain why protests continued
• Explain what led to the Paris Peace Accords and why South Vietnam eventually fell to the communists
• Evaluate the impact of the Vietnam War on the United States

Lesson 14: Nixon and the Cold War

Objectives:
• Explain the thinking behind Richard Nixon's foreign policy
• Define Nixon's foreign policy toward China and the Soviet Union

Lesson 15: Challenges and Changes Part 1 Review

Objectives:
• Review unit key words
• Review unit main ideas

Lesson 16: Challenges and Changes Part 1 Test

Unit 3: Challenges and Change: Part 2

This unit continues to focus on the major changes in the United States during the 1960s and 1970s. You will begin the unit by examining the events of the women’s rights movement. You will learn about the policies of Presidents Nixon, Ford, and Carter. Finally, you will learn about key events of the 1970s, including the Watergate scandal, stagflation, and the Iran hostage crisis. Throughout the unit, you will continue to work on your major research project.

Objectives:
• Describe the causes and effects of the women’s rights movement
• Describe the main policies of the Nixon, Ford, and Carter administrations
• Describe the mood of the country during the 1970s

Lesson 1: The Counter Culture

Objectives:
• Describe the rise of the counterculture
• List the major characteristics of the counterculture
• Evaluate the impact of the counterculture on American values and society
Lesson 2: The Women's Rights Movement

Objectives:
• Analyze how a movement for women's rights arose in the 1960s
• Explain the goals and tactics of the women's movement
• Assess the impact of the women's movement on American society

Lesson 3: The Rights Revolution Expands

Objectives:
• Explain how the Latino population grew after World War I
• Analyze the Latino and Native American rights movements of the 1960s and 1970s
• Describe the expansion of rights for consumers and the disabled

Lesson 4: The Environmental Movement (two-day lesson)

Objectives:
• Assess the causes and effects of the environmental movement
• Analyze why environmental protection became a controversial issue

Lesson 5: Nixon and the Watergate Scandal

Objectives:
• Describe Richard Nixon's attitude toward "big" government
• Analyze Nixon's southern strategy
• Explain the Watergate incident and its consequences

Lesson 6: The Ford and Carter Years

Objectives:
• Evaluate the presidency of Gerald Ford
• Assess the domestic policies of Jimmy Carter
• Analyze how American society changed in the 1970s

Lesson 7: Foreign Policy Troubles

Objectives:
• Compare the policies of Gerald Ford and Jimmy Carter toward the Soviet Union
• Discuss changing U.S. foreign policy in the developing world
• Identify the successes and failures of Carter's foreign policy in the Middle East

Lesson 8: Research Portfolio: Writing a Rough Draft (four-day lesson)

Objectives:
• Write a thesis statement
• Write and revise a rough draft of a research paper
• Make and support historical argument

Lesson 9: Challenges and Change Unit Part 2 Review
Lesson 10: Challenges and Change Unit Test

Unit 4: Changing and Enduring Issues

This unit focuses on the events of the last thirty years in American history. You will learn about the resurgence of conservative Republicans and the presidencies of Ronald Reagan and George H.W. Bush. You will learn about the main domestic and international events of the 1990s. Finally you will look at the events that have shaped the beginning of the 21st century, including global terrorism and immigration. You will finish your major research project.

Objectives:

- Explain why the nation’s politics became more conservative
- Describe the events that led to the end of the Cold War
- List the challenges that the United States faced after the end of the Cold War

Lesson 1: The Conservative Movement Grows

Objectives:

- Describe the differences between liberal and conservative viewpoints
- Analyze the reasons behind the rise of conservatism in the early 1980s
- Explain why Ronald Reagan won the presidency in 1980

Objectives derived from Pearson Education, Inc. © Pearson Education, Inc., publishing as Pearson Prentice Hall. All rights reserved.

Lesson 2: The Reagan Revolution

Objectives:

- Analyze Reagan’s economic policies as President
- Summarize how Reagan strengthened the conservative movement
- Evaluate the steps taken to address various problems in the 1980s and early 1990s

Objectives derived from Pearson Education, Inc. © Pearson Education, Inc., publishing as Pearson Prentice Hall. All rights reserved.

Lesson 3: 1980s Culture

Objectives:

- Describe the spread and influence of AIDS
- Explain the characteristics of Generation X
- Examine primary source documents to learn about the culture of the 1980s

Objectives derived from Pearson Education, Inc. © Pearson Education, Inc., publishing as Pearson Prentice Hall. All rights reserved.

Lesson 4: The End of the Cold War

Objectives:

- Analyze the ways that Ronald Reagan challenged communism and the Soviet Union
- Explain why communism collapsed in Europe and in the Soviet Union
- Describe other foreign policy challenges that faced the United States in the 1980s

Objectives derived from Pearson Education, Inc. © Pearson Education, Inc., publishing as Pearson Prentice Hall. All rights reserved.

Lesson 5: Foreign Policy after the Cold War (two-day lesson)

Objectives:

- Analyze why George H. W. Bush decided to use force in some foreign disputes and not in others
- Summarize the Persian Gulf War and its results

Objectives derived from Pearson Education, Inc. © Pearson Education, Inc., publishing as Pearson Prentice Hall. All rights reserved.
Lesson 6: The Computer and Technology Revolutions

Objectives:

- Describe the development of the computer and its impact on business and industry
- Analyze the impact of new technology on communications
- Explain how globalization and the rise of the service sector affected the American economy

Objectives derived from Pearson Education, Inc. © Pearson Education, Inc., publishing as Pearson Prentice Hall. All rights reserved.

Lesson 7: The Clinton Presidency

Objectives:

- Explain why Bill Clinton won the presidency in 1992
- Assess the success of Clinton's domestic policies
- Describe the Contract with America and its impact
- Analyze the Clinton impeachment

Objectives derived from Pearson Education, Inc. © Pearson Education, Inc., publishing as Pearson Prentice Hall. All rights reserved.

Lesson 8: Global Politics and Economics

Objectives:

- Analyze how the United States responded to changes in the global economy
- Assess the foreign policy goals and actions of the Clinton administration
- Describe U.S. relations with various Middle Eastern countries and groups

Objectives derived from Pearson Education, Inc. © Pearson Education, Inc., publishing as Pearson Prentice Hall. All rights reserved.

Lesson 9: The George W. Bush Presidency

Objectives:

- Assess the outcome of the 2000 presidential election
- Explain the goals and achievements of George W. Bush's domestic policy
- Analyze the impact of terrorist attacks on the United States
- Summarize the important issues of Bush's second term

Objectives derived from Pearson Education, Inc. © Pearson Education, Inc., publishing as Pearson Prentice Hall. All rights reserved.

Lesson 10: Americans Look to the Future (two-day lesson)

Objectives:

- Analyze the impact of immigration on American society
- Summarize the causes and effects of changing demographics

Objectives derived from Pearson Education, Inc. © Pearson Education, Inc., publishing as Pearson Prentice Hall. All rights reserved.

Lesson 11: Immigrants Today

Objectives:

- Describe the experiences of immigrants to the United States today
- Examine primary source documents to learn about history

Objectives derived from Pearson Education, Inc. © Pearson Education, Inc., publishing as Pearson Prentice Hall. All rights reserved.

Lesson 12: Research Paper: Writing a Final Draft (three-day lesson)

Objectives:

- Revise a rough draft
- Write a final draft of a research paper

Lesson 13: Changing and Enduring Issues Review

Objectives:

- Review unit key words
- Review unit main ideas
Lesson 14: Changing and Enduring Issues Unit Test

Unit 5: U.S. History B Semester Review

In this unit, you will review for the U.S. History B Semester Exam. You will study by using the graphic organizers from each unit, by taking a practice test, and by choosing from a list of other review strategies. Finally, you will take the exam itself.

Lesson 1: Semester Review (two-day lesson)

Objectives:

• Assess your understanding of U.S. History from the aftermath of World War II to contemporary America

Lesson 2: U.S. History B Final Exam
WORLD HISTORY A
World History A

This is the first of two courses that comprise World History. Glencoe’s World History: Modern Times provides the basis for instruction. Students begin by exploring prehistory, focusing on the Stone and Bronze Ages. Students move on to learn about the early civilizations of Asia, the Middle East, and the Mediterranean basin, paying special attention to the civilizations of ancient Egypt, Greece, and Rome. The Middle Ages, Renaissance, and Reformation periods round out the course, throughout which students examine how historians work with ancient documents and both primary and secondary sources of information.

U.S. Constitution Day (L)

Objectives:
- Identify the foundations of the U.S. Constitution.
- Explain how the U.S. Constitution has impacted people worldwide.
- Observe Constitution Day.

Unit 1: Reading and Writing for History

In this unit, you will practice skills that will make you a better historian. You will hone your critical reading skills and develop a process for preparing and writing a research paper. Finally, you will learn how to identify reliable research sources and avoid committing plagiarism.

Objectives:
- Develop critical reading skills
- Learn the difference between primary and secondary sources
- Identify and organize reliable research sources for writing a research paper
- Define plagiarism
- Practice methods of citing information to avoid plagiarism

Lesson 1: Thinking About Your Reading (two-day lesson)

Objectives:
- Use of critical reading skills to think more deeply about reading material
- Introduction to conventions of reading primary source documents
- Identify perspective and bias from primary source documents
- Distinguish characteristics of primary and secondary sources

Lesson 2: Reading for Research-Before Reading

Objectives:
- Identify correct forms of citation of sources
- Determine main idea and supporting details for a research topic
- Create a graphic organizer to sort research details

Lesson 3: Reading for Research-During Reading

Objectives:
- Utilize methods to organize research
- Create a graphic organizer to sort research details

Lesson 4: Reading for Research-After Reading

Objectives:
- Identify criteria for determining the reliability of sources
- Explain the advantages and disadvantages of different types of sources
- Recognize bias in conflicting media accounts

Lesson 5: Plagiarism

Objectives:
- Define plagiarism
- Identify examples of plagiarized materials
- Identify methods of citing information to avoid plagiarism

Unit 2: Geography and History
In this unit, you will learn about the relationship between geography and historic events. You will learn more about the purpose and uses of globes and maps and examine the themes and elements associated with the study of geography.

Objectives:
- Analyze geographic factors that have shaped the course of historic events
- Understand the purpose and uses of globes and map projections
- Understand the purpose and uses of specific types of maps
- Identify the most commonly used geographic terms
- Understand the themes and elements associated with the study of geography

Lesson 1: Geography's Impact on History

Objectives:
- Analyze geographic factors that have shaped the course of historic events
- Understand the themes and elements associated with the study of geography

Lesson 2: Globes and Maps

Objectives:
- Understand the purpose and uses of globes and map projections

Lesson 3: Types of Maps

Objectives:
- Understand the purpose and uses of specific types of maps

Lesson 4: Geographic Terms

Objectives:
- Identify the most commonly used geographic terms

Unit 3: The World Before Modern Times

In this unit, you will learn about the emergence of civilizations from prehistory to about 1500. You will study ancient societies of Western Asia, Egypt, India, and China. You will also examine the contributions of the Greek, Roman, Arab, African, and Asian empires to world history. Finally, your study of ancient American civilizations will conclude the first unit of the course.

Objectives:
- Explain how the first civilizations emerged
- List and explain contributions of the Greeks and Romans to Western civilization
- Identify how Arab, African, and Asian empires spread
- Summarize the development of civilizations in the Americas

Lesson 1: The First Humans

Objectives:
- Describe the stages of development in the earliest humans
- Discuss the changes that occurred during the Neolithic Revolution that made the development of cities possible

Lesson 2: Western Asia and Egypt

Objectives:
- Explain how geography affected the rise of civilizations in Western Asia and Egypt
- Discuss the world religion of Judaism, which influenced the religions of Christianity and Islam

Lesson 3: India and China (two-day lesson)

Objectives:
Lesson 4: Ancient Greece (two-day lesson)

Objectives:
• Trace the history of early Greece from the first Greek state of Mycenae through the era of Classical Greece to the Hellenistic period of Alexander the Great
• Discuss the contributions of early Greece to Western civilization

Lesson 5: Rome and the Rise of Christianity (two-day lesson)

Objectives:
• Discuss how Roman culture and society were heavily influenced by the Greeks
• Summarize how Christianity spread throughout the empire and eventually became the state religion of Rome

Lesson 6: The World of Islam (two-day lesson)

Objectives:
• Describe the life of Muhammad and the basic tenets of Islam
• Explain the growth of Islam and its expansion to other parts of the world

Lesson 7: Early African Civilizations (two-day lesson)

Objectives:
• Analyze how the expansion of trade led to the growth of new kingdoms
• Characterize the extended family units that formed the basis of African villages

Lesson 8: The Asian World (two-day lesson)

Objectives:
• Characterize the Sui, Tang, Song, and Mongol dynasties
• Analyze how geography affected the development of Japan

Lesson 9: Emerging Europe and the Byzantine Empire (two-day lesson)

Objectives:
• Describe the rise of the Germanic and Frankish kingdoms, the influence of Christianity, and the importance of Charlemagne
• Explain the Norman Conquest, Magna Carta, French kingdoms, and the growth of Slavic states

Lesson 10: Europe in the Middle Ages (two-day lesson)

Objectives:
• Discuss the new farming practices, the growth of trade, and the rise of cities that created a flourishing European society
• Describe the various misfortunes that challenged Europe in the fourteenth century
Lesson 11: The Americas (three-day lesson)

Objectives:
• Characterize early Mesoamerican civilizations that flourished with fully developed political, religious, and social structures
• Explain how the Aztec and the Inca succumbed to disease and to Spanish forces

Lesson 12: Unit Review

Lesson 13: Unit Assessment

Unit 4: The Early Modern World - Part I

In this unit, you will learn about world cultures between 1400 and 1800. You will study the Renaissance and its impact on people's interpretation of the world around them. In addition, you will explore the role of religion and study the effect of the Protestant Reformation and the Catholic Counter-Reformation. You will also look at various societies' explorations around the globe. Finally, you will examine social and political struggles in Europe between 1550 and 1715.

Objectives:
• Explain the achievements of the Renaissance and the effects of the Protestant Reformation
• Trace the growing power of monarchs and the rise of absolutism in Europe

Lesson 1: The Renaissance (two-day lesson)

Objectives:
• Explain why, between 1350 and 1550, Italian intellectuals believed they had entered a new age of human achievement
• Characterize city-states, which were centers of political, economic, and social life in Renaissance Italy

Lesson 2: The Intellectual and Artistic Renaissance (two-day lesson)

Objectives:
• Discuss humanism, the most important intellectual movement associated with the Renaissance
• Identify the great artists and sculptors produced by the Renaissance, such as Michelangelo, Raphael, and Leonardo da Vinci

Lesson 3: The Protestant Reformation (two-day lesson)

Objectives:
• Discuss the major goal of humanism in northern Europe, which was to reform Christendom
• Explain how Martin Luther's religious reforms led to the emergence of Protestantism

Lesson 4: The Spread of Protestantism and Catholic Response

Objectives:
• Summarize the different forms of Protestantism that emerged in Europe as the Reformation spread
• Summarize the religious rebirth of the Catholic Church
Lesson 5: Exploration and Expansion (two-day lesson)

Objectives:
- Discuss how in the fifteenth century Europeans began to explore the world
- Summarize how Portugal, Spain, the Dutch Republic, and England reached new economic heights through worldwide trade

Objectives derived from The McGraw-Hill Companies, Inc. © The McGraw-Hill Companies, Inc., publishing as Glencoe. All rights reserved.

Lesson 6: Africa in an Age of Transition (two-day lesson)

Objectives:
- Explain how European expansion affected Africa with the dramatic increase of the slave trade
- Characterize the traditional political systems and cultures that continued to exist in most of Africa

Objectives derived from The McGraw-Hill Companies, Inc. © The McGraw-Hill Companies, Inc., publishing as Glencoe. All rights reserved.

Lesson 7: Southeast Asia in the Era of the Spice Trade (two-day lesson)

Objectives:
- Summarize the Portuguese occupation of the Moluccas in search of spices and how the Dutch pushed the Portuguese out
- Relate how the arrival of the Europeans greatly affected the Malay

Objectives derived from The McGraw-Hill Companies, Inc. © The McGraw-Hill Companies, Inc., publishing as Glencoe. All rights reserved.

Lesson 8: Europe in Crisis-The Wars of Religion

Objectives:
- Discuss the situation in many European nations in which Protestants and Catholics fought for political and religious control
- Summarize how, during the sixteenth and seventeenth centuries, many European rulers extended their power and their borders

Objectives derived from The McGraw-Hill Companies, Inc. © The McGraw-Hill Companies, Inc., publishing as Glencoe. All rights reserved.

Lesson 9: Social Crises, War, and Revolution (two-day lesson)

Objectives:
- Explain how the Thirty Years’ War ended the unity of the Holy Roman Empire
- Relate how democratic ideals were strengthened as a result of the English and Glorious Revolutions

Objectives derived from The McGraw-Hill Companies, Inc. © The McGraw-Hill Companies, Inc., publishing as Glencoe. All rights reserved.

Lesson 10: Response to Crisis-Absolutism (two-day lesson)

Objectives:
- Identify and describe Louis XIV, an absolute monarch whose extravagant lifestyle and military campaigns weakened France
- Discuss how Prussia, Austria, and Russia emerged as great European powers in the seventeenth and eighteenth centuries

Objectives derived from The McGraw-Hill Companies, Inc. © The McGraw-Hill Companies, Inc., publishing as Glencoe. All rights reserved.

Lesson 11: The World of European Culture (two-day lesson)

Objectives:
- Describe the artistic movements of Mannerism and the baroque, which began in Italy and reflected the spiritual perceptions of the time
- Identify Shakespeare and Lope de Vega, prolific writers of dramas and comedies that reflected the human condition

Objectives derived from The McGraw-Hill Companies, Inc. © The McGraw-Hill Companies, Inc., publishing as Glencoe. All rights reserved.
Lesson 12: Unit Review

Lesson 13: Unit Assessment

Unit 5: The Early Modern World - Part II

In this unit, you will continue to study the contributions of world cultures between 1400 and 1815. You will examine the expansion of Muslim Empires throughout the world and the impact of the religion of Islam. Additionally, you will learn about cultures of the East Asian world, including China, Japan, and Korea. You will also examine the causes and effects of the Scientific Revolution and the Enlightenment and study their impact on the American colonies. You will conclude World History A by learning about the French Revolution and its consequences, as well as studying the contributions of Napoleon.

Objectives:
- Examine the Ottoman, Safavid, and Mogul Empires in Asia and India
- Explain how the Scientific Revolution and Enlightenment changed the way people viewed their world
- Compare the causes and evaluate effects of the English, French, and American Revolutions

Lesson 1: The Ottoman Empire

Objectives:
- Discuss how the Ottoman Turks used firearms to expand their lands and appointed local rulers to administer conquered regions
- Characterize the creation of a strong Ottoman Empire with religious tolerance and artistic achievements

Objectives derived from The McGraw-Hill Companies, Inc. © The McGraw-Hill Companies, Inc., publishing as Glencoe. All rights reserved.

Lesson 2: The Rule of the Safavids

Objectives:
- Relate how the Safavids used their faith as a unifying force to bring Turks and Persians together
- Describe how the Safavid dynasty reached its height under Shah Abbas

Objectives derived from The McGraw-Hill Companies, Inc. © The McGraw-Hill Companies, Inc., publishing as Glencoe. All rights reserved.

Lesson 3: The Grandeur of the Moguls (two-day lesson)

Objectives:
- Explain how the Moguls united India under a single government with a common culture
- Discuss how the introduction of foreigners seeking trade opportunities in India hastened the decline of the Mogul Empire

Objectives derived from The McGraw-Hill Companies, Inc. © The McGraw-Hill Companies, Inc., publishing as Glencoe. All rights reserved.

Lesson 4: China at Its Height (two-day lesson)

Objectives:
- Summarize how China opened its doors to Europeans but closed those doors when it observed the effect of Western ideas on Chinese society
- Discuss how Chinese art and culture flourished between 1500 and 1800

Objectives derived from The McGraw-Hill Companies, Inc. © The McGraw-Hill Companies, Inc., publishing as Glencoe. All rights reserved.

Lesson 5: Chinese Society and Culture (two-day lesson)

Objectives:
- Describe the rapid increase in population that led to rural land shortages
- Summarize Chinese society and its organization around the family
- Relate how architecture, decorative arts, and literature flourished during this period

Objectives derived from The McGraw-Hill Companies, Inc. © The McGraw-Hill Companies, Inc., publishing as Glencoe. All rights reserved.
Lesson 6: Tokugawa Japan and Korea (two-day lesson)

Objectives:
- Identify three powerful political figures who unified Japan
- Describe how between 1500 and 1800 Japan experienced many peasant uprisings
- Explain why Korea could not withstand invasions by the Japanese and Manchus

Objectives derived from The McGraw-Hill Companies, Inc. © The McGraw-Hill Companies, Inc., publishing as Glencoe. All rights reserved.

Lesson 7: The Scientific Revolution

Objectives:
- Discuss how the Scientific Revolution gave Europeans a new way to view humankind’s place in the universe

Objectives derived from The McGraw-Hill Companies, Inc. © The McGraw-Hill Companies, Inc., publishing as Glencoe. All rights reserved.

Lesson 8: The Enlightenment (two-day lesson)

Objectives:
- Describe how eighteenth-century intellectuals used the ideas of the Scientific Revolution to reexamine all aspects of life
- Relate how people gathered in salons to discuss the ideas of the philosophers

Objectives derived from The McGraw-Hill Companies, Inc. © The McGraw-Hill Companies, Inc., publishing as Glencoe. All rights reserved.

Lesson 9: The Impact of the Enlightenment (two-day lesson)

Objectives:
- Discuss how Enlightenment beliefs were reflected in the art, music, and literature of the time
- Summarize how Enlightenment thought influenced the politics of Europe in the eighteenth century

Objectives derived from The McGraw-Hill Companies, Inc. © The McGraw-Hill Companies, Inc., publishing as Glencoe. All rights reserved.

Lesson 10: Colonial Empires and the American Revolution (two-day lesson)

Objectives:
- Explain how the colonies of Latin America and British North America were developing in ways that differed from their European mother countries
- Analyze why the American colonies revolted against Great Britain and formed a new nation

Objectives derived from The McGraw-Hill Companies, Inc. © The McGraw-Hill Companies, Inc., publishing as Glencoe. All rights reserved.

Lesson 11: The French Revolution Begins (two-day lesson)

Objectives:
- Specify why social inequality and economic problems contributed to the French Revolution
- Explain why radicals, Catholic priests, nobles, and the lower classes opposed the new order

Objectives derived from The McGraw-Hill Companies, Inc. © The McGraw-Hill Companies, Inc., publishing as Glencoe. All rights reserved.

Lesson 12: Radical Revolution and Reaction (two-day lesson)

Objectives:
- Report how radical groups and leaders controlled the Revolution
- Discuss why the new French Republic faced enemies at home and abroad

Objectives derived from The McGraw-Hill Companies, Inc. © The McGraw-Hill Companies, Inc., publishing as Glencoe. All rights reserved.
Lesson 13: The Age of Napoleon (three-day lesson)

Objectives:
- Summarize how Napoleon built and lost an empire
- Discuss how nationalism spread as a result of the French Revolution
- Describe how Napoleon was exiled first to Elba and then to St. Helena, where he died

Objectives derived from The McGraw-Hill Companies, Inc. © The McGraw-Hill Companies, Inc., publishing as Glencoe. All rights reserved.

Lesson 14: Unit Review

Lesson 15: Unit Assessment

Unit 6: World History A Final Exam

In this unit, you will have the opportunity to prepare for and take the final exam. Since this is a comprehensive exam, it may be helpful to organize your notes in the order of the course outline before you begin to review. Using the test-taking strategies that you have previously learned can help you be successful with both objective and essay questions.

Objectives:
- Decide which strategies you will use to prepare for your exam
- Organize your time and study materials
- Review your notes, keywords and vocabulary terms, and all important concepts that may be covered on this exam

Lesson 1: World History A Final Exam Review (two-day lesson)

Lesson 2: World History A Final Exam
WORLD HISTORY B
World History B

This is the second of two courses that comprise World History. Glencoe's *World History: Modern Times* provides the basis for instruction. Students will explore the social, political, and economic changes in the 19th and 20th centuries. Topics of study include the Industrial Revolution, armed revolutions, and independence movements throughout the world. The course focuses on the impact of nationalism and imperialism and explores the world wars. Students also study the modern era and explore topics such as technological advancements and globalization.

Unit 1: An Era of European Imperialism

In this unit, you will explore the causes and effects of European Imperialism between 1800 and 1914. You will examine how industrialization and nationalism influenced empire-building around the globe. In addition, you will learn about European colonies in Southeast Asia, Africa, India, and Latin America, and consider the consequences of imperialism on indigenous peoples. Finally, you will study social and political challenges in China and Japan in the 19th and early 20th centuries.

Objectives:
- Describe the impact of the Industrial Revolution
- Describe the revolutionary and reform movements that reshaped politics of Europe and the Americas in the 1800s
- Explain how nationalists unified Italy and Germany and challenged autocracy in Russia and Austria-Hungary
- Discuss the effects of imperialism in Asia, Africa, and Latin America

Lesson 1: The Industrial Revolution

Objectives:
- Explain why coal and steam replaced wind and water as new sources of energy and power
- Describe the growth of cities as people moved from the country to work in factories.

Objectives derived from The McGraw-Hill Companies, Inc. © The McGraw-Hill Companies, Inc., publishing as Glencoe. All rights reserved.

Lesson 2: Reaction and Revolution (two-day lesson)

Objectives:
- Summarize how the great powers worked to maintain a conservative order throughout Europe
- Characterize the forces of liberalism and nationalism and their continued growth, which led to the revolutions of 1848

Objectives derived from The McGraw-Hill Companies, Inc. © The McGraw-Hill Companies, Inc., publishing as Glencoe. All rights reserved.

Lesson 3: National Unification and the National State (two-day lesson)

Objectives:
- Report how the rise of nationalism contributed to the unification of Italy and Germany
- Explain that while nationalism had great appeal, not all peoples achieved the goal of establishing their now national states

Objectives derived from The McGraw-Hill Companies, Inc. © The McGraw-Hill Companies, Inc., publishing as Glencoe. All rights reserved.

Lesson 4: Culture-Romanticism and Realism (two-day lesson)

Objectives:
- Describe how romanticism emerged as a reaction to the ideas of the Enlightenment at the end of the eighteenth century
- Characterize the Industrial Revolution, which created a new interest in science and helped produce the realist movement

Objectives derived from The McGraw-Hill Companies, Inc. © The McGraw-Hill Companies, Inc., publishing as Glencoe. All rights reserved.
Lesson 5: The Growth of Industrial Prosperity

Objectives:
- Describe how new sources of energy and consumer products transformed the standard of living for all social classes in many European countries.
- Summarize how working-class leaders used Marx's ideas to form socialist parties.

Objectives derived from The McGraw-Hill Companies, Inc. © The McGraw-Hill Companies, Inc., publishing as Glencoe. All rights reserved.

Lesson 6: The Emergence of Mass Society

Objectives:
- Characterize the varied middle class in Victorian Britain and their belief in the principles of hard work and good conduct.
- Discuss how the new opportunities for women and the working class improved their lives.

Objectives derived from The McGraw-Hill Companies, Inc. © The McGraw-Hill Companies, Inc., publishing as Glencoe. All rights reserved.

Lesson 7: The National State and Democracy

Objectives:
- Discuss how new political parties and labor unions challenged the governments of western Europe.
- Explain how international rivalries led to conflicts in the Balkans and World War I.

Objectives derived from The McGraw-Hill Companies, Inc. © The McGraw-Hill Companies, Inc., publishing as Glencoe. All rights reserved.

Lesson 8: Toward Modern Consciousness

Objectives:
- Explain how extreme nationalism and racism led to an increase in anti-Semitism.
- Summarize how developments in science changed how people saw themselves and their world.

Objectives derived from The McGraw-Hill Companies, Inc. © The McGraw-Hill Companies, Inc., publishing as Glencoe. All rights reserved.

Lesson 9: Toward the Modern Consciousness: The Impressionist

Objectives:
- Describe how innovative artistic movements during the late 1800s and early 1900s rejected traditional styles.

Objectives derived from The McGraw-Hill Companies, Inc. © The McGraw-Hill Companies, Inc., publishing as Glencoe. All rights reserved.

Lesson 10: Colonial Rule in Southeast Asia

Objectives:
- Explain how, through the "new imperialism," Westerners sought to control vast territories.
- Describe how colonial export policies exploited native populations and opened up markets for European manufactured goods.

Objectives derived from The McGraw-Hill Companies, Inc. © The McGraw-Hill Companies, Inc., publishing as Glencoe. All rights reserved.

Lesson 11: Empire Building in Africa

Objectives:
- Discuss how Great Britain, France, Germany, Belgium, and Portugal placed virtually all of Africa under European rule.
- Report how native peoples sought an end to colonial rule.

Objectives derived from The McGraw-Hill Companies, Inc. © The McGraw-Hill Companies, Inc., publishing as Glencoe. All rights reserved.

Lesson 12: British Rule in India

Objectives derived from The McGraw-Hill Companies, Inc. © The McGraw-Hill Companies, Inc., publishing as Glencoe. All rights reserved.
Objectives:
• Discuss how British rule brought stability to India but destroyed native industries and degraded Indians
• Identify Mohandas Gandhi, who advocated nonviolent resistance to gain Indian independence from Great Britain

Objectives derived from The McGraw-Hill Companies, Inc. © The McGraw-Hill Companies, Inc., publishing as Glencoe. All rights reserved.

Lesson 13: Nation Building in Latin America (two-day lesson)

Objectives:
• Explain how Latin American countries served as a source of raw materials for Europe and the United States
• Explain that because land remained the basis of wealth and power, landed elites dominated Latin American countries

Objectives derived from The McGraw-Hill Companies, Inc. © The McGraw-Hill Companies, Inc., publishing as Glencoe. All rights reserved.

Lesson 14: The Decline of the Qing Dynasty

Objectives:
• Explain that the Qing Dynasty declined because of internal and external pressures
• Summarize how Western nations increased their economic involvement with China

Objectives derived from The McGraw-Hill Companies, Inc. © The McGraw-Hill Companies, Inc., publishing as Glencoe. All rights reserved.

Lesson 15: Revolution in China

Objectives:
• Identify Sun Yat-sen and his reforms, which led to a revolution in China
• Discuss how the arrival of Westerners brought changes to the Chinese economy and culture

Objectives derived from The McGraw-Hill Companies, Inc. © The McGraw-Hill Companies, Inc., publishing as Glencoe. All rights reserved.

Lesson 16: Rise of Modern Japan

Objectives:
• Describe how Western intervention opened Japan, an island that had been isolated for 200 years, to trade
• Discuss the interaction between Japan and Western nations that gave birth to a modern industrial society

Objectives derived from The McGraw-Hill Companies, Inc. © The McGraw-Hill Companies, Inc., publishing as Glencoe. All rights reserved.

Lesson 17: Unit Review (two-day lesson)

Lesson 18: Unit Assessment

Unit 2: The Twentieth Century Crisis

In this unit, you will study social, political, and military struggles throughout the world between 1914 and 1945. You will examine the causes and effects of World War I, and study how the outcome of that war laid the foundation for a second world war. Additionally, you will study world cultural trends between the world wars. You will also explore the role of nationalism in the Middle East, Africa, Asia, and Latin America. Finally, you will learn about the reasons for and consequences of World War II.

Objectives:
• Describe the causes and impact of World War I
• Trace the growth of Fascist and Communist dictatorships in Italy, Germany, and the Soviet Union
• Explain the upsurge of nationalism in Asia, Africa, and Latin America
• Trace the events that led to World War II; Describe major events and turning points of World War II
• Describe events that took place during the Holocaust; Describe the impact of World War II on civilian populations

Lesson 1: The Road to World War I

Objectives:
• Discuss how militarism, nationalism, and a crisis in the Balkans led to World War I
• Explain why Serbia’s determination to become a large, independent state angered Austria-Hungary and initiated hostilities

Lesson 2: The War (two-day lesson)

Objectives:
• Report how the stalemate at the Western Front led to new alliances, a widening of the war, and new weapons
• Summarize how governments expanded their powers, increased opportunities for women, and made use of propaganda

Lesson 3: The Russian Revolution (two-day lesson)

Objectives:
• Explain how poor leadership led to the fall of the czarist regime in Russia
• Relate how the Bolsheviks came to power under Lenin
• Describe how Communist forces triumphed over anti-Communist forces

Lesson 4: End of the War (two-day lesson)

Objectives:
• Report how combined Allied forces stopped the German offensive
• Explain how peace settlements brought political and territorial changes to Europe and created bitterness and resentment in several nations

Lesson 5: The Futile Search for Stability

Objectives:
• Explain why peace and prosperity were short-lived after World War I
• Describe how global economic depression weakened the Western democracies after 1929

Lesson 6: The Rise of Dictatorial Regimes

Objectives:
• Characterize the modern totalitarian state established by Mussolini
• Report how Stalin, the leader of the Soviet Union, eliminated people who threatened his power

Lesson 7: Hitler and Nazi Germany (two-day lesson)

Objectives:
• Characterize the totalitarian state in Germany established by Hitler and the Nazi Party
• Explain why many Germans accepted the Nazi dictatorship while other Germans suffered greatly under Hitler’s rule
Lesson 8: Cultural and Intellectual Trends (two-day lesson)

Objectives:
- Relate how radios and movies were popular forms of entertainment that were used to spread political messages
- Summarize the new artistic and intellectual trends that reflected the despair created by World War I and the Great Depression

Objectives derived from The McGraw-Hill Companies, Inc. © The McGraw-Hill Companies, Inc., publishing as Glencoe. All rights reserved.

Lesson 9: Nationalism in the Middle East

Objectives:
- Explain how nationalism led to the creation of the modern states of Turkey, Iran, and Saudi Arabia
- Specify how the Balfour Declaration made Palestine a national Jewish homeland

Objectives derived from The McGraw-Hill Companies, Inc. © The McGraw-Hill Companies, Inc., publishing as Glencoe. All rights reserved.

Lesson 10: Nationalism in Africa and Asia (two-day lesson)

Objectives:
- Describe how peoples in Africa and Asia began to agitate for independence
- Relate how Japan became an aggressive military state
- Characterize how Soviet agents worked to spread communism around the world

Objectives derived from The McGraw-Hill Companies, Inc. © The McGraw-Hill Companies, Inc., publishing as Glencoe. All rights reserved.

Lesson 11: Revolutionary Chaos in China

Objectives:
- Report how internal tensions led Chiang Kai-shek to violently end the Communist-National alliance
- Discuss Mao Zedong's belief that revolution in China would be led by peasants, not the urban working class

Objectives derived from The McGraw-Hill Companies, Inc. © The McGraw-Hill Companies, Inc., publishing as Glencoe. All rights reserved.

Lesson 12: Nationalism in Latin America (two-day lesson)

Objectives:
- Describe how, before the Great Depression, the United States was the foremost investor in Latin America
- Report how the Great Depression created instability in Latin America, which led to military coups and the creation of military dictatorships

Objectives derived from The McGraw-Hill Companies, Inc. © The McGraw-Hill Companies, Inc., publishing as Glencoe. All rights reserved.

Lesson 13: World War II: Paths to War

Objectives:
- Explain how Adolf Hitler's theory of Aryan racial domination laid the foundation for aggressive expansion outside of Germany
- Specify how the actions and ambitions of Japan and Germany paved the way for the outbreak of World War II

Objectives derived from The McGraw-Hill Companies, Inc. © The McGraw-Hill Companies, Inc., publishing as Glencoe. All rights reserved.

Lesson 14: World War II: The Course of World War II (two-day lesson)

Objectives:
- Discuss how the bombing of Pearl Harbor created a global war between the Allied and the Axis forces
- Describe how Allied perseverance and effective military operations, as well as Axis miscalculations, brought an end to the war
Lesson 15: World War II: The New Order and the Holocaust (two-day lesson)

Objectives:
- Report how Adolf Hitler's philosophy of Aryan superiority led to the Holocaust
- Analyze how the Japanese conquest of Southeast Asia forced millions of native peoples to labor for the Japanese war machine

Lesson 16: World War II: The Home Front and Aftermath (two-day lesson)

Objectives:
- Discuss how World War II left a lasting impression on civilian populations
- Summarize how the end of the war created a new set of problems for the Allies as the West came into conflict with the Soviet Union

Lesson 17: Unit Review

Lesson 18: Unit Assessment

Unit 3: Toward a Global Civilization

In this final unit of World History, you will learn about developments throughout the world between 1945 and the present. You will examine the causes and consequences of the Cold War and trace the influence of communism throughout the postwar world. You will also learn about the emergence of new economies and independent nations in Latin America, Africa, and Asia. Finally, you will consider the challenges facing the global civilization and how nations try to achieve peace.

Objectives:
- Summarize the causes and impact of the Cold War; Describe conflicts in Asia and the region's emergence as an economic powerhouse
- Analyze the legacy of colonial rule in Africa and the challenges facing that continent
- Examine the rival nationalistic movements in the Middle East and the region's search for peace
- Identify political and economic trends in Latin America
- Analyze factors that are leading toward globalization

Lesson 1: Development of the Cold War

Objectives:
- Identify and describe the period of conflict called the Cold War that developed between the United States and the Soviet Union after 1945
- Explain why, as the Cold War developed, European nations were forced to support one of the two major powers

Lesson 2: The Soviet Union and Eastern Europe

Objectives:
- Describe the policies of de-Stalinization initiated by Soviet leader Khrushchev
- Discuss the revolts and protests faced by the Soviet Union in its attempt to gain and maintain control over Eastern Europe

Lesson 3: Western Europe and North America (two-day lesson)

Objectives:
• Report how postwar Western societies rebuilt their economies and communities
• Explain how shifting social structures in the West led to upheaval and change

Objectives derived from The McGraw-Hill Companies, Inc. © The McGraw-Hill Companies, Inc., publishing as Glencoe. All rights reserved.

Lesson 4: Decline of the Soviet Union

Objectives:
• Discuss how the Cold War ended after leadership changed in the Soviet Union
• Identify policies of Gorbachev that contributed to the disintegration of the Soviet Union
• Explain how conversion from a socialist to a free-market economy created many problems in the former Soviet states

Objectives derived from The McGraw-Hill Companies, Inc. © The McGraw-Hill Companies, Inc., publishing as Glencoe. All rights reserved.

Lesson 5: Eastern Europe

Objectives:
• Describe Gorbachev's policy of not giving military support to Communist governments and how it created the opportunity for revolution
• Characterize the massive demonstrations that peacefully ended some Communist regimes and the violence that ended others

Objectives derived from The McGraw-Hill Companies, Inc. © The McGraw-Hill Companies, Inc., publishing as Glencoe. All rights reserved.

Lesson 6: Europe and North America

Objectives:
• Discuss how Western European nations moved to unite their economies after 1970
• Identify the domestic problems that arose in the United States, Great Britain, France, Germany, and Canada

Objectives derived from The McGraw-Hill Companies, Inc. © The McGraw-Hill Companies, Inc., publishing as Glencoe. All rights reserved.

Lesson 7: Western Society and Culture (two-day lesson)

Objectives:
• Relate how technological and scientific advances have created a global society
• Discuss artistic trends that reflect how the emerging global society led to a blending of cultural forms and ideas

Objectives derived from The McGraw-Hill Companies, Inc. © The McGraw-Hill Companies, Inc., publishing as Glencoe. All rights reserved.

Lesson 8: General Trends in Latin America

Objectives:
• Explain how exporting raw materials and importing manufactured goods has led to economic and political troubles for Latin American nations
• Characterize the democratic systems that many Latin American nations began to build in the late 1980s

Objectives derived from The McGraw-Hill Companies, Inc. © The McGraw-Hill Companies, Inc., publishing as Glencoe. All rights reserved.

Lesson 9: Mexico, Cuba, and Central America

Objectives:
• Summarize the political and economic crises that Mexico and Central America faced after World War II
• Discuss the United States' fear of the spread of communism in Central American countries that led to active U.S. involvement in the region

Objectives derived from The McGraw-Hill Companies, Inc. © The McGraw-Hill Companies, Inc., publishing as Glencoe. All rights reserved.
Lesson 10: The Nations of South America (two-day lesson)

Objectives:
- Discuss why South American nations have experienced economic, social, and political problems
- Explain why democracy has advanced in South America since the late 1980s

Objectives derived from The McGraw-Hill Companies, Inc. © The McGraw-Hill Companies, Inc., publishing as Glencoe. All rights reserved.

Lesson 11: Independence in Africa (two-day lesson)

Objectives:
- Describe how people hoped that independence would bring democratic governments, but instead many African nations fell victim to military regimes and one-party states
- Discuss how African nations struggled to resolve the tension between modern and traditional cultures and economies

Objectives derived from The McGraw-Hill Companies, Inc. © The McGraw-Hill Companies, Inc., publishing as Glencoe. All rights reserved.

Lesson 12: Conflict in the Middle East (three-day lesson)

Objectives:
- Explain how instability in various parts of the Middle East led to armed conflict and mediation attempts from countries outside the region
- Discuss the Islamic revival in many Middle Eastern countries, which influenced political and social life

Objectives derived from The McGraw-Hill Companies, Inc. © The McGraw-Hill Companies, Inc., publishing as Glencoe. All rights reserved.

Lesson 13: Communist China

Objectives:
- Describe the socialist society in China established by Mao Zedong
- Discuss how after Mao's death modified capitalist techniques were used to encourage growth in industry and farming

Objectives derived from The McGraw-Hill Companies, Inc. © The McGraw-Hill Companies, Inc., publishing as Glencoe. All rights reserved.

Lesson 14: Independent States in South and Southeast Asia (three-day lesson)

Objectives:
- Explain how British India was divided into two states: India, mostly Hindu, and Pakistan, mostly Muslim
- Summarize how many of the newly independent states of Southeast Asia attempted to form democratic governments but often fell subject to military regimes

Objectives derived from The McGraw-Hill Companies, Inc. © The McGraw-Hill Companies, Inc., publishing as Glencoe. All rights reserved.

Lesson 15: Japan and the Pacific (two-day lesson)

Objectives:
- Describe how Japan and the "Asian tigers" have created successful industrial societies
- Analyze why Australia and New Zealand have identified themselves culturally and politically with Europe, yet in recent years they have been drawing closer to their Asian neighbors

Objectives derived from The McGraw-Hill Companies, Inc. © The McGraw-Hill Companies, Inc., publishing as Glencoe. All rights reserved.

Lesson 16: The Challenges of Our World

Objectives:
- Discuss the environmental, social, economic, and political challenges that the world faces

Objectives derived from The McGraw-Hill Companies, Inc. © The McGraw-Hill Companies, Inc., publishing as Glencoe. All rights reserved.
Lesson 17: Global Visions (four-day lesson)

Objectives:
- Identify the organizations that have been established to respond to global challenges
- Characterize the citizens' groups and nongovernmental organizations that have also formed to address global concerns

Lesson 18: Unit Review

Lesson 19: Unit Assessment

Unit 4: World History B Final Exam

In this unit, you will have the opportunity to prepare for and take the final exam. Since this is a comprehensive exam, it may be helpful to organize your notes in the order of the course outline before you begin to review. Using the test-taking strategies that you have previously learned can help you be successful with both objective and essay questions.

Objectives:
- Decide which strategies you will use to prepare for your exam
- Organize your time and study materials
- Review your notes, keywords and vocabulary terms, and all important concepts that may be covered on this exam

Lesson 1: World History B Final Exam Review (two-day lesson)

Objectives:
- Decide which strategies you will use to prepare for your exam
- Organize your time and study materials
- Review your notes, keywords and vocabulary terms, and all important concepts that may be covered on this exam

Lesson 2: World History B Final Exam
AMERICAN GOVERNMENT A
American Government A

This is the first of two courses that comprise American Government. In this course, the student will explore the foundation of American government and its fundamental principles and organization. Glencoe's United States Government: Democracy in Action provides the basis for instruction. The student will examine government concepts such as the growth of democracy, federalism, separation of powers, and checks and balances. The branches of government—legislative, executive, and judicial—are studied in depth. This course promotes understanding and participation in government by presenting information in a context that is relevant to the student. Activities in this course are designed to develop the student's abilities to question, read, analyze, interpret, and evaluate different forms of information, as well as to communicate his or her ideas to others.

Unit 1: Foundations of American Government

In this unit, you will explore the beginnings of government in the United States. You will learn about the political and economic features of American government. You will discover how the American colonies won independence from Great Britain and what models they looked to in creating a new nation. You will study the Constitution, the three branches of government, and the principle of federalism.

Objectives:
• Discuss the history and purpose of government
• Analyze ideas and historical documents and events that shaped the U.S. Constitution
• Describe structural features of the Constitution
• Explain how the U.S. system of government is a federal one

Lesson 1: Principles of Government

Objectives:
• Identify the essential features of a state and describe the theories about the origin of government

Objectives derived from The McGraw-Hill Companies, Inc. © The McGraw-Hill Companies, Inc., publishing as Glencoe. All rights reserved.

Lesson 2: The Formation of Governments

Objectives:
• Cite similarities and differences between unitary and federal governments

Objectives derived from The McGraw-Hill Companies, Inc. © The McGraw-Hill Companies, Inc., publishing as Glencoe. All rights reserved.

Lesson 3: Types of Government

Objectives:
• Summarize the relationship between democracy and free enterprise

Objectives derived from The McGraw-Hill Companies, Inc. © The McGraw-Hill Companies, Inc., publishing as Glencoe. All rights reserved.

Lesson 4: Economic Theories (two-day lesson)

Objectives:
• Name the ways the United States has modified its free enterprise system

Objectives derived from The McGraw-Hill Companies, Inc. © The McGraw-Hill Companies, Inc., publishing as Glencoe. All rights reserved.

Lesson 5: The Colonial Period

Objectives:
• Explain why colonists expected representative government

Objectives derived from The McGraw-Hill Companies, Inc. © The McGraw-Hill Companies, Inc., publishing as Glencoe. All rights reserved.

Lesson 6: Uniting for Independence

Objectives:
Lesson 7: The Articles of Confederation

Objectives:
- Explain the weaknesses and achievements of the Articles of Confederation

Lesson 8: The Constitutional Convention (two-day lesson)

Objectives:
- Describe the making of the Constitution.

Lesson 9: Structure and Principles (four-day lesson)

Objectives:
- Describe the structure and principles behind the Constitution

Lesson 10: Three Branches of Government

Objectives:
- Summarize the powers, duties, and roles of the three branches of government

Lesson 11: Amending the Constitution (two-day lesson)

Objectives:
- Itemize the ways of proposing and ratifying amendments to the Constitution and detail methods of informal constitutional change

Lesson 12: The Amendments (two-day lesson)

Objectives:
- Classify amendments as dealing with individual rights, reflecting societal change, and affecting the structure of government

Lesson 13: National and State Powers (two-day lesson)

Objectives:
- Distinguish the expressed, implied, and inherent powers of the federal government
- Compare federal powers with state powers

Lesson 14: Relations Among the States

Objectives:
- Explain how the Constitution regulates interstate relations

Lesson 15: Developing Federalism (two-day lesson)

Objectives:
Lesson 16: Federalism and Politics (two-day lesson)

Objectives:
- Summarize the impact of federalism on politics

Lesson 17: Foundations of American Government Unit Review

Objectives:
- Review the main ideas and vocabulary of Unit 1

Lesson 18: Foundations of American Government Unit Test

Unit 2: The Legislative Branch

In this unit, you will learn about the powers and functions of the legislative branch of the United States government. You will explore the House of Representatives, the Senate, and additional committees and agencies. You will study how Congress works with the president, as well as how new laws are made.

Objectives:
- Describe the organizational structure, support systems, and leadership systems of Congress
- Discuss the powers of Congress and the relationship between Congress and the executive branch
- Analyze the lawmaking process, the factors involved in the passage of legislation, and the interaction between members of Congress and their constituents

Lesson 1: Congressional Membership

Objectives:
- Describe the structure of Congress
- List qualifications for membership in Congress

Lesson 2: The House of Representatives

Objectives:
- Describe the rules and procedures used in the House and explain the House's role in the lawmaking process

Lesson 3: The Senate

Objectives:
- Contrast the Senate's leadership and role in the lawmaking process with that of the House of Representatives

Lesson 4: Congressional Committees

Objectives:
- Identify kinds of committees and why members serve on them

Lesson 5: Staff and Support Agencies (two-day lesson)

Objectives:
- Explain how staff members and support agencies participate in the legislative process
Lesson 6: Constitutional Powers (two-day lesson)

Objectives:
- Identify and explain classifications of powers through which Congress makes laws for the nation

Lesson 7: Investigations and Oversight

Objectives:
- Discuss times when Congress used its power to conduct investigations and practice legislative oversight

Lesson 8: Congress and the President (three-day lesson)

Objectives:
- Analyze the dynamics in the relationship between the legislative and executive branches of the federal government

Lesson 9: How a Bill Becomes a Law

Objectives:
- Explain how federal legislation is proposed, reviewed, and enacted

Lesson 10: Taxing and Spending Bills

Objectives:
- Analyze the ways in which Congress raises and spends money

Lesson 11: Influencing Congress (four-day lesson)

Objectives:
- Identify factors that often influence members of Congress

Lesson 12: Helping Constituents (two-day lesson)

Objectives:
- Explain how members of Congress help voters in their states or districts

Lesson 13: The Legislative Branch Unit Review

Objectives:
- Review the main ideas and key words of Unit 2

Lesson 14: The Legislative Branch Unit Test

Unit 3: The Executive Branch

In this unit, you will explore the powers and functions of the executive branch of the United States government. You will learn about the responsibilities of the president, vice president, and the cabinet. You will also study the seven major roles of the president and styles of leadership that lead to presidential success. Finally, you will learn about the bureaucratic and civil service systems of the executive branch.

Objectives:
• Describe the organization and functions of the executive branch of the federal government
• Discuss presidential powers
• Evaluate the functions of the federal bureaucracy

Lesson 1: President and Vice President

Objectives:
• Describe the requirements for the office of president and the role of the vice president

Lesson 2: Electing the President (two-day lesson)

Objectives:
• Discuss the historical foundations of the Electoral College and its advantages and disadvantages

Lesson 3: The Cabinet

Objectives:
• Evaluate how politics influences cabinet appointments and relationships

Lesson 4: The Executive Office (two-day lesson)

Objectives:
• Describe the components of the Executive Office of the President

Lesson 5: Presidential Powers

Objectives:
• Summarize the historical changes in the power of the presidency

Lesson 6: Roles of the President (two-day lesson)

Objectives:
• Describe the seven major roles of the president

Lesson 7: Styles of Leadership (four-day lesson)

Objectives:
• Evaluate the leadership qualities important to the success of the president

Lesson 8: Bureaucratic Organization (two-day lesson)

Objectives:
• Describe the functions of the Cabinet, independent government agencies, and regulatory commissions

Lesson 9: The Civil Service System

Objectives:
• Evaluate the effectiveness of the civil service system
Lesson 10: The Bureaucracy at Work (two-day lesson)

Objectives:
- Summarize the advantages and disadvantages of the federal bureaucracy

Lesson 11: The Executive Branch Unit Review

Objectives:
- Review the main ideas and key words of Unit 3

Lesson 12: The Executive Branch Unit Test

Unit 4: The Judicial Branch

In this unit, you will explore the powers and functions of the judicial branch of the United States government. You will learn about the judicial systems of federal and state courts. You will study the Supreme Court, and learn about how it selects, hears, and decides cases. Finally, you will investigate how the Supreme Court shapes public policy as well as the factors that influence the Court's decisions.

Objectives:
- Describe the jurisdiction of federal courts and the method of selecting judges for them
- Explain the workings of the Supreme court, how it shapes public policy, and the forces that shape its decisions

Lesson 1: Powers of the Federal Courts

Objectives:
- Compare the jurisdiction of federal and state courts and describe the growth of the Supreme Court

Lesson 2: Lower Federal Courts

Objectives:
- Explain the jurisdiction of federal and state courts and describe the growth of the Supreme Court

Lesson 3: The Supreme Court (two-day lesson)

Objectives:
- Describe the jurisdiction of the Supreme Court, the duties of its justices, and the way its justices are selected

Lesson 4: The Supreme Court at Work

Objectives:
- Explain how the Supreme Court selects, hears, and decides cases

Lesson 5: Shaping Public Policy (two-day lesson)

Objectives:
- Identify the ways the Supreme Court shapes public policy and explain the limits on the Court's power

Appendix A.2.d Social Studies Course Guides

© 2006 Connections Education LLC. All rights reserved.
© 2006 The McGraw-Hill Companies, Inc. All rights reserved.
Lesson 6: Influencing Court Decisions (two-day lesson)

Objectives:
- Describe the forces that shape the Supreme Court's decisions

Objectives derived from The McGraw-Hill Companies, Inc. © The McGraw-Hill Companies, Inc., publishing as Glencoe. All rights reserved.

Lesson 7: The Judicial Branch Unit Review (two-day lesson)

Lesson 8: The Judicial Branch Unit Test

Unit 5: American Government A Final

In this unit, you will have the opportunity to prepare for and take the final exam. Since this is a comprehensive exam, it may be helpful to organize your notes in the order of the course outline before you begin to review. Using the test-taking strategies that you have previously learned can help you be successful with both objective and essay questions.

Lesson 1: American Government A Review (two-day lesson)

Lesson 2: American Government A Final
AMERICAN GOVERNMENT B
American Government B

This is the second of two courses that comprise American Government. In this course, the student will examine the basic rights and responsibilities of U.S. citizens and the foundations of American government. Glencoe's *United States Government: Democracy in Action* provides the basis for instruction. In this course students explore constitutional freedoms, citizen requirements, and aspects of American law. Students learn about ways to affect the government and study the influence of the media, political parties, and interest groups. Students will also learn about local and state government structures and compare political systems and economies from around the world.

**Unit 1: Liberty and Justice for All**

In this unit, you will learn about the basic rights and responsibilities of U.S. citizens. You will explore the freedoms granted by the Bill of Rights. You will also study U.S. immigration policy as well as the requirements for U.S. citizenship. Finally, you will learn about aspects of American law, including the concepts of equal protection, privacy, and equal opportunity.

Objectives:
- List an American citizen's basic civil liberties and review the constitutional protections provided for each
- Discuss the nature, rights, and responsibilities of U.S. citizenship
- Explain the foundations of the U.S. legal system and the basic procedures of civil and criminal law

**Lesson 1: Constitutional Rights**

Objectives:
- Discuss constitutional rights and the importance of the nationalization of the Bill of Rights

*Objectives derived from The McGraw-Hill Companies, Inc. © The McGraw-Hill Companies, Inc., publishing as Glencoe. All rights reserved.*

**Lesson 2: Freedom of Religion**

Objectives:
- Explain the establishment and free exercise clauses that define the First Amendment's guarantee of religious freedom

*Objectives derived from The McGraw-Hill Companies, Inc. © The McGraw-Hill Companies, Inc., publishing as Glencoe. All rights reserved.*

**Lesson 3: Freedom of Speech**

Objectives:
- Explain how the First Amendment protects diversity of opinion in the United States

*Objectives derived from The McGraw-Hill Companies, Inc. © The McGraw-Hill Companies, Inc., publishing as Glencoe. All rights reserved.*

**Lesson 4: Freedom of the Press**

Objectives:
- Analyze First Amendment protections for sharing information and opinions

*Objectives derived from The McGraw-Hill Companies, Inc. © The McGraw-Hill Companies, Inc., publishing as Glencoe. All rights reserved.*

**Lesson 5: Freedom of Assembly (four-day lesson)**

Objectives:
- Explain the freedoms and restrictions placed by the First Amendment upon gatherings of people

*Objectives derived from The McGraw-Hill Companies, Inc. © The McGraw-Hill Companies, Inc., publishing as Glencoe. All rights reserved.*

**Lesson 6: A Nation of Immigrants**

Objectives:
Lesson 7: The Basis of Citizenship

Objectives:
- Explain the requirements for United States citizenship

Lesson 8: The Rights of the Accused

Objectives:
- Summarize the rights of Americans accused of crimes

Lesson 9: Equal Protection of the Law

Objectives:
- Explain the concept of "equal protection" and the tests by which the Supreme Court determines discrimination

Lesson 10: Challenges for Civil Liberties (two-day lesson)

Objectives:
- Contrast trends and laws intended to ensure equal opportunity, privacy, and citizen's right to know

Lesson 11: Sources of American Law

Objectives:
- Discuss the major foundations and principles of the American legal system

Lesson 12: Civil Law

Objectives:
- Explain the various types of civil law and the steps involved in resolving a civil dispute

Lesson 13: Criminal Law (two-day lesson)

Objectives:
- Classify types of crimes
- Outline the steps followed in criminal cases

Lesson 14: Liberty and Justice for All Unit Review

Lesson 15: Liberty and Justice for All Unit Test

Unit 2: Participating in Government

In this unit, you will explore the different ways in which Americans participate in the political system. You will learn about the role and organization of political parties. In addition, you will study the election process in the U.S. You will also explore the roles and responsibilities of voters, and discover how they influence and are influenced by the political system. Finally,
you will learn about the roles of interest groups, public opinion, and the media in American
government.

Objectives:
• Identify the function of political parties
• Analyze the importance of an informed electorate
• Evaluate the effect of interest groups on the government
• Explain the power of mass media as it relates to individuals, interest groups, and the
government

Lesson 1: Development of Parties

Objectives:
• Summarize the role of political parties in American politics

Objectives derived from The McGraw-Hill Companies, Inc. © The McGraw-Hill Companies,
Inc., publishing as Glencoe. All rights reserved.

Lesson 2: Party Organization

Objectives:
• Describe the organization and function of American political parties

Objectives derived from The McGraw-Hill Companies, Inc. © The McGraw-Hill Companies,
Inc., publishing as Glencoe. All rights reserved.

Lesson 3: Nominating Candidates (two-day lesson)

Objectives:
• Discuss the advantages and disadvantages of the four methods of
nominating candidates

Objectives derived from The McGraw-Hill Companies, Inc. © The McGraw-Hill Companies,
Inc., publishing as Glencoe. All rights reserved.

Lesson 4: Election Campaigns

Objectives:
• Examine the role campaign financing and political parties play in electing
candidates for public office

Objectives derived from The McGraw-Hill Companies, Inc. © The McGraw-Hill Companies,
Inc., publishing as Glencoe. All rights reserved.

Lesson 5: Expanding Voting Rights

Objectives:
• Summarize the historical expansion of voting rights

Objectives derived from The McGraw-Hill Companies, Inc. © The McGraw-Hill Companies,
Inc., publishing as Glencoe. All rights reserved.

Lesson 6: Influences on Voters

Objectives:
• Evaluate the factors that influence voters and nonvoters

Objectives derived from The McGraw-Hill Companies, Inc. © The McGraw-Hill Companies,
Inc., publishing as Glencoe. All rights reserved.

Lesson 7: Interest Group Organization

Objectives:
• Describe the types of interest groups in the United States

Objectives derived from The McGraw-Hill Companies, Inc. © The McGraw-Hill Companies,
Inc., publishing as Glencoe. All rights reserved.

Lesson 8: Affecting Public Policy

Objectives:
• Explain how lobbyists affect public policy

Objectives derived from The McGraw-Hill Companies, Inc. © The McGraw-Hill Companies,
Inc., publishing as Glencoe. All rights reserved.

Lesson 9: Shaping Public Opinion

Appendix A.2.d Social Studies Course Guides
American Government B

© 2006 Connections Education LLC. All rights reserved.
© 2006 The McGraw-Hill Companies, Inc. All rights reserved.
Lesson 10: Measuring Public Opinion (two-day lesson)

Objectives:
- Evaluate the methods used to measure public opinion

Lesson 11: How Media Impact Government (three-day lesson)

Objectives:
- Discuss the role of mass media in United States politics

Lesson 12: Regulating Print and Broadcast Media

Objectives:
- Evaluate the role the governments plays in regulating mass media

Lesson 13: The Internet and Democracy (two-day lesson)

Objectives:
- Analyze the impact of the Internet on government in the United States

Lesson 14: Participating in Government Unit Review
Lesson 15: Participating in Government Unit Test

Unit 3: Public Policies and Services

In this unit, you will explore public policies and services of the U.S. government. You will learn about how the government raises and manages money. You will also study the government's policies on business, the environment, public health, education, housing, and transportation. Finally, you will learn about the nation's foreign policy, and how it has changed over time.

Objectives:
- Describe the federal government's methods of raising money and of budgeting and spending that money
- Discuss social and domestic policy in such areas as business and labor, agriculture and the environment, health care and public assistance, and transportation
- Summarize various aspects of foreign policy- goals, historical development, the roles of the executive and legislative branches, and tools

Lesson 1: Raising Money

Objectives:
- Identify the kinds of taxes and the methods of borrowing the government uses to raise money

Lesson 2: Preparing the Federal Budget

Objectives:
- Describe the roles of the executive and legislative branches in the preparation of the federal budget
Lesson 3: Managing the Economy (two-day lesson)

Objectives:
• Explain the influence of fiscal and monetary policies on the economy

Objectives derived from The McGraw-Hill Companies, Inc. © The McGraw-Hill Companies, Inc., publishing as Glencoe. All rights reserved.

Lesson 4: Business and Labor Policy

Objectives:
• Describe the interaction among government, business, labor, and consumers

Objectives derived from The McGraw-Hill Companies, Inc. © The McGraw-Hill Companies, Inc., publishing as Glencoe. All rights reserved.

Lesson 5: Agriculture and Environment

Objectives:
• Summarize past and current federal farm and environmental policy

Objectives derived from The McGraw-Hill Companies, Inc. © The McGraw-Hill Companies, Inc., publishing as Glencoe. All rights reserved.

Lesson 6: Health and Public Assistance

Objectives:
• Identify the role of the federal government in health care, public assistance, and social insurance

Objectives derived from The McGraw-Hill Companies, Inc. © The McGraw-Hill Companies, Inc., publishing as Glencoe. All rights reserved.

Lesson 7: Education, Housing, and Transportation (two-day lesson)

Objectives:
• Explain the federal government's role in education, housing and urban renewal, and transportation

Objectives derived from The McGraw-Hill Companies, Inc. © The McGraw-Hill Companies, Inc., publishing as Glencoe. All rights reserved.

Lesson 8: Development of Foreign Policy

Objectives:
• Describe the goals and development of United States foreign policy

Objectives derived from The McGraw-Hill Companies, Inc. © The McGraw-Hill Companies, Inc., publishing as Glencoe. All rights reserved.

Lesson 9: Shared Foreign Policy Powers

Objectives:
• Explain how the executive and legislative branches share foreign policy powers

Objectives derived from The McGraw-Hill Companies, Inc. © The McGraw-Hill Companies, Inc., publishing as Glencoe. All rights reserved.

Lesson 10: State and Defense Departments

Objectives:
• Summarize the roles of the Departments of State and Defense in foreign policy making

Objectives derived from The McGraw-Hill Companies, Inc. © The McGraw-Hill Companies, Inc., publishing as Glencoe. All rights reserved.

Lesson 11: Foreign Policy in Action (three-day lesson)

Objectives:
• Describe the tools of foreign policy

Objectives derived from The McGraw-Hill Companies, Inc. © The McGraw-Hill Companies, Inc., publishing as Glencoe. All rights reserved.

Lesson 12: Public Policies and Services Unit Review
Unit 4: State and Local Government

In this unit, you will learn about different roles and responsibilities of state and local governments. You will explore the similarities and differences in their history and organization. Finally, you will learn about the ways in which state and local government influences your daily life.

Objectives:
- Discuss the foundation, organization, and functions of state governments
- Summarize the history, structure, and responsibilities of local governments

Lesson 1: State Constitutions

Objectives:
- Explain the importance and functions of state constitutions

Lesson 2: The Three Branches

Objectives:
- Discuss the organization and functions of the three branches of state governments

Lesson 3: State Government Policy

Objectives:
- Analyze ways in which state governments write and enforce public policy

Lesson 4: Financing State Government (two-day lesson)

Objectives:
- Identify and evaluate various sources of state revenue

Lesson 5: Structure of Local Government

Objectives:
- Describe and compare various forms of local government

Lesson 6: Serving Localities

Objectives:
- Explain how local governments provide a range of services to residents of the community

Lesson 7: Challenges of Urban Growth (three-day lesson)

Objectives:
- Identify problems that metropolitan areas face and potential solutions

Lesson 8: State and Local Government Unit Review

Lesson 9: State and Local Government Unit Test
In this unit, you will identify the characteristics of different types of political systems. You will evaluate the relationship between economic decision-making and political freedom. Finally, you will compare capitalism, socialism, and communism.

Objectives:
- Discuss the characteristics of different types of political systems
- Evaluate the relationship between economic decision making and political freedom
- Compare capitalism, socialism, and communism

**Lesson 1: Democratic Governments**

Objectives:
- Compare parliamentary government and presidential government

**Lesson 2: Authoritarian Governments**

Objectives:
- Discuss the traits that authoritarian governments have in common

**Lesson 3: International Organizations**

Objectives:
- Evaluate the impact of international organizations on global affairs

**Lesson 4: Global Issues (three-day lesson)**

Objectives:
- Understand the major global issues facing the world today

**Lesson 5: Capitalist and Mixed Systems**

Objectives:
- Identify the factors of production in economic systems and the chief characteristics of capitalism

**Lesson 6: Emerging Economies**

Objectives:
- Discuss economic problems that have challenged developing nations and attempts to solve those problems

**Lesson 7: Major Economies in Transition**

Objectives:
- Describe the major obstacles to change in the Russian and Chinese economies

**Lesson 8: The Global Economy (two-day lesson)**

Objectives:
- Analyze the factors that dominate global economic concerns today

**Lesson 9: Political and Economic Systems Unit Review**
Lesson 10: Political and Economic Systems Unit Test

Unit 6: American Government B Final

In this unit, you will have the opportunity to prepare for and take the final exam. Since this is a comprehensive exam, it may be helpful to organize your notes in the order of the course outline before you begin to review. Using the test-taking strategies that you have previously learned can help you be successful with both objective and essay questions.

Lesson 1: American Government B Review (two-day lesson)

Lesson 2: American Government B Final
ECONOMICS
Economics

Economics provides an introduction to the concepts of both macro- and microeconomics. Prentice Hall’s *Economics: Principles in Action* provides the basis for instruction. Students explore topics such as scarcity, opportunity cost, and supply and demand. The course provides an overview of the free market and centrally planned economies, as well as how government influences economics. Students will also explore business and labor, money, banking, and finance. Economics introduces students to economic growth, development, and challenges in both the U.S. and the global economies.

**Unit 1: Introduction to Economics**

In the first unit of Economics, you will be introduced to the basic ideas of economics. You will study scarcity, the factors of production, decision making, and opportunity cost. You will also examine how societies have developed different economic systems to make choices about resource allocation. Finally, you will study the American free enterprise system.

Objectives:
- Explain why scarcity and choice are basic problems of economics; Identify types of capital
- Interpret a production possibilities curve; Identify the three key economic questions
- Explain why markets exist; Explain the advantages and disadvantages of different types of markets
- Describe the free enterprise system of the United States
- Identify examples of public goods

**Lesson 1: Scarcity, Production Factors, and Opportunity Cost**

Objectives:
- Explain why scarcity and choice are basic problems of economics
- Identify land, labor, and capital as the three factors of production, and identify the two types of capital
- Explain the role of entrepreneurs
- Explain why economists say all resources are scarce
- Describe why every decision involves trade-offs
- Explain the concept of opportunity cost
- Explain how people make decisions by thinking at the margin

Objectives derived from Pearson Education, Inc. © Pearson Education, Inc., publishing as Pearson Prentice Hall. All rights reserved.

**Lesson 2: Production Possibilities Curves (two-day lesson)**

Objectives:
- Interpret a production possibilities curve
- Demonstrate how production possibilities curves show efficiency, growth, and cost
- Understand that a country’s production possibilities depend on its available resources and technology

Objectives derived from Pearson Education, Inc. © Pearson Education, Inc., publishing as Pearson Prentice Hall. All rights reserved.

**Lesson 3: Answering the Three Economic Questions**

Objectives:
- Identify the three key economic questions of what to produce, how to produce, and who consumes what is produced
- Analyze the societal values that determine how a country answers the three economic questions
- Explain the characteristics of traditional, command, and market economies and describe the societal values that influence them

Objectives derived from Pearson Education, Inc. © Pearson Education, Inc., publishing as Pearson Prentice Hall. All rights reserved.

**Lesson 4: Free Market, Planned, and Modern Economies (two-day lesson)**

Objectives:

Appendix A.2.d Social Studies Course Guides Economics

© 2007 Connections Education LLC. All rights reserved.
Lesson 5: Benefits of Free Enterprise, Growth, and Stability

Objectives:
- Describe the tradition of free enterprise in the United States and the constitutional protections that underlie it
- Explain the basic principles of the U.S. free enterprise system
- Identify the role of the consumer in the U.S. free enterprise system
- Describe the role of the government in the U.S. free enterprise system
- Explain how the government tracks and seeks to influence business cycles
- Analyze how the government promotes economic strength
- Analyze the effect of technology on productivity

Lesson 6: Providing Public Goods and a Safety Net

Objectives:
- Identify examples of public goods
- Analyze market failures
- Evaluate how the government allocates some resources by managing externalities
- Summarize the U.S. political debate on ways to fight poverty
- Describe the main programs through which the government redistributes income

Lesson 7: Unit Review

Objectives:
- Review the basic ideas of economics
- Learn about scarcity, the factors of production, decision making, and opportunity costs
- Look at how societies have developed different economic systems to make choices about resource allocations
- Examine one of those systems, the American system of free enterprise

Lesson 8: Unit Assessment

Unit 2: How Markets Work

In this unit, you will study the factors that affect the way markets perform. You will learn about demand, consumer desire for a product, and how it is affected by other economic factors. In addition, you will examine supply and its role in the market. Both supply and demand affect prices, which you will also learn about in this unit. Finally, you will study the four types of market structures and identify their advantages and disadvantages.

Objectives:
Lesson 1: Understanding Demand

Objectives:
- Explain the law of demand
- Understand how the substitution effect and the income effect influence decisions
- Create a demand schedule for an individual and a market
- Interpret a demand graph using demand schedules

Lesson 2: Demand Curve Shifts and Elasticity of Demand (three-day lesson)

Objectives:
- Understand the difference between a change in quantity demanded and a shift in the demand curve
- Identify the determinants that create changes in demand and that can cause a shift in the demand curve
- Explain how the change in the price of one good can affect demand for a related good
- Explain how to calculate the elasticity of demand
- Identify factors that affect elasticity
- Explain how firms use elasticity of supply and time

Lesson 3: Understanding Supply

Objectives:
- Explain the law of supply
- Interpret a supply graph using a supply schedule
- Explain the relationship between elasticity of supply and time

Lesson 4: Costs of Production

Objectives:
- Explain how firms decide how much labor to hire to produce a certain level of output
- Analyze the production costs of a firm
- Understand how a firm chooses to set output
- Explain how a firm decides to shut down an unprofitable business

Lesson 5: Changes in Supply (two-day lesson)

Objectives:
- Identify how determinants such as input costs create changes in supply
- Identify three ways that the government can influence the supply of a good
- Understand supply and demand in the global economy
- Analyze the effects of other factors that affect supply

Lesson 6: Supply and Demand and Market Equilibrium (three-day lesson)
Lesson 7: The Role of Prices (two-day lesson)

Objectives:
- Analyze the role of prices in a free market
- List the advantages of a price-based system
- Explain how a price-based system leads to a wider choice of goods and more efficient allocation of resources
- Describe the relationship between prices and the profit incentive

Lesson 8: Perfect Competition and Monopoly

Objectives:
- Describe the four conditions that are in place in a perfectly competitive market
- List two common barriers that prevent firms from entering a market
- Describe prices and output in a perfectly competitive market
- Describe characteristics and give examples of monopoly
- Describe how monopolies are formed, including government monopolies
- Explain how a firm with a monopoly sets output and price and why companies practice price discrimination

Lesson 9: Competition, Oligopoly, and Regulation

Objectives:
- Describe characteristics and give examples of monopolistic competition
- Explain how firms compete without lowering prices
- Understand how firms in a monopolistically competitive market set output
- Describe characteristics and give examples of oligopoly
- Understand how firms use market power
- List three market practices that the government regulates or bans to protect competition
- Define deregulation and list its effects on several industries

Lesson 10: Unit Review

Objectives:
- Learn about demand, consumer desire for a product, and how it is affected by other economic factors
- Explain how supply is one of the basic building blocks of the market place
- Explain how supply and demand affect prices
- Review the four types of market structures and how the government intervenes to protect competition, a key element of free enterprise, in the marketplace
Lesson 11: Unit Assessment

Unit 3: Business and Labor

In this unit, you will learn about how the world of work is organized. You will develop an understanding of the types of business organizations, including sole proprietorships, partnerships, and corporations. You will also examine the history and development of organized labor as well as factors that determine wages. Finally, you will learn about trends in the labor force and in wages and benefits.

Objectives:
- Examine the characteristics of sole proprietorships, partnerships, and corporations
- Analyze the advantages and disadvantages of incorporation and mergers
- Analyze the relationship between supply and demand in the labor market
- Trace the history of the labor movement in the United States

Lesson 1: Sole Proprietorships

Objectives:
- Explain the characteristics of sole proprietorships
- Analyze the advantages of a sole proprietorship
- Analyze the disadvantages of a sole proprietorship

Lesson 2: Partnerships

Objectives:
- Compare and contrast the different types of partnerships
- Analyze the advantages of partnerships
- Analyze the disadvantages of partnerships

Lesson 3: Corporations and Mergers (two-day lesson)

Objectives:
- Explain the characteristics of corporations
- Analyze the advantages of incorporation; Analyze the disadvantages of incorporation
- Compare and contrast corporate combinations

Lesson 4: Other Organizations

Objectives:
- Understand how a business franchise works
- Identify the different types of cooperative organizations
- Understand the purpose of nonprofit organizations, including professional and business organizations

Lesson 5: Labor Market Trends

Objectives:
- Describe how trends in the labor force are tracked
- Analyze past and present occupational trends
- Summarize how the U.S. labor force is changing
- Identify and explain trends in the wages and benefits paid to U.S. workers

Lesson 6: Labor and Wages

Objectives:
- Analyze the relationship between supply and demand in the labor market
Lesson 7: Organized Labor

Objectives:
- Describe why historically some American workers have joined labor unions
- Trace the history of the labor movement in the United States
- Analyze reasons for the decline of the labor movement
- Explain how labor and management negotiate contracts

Lesson 8: Unit Review

Objectives:
- Learn how and why economists study the composition of the country’s labor force
- Explain the impact of supply and demand on labor and wages

Lesson 9: Unit Assessment

Unit 4: Money, Banking, and Finance

In this unit, you will learn about money, banking, and finance. You will examine the characteristics of money, the historic role of banks, and trends in banking today. You will also study the world of finance and develop an understanding of savings and investment, including investment options, such as stocks and bonds.

Objectives:
- Describe the three uses of money; Understand the source of money’s value
- Trace the history of American banking; Explain the functions of financial institutions
- Understand how investing contributes to the free enterprise system; Identify the trade-offs among risk, liquidity, and return
- Describe the characteristics of bonds as financial assets; Identify different types of bonds
- Understand the benefits and risks of buying stock

Lesson 1: Money

Objectives:
- Describe the three uses of money
- Explain the six characteristics of money
- Understand the sources of money’s value

Lesson 2: The History of American Banking and Banking Today (two-day lesson)

Objectives:
- Describe the shifts between centralized and decentralized banking before the Civil War
- Explain how the banking system was stabilized in the later 1800s
- Describe developments in banking during the twentieth century
- Explain how the money supply in the United States is measured
- Explain the functions of financial institutions
- Identify different types of financial institutions
- Understand the changes brought about by electronic banking
Lesson 3: Saving and Investing

Objectives:
• Understand how investing contributes to the free enterprise system
• Explain how the financial system brings together savers and borrowers
• Describe how financial intermediaries link savers and borrowers
• Identify the trade-offs among risk, liquidity, and return

Objectives derived from Pearson Education, Inc. © Pearson Education, Inc., publishing as Pearson Prentice Hall. All rights reserved.

Lesson 4: Bonds and Other Financial Assets

Objectives:
• Describe the characteristics of bonds as financial assets
• Identify different types of bonds
• Describe the characteristics of other types of financial assets
• Explain four different types of financial asset markets

Objectives derived from Pearson Education, Inc. © Pearson Education, Inc., publishing as Pearson Prentice Hall. All rights reserved.

Lesson 5: The Stock Market

Objectives:
• Understand the benefits and risks of buying stock
• Describe how stocks are traded
• Identify how stock performance is measured
• Explain the causes and effects of the Great Crash of 1929

Objectives derived from Pearson Education, Inc. © Pearson Education, Inc., publishing as Pearson Prentice Hall. All rights reserved.

Lesson 6: Unit Review

Objectives:
• Learn how economists define money
• Study how banks and other institutions help channel money from savers to investors

Objectives derived from Pearson Education, Inc. © Pearson Education, Inc., publishing as Pearson Prentice Hall. All rights reserved.

Lesson 7: Unit Assessment

Unit 5: Measuring Economic Performance

In this unit, you will discover how economic performance is measured. You will learn about the calculation and use of gross domestic product and the significance of business cycles. In addition, you will study economic growth and the factors that contribute to it. You will examine the economic challenges of unemployment, inflation, and poverty, and the effect of these challenges on the economy.

Objectives:
• Explain how gross domestic product is calculated; Identify factors that influence gross domestic product
• Identify the phases of the business cycle; Describe four key factors that keep the business cycle going
• Analyze how economic growth is measured; Analyze how saving and investing are related to economic growth
• Describe frictional, seasonal, structural, and cyclical unemployment; Describe how full employment is measured
• Explain the effects of rising prices; Define who is poor, according to government standards

Lesson 1: Gross Domestic Product

Objectives:
• Identify National Income and Product Accounts (NIPA)
• Explain how gross domestic product (GDP) is calculated
• Explain the difference between nominal and real GDP
• List the main limitations of GDP

Appendix A.2.d Social Studies Course Guides Economics

© 2007 Connections Education LLC. All rights reserved.
Lesson 2: Business Cycles

Objectives:
- Identify the phases of the business cycle
- Describe four key factors that keep the business cycle going
- Explain how economists forecast fluctuations in the business cycle
- Analyze the impact of business cycles in U.S. history
- Analyze why U.S. business cycles may change in the future

Lesson 3: Economic Growth (two-day lesson)

Objectives:
- Analyze how economic growth is measured
- Understand capital deepening and how it contributes to economic growth
- Analyze how saving and investment are related to economic growth
- Summarize the impact of population growth, government, and foreign trade on economic growth
- Identify the causes and impact of technological progress

Lesson 4: Unemployment (two-day lesson)

Objectives:
- Describe frictional, seasonal, structural, and cyclical unemployment
- Describe how full employment is measured
- Explain why full employment does not mean that every worker is employed

Lesson 5: Inflation

Objectives:
- Explain the effects of rising prices
- Understand the use of price indexes to compare changes in prices over time
- Identify the causes and effects of inflation
- Describe recent trends in the inflation rate

Lesson 6: Poverty (two-day lesson)

Objectives:
- Define who is poor, according to government standards
- Describe the causes of poverty
- Analyze the distribution of income in the United States
- Summarize government policies intended to combat poverty

Lesson 7: Unit Review

Objectives:
- Learn how economists measure the health of the economy
- Study the impact a recession has on workers and businesses
- Define inflation
- Identify what makes the economy grow

Appendix A.2.d Social Studies Course Guides  Economics
Lesson 8: Unit Assessment

Unit 6: Government and the Economy

In this unit, you will learn about the ways the government obtains and spends resources as well as how it intervenes in the economy. You will study taxes and federal spending. You will also learn about fiscal policy and the different ways economists view the role of government in the economy. Finally, you will examine monetary policy, the money creation process, bank regulation, and the role of the Federal Reserve.

Objectives:
- Understand how the government uses taxes to fund programs; Describe types of tax bases and tax structures; Distinguish between mandatory and discretionary spending; Describe major entitlement programs
- Describe how the government uses fiscal policy as a tool for achieving its economic goals; Explain how the government creates the federal budget
- Compare and contrast classical economics and Keynesian economics
- Explain the importance of balancing the budget
- Explain the structure of the Federal Reserve system; Describe the process of money creation; Understand how monetary policy works

Lesson 1: Taxes

Objectives:
- Understand how the government uses taxes to fund programs; Identify the roots of the concept of taxation in the United States Constitution
- Describe types of tax bases and tax structures; List the characteristics of a good tax
- Identify who bears the burden of a tax
- Describe the process of paying individual income taxes
- Explain the basic characteristics of corporate income taxes
- Understand the purpose of Social Security, Medicare, and unemployment taxes
- Identify other types of taxes

Objectives derived from Pearson Education, Inc. © Pearson Education, Inc., publishing as Pearson Prentice Hall. All rights reserved.

Lesson 2: Federal, State, and Local Taxes and Spending (four-day lesson)

Objectives:
- Distinguish between mandatory and discretionary spending
- Describe major entitlement programs; Identify categories of discretionary spending
- Explain the impact of federal aid to state and local governments
- Explain how states use a budget to plan their spending
- Identify where state taxes are spent
- List the major sources of state tax revenue
- Describe local government spending an sources of revenue

Objectives derived from Pearson Education, Inc. © Pearson Education, Inc., publishing as Pearson Prentice Hall. All rights reserved.

Lesson 3: Understanding Fiscal Policy

Objectives:
- Describe how the government uses fiscal policy as a tool for achieving its economic goals
- Explain how the government creates the federal budget
- Analyze the impact of fiscal policy decisions on the economy
- Identify the limits of fiscal policy

Objectives derived from Pearson Education, Inc. © Pearson Education, Inc., publishing as Pearson Prentice Hall. All rights reserved.

Lesson 4: Fiscal Policy Options

Objectives:
- Compare and contrast classical economics and Keynesian economics
- Explain the basic principles of supply-side economics
Lesson 5: Budget Deficits and the National Debt (two-day lesson)

Objectives:
- Explain the importance of balancing the budget
- Analyze how budget deficits add to the national debt
- Summarize the problems caused by the national debt
- Identify how a government can reduce budget deficits and the national debt

Lesson 6: The Federal Reserve System and its Functions (two-day lesson)

Objectives:
- Understand banking history in the United States; Explain why the Federal Reserve Act of 1913 led to further reform
- Explain the structure of the Federal Reserve System
- Describe how the Federal Reserve serves the federal government
- Describe how the Federal Reserve serves banks
- Describe how the Federal Reserve regulates the banking system
- Understand the Federal Reserve's role in regulating the nation's money supply

Lesson 7: Monetary Policy Tools

Objectives:
- Describe the process of money creation
- Explain how the Federal Reserve uses reserve requirements, interest rates, and open market operations to implement U.S. monetary policy
- Understand why some monetary policy tools are favored over others

Lesson 8: Monetary Policy and Macroeconomic Stabilization (two-day lesson)

Objectives:
- Understand how monetary policy works
- Explain the problems of timing and policy lags in implementing monetary policy
- Explain how predictions about the length of a business cycle affect monetary policy
- Describe two distinct approaches to monetary policy

Lesson 9: Unit Review

Objectives:
- Learn how governments gather and spend financial resources
- Examine the actions that the government sometimes takes to help ensure the health of the nation's economy

Lesson 10: Unit Assessment

Unit 7: The Global Economy

In the final unit of Economics, you will learn about international trade and economic development. You will study reasons why nations trade, barriers to trade, international
cooperation, and ways in which trade is measured. Finally, you will study levels of economic development and the changes that are occurring throughout much of the world today.

Objectives:
- Explain why nations trade; Define various types of trade barriers
- Analyze how changes in exchange rates of world currencies affect international trade; Understand what is meant by developed nations and less developed countries
- Identify the tools used to measure levels of development
- Understand the role investment plays in development; Identify the purposes of foreign aid
- Describe the functions of various international economic institutions

Lesson 1: Why Nations Trade

Objectives:
- Analyze the locations of resources and evaluate the significance of these locations
- Explain the concepts of absolute and comparative advantage and apply the concept of comparative advantage to explain why and how countries trade
- Analyze the impact of U.S. imports and exports on the United States and its trading partners
- Describe the effects of trade on employment

Lesson 2: Trade Barriers and Agreements

Objectives:
- Define various types of trade barriers
- Compare the effects of free trade and trade barriers on economic activities
- Understand arguments in favor of protectionism
- Evaluate the benefits and costs of participation in international trade agreements
- Explain the role of multinationals in the global market

Lesson 3: Measuring Trade

Objectives:
- Analyze how changes in exchange rates of world currencies affect international trade
- Describe the effect of various exchange rate systems
- Analyze the effects of changes in exchange rates on the balance of trade

Lesson 4: Levels of Development (two-day lesson)

Objectives:
- Understand what is meant by developed nations and less developed countries
- Identify the tools used to measure levels of development
- Describe the characteristics of developed nations and less developed countries
- Understand how levels of development are ranked

Lesson 5: Issues in Development

Objectives:
- Identify the causes and effects of rapid population growth
- Describe the effects of the unequal distribution of the factors of production
- Understand the importance of human capital to development
Lesson 6: Financing Development

Objectives:
- Understand the role investment plays in development
- Identify the purposes of foreign aid
- Describe the functions of various international economic institutions

Lesson 7: Transitions to Free Enterprise

Objectives:
- Identify some important steps in moving from a centrally planned economy toward a free market economy
- Describe the political and economic changes that have taken place in Russia in recent decades
- Describe the actions that China's communist government has taken to introduce free market reforms into China

Lesson 8: Unit Review

Objectives:
- Learn why nations trade
- Explore what actions nations take to restrict or increase trade
- Examine why standards of living vary greatly from country to country
- Study the impact of the global economy on everyone's future

Lesson 9: Unit Assessment

Unit 8: Economics Final Exam

In this unit, you will have the opportunity to prepare for and take the final exam. Since this is a comprehensive exam, it may be helpful to organize your notes in the order of the course outline before you begin to review. Using the test-taking strategies that you have previously learned can help you be successful with both objective and essay questions.

Objectives:
- Decide which strategies you will use to prepare for your exam
- Organize your time and study materials
- Review your notes, keywords and vocabulary terms, and all important concepts that may be covered on this exam

Lesson 1: Economics Final Exam Review (two-day lesson)

Objectives:
- Decide which strategies you will use to prepare for your exam
- Organize your time and study materials
- Review your notes, keywords and vocabulary terms, and all important concepts that may be covered on this exam

Lesson 2: Economics Final Exam
GEOGRAPHY & SOCIETY
Geography and Society

In Geography and Society, students will study the physical processes of the Earth, human systems such as culture, government, and economics, and develop skills to investigate regional conflicts around the world. Students will also begin to develop practical skills utilizing geographic concepts such as map reading and creation, as well as weather forecasting.

Unit 1: Geography Workshop

In this unit, you will begin by learning about the different perspectives that underpin the science of geography. Once you have become familiar with those concepts, you will work extensively with the primary tool of a geographer: maps. From examining how maps have evolved over centuries, their different forms and uses, and utilizing maps, you will gain an appreciation for the work that geographers do in our society.

Lesson 1: Introduction to Geography

Objectives:
• Define geography and explain the purpose of studying geography
• Identify and be able to give examples of the elements of geography
• Explain how geographers organize information

Lesson 2: Introduction to Maps

Objectives:
• Define cartography
• Be able to use map scale to determine distances between objects

Lesson 3: Mental Maps (two-day lesson)

Objectives:
• Generate and be able to utilize mental maps

Lesson 4: Patrol Maps (two-day lesson)

Objectives:
• Create and be able to use a patrol map

Lesson 5: Representing the Earth: History

Objectives:
• Understand what longitude and latitude are
• Be able to explain how they are used in navigation

Lesson 6: Absolute Location

Objectives:
• Use longitude and latitude
• Identify absolute location of longitude and latitude

Lesson 7: Regions

Objectives:
• Identify and be able to compare the differences among formal, functional, and perceptual regions

Lesson 8: Shape of the World

Objectives:
• Identify the different types of map projections
• Be able to compare and contrast features of each projection

Lesson 9: Map Maker (two-day lesson)

Objectives:
• Prepare maps that illustrate a variety of political entities, such as precincts, states, or countries
Lesson 10: Careers in Geography (two-day lesson)

Objectives:
- Identify examples of careers that utilize geographic knowledge and skills
- Demonstrate the role that geographers play in society

Lesson 11: Unit Review

Objectives:
- Review key terms from the unit

Lesson 12: Geography Workshop Unit Test

Unit 2: Physical Systems

In this unit, you will examine the physical systems that shape and affect our every day lives through weather and climate. You will begin by examining the major components of Earth's physical systems and how the Earth's relationship with the Sun plays a dramatic role in our world. Once you have completed your study of those systems, you will study how those systems affect the climate and weather all over the planet.

Lesson 1: An Introduction to Physical Systems

Objectives:
- Identify the four main components of Earth's physical systems: the atmosphere, lithosphere, hydrosphere, and biosphere
- Explain how Earth's physical systems interact

Lesson 2: Forces of Change: The Lithosphere

Objectives:
- Describe Earth's internal structure
- Explain how plate tectonics affects Earth's structure
- Explain what causes earthquakes and volcanic eruptions

Lesson 3: Water Cycle: The Hydrosphere

Objectives:
- Identify the stages of the water cycle
- Explain the differences between Earth's salt water and freshwater resources

Lesson 4: The Skies Above: The Atmosphere

Objectives:
- Identify the different layers of the atmosphere
- Describe the main functions of the atmosphere

Lesson 5: Life on Earth: The Biosphere

Objectives:
- Identify the different elements of the biosphere
- Recognize the interactions between the elements of the biosphere

Lesson 6: Climate and Weather

Objectives:
- Identify five climatic factors that affect the weather in a given location
- List the five climatic regions that exist on Earth

Lesson 7: The Earth-Sun Relationship

Objectives:
- Describe how weather and climate are affected by Earth's relationship to the sun
- Explain the greenhouse effect

Lesson 8: Predicting the Weather (two-day lesson)
Lesson 9: Natural Disasters

Objectives:
- Identify the different types of natural disasters
- Discuss how each type of natural disaster occurs

Objectives:
- Identify reasons why the 2004 tsunami was so destructive
- Research steps that have been taken in the wake of the 2004 tsunami to prevent a similar disaster from occurring

Lesson 11: Unit Review

Objectives:
- Identify and explain the main terms and concepts of the unit

Lesson 12: Physical Systems Unit Test

Unit 3: Environmental Issues

In this unit, you will examine the environmental issues that affect the biodiversity of our planet. You will examine the impact that humans have on the environment as well as what can be done to honor and protect it. Your study of population growth, land use, conservation, and climate change will identify factors that can positively influence and protect the planet. You will watch a multimedia presentation in order to investigate the available sources of renewable and nonrenewable energy and explore which sources have the least impact on the natural world.

Lesson 1: Introduction to Environmental Issues

Objectives:
- Identify the broad economic, political, and cultural context of environmental issues
- Provide an example of each of these environmental issues
- Identify environmental issues that affect land, air, and water
- Identify different forms of pollution and be able to relate environmental threats to the loss of biodiversity
- Explain why preserving biodiversity is important and identify the first laws passed to address pollution

Lesson 2: Population Growth

Objectives:
- Identify factors that contribute to population growth
- Understand how birthrates, death rates, and migration affect the rate at which populations change
- Identify how population growth can influence changes within the natural environment

Lesson 3: Land Use (two-day lesson)

Objectives:
- Explain why land is considered a natural resource
- Identify different ways in which humans use land
- Explain how the overuse of land can lead to habitat destruction
- Identify methods of protecting land resources

Lesson 4: Conservation (two-day lesson)

Objectives:
- Define land use and be able to differentiate between different types of land use
Lesson 5: Climate Change

Objectives:
• Describe the nature of conservation efforts and contrast them with the issues caused by land use
• Identify factors that affect climate and distinguish different types of climactic changes
• Recognize why climate change occurs and explain the greenhouse effect
• Define global warming and explain its consequences
• Identify ways in which human activities have influenced climate change

Lesson 6: Energy (two-day lesson)

Objectives:
• Identify types of energy sources and be able to describe how each is transformed into electricity
• Distinguish between renewable and non-renewable energy resources
• Explain how fossil fuels form
• Identify alternative energy sources
• Evaluate the advantages of alternative energy sources

Lesson 7: Investigating Energy Alternatives (two-day lesson)

Objectives:
• Investigate the Marcellus Shale
• Conduct research
• Create a multimedia presentation

Lesson 8: Unit Review

Objectives:
• Identify the main ideas of the unit
• Define and provide examples of the main vocabulary terms from the unit

Lesson 9: Environmental Issues Unit Test

Unit 4: Human Systems

In this unit, you will examine components of culture and how cultures change over time. You will learn about the primary world religions and belief systems of the eastern and western hemispheres. Your exploration of how societies govern themselves will include an analysis of political maps. By the end of this unit, you will draw your own conclusions about the electoral process governing the United States.

Lesson 1: Introduction to Culture

Objectives:
• Define culture
• Identify the components of culture
• Explain the history of anthropology
• Examine how definitions of culture have changed over time
• Explain how culture has been viewed by diverse civilizations and differing ideologies

Lesson 2: How Geography Influences Culture

Objectives:
• Describe how geography can impact aspects of culture
• Identify how factors such as climate and naturally occurring resources can affect daily activities and values
• Discuss specific examples of cultures in which these geographical impacts are evident

Lesson 3: Culture and Society

Objectives:
• Describe and be able to distinguish how culture and society mutually affect one another
• Describe various definitions of sociology
• Recognize key historical figures that shaped modern sociological thought
• Interpret the challenges of developing nations as opposed to wealthier and established nations

**Lesson 4: Introduction to Western Religions**

**Objectives:**
• Identify the main beliefs of three main western religions
• Describe the unique practices of each religion
• Compare and contrast the similarities and differences between the religions

**Lesson 5: Introduction to Eastern Religions**

**Objectives:**
• List and be able to categorize three eastern religions by their unique characteristics
• Describe the unique practices of each religion
• Compare and contrast the similarities and differences between them

**Lesson 6: Introduction to Government**

**Objectives:**
• Identify the characteristics of government
• Be able to describe how the concept of government has changed over time

**Lesson 7: Modern Government**

**Objectives:**
• Identify the development, features, and implementation of several types of modern governments
• Be able to discuss the differences between democracies, republics, and totalitarian governments
• Be able to draw conclusions about the quality of life for citizens under these governmental systems

**Lesson 8: Portfolio - Political Maps (three-day lesson)**

**Objectives:**
• Compare maps of voting patterns or political boundaries
• Draw conclusions about the distribution of political power
• Understand the U.S. electoral process
• Identify current elected officials using maps

**Lesson 9: Economic Systems**

**Objectives:**
• Describe and be able to analyze the evolution of economics from the Mercantile Age to the present day
• Describe the history of mercantilism and capitalism
• Identify relevant economic ideologies, theories, and founding economists
• Analyze the evolution of economics from the Mercantile Age, the Industrial Revolution, and present day

**Lesson 10: Cultural Change**

**Objectives:**
• Recall foundational elements of culture and society
• Be able to hypothesize why cultures change over time
• Analyze how the manifestations of cultural change create lasting shifts either ideologically or materially

**Lesson 11: Unit Review**

**Objectives:**
Lesson 12: Human Systems Unit Test

Unit 5: Migration and Cultural Exchange

In this unit, you will examine what makes the United States a melting pot. You will interpret population patterns and consider solutions for managing population growth. Your study of the causes and effects of migration will include two primary accounts, one from a Mexican migrant and one from an Afghan refugee. Your study of cultural diffusion and multiculturalism will identify factors that unite and divide humans living in the United States and around the world.

Lesson 1: Population

Objectives:
- Identify uses for population pyramids and basic features of the three types of pyramids
- Construct and analyze population pyramids and be able to describe population characteristics of different societies

Lesson 2: Future Trends

Objectives:
- Interpret past population growth
- Understand and examine population graphs
- Predict future population patterns
- Assess solutions for managing population carrying capacity based on a variety of factors

Lesson 3: Migration

Objectives:
- Define migration
- Examples of push/pull factors
- Identify geographic regions with high percentages of immigrants and high percentages of emigration
- Analyze push/pull factors in the context of urban migration

Lesson 4: Immigrants and Refugees

Objectives:
- Recognize and be able to discuss reasons why people willingly or unwillingly move from one country to another
- Describe the causes and effects of refugee migration
- Analyze the pros, cons, and controversy surrounding the topic of international migration

Lesson 5: Stories from a Small World

Objectives:
- Investigate the stories of a Mexican migrant and a refugee in a Kabul women’s shelter
- Evaluate the issues surrounding immigration and refugees
- Relate to the refugee experience in a simulation

Lesson 6: Cultural Exchange

Objectives:
- Define cultural diffusion
- Understand what occurs during cultural exchanges
- Identify examples of cultural diffusion
- Assess how cultural diffusion has affected the concept of globalization

Lesson 7: Multiculturalism

Objectives:
- Define multiculturalism

© 2010 Connections Education LLC. All rights reserved.
Lesson 8: The Most Recognized Symbols on Earth (two-day lesson)

Objectives:
- Define and explain key terms relating to cultural diffusion
- Identify global brands that exemplify cultural diffusion
- Make conclusions about the reasons for global spread
- Hypothesize what global brands communicate about world values

Lesson 9: Unit Review

Objectives:
- Identify the main ideas of the unit
- Define and provide examples of main vocabulary terms from the unit

Lesson 10: Migration and Cultural Exchange Unit Test

Unit 6: Resources and Conflict

In this unit, you will study and learn how to examine ongoing conflicts all over the globe. Using critical thinking and analysis, you will learn what kinds of conflicts exist, who the key players or groups in those conflicts are, and why conflicts may be happening. Through learning how to apply these critical analysis skills, you will also learn how to compare and contrast existing conflicts in order to gain a greater and more complex understanding of future conflicts around the world.

Objectives:
- Review key terms from the unit.

Lesson 1: Introduction to Regional Conflict

Objectives:
- List and be able to describe the underlying causes to regional conflicts

Lesson 2: Xinjiang

Objectives:
- Evaluate regional conflicts based on static criteria
- Compare and contrast conflicts based on static criteria

Lesson 3: Chechnya

Objectives:
- Identify the role economic infrastructure plays in the Chechen conflict
- Identify key players in the conflict

Lesson 4: Burma (Myanmar)

Objectives:
- Describe the political environment in Burma
- Compare it to the political environment in the United States

Lesson 5: Kashmir

Objectives:
- Evaluate the role religion plays in the conflict in Kashmir
- Evaluate how the creation of Pakistan and India affects the conflict in Kashmir

Lesson 6: Quebec (two-day lesson)

Objectives:
- Describe the evolution of Quebec's separatist movement
- Compare the conflict in Quebec with similar separatist movements

Lesson 7: Mexico
Objectives:
- Evaluate the role that the drug trade and crime play in Mexican society
- Describe how those issues affect the United States

**Lesson 8: Somalia**

Objectives:
- Identify and evaluate the factors that contribute to the dire level of poverty in Somalia

**Lesson 9: Sudan**

Objectives:
- Identify the factors underlying the conflict in Sudan

**Lesson 10: Compare and Contrast Regional Conflicts (two-day lesson)**

Objectives:
- Choose and evaluate three regional conflicts from this unit
- Compare and contrast each one against the other two

**Lesson 11: Unit Review**

Objectives:
- Review key terms from the unit

**Lesson 12: Resources and Conflict Unit Test**

**Unit 7: Geography and Society Final Exam**

Objectives:
- Review lesson objectives and key words
- Identify areas of strength and weakness in preparation for the final exam

**Lesson 1: Geography and Society Final Review (two-day lesson)**

Objectives:
- Review unit objectives and key words
- Identify areas of strengths and weakness in preparation for the final exam

**Lesson 2: Geography and Society Final Exam**
APPENDIX A
CURRICULUM

A.2 COURSE GUIDES

e. ART
This document is part of Appendix A: Curriculum.

It includes course guides for each Art class for students in Kindergarten through Grade 8.

- Art K
- Art 1
- Art 2
- Art 3
- Art 4
- Art 5
- Art 6 A
- Art 6 B
- Art 7 A
- Art 7 B
- Art 8 A
- Art 8 B

Course guides provide detailed information on the curriculum including course descriptions, unit summaries, lesson objectives, activities, and assessment types. Course guides include information on:

- Planned instruction (provided in the unit summary of each unit within individual Course Guides)
- Course objectives (provided in the unit and lesson objectives within individual Course Guides)
- Activities (provided in the unit summary and lesson objectives of each unit within individual Course Guides)
ART K
Art K

In this course, the student will explore color, line, and shape. A combination of interactive and hands-on studio projects encourages the student to create art, sharpen fine motor skills, and explore areas of interest in art. Artistic modes include drawing, painting, assembling, and sculpting.

Unit 1: Art Is Everywhere

Everything in the world is made up of five basic elements of shape: circle, dot, angle line, curved line, and straight line. In this unit, your student will learn to recognize these elements of shape in his environment and in presented artworks. He will apply these elements to create original artworks using a variety of media, including crayons, finger paints, and watercolors; he will also use techniques that include cutting and pasting, finger painting, and drawing.

Art is a way for people to record what happens around the world. Your student will create sidewalk art inspired by the Diwali Festival in India, which celebrates the fall season. As a portfolio assessment, your student will create a mixed-media collage using the five elements of shape.

Objectives:
- Identify and create the elements of shape
- Apply the five elements of shape to original works of art
- Describe how other cultures use art to celebrate holidays and traditions
- Create mixed-media and collage art

Lesson 1: Art Is Everywhere!

Objectives:
- Identify and describe the five elements of shape in the environment and in artworks
- Illustrate the five elements of shape using finger paints

Lesson 2: Let’s Draw Lines

Objectives:
- Draw variations of lines
- Draw straight lines using a ruler
- Create art using crayons, markers, and lines

Lesson 3: Lots and Lots of Dots

Objectives:
- Create a mixed-media collage using cut-out paper dots and dot-shaped objects

Lesson 4: Art Around the World

Objectives:
- Create a Diwali pattern using chalk
- Describe a family tradition

Lesson 5: Learning to See and Draw Like an Artist

Objectives:
- Observe and recreate elements of shape using a pencil
- Create original collage art using an online program
- Demonstrate creativity and knowledge of elements of shape in a collage

Lesson 6: Elements of Art

Objectives:
- Create original artwork using the five elements of shape
- Select and use a variety of media to create art
- Use the numbers 1–5 in original artwork

Unit 2: Coloring the Season
In this unit, your student will build on her knowledge of art elements and begin to explore the color wheel. She will use various art techniques, including watercolor painting and crayon resist, and will use a variety of media including crayons, pencil, watercolors, and objects from nature. She will create original artworks inspired by the season and a Monarch butterfly watercolor painting inspired by the annual migration of Monarch butterflies. As a portfolio assessment, your student will create a fall-themed painting.

Objectives:
- Identify and describe warm and cool colors and use them in creating art
- Describe migration and why animals migrate
- Describe how art is used in everyday life
- Respond to and make judgments about artwork
- Demonstrate emerging awareness of balance and space in artwork

Lesson 1: Colors All Around Us

Objectives:
- Identify warm and cool colors
- Identify primary and secondary colors
- Identify opposite colors
- Create original artwork using warm and cool colors

Lesson 2: Fluttering Colors

Objectives:
- Demonstrate beginning awareness of the concept of symmetry as a mirror image
- Describe migration and why monarch butterflies migrate
- Create a watercolor painting of a monarch butterfly

Lesson 3: See and Draw Like an Artist

Objectives:
- Observe and recreate the elements of shape and mirror images using pencil
- Create a still life arrangement which demonstrates emerging awareness of balance and space

Lesson 4: Autumn Arrangement

Objectives:
- Create a fall-themed table centerpiece using objects found in nature and around the house
- Demonstrate emerging awareness of balance and space in an artwork

Lesson 5: Painting the Seasons

Objectives:
- Paint a fall scene using watercolors and crayons
- Demonstrate emerging awareness of space and balance within an artwork
- Demonstrate understanding of warm and cool colors by utilizing them appropriately within an artwork
- Demonstrate emerging awareness of a horizon line

Unit 3: Winter Is Taking Shape

In this unit, your student will continue to build on his knowledge of art elements and colors and begin to explore shapes, texture, and pattern in artworks. He will create original artworks inspired by the season. As a portfolio assessment, your student will use shapes, texture, and pattern to make a kite inspired by those made traditionally during the Korean Lunar New Year.

Objectives:
- Identify and describe basic shapes in artworks and use them in creating art
- Relate art to personal experiences and the experiences of others
- Identify subject, texture, and pattern in artworks
- Respond to and make judgments about artworks
- Demonstrate emerging awareness of balance and space in artwork
Lesson 1: Shapes in Art

Objectives:
- Identify and draw basic shapes: circle, oval, triangle, square, and rectangle
- Create a mosaic design using crayons and black marker

Lesson 2: Snowflakes

Objectives:
- Create snowflakes by cutting shapes into coffee filters
- Identify and create patterns

Lesson 3: It's Wintertime!

Objectives:
- Create a mixed-media snowman using paint, objects, and glue
- Identify and use texture in an original artwork

Lesson 4: See and Draw Like an Artist

Objectives:
- Observe and recreate the elements of shape using pencil
- Create patterns with shape

Lesson 5: Art Around the World

Objectives:
- Create a kite that shows shapes, pattern, and balance
- Demonstrate understanding of mixed media, texture, pattern, and basic shapes

Unit 4: Art Forms

In this unit, your student will continue to build on her knowledge of art elements and principles of design, exploring balance and symmetry. She will begin to explore art as form, or sculpture, and use various media, such as clay, yarn, and other arts and crafts materials to create art forms. She will create original artworks inspired by animals, a mask inspired by the Mardi Gras celebration, and a tree sculpture inspired by a Bulgarian tradition. In a cross-curricular activity, she will paint a mural inspired by the book, Abuela. As a portfolio assessment, your student will create a clay sculpture of a playground.

Objectives:
- Identify and describe form in artworks
- Relate art to personal experiences and others’ experiences
- Use a variety of media types to create works of art
- Respond to and make judgments about artwork
- Demonstrate emerging awareness of balance and space in artwork

Lesson 1: Clay Animals

Objectives:
- Identify elements of shape in sculptures
- Relate sculptures to history and cultures
- Create an animal sculpture using clay and the elements of shape

Lesson 2: Carnival Mask

Objectives:
- Create an animal mask using mixed media
- Describe a mixed-media artwork

Lesson 3: Learning to See and Draw Like an Artist

Objectives:
- Use mental imagery to visualize artwork
- Observe and recreate the elements of shape using pencil
- Demonstrate balance and space in an artwork composition
Lesson 4: Art Around the World

Objectives:
- Create an artwork using twigs, yarn, and glue
- Describe the traditions of the Bulgarian “Baba Marta” celebration
- Identify the elements within artworks

Lesson 5: Abuela Mural

Objectives:
- Describe a mural
- Design a mural using paint and observation
- Identify elements of art within an illustration

Lesson 6: Art All Around Us

Objectives:
- Create a playground scene using sculpture techniques
- Identify and use mixed-media in an original artwork

Unit 5: Springtime Painting

In this unit, your student will continue to build on his knowledge of art elements and principles of design, exploring patterns in art, different media (including tissue paper, mud, watercolors, and sponges), and processes and tools for painting. He will create original artwork and crafts inspired by the season, as well as a Malian mud cloth inspired by a tradition of the Malian people in Africa. As a portfolio assessment, your student will cut basic and more complex shapes out of sponges and then create a sponge and finger paint mural.

Objectives:
- Identify and describe forms in artwork
- Relate art to personal experiences and others’ experiences
- Use a variety of media types to create works of art
- Respond to and make judgments about artwork
- Demonstrate emerging awareness of balance and space in artwork

Lesson 1: It’s Springtime

Objectives:
- Define watercolor artwork
- Create a painting using watercolors
- Identify the five elements of art used in a watercolor painting

Lesson 2: Blooming Flowers

Objectives:
- Create a vase of flowers using mixed media
- Identify the five elements of art in your artwork

Lesson 3: Learning to See Like an Artist

Objectives:
- Use mental imagery to visualize artwork
- Create an original watercolor
- Demonstrate balance and space in an artwork composition

Lesson 4: Egg Carton Monsters

Objectives:
- Create recycled artwork using mixed media
- Define recycled materials
- Identify the types of media used in a mixed-media artwork

Lesson 5: Art Around the World

Objectives:
- Create a traditional mud painting
- Differentiate between patterned and non-patterned sequences
Lesson 6: Painting Shapes

Objectives:
- Categorize the five elements of shape
- Create texture in artwork
- Create an original artwork using finger and sponge painting

Unit 6: Summertime Art

In this culminating unit, your student will continue to explore art elements, processes, and techniques, and apply them to fun arts and crafts projects. She will create a sun print, learn how to make multi-color crayons, and use objects from nature to inspire her art. She will create original artworks inspired by the season and a sunshine flag inspired by Inti Raymi, an Ecuadorian tradition. As a portfolio assessment, your student will choose the media, techniques, and processes to create an original artwork with the theme, “My Art.”

Objectives:
- Identify and describe elements of art in the environment and in artworks
- Relate art to personal experiences and to the experiences of others
- Develop and organize ideas from the environment to create original artwork
- Respond to and make judgments about artworks

Lesson 1: Here Comes Summer

Objectives:
- Classify colors as either warm or cool
- Identify warm and cool colors found in nature during summertime
- Draw a summer nature scene using warm and cool colors

Lesson 2: Outdoor Art

Objectives:
- Identify natural objects to be used in artwork
- Use sun-printing techniques to create an original artwork
- Describe textures found in nature

Lesson 3: See and Draw Like an Artist

Objectives:
- Use mental imagery to visualize artwork
- Draw a duplication image of summer shapes using the basic elements
- Create an original online drawing using natural elements
- Analyze how the 5 elements of shape were used in an original artwork

Lesson 4: Art Around the World

Objectives:
- Discuss cultural traditions of the Inti Raymi celebration in Ecuador
- Create a model of a sun flag from Ecuador

Lesson 5: Cooking Up Crayons

Objectives:
- Identify different colors
- Use primary colors to create secondary colors
- Draw a picture using newly-created tools

Lesson 6: My Art

Objectives:
- Use elements of shape to create an original artwork
- Incorporate cool and warm colors into an original artwork
- Identify primary and secondary colors in an original artwork
ART 1
Art 1

In this course the student will develop and use skills in art, building on his knowledge about line, shape, and color. Your student will be introduced to other elements of art as well as to the principles of design. This course will enable your student to develop his creative side through the introduction of art media and the exploration of art themes. The activities in this course include practicing drawing, learning about color, creating designs using balance and patterns, and working with three dimensional forms.

Unit 1: Elements of Art

This unit addresses the elements of art. The elements of art are line, shape, color, value, texture, space, and form. In this unit your student will learn about the seven art elements and how to use them to create a work of art. Each lesson in this unit will address a different aspect of the elements of art, and how each element combines with another during the creative process. As your student applies the elements of art to his work, he will gain a greater understanding of and appreciation for the different styles of art and the techniques used to create them.

Objectives:
- Identify the elements of art: color, form, line, shape, texture, value
- Develop skills in applying the elements of art to personal artwork

Lesson 1: Learning About Lines: Practice Drawing

Objectives:
- Demonstrate an understanding of line as a element of art
- Develop knowledge about line by practice - drawing different kinds of lines

Lesson 2: Lines: Making a Drawing

Objectives:
- Demonstrate an understanding that line is an element of art
- Demonstrate an understanding that lines are used to express ideas in a visual way

Lesson 3: Shapes

Objectives:
- Identify shape as an element of art
- Demonstrate an understanding that lines make shapes
- Differentiate between geometric and organic shapes

Lesson 4: Organic Shape Collage

Objectives:
- Continue to demonstrate an understanding that shape is an element of art
- Demonstrate an understanding of the difference between geometric and organic shapes
- Demonstrate an understanding of collage techniques

Lesson 5: Draw Animals Using Shapes

Objectives:
- Demonstrate an understanding of shape as an important part of artmaking

Lesson 6: Mixing Colors

Objectives:
- Demonstrate an understanding of color as an element of art
- Demonstrate an understanding of primary and secondary colors
- Demonstrate an understanding that primary colors are mixed to make secondary colors

Lesson 7: Color: Paint an Animal

© 2009 Connections Education LLC. All rights reserved.
Objectives:
• Demonstrate an understanding of primary and secondary colors
• Demonstrate an understanding of mixing colors
• Demonstrate an understanding of the effects different colors have on works of art

Lesson 8: Color Value: Paint a Landscape

Objectives:
• Demonstrate an understanding of color value
• Demonstrate an understanding of tints and shades

Lesson 9: Discovering Texture

Objectives:
• Demonstrate an understanding of texture as an element of art
• Demonstrate an understanding of the difference between visual and tactile texture

Lesson 10: Form and Texture in Clay

Objectives:
• Identify form as an element of art
• Demonstrate an understanding of the difference between shape and form

Unit 2: Principles of Design

In this unit, your student will learn about the principles of design. Artists use the principles of design to create effective artwork. The principles of design are combined with the elements of art to enable the artwork to become a unique visual expression. By learning the principles of design, your student will discover new and exciting ways to make her artwork creatively effective. Understanding the principles of design will also enable your student to better appreciate works of art when they are presented to her. The principles of art are balance, emphasis, contrast, harmony, movement, pattern, rhythm, and unity.

Objectives:
• Demonstrate an understanding of pattern as a principle of design
• Differentiate between formal and informal balance
• Demonstrate an understanding of the concept of emphasis in artwork
• Demonstrate an understanding of the concepts of movement and rhythm in artwork

Lesson 1: Patterns All Around Us

Objectives:
• Become familiar with pattern as a principle of design
• Demonstrate an understanding of pattern by printing a pattern

Lesson 2: In Balance

Objectives:
• Become familiar with balance as a principle of design
• Differentiate between formal and informal balance

Lesson 3: Emphasis in Artwork

Objectives:
• Demonstrate an understanding of emphasis in artwork
• Demonstrate an understanding of the term "focal point"

Lesson 4: Creating Contrast in Art

Objectives:
• Become familiar with contrast as a principle of design
• Demonstrate an understanding of how contrast is used in artwork

Lesson 5: Getting the Movement and Rhythm in Art

Objectives:
Lesson 6: Working with Harmony and Unity

Objectives:
- Demonstrate an understanding of harmony and unity as principles of design

Unit 3: Art Media

Art media are the materials and supplies that are used in the creation of works of art. The lessons in this unit will enable your student to become familiar with various types of art media and to explore creative freedom. The lessons will also enable your student to use art materials in a safe and responsible way. In this unit, your student will work with a variety of art media including paint, crayons, clay, and markers as well as objects found in the home and the outdoors.

Objectives:
- Explore the concept of form by creating a clay figure
- Become familiar with the technique of collage
- Explore and experiment with paper mosaic technique
- Construct a mask using a variety of art media
- Construct an assemblage using found objects

Lesson 1: Magazine Photo Collage

Objectives:
- Demonstrate an understanding of the medium of photo collage
- Demonstrate an understanding of the term composition

Lesson 2: Nighttime Crayon Resist

Objectives:
- Demonstrate an understanding of the crayon resist technique
- Demonstrate an understanding of how color value is used to show a specific time of day

Lesson 3: Monoprinting with Paint

Objectives:
- Demonstrate an understanding of the printing process by creating a monoprint

Lesson 4: Magical Mosaics (two-day lesson)

Objectives:
- Demonstrate an understanding of the mosaic technique

Lesson 5: Mixed Media African Mask

Objectives:
- Demonstrate the ability to construct a work of art using a variety of art media
- Demonstrate an understanding of formal balance

Lesson 6: The Potter's Art

Objectives:
- Demonstrate an understanding of ceramic forms
- Distinguish types of pottery from different cultures and time periods
- Demonstrate an understanding of how pottery is used for a variety of purposes in different cultures

Unit 4: Themes in Art

Artists often use subject matter taken from their environments as well as from objects seen and used in everyday life. This unit is designed to enable your student to develop her observational and critical thinking skills. She will be introduced to several art themes, including portrait, still life, landscape, and themes that focus on special occasions with family.
Reach Cyber Charter School Application

and friends. Your student will continue to work with a variety of art media and techniques as she explores and develops her creative side.

Objectives:
- Demonstrate an understanding of portrait as a theme in art
- Use the elements of art to draw a still life using everyday objects
- Express an understanding of scientific aspects of the ocean
- Demonstrate an understanding of the celebrations of various cultures
- Demonstrate an understanding of personal history

**Lesson 1: My Self-Portrait (two-day lesson)**

Objectives:
- Demonstrate an understanding of portrait as a theme in art
- Demonstrate an understanding of the correct placement of facial features
- Demonstrate an understanding of the cultural characteristics of portraits

**Lesson 2: A Portrait of My Family**

Objectives:
- Understand family portraits as a theme in art
- Understand portraits as a means of recording family history
- Demonstrate understanding of placement and proportion

**Lesson 3: Objects from Every Day**

Objectives:
- Understand still life as a theme in art
- Demonstrate an understanding of proportion
- Demonstrate an understanding of the technique of overlapping

**Lesson 4: Under the Sea Crayon Resist**

Objectives:
- Demonstrate an understanding about life in the ocean
- Understand the ocean as an important ecosystem
- Demonstrate an understanding of crayon resist techniques
- Demonstrate an understanding of how the environment influences art

**Lesson 5: A Special Occasion**

Objectives:
- Demonstrate an understanding of how special occasions are celebrated in different cultures
- Demonstrate an understanding of how elements of art can be used to illustrate a special occasion

**Lesson 6: A Story Quilt Square (two-day lesson)**

Objectives:
- Demonstrate an understanding of symbols
- Become familiar with story quilts as a theme in art
ART 2
Art 2

In this course, your student will continue to develop and use skills in art, building on his knowledge about line, shape, and color. Your student will be introduced to other art elements as well as to the principles of design. This course will enable your student to develop his creative side through the introduction of art media and through the exploration of art themes. The activities in this course include drawing, learning about color, creating designs using balance and patterns, and working with three-dimensional forms.

Unit 1: Laying the Foundation

This unit addresses the basic elements of art, which are line, shape, color, value, texture, space, and form. In this unit your student will learn about the seven art elements and how to use them to create a work of art. Each lesson in this unit will address a different aspect of the elements of art, and how each element combines with another during the creative process. As your student applies the elements of art to his work, he will gain a greater understanding of and appreciation for the different styles of art and the techniques used to create them.

Objectives:
• Identify the elements of art: color, form, line, shape, texture, value
• Develop skills in applying the elements of art to personal artwork

Lesson 1: What Can You Do with a Line?

Objectives:
• Develop familiarity with different kinds of lines
• Demonstrate an understanding of what artists do with different lines

Lesson 2: Everything Has a Shape

Objectives:
• Learn about the difference between geometric and organic shapes
• Develop familiarity with how shapes are combined in artwork

Lesson 3: Texture

Objectives:
• Learn about the connection between line and texture
• Demonstrate an understanding of the difference between visual texture and tactile texture
• Develop familiarity with the different techniques used by artists to show visual texture

Lesson 4: Color in Your World

Objectives:
• Learn about primary colors
• Demonstrate an understanding of how primary colors are mixed to make secondary colors

Lesson 5: Value

Objectives:
• Demonstrate an understanding of how colors are made lighter and darker
• Learn about shadows

Lesson 6: Seeing in Three Dimensions

Objectives:
• Demonstrate an understanding of the difference between two-dimensional shape and three-dimensional form
• Learn about three-dimensional sculpture, including "sculpture in the round"

Lesson 7: The Area Around You

Objectives:
Identify space as an element of art
Learn about the picture plane as "space"
Demonstrate an understanding of space in artwork
Understand simple perspective (near and far objects) and overlapping

Unit 2: Principles of Art

In this unit, your student will learn about the principles of design. Artists use the principles of design to create effective artwork. The principles of design are combined with the elements of art to enable the artwork to become a unique visual expression. By learning the principles of design, your student will discover new and exciting ways to make her artwork creatively effective. Understanding the principles of design will also enable your student to better appreciate works of art when they are presented to her. The principles of art are balance, emphasis, contrast, harmony, movement, pattern, rhythm, and unity.

Objectives:
- Demonstrate an understanding of pattern as a principle of design
- Differentiate between formal and informal balance
- Demonstrate an understanding of unity and harmony in artwork
- Demonstrate an understanding of the concept of emphasis in artwork
- Demonstrate an understanding of the concepts of movement and rhythm in artwork

Lesson 1: Get in Balance

Objectives:
- Learn about the principle of balance
- Demonstrate an understanding of the difference between formal and informal balance

Lesson 2: Pattern

Objectives:
- Learn about the principle of pattern
- Understand how colors, lines, and shapes can be repeated in order to make a pattern
- Become familiar with the use of patterns in artwork

Lesson 3: Movement and Rhythm

Objectives:
- Learn about the principles of movement and rhythm
- Develop an understanding of how artists use movement and rhythm to keep the viewer interested and to move the viewer's eye through an artwork
- Demonstrate knowledge of the elements of line, shape, and color as they are used to create movement and rhythm in artwork

Lesson 4: Unity and Harmony

Objectives:
- Learn about the principles of unity and harmony
- Develop an understanding of the use of color, line, texture, and shape as they are used to create unity and harmony in a work of art

Lesson 5: Variety

Objectives:
- Learn about the principle of variety and its function in art
- Understand how using a variety of colors, shapes, lines, textures, and patterns can make artwork unique and fun to look at

Lesson 6: Contrast and Emphasis

Objectives:
- Explore the principles of emphasis and contrast
- Develop an understanding of focal point as the most important part of a work of art
- Learn about the ways that artists create the focal point in an artwork, including the use of contrast
Unit 3: Mixin the Media: The Making of Art

Art media are the materials and supplies that are used in the creation of works of art. The lessons in this unit will enable your student to become familiar with various types of art media and to explore creative freedom. The lessons will also enable your student to use art materials in a safe and responsible way. In this unit, your student will work with a variety of art media, including paint, crayons, clay, and markers, as well as objects found in the home and the outdoors.

Objectives:
- Explore the concept of form by creating a clay figure
- Become familiar with the technique of collage
- Explore and experiment with paper mosaic technique
- Construct a mask using a variety of art media
- Construct an assemblage using found objects

Lesson 1: Art Where You Live

Objectives:
- Understand art as a reflection of the environment in which we live
- Learn how artists throughout time have depicted the environment around them

Lesson 2: Games We Like to Play

Objectives:
- Learn about techniques used to draw people in motion
- Develop an understanding of muscles and joints and how they help us move

Lesson 3: The Ins and Outs of Weaving

Objectives:
- Develop knowledge of different kinds of weaving, including textiles and basketry
- Understand the loom and its function, as well as warp threads and weft threads
- Learn about weaving from different cultures, including kente cloth from West Africa

Lesson 4: Puppets Tell a Story

Objectives:
- Learn about different styles of puppets from different cultures
- Understand that puppets are used to actively tell a story or a fable with a moral
- Learn about various kinds of puppets of different sizes and materials

Lesson 5: Sculpture: Art We Can Walk Around

Objectives:
- Learn about different kinds of sculpture
- Learn to differentiate between sculpture in the round and relief sculpture
- Become familiar with various types of sculpture

Lesson 6: Art to Wear: Jewelry

Objectives:
- Understand jewelry as a type of applied art
- Become familiar with some different types of jewelry
- Learn about how the making and wearing of jewelry or other adornment has different meanings in various cultures around the world

Lesson 7: Assembling All Materials! (two-day lesson)

Objectives:
- Learn about the technique of assemblage
- Look at examples of assemblage artworks that have been created from found objects
Unit 4: Connections: Art in Other Subjects

Artists often use subject matter taken from their environments as well as from objects seen and used in everyday life. This unit is designed to enable your student to develop her observational and critical thinking skills. She will be introduced to several art themes, including portrait, still life, landscape, and themes that focus on special occasions with family and friends. Your student will continue to work with a variety of art media and techniques as she explores and develops her creative side.

Objectives:
- Demonstrate an understanding of portrait as a theme in art
- Use the elements of art to draw a still life using everyday objects
- Express an understanding of scientific aspects of the ocean
- Demonstrate an understanding of the celebrations of various cultures
- Demonstrate an understanding of personal history

Lesson 1: Art and Science: Rainforest Printmaking (two-day lesson)

Objectives:
- Learn about the connections between art and science
- Develop a familiarity with the influence of science on works of art
- Become familiar with the nature-inspired art of Henri Rousseau

Lesson 2: Art and Math: You Take the Cake!

Objectives:
- Learn about the connections between art and math
- Demonstrate an understanding of simple fractions by creating a painting of a cake that shows fractional parts
- Learn about the mathematically-inspired art of Wayne Thiebaud

Lesson 3: Art and Language: Letter Designs Using Your Name (two-day lesson)

Objectives:
- Learn about the connections between art and language
- Become familiar with words and letters as an ingredient of design
- Develop knowledge about the incorporation of words into artworks, including drawing, painting, and sculpture

Lesson 4: Art and History: A Portrait from the Past (two-day lesson)

Objectives:
- Learn about the connections between art and history
- Develop an understanding of portraits and their significance—including the concept of a self-portrait—and how portraits can reveal the ways that people lived in past periods
- Demonstrate an understanding of portraits and history by drawing a self-portrait that shows details from another period in time

Lesson 5: Art and Seasons: Four Seasons Drawing

Objectives:
- Learn about the seasons as they are expressed through forms of art
- Develop and demonstrate familiarity with the main characteristics of each season, and with the ways in which artists depict seasons in their work

Lesson 6: Art and Nutrition: Make a Colorful Food Collage

Objectives:
- Learn about the concept of nutrition and eating well
- Become familiar with the presence of food in works of art, including advertisements
- Learn and demonstrate understanding of the technique of collage
ART 3
Art 3

This course focuses on arts and crafts inspired by the four seasons. The student will examine and create artwork based on seasonal characteristics or common cultural trends. The student will be exposed to art history, art criticism, and art production activities with a multicultural focus. Creative freedom is experienced as the student uses his imagination and several types of media and processes. These processes include drawing, painting, printmaking, sculpture, bookmaking, and techniques for creating crafts and fiber arts.

Unit 1: Summer Strokes

In this unit, your student will explore his summer experiences while learning about basic drawing, design, and watercolor techniques. Topics include patterns, portraits, seascapes, and book arts. He will have the opportunity to draw and paint, as well as construct a book.

Objectives:

Lesson 1: Practice and Patience

Objectives:
- Define the terms drawing, contour line, and shading
- Distinguish between abstract and representational art
- Demonstrate the techniques of contour drawing and shading using a pencil

Lesson 2: Back-to-School Expressions: Pattern Portraits

Objectives:
- Define the terms pattern and portrait
- Draw an expressive line portrait that includes a variety of patterns

Lesson 3: Summer Tunnel Book (two-day lesson)

Objectives:
- Define the terms artists' books and book arts
- Construct a tunnel-style book based on a summer experience

Lesson 4: Using Watercolor

Objectives:
- Define the term watercolor
- Demonstrate watercolor techniques

Lesson 5: A View of the Water: A Watercolor Seascapes

Objectives:
- Define the term seascape
- Distinguish between the background, middle ground, and foreground of a picture
- Draw and paint a watercolor seascape

Lesson 6: Unit 1 Review and Test

Objectives:
- Review the terms and concepts presented in Unit 1

Unit 2: Autumn Arts

In this unit, your student will explore her autumn experiences while learning about basic drawing, paper construction, and clay handbuilding techniques. She will have the opportunity to draw and create three-dimensional objects. Your student will also explore basic aesthetics by describing, judging, and drawing conclusions about a historical artwork.

Objectives:
- Demonstrate basic drawing, paper construction, and clay handbuilding techniques
- Distinguish between types of shape and balance
- Identify, describe, judge, and draw conclusions about a historical artwork
- Recognize masks and pottery as three-dimensional art forms
Lesson 1: A Leaf Montage (two-day lesson)

Objectives:
- Distinguish between organic and geometric shapes
- Compose a montage drawing using overlapping, geometric, and organic leaf shapes

Lesson 2: Harvest Still Life (two-day lesson)

Objectives:
- Define the term still life
- Demonstrate one or more of the following drawing techniques: shading, overlapping, and changes in object size and placement
- Create a still life drawing from life

Lesson 3: Masks from Many Cultures (two-day lesson)

Objectives:
- Recognize symmetrical objects and images
- List the ways masks are used
- Construct a three-dimensional mask from paper

Lesson 4: Pottery and People (two-day lesson)

Objectives:
- Define the terms clay, pinch pot, and coil
- Build a homemade clay pot using pinch and coil construction

Lesson 5: Family and Friends

Objectives:
- Describe, judge, and draw conclusions about an artwork
- Identify an important artist and artwork from history

Lesson 6: Unit 2 Review and Test

Objectives:
- Review the terms and concepts presented in Unit 2

Unit 3: Winter Highlights

In this unit, your student will explore his winter experiences while learning about drawing faces, printmaking, fiber arts, and adding shadows to pictures. He will have the opportunity to draw, paint, print, and weave. Your student will also explore the artwork of an important American artist from history.

Objectives:
- Demonstrate basic printmaking, weaving, painting, and drawing techniques
- Distinguish between types of texture and line
- Recognize the artwork of a historical American artist
- Define common design, weaving, and drawing terms

Lesson 1: Fur, Fuzz, and Feathers (two-day lesson)

Objectives:
- Define the terms line, texture, and print
- Distinguish between line directions
- Create an animal print using line and texture

Lesson 2: Weaving Warmth (two-day lesson)

Objectives:
- Define the terms weaving and loom
- Distinguish between the warp and weft
- Demonstrate the plain weave technique

Lesson 3: Seeing Shadows (two-day lesson)
Objectives:

• Recognize the purpose of shadows in realistic artworks
• Describe the meaning of the term light source
• Paint a watercolor landscape with shadows

Lesson 4: Portraits and Importance (two-day lesson)

Objectives:

• Describe the functions of a portrait
• Identify an important artist from history
• Apply the proportions of a human face
• Create a miniature self-portrait

Lesson 5: Unit 3 Review and Test

Objectives:

• Review the terms and concepts presented in Unit 3

Unit 4: Spring into Art

In this unit, your student will explore her spring experiences while learning about basic drawing, collage, and clay handbuilding techniques. Topics include illustration, Japanese prints, weather in art, Mexican folk art, and drawing people in motion. Your student will have the opportunity to draw, paint, collage, and sculpt. She will also explore basic aesthetics by describing, judging, and drawing conclusions about a historical artwork.

Objectives:

• Demonstrate basic drawing, watercolor, sculpture, and collage techniques
• Distinguish between types of textures, warm and cool colors, and artists' media
• Recognize the artwork of historical, contemporary, and folk artists
• Identify, describe, judge, and draw conclusions about a historical artwork
• Define common drawing, design, sculpture, and art history terms

Lesson 1: Flowers, Sprouts, and Weeds

Objectives:

• Define the terms collage and illustration
• Identify a contemporary artist
• Apply watercolor and drawing techniques to create texture
• Design a collage illustrating plants and creatures

Lesson 2: Weather in Art

Objectives:

• Distinguish between warm and cool colors
• Describe, judge, and draw conclusions about an artwork
• Identify an important artist and artwork from history

Lesson 3: Sensational Suns (three-day lesson)

Objectives:

• Define the terms folk art, relief, and sculpture
• Create a sun design using patterns
• Build a relief sun sculpture using clay slab construction

Lesson 4: Outdoor Action Figures (two-day lesson)

Objectives:

• Draw a human figure in a pose
• Create a self-portrait drawing with you in motion
• Identify three ways an artist can show motion

Lesson 5: Unit 4 Review and Test

Objectives:

• Review the terms and concepts presented in Unit 4
ART 4
Art 4

In this course the student will be introduced to works of art from several continents. Before humans developed written language, they recorded their thoughts and ideas using what we now call visual art. Throughout time the growth and development of civilizations around the world have been recorded and defined through the works of artists. Students will become familiar with the art elements and the principles of design and with how these elements and principles are applied to create visual art in diverse cultures.

Unit 1: A European Adventure

This unit will acquaint your student with some of the artwork of the European continent. Throughout history, artists have chosen subjects from many sources. Some artists have chosen to express themselves by centering their art on what they see in their home or in the homes of other people. Other artists prefer to express themselves through what they see in the natural world. We can find subjects for art in many places. In order to creatively express impressions and feelings in a visually effective way, artists use the elements of art: line, color, value, texture, form, and space. The elements of art provide a solid foundation that will enable your student to develop his unique creative abilities.

Objectives:
- Demonstrate an understanding of the elements of art
- Differentiate between realistic and abstract interpretation of subject matter
- Demonstrate the ability to create moods using color values
- Become familiar with artwork created by major European artists

Lesson 1: Expressions in Lines

Objectives:
- Demonstrate an understanding of the art element of line
- Identify the art element of line as a means of expression
- Compare realistic and expressionistic styles of artwork

Lesson 2: Texture: What You See and Feel

Objectives:
- Demonstrate an understanding of texture as an element of art
- Differentiate between visual and tactile texture

Lesson 3: All About Color

Objectives:
- Demonstrate an understanding of color value
- Compare and contrast color values in artwork
- Demonstrate an understanding how to make tints and shades

Lesson 4: Warm and Cool Expressions

Objectives:
- Demonstrate an understanding of the properties of color
- Differentiate between warm and cool colors
- Demonstrate an understanding of how color can create a mood in artwork

Lesson 5: Picasso and the Circus

Objectives:
- Demonstrate an understanding of background, middleground, and foreground

Lesson 6: Shape, Space, Cityscape (two-day lesson)

Objectives:
- Demonstrate an understanding of shape and space as elements of art
- Differentiate between geometric and organic shapes
- Become familiar with the medium of art books
Lesson 7: Forms and Shapes: Still Life

Objectives:
- Differentiate between forms and shapes
- Demonstrate an understanding of light and shadow
- Demonstrate an understanding of composition in artwork

Lesson 8: Create a Colorful Portrait

Objectives:
- Compare and contrast styles of portraits
- Demonstrate an understanding of realistic style
- Demonstrate an understanding about correct placement of facial features

Lesson 9: Unit 1 Review and Test

Objectives:
- Review the terms and concepts presented in Unit 1

Unit 2: African Travels

Why do we study African art? As your student moves through the lessons in this unit, she will see that African art is different from art in other cultures. Art in Africa is used as an important part of ceremonies, rituals, and dances. Masks, carvings, weavings, and other art forms have special meanings and specific functions for the people who create and use them. The art of Africa has had a strong influence on the art in Europe and America. This unit will explore the elements of art and the unique and fascinating way the elements are used in African artistic expression.

Objectives:
- Identify structures and functions in African art forms
- Demonstrate an understanding of the elements of art and how they are used in African artistic expression
- Explore and interpret African art forms and their specific meanings

Lesson 1: African Style: Changes and Interpretations

Objectives:
- Identify how African art forms changed established European art

Lesson 2: Ceremonial Dress: Create a Mask with Meaning

Objectives:
- Demonstrate the ability to identify the three types of African masks
- Demonstrate an understanding of the purposes of African masks
- Demonstrate an understanding of symmetrical balance

Lesson 3: Special Guardians: Kota Figures

Objectives:
- Identify the Gabon and Congo regions in West Africa
- Develop an understanding of the Kota people and the Kota image
- Demonstrate an understanding of cardboard construction techniques

Lesson 4: Mudcloth Resist

Objectives:
- Demonstrate an understanding of how patterns are used in African textiles
- Demonstrate an understanding of emphasis, pattern, and rhythm in design

Lesson 5: Symbols in Cloth: Adinkra Designs

Objectives:
- Demonstrate an understanding of symbols
- Demonstrate an understanding of symbols on adinkra cloth

Lesson 6: Colorful Beads (two-day lesson)
Objectives:
- Demonstrate an understanding of how beads are used in Yoruba culture
- Demonstrate an understanding of how color is used in Yoruba culture

Lesson 7: A View from the Side: Egyptian Profiles

Objectives:
- Demonstrate an understanding of life in ancient Egypt
- Demonstrate an understanding of proportion
- Demonstrate an understanding of Egyptian wall paintings

Lesson 8: Unit 2 Review and Test

Objectives:
- Review the terms and concepts presented in Unit 2

Unit 3: Above and Below: Art in the Americas

This unit will present art forms of North and South America. The unit will begin with lessons that focus on African influences and contributions to society in both North and South America. Lessons will also focus on the artistic contributions of the Harlem Renaissance and Abstract Expressionism, two movements in art that are uniquely American. Other lessons will present the contributions to art by native people in North and South America. Your student will see how the elements of art and the principles of design have been applied using techniques that make art in the Americas a truly unique experience.

Objectives:
- Demonstrate an understanding of the contributions of African people to the New World
- Demonstrate an understanding of major art movements in North America
- Demonstrate an understanding of the artistic expressions of native cultures
- Identify how the elements of art and principles of design are used to create artwork that is unique to cultures in the Americas

Lesson 1: Transition to the New World

Objectives:
- Demonstrate an understanding of African contributions to cultures in the New World

Lesson 2: The Harlem Renaissance

Objectives:
- Demonstrate an understanding of the art forms of the Harlem Renaissance

Lesson 3: Expressing Mood: Abstract Expressionism

Objectives:
- Demonstrate an understanding of abstract expression
- Demonstrate an understanding of how abstract expressionism changed art
- Demonstrate an understanding of how the elements of art are used in abstract expressionism

Lesson 4: Beauty Around Us: Designs of Native America (two-day lesson)

Objectives:
- Demonstrate an understanding of Native American artifact functions
- Demonstrate an understanding of some Native American traditions

Lesson 5: The Art of the Kuna: Mola Designs

Objectives:
- Demonstrate an understanding of the Kuna people
- Demonstrate an understanding of mola design standards

Lesson 6: Unit Review and Test
Unit 4: The Expressive Art of Asia

Asia is the world’s largest continent and boasts many distinct cultures. In this unit, your student will learn about art forms from China, India, Indonesia, and Japan. The art of Asia represents the great diversity of the people who live there; studying this wealth of creative knowledge will help your student develop an understanding of and appreciation for Asia’s varied cultures.

Objectives:
- Demonstrate an understanding of the various art forms and techniques of Asia
- Demonstrate an understanding of how the elements of art are used in expressive ways
- Demonstrate an appreciation for Asia’s diverse cultures and people

Lesson 1: Painting Quietly: Sumi-e

Objectives:
- Demonstrate an understanding of effective use of line
- Demonstrate an understanding of the role of nature in Japanese art
- Demonstrate an understanding of writing haiku poems

Lesson 2: Paper: More Than Just for Writing

Objectives:
- Demonstrate an understanding of how paper is used in Japan

Lesson 3: The Dance of the Dragon (two-day lesson)

Objectives:
- Demonstrate an understanding of art forms from China
- Demonstrate an understanding of paper construction techniques

Lesson 4: Indonesian Batik Design

Objectives:
- Demonstrate an understanding of radial balance
- Demonstrate an understanding of the diversity of Indonesian visual art

Lesson 5: Hands from India

Objectives:
- Demonstrate an understanding of the art forms of India
- Demonstrate an understanding of mehndi design

Lesson 6: Stories in Miniature

Objectives:
- Demonstrate an understanding of miniature painting from India

Lesson 7: Unit 4 Review and Unit Test

Objectives:
- Review the terms and concepts presented in Unit 4
ART 5
Art 5

In this course, the student will be introduced to works of art through time. Throughout history the growth and development of civilizations around the world have been recorded and defined through the works of artists. The student will become familiar with the art elements, the principles of design, and how these elements and principles were applied to create visual art in different time periods and cultures.

Unit 1: The Ancient World

This unit will acquaint your student with some of the artwork from pre-history and ancient civilizations while exploring the elements of art. Your student will apply the elements of line, shape, color, texture, form, value, and space to his own artworks as he analyzes these elements in the works of ancient artists.

Objectives:
- Demonstrate an understanding of the elements of art and apply them to original artworks
- Demonstrate an understanding of artworks from pre-history and ancient civilizations

Lesson 1: The Lines of Ancient Animals

Objectives:
- Demonstrate an understanding of the art element of line
- Identify and apply the art element of line as a means of expression
- Create an image from imagination and memory that communicates a story

Lesson 2: Arts, Rocks, and Shapes

Objectives:
- Demonstrate an understanding of shape as an element of art
- Distinguish between organic and geometric shapes
- Distinguish between pictographs and petroglyphs
- Apply the element of shape in a stencil painting

Lesson 3: Textures in Ancient Mexico

Objectives:
- Distinguish between tactile and visual texture
- Apply the element of texture to a personal artwork
- Demonstrate an understanding of Mayan subject matter

Lesson 4: Ancient Greece: Vases and Stories

Objectives:
- Demonstrate an understanding of the functions of ancient Greek vases
- Distinguish between two types of forms
- Create a design inspired by ancient Greek vases
- Communicate a personal story through a drawing

Lesson 5: All Roads Lead to Rome

Objectives:
- Demonstrate an understanding of background, middleground, and foreground
- Distinguish between styles of Roman wall painting
- Apply perspective techniques to a personal artwork

Lesson 6: Bits and Pieces: Islamic Mosaics (two-day lesson)

Objectives:
- Demonstrate an understanding of mosaic construction
- Differentiate between primary and secondary colors

Lesson 7: Unit 1 Review and Test

Objectives:
- Review the terms and concepts presented in Unit 1
Unit 2: The Middle Ages to the Renaissance

Your student traveled through ancient cultures in Unit 1, and she will now explore the artworks and cultures of the Middle Ages through the Renaissance in Unit 2. As she explores this art, she will come to understand the principles of art and how they were and are applied to artworks. Your student will have the opportunity to create her own artworks by applying the elements, principles, and techniques of visual art.

Objectives:
- Create original artworks by applying art elements, principles, and techniques
- Demonstrate an understanding of the principles of art and how they were used in art history
- Explore and interpret artworks from the Middle Ages through the Renaissance

Lesson 1: Colored Light: Radial Balance in a Rose Window

Objectives:
- Distinguish among the three types of balance
- Demonstrate an understanding of the functions of stained glass windows in the Middle Ages
- Apply radial balance to create an original design

Lesson 2: Your Large Initial: Illuminated Manuscripts

Objectives:
- Demonstrate an understanding of the purposes of illuminated manuscripts
- Demonstrate an understanding of emphasis

Lesson 3: Art in Medieval Japan: Painted Patterns

Objectives:
- Apply a pattern to an original artwork
- Demonstrate an understanding of pattern in Medieval Japanese paintings

Lesson 4: Paint Like Michelangelo

Objectives:
- Describe and apply the art principle of harmony
- Identify the artwork of Michelangelo Buonarroti
- Demonstrate an understanding of the Renaissance

Lesson 5: Movement and Rhythm: A Renaissance Cityscape

Objectives:
- Demonstrate an understanding of movement and rhythm
- Apply the art principles of movement and rhythm to an original artwork

Lesson 6: Art Meets Math: Where Lines Come Together (two-day lesson)

Objectives:
- Demonstrate an understanding of one-point perspective

Lesson 7: A True Renaissance Man: Leonardo da Vinci

Objectives:
- Demonstrate an understanding of the life and work of Leonardo da Vinci

Lesson 8: Unit 2 Review and Test

Objectives:
- Review the terms and concepts presented in Unit 2

Unit 3: Baroque/Rococo

This unit will present Baroque and Rococo styles of European art and architecture. Students will have an opportunity to observe images of various world-renowned structures to gain an understanding of the design elements of Baroque and Rococo structures. Students will also have an opportunity to explore the elements of Rococo style in visual artwork and music. In
addition, students will demonstrate an understanding of Baroque and Rococo artists use of color by making a collage that uses color to create a mood.

Objectives:
- Identify elements of Baroque and Rococo Architecture
- Identify elements of the Rococo style in visual artwork and music
- Explore the work of Chardin
- Explore Warm and Cool Color Schemes

Lesson 1: In The Royal Style: Versailles

Objectives:
- Identify elements of baroque and rococo architecture
- Understand motivations for architectural decisions
- Design a home based on your own architectural decisions

Lesson 2: Rococo Art

Objectives:
- Identify elements of the rococo style in visual artwork
- Create a drawing or painting influenced by the rococo style

Lesson 3: Games Children Play

Objectives:
- Investigate genre painting and the work of Chardin
- Create a painting or photograph influenced by Chardin’s style that shows games you like to play

Lesson 4: Quiet Time

Objectives:
- Investigate warm and cool color schemes
- Create a collage that uses color to create a mood

Lesson 5: Baroque and Rococo Unit Review and Test

Objectives:
- Review the terms and concepts presented in Unit 3

Unit 4: Romanticism and the Modern Age

The Romantic movement produced art that has emotional and spiritual themes. Much of the art created in the period that followed the Romantic era, the Modern age, is experimental. In this unit your student will learn about the art and artists of both of these periods. She will examine Romantic landscape paintings and have the opportunity to create her own landscape painting. She will study the works of John Constable, Vincent Van Gogh, and Pablo Picasso. In addition, she will learn more about the role of an artist in society.

Objectives:
- Demonstrate an understanding of the various art forms and techniques of Asia
- Demonstrate an understanding of how the elements of art are used in expressive ways
- Demonstrate an appreciation for Asia’s diverse cultures and people

Lesson 1: Constable’s Romantic Landscape

Objectives:
- Identify elements of landscape painting
- Understand the use of perspective, light, and contrast in Constable’s work
- Create your own landscape based on your experience of the weather

Lesson 2: Your Impressionism: Monet, Cassatt, Van Gogh (two-day lesson)

Objectives:
- Identify key discoveries during the Impressionist period
- Understand the use of light, color, and mood in Impressionist painting
- Create your own moody landscapes
Lesson 3: Color Your World Differently: Matisse

Objectives:
- Identify key discoveries during the Fauvist period
- Describe the use of color and mood in Matisse’s work
- Create your own “wild-beast” collage

Lesson 4: Taking a Walk around Cubism: Picasso (two-day lesson)

Objectives:
- Identify key processes used by the Cubists
- Describe the use of line, shape, value, and form
- Create a multimedia piece inspired by Cubist processes

Lesson 5: Icons and Illusions: Pop and Op (two-day lesson)

Objectives:
- Identify key elements of pop and op art
- Use contemporary images and color theory to create a poster with an icon and personal message

Lesson 6: Aesthetics: How You Look at Art

Objectives:
- Define aesthetics
- Apply personal aesthetic judgments to the artwork reviewed in previous lessons

Lesson 7: What Does an Artist Do?

Objectives:
- Consider the roles artists have played in society over time
- Investigate a career in the arts

Lesson 8: It’s Your Call: Art Criticism

Objectives:
- Learn the steps involved in making educated judgments about artwork
- Curate a show, and write a review based on your own work

Lesson 9: Romanticism and the Modern Age Review and Test

Objectives:
- Review the terms and objectives from Unit 4: Romanticism and the Modern Age
- Take a short exam to test comprehension
Art 6 A

The middle school art program is organized around the three artistic processes of creating, presenting, and responding. In addition, the program emphasizes how art and design can drive innovation in the same way science, technology, engineering, and mathematics do. Throughout the courses, students use various media and techniques to construct projects, collaborate with peers, and critique their own work as well as the work of other artists.

In Semester A, students explore the wide range and variety of visual arts. They learn the basic elements of art and principles of design and apply them in their own creative ways. The semester culminates in a study of factors involved in evaluating and critiquing art.

Unit 1: Course Overview

In this unit, you will receive a basic overview of the key components of Middle School Art and reference information that can be used at any time during the semester. You will learn how to navigate special interactive features and how to be successful in this course.

Lesson 1: Getting Started in Middle School Art

Unit 2: What Is Art?

In this unit, you will explore the definition of art. You will gain an understanding of the different purposes for art in the everyday world, as well as why people create art. The benefits of art in academics and employment will also be explored through the investigation of how art relates to other subjects and various careers.

Objectives:
- Reflect on the scope and diversity of the visual arts
- Investigate the role of art as a means for better understanding people and the world
- Establish a framework for evaluating works of art

Lesson 1: Defining Art

Objectives:
- Define and summarize key concepts of art
- Describe the basic purposes of art creation
- Analyze the purpose and success of art

Lesson 2: Tell Your Story

Objectives:
- Summarize how art is used to tell stories and record culture and history
- Recognize personal stories that are part one's heritage
- Analyze art work to determine the purpose and historical information being shared

Lesson 3: Art and Entertainment (two-day lesson)

Objectives:
- Recognize and understand the purpose of art in terms of entertainment
- Use creativity to develop original characters and images
- Justify the choices made in the creation of art

Lesson 4: Express Yourself

Objectives:
- Recognize the importance of personal expression
- Demonstrate the ability to use art as a means of expression
- Evaluate the artwork of others to understand the emotions or opinions being expressed in the art

Lesson 5: Art and Aesthetics

Objectives:
- Demonstrate an understanding of the meaning of aesthetics
- Design a collection of art that is aesthetically pleasing
- Evaluate the qualities of individual pieces of art

© 2014 Connections Education LLC. All rights reserved.
Lesson 6: Design and Production

Objectives:
- Identify the purpose of design in terms of utilitarian products used each day
- Carry out activities that enhance abilities to be creative
- Assess how ability to be creative can enhance skills used to design products
- Review the objectives of the unit as a whole

Unit 3: The Elements of Art

In this unit, you will explore the elements of art. These are the founding principles that assist in understanding how art is made. You will understand what guides artists as they work. Also, you will gain an understanding of how to interpret finished pieces of art and how to determine the success of a particular art piece.

Objectives:
- Experiment with the elements of art
- Make original artwork through investigation and planning
- Use the elements of art to evaluate the quality of artwork
- Use experiences with art to interpret and critique artwork
- Explain proper care and maintenance of art equipment and materials

Lesson 1: Interpreting Lines

Objectives:
- Describe various types of lines
- Analyze how those lines are used in art
- Create art that focuses on line usage

Lesson 2: The Shapes that Form the World

Objectives:
- Identify different types of shapes
- Interpret how shapes are used to create objects in images
- Evaluate images for the use of shapes

Lesson 3: What You See and What You Feel

Objectives:
- Interpret what texture is in art
- Analyze how texture is created and used in art

Lesson 4: The Colors Around Us (two-day lesson)

Objectives:
- Identify color families
- Learn how to mix colors
- Analyze how colors affect art
- Create art based on color theories

Lesson 5: The Value in Art

Objectives:
- Define value and contrast
- Demonstrate understanding of value to create highlights and shadows

Lesson 6: The Space In Between

Objectives:
- Recognize positive and negative space
- Demonstrate understanding of space in terms of drawing objects
- Evaluate images for use of space

Lesson 7: It's All About Perspective (two-day lesson)

Objectives:
- Define perspective and rules for drawing in perspective
Lesson 8: Elements in Review

Objectives:
- Review all terms and concepts presented in the unit
- Analyze meaning of terms as they apply to art
- Use the elements of art to evaluate the quality of artwork
- Use experiences with art to interpret and critique artwork

Unit 4: Principles of Design

In this unit you will explore the principles of art. Combined with the elements of art, these are the founding concepts that assist in understanding how art is made and why it is successful. You will understand what guides artists as they work. Also, you will gain an understanding of how to interpret finished pieces of art and how to determine the success of a particular art piece.

Objectives:
- Experiment with the principles of design to communicate ideas in original artwork
- Evaluate and recommend changes to artwork based on the goals of the design
- Analyze the effectiveness of the principles of design to convey ideas
- Use personal experiences with design and artwork to interpret and create contemporary artwork
- Explain the importance of experimentation and initiative when developing original artwork

Lesson 1: Variety in Art

Objectives:
- Describe what variety means in art
- Construct art based on the concept of variety
- Justify choices made during artistic creations

Lesson 2: Is There Movement in a Still Image?

Objectives:
- Comprehend the premise of rhythm and movement in art
- Analyze how rhythm and movement were used in various pieces of art

Lesson 3: The Patterns You See

Objectives:
- Define patterns in art
- Produce a design that utilizes pattern
- Critique the success of the design

Lesson 4: What We Emphasize (two-day lesson)

Objectives:
- Define emphasis as it applies to art
- Observe usage of emphasis in art
- Analyze the effectiveness of emphasis in creating an obvious focal point

Lesson 5: Proportion

Objectives:
- Define proportion
- Apply the theory of proportion in art production

Lesson 6: Harmony Created

Objectives:
- Identify harmony as it applies to art
- Distinguish various ways that harmony is created when making art

Lesson 7: Balancing Act (two-day lesson)

Objectives:
- Define various types of balance
Lesson 8: Principles in Review

Objectives:
- Review all terms and processes learned during the unit

Unit 5: Responding to Art

In this unit, you will create works of art based upon preset criteria. You will understand how to evaluate and present your artwork for others to see and understand. Through these practices, you will gain an understanding of why art is evaluated differently depending on situations and needs.

Objectives:
- apply appropriate criteria to analyze, select, and respond to art
- critique choices artists, designers, and curators make when creating or presenting artwork
- identify reasons why criteria used to evaluate artwork would vary
- reflect on the procedures and products of art and design
- analyze the traits of artwork that communicates effectively

Lesson 1: Responding to Criteria

Objectives:
- Identify criteria for evaluating different types of art
- Communicate meaning through art
- Apply the evaluation criteria to a piece of art
- Justify decisions made in artwork

Lesson 2: The Portrait (two-day lesson)

Objectives:
- Describe the characteristics of portraiture
- Create art based on those characteristics
- Evaluate artwork based on the characteristics of quality portraits

Lesson 3: The Art of Impressionism

Objectives:
- Describe the characteristics of Impressionism
- Create art based upon the characteristics of Impressionism

Lesson 4: What's in a Name?

Objectives:
- List basic rules of one-point perspective
- Create an illustration in one-point perspective
- Evaluate art based on preset criteria of perspective

Lesson 5: Being an Art Critic

Objectives:
- Apply appropriate criteria to analyze, select, and respond to art
- Critique choices artists, designers, and curators make when creating or presenting artwork
- Identify reasons why criteria used to evaluate artwork would vary
- Reflect on the procedures and products of art and design
- Analyze the traits of artwork that communicate effectively
Art 6 B

The middle school art program is organized around the three artistic processes of creating, presenting, and responding. In addition, the program emphasizes how art and design can drive innovation in the same way science, technology, engineering, and mathematics do. Throughout the courses, students use various media and techniques to construct projects, collaborate with peers, and critique their own work as well as the work of other artists.

In Semester B, students consider the preservation and protection of art. They then explore how international, national, and local art influences ideas, actions, cultures, and environments. Using this information, students build their own ideas of the role art plays in their lives.

Unit 1: Course Overview

In this unit, you will receive a basic overview of the key components of Middle School Art and reference information that can be used at any time during the semester. You will learn how to navigate special interactive features and how to be successful in this course.

Lesson 1: Getting Started in Middle School Art

Unit 2: Protecting and Respecting Art

In this unit, you will gain an appreciation for the need to preserve art. You will explore techniques used to protect art and learn about decisions that must be made when building and maintaining an art collection. Various careers related to art conservation will be studied.

Objectives:
- Analyze different methods for preserving and presenting artwork
- Apply processes used to decide what artwork gets preserved and presented
- Identify the professionals involved in preservation and presentation of artworks
- Choose where to store, present, and preserve artwork
- Explain the responsibilities artists face when creating works of art and design

Lesson 1: Why Do We Need to Preserve Artwork?

Objectives:
- Identify causes of damage to artwork
- Analyze artworks and classify appropriate conservation techniques based on media
- Understand why preserving art is culturally important

Lesson 2: Careers in Preservation and Conservation

Objectives:
- Identify careers available in preservation and conservation
- Identify skill sets needed for art preservation and conservation careers

Lesson 3: Is It Worth It?

Objectives:
- Explore several criteria used in assessing the value of art
- Use criteria to analyze art to assess whether it should be preserved

Lesson 4: On View Now And Forever?

Objectives:
- Select the most appropriate location to safely store and display artwork

Lesson 5: Is it Archival? An Art Lab (two-day lesson)

Objectives:
- Perform a series of experiments on preservation materials and situations
- Report experiment findings

Lesson 6: Preservation Panorama

Objectives:
- Analyze different methods for preserving and presenting art work
Unit 3: The World of Art

During this unit you will interpret art from past and present perspectives, searching for clues about purpose, meaning, and culture. You will practice responding to art based on your understanding of a specific time period and culture; create art symbolic of a certain period/culture; and critique art from varying perspectives. You will then submit one work of your choice.

Objectives:
- Analyze how works of art influence your world view
- Understand factors that influence creativity
- Evaluate how art helps you understand people living in different cultures
- Evaluate how understanding people living in different cultures helps you respond to art
- Critique works of art using cultural contexts

Lesson 1: Art in Context

Objectives:
- Recognize that works of art that appear similar can have different meanings and uses depending on the cultural context in which they were created
- Interpret art based on cultural context

Lesson 2: Meaning and Culture

Objectives:
- Given cultural background, interpret artwork to determine its uses, functions, and significance

Lesson 3: The Story Behind the Artifact (two-day lesson)

Objectives:
- Differentiate between an insider’s perspective and an outsider’s perspective on the cultural significance of an object

Lesson 4: Here and There; Then and Now (two-day lesson)

Objectives:
- Compare the original cultural value of artwork with its new value in a different culture
- Compare the original purpose and value of historical artwork with its purpose and value today
- Interpret art based on its cultural context
- Compare similar styles of artwork in different cultures and time periods

Lesson 5: Art Metamorphosis (two-day lesson)

Objectives:
- Explore reasons for the evolution of artistic style
- Investigate how artists from various cultures and time periods inspire each other
- Create art that is inspired by a particular era or artistic style

Lesson 6: Complex Contexts

Objectives:
- Analyze how works of art influence your world view
- Understand factors that influence creativity
- Evaluate how art helps us understand people living in different cultures, areas of the world, and/or periods of time
Unit 4: Art In Your Community

During this unit you will examine a variety of community art and analyze works that reveal information about community identity. Evaluating the purposes of community art will allow you to discover its role in strengthening and uniting a community. You will design a community mural with a meaningful purpose and message over the course of two lessons.

Objectives:
- Examine art in your community in the broadest sense possible (museums, public places, diversity of media, and form)
- Critique works of art in your community for what they reveal about the community identity
- Evaluate how artistic collaboration can strengthen and unite a community
- Create community art

Lesson 1: Imagining a Community

Objectives:
- Analyze why artists create community art and the purposes of community art
- Identify how artists represent their communities using community art

Lesson 2: Community Celebration

Objectives:
- Analyze and evaluate art that celebrates community events

Lesson 3: Depicting our Neighbors (two-day lesson)

Objectives:
- Investigate artists’ values by analyzing who they choose to depict and how the work is displayed
- Identify good placements for community murals and recognize why
- Create a plan for a community mural that depicts members of the community

Lesson 4: Pictures: Giving Community Meaning

Objectives:
- Identify, analyze, and respond to cultural norms as expressed through community art and murals
- Act as art historians to interpret images and connect them to cultures

Lesson 5: Perspectives in Community Art (two-day lesson)

Objectives:
- Master vocabulary and basic skills of perspective drawing, to create space
- Evaluate community art for its use of linear and atmospheric perspective
- Incorporate perspective in the completion of a community art mural plan

Lesson 6: Community Art: A View Through the Wide-Angle Lens

Objectives:
- Respond to and evaluate community art according to criteria such as positive depiction of community, use of perspective, purpose of artwork, event celebrated, and culture norms depicted

Unit 5: Art in Your Life

In this unit, you will investigate the role of art in your everyday life, connect art-related careers to the products you use daily, and examine the practices of analyzing and critiquing art. You will have the opportunity to develop and use your own aesthetic preferences to
build a digital art collection. You will reflect on your own growth as an artist and build your personal art portfolio of artworks and artifacts.

Objectives:
- Recognize the ways in which art influences a person's life
- Identify how life experiences and mentors serve as sources of inspiration for artists
- Investigate the career possibilities in the field of visual arts
- Reflect on the changes in personal perception and understanding of art acquired throughout the course

Lesson 1: Surrounded by Art

Objectives:
- Differentiate between art objects and functional objects
- Categorize objects as functional, art, or both using aesthetic judgment

Lesson 2: Careers in Art (two-day lesson)

Objectives:
- Review careers in art and analyze what skills would be necessary to excel at the career

Lesson 3: The Collector

Objectives:
- Create a collection based on stated aesthetic preferences and other organizing principles
- Interpret other collectors’ works for evidence of aesthetic preferences and historical interests

Lesson 4: The Critic

Objectives:
- Identify the role of the art critic in guiding tastes in the art market
- Recognize and practice the role of art criticism in the creative revision process

Lesson 5: Art of Memory (two-day lesson)

Objectives:
- Identify and analyze artworks that represent a significant memory, experience, or event in the life of the artists

Lesson 6: The Power of Influence (two-day lesson)

Objectives:
- Analyze how artists have been influenced by other individuals, styles, or events
- Assemble a portfolio of artworks that inspire the artistic process and explain the connection to personal artwork
ART 7A
Art 7 A

The middle school art program is organized around the three artistic processes of creating, presenting, and responding. In addition, the program emphasizes how art and design can drive innovation in the same way science, technology, engineering, and mathematics do. Throughout the courses, students use various media and techniques to construct projects, collaborate with peers, and critique their own work as well as the work of other artists.

In Semester A, students explore the wide range and variety of visual arts. They learn the basic elements of art and principles of design and apply them in their own creative ways. The semester culminates in a study of factors involved in evaluating and critiquing art.

Unit 1: Course Overview

In this unit, you will receive a basic overview of the key components of Middle School Art and reference information that can be used at any time during the semester. You will learn how to navigate special interactive features and how to be successful in this course.

Lesson 1: Getting Started in Middle School Art

Unit 2: What Is Art?

In this unit, you will explore why people create art. You will review the purposes of different types of art as well as how that artwork plays a role in the world. You will gain a better understanding of how art is used as a communication tool for individuals and societies. In addition, you will gain a better understanding of how to evaluate artwork.

Objectives:
- Reflect on the scope and diversity of visual arts
- Investigate the role of art as a means to better understand people and the world
- Establish a framework for evaluating artwork

Lesson 1: Why Is Art Created?

Objectives:
- Understand the purpose of creating art
- Apply skills and knowledge to create works of art for a purpose
- Analyze the choices made in all artistic decisions

Lesson 2: Utilitarian or Aesthetic

Objectives:
- Identify art made for utilitarian purposes and art that is made for aesthetic purposes
- Produce a design that is either utilitarian or aesthetic
- Compare designs to others of a similar nature

Lesson 3: Communication Is the Key

Objectives:
- Recognize what message various pieces of art communicate
- Compare different art pieces to determine purpose and message
- Evaluate the artist's success in conveying the intended message

Lesson 4: The Importance of Creativity (two-day lesson)

Objectives:
- Define creativity and why it is important
- Apply skills to demonstrate creative ability
- Evaluate the success of artistic creations

Lesson 5: Reviewing Purpose

Objectives:
- Reflect on the scope and diversity of visual arts
- Investigate the role of art as a means to better understand people and the world
- Establish a framework for evaluating works of art
Unit 3: The Essentials of Visual Arts

In this unit, you will explore the elements and principles of art. These concepts provide the basic foundation for creating art by providing the artist with tools and techniques for creating. You will understand how to utilize the elements and principles to develop a dynamic piece of art. You will also be able to properly critique your work, and the work of others, to determine its effectiveness and success.

Objectives:
- Experiment with the elements of art
- Make original artwork through investigation and planning
- Use the elements of art to evaluate the quality of artwork
- Use experiences with art to interpret and critique artwork
- Explain proper care and maintenance of art equipment and materials.

Lesson 1: Reviewing the Elements

Objectives:
- Describe and apply the elements of art

Lesson 2: The Principles of Design

Objectives:
- Describe each of the principles of design
- Comprehend how those principles are used in art

Lesson 3: Versatile Lines

Objectives:
- Identify basic lines
- Demonstrate how those lines can be used to create each of the principles of design

Lesson 4: Morphing Shapes (two-day lesson)

Objectives:
- Identify basic shapes
- Demonstrate how shapes can be used to create the principles of art

Lesson 5: Pop Art (two-day lesson)

Objectives:
- Recognize how color can be used as a tool for emphasis
- Discuss the movement of pop art
- Create pop art pieces that utilize color as emphasis
- Justify choices made in the process of creating

Lesson 6: The Value of Proportion (two-day lesson)

Objectives:
- Summarize the basic concepts of facial proportions
- Discuss the importance of contrast and value when creating art
- Demonstrate understanding of facial proportions
- Demonstrate the usage of contrast in value

Lesson 7: Emphasizing Perspective (two-day lesson)

Objectives:
- Review the basic concepts of perspective, emphasis, and unity
- Construct a drawing that employ the concepts of perspective, emphasis, and unity
- Evaluate the success of the drawing

Lesson 8: Elements and Principles in Review

Objectives:
- Experiment with the elements of art
- Make original artwork through investigation and planning
- Use the elements of art to evaluate the quality of artwork
Unit 4: The Application of Art

In this unit you will gain an understanding of how art is applied to many areas of life. You will evaluate how the concepts, elements, and principles related to art and design apply to areas such as English, math, social studies, and science. You will have the opportunity to evaluate how art is used as a tool to enhance those subjects.

Objectives:
- Experiment with the principles of design to communicate ideas in original artwork
- Analyze the effectiveness of the principles of design to convey ideas
- Use personal experiences with design and artwork to interpret and create work that is cross-curricular
- Explain the importance of experimentation and initiative when developing original artwork

Lesson 1: The Math Connection – Tessellations (two-day lesson)

Objectives:
- Describe how art is connected to math through the use of patterns and tessellations
- Identify and create tessellation patterns

Lesson 2: Art and Language Arts – The Storyteller (two-day lesson)

Objectives:
- Identify the connection between visual and verbal storytelling
- Carry out the process of storytelling through creating a story map
- Create art based on a story map

Lesson 3: Art and Science – From Earth to Canvas (two-day lesson)

Objectives:
- Identify materials used in creating art
- Discuss how materials are created from natural resources

Lesson 4: Social Studies and Art – Decoding the Past (two-day lesson)

Objectives:
- Describe how historical information is often recorded visually rather than verbally
- Recognize what visual clues are present in modern society
- Analyze the story that is interpreted based on the visual clues created by the artist

Lesson 5: The Application of Art Review Quiz

Objectives:
- Experiment with the principles of design to communicate ideas in original artwork
- Analyze the effectiveness of the principles of design to convey ideas
- Use personal experiences with design and artwork to interpret and create work that is cross-curricular
- Explain the importance of experimentation and initiative when developing original artwork

Unit 5: Responding to Art

In this unit, you will create works of art based upon defined criteria. You will understand how to evaluate and present your artwork based on a theme that others will see and understand. Through these practices, you will gain an understanding of why art is evaluated differently depending on situations and needs.

Objectives:
- Apply appropriate criteria to analyze, select, and respond to art
- Critique choices artists, designers, and curators make when creating or presenting artwork

© 2014 Connections Education LLC. All rights reserved.
Lesson 1: Responding to Criteria

Objectives:
- Identify different genres of art
- Understand different criteria for evaluating artwork
- Create specific criteria to evaluate a genre of art
- Analyze artwork based on criteria

Lesson 2: Evaluating a Genre

Objectives:
- Understand concepts that define a genre or a group of artwork
- Develop ideas for evaluating a group of artwork based upon a particular genre
- Evaluate artwork based upon the criteria established for the genre

Lesson 3: Extending the Collection (two-day lesson)

Objectives:
- Interpret a theme for a group of artwork
- Create artwork based on a genre
- Justify decisions

Lesson 4: Presenting Your Message

Objectives:
- Select art to represent a message
- Create a collection based upon a message
- Justify decisions made

Lesson 5: Responding to Art Review

Objectives:
- Apply appropriate criteria to analyze, select, and respond to art
- Critique choices artists, designers, and curators make when creating or presenting artwork
- Identify reasons why criteria used to evaluate artwork would vary
- Analyze the traits of artwork that communicates effectively
ART 7B
Art 7 B

The middle school art program is organized around the three artistic processes of creating, presenting, and responding. In addition, the program emphasizes how art and design can drive innovation in the same way science, technology, engineering, and mathematics do. Throughout the courses, students use various media and techniques to construct projects, collaborate with peers, and critique their own work as well as the work of other artists.

In Semester B, students consider the preservation and protection of art. They then explore how international, national, and local art influences ideas, actions, cultures, and environments. Using this information, students build their own ideas of the role art plays in their lives.

Unit 1: Course Overview

In this unit, you will receive a basic overview of the key components of Middle School Art and reference information that can be used at any time during the semester. You will learn how to navigate special interactive features and how to be successful in this course.

Lesson 1: Getting Started in Middle School Art

Unit 2: Protecting and Respecting Art

In this unit, you will gain an appreciation for the changing nature of art. As you examine World Heritage Sites, you will understand the challenges of large-scale preservation, recognize responsibilities of artists, and practice characters of an active observer.

Objectives:
• Explore factors involved in the preservation of sites, such as World Heritage Sites
• Analyze artwork for evidence of differing styles and methods
• Explain the choices and responsibilities of artists when creating works of art and design.
• Understand the responsibilities and privileges of the art viewer

Lesson 1: The Evolution of Style (two-day lesson)

Objectives:
• Analyze historical artwork from a cultural perspective
• Examine art trends and styles across time and culture
• Understand reasons for stylistic change

Lesson 2: Pick Your Medium

Objectives:
• Explain how and why artists choose a medium

Lesson 3: Heritage Sites: Place Preservation (two-day lesson)

Objectives:
• Explore World Heritage Sites and identify why they are important to preserve

Lesson 4: With Great Art Comes Great Responsibility

Objectives:
• Analyze the responsibilities artists have when they create and exhibit artwork
• Understand the factors artists consider before they hang a piece for exhibition

Lesson 5: Passive Observer Responsible Viewer?

Objectives:
• Analyze the responsibilities of the viewer when looking at and responding to a work of art

Lesson 6: A Path to Preservation and Respect

Objectives:
Unit 3: The World of Art

In this unit, you will gain an understanding of and appreciation for the symbolism used in art across various cultures. You will explore and analyze artistic methods for representing religious figures, and examine ways that art has influenced culture or national identity.

Objectives:
• Analyze ways that beliefs, philosophy, and cultural values have influenced the development of various art forms
• Examine ways that cultures use art and its principles to portray significant individuals or religious figures
• Understand ways that math and art intersect
• Analyze ways that art has influenced a culture or nation

Lesson 1: Harmonious Principles: The World of Chinese Art (two-day lesson)

Objectives:
• Understand how philosophy and culture influenced the development of various art forms
• Create artwork that illustrates aspects of philosophy and culture

Lesson 2: Mathematics Meets Art: The Golden Ratio

Objectives:
• Analyze the use of the golden ratio in art and architecture
• Understand ways that the golden ratio has been a guiding principle in the art of multiple cultures

Lesson 3: The Beast: Animal Representations in Art

Objectives:
• Evaluate ways that animals are used in art to represent people or ideas
• Compare animal art from different cultures

Lesson 4: The Ideal: Representations of Soldiers and Saints

Objectives:
• Identify the use of artistic composition techniques to elevate the status of strategic individuals in history
• Analyze gesture and grouping of figures to interpret the relationships between them

Lesson 5: The Creation of American Culture Through Art (two-day lesson)

Objectives:
• Analyze symbolic development of national identity through artwork in the early days of the American republic

Unit 4: Art in Your Community

Explore community art ranging from ordinary money to architecture and monumental structures. Learn how both everyday and extraordinary community art are used to express a message and unify viewers around a common purpose. Discover the process and skills necessary to create currency or design a monument. Analyze the importance of memorializing hardships such as war through art, and question the reasons why beauty and
creativity are necessary to human survival. Exercise creative choice by creating two projects and then choosing between the two for submission as your portfolio assignment.

Objectives:
- Examine the ways that currency, architecture, and memorials send messages that unify and inspire communities
- Learn the processes and skills behind designing currency, monuments, and structures
- Analyze art and creativity’s role in effectively memorializing hardships
- Create ordinary and large-scale community art designs

Lesson 1: The Art of Money (two-day lesson)

Objectives:
- Examine the images that compose currency from various countries and interpret what they say about national identity
- Understand the technology and artistic methods used to manufacture currency

Lesson 2: Monumental Sculptures: We Remember (two-day lesson)

Objectives:
- Observe and analyze war memorials from various time periods and compare and contrast styles and purposes
- Explore the purpose behind the creation of war memorials

Lesson 3: Monumental Design (two-day lesson)

Objectives:
- Analyze the process of monument design with an in-depth model
- Analyze and discuss why symbolism and placement of artworks is important

Lesson 4: Building Community: Architecture (two-day lesson)

Objectives:
- Describe processes and techniques practiced by architects
- Analyze ways architects send a message through structural elements
- Create an architectural drawing

Lesson 5: Community Art: Mundane to Magnificent

Objectives:
- Analyze the purposes of a range of art
- Understand methods used in the creation of a wide range of community art
- Explore reasons creativity and beauty are important to human existence

Unit 5: Art in Your Life

You will investigate art that is present in your everyday landscape. Explore your home to learn ways that interior design can shape mood and space. Analyze the history of printmaking to understand its impact on creativity and the world as a whole. Discover techniques for composing photographs and consider the revolution of photographic technology and its impact on how images are shared. Look around you to find examples of advertising and discuss best practices of professionals in the field. Close your study with the creation of a mixed media piece that combines printmaking and photography to communicate a personal theme.

Objectives:
- Recognize the ways that artists such as graphic designers create visual images to convince or manipulate
- Identify ways that technology has impacted art and humanity in the fields of printmaking and photography
- Explore spaces to understand how interior design can impact mood and well being
- Practice the skills of printmaking, photography, advertising, and mixed media art

Lesson 1: Interior Landscapes: Designing a Room

Objectives:
Lesson 2: Reproductions: The Art and History of Printing (two-day lesson)

Objectives:
- Compare and contrast printing technology and techniques from various times in history
- Reflect on ways that printing has impacted the spread of ideas in images and text

Lesson 3: Photography: Instant Art? (two-day lesson)

Objectives:
- Analyze photographs across time and cultures for the ways they portray subjects and send a message through composition and techniques
- Understand how photography has altered the way we create and share images

Lesson 4: Convincing Images: The Art of Advertising

Objectives:
- Analyze the role of art in creating effective advertisements
- Learn about careers in the field of professional advertising
- Discuss the choices advertising professionals make when crafting an advertisement with a specific message

Lesson 5: Caring for the Environment: Recycled Art

Objectives:
- Analyze the ways that artists use recycled media to communicate a message

Lesson 6: Intersecting Art Forms (two-day lesson)

Objectives:
- Analyze the ways that artists use mixed media to communicate a message
- Create a mixed media piece that conveys a particular theme
ART 8A
Art 8 A

The middle school art program is organized around the three artistic processes of creating, presenting, and responding. In addition, the program emphasizes how art and design can drive innovation in the same way science, technology, engineering, and mathematics do. Throughout the courses, students use various media and techniques to construct projects, collaborate with peers, and critique their own work as well as the work of other artists.

In Semester A, students explore the wide range and variety of visual arts. They learn the basic elements of art and principles of design and apply them in their own creative ways. The semester culminates in a study of factors involved in evaluating and critiquing art.

Unit 1: Course Overview

In this unit, you will receive a basic overview of the key components of Middle School Art and reference information that can be used at any time during the semester. You will learn how to navigate special interactive features and how to be successful in this course.

Lesson 1: Getting Started in Middle School Art

Unit 2: What Is Art?

In this unit, you will gain an understanding of what art is. You will investigate the concepts of inspiration, creativity, innovation, and communication. Through an understanding of those concepts, you will identify what you consider art to be and what type of message you would like to communicate as an artist.

Objectives:
- Reflect on the scope and diversity of the visual arts
- Investigate the role of art as a means for better understanding people and the world
- Establish a framework for evaluating works of art

Lesson 1: The Role of Inspiration

Objectives:
- Define inspiration
- Explore the role that inspiration plays in the creation of art
- Evaluate personal inspiration factors
- Create art based on personal inspiration

Lesson 2: What Is Art to You? (two-day lesson)

Objectives:
- Describe the various roles art has played through history
- Interpret the purpose/role of various art pieces
- Create art based on the role of preserving heritage

Lesson 3: Creativity and Innovation

Objectives:
- Define creativity and innovation
- Investigate the role of creativity and innovation in the creation of art
- Create art based on the concepts of creativity and innovation

Lesson 4: What Type of Artist Do You Want to Be?

Objectives:
- Explore the role played by art in the communication of ideas
- Analyze the types of messages that prompt a personal response
- Develop an art piece that effectively communicates a message you want to convey to others

Lesson 5: Art in Review

Objectives:
- Reflect on the scope and diversity of the visual arts
- Investigate the role of art as a means for better understanding people and the world
- Establish a framework for evaluating works of art
Unit 3: The Essentials of Visual Arts

In this unit, you will explore how elements and principles of art are used interchangeably to create dynamic imagery. You will work to develop a stronger sense of understanding through the creation of artwork and the analysis of the process and success of the various creations.

Objectives:
- Experiment with the elements and principles of art
- Make original artwork through investigation and planning
- Use the elements of art to evaluate the quality of artwork
- Use experiences with art to interpret and critique artwork
- Explain proper care and maintenance of art equipment and materials

Lesson 1: Review of the Elements and Principles of Art (two-day lesson)

Objectives:
- Define the elements and principles of art
- Create tools that will help with understanding of the elements and principles

Lesson 2: Billboard Designs (two-day lesson)

Objectives:
- Discuss the use of color to create emphasis and balance
- Create a design that utilizes the element of color to create emphasis and balance

Lesson 3: A New Perspective (two-day lesson)

Objectives:
- Identify the steps and concepts of drawing in two-point perspective
- Describe the importance of value when drawing in perspective
- Create an image in two-point perspective that is harmonious
- Assess the success of the image created

Lesson 4: Drawing the Human Body (two-day lesson)

Objectives:
- Define the correct proportions of drawing the human body
- Understand how basic shapes can be used to draw the different parts of the human body
- Create a drawing of the human body that utilizes value and texture correctly

Lesson 5: Painting Contrast (two-day lesson)

Objectives:
- Define the concepts of color, value, and movement
- Create art based on the elements and principles of color, value, and movement
- Assess the success and purpose of the art piece created.

Lesson 6: Reviewing the Essentials

Objectives:
- Experiment with the elements and principles of art
- Make original artwork through investigation and planning
- Use the elements of art to evaluate the quality of artwork
- Use experiences with art to interpret and critique artwork
- Explain proper care and maintenance of art equipment and materials

Unit 4: Art Connections

In this unit, you will gain understanding of how art is applied to many areas of life. You will evaluate how the concepts presented with the elements and principles will apply to areas such as language arts, math, social studies, and science, along with careers that stem from those fields. You will be offered the opportunity to evaluate how art is used as a tool to enhance those subjects and how careers are connected to and spawned from the concepts.

Objectives:
Lesson 1: The Math Connection (two-day lesson)

Objectives:
- Understand the connection between math and the visual arts
- Explore a correlation of math and art as a career field

Lesson 2: Art and Language Arts (two-day lesson)

Objectives:
- Describe the connection between language arts and the visual arts
- Examine an example of the connection between the two arts

Lesson 3: Social Studies and Art (two-day lesson)

Objectives:
- Relate the visual arts to the study of social studies
- Investigate the connection by analyzing current events that impact students

Lesson 4: Art and Science (two-day lesson)

Objectives:
- Explain how the visual arts and sciences are connected through the field of conversation
- Create a product that exemplifies the connection between visual arts and sciences

Lesson 5: Art Connections Review

Objectives:
- Experiment with the principles of design to communicate ideas in original artwork
- Evaluate the relation between art and core subject areas
- Evaluate the impact of art on careers that relate to other subject areas
- Analyze the effectiveness of the principles of design to convey ideas through art
- Use personal experiences with design and artwork to interpret and create contemporary artwork
- Explain the importance of experimentation and initiative when developing original artwork and designs

Unit 5: Responding to Art

In this unit, you will create works of art based upon preset criteria such as theme. You will use this work to better understand how to evaluate and present your artwork and response to critiques. Through these practices, you will gain an understanding of why art is evaluated differently depending on situations and needs.

Objectives:
- Analyze the traits of artwork that communicate effectively
- Apply appropriate criteria to analyze, select, and respond to art
- Critique choices made by artists, designers, and curators when creating or presenting artwork
- Identify reasons why criteria used to evaluate artwork vary

Lesson 1: The Role of Inspiration (two-day lesson)

Objectives:
- Develop criteria that identifies different styles of art
- Develop evaluation criteria for artwork as it applies to a particular style
Lesson 2: Creating a Portfolio

Objectives:
- List the characteristics of your artwork
- Justify decisions made in creating a portfolio of work

Lesson 3: Creativity and Innovation (two-day lesson)

Objectives:
- Interpret artwork based upon your criteria
- Create artwork based upon your criteria
- Justify decisions regarding artistic choices

Lesson 4: Presenting a Collection

Objectives:
- Select a piece of art to represent your skill and style
- Create art based your criteria
- Justify decisions regarding artistic choices

Lesson 5: Responding to Art Review

Objectives:
- Analyze the traits of artwork that communicate effectively
- Apply appropriate criteria to analyze, select, and respond to art
- Critique choices made by artists, designers, and curators when creating or presenting artwork
- Identify reasons why criteria used to evaluate artwork vary
ART 8B
Art 8 B

The middle school art program is organized around the three artistic processes of creating, presenting, and responding. In addition, the program emphasizes how art and design can drive innovation in the same way science, technology, engineering, and mathematics do. Throughout the courses, students use various media and techniques to construct projects, collaborate with peers, and critique their own work as well as the work of other artists.

In Semester B, students consider the preservation and protection of art. They then explore how international, national, and local art influences ideas, actions, cultures, and environments. Using this information, students build their own ideas of the role art plays in their lives.

Unit 1: Course Overview

In this unit, you will receive a basic overview of the key components of Middle School Art and reference information that can be used at any time during the semester. You will learn how to navigate special interactive features and how to be successful in this course.

Lesson 1: Getting Started in Middle School Art

Unit 2: Protecting and Respecting Art

In this unit, you will gain an understanding of and appreciation for the potential benefits and drawbacks of art preservation. Complex science and technology for preservation will be explored. You will analyze cultural messages of artists and understand how art is picked for preservation and display. You will choose between an opinion piece and non-traditional artwork for submission as your portfolio evaluation.

Objectives:
- Analyze art and artifacts that document culture and history
- Explore advanced science behind art preservation
- Explore challenges in preservation of non-traditional art forms
- Understand the factors that determine which art is preserved and exhibited
- Analyze the benefits and drawbacks of art conservation

Lesson 1: External Memory: Art Reveals Culture

Objectives:
- Analyze art and artifacts that document the everyday life of a culture
- Identify and evaluate the cultural messages that artists send through their artwork

Lesson 2: External Memory: Art Reveals Opinions

Objectives:
- Analyze art and artifacts that document the major issues of a time and place
- Identify and evaluate the ways that artists communicate cultural opinions through their artwork

Lesson 3: Advanced Art Preservation (two-day lesson)

Objectives:
- Understand advanced science technology and techniques behind art preservation

Lesson 4: Nontraditional Art Preservation (two-day lesson)

Objectives:
- Analyze preservation methods for nontraditional and contemporary forms of art
- Evaluate examples of nontraditional art including installation and environmental art

Lesson 5: Who Determines the Display?

Objectives:
Lesson 6: The Conservation Conundrum

Objectives:
- Analyze the benefits and drawbacks of art preservation and restoration

Unit 3: The World of Art

During this unit, you will analyze art’s purpose and message during conflict. Discover varied empires, contrasting their styles of architecture and engineering to look for clues about culture and cultural exchange. As you examine technology from the Industrial Revolution to the present, you will analyze its impact on art and art’s reaction to technology. Compare the art of filmmaking to other art forms, and understand the unique ways that movies have reflected and shaped culture.

Objectives:
- Analyze styles and philosophy in architecture and engineering
- Evaluate the impact of technology on the creative process, art, and the spread of art
- Understand the role of art and the way art changes during times of conflict
- Critique works of art using cultural, geographical, and/or historical contexts

Lesson 1: The Art of War

Objectives:
- Interpret the role of art and artists during times of war
- Analyze ways that artists use visual composition to create scenes of conflict

Lesson 2: Engineering Empires (two-day lesson)

Objectives:
- Compare architecture and engineering developments across cultures
- Use inference to learn information about culture and government based on architectural records

Lesson 3: Democratic Architecture

Objectives:
- Analyze the visual and structural similarities between Greek architecture and buildings and sculptures in America
- Identify visual messages communicated by the elements of Greek architecture

Lesson 4: Mass Art: Technology and the Industrial Revolution

Objectives:
- Analyze the impact of technology and the Industrial Revolution on past and present art
- Understand ways that technology has influenced the spread of art and artistic ideas

Lesson 5: Designing a World: Engineering Movies

Objectives:
- Compare the work of a set designer or special effects artist to an architect or city planner
- Identify factors movie artists must consider to create a believable world
- Understand careers of key movie professionals
- Understand ways that culture is revealed in movies

Lesson 6: Machu Picchu to Movies

Objectives:
- Connect artworks with the underlying philosophies they represent
- Compare and contrast architectures across cultures
- Compare and contrast engineering and technological developments across cultures and time
Unit 4: Art in Your Community

During this unit, you will explore art careers in the community, ranging from public space design to art therapy. You will examine ways that artists in communities send messages about culture and value through various artistic media and investigate ways that artists have contributed to their community through creative invention. After analyzing your own personal skills and interests, you will select and practice a career that could impact the arts in your community.

Objectives:
- Examine communities for the messages of culture and value that are sent through landscape art, public spaces, fashion, and inventions
- Understand ways that art can be used to teach and heal humanity
- Analyze your skills and interests in order to pick a career that will affect the arts in your community
- Research, explore, and practice your chosen career and the necessary skills to perform this job

Lesson 1: Revealing Landscapes: Metropolis and Nature (two-day lesson)

Objectives:
- Examine human-made and natural landscapes for clues about our relationship with the natural world
- Identify ways that artists from around the world represent culture and worldviews through landscapes or cityscapes
- Analyze ways that artists use various media and techniques to depict objects in the space of a landscape or cityscape

Lesson 2: The Art of Public Spaces (two-day lesson)

Objectives:
- Explore the purpose, meaning, and uses of public spaces
- Analyze the design and symbolism of public spaces for clues about values and culture

Lesson 3: Wearable Art

Objectives:
- Analyze fashions across time for clues about values and culture
- Outline the tasks of professional fashion artists and the ways they use principles of art and design to create clothing

Lesson 4: The Artist as Inventor

Objectives:
- Compare traits that artists and inventors have in common
- Analyze and explore ways that artists have used their creativity to produce meaningful inventions

Lesson 5: Art to Teach, Art to Heal

Objectives:
- Compare the skills and job responsibilities of art educators and art therapists
- Analyze the unique ways that art educators and art therapists use art to teach and heal in a community

Lesson 6: Multiple Paths to Creativity (two-day lesson)

Objectives:
- Analyze and review different types of outlets for artistic creativity
- Create a portfolio that demonstrates exploration and skill in your preferred method of artistic creativity

Unit 5: Art In Your Life

In this unit, you will examine the artistic and cultural role of textiles, furniture design, and illustration. You will also explore factors that motivate artists to create specific works of art.
Additionally, you will learn about the important place young artists hold in the history of art, and examine the methods, materials, and subjects of these creators. In this unit you will also work on a personal portfolio that describes your preferred artistic methods, materials, inspirations, and subject matter.

Objectives:
- Examine communities for messages of culture and value sent through textiles, furniture design, and illustration
- Analyze the complex nature of artistic inspiration and understand sources of motivation such as life experiences and internal beliefs
- Explore the methods, materials, and subjects of young artists
- Create a personal portfolio that describes your preferred artistic methods, materials, inspirations, and subject matter

Lesson 1: Textile Art: The Fabric of Your Life (two-day lesson)

Objectives:
- Examine the techniques and materials that are used in the creation of textiles
- Analyze textiles to see how artists from various locations use elements of art such as pattern, repetition, form, and balance to send messages about culture and value

Lesson 2: Take a Seat On a Work of Art (two-day lesson)

Objectives:
- Examine furniture from different cultures and time periods for its purpose, design, and materials
- Analyze ways that artists have used balance, repetition, rhythm, color, and form to create unity in furniture design

Lesson 3: The Art of Illustration (two-day lesson)

Objectives:
- Identify the ways that illustration is used to visualize a story or message
- Explore and analyze messages sent through various types of illustration such as books and illuminated manuscripts

Lesson 4: Finding Inspiration: Artistic Motivation

Objectives:
- Identify and analyze motivating factors, inspirations, methods, and materials for young artists
- Create a portfolio of your inspirations, motivations, and preferred methods and materials

Lesson 5: Art of Your Generation (two-day lesson)

Objectives:
- Identify and analyze motivating factors, inspirations, methods, and materials for young artists
- Create a portfolio of your inspirations, motivations, and preferred methods and materials
APPENDIX A
CURRICULUM

A.2 COURSE GUIDES

f. HEALTH AND PHYSICAL EDUCATION
This document is part of Appendix A: Curriculum.

It includes course guides for each Health and Physical Education class for students in Kindergarten through Grade 8.

- Physical Education K
- Physical Education 1
- Physical Education 2
- Physical Education 3
- Physical Education 4
- Physical Education 5
- Health & Physical Education 6
- Health & Physical Education 7
- Health & Physical Education 8

Course guides provide detailed information on the curriculum including course descriptions, unit summaries, lesson objectives, activities, and assessment types. Course guides include information on:

- Planned instruction (provided in the unit summary of each unit within individual Course Guides)
- Course objectives (provided in the unit and lesson objectives within individual Course Guides)
- Activities (provided in the unit summary and lesson objectives of each unit within individual Course Guides)
PHYSICAL EDUCATION K
Physical Education K

In this course, physical education encourages students to develop their fine motor skills, movement, and confidence to enjoy healthy physical activity regularly. A combination of interactive and hands-on activities teaches students essential skills. Students learn how to respect themselves and others while playing.

Unit 1: Physically Active Lifestyle

In this unit, your student will learn to explain the benefits of physical activity and ways to be physically active. Your student will also learn the importance of participating in physical activity outside of school and be able to distinguish and identify physical activities that are enjoyable and those that are not. By the end of the unit, your student will understand the importance of having a physically active lifestyle.

Objectives:
- Investigate the benefits of physical activity
- Engage regularly in moderate physical activities outside PE class
- Explain and participate in physical activities that are enjoyable

Lesson 1: Physical Activities

Objectives:
- Select and demonstrate activities that are classified as physical activity or exercise

Lesson 2: Benefits of Physical Activity

Objectives:
- Recognize that exercise benefits the body and the brain

Lesson 3: Not Being Active

Objectives:
- Identify disadvantages of not being physically active

Lesson 4: Being Active Outside of School

Objectives:
- Engage in at least one physical activity outside of school
- Create a book of physical activities

Lesson 5: Feelings and Physical Activity

Objectives:
- Identify the emotional benefits to your brain from participating in physical activities

Lesson 6: Enjoyable Physical Activities

Objectives:
- Identify one physical activity that is enjoyable and state why it is fun

Unit 2: Introduction to Common Movements

This unit will introduce your student to movement patterns such as throwing, kicking, and catching that are commonly used during physical activities. Your student will also be able to identify directional patterns such as under, over, behind, next to, through, right, left, up, down, forward, backward, and in front of. These patterns are also used in sports and physical activities. Your student will understand the roles and importance of stretching and balancing. At the end of the unit, she will understand how fundamental movement patterns help accomplish physical activities.

Objectives:
- Develop the fundamental movement patterns of throwing, catching, and kicking
- Identify directional patterns used in physical activity
- Distinguish between the different ways you can play with a ball
- Stretch properly and explain the importance of stretching
• Demonstrate balance while bearing weight on various body parts and experiment with moving to a steady beat.

**Lesson 1: Moving Forward, Sideways, and Backward**

Objectives:
- Show how your body can move forward, backward and sideways
- Explain why it is important to understand direction

**Lesson 2: Playing Ball**

Objectives:
- Demonstrate kicking, throwing, catching, and striking a ball
- Describe how different actions used with balls produce various results

**Lesson 3: Stretching**

Objectives:
- Show how your body can stretch, bend, swing, twist
- Explain why it is important to stretch before exercising

**Lesson 4: Determining Direction**

Objectives:
- Distinguish between directional relationships with an object and your body

**Lesson 5: Balancing and Body Parts**

Objectives:
- Demonstrate balancing while bearing weight on both feet, one foot, and on hands and knees

**Lesson 6: Moving to a Rhythm**

Objectives:
- Experiment with clapping, tapping, and moving to a steady beat

**Unit 3: Let’s Move**

This unit will introduce your student to how movements are utilized in various physical activities. Your student will also be introduced to the different parts of the body that are used in physical activities. Your student will be able to distinguish between slow and fast movements and understand the difference between personal and general space. Your student will be able to demonstrate head flexion, extension, and rotation. At the end of the unit, your student will understand how to apply different types of movements to physical activities.

Objectives:
- Differentiate between fundamental movement patterns
- Diagram the different parts of the body that are used in physical activity
- Distinguish between a slow and fast movement when traveling
- Demonstrate movement forms of various body parts
- Determine between general and personal space

**Lesson 1: Bending, Pushing, Pulling, and Squatting**

Objectives:
- Identify and perform squatting, bending, pulling, and pushing
- Describe the difference between squatting, bending, pulling, and pushing

**Lesson 2: Let’s Travel**

Objectives:
- Differentiate between hopping, skipping, jumping, and running
- Perform a hop, skip, jump, and run

**Lesson 3: What Body Parts Can You Name?**

Objectives:
• Label the different parts of the body used in physical activity
• Identify various body parts

Lesson 4: My Space, Our Space

Objectives:
• Determine the difference between personal and general space
• Perform movements using both personal and general space

Lesson 5: Are You Fast or Slow?

Objectives:
• Identify fast and slow movements
• Explain how fast and slow movements look and feel different
• Demonstrate the difference between slow and fast movements while traveling

Lesson 6: Twist and Bend your Body

Objectives:
• Demonstrate head flexion, head extension, and head rotation

Unit 4: Effects of Exercise

In this unit, your student will be able to describe changes that take place in the body during exercise. She will also be able to explain the role of the lungs during exercise. Your student will be able to understand why sleep is important to overall health and why daily physical activity is important. By the end of the unit, your student will be able to describe ways to stay fit and why staying fit is important.

Objectives:
• Discover changes that take place in the body during exercise
• Examine the role of the lungs during exercise and discover what muscles are and their role in fitness
• Discover the importance of a daily physical activity
• Tell why sleep is necessary for the body to function properly
• Recognize appropriate exercises to increase flexibility

Lesson 1: Do You Notice a Change?

Objectives:
• Explain that fast heart rate, sweat, and heavy breathing accompany exercise
• Discuss why your heart rate increases, breathing deepens, and sweating occurs during exercise

Lesson 2: Building Muscle Strength

Objectives:
• Describe muscles
• Demonstrate the ability to lift and support body weight

Lesson 3: The Lungs

Objectives:
• Identify where the lungs are located
• Describe what lungs help you do

Lesson 4: Importance of Sleep

Objectives:
• Explain the importance of rest and sleep for the body

Lesson 5: Flexibility

Objectives:
• Participate in exercises that increase flexibility in the shoulders, legs, and trunk
• Describe and select a stretching activity that provides enjoyment
Lesson 6: Daily Physical Activity

Objectives:
• Identify the benefits that occur when involved in daily physical activity
• Develop and track a physical activity goal

Unit 5: Responsibility, Respect, and Enjoyment

In this unit, your student will be able to understand how to dress for physical activity and why it is important to follow rules. Your student will also learn the basics of water safety, as well as how to use sporting equipment properly. Your student will also learn how to respond to physical activity emergencies during this unit. Your student will be able to describe the positive feelings produced by engaging in physical activity. Your student will understand why it is important to try new physical activities. At the end of the unit, your student will be able to understand how he should interact with others during physical activity and explain the benefits of having personal responsibility and respect for others, as well as understand that physical activity provides enjoyment while interacting with others.

Objectives:
• Explain why it is important to know and follow rules in physical activity
• Explain and summarize how to use equipment and sportswear to play safely and prevent injuries
• Explain appropriate water safety rules and how to react during emergencies
• Explain that physical activity provides the opportunity for positive social interaction
• Describe positive feelings produced while engaging in physical activity and explain why it is important to try new activities

Lesson 1: Importance of Following Rules

Objectives:
• State why it is important to follow rules when participating in physical activity
• Illustrate the importance of following rules and consequences of not following rules

Lesson 2: Dressing for Physical Activity

Objectives:
• Identify appropriate clothing to wear when exercising
• Explain how proper clothing and shoes help prevent injury

Lesson 3: Staying Safe in the Water

Objectives:
• Explain basic water safety rules

Lesson 4: Using Equipment

Objectives:
• Discuss the proper use of sporting equipment

Lesson 5: Emergencies

Objectives:
• Discuss appropriate reactions during emergencies in physical activities

Lesson 6: Working Together

Objectives:
• Explain the benefits of working together in physical activity

Lesson 7: Positive Feelings During Physical Activity

Objectives:
• Identify specific positive feelings associated with participating in physical activity

Lesson 8: Try a New Sport or Activity

Objectives:
• Summarize why it is important to try a new sport or activity
• Explain how physical activity provides the opportunity for social interaction
PHYSICAL EDUCATION 1
Physical Education 1
Course Summary

Welcome to Physical Education 1! Each week, the student will learn a new game or activity. There will be games and activities that may be played inside, while others will be better suited for outdoor play. The games and activities in this course are grouped in thematic units. In each lesson, the student will find a brief description of that week’s game. Each week a new game will be added, but the previous lessons’ games will still be listed for the student to see. In addition to the activities described in the lessons, students will also have the option of participating in yoga or an individual or team sport.

Units
1. Get Up and Move
2. Making Healthy Choices
3. Make Your Own Fun
4. Games from Around the World
5. Show Your Strength

Unit 1: Get Up and Move
Physical Education 1

Unit Summary
In this unit your student will be introduced to the three different Physical Education programs that he will be able to participate in this school year. These programs include Connections Academy Fitness, Personal Fitness, and Yoga.

Your student will have the opportunity to learn how to play various games, continue playing an individual or team sport that he is involved in, or begin practicing yoga. Regardless of the program your student chooses to participate in, he will have the opportunity to be physically active on a daily basis.

Objectives
• Demonstrate the motor skills needed for throwing and catching
• Demonstrate flexibility and balance through movement
• Demonstrate locomotor patterns of jumping

Lessons
1. Introduction to Physical Education 1
2. Ping-Pong Pass
3. Limbo Lights
4. Push-ups
5. Side Straddle Hop
6. Musical Hoops
7. Plyometrics
8. Marsupial Mania

Lesson 1: Introduction to Physical Education 1
Physical Education 1 Unit 1: Get Up and Move

Objective: Learn about the three different options that Connections Academy students have to fulfill their Physical Education requirement

Lesson 2: Ping-Pong Pass
Physical Education 1 Unit 1: Get Up and Move

Objectives: Demonstrate motor skills needed for throwing and catching; Refine hand-eye coordination through process of throwing and catching

Lesson 3: Limbo Lights
Physical Education 1 Unit 1: Get Up and Move

Objectives: Play a limbo game without using a limbo stick; Demonstrate flexibility and balance through movement
Lesson 4: Push-ups
Physical Education 1 Unit 1: Get Up and Move

Objectives: Demonstrate how to do a basic push-up; Demonstrate how to do different variations of push-ups; Identify the different parts of the body that the different push-up variations target

Lesson 5: Side Straddle Hop
Physical Education 1 Unit 1: Get Up and Move

Objective: Demonstrate how to do a side straddle hop or jumping jack

Lesson 6: Musical Hoops
Physical Education 1 Unit 1: Get Up and Move

Objectives: Demonstrate how to correctly use a hula hoop; Use a hula hoop as part of exercises to strengthen the oblique muscles

Lesson 7: Plyometrics
Physical Education 1 Unit 1: Get Up and Move

Objectives: Define plyometrics; Participate in plyometric exercises

Lesson 8: Marsupial Mania
Physical Education 1 Unit 1: Get Up and Move

Objectives: Demonstrate locomotor patterns of jumping; Practice jumping distances
Unit 2: Making Healthy Choices
Physical Education 1

Unit Summary
The unit explains to your student the importance of making healthy choices and the effects that those choices have on her overall health.

Your student will examine the food pyramid and proper nutrition guidelines, so that she will learn how to make appropriate food choices for a regular, healthy lifestyle. Also, the topics of exercise and personal hygiene will be discussed.

Objectives
- Examine the food pyramid and identify the five food groups and which foods belong to which group
- Identify healthy food choices
- Explain benefits of exercise and its importance to overall healthy living
- Discuss the importance of proper personal hygiene and its effect on overall health

Lessons
1. Nutrition: USDA’s MyPlate
2. Nutrition: Choosing Healthy Food
3. Exercise
4. Personal Hygiene

Lesson 1: Nutrition: USDA’s MyPlate
Physical Education 1 Unit 2: Making Healthy Choices

Objectives: Identify the five food groups that make up USDA’s MyPlate; Name specific foods and what food group they belong to

Lesson 2: Nutrition: Choosing Healthy Food
Physical Education 1 Unit 2: Making Healthy Choices

Objectives: Identify foods from the different food groups; Create a menu for a healthy, balanced dinner

Lesson 3: Exercise
Physical Education 1 Unit 2: Making Healthy Choices

Objectives: Define exercise; Explain the benefits of exercise on the heart and lungs; Measure the effects of exercise on the pulse rate
Lesson 4: Personal Hygiene
Physical Education 1 Unit 2: Making Healthy Choices

Objectives: Define personal hygiene and explain why it is important to overall health; Describe the proper hand washing technique

Unit 3: Make Your Own Fun
Physical Education 1

Unit Summary
Your student will have the opportunity to let his creative side shine in this unit. He will not only participate in some fun and exciting activities, he will make the items that are used in each of the games. Once your student has built a kite, a plisbee, and a catcher's cup, it is time to put them to the test and see how much fun he was able to make!

Heads-Up
Students who attend Connections Academy in Florida are required to participate in a program for 150 minutes per week. Students who attend Connections Academy in California are required to participate in 200 minutes of Physical Education every 10 school days, or 100 minutes per week. Students in all other states are required to participate in a program for at least 90 minutes per week.

Objective
- Demonstrate motor and manipulative skills necessary to construct and use various toys

Lessons
1. Make Your Own Kite
2. Make Your Own Plisbee
3. Make Your Own Catcher's Cup

Lesson 1: Make Your Own Kite
Physical Education 1 Unit 3: Make Your Own Fun

Objectives: Construct and fly two kites out of household materials; Demonstrate motor skills needed to fly a kite

Lesson 2: Make Your Own Plisbee
Physical Education 1 Unit 3: Make Your Own Fun

Objectives: Demonstrate manipulative skills used to throw and catch; Improve hand-eye coordination through throwing and catching accurately
**Lesson 3: Make Your Own Catcher's Cup**

Physical Education 1 Unit 3: Make Your Own Fun

**Objective:** Demonstrate accurate hand-eye coordination and spatial relationships to be able to catch a ball on a string

---

**Unit 4: Games from Around the World**

Physical Education 1

**Unit Summary**

In this unit your student will learn about games that children from different cultures, and different parts of the world play. Your student’s journey will take her to Spain, Japan, China, Indonesia, and Australia. She will also learn a game played by Native American children. Your student will uncover that even though the children in these countries are very far away geographically, the styles of games that they play are very close to what your student plays at home.

**Objective**

- Learn how to play games that are played in various countries

**Lessons**

1. Brinca (Spain)
2. Chunky (Native American)
3. Japanese Horseshoes (Japan)
4. Lame Hen (China)
5. Lompat Tali (Indonesia)
6. Down, Down, Down (Australia)

---

**Lesson 1: Brinca (Spain)**

Physical Education 1 Unit 4: Games from Around the World

**Objective:** Demonstrate balance and coordination through a series of hops, steps, and jumps

---

**Lesson 2: Chunky (Native American)**

Physical Education 1 Unit 4: Games from Around the World

**Objectives:** Demonstrate motor skills needed for throwing; Utilize hand-eye coordination and depth perception to participate in an activity from Native American culture

---

**Lesson 3: Japanese Horseshoes (Japan)**

Physical Education 1 Unit 4: Games from Around the World

**Objectives:** Demonstrate accurate throwing techniques to knock over a target; Improve throwing accuracy through practice
Lesson 4: Lame Hen (China)
Physical Education 1 Unit 4: Games from Around the World

Objectives: Demonstrate motor skills needed to hop on one foot; Balance on one leg long enough to pick up items from the ground.

Lesson 5: Lompat Tali (Indonesia)
Physical Education 1 Unit 4: Games from Around the World

Objectives: Demonstrate locomotor skills necessary to jump rope; Participate in fundamental movements such as jumping and hopping.

Lesson 6: Down, Down, Down (Australia)
Physical Education 1 Unit 4: Games from Around the World

Objectives: Demonstrate proficiency in throwing and catching a ball; Utilize depth perception to be able to catch a ball.

Unit 5: Show Your Strength
Physical Education 1

Unit Summary
Throughout this unit your student will demonstrate the motor skills necessary to play various types of games. Some of these games will test his physical strength, while others will test his balance and precision during movement.

Your student will be challenged, both physically and mentally, as participates in challenges that will show his strength!

Objectives
- Demonstrate locomotor skills necessary for jumping and running
- Utilize accurate hand-eye coordination to accurately throw and catch an object
- Demonstrate appropriate balance techniques

Lessons
1. Bowling for Bottles
2. Give Yourself a Hand
3. Soaring Slippers
4. Ping Pong Pockets
5. Sponge Toss
Lesson 1: Bowling for Bottles
Physical Education 1 Unit 5: Show Your Strength

Objective: Demonstrate hand-eye coordination necessary to knock over a target with a ball

Lesson 2: Give Yourself a Hand
Physical Education 1 Unit 5: Show Your Strength

Objectives: Improve balance and coordination; Use motor skills necessary to jump from one space to another

Lesson 3: Soaring Slippers
Physical Education 1 Unit 5: Show Your Strength

Objectives: Demonstrate motor skills needed to throw accurately at a target; Utilize hand-eye coordination necessary for throwing

Lesson 4: Ping Pong Pockets
Physical Education 1 Unit 5: Show Your Strength

Objective: Demonstrate throwing accuracy by hitting a specific target

Lesson 5: Sponge Toss
Physical Education 1 Unit 5: Show Your Strength

Objectives: Demonstrate ability to throw and catch; Be able to throw objects into a specific container
PHYSICAL EDUCATION 2
Physical Education 2
Course Summary

Welcome to Physical Education 2! Each week, the student will learn a new game or activity. There will be games and activities that may be played inside, while others will be better suited for outdoor play. The games and activities in this course are grouped in thematic units. In each lesson, the student will find a brief description of that week’s game. Each week a new game will be added, but the previous lessons’ games will still be listed for the student to see. In addition to the activities described in the lessons, students will also have the option of participating in yoga or an individual or team sport.

Units
1. Get Up and Move
2. Making Healthy Choices
3. Games You Can Make!
4. Games from Around the World
5. How Strong Are You?

Unit 1: Get Up and Move
Physical Education 2

Unit Summary
In this unit, your student will be introduced to the three different Physical Education programs that he will be able to participate in this school year. These programs include Connections Academy Fitness, Personal Fitness, and Yoga.

Your student will have the opportunity to learn how to play various games, continue playing an individual or team sport that he is involved in, or begin practicing yoga. Regardless of the program your student chooses to participate in, he will have the opportunity to be physically active on a daily basis.

Objectives
• Demonstrate the motor skills needed for throwing and catching
• Demonstrate flexibility and balance through movement
• Demonstrate locomotor patterns of jumping

Lessons
1. Introduction to Physical Education 2
2. Space Awareness: Balance
3. Tightrope Walker
4. Body Toss
5. Side Straddle Hop
6. Scarf Juggling
7. Jumping Jacks to the Music
8. Where Are You Going?

Lesson 1: Introduction to Physical Education 2
Objective: Learn about the three different options that Connections Academy students have to fulfill their Physical Education requirement

Lesson 2: Space Awareness: Balance
Objective: Demonstrate an understanding of stationary balance and moving balance

Lesson 3: Tightrope Walker
Objective: Demonstrate how to maintain balance while walking a tightrope

Unit 2: Making Healthy Choices
Physical Education 2

Unit Summary
The unit explains to your student the importance of making healthy choices and the effects that those choices have on her overall health.

Your student will examine USDA’s MyPlate (formerly the food pyramid) and proper nutrition guidelines, so that she will learn how to make appropriate food choices for a regular, healthy lifestyle. Also, the topics of exercise and personal hygiene will be discussed.

Objectives
- Examine USDA’s MyPlate and identify the five food groups and which foods belong to which group
- Identify healthy food choices
- Explain benefits of exercise and its importance to overall healthy living
- Discuss the importance of proper personal hygiene and its effect on overall health

Lessons
1. Nutrition: MyPlate
2. Nutrition: Choosing Healthy Food
3. Exercise
4. Personal Hygiene

Lesson 1: Nutrition: MyPlate
Physical Education 2 Unit 2: Making Healthy Choices

Objectives: Identify the five food groups that make up MyPlate; Name specific foods and what food group they belong to

Lesson 2: Nutrition: Choosing Healthy Food
Physical Education 2 Unit 2: Making Healthy Choices

Objectives: Identify foods from the different food groups; Create a menu for a healthy, balanced dinner

Lesson 3: Exercise
Physical Education 2 Unit 2: Making Healthy Choices

Objectives: Define exercise; Explain the benefits of exercise on the heart and lungs; Measure the effects of exercise on the pulse rate

Materials: Course Materials are not available as of this time as this User has not been assigned to any Courses. Please check back once the User has been placed into a Course.
Lesson 4: Personal Hygiene
Physical Education 2 Unit 2: Making Healthy Choices

Objectives: Define personal hygiene and explain why it is important to overall health; Describe the proper hand washing technique

Unit 3: Games You Can Make!
Physical Education 2

Unit Summary
Your student will have the opportunity to let his creative side shine in this unit. He will not only participate in some fun and exciting activities, but he will also make the items that are used in each of the games. Once your student has built cheerleader pompoms, a pair of stilts, and dancing ribbons, it is time to put them to the test and see how much fun he was able to make!

Objective
• Demonstrate motor and manipulative skills necessary to construct and use various toys

Lessons
1. Make Your Own Cheerleader Pompoms
2. Make Your Own Coffee Can Stilts
3. Make Your Own Swirling Dancing Ribbons
4. Ab Wheelie
5. Don’t Fall in the Lava
6. Beach Ball Lift

Lesson 1: Make Your Own Cheerleader Pompoms
Physical Education 2 Unit 3: Games You Can Make!

Objective: Demonstrate locomotor skills with basic cheerleading moves

Lesson 2: Make Your Own Coffee Can Stilts
Physical Education 2 Unit 3: Games You Can Make!

Objective: Demonstrate gross motor control and balance while walking on tin can stilts

Lesson 3: Make Your Own Swirling Dancing Ribbons
Physical Education 2 Unit 3: Games You Can Make!

Objective: Demonstrate motor control and body awareness with rhythmic gymnastics
Lesson 4: Ab Wheelie  
Physical Education 2 Unit 3: Games You Can Make!  
**Objective:** Demonstrate coordination and core strength

Lesson 5: Don't Fall in the Lava  
Physical Education 2 Unit 3: Games You Can Make!  
**Objective:** Demonstrate locomotor skills and coordination

Lesson 6: Beach Ball Lift  
Physical Education 2 Unit 3: Games You Can Make!  
**Objective:** Demonstrate strength in the legs and abdominal muscles

Unit 4: Games from Around the World  
Physical Education 2  
**Unit Summary**  
In this unit, your student will learn about games that children from different cultures and different parts of the world play. Your student’s journey will take her to Spain, Japan, China, Indonesia, and Australia. She will also learn a game played by Native American children. Your student will discover that even though the children in these countries are very far away geographically, the styles of games that they play are very close to what your student plays at home.  
**Objective**  
- Learn how to play games that are played in various countries  
**Lessons**  
1. Greece: The Snail Game  
2. Romania: Rings Game  
3. Germany: Hit the Pot and Sardines  
4. China: Hopping Chicken and Jump Over the Band  
5. Colombia: Oba  
6. Indonesia: Jumping Rope

Lesson 1: Greece: The Snail Game 🦀  
Physical Education 2 Unit 4: Games from Around the World  
**Objective:** Demonstrate balance and coordination through a series of hops, steps, and jumps
Lesson 2: Romania: Rings Game
Physical Education 2 Unit 4: Games from Around the World

Objective: Demonstrate hand-eye coordination

Lesson 3: Germany: Hit the Pot and Sardines
Physical Education 2 Unit 4: Games from Around the World

Objective: Demonstrate interpersonal cooperation and team spirit

Lesson 4: China: Hopping Chicken and Jump Over the Band
Physical Education 2 Unit 4: Games from Around the World

Objective: Demonstrate locomotor skills and coordination

Lesson 5: Colombia: Oba
Physical Education 2 Unit 4: Games from Around the World

Objective: Demonstrate hand-eye coordination

Lesson 6: Indonesia: Jumping Rope
Physical Education 2 Unit 4: Games from Around the World

Objective: Demonstrate coordination and physical perseverance
Unit 5: How Strong Are You?
Physical Education 2

Unit Summary
Throughout this unit, your student will demonstrate the motor skills necessary to play various types of games. Some of these games will test his physical strength, while others will test his balance and precision during movement.

Your student will be challenged, both physically and mentally, as he participates in challenges that will show his strength!

Objectives
• Demonstrate stamina and endurance through the performance of various exercises
• Demonstrate an understanding of heart healthy activities
• Demonstrate physical stamina by hopping, jumping, and running
• Demonstrate stamina, flexibility, and endurance by moving and dancing to music
• Demonstrate strength and endurance through strength training

Lessons
1. Deck of Cards
2. Jump Start Your Heart
3. Get Around This!
4. Get Up and Dance!
5. Let’s Build Your Muscles!

Lesson 1: Deck of Cards
Physical Education 2 Unit 5: How Strong Are You?

Objective: Demonstrate stamina and endurance through the performance of various exercises

Lesson 2: Jump Start Your Heart
Physical Education 2 Unit 5: How Strong Are You?

Objective: Demonstrate an understanding of heart healthy activities

Lesson 3: Get Around This!
Physical Education 2 Unit 5: How Strong Are You?

Objective: Demonstrate physical stamina by hopping, jumping, and running
Lesson 4: Get Up and Dance!
Physical Education 2 Unit 5: How Strong Are You?

Objective: Demonstrate stamina, flexibility, and endurance by moving and dancing to music

Lesson 5: Let’s Build Your Muscles!
Physical Education 2 Unit 5: How Strong Are You?

Objective: Demonstrate strength and endurance through strength training
PHYSICAL EDUCATION 3
Physical Education 3
Course Summary

Our third grade students are expected to understand and demonstrate clearly-defined combinations of movements. Each week the student will learn one or more new activities. In addition, the student will learn the importance of nutrition as it relates to health and physical fitness. The student will learn life skills throughout the curriculum. In each lesson, the student will find a brief description of that week’s activity. Each week a new activity will be added, but the previous activities can always be reviewed.

Units

1. The Presidential Fitness Challenge: Introduction
2. Moving, Stretching, and Strengthening
3. Developing a Healthy Exercise Routine
4. Your Body and Exercise
5. The Presidential Fitness Challenge
6. Games Around the World

Unit 1: The Presidential Fitness Challenge: Introduction
Physical Education 3

Unit Summary
In this unit, your student will learn about the Presidential Fitness Challenge. The President's Challenge is a program created by the United States government that rewards students for being physically active and fit. Your student will learn about the activities he can participate in, the awards that he can win, and how to keep track of his progress. By the end of this unit, your student will have taken his first step toward earning the Presidential Physical Fitness Award or the Presidential Active Lifestyle Award or he will have qualified for one.

You may choose to participate in either the Active Lifestyle Award program or the Physical Fitness Award program.

Objectives
• Learn about the President’s Challenge physical fitness program
• Learn how to keep track of exercise progress

Lessons
1. About the President’s Challenge
2. Endurance Run/Walk & Shuttle Run
3. Pull-ups or Push-ups
4. V-Sit and Reach

Lesson 1: About the President’s Challenge
Physical Education 3 Unit 1: The Presidential Fitness Challenge: Introduction

Objective: Learn about the Presidential fitness programs

Lesson 2: Endurance Run/Walk & Shuttle Run
Physical Education 3 Unit 1: The Presidential Fitness Challenge: Introduction

Objectives: Learn the proper way to do the endurance run/walk; Learn the proper way to do the shuttle run

Lesson 3: Pull-ups or Push-ups
Physical Education 3 Unit 1: The Presidential Fitness Challenge: Introduction

Objectives: Learn the proper way to do pull-ups; Learn the proper way to do push-ups

Lesson 4: V-Sit and Reach
Physical Education 3 Unit 1: The Presidential Fitness Challenge: Introduction

Objective: Learn the proper way to do the V-sit and reach
Unit 2: Moving, Stretching, and Strengthening
Physical Education 3

Unit Summary
Throughout this unit the student will demonstrate motor skills and knowledge of rules in games. In addition, the student will review how to jump rope, stretch, throw, and catch. Each lesson includes individual and partner activities. These activities may be revised or replaced to meet the needs of the student.

Objectives
- Demonstrate motor skills
- Participate in individual and partner activities

Lessons
1. Jumping and Leaping
2. Move It!
3. Did You Catch That?
4. Which Way Am I Going?
5. I Am Strong and Sturdy
6. Upper Body Strength
7. Twist and Turn
8. Bending and Stretching
9. Jumping Beans
10. Jumping Beans II
11. Lower Body Strength

Lesson 1: Jumping and Leaping 🎉
Physical Education 3 Unit 2: Moving, Stretching, and Strengthening

Objectives: Jump as high as you can; Jump as far as you can; Leap as far as you can

Lesson 2: Move It! 🏃‍♂️
Physical Education 3 Unit 2: Moving, Stretching, and Strengthening

Objectives: Move quickly; Change direction quickly

Lesson 3: Did You Catch That? 🏛️
Physical Education 3 Unit 2: Moving, Stretching, and Strengthening

Objective: Catch a ball using two hands
Lesson 4: Which Way Am I Going?
Physical Education 3 Unit 2: Moving, Stretching, and Strengthening

Objectives: Perform jumps in various directions; Run in various directions

Lesson 5: I Am Strong and Sturdy
Physical Education 3 Unit 2: Moving, Stretching, and Strengthening

Objectives: Balance using four supports; Balance using three supports; Balance using two supports

Lesson 6: Upper Body Strength
Physical Education 3 Unit 2: Moving, Stretching, and Strengthening

Objective: Use upper body strength to perform various activities

Lesson 7: Twist and Turn
Physical Education 3 Unit 2: Moving, Stretching, and Strengthening

Objectives: Perform skills that cross the mid-line of the body; Twist the torso as far as possible

Lesson 8: Bending and Stretching
Physical Education 3 Unit 2: Moving, Stretching, and Strengthening

Objective: Demonstrate ankle, knee, and hip flexibility

Lesson 9: Jumping Beans
Physical Education 3 Unit 2: Moving, Stretching, and Strengthening

Objectives: Jump while keeping your balance; Jump rope several times consecutively

Lesson 10: Jumping Beans II
Physical Education 3 Unit 2: Moving, Stretching, and Strengthening

Objectives: Jump in a diagonal direction with control; Jump as quickly as possible in various directions
Objective: Demonstrate lower body strength

Unit 3: Developing a Healthy Exercise Routine
Physical Education 3

Unit Summary
In this unit your student will learn the four principles of exercise: regularity, overload, specificity, and progression. He will also learn about the four components of an effective exercise routine, which are warm-up, stretching, exercise, and cool-down, and will understand why each one is important. He will then begin the suggested daily exercise activities.

Objectives
• Learn the principles of exercise
• Learn the components of an exercise routine
• Learn how to properly warm-up and cool-down

Lessons
1. A Healthy Exercise Routine
2. Flexibility Training
3. Aerobic Training
4. Strength and Endurance Training

Lesson 1: A Healthy Exercise Routine
Physical Education 3 Unit 3: Developing a Healthy Exercise Routine

Objectives: Learn the principles of exercise; Learn the components of an exercise routine; Learn how to properly warm up and cool down

Lesson 2: Flexibility Training
Physical Education 3 Unit 3: Developing a Healthy Exercise Routine

Objectives: Learn about the importance of flexibility; Incorporate stretching into a daily exercise routine

Lesson 3: Aerobic Training
Physical Education 3 Unit 3: Developing a Healthy Exercise Routine

Objectives: Learn about the importance of aerobic activity; Incorporate aerobic activity into a daily exercise routine
Lesson 4: Strength and Endurance Training
Physical Education 3 Unit 3: Developing a Healthy Exercise Routine

Objectives: Learn the importance of muscular strength; Learn the importance of muscular endurance; Incorporate strength and endurance into a daily exercise routine

Unit 4: Your Body and Exercise
Physical Education 3

Unit Summary
In this unit your student will learn about how different factors affect her body during exercise. The unit explores body type and composition, proper diet and nutrition, the importance of fluids during exercise, how the human body maintains a healthy balance, and how exercise-related injuries can be prevented and cared for.

Objectives
• Learn what body type and body composition are
• Understand the value of eating a healthy diet
• Learn how fluids are important for your body
• Learn about care and prevention of exercise-related injuries

Lessons
1. Body Composition
2. Nutrition and Healthy Eating
3. The Importance of Fluids
4. Injuries

Lesson 1: Body Composition
Physical Education 3 Unit 4: Your Body and Exercise

Objectives: Learn how to calculate Body Mass Index; Learn about different body types

Lesson 2: Nutrition and Healthy Eating
Physical Education 3 Unit 4: Your Body and Exercise

Objectives: Learn about essential nutrients; Learn why eating a healthy diet is important

Lesson 3: The Importance of Fluids
Physical Education 3 Unit 4: Your Body and Exercise

Objectives: Learn why fluids are important during exercise; Learn about homeostasis
Lesson 4: Injuries
Physical Education 3 Unit 4: Your Body and Exercise

Objectives: Learn how to prevent exercise-related injuries; Learn how to care for exercise-related injuries

Unit 5: The Presidential Fitness Challenge
Physical Education 3

Unit Summary
In this unit, your student will participate in the Presidential Fitness Challenge. The President’s Challenge is a program created by the United States government that rewards students for being physically active and fit. Your student will take part in an endurance run/walk, a shuttle run, curl-ups, push-ups, and the v-sit and reach. His best performance in each of these events will be recorded and submitted to his teacher so that he receives the appropriate recognition and award for his achievement.

Objective
- Participate in the Presidential Fitness Challenge

Lessons
1. Endurance Run/Walk and Shuttle Run
2. Pull-ups or Push-ups and Curl-ups
3. V-Sit and Reach

Lesson 1: Endurance Run/Walk and Shuttle Run
Physical Education 3 Unit 5: The Presidential Fitness Challenge

Objectives: Complete the endurance run/walk; Complete the shuttle run

Lesson 2: Pull-ups or Push-ups and Curl-ups
Physical Education 3 Unit 5: The Presidential Fitness Challenge

Objectives: Complete as many pull-ups or push-ups as you can in one minute; Complete as many curl-ups as you can in one minute

Lesson 3: V-Sit and Reach
Physical Education 3 Unit 5: The Presidential Fitness Challenge

Objective: Perform the v-sit and reach exercise
Unit 6: Games Around the World
Physical Education 3

Unit Summary
In this unit your student will learn about games that children play. However, the games that your student will learn are probably not ones that she has played before. Your student is going to take a look at games that children play in different countries around the world. In the first lesson, she will learn games from countries in Asia. Next she will look at games that are played in countries in Europe. The third lesson will concentrate on countries of Africa. Finally, your student will learn some games from Australia.

Objective
• Learn how to play games that are played in other countries

Lessons
1. Asia
2. Europe
3. Africa
4. Australia

Lesson 1: Asia
Physical Education 3 Unit 6: Games Around the World
Objectives: Participate in games played by children in Asia; Demonstrate locomotor skills necessary for running and jumping

Lesson 2: Europe
Physical Education 3 Unit 6: Games Around the World
Objectives: Participate in games that are played by children in Europe; Demonstrate locomotor skills necessary for running and jumping

Lesson 3: Africa
Physical Education 3 Unit 6: Games Around the World
Objectives: Learn about games that are played Africa; Demonstrate locomotor skills necessary for running and jumping

Lesson 4: Australia
Physical Education 3 Unit 6: Games Around the World
Objectives: Learn about games that are played in Australia; Demonstrate locomotor skills necessary to run
PHYSICAL EDUCATION 4
Physical Education 4
Course Summary

At the fourth grade level, student's hand-eye coordination has improved, allowing for advanced instruction in individual and partner activities. Fourth grade students are able to understand rules and the importance of following them. The development of a healthy lifestyle requires that the student acquire knowledge to make positive decisions about exercise, and nutrition. The student's participation and progress will be monitored through the Activity Tracker and periodic performance tests.

The President's Council on Physical Fitness and Sports Tests will be part of his/her curriculum. Depending on the program chosen, the student will have the opportunity to record his results on a periodic basis, and receive the appropriate award depending on the performance level.

Units
1. The Presidential Fitness Challenge: Introduction
2. Learning Locomotor Skills
3. Developing A Healthy Exercise Routine
4. Your Body and Exercise
5. The Presidential Fitness Challenge
6. Games Around The World

Unit 1: The Presidential Fitness Challenge: Introduction
Physical Education 4

Unit Summary

In this unit, your student will learn about The Presidential Fitness Challenge. The President's Challenge is a program created by the United States government that rewards students for being physically active and physically fit. Your student will learn about the events involved, the awards that he can win, and how to keep track of his progress. By the end of this unit, your student will have taken his first step toward earning the Presidential Physical Fitness Award or the Presidential Active Lifestyle Award.

Objectives

- Learn about the Presidential Fitness Challenge programs which include the Presidential Active Lifestyle program and the Presidential Physical Fitness program
- Learn how to keep track of exercise progress

Lessons

1. About the Presidential Fitness Challenge
2. Endurance Run/Walk & Shuttle Run
3. Pull-ups, Push-ups, and Curl-ups
4. V-Sit and Reach

---

Lesson 1: About the Presidential Fitness Challenge
Physical Education 4 Unit 1: The Presidential Fitness Challenge: Introduction

Objective: Learn about the Presidential Fitness Challenge programs, which include the Presidential Active Lifestyle program and the Presidential Physical Fitness program.

---

Lesson 2: Endurance Run/Walk & Shuttle Run
Physical Education 4 Unit 1: The Presidential Fitness Challenge: Introduction

Objectives: Learn the proper way to do the endurance run/walk; Learn the proper way to do the shuttle run; Demonstrate accurate completion of the endurance run/walk; Demonstrate accurate completion of the shuttle run.

---

Lesson 3: Pull-ups, Push-ups, and Curl-ups
Physical Education 4 Unit 1: The Presidential Fitness Challenge: Introduction

Objectives: Learn the proper way to do pull-ups or push-ups; Demonstrate proper technique while doing pull-ups or push-ups; Learn the proper way to do curl-ups or partial curl-ups; Demonstrate proper technique while doing curl-ups or partial curl-ups.
Lesson 4: V-Sit and Reach
Physical Education 4 Unit 1: The Presidential Fitness Challenge: Introduction

Objectives: Learn the proper way to do the V-sit and reach; Demonstrate proper techniques while doing the V-sit and reach

Unit 2: Learning Locomotor Skills
Physical Education 4

Unit Summary

In this unit, your student will demonstrate age-appropriate proficiency in fundamental sports skills: throwing, catching, kicking, running, and jumping.

Your student will learn the eight principal locomotor skills: running, hopping, vertical jumping, horizontal jumping, galloping, sliding, skipping, and leaping. Some of these locomotor skills relate directly to sports skills, while others will assist your student with dance skills and in becoming a more skillful mover. Your student will also begin to participate in daily exercise activities.

Objectives
- Demonstrate eight principle locomotor skills
- Participate in various physical activities

Lessons
1. Jumping and Leaping
2. Move It!
3. Did You Catch That?
4. Which Way Am I Going?
5. I Am Strong and Sturdy
6. Upper Body Strength
7. Twist and Turn
8. Bending and Stretching
9. Jumping Beans
10. Jumping Beans II
11. Lower Body Strength

Lesson 1: Jumping and Leaping
Physical Education 4 Unit 2: Learning Locomotor Skills

Objectives: Demonstrate the locomotor skills necessary to participate in a variety of jumping routines; Learn the fundamentals of jumping and how it can help to improve overall physical fitness

Lesson 2: Move It!
Physical Education 4 Unit 2: Learning Locomotor Skills

Objectives: Demonstrate your speed and quickness through a series of movement drills; Practice the shuttle run, a part of the Presidential Physical Fitness Program
Lesson 3: Did You Catch That?
Physical Education 4 Unit 2: Learning Locomotor Skills

Objectives: Demonstrate locomotor skills necessary to catch a ball; Demonstrate locomotor skills necessary to throw a ball to another person; Improve hand-eye coordination and depth perception by catching a ball thrown by another person.

Lesson 4: Which Way Am I Going?
Physical Education 4 Unit 2: Learning Locomotor Skills

Objectives: Develop an understanding of the physical fitness concept of agility and demonstrate your agility through a series of exercise drills; Demonstrate the locomotor skills necessary to run and stop quickly.

Lesson 5: I Am Strong and Sturdy
Physical Education 4 Unit 2: Learning Locomotor Skills

Objectives: Demonstrate appropriate balancing technique by participating in a series of balancing exercises; Demonstrate upper body strength necessary to complete push-ups.

Lesson 6: Upper Body Strength
Physical Education 4 Unit 2: Learning Locomotor Skills

Objectives: Demonstrate the ability to utilize upper body strength to participate in various exercises; Improve upper body strength by performing exercises that target the upper body muscles.

Lesson 7: Twist and Turn
Physical Education 4 Unit 2: Learning Locomotor Skills

Objectives: Demonstrate flexibility through a series of stretching exercises; Increase flexibility in the upper body and abdomen by performing various twisting exercises.

Lesson 8: Bending and Stretching
Physical Education 4 Unit 2: Learning Locomotor Skills

Objectives: Demonstrate flexibility through a series of stretching exercises; Increase flexibility by performing various stretching exercises.
Lesson 9: Jumping Beans
Physical Education 4 Unit 2: Learning Locomotor Skills

Objectives: Demonstrate the ability to jump while maintaining balance in order to participate in jumping rope; Demonstrate jumping techniques.

Lesson 10: Jumping Beans II
Physical Education 4 Unit 2: Learning Locomotor Skills

Objective: Demonstrate balance and coordination necessary to participate in a variety of jumping routines.

Lesson 11: Lower Body Strength
Physical Education 4 Unit 2: Learning Locomotor Skills

Objectives: Demonstrate lower body strength by participating in a variety of exercises; Improve lower body strength by performing exercises that target those muscles.

Unit 3: Developing A Healthy Exercise Routine
Physical Education 4

Unit Summary

In this unit, your student will learn the four principles of exercise: regularity, overload, specificity, and progression. He will also learn about the four components—warm-up, stretching, exercise, and cool-down—that make up an effective exercise routine. Lastly, he will gain an understanding of why each one is important and then begin the suggested daily exercise activities.

Objectives
- List the principles of exercise
- Demonstrate the components of an exercise routine
- Demonstrate how to properly warm-up and cool-down

Lessons
1. A Healthy Exercise Routine
2. Flexibility Training
3. Aerobic Training
4. Strength and Endurance Training

Lesson 1: A Healthy Exercise Routine
Physical Education 4 Unit 3: Developing A Healthy Exercise Routine

Objectives: Identify the four principles of exercise; Identify the components of an exercise routine; Demonstrate how to properly warm-up and cool-down.
Lesson 2: Flexibility Training
Physical Education 4 Unit 3: Developing A Healthy Exercise Routine

**Objectives:** Learn about the importance of flexibility and its overall health benefits; Demonstrate a variety of stretching techniques in order to improve flexibility; Incorporate stretching into your daily exercise routine.

Lesson 3: Aerobic Training
Physical Education 4 Unit 3: Developing A Healthy Exercise Routine

**Objectives:** Learn the principles and importance of aerobic activity; Demonstrate aerobic activity and incorporate it into a daily exercise routine.

Lesson 4: Strength and Endurance Training
Physical Education 4 Unit 3: Developing A Healthy Exercise Routine

**Objectives:** Learn the importance of muscular strength; Learn the importance of muscular endurance; Incorporate strength and endurance exercises into a daily exercise routine.

Unit 4: Your Body and Exercise
Physical Education 4

**Unit Summary**
In this unit, your student will learn about how different factors affect her body during exercise. The unit explores body type and composition, proper diet and nutrition, the importance of fluids during exercise, how the human body maintains a healthy balance, and how exercise-related injuries can be prevented and cared for.

**Objectives**
- Define body type and body composition
- Understand the value of eating a healthy diet
- Explain the importance of fluids for your body
- Demonstrate appropriate care and prevention of exercise-related injuries

**Lessons**
1. Body Composition
2. Nutrition & Healthy Eating
3. The Importance of Fluids
4. Injuries
Lesson 1: Body Composition
Physical Education 4 Unit 4: Your Body and Exercise

Objectives: Learn about different body types and the characteristics of each; Identify the three components of body composition; Calculate your Body Mass Index using a BMI Calculator

Lesson 2: Nutrition & Healthy Eating
Physical Education 4 Unit 4: Your Body and Exercise

Objectives: Identify the five food groups that make up MyPlate; Explain why eating a healthy diet is important to overall wellness; Name specific foods and what food group they belong to

Lesson 3: The Importance of Fluids
Physical Education 4 Unit 4: Your Body and Exercise

Objectives: Define homeostasis and explain the role it plays in body system regulation; Explain why replacing fluids is important during exercise

Lesson 4: Injuries
Physical Education 4 Unit 4: Your Body and Exercise

Objectives: Learn how to prevent exercise-related injuries; Learn how to care for exercise-related injuries

Unit 5: The Presidential Fitness Challenge
Physical Education 4

Unit Summary
In this unit, your student will participate in The Presidential Physical Fitness Challenge. The President's Challenge is a program created by the United States government that rewards students for being physically active and physically fit. Your student will complete various exercises and submit a record of his performance in these exercises to his teacher for verification and recognition.

Objective
- Participate in The Presidential Physical Fitness Challenge

Lessons
1. Endurance Run/Walk and Shuttle Run
2. Pull-ups or Push-ups and Curl-ups
3. V-Sit and Reach
Lesson 1: Endurance Run/Walk and Shuttle Run
Physical Education 4 Unit 5: The Presidential Fitness Challenge

Objectives: Participate in The Presidential Physical Fitness Challenge; Complete the endurance run/walk; Complete the shuttle run

Lesson 2: Pull-ups or Push-ups and Curl-ups
Physical Education 4 Unit 5: The Presidential Fitness Challenge

Objectives: Participate in The Presidential Physical Fitness Challenge; Complete pull-ups or push-ups; Complete curl-ups

Lesson 3: V-Sit and Reach
Physical Education 4 Unit 5: The Presidential Fitness Challenge

Objectives: Participate in The Presidential Physical Fitness Challenge; Complete the v-sit and reach

Unit 6: Games Around The World
Physical Education 4

Unit Summary
In this unit, your student will learn about games played by children in other countries. She will learn games from countries in Asia in the first lesson. Next she will look at games that are played in countries in Europe. The third lesson will concentrate on games that children play in Australia. Finally, in the fourth lesson your student will focus on games from countries in Africa.

Objectives
• Participate in various games played by children in other countries
• Demonstrate locomotor skills necessary for running and jumping

Lessons
1. Asia
2. Europe
3. Australia
4. Africa

Lesson 1: Asia
Physical Education 4 Unit 6: Games Around The World

Objectives: Participate in games that are played by children in Asia; Demonstrate locomotor skills necessary for running and jumping
Lesson 2: Europe
Physical Education 4 Unit 6: Games Around The World

Objectives: Participate in games that are played by children in Europe; Demonstrate locomotor skills necessary for running and jumping; Demonstrate hand-eye coordination necessary to catch a ball with a cup

Lesson 3: Australia
Physical Education 4 Unit 6: Games Around The World

Objectives: Participate in games that are played by children in Australia; Demonstrate hand-eye coordination necessary to throw and catch a ball; Demonstrate locomotor skills necessary to run

Lesson 4: Africa
Physical Education 4 Unit 6: Games Around The World

Objectives: Participate in games that are played by children in Ghana; Demonstrate locomotor skills necessary for running and jumping
PHYSICAL EDUCATION 5
Physical Education 5  
Course Summary  
At the fifth grade level students understand the concept of fair play and begin to recognize the varying fitness levels within the appropriate age standards. Playing by the rules and respecting self and others are emphasized as students participate in cooperative physical education activities. Students see how levels of physical activity and food intake are related to a healthy productive life-style.

The President's Council on Physical Fitness and Sports Tests will be part of his/her curriculum. Depending on the program chosen, the student will have the opportunity to record his results on a periodic basis, and receive the appropriate award depending on the performance level.

Units
1. The Presidential Fitness Challenge: Introduction
2. Learning Locomotor Skills
3. Developing a Healthy Exercise Routine
4. Your Body and Exercise
5. The Presidential Fitness Challenge
6. Games Around The World

Unit 1: The Presidential Fitness Challenge: Introduction
Physical Education 5

Unit Summary
In this unit, your student will learn about The Presidential Fitness Challenge. The President’s Challenge is a program created by the United States government that rewards students for being physically active and physically fit. Your student will learn about the events involved, the awards that he can win, and how to keep track of his progress. By the end of this unit, your student will have taken his first step toward earning the Presidential Physical Fitness Award or the Presidential Active Lifestyle Award.

Objectives
- Learn about the Presidential Fitness Challenge programs which include the Presidential Active Lifestyle program and the Presidential Physical Fitness program
- Learn how to keep track of exercise progress

Lessons
1. About the Presidential Fitness Challenge
2. Endurance Run/Walk & Shuttle Run
3. Pull-ups, Push-ups, and Curl-ups
4. V-Sit and Reach

Lesson 1: About the Presidential Fitness Challenge
Physical Education 5 Unit 1: The Presidential Fitness Challenge: Introduction

Objective: Learn about the Presidential Fitness Challenge programs, which include the Presidential Active Lifestyle program and the Presidential Physical Fitness program

Lesson 2: Endurance Run/Walk & Shuttle Run
Physical Education 5 Unit 1: The Presidential Fitness Challenge: Introduction

Objectives: Learn the proper way to do the endurance run/walk; Learn the proper way to do the shuttle run; Demonstrate accurate completion of the endurance run/walk; Demonstrate accurate completion of the shuttle run

Lesson 3: Pull-ups, Push-ups, and Curl-ups
Physical Education 5 Unit 1: The Presidential Fitness Challenge: Introduction

Objectives: Learn the proper way to do pull-ups or push-ups; Demonstrate proper technique while doing pull-ups or push-ups; Learn the proper way to do curl-ups or partial curl-ups; Demonstrate proper technique while doing curl-ups or partial curl-ups
Lesson 4: V-Sit and Reach
Physical Education 5 Unit 1: The Presidential Fitness Challenge: Introduction

Objectives: Learn the proper way to do the V-sit and reach; Demonstrate proper techniques while doing the V-sit and reach

Unit 2: Learning Locomotor Skills
Physical Education 5

Unit Summary
In this unit, your student will demonstrate age-appropriate proficiency in fundamental sports skills: throwing, catching, kicking, running, and jumping.

Your student will learn the eight principal locomotor skills: running, hopping, vertical jumping, horizontal jumping, galloping, sliding, skipping, and leaping. Some of these locomotor skills relate directly to sports skills, while others will assist your student with dance skills and in becoming a more skillful mover. Your student will also begin to participate in daily exercise activities.

Objectives
- Demonstrate eight principle locomotor skills
- Participate in various physical activities

Lessons
1. Steal the Ball
2. Marathon Walk/Run
3. Up and Down the Step Aerobics
4. Let’s Get Jumping
5. Let’s Have a Ball
6. Throw and Catch
7. You Can Build a Strong Upper Body
8. Get Flexible
9. Strong Legs Will Take You Far
10. Core Strength: Twisting and Turning
11. Fitness Around the House

Lesson 1: Steal the Ball
Physical Education 5 Unit 2: Learning Locomotor Skills

Objective: Develop locomotor skills of running, and dribbling a ball with your feet

Lesson 2: Marathon Walk/Run
Physical Education 5 Unit 2: Learning Locomotor Skills

Objective: Develop the locomotor skills of walking and running
Lesson 3: Up and Down the Step Aerobics
Physical Education 5 Unit 2: Learning Locomotor Skills

Objective: Develop and demonstrate coordination

Lesson 4: Let's Get Jumping
Physical Education 5 Unit 2: Learning Locomotor Skills

Objective: Develop and demonstrate the locomotor skill of jumping

Lesson 5: Let's Have a Ball
Physical Education 5 Unit 2: Learning Locomotor Skills

Objectives: Develop the locomotor skills of throwing and catching a ball; Develop eye-hand coordination skills

Lesson 6: Throw and Catch
Physical Education 5 Unit 2: Learning Locomotor Skills

Objective: Develop accurate throwing, catching, visual tracking, and dexterity

Lesson 7: You Can Build a Strong Upper Body
Physical Education 5 Unit 2: Learning Locomotor Skills

Objective: Develop knowledge of exercises that strengthen the upper body

Lesson 8: Get Flexible
Physical Education 5 Unit 2: Learning Locomotor Skills

Objective: Develop flexibility by performing bending and stretching exercises

Lesson 9: Strong Legs Will Take You Far
Physical Education 5 Unit 2: Learning Locomotor Skills

Objective: Develop strength in the lower body through interval training
Lesson 10: Core Strength: Twisting and Turning
Physical Education 5 Unit 2: Learning Locomotor Skills

Objective: Develop core strength through the use of twisting and turning skills

Lesson 11: Fitness Around the House
Physical Education 5 Unit 2: Learning Locomotor Skills

Objective: Develop fitness skills by performing exercises that address different components of fitness

Unit 3: Developing a Healthy Exercise Routine
Physical Education 5

Unit Summary
In this unit, your student will learn the four principles of exercise: regularity, overload, specificity, and progression. He will also learn about the four components—warm-up, stretching, exercise, and cool-down—that make up an effective exercise routine. Lastly, he will gain an understanding of why each one is important and then begin the suggested daily exercise activities.

Objectives
- Demonstrate an understanding of the importance of flexibility and its overall health benefits
- Demonstrate a variety of stretching techniques
- Incorporate stretching into a daily exercise routine

Lessons
1. A Healthy Exercise Routine
2. Flexibility Training
3. Aerobic Training
4. Training for Strength and Endurance

Lesson 1: A Healthy Exercise Routine
Physical Education 5 Unit 3: Developing a Healthy Exercise Routine

Objectives: Identify the four principles of exercise; Identify the components of an exercise routine; Demonstrate how to properly warm up and cool down

Lesson 2: Flexibility Training
Physical Education 5 Unit 3: Developing a Healthy Exercise Routine

Objectives: Demonstrate an understanding of the importance of flexibility and its overall health benefits; Demonstrate a variety of stretching techniques in order to improve flexibility; Incorporate stretching into your daily exercise routine
Lesson 3: Aerobic Training
Physical Education 5 Unit 3: Developing a Healthy Exercise Routine

Objectives: Demonstrate an understanding of the importance of aerobic activity; Demonstrate an understanding of aerobic activities and include them in a daily exercise routine.

Lesson 4: Training for Strength and Endurance
Physical Education 5 Unit 3: Developing a Healthy Exercise Routine

Objectives: Demonstrate an understanding of the importance of muscular strength; Demonstrate an understanding of the importance of muscular endurance; Incorporate strength and endurance exercises into a daily exercise routine.

Unit 4: Your Body and Exercise
Physical Education 5

Unit Summary

In this unit, your student will learn about how different factors affect her body during exercise. The unit explores body type and composition, proper diet and nutrition, the importance of fluids during exercise, how the human body maintains a healthy balance, and how exercise-related injuries can be prevented and cared for.

Objectives

- Define body type and body composition
- Understand the value of eating a healthy diet
- Explain the importance of fluids for your body
- Demonstrate appropriate care and prevention of exercise-related injuries

Lessons

1. Body Composition
2. Nutrition & Healthy Eating
3. The Importance of Fluids
4. Injuries

Lesson 1: Body Composition
Physical Education 5 Unit 4: Your Body and Exercise

Objectives: Learn about different body types and the characteristics of each; Identify the three components of body composition; Calculate your Body Mass Index using a BMI Calculator.
Lesson 2: Nutrition & Healthy Eating
Physical Education 5 Unit 4: Your Body and Exercise

Objectives: Identify the five food groups that make up MyPlate; Explain why eating a healthy diet is important to overall wellness; Name specific foods and what food group they belong to

Lesson 3: The Importance of Fluids
Physical Education 5 Unit 4: Your Body and Exercise

Objectives: Define homeostasis and explain the role it plays in body system regulation; Explain why replacing fluids is important during exercise

Lesson 4: Injuries
Physical Education 5 Unit 4: Your Body and Exercise

Objectives: Learn how to prevent exercise-related injuries; Learn how to care for exercise-related injuries

Unit 5: The Presidential Fitness Challenge
Physical Education 5

Unit Summary
In this unit, your student will participate in The Presidential Physical Fitness Challenge. The President's Challenge is a program created by the United States government that rewards students for being physically active and physically fit. Your student will complete various exercises and submit a record of his performance in these exercises to his teacher for verification and recognition.

Objective
• Participate in The Presidential Physical Fitness Challenge

Lessons
1. Endurance Run/Walk and Shuttle Run
2. Pull-ups or Push-ups and Curl-ups
3. V-Sit and Reach

Lesson 1: Endurance Run/Walk and Shuttle Run
Physical Education 5 Unit 5: The Presidential Fitness Challenge

Objectives: Participate in The Presidential Physical Fitness Challenge; Complete the endurance run/walk; Complete the shuttle run
Lesson 2: Pull-ups or Push-ups and Curl-ups
Physical Education 5 Unit 5: The Presidential Fitness Challenge

Objectives: Participate in The Presidential Physical Fitness Challenge; Complete pull-ups or push-ups; Complete curl-ups

Lesson 3: V-Sit and Reach
Physical Education 5 Unit 5: The Presidential Fitness Challenge

Objectives: Participate in The Presidential Physical Fitness Challenge; Complete the v-sit and reach

Unit 6: Games Around The World
Physical Education 5

Unit Summary

In this unit, your student will learn about games played by children in other countries. She will learn games from countries in Asia in the first lesson. Next she will look at games that are played in countries in Europe. The third lesson will concentrate on games that children play in Australia. Finally, in the fourth lesson your student will focus on games from countries in Africa.

Objectives

• Participate in various games played by children in other countries
• Demonstrate locomotor skills necessary for running and jumping

Lessons

1. Asia
2. Europe
3. Australia
4. Africa

Lesson 1: Asia
Physical Education 5 Unit 6: Games Around The World

Objectives: Participate in games that are played by children in Asia; Demonstrate locomotor skills necessary for running and jumping

Lesson 2: Europe
Physical Education 5 Unit 6: Games Around The World

Objectives: Participate in games that are played by children in Europe; Demonstrate locomotor skills necessary for running and jumping; Demonstrate hand-eye coordination necessary to catch a ball with a cup
Lesson 3: Australia
Physical Education 5 Unit 6: Games Around The World

Objectives: Participate in games that are played by children in Australia; Demonstrate hand-eye coordination necessary to throw and catch a ball; Demonstrate locomotor skills necessary to run.

Lesson 4: Africa
Physical Education 5 Unit 6: Games Around The World

Objectives: Participate in games that are played by children in Ghana; Demonstrate locomotor skills necessary for running and jumping.
HEALTH &
PHYSICAL EDUCATION 6
Health and Physical Education 6

The Health and Physical Education course will provide the student with the foundation for concepts and skills necessary for lifelong health and physical fitness. In the health portion of the course, the student will be introduced to and assessed on various topics ranging from body systems to proper nutrition and fitness, as well as understanding what it means to be healthy. The student will also be introduced to skills that can be applied toward healthy behaviors. The physical education portion of the course will offer great freedom as the student will be able to choose a physical education regimen that will fit the student’s individual needs. The student will be given a choice of three paths that place emphasis on lifelong activities as well as current fitness trends. Physical education lessons are geared toward a “physically fit” lifestyle that will aid the student in the years to come and ensure a higher quality of life.

Unit 1: Your Health and Wellness

In this unit, you will learn about the health triangle and find out about the difference between health and wellness. You will also identify the factors that influence health, skills that will help you stay healthy, and the importance of goals.

In the Physical Education portion of the lesson, depending on your plan for this course, you will be able to choose one of the following physical activities: Connections Academy Fitness, Vinyasa Yoga, or Personal Fitness. After completing your physical activity each day, you will update Activity Tracker or your PE Log. At the end of the unit, you will submit your tracked activities using the Drop Box in the last lesson.

Objectives:
• Identify the three parts of the health triangle and the factors and behaviors that influence your health
• Explain the relationship between health and wellness and how to balance your physical, mental, and social health
• Identify skills that can help you maintain your health and describe how your attitude can affect your health
• Explain how to set goals and why having goals are important

Lesson 1: Overall Health

Objectives:
• Identify the three parts of the health triangle
• Describe the relationship between overall health and wellness
• Explain the importance of maintaining balance among your physical, mental/emotional, and social health

Lesson 2: Factors Affecting Your Health

Objectives:
• Identify factors that affect your health
• Explain how your behavior and choices play a role in your health
• Describe how your health is affected by your behavior

Lesson 3: Your Health Is Your Responsibility

Objectives:
• Identify skills that help you maintain a healthy life
• Explain the importance of healthy life skills

Lesson 4: Responsible Decision Making

Objectives:
• Identify the steps involved in making responsible decisions
• Explain the importance of values when making decisions
• Practice good decision-making skills

Lesson 5: Create Your Health Goals

Objectives:
• Explain the importance of having goals
• Describe the steps of setting goals

© 2014 Connections Education LLC. All rights reserved.
• Develop a plan to achieve your goals

**Unit 2: Your Character Counts**

In this unit, you will learn about self-concept, the characteristics of a good self-concept, and ways to show your good character. You will also find out about stress and how to manage it to stay healthy. At the end of the unit, you will explore emotional problems, the warning signs of suicide, and how to find help for emotional problems.

In the Physical Education portion of the lesson, depending on your plan for this course, you will be able to choose one of the following physical activities: Connections Academy Fitness, Vinyasa Yoga, or Personal Fitness. After completing your physical activity each day, you will update Activity Tracker or your PE Log. At the end of the unit, you will submit your tracked activities using the Drop box in the last lesson.

Objectives:
- Identify things that can influence your self-concept
- Explain how to develop good character
- Describe how to express strong feelings in a healthy way
- List ways to manage stress
- Describe the types of emotional problems

**Lesson 1: A Healthy Self-Concept**

Objectives:
- Describe your self-concept
- Identify what influences your self-concept
- Explain how you can build a healthy self-concept

**Lesson 2: Your Character Counts**

Objectives:
- Identify good character traits
- Explain how character is developed
- Describe what defines good character

**Lesson 3: Expressing Emotions**

Objectives:
- Explain what causes emotions
- Express strong feelings in a healthy way
- Discuss the importance of teen abstinence

**Lesson 4: Stress is All around Us**

Objectives:
- Explain what stress is
- Describe how stress affects the body
- List strategies for managing stress

**Lesson 5: Emotional Problems**

Objectives:
- Describe the different types of emotional problems
- Recognize key warning signs of suicide
- Identify resources for help with emotional problems

**Unit 3: Healthy Relationships**

In this unit, you will learn about different ways to communicate and how to be a better speaker. You will describe different types of families, the ways families care for each other, and how to handle family problems. Then you will explore the qualities of good friends and how to identify good character traits in your friends. At the end of the unit, you will discover the reason for conflicts and how to protect yourself from violence.

In the Physical Education portion of the lesson, depending on your plan for this course, you will be able to choose one of the following physical activities: Connections Academy Fitness, Vinyasa Yoga, or Personal Fitness. After completing your physical activity each day, you will update Activity Tracker or your PE Log. At the end of the unit, you will submit your tracked activities using the Drop box in the last lesson.
Objectives:
- Identify the different communication styles to learn how to become a better communicator
- Describe the different types of family units, family roles within a unit, and how they care for each other
- Learn how to identify quality character traits in friends
- Understand the different kinds of peer pressure and how to resist them
- Explain why conflicts occur and the strategies to use to resolve them

Lesson 1: Communication Skills

Objectives:
- Explain the various ways people communicate
- Describe how to become a better speaker and listener
- Identify the three communication styles

Lesson 2: Your Family

Objectives:
- Recognize various types of family structures
- Identify your family role
- Explain how members of a family care for each other

Lesson 3: Friends and Peers

Objectives:
- Identify the qualities a good friend should have
- Recognize the character traits of friends
- Compare and contrast the two different types of peer pressure

Lesson 4: How to Use Refusal Skills

Objectives:
- Identify how to resist peer pressure using refusal skills
- Demonstrate negative peer pressure refusal skills

Lesson 5: Resolving Conflicts

Objectives:
- Explain the reason for conflicts
- Describe methods of protecting yourself from violence
- Discuss negotiation strategies for resolving conflicts

Unit 4: Nutrition

In this unit, you will learn the six main classes of nutrients, which foods can be eaten to obtain nutrients, and which kinds of foods will keep you healthy according to the USDA food guidance system. You will find out how to choose healthy foods and analyze the key nutrients in a food product.

In the Physical Education portion of the lesson, depending on your plan for this course, you will be able to choose one of the following physical activities: Connections Academy Fitness, Vinyasa Yoga, or Personal Fitness. After completing your physical activity each day, you will update Activity Tracker or your PE Log. At the end of the unit, you will submit your tracked activities using the Drop box in the last lesson.

Objectives:
- Identify the main nutrient groups and determine the proper foods that will provide you with these nutrients
- Identify the five food groups and demonstrate how to use MyPlate to plan nutrient-rich meals
- Recognize what influences your food choices and identify ways to maintain a healthy weight

Lesson 1: Nutrients Your Body Needs

Objectives:
- Identify the six main nutrient groups
- Determine the proper foods you can eat to obtain nutrients
• Analyze a recipe for key nutrients

Lesson 2: Guidelines for Eating Healthy

Objectives:
• Identify the five food groups
• Discuss the proper use of the MyPlate food guidance system
• Demonstrate how to use the MyPlate to plan a nutrient-rich meal

Lesson 3: Healthy Choices

Objectives:
• Recognize what influences your food choices
• Interpret guidelines for choosing healthy foods
• Explain how healthy weight is maintained
• Examine the various eating behavior problems

Unit 5: Personal Health

In this unit, you will learn about personal hygiene, including taking care of your teeth, hair, and skin. You will discover ways to care for your ears and eyes. You will also learn about consumer products and the influences of advertising. Toward the end of the unit, you will find out about health care in your community.

In the Physical Education portion of the lesson, depending on your plan for this course, you will be able to choose one of the following physical activities: Connections Academy Fitness, Vinyasa Yoga, or Personal Fitness. After completing your physical activity each day, you will update Activity Tracker or your PE Log. At the end of the unit, you will submit your tracked activities using the Drop box in the last lesson.

Objectives:
• Demonstrate routine care of your body to maintain health
• Discuss how to properly use the media to make healthy consumer choices
• Explain how communities affect your health

Lesson 1: Your Teeth, Skin, and Hair

Objectives:
• Demonstrate how to keep your teeth and gums healthy
• Discuss examples of how to take care of your skin
• Describe the proper care for hair and nails

Lesson 2: Protecting Your Eyes and Ears

Objectives:
• Outline proper care for your eyes and ears
• Demonstrate how to protect your hearing

Lesson 3: Choosing Health Products

Objectives:
• Explain influences on your consuming choices
• Demonstrate how to wisely choose health products
• Evaluate how consumer choices are influenced by the media

Lesson 4: Using Medicines Responsibly

Objectives:
• Explain the benefits of medicine
• Interpret medicine label information

Lesson 5: Health Care in Your Community

Objectives:
• Distinguish between the different types of health care providers
• Outline the importance of regular health checkups

Lesson 6: First Aid for Emergencies

Objectives:
• Explain strategies for responding to injuries
• Outline the steps to help someone who is bleeding
• Demonstrate the universal sign for choking
• Describe how to help a burn victim

Unit 6: Human Body Systems

In this unit, you will identify the body's building blocks, the major body systems, and ways to care for your body. You will look at the body systems, including the skeletal system and the muscular system, and find out how they work. You will also look at the digestive system and respiratory system and what they do to influence your health.

In the Physical Education portion of the lesson, depending on your plan for this course, you will be able to choose one of the following physical activities: Connections Academy Fitness, Vinyasa Yoga, or Personal Fitness. After completing your physical activity each day, you will update Activity Tracker or your PE Log. At the end of the unit, you will submit your tracked activities using the Drop box in the last lesson.

Objectives:
• Explain the parts and functions of the major body systems
• Summarize how the body changes over time

Lesson 1: Your Cells and Systems

Objectives:
• Connect the body’s building blocks
• Classify the major body systems and describe their functions

Lesson 2: Bones and Muscles Working Together

Objectives:
• Classify the parts and functions of the skeletal system
• Examine the parts and functions of the muscular system
• Discover ways to protect the bones and muscles

Lesson 3: The Digestion and Elimination Cycle

Objectives:
• Relate the parts and functions of the digestive system
• Relate the parts and functions of the excretory system
• Summarize ways to care for the digestive and excretory systems

Lesson 4: Heart, Lungs, and Nerves Working Together

Objectives:
• Describe how blood circulates through the body
• Investigate how your nervous system controls body functions
• Examine environmental factors that influence respiratory health

Unit 7: Tobacco

In this unit, you will learn about tobacco and the dangerous effects it has on the body. You will understand the influences on teens to try tobacco and how to gather reliable information on teens and tobacco use. In the last lesson of this unit, you will learn about ways to say no to tobacco, how to quit smoking if you are addicted, and the rights of nonsmokers.

In the Physical Education portion of the lesson, depending on your plan for this course, you will be able to choose one of the following physical activities: Connections Academy Fitness, Vinyasa Yoga, or Personal Fitness. After completing your physical activity each day, you will update Activity Tracker or your PE Log. At the end of the unit, you will submit your tracked activities using the Drop box in the last lesson.

Objectives:
• Give examples of how tobacco harms your body
• Identify influences that encourage tobacco use in teens
• Practice strategies of refusing tobacco

Lesson 1: The Dangers of Tobacco

Objectives:
• Outline how tobacco damages your health
• Illustrate how tobacco leads to addiction

**Lesson 2: Teen Tobacco Use**

Objectives:
• Describe influences that contribute to teens trying tobacco
• Connect negative influences to teen tobacco use

**Lesson 3: Free From Tobacco**

Objectives:
• Simulate how to say no to tobacco
• Outline methods of giving up tobacco use

**Unit 8: Using Alcohol and Other Drugs**

In this unit, you will learn about alcohol and drugs. You will learn about why teens use alcohol and ways to help a friend avoid alcohol. You will learn the cycle of addiction, the dangers of drug use, and ways to say no to drugs.

In the Physical Education portion of the lesson, depending on your plan for this course, you will be able to choose one of the following physical activities: Connections Academy Fitness, Vinyasa Yoga, or Personal Fitness. After completing your physical activity each day, you will update Activity Tracker or your PE Log. At the end of the unit, you will submit your tracked activities using the Drop box in the last lesson.

Objectives:
• Investigate the effects of teen use of alcohol
• Construct strategies for fighting teen addictions
• Highlight the dangers of illegal drug use

**Lesson 1: Alcohol: Dangerous Drinking**

Objectives:
• Relate how alcohol affects the body and the mind
• Investigate why some teens use alcohol

**Lesson 2: The Dangers of Alcohol Use**

Objectives:
• Investigate the alcohol cycle of addiction
• Establish the health risks of drinking during pregnancy
• Outline alcohol-free strategies to reduce stress

**Lesson 3: The Look of Illegal Drug Use**

Objectives:
• Recognize the dangers of illegal drugs
• Compare marijuana and inhalant risks
• Classify the harmful effects of drug abuse
• Correlate recovery and withdrawal
• Summarize treatments for drug addicts
HEALTH & PHYSICAL EDUCATION 7
Health and Physical Education 7

The Health and Physical Education course will guide the student through material that will promote healthy, active lifestyles. Health topics include issues that are relevant to the age group, such as mental and emotional health, conflict resolution, and bullying. The student will also be immersed in the prevention and avoidance of drugs, alcohol, and tobacco. The student will receive the necessary strategies to help avoid the pitfalls of unhealthy and risky behaviors. The physical education portion of the course will offer great freedom as the student will be able to choose a physical education regimen that will fit the student’s individual needs. The student will be given a choice of three paths that place emphasis on lifelong activities as well as current fitness trends. Physical education lessons are geared toward a “physically fit” lifestyle that will aid the student in the years to come and ensure a higher quality of life.

Unit 1: Understanding Health and Wellness

In this unit, you will learn about the health triangle, and you will find out how to differentiate between overall health and wellness. You will also identify the factors that influence health and the basic but important skills that help you stay healthy.

In the Physical Education portion of the lesson, you will learn about the President's Challenge. The President’s Challenge is a program created by the U.S. government that rewards students for being physically active and physically fit. You will learn about the history and guidelines of the Active Lifestyle Program, why staying active is important, and how to set activity goals and log results. By the end of this unit, you will have taken your first steps toward earning the Presidential Active Lifestyle Award.

Objectives:
- Identify the parts of the health triangle and how the mind and body are connected
- Explain the difference between overall health and wellness and identify the ten basic skills that you need for maintaining good health
- Explain how your environment and risky behavior can affect your total health

Lesson 1: Overall Health

Objectives:
- Identify the three different aspects of health
- Determine the link between health and wellness
- Describe how the body and mind are connected

Lesson 2: Taking Responsibility for Your Health

Objectives:
- List and explain the three steps necessary for achieving health goals
- Identify the seven health skills needed to ensure a healthy you

Lesson 3: Factors That Affect Your Health

Objectives:
- Explain why heredity is a health factor you cannot control
- Describe two types of environmental health factors and explain the role each plays in your total health

Lesson 4: Understanding Health Risks

Objectives:
- Identify health risks
- Describe health consequences of risks and risky behavior
- Describe strategies you can use to evaluate health risks

Unit 2: Food and Nutrition

In this unit, you will learn about food and nutrition. You will learn about the nutrients required by the body to function properly, how to use the MyPlate plan to recognize different groups of foods, and how to choose foods for a healthy, balanced diet. Additionally, you will...
explore the concepts of body image and healthy weight and learn the benefits of maintaining a healthy weight.

In the Physical Education portion of the lesson, depending on your plan for this course, you will be able to choose one of the following physical activities: Connections Academy Fitness, Vinyasa Yoga, or Personal Fitness. After completing your physical activity each day, you will update Activity Tracker or your PE Log. At the end of the unit, you will submit your tracked activities using the Drop box in the last lesson.

Objectives:
- Identify the classes of nutrients that supply the body with energy: carbohydrates, proteins, and fats
- Identify foods that are healthy sources of carbohydrates, proteins, and fats
- Understand the current guidelines for healthful eating
- Describe the process of digestion and excretion
- Recognize the importance of maintaining a healthy weight and body image

Lesson 1: Nutrients

Objectives:
- Define “nutrient” and identify the three classes of nutrients that supply your body with energy
- Describe how your body gets energy from the food you eat
- Describe the role of carbohydrates, proteins, and fats as nutrients
- Recognize sources of carbohydrates, proteins, and fats in your diet
- Learn how to select foods to create a healthy, balanced diet

Lesson 2: Choosing Food Wisely

Objectives:
- Identify three main reasons why you eat
- Describe the different influences on choices of food
- Evaluate food choices using food labels
- Identify healthy food choices using the MyPlate plan

Lesson 3: Planning Healthy Meals

Objectives:
- Explain how dietary guidelines can help you plan a healthy diet
- Utilize the MyPlate plan and Dietary Guidelines for Americans to plan healthy meals

Lesson 4: Digestion and Excretion

Objectives:
- Identify the three main functions of the digestive system
- Describe the process of digestion
- Identify digestive organs and their functions
- Describe how your body eliminates waste products

Lesson 5: Healthy Body Image

Objectives:
- Examine how heredity, activity level, and body composition affect your weight
- Explain what body mass index (BMI) is
- Describe the benefits of having a positive body image

Lesson 6: Maintaining a Healthy Weight

Objectives:
- State the benefits of maintaining a healthy weight
- Identify health problems related to being overweight and underweight
- Identify three common eating disorders
- Explain the dangers of eating disorders

Unit 3: Mental and Emotional Health
In this unit, you will learn about personality, self-esteem, and emotions and how they affect your mental and emotional health. You will learn about the different types of stress and how stress affects your body. You will also learn different ways to manage or cope with stress. Finally, you will learn about mental and emotional disorders. You will learn to recognize signs of these disorders and understand causes of mental disorders.

In the Physical Education portion of the lesson, depending on your plan for this course, you will be able to choose one of the following physical activities: Connections Academy Fitness, Vinyasa Yoga, or Personal Fitness. After completing your physical activity each day, you will update Activity Tracker or your PE Log. At the end of the unit, you will submit your tracked activities using the Drop box in the last lesson.

Objectives:
- Explain what personality, self-esteem, and emotions are and the role they play in your mental and emotional health
- Define stress and identify types of stress in your life
- Describe the body’s reaction to stress and identify ways to manage stress
- Identify mental disorders and recognize the warning signs of serious mental disorders
- Identify some causes of mental disorders

Lesson 1: Personality

Objectives:
- Identify the five traits that define personality
- Identify factors that affect how your personality develops
- Describe the stages of personality development

Lesson 2: Self-Esteem

Objectives:
- Define self-esteem and compare the effects of high and low self-esteem on your health
- Explain how self-esteem develops and changes as you grow
- Identify ways to improve self-esteem
- Summarize how to achieve your potential through the hierarchy of needs
- Identify the qualities of a self-actualized person

Lesson 3: Emotions

Objectives:
- Differentiate between primary and learned emotions
- Understand the importance of being aware of your emotions
- Identify ways to cope with difficult emotions

Lesson 4: Stress

Objectives:
- Define stress and identify sources of stress
- Describe the body’s reaction to stress
- Identify effective strategies to manage stress

Lesson 5: Mental Disorders

Objectives:
- Recognize symptoms of mental disorders
- Identify causes of mental disorders
- Identify different types of mental disorders

Unit 4: Resolving Conflicts and Preventing Violence

In this unit you will learn about the nature, causes, types, and signs of conflict. You will learn about negotiation and mediation, conflict resolution strategies, and how conflict can lead to violence. You will have the opportunity to develop skills to protect against violence. At the end of the unit you will explore different kinds of abuse and ways of seeking help if you are being abused.

In the Physical Education portion of the lesson, depending on your plan for this course, you will be able to choose one of the following physical activities: Connections Academy Fitness, Vinyasa Yoga, or Personal Fitness. After completing your physical activity each day, you will
update Activity Tracker or your PE Log. At the end of the unit, you will submit your tracked activities using the Drop box in the last lesson.

Objectives:
- Identify causes of conflict and describe different types of conflict
- Recognize signs of conflict and identify how conflict can lead to violence
- Demonstrate conflict resolution skills
- Identify causes of violence and develop skills to protect against violence
- Define abuse and identify warning signs of abuse

Lesson 1: Conflict

Objectives:
- Define and explain the nature of conflict
- Identify causes of conflict
- Recognize the signs of conflict
- Describe different types of conflict

Lesson 2: Conflict Resolution

Objectives:
- Identify characteristics of healthy relationships
- Describe skills for resolving conflict
- Practice conflict resolution

Lesson 3: Violence

Objectives:
- Define violence and identify types of violence
- Identify causes and risk factors of violence
- Describe the cycle of violence in dating relationships
- Identify characteristics of gangs

Lesson 4: Abuse

Objectives:
- Define abuse
- Describe different types of abuse
- Recognize signs of abuse
- Recognize that abuse is never the fault of the victim

Unit 5: Tobacco

In this unit you will learn about tobacco—the chemicals it contains and the dangerous effects it has on your body. You will learn how the respiratory system functions and how smoking can damage your respiratory system. You will also learn ways to say no to tobacco, quit smoking if you are addicted, and about the rights of nonsmokers.

In the Physical Education portion of the lesson, depending on your plan for this course, you will be able to choose one of the following physical activities: Connections Academy Fitness, Vinyasa Yoga, or Personal Fitness. After completing your physical activity each day, you will update Activity Tracker or your PE Log. At the end of the unit, you will submit your tracked activities using the Drop box in the last lesson.

Objectives:
- Identify the harmful ingredients in tobacco and explain how tobacco affects the body
- Give reasons why teens use tobacco and describe nicotine addiction
- List reasons why it is good to be tobacco free and learn skills to avoid tobacco
- Identify organs of the respiratory system and list the functions of the respiratory system
- Explain how to keep your respiratory system healthy

Lesson 1: Chemicals in Tobacco Products

Objectives:
- Identify dangerous substances in tobacco products
- Explain how nicotine affects the body
- Describe nicotine addiction
Lesson 2: The Respiratory System

Objectives:
- Explain the function of the respiratory system
- Describe the breathing process
- Trace the path of air through the respiratory system
- Identify problems of the respiratory system and ways to keep it healthy

Lesson 3: Teens and Tobacco

Objectives:
- Identify factors that influence a teen’s decision about tobacco use
- Describe different tobacco products
- Describe changes in tobacco use over the past few decades

Lesson 4: Risks of Tobacco Use

Objectives:
- Describe long-term health risks of using tobacco products
- Identify the risks of exposure to secondhand smoke
- List ways to avoid exposure to secondhand smoke

Lesson 5: Saying No to Tobacco

Objectives:
- Recognize the importance of refusal skills to avoid tobacco use
- Identify benefits of being tobacco free
- Describe tips for quitting tobacco use

Unit 6: Alcohol

In this unit, you will learn about alcohol and the dangerous effects it has. You will be able to identify the parts of the nervous system and learn how to keep it healthy. You will develop refusal skills and learn why teens use alcohol. You will find out what to do if you or someone you know needs help with alcohol addiction.

In the Physical Education portion of the lesson, depending on your plan for this course, you will be able to choose one of the following physical activities: Connections Academy Fitness, Vinyasa Yoga, or Personal Fitness. After completing your physical activity each day, you will update Activity Tracker or your PE Log. At the end of the unit, you will submit your tracked activities using the Drop box in the last lesson.

Objectives:
- Explain the short-term and long-term risks of using alcohol
- Identify parts of the nervous system and explain how to keep your nervous system healthy
- Identify influences on teen alcohol use and learn refusal skills
- Learn how alcohol addiction is treated

Lesson 1: Alcohol's Effects on the Body

Objectives:
- Identify facts about alcohol and describe short-term effects of alcohol on the body
- Define blood alcohol concentration (BAC) and identify factors that affect BAC
- Identify life-threatening effects of alcohol

Lesson 2: The Nervous System

Objectives:
- Identify the functions of the nervous system
- Explain the structure and function of a neuron
- Differentiate between the central and peripheral nervous systems
- Identify problems of the nervous system and ways to keep your nervous system healthy

Lesson 3: Teens and Alcohol

Objectives:
- Identify factors that influence teen drinking
Lesson 4: Long-Term Risks of Alcohol

Objectives:
- Identify serious long-term health effects of alcohol abuse
- Describe the stages and treatment of alcoholism
- Identify how alcohol abuse affects others

Lesson 5: Choosing Not to Drink

Objectives:
- Understand how refusal skills can help you stick to your decision not to drink
- Identify and practice refusal skills
- Describe benefits of avoiding situations where alcohol is present

Unit 7: Drugs

In this unit, you will learn about legal and illegal drugs and their effects on your body. You will learn about the risks of drug abuse, look at treatment options for people who abuse drugs, and learn steps you can take to stay drug free.

In the Physical Education portion of the lesson, depending on your plan for this course, you will be able to choose one of the following physical activities: Connections Academy Fitness, Vinyasa Yoga, or Personal Fitness. After completing your physical activity each day, you will update Activity Tracker or your PE Log. At the end of the unit, you will submit your tracked activities using the Drop box in the last lesson.

Objectives:
- Define drug abuse and understand the difference between appropriate use and misuse of drugs
- Identify the effects of depressants, stimulants, and hallucinogens on the body
- Describe the risks of drug abuse
- Describe treatment options for people who abuse drugs
- Identify steps you can take to stay drug free

Lesson 1: Legal and Illegal Drugs

Objectives:
- Differentiate between legal and illegal drugs
- Differentiate between drug abuse, drug misuse, and appropriate drug use
- Describe different ways drugs affect your body
- Identify risks of drug abuse

Lesson 2: Commonly Abused Drugs

Objectives:
- Describe the effects of different classes of drugs on the body
- Identify classes of drugs of concern in recent years

Lesson 3: Factors Affecting Drug Abuse

Objectives:
- Identify risk factors for drug abuse
- Identify protective factors that help you stay drug free

Lesson 4: Choosing to Be Drug Free

Objectives:
- Recognize signs of drug abuse
- Identify treatment options for people who abuse drugs
- Describe steps you can take to stay drug free
HEALTH &
PHYSICAL EDUCATION 8
Health and Physical Education 8

The Health and Physical Education course will introduce the student to vital health concepts and reinforce health skills that promote healthy behaviors. The student will learn the functions and structures of various body systems as well as the care and prevention of disease to these systems. The student will learn about communicable diseases and how to prevent the spread of such diseases. The student will also be able to demonstrate the importance of proper nutrition by planning and analyzing meals and nutritional values. Proper actions in emergencies and safety procedures will also be included. The physical education portion of the course will offer great freedom as the student will be able to choose a physical education regimen that will fit the student's individual needs. The student will be given a choice of three paths that place emphasis on lifelong activities as well as current fitness trends. Physical education lessons are geared toward a "physically fit" lifestyle that will aid the student in the years to come and ensure a higher quality of life.

Unit 1: Understanding Your Health

In this unit, you will learn about your health and the three sides of the health triangle. The three sides explain what your body needs to be healthy. You will learn about healthy habits, physical changes during puberty, and the role of lifestyle factors in a person’s life.

In the Physical Education portion of the lesson, you will learn about the President’s Challenge. The President’s Challenge is a program created by the U.S. government that rewards students for being physically active and physically fit. You will learn about the history and guidelines of the Active Lifestyle Program, why staying active is important, and how to set activity goals and log results. By the end of this unit, you will have taken your first steps toward earning the Presidential Active Lifestyle Award.

Objectives:

- Identify the three sides of the health triangle and explain how different aspects of health affect wellness and learn how to practice healthy behaviors to improve your overall health
- Describe the physical, mental, and emotional changes that occur during puberty and explain how relationships may change during the teen years
- Explain the role of lifestyle factors in a person’s health and explain how abstinence benefits the three sides of the health triangle

Lesson 1: Factors Affecting Overall Health

Objectives:

- Define health today
- Identify and describe the three sides of the health triangle
- Explain how habits affect wellness

Lesson 2: Changes in the Teen Years

Objectives:

- Describe physical changes that occur during the teen years
- Describe the mental and emotional changes experienced during adolescence
- Explain how change during adolescence may affect your relationships
- Identify some healthy behaviors that contribute to emotional and mental health

Lesson 3: How to Make Responsible Health Decisions

Objectives:

- Recognize the importance of lifestyle factors in a person's health
- Describe risk-reducing behaviors and habits to reduce risks in your life
- Understand how to evaluate sources of health information

Unit 2: Mental and Emotional Health

In this unit, you will learn about the importance of good mental and emotional health in your life. A key component of mental and emotional health is your self-esteem; you will learn how it changes throughout your life, why healthy self-esteem affects every part of the health triangle, and ways in which your self-esteem can be improved. You will investigate different
types of emotions, identify ways of dealing with them, and recognize how stress also affects your overall health.

In the Physical Education portion of the lesson, depending on your plan for this course, you will be able to choose one of the following physical activities: Connections Academy Fitness, Vinyasa Yoga, or Personal Fitness. After completing your physical activity each day, you will update Activity Tracker or your PE Log. At the end of the unit, you will submit your tracked activities using the Drop box in the last lesson.

Objectives:
- Recognize the importance of good mental and emotional health in your life
- Identify ways to increase your self-esteem
- Describe primary and learned emotions and healthy ways to express each of them
- Understand the causes of stress and identify ways to deal with them

Lesson 1: Understanding Mental and Emotional Health

Objectives:
- Describe characteristics of good mental and emotional health
- Recognize factors that affect your self-esteem
- Identify skills that help to build your self-esteem

Lesson 2: Emotions and Behavior

Objectives:
- Recognize common emotions
- Discover healthy ways to express emotions
- Identify how to manage anger in a healthful way

Lesson 3: How to Manage Stress

Objectives:
- Recognize the causes of stress
- Explain how your body responds to stress
- Describe habits for managing stress in your life

Lesson 4: Dealing with Loss

Objectives:
- Understand the stages of reactions that are associated with the grieving process
- Describe strategies for dealing with personal loss
- Find out how to emotionally support someone through the grief process

Unit 3: Mental and Emotional Problems

In this unit, you will familiarize yourself with various mental and emotional health disorders. You will learn how to recognize the signs of depression and teen suicide, allowing you to better communicate with someone with a mental health disorder. You will end the unit by investigating the different kinds of therapies available to treat mental and emotional health disorders.

In the Physical Education portion of the lesson, depending on your plan for this course, you will be able to choose one of the following physical activities: Connections Academy Fitness, Vinyasa Yoga, or Personal Fitness. After completing your physical activity each day, you will update Activity Tracker or your PE Log. At the end of the unit, you will submit your tracked activities using the Drop box in the last lesson.

Objectives:
- Identify types of mental and emotional health disorders
- Identify signs of major depression
- Recognize the causes and warning signs of teen suicide
- Learn how to communicate effectively with someone with mental and emotional problems
- Describe the kinds of therapies used to treat mental and emotional health disorders
Lesson 1: Mental and Emotional Health Disorders

Objectives:
- Identify five types and signs of anxiety disorders
- Discover the common causes of mental and emotional health disorders
- Identify and describe two mood disorders
- Describe three signs of clinical depression

Lesson 2: Suicide Prevention

Objectives:
- Recognize warning signs of teen suicide
- Describe the causes of teen suicide
- Understand how to communicate to help someone who may be suffering from a mental or emotional health problem

Lesson 3: Help for Mental and Emotional Disorders

Objectives:
- Recognize why you or someone you know may be avoiding getting help for a mental illness
- Describe the kinds of therapies used to treat mental and emotional disorders
- Identify professionals who help people with mental health problems

Unit 4: Nutrition for Health

In this unit, you will learn the importance of nutrition not just as a word, but by the positive and negative impacts your eating habits can have on your body and overall health and well-being. You will identify the six major categories of nutrition and describe their importance. You will be introduced to nutritional guidelines that are essential for living a healthy lifestyle. You will also have the opportunity to evaluate and plan your own meals and snacks.

This unit enables you to take a real life look at your current nutritional habits while acknowledging necessary changes to allow yourself to live at a high level of wellness.

In the Physical Education portion of the lesson, depending on your plan for this course, you will be able to choose one of the following physical activities: Connections Academy Fitness, Vinyasa Yoga, or Personal Fitness. After completing your physical activity each day, you will update Activity Tracker or your PE Log. At the end of the unit, you will submit your tracked activities using the Drop box in the last lesson.

Objectives:
- Identify environment and mental factors that influence food choices
- Identify the six major categories of nutrition
- Describe three ways your body uses nutrients
- Identify the five main food groups that create MyPlate
- Identify healthy ways to choose a snack

Lesson 1: The Benefits of Nutrition

Objectives:
- Describe the importance of nutrition on the body
- Explain how your mood can affect the foods that you eat

Lesson 2: Essential Nutrients for Wellness

Objectives:
- Identify the six major categories of nutrients
- Describe three ways your body uses nutrients

Lesson 3: Using Nutritional Guidelines

Objectives:
- Explain how to adequately use MyPlate as a guide for healthy eating
- Describe the recommendations for healthy eating provided by the Dietary Guidelines for Americans
Lesson 4: Planning for Meals and Snacks

Objectives:
- Understand why breakfast is the most important meal of the day
- Identify meal planning tips
- Identify healthy ways to choose a snack

Student Lesson Activity:

Complete the following activities.

1. Answer the following questions in your journal.
   1. Using knowledge from previous lessons, why are whole grains recommended for breakfast and lunch?
   2. Why is it possible for fruit to satisfy your sweet tooth over a cookie?
   3. Is it necessary to use each one of these tips for eating each time you consume food?

Select the link to access sample answers.

Sample Answers

2. Select the link to review the Sample Menus for a 2000 Calorie Food Pattern document, courtesy of ChooseMyPlate.gov.

Sample Menus for a 2000 Calorie Food Pattern

Review each menu listed for a seven-day period.

Answer the following questions in your journal.

If you had the resources to do so, what food would you choose for:
- breakfast
- lunch
- dinner
- snack

Discuss with your Learning Coach the benefits to consuming a variety of foods within one day.

If the ingredients allow, try one of the snacks listed for your next study break rather than a bag of chips!

Unit 5: Your Body Image

Throughout this unit you will have the opportunity to identify why food and physical activity can influence your weight so significantly. By understanding this concept you will be able to describe ways to maintain a healthy weight. When weight becomes a hindrance or displeasure oftentimes eating habits are taken to the extreme and individuals develop an eating disorder. In this unit you will learn the signs and symptoms and health risks associated with eating disorders as well as where to seek help for such conditions.

In the Physical Education portion of the lesson, depending on your plan for this course, you will be able to choose one of the following physical activities: Connections Academy Fitness, Vinyasa Yoga, or Personal Fitness. After completing your physical activity each day, you will update Activity Tracker or your PE Log. At the end of the unit, you will submit your tracked activities using the Drop box in the last lesson.

Objectives:
- Describe how food and physical activity can have a major impact on your weight
- Identify three ways to maintain a healthy weight
- Identify signs and symptoms of eating disorders
- Describe the health risks associated with eating disorders
- Identify where someone can get help for an eating disorder
Lesson 1: Learning to Maintain a Healthy Weight

Objectives:
- Understand the importance of a healthy body image
- Describe how food and physical activity have a major impact on your weight
- Identify three ways to maintain a healthy weight

Lesson 2: Living with an Eating Disorder

Objectives:
- Identify signs and symptoms of eating disorders
- Describe the health risks associated with eating disorders
- Identify where someone can get help for an eating disorder

Unit 6: Your Body Systems

Throughout this unit, you will take a close look at various body systems. While this may sound like a science class, choosing healthy behaviors to keep each system functioning properly is essential to living a healthy and productive life. You will start by looking at the skeletal system and the important role it plays in offering support and protection for internal organs. You will then get a closer look at the muscular system, circulatory system, respiratory system, nervous system, digestive and excretory systems, endocrine system, and ending with the male and female reproductive systems. Knowing how your body operates is important, both for your current lifestyle and for future years as you continue to develop and age.

In the Physical Education portion of the lesson, depending on your plan for this course, you will be able to choose one of the following physical activities: Connections Academy Fitness, Vinyasa Yoga, or Personal Fitness. After completing your physical activity each day, you will update Activity Tracker or your PE Log. At the end of the unit, you will submit your tracked activities using the Drop box in the last lesson.

Objectives:
- Describe the functions of the skeletal system
- Describe the process of circulation through the body
- Understand the parts and functions of the respiratory system
- Identify the importance of protecting your nervous system from injury
- Understand the parts and functions of both the male and female reproductive systems

Lesson 1: Human Skeletal System

Objectives:
- Describe the functions of the skeletal system
- Identify four types of joints located in the body
- Describe problems that can occur within the skeletal system
- Identify behaviors that can keep your skeletal system healthy

Lesson 2: Human Muscular System

Objectives:
- Describe the functions of the muscular system
- Identify the differences between various muscle types
- Identify behaviors that can keep your muscular system healthy

Lesson 3: Human Circulatory System

Objectives:
- Describe the process of circulation
- Identify and explain the parts of the circulatory system
- Identify behaviors that can keep your circulatory system healthy

Lesson 4: Human Respiratory System

Objectives:
- Describe how your body uses the air you breathe
- Identify and explain the parts and functions of the respiratory system
- Identify ways to maintain a healthy respiratory system
Lesson 5: Human Nervous System

Objectives:
- Describe the functions of the nervous system
- Identify and explain the different parts of the nervous system
- Identify ways to protect your nervous system from injury

Lesson 6: The Human Digestive and Excretory Systems

Objectives:
- Describe the process of excretion
- Identify ways to prevent problems to the digestive and excretory systems
- Identify behaviors for good digestive health

Lesson 7: Human Endocrine System

Objectives:
- Identify the main functions of the endocrine system
- Describe the jobs done by the different endocrine glands
- Explain disorders of the endocrine system

Lesson 8: Human Reproductive System

Objectives:
- Identify the parts of the male and female reproductive systems
- Describe three functions of the female reproductive system
- Identify problems that can be associated with the male and female reproductive systems
- Identify ways to keep your reproductive system healthy

Unit 7: Infectious Diseases

In this unit, you will learn about types of infectious diseases and how they are treated. In addition, you will learn about your body’s immune system and how it works to defend against dangerous pathogens. Your body has three lines of defense in the war against germs, and you will take a closer look at those defenses as you study the immune system. You will complete the unit by examining what you can do personally to prevent infectious diseases and keep yourself healthy.

In the Physical Education portion of the lesson, depending on your plan for this course, you will be able to choose one of the following physical activities: Connections Academy Fitness, Vinyasa Yoga, or Personal Fitness. After completing your physical activity each day, you will update Activity Tracker or your PE Log. At the end of the unit, you will submit your tracked activities using the Drop box in the last lesson.

Objectives:
- List the causes of infectious diseases
- List the three defenses your body has against infectious disease
- Identify how the immune system functions
- Discuss what causes colds and how to treat them
- Describe what you can do to prevent infectious diseases

Lesson 1: Understanding Infectious Diseases

Objectives:
- List the causes of infectious diseases
- Differentiate how germs are spread

Lesson 2: How Does the Body Fight Infectious Diseases?

Objectives:
- List the three lines of defense your body has against infectious disease
- Identify how the immune system functions
- Describe how antibodies defend against diseases

Student Lesson Activity:
Lesson 3: Common Infectious Diseases

Objectives:
- Name four common infectious diseases
- Discuss what causes colds and how to treat them
- Describe what you can do to prevent infectious diseases

Student Lesson Activity:

Complete the following review activity.
Select the image and complete the Types Of Pathogens interactive review.

Unit 8: Safety and Emergencies

In this unit, you will learn about safety and emergencies. You will learn how to keep yourself safe at home, school, outdoors, in the water, and on the road. We will cover the steps to take to reduce the risk of an accident occurring and the emergency plan in case an accident does occur. You will have the opportunity to learn first aid procedures for common emergencies as well as those that may be life-threatening. This unit will not make you an expert in responding to emergencies however, it will give you some tools and resources in case you ever have or approach an emergency.

In the Physical Education portion of the lesson, depending on your plan for this course, you will be able to choose one of the following physical activities: Connections Academy Fitness, Vinyasa Yoga, or Personal Fitness. After completing your physical activity each day, you will
update Activity Tracker or your PE Log. At the end of the unit, you will submit your tracked activities using the Drop box in the last lesson.

Objectives:
- Define the parts of an accident chain
- Identify ways to avoid injuries in the water and outdoors
- List the steps to take in an emergency
- Explain the different types of common emergencies
- Differentiate the different types of life-threatening emergencies

Lesson 1: Being Safe at Home and School

Objectives:
- Identify how to stay safe in the home and at school
- Define the parts of an accident chain
- Identify safe habits

Lesson 2: Being Safe Outdoors and on the Road

Objectives:
- Identify ways to avoid injuries in the water and outdoors
- Define how to stay safe as a pedestrian
- Differentiate safety and traffic rules for bicycles, skates, skateboards, and scooters

Lesson 3: First Aid

Objectives:
- Describe what are known as Universal Precautions
- List the steps to take in an emergency
- Organize your own first aid kit

Lesson 4: Handling Common Emergencies

Objectives:
- Explain the different types on common emergencies
- Identify first-aid treatments for common emergencies
- Understand when it is time to call for medical assistance

Lesson 5: Medical and Life-Threatening Emergencies

Objectives:
- Differentiate the different types of life-threatening emergencies
- List the steps to perform rescue breathing
- Describe the symptoms of shock
- Recite how to help someone who is choking

Unit 9: Environmental Health

In this unit, you will learn about environmental health. This unit will discuss air, water, and land pollution and the impact they have on the environment and our health. You will learn action steps that you can take to protect the environment and reduce your contribution to the growing problem associated with pollution. Finally, you will learn how you can have an impact on our planet by reducing, reusing, and recycling.

In the Physical Education portion of the lesson, depending on your plan for this course, you will be able to choose one of the following physical activities: Connections Academy Fitness, Vinyasa Yoga, or Personal Fitness. After completing your physical activity each day, you will update Activity Tracker or your PE Log. At the end of the unit, you will submit your tracked activities using the Drop box in the last lesson.

Objectives:
- Evaluate what contributes to air, water, and land pollution
- Discuss strategies to reduce the ways you contribute to pollution
- Assess how pollution affects the environment
- Define the three Rs: reduce, reuse, and recycle
- List the actions individuals can take to protect the environment
Lesson 1: The Impact of Pollution

Objectives:
- Define pollution
- Evaluate what contributes to air, water, and land pollution
- Discuss strategies to reduce the ways you contribute to pollution
- Assess how pollution affects the environment

Lesson 2: Reducing, Reusing, and Recycling

Objectives:
- Define the three Rs: reduce, reuse, and recycle
- List the actions individuals can take to protect the environment
- Describe nonrenewable resources
APPENDIX A
CURRICULUM

A.2 COURSE GUIDES

g. EDUCATIONAL TECHNOLOGY
This document is part of Appendix A: Curriculum.

It includes course guides for each Educational Technology class for students in Kindergarten through Grade 8.

- Educational Technology and Online Learning K
- Educational Technology and Online Learning 1
- Educational Technology and Online Learning 2
- Educational Technology and Online Learning 3
- Educational Technology and Online Learning 4
- Educational Technology and Online Learning 5
- Educational Technology and Online Learning 6
- Educational Technology and Online Learning 7
- Educational Technology and Online Learning 8

Course guides provide detailed information on the curriculum including course descriptions, unit summaries, lesson objectives, activities, and assessment types. Course guides include information on:

- Planned instruction (provided in the unit summary of each unit within individual Course Guides)
- Course objectives (provided in the unit and lesson objectives within individual Course Guides)
- Activities (provided in the unit summary and lesson objectives of each unit within individual Course Guides)
EDUCATIONAL TECHNOLOGY
AND ONLINE LEARNING
K
Educational Technology and Online Learning K

In this course, students will explore the features of a draw and paint program as a tool to support emerging reading, writing, and mathematics skills. They will locate letters and numbers on the keyboard. A study skills unit will introduce them to listening and visualization skills that will support learning across the school day. Students will recognize safe and responsible use of technology resources so that they can become model digital citizens.

Unit 1: Tux Paint

In this unit, your student will explore the features of a draw and paint program called Tux Paint. He will learn how to use the brush and other drawing tools to write uppercase and lowercase letters, draw pictures, and illustrate his understanding of newly learned academic skills. He will also learn how to use features such as the Text tool to type text and font attributes (i.e., bold, italics, and underline) to format the text. In addition, he will become familiar with the Shapes tool to incorporate shapes with fill and without fill to draw and color two-dimensional shapes as well as learn how to incorporate various stamps and backgrounds into his illustrations. As Tux Paint has the ability to intertwine fun and education, your student will not only develop his academic and artistic skills, but his imagination will soar!

Objectives:
- Identify, describe, pronounce, and write uppercase and lowercase letters c, d, j, k, l, m, n, q, s, and t
- Define high-frequency words all, are, at, be, but, did, do, eat, get, good, have, he, like, new, no, on, who, and will
- Compose meaningful sentences with high-frequency words all, are, at, be, but, did, do, eat, get, good, have, he, like, new, no, on, who, and will
- Name circles, squares, triangles, and rectangles and classify polygons
- Operate software tools in Tux Paint to write and type letters and key words, edit mistakes, format text, incorporate pictures, illustrate high-frequency words, construct two-dimensional shapes, plane figures, and polygons, and change text and shape colors

Lesson 1: Beginning Consonant C (two-day lesson)

Objectives:
- Academic: Identify and write an uppercase and a lowercase letter c and pronounce the correct consonant sound
- Academic: Illustrate the difference between an uppercase and a lowercase letter c
- Academic: Interpret pictures in order to identify words that begin with the letter c
- Technology: Demonstrate how to use the Paint tool in Tux Paint to illustrate an uppercase and a lowercase letter c
- Technology: Demonstrate how to use the Eraser tool in Tux Paint to edit mistakes

Lesson 2: Beginning Consonant D

Objectives:
- Academic: Identify and write an uppercase and a lowercase letter d and pronounce the correct consonant sound
- Academic: Interpret pictures in order to identify words that begin with the letter d
- Technology: Demonstrate how to use the Paint tool in Tux Paint to illustrate an uppercase and a lowercase letter d
- Technology: Demonstrate how to use the Eraser tool in Tux Paint to edit mistakes
- Technology: Demonstrate how to use the Stamp tool in Tux Paint to illustrate words that begin with the letter d

Lesson 3: Beginning Consonant J

Objectives:
Lesson 4: Beginning Consonant K

Objectives:
- Academic: Identify and write an uppercase and a lowercase letter k and pronounce the correct consonant sound
- Academic: Illustrate the difference between an uppercase and a lowercase letter k
- Technology: Demonstrate how to use features of the Paint tool in Tux Paint to illustrate an uppercase and a lowercase letter k using different sizes, strokes, and colors
- Technology: Demonstrate how to use the Eraser tool in Tux Paint to edit mistakes
- Technology: Demonstrate how to use the Stamp tool in Tux Paint to locate and integrate sign language symbols into Tux Paint pictures

Lesson 5: Beginning Consonant L

Objectives:
- Academic: Identify and write an uppercase and a lowercase letter l and pronounce the correct consonant sound
- Academic: Interpret pictures in order to identify words that begin with the letter l
- Technology: Demonstrate how to use the Text tool and Shift key in Tux Paint to type key words in both uppercase and lowercase letters
- Technology: Demonstrate how to use the Calligraphy effect button in Tux Paint to illustrate key words beginning with the letter m

Lesson 6: Beginning Consonant M (two-day lesson)

Objectives:
- Academic: Identify and write an uppercase and a lowercase letter m and pronounce the correct consonant sound
- Academic: Illustrate the difference between an uppercase and a lowercase letter m
- Technology: Demonstrate how to use the Paint tool in Tux Paint to illustrate an uppercase and a lowercase letter m using different sizes, strokes, and colors
- Technology: Demonstrate how to use the Eraser tool in Tux Paint to edit mistakes
- Technology: Demonstrate how to use the Calligraphy effect button in Tux Paint to illustrate key words beginning with the letter m

Lesson 7: Beginning Consonant N (two-day lesson)

Objectives:
- Academic: Identify and write an uppercase and a lowercase letter n and pronounce the correct consonant sound
- Academic: Illustrate the difference between an uppercase and a lowercase letter n
- Academic: Interpret pictures in order to identify words that begin with the letter n
- Technology: Demonstrate how to use the Text tool and Shift key in Tux Paint to type key words in both uppercase and lowercase letters
• Technology: Demonstrate how to use the Undo button in Tux Paint to edit mistakes

Lesson 8: Beginning Consonant Q

Objectives:
• Academic: Identify and write an uppercase and a lowercase letter q and pronounce the correct consonant sound
• Academic: Interpret pictures in order to identify words that begin with the letter q
• Technology: Demonstrate how to use the Paint tool in Tux Paint to illustrate an uppercase and a lowercase letter q
• Technology: Demonstrate how to use the Text tool and Shift key in Tux Paint to type key words in both uppercase and lowercase letters and format text in different colors
• Technology: Demonstrate how to use the Undo button in Tux Paint to edit mistakes

Lesson 9: Beginning Consonant S (two-day lesson)

Objectives:
• Academic: Identify and write an uppercase and a lowercase letter s and pronounce the correct consonant sound
• Technology: Demonstrate how to use the Text tool and Shift key in Tux Paint to type key words in both uppercase and lowercase letters
• Technology: Demonstrate how to use the Letters selector to format text in different font styles
• Technology: Demonstrate how to use the Undo button in Tux Paint to edit mistakes
• Technology: Demonstrate how to use the Stamp tool in Tux Paint to illustrate words that begin with the letter s

Lesson 10: Beginning Consonant T (two-day lesson)

Objectives:
• Academic: Identify and write an uppercase and a lowercase letter t and pronounce the correct consonant sound
• Technology: Demonstrate how to use the Text, Magic, and Paint tools to type and illustrate key words
• Technology: Demonstrate how to use the Text tool and format text in different colors, font styles, and sizes
• Technology: Demonstrate how to use the Undo button in Tux Paint to edit mistakes
• Technology: Demonstrate how to use the Stamp tool in Tux Paint to illustrate words that begin with the letter t

Lesson 11: Frequent Words: all, are, at, but, and who

Objectives:
• Academic: Identify and pronounce high frequency words all, are, at, but, and who
• Academic: Define high frequency words all, are, at, but, and who
• Academic: Compose meaningful sentences using high frequency words all, are, at, but, and who
• Technology: Demonstrate how to use the Paint tool and Text tool in Tux Paint to write and type high frequency words all, are, at, but, and who
• Technology: Demonstrate how to use the Stamp tool in Tux Paint to illustrate the meaning of high frequency words all, are, at, but, and who

Lesson 12: Frequent Words: did, do, eat, get, good, and have

Objectives:
• Academic: Identify and pronounce high frequency words did, do, eat, get, good, and have
• Academic: Define high frequency words did, do, eat, get, good, and have
• Academic: Compose meaningful sentences using high frequency words did, do, eat, get, good, and have
Lesson 13: Frequent Words: he, like, new, no, on, and will

Objectives:
- Academic: Identify and pronounce high frequency words he, like, new, no, on, and will
- Academic: Define high frequency words he, like, new, no, on, and will
- Academic: Compose meaningful sentences using high frequency words he, like, new, no, on, and will
- Technology: Demonstrate how to use the Paint tool and Text tool in Tux Paint to write and type high frequency words he, like, new, no, on, and will
- Technology: Demonstrate how to use the Stamp tool in Tux Paint to illustrate the meaning of high frequency words he, like, new, no, on, and will

Lesson 14: Recognizing Shapes (two-day lesson)

Objectives:
- Academic: Identify and name squares, circles, triangles, and rectangles
- Academic: Illustrate different shapes at various sizes
- Technology: Demonstrate how to use the Shapes tool and Color palette in Tux Paint in order to draw two-dimensional shapes in various colors
- Technology: Demonstrate how to use the Text tool in Tux Paint and label individual shapes

Lesson 15: Naming Shapes (two-day lesson)

Objectives:
- Academic: Identify, name, and draw squares, circles, triangles, and rectangles
- Academic: Classify polygons based on number of sides
- Technology: Demonstrate how to use the Shapes tool and Color palette in Tux Paint and draw two-dimensional shapes in various colors
- Technology: Demonstrate how to use the Text tool and Color palette in Tux Paint and label polygons in various colors
- Technology: Demonstrate how to use the Stamp tool in Tux Paint to compile real-world pictures that represent polygons

Unit 2: Keyboarding

In this unit, your student will explore letter and number recognition. She will be able to locate all letter and number keys. Your student will demonstrate correct posture and finger position while typing and apply proper touch-typing skills to type the home row letters.

Objectives:
- Academic: Identify the letters a–z on the keyboard
- Academic: Identify the numbers 0–9 on the keyboard
- Technology: Demonstrate how to use the keyboard to type the letters a–z
- Technology: Demonstrate how to use the keyboard to type the numbers 0–9

Lesson 1: Keyboarding A–M

Objectives:
- Identify and type the letters A–M on the keyboard

Lesson 2: Keyboarding N–Z

Objectives:
- Identify and type the letters N–Z on the keyboard

Lesson 3: Keyboarding Numbers and Letters
Objectives:
• Identify and type the letters A–Z on the keyboard
• Identify and type the numbers 0–9 on the keyboard

Unit 3: Study Skills
In this unit, your student will learn how to use basic study skills. He will begin the unit by creating a work environment suited for success. The lessons included in this unit will build your student’s listening skills, visualization, and online learning skills. These skills will aid your student in the online learning environment as well as the real world as he learns how to become an effective speaker and listener.

Objectives:
• Compare the online learning environment to that of a bricks-and-mortar environment
• Identify tips for successful online learning
• Identify ways that effective speakers help listeners
• Identify how pictures and other visual aids enhance reading and writing
• Explain how visuals demonstrate understanding

Lesson 1: Online Learning and a Proper Work Environment

Objectives:
• Academic: Identify familiar environments and compare them to the online learning environment
• Academic: Identify tips for successful online learning
• Technology: Apply digital tools and resources to address a variety of tasks and problems

Lesson 2: Listening and Speaking

Objectives:
• Academic: Discuss the importance of having good listening skills
• Academic: Describe ways that effective speakers help listeners
• Technology: Illustrate and communicate original ideas and stories using digital tools and resources
• Technology: Demonstrate the ability to navigate virtual environments

Lesson 3: Visualization (two-day lesson)

Objectives:
• Academic: Describe how pictures and other visuals enhance reading and writing
• Academic: Explain how visuals help demonstrate understanding
• Academic: Create a visual in Tux Paint to share information
• Technology: Demonstrate how to use simulations and graphic organizers to explore and depict patterns of growth, such as the life cycles of plants and animals

Unit 4: Internet Safety
In this unit, your student will learn about Internet safety. The goal of the lessons in this unit is to educate your student on how to avoid online dangers and stay safe while using the Internet. Your student will learn about the dangers of cyber bullies, strangers, and computer viruses by reading stories, discussing a variety of scenarios, learning safety tips, and completing other related activities.

Objectives:
• Develop an understanding of community and apply it to the knowledge of the Internet
• Describe qualities of being a good friend and citizen in the physical and cyber communities
• Examine the concept that computers can become infected with viruses and understand to use caution when opening e-mail
• Demonstrate an understanding of personal and online identity and making responsible choices to ensure safety in the cyber community
• Complete hands-on activities to reinforce technology vocabulary and concepts introduced

Lesson 1: Cyber Community
Objectives:
- Identify the concept of community and apply it to knowledge of the Internet
- Identify and discuss vocabulary words related to the Internet
- Relate and connect the physical community to the abstract concept of a cyber community
- Complete a hands-on activity to reinforce vocabulary and concepts introduced

**Lesson 2: Cyber Citizenship (two-day lesson)**

Objectives:
- Identify the qualities of being a good friend
- Understand that a bully is mean to people on purpose
- Understand that bullying can be online and offline

**Lesson 3: Cyber Security**

Objectives:
- Examine the concept that computers can become infected with viruses
- Explain why it is important to use caution and to seek help when opening e-mail
- Discuss the concept of the computer virus
- Engage in a discussion with the Learning Coach to learn about computer viruses

**Lesson 4: Personal Safety**

Objectives:
- Develop an understanding of the term identity
- Describe how an identity is formed online
- Explain why a trusted adult can help create and keep a student's online identity safe
EDUCATIONAL TECHNOLOGY
AND ONLINE LEARNING
1
Educational Technology and Online Learning 1

In this course, students build on foundational skills while using software to draw, type, and format text, and create presentations to support academic skills. Students learn listening and organizational skills and set attainable learning goals. Students become responsible users of technology as they learn about Internet safety and appropriate online behavior.

Unit 1: Introduction and Tux Paint

In this unit, your student will learn how to use Tux Paint, an interactive paint program, to express original ideas and create art. By the end of this unit, your student will learn how to illustrate concepts using the drawing, text, and shape tools within the program. He will also be able to draw pictures and select meaningful images from a gallery to support his understanding.

Objectives:
- Learn and use the basic tools of a draw and paint program
- Use the paint, text, and shape tools to modify and create words, sentences, and artwork
- Draw pictures and select images from a gallery to create original artwork

Lesson 1: Ending Consonant l

Objectives:
- Academic: Demonstrate how to pronounce the correct consonant sound when seeing the letter l
- Academic: Identify and compose sentences using words that end with the letter l
- Technology: Demonstrate how to use the Text tool to type words and sentences
- Technology: Demonstrate how to format text by changing the font style and size
- Technology: Demonstrate how to select and incorporate images from a stamp gallery that correspond to words that end with the letter l

Lesson 2: Ending Consonant m (two-day lesson)

Objectives:
- Academic: Demonstrate how to pronounce the correct consonant sound for the letter m
- Academic: Identify and compose sentences using words that end with the letter m
- Technology: Demonstrate how to use the Text tool to write words
- Technology: Demonstrate how to format text by changing the size and font type
- Technology: Demonstrate how to use stamp images that correspond to words ending with the letter m and use them to illustrate the words

Lesson 3: Ending Consonant p (two-day lesson)

Objectives:
- Academic: Demonstrate how to pronounce the correct consonant sound for the letter p
- Academic: Identify and compose sentences using words that end with the letter p
- Technology: Demonstrate how to use the Paint tool to write words ending with the letter p
- Technology: Demonstrate how to format the brush stroke, shape, and size within the Brushes selector

Lesson 4: Ending Consonant r

Objectives:
- Academic: Demonstrate how to pronounce the correct consonant sound for the letter r
- Academic: Interpret pictures to identify words that end with the letter r
• Academic: Identify and compose sentences using words that end with the letter r
• Technology: Demonstrate how to use the Magic tools including the calligraphy, metal paint, and rainbow effects to practice writing letter r words

Lesson 5: High Frequency Words: after, again, an, any, by

Objectives:
• Academic: Identify, read, and compose sentences using high frequency words
• Academic: Identify high frequency words in context
• Technology: Demonstrate how to use the Text tool in Tux Paint to type key words
• Technology: Demonstrate how to format font style and size within the Letters selector
• Technology: Demonstrate how to use the Stamp tool to illustrate high frequency words

Lesson 6: Short a Words (two-day lesson)

Objectives:
• Academic: Identify and read words with the short /a/ vowel sound
• Academic: Demonstrate how to correctly pronounce words with the short /a/ vowel sound
• Technology: Demonstrate how to use the Paint tool to write words with the short /a/ sound
• Technology: Demonstrate how to format the brush stroke, shape, size, and color in order to color code the short a vowel pattern in key words
• Technology: Demonstrate how to use the Stamp tool to illustrate words with the short /a/ vowel sound

Lesson 7: Short e Words

Objectives:
• Academic: Identify, read, and write sentences using words with the short /e/ vowel sound
• Academic: Demonstrate how to correctly pronounce words with the short /e/ vowel sound
• Technology: Demonstrate how to use the Paint tool to write words with the short /e/ sound
• Technology: Demonstrate how to format the brush stroke, shape, size, and color in order to color code the short e vowel pattern in key words
• Technology: Demonstrate how to use the Stamp tool to illustrate words with the short /e/ vowel sound

Lesson 8: Short i Words

Objectives:
• Academic: Identify, read, and write sentences using words with the short /i/ vowel sound
• Academic: Demonstrate how to correctly pronounce words with the short /i/ vowel sound
• Technology: Demonstrate how to use the Paint tool to write words with the short /i/ sound
• Technology: Demonstrate how to format the brush stroke, shape, size, and color in order to color code the short i vowel pattern in key words
• Technology: Demonstrate how to use the Stamp tool to illustrate words with the short /i/ vowel sound

Lesson 9: Short o Words (two-day lesson)

Objectives:
• Academic: Identify, read, and write words with the short /o/ vowel sound
• Academic: Demonstrate how to correctly pronounce words with the short /o/ vowel sound
Lesson 10: Short u Words (two-day lesson)

Objectives:
- Academic: Identify, read, and write words with the short /u/ vowel sound
- Academic: Demonstrate how to correctly pronounce words with the short /u/ vowel sound
- Technology: Demonstrate how to use the Text tool to type words with the short /u/ sound
- Technology: Demonstrate how to use the Text tool to format font style and size
- Technology: Demonstrate how to use the Stamp and Shapes tools to illustrate words or sentences

Lesson 11: Long a Words: Vowel Pattern a_e

Objectives:
- Academic: Identify, read, and write words and sentences using words with the long /a/ vowel sound
- Academic: Demonstrate how to correctly pronounce words with the long /a/ vowel sound
- Technology: Demonstrate how to use the Paint tool to write words with the long /a/ vowel sound
- Technology: Demonstrate how to format the brush stroke, shape, size, and color in order to color code the long a vowel pattern a_e.
- Technology: Demonstrate how to use the Stamp tool to illustrate keys words and sentences

Lesson 12: Long o Words: Vowel Pattern o_e

Objectives:
- Academic: Identify, read, and write words and sentences using words with the long /o/ vowel sound
- Academic: Demonstrate how to correctly pronounce words with the long /o/ vowel sound
- Technology: Demonstrate how to use the Paint tool to write words with the long /o/ vowel sound
- Technology: Demonstrate how to format the brush stroke, shape, size, and color in order to color code the long o vowel pattern o_e

Lesson 13: Long e Words: Vowel Patterns ee and ea

Objectives:
- Academic: Identify, read, and write words and sentences with the long /e/ sound and vowel patterns ee and ea
- Academic: Demonstrate how to correctly pronounce words with the long /e/ vowel sound
- Technology: Demonstrate how to use the Paint tool to write words with the long /e/ vowel sound
- Technology: Demonstrate how to format the brush stroke, shape, size, and color in order to color code the long e vowel patterns ee and ea
- Technology: Demonstrate how to use the Stamp tool to illustrate words with the long /e/ vowel sound

Lesson 14: Silly Sentences (two-day lesson)

Objectives:
- Academic: Identify pairs of rhyming words that have the same vowel sounds
• Academic: Compose sentences with pairs of rhyming words using words from previous lessons
• Technology: Demonstrate how to use the Text tool to type sentences with pairs of rhyming words
• Technology: Demonstrate how to use the Paint tool to write a sentence with a pair of rhyming words
• Technology: Demonstrate how to use the Stamp tool to illustrate a sentence with a pair of rhyming words

Lesson 15: Long i Words: Vowel Pattern i_e

Objectives:
• Academic: Identify, read, and write words and sentences with the long /i/ vowel sound
• Academic: Demonstrate how to correctly pronounce words with the long /i/ vowel sound
• Technology: Demonstrate how to use the Text tool and Paint tool in Tux Paint
• Technology: Demonstrate how to use the Stamp and Shapes tools to create math problems

Lesson 16: Long u Words: Vowel Pattern u_e

Objectives:
• Academic: Identify, read, and write words and sentences with the long /u/ vowel sound
• Academic: Demonstrate how to correctly pronounce words with the long /u/ vowel sound
• Technology: Demonstrate how to use the Text tool and Paint tool to make a poster
• Technology: Demonstrate how to format the brush stroke, shape, size, and color in order to color code the long u vowel pattern u_e
• Technology: Demonstrate how to use the Stamp tool to illustrate keys words or sentences

Lesson 17: Subtraction to 10 (two-day lesson)

Objectives:
• Academic: Solve subtraction problems within 10
• Academic: Construct subtraction equations using pictures, numbers, and symbols
• Technology: Demonstrate how to use the Stamp tool to illustrate subtraction problems within 10
• Technology: Demonstrate how to use the Stamp tool to add numbers and symbols to create an equation

Lesson 18: Telling Time to the Hour and Half Hour

Objectives:
• Academic: Demonstrate telling time to the hour and half hour using analog clocks
• Technology: Illustrate time to the hour and half hour using the Stamp and Paint tools
• Technology: Distinguish between the hour and minute hand using different brush colors

Lesson 19: The Best Pet Ever

Objectives:
• Academic: Describe the characteristics of a real or imaginary pet
• Technology: Demonstrate how to use Tux Paint to draw a picture
• Technology: Demonstrate how to select colors using the Custom palette

Unit 2: Microsoft® Word

In this unit, your student will learn basic Microsoft® Word techniques including how to type text, highlight and format text, and insert, format, and complete tables. Your student will insert Clip Art, WordArt, shapes, and text boxes.
Objectives:

- Evaluate the use of text features in informational text and incorporate elements within a Microsoft Word document
- Demonstrate how to incorporate Clip Art and pictures to illustrate concepts
- Apply digital tools and resources to enhance writing tasks
- Connect language arts and mathematical concepts to technology

Lesson 1: High Frequency Words

Objectives:

- Academic: Identify and read high frequency words
- Academic: Compose sentences using high frequency words
- Technology: Demonstrate how to type text and use the Enter key to begin new lines in a document
- Technology: Demonstrate how to italicize, bold, and underline text using font formatting buttons in the Home ribbon
- Technology: Demonstrate how to apply a different font face, color, and size using the Font Face, Font Color, and Font Size drop-down menus

Lesson 2: How Is the Character Feeling? (two-day lesson)

Objectives:

- Academic: Describe how a character in a story feels
- Academic: Analyze how a character in a story feels using key words
- Technology: Demonstrate how to type words in meaningful sentences
- Technology: Demonstrate how to adjust and apply formatting to font using menus and buttons within the Home ribbon

Lesson 3: Descriptive Words (two-day lesson)

Objectives:

- Academic: Describe pictures using descriptive words
- Academic: Compose sentences using descriptive words
- Technology: Demonstrate how to type words in meaningful sentences
- Technology: Demonstrate how to change the font face and font color using the Font Face and Font Size drop-down menus
- Technology: Demonstrate how to insert clip art to illustrate key words

Lesson 4: Counting the Sides of Shapes (two-day lesson)

Objectives:

- Academic: Identify and classify shapes based on their attributes
- Technology: Demonstrate how to insert and format shapes in a document using the Shapes drop-down menu
- Technology: Demonstrate how to insert a text box using the Text Box drop-down menu, and type numbers within a text box
- Technology: Demonstrate how to insert a table using the Text Box drop-down menu, add the correct number of rows and columns, and format the table in a document

Lesson 5: Highlighting Main Idea (two-day lesson)

Objectives:

- Academic: Identify the main idea in informational text
- Technology: Demonstrate how to highlight the main idea of an article using the Highlighter tool
- Technology: Demonstrate how to use Word Art to create titles in a document
- Technology: Demonstrate how to add meaningful clip art to an article to express the main idea

Lesson 6: Navigating Text Features

Objectives:

- Academic: Identify text features in informational text
- Academic: Analyze and assess the use of text features in informational text
Lesson 7: Creating a Poster (two-day lesson)

Objectives:
- Academic: Plan and design an informational poster
- Academic: Create an informational poster using text features
- Technology: Demonstrate how to insert pictures from the computer into a document
- Technology: Demonstrate how to use font formatting features, insert shapes, clip art, and add text boxes in a document

Unit 3: Microsoft® PowerPoint

In this unit, your student will explore and be introduced to a variety of features in Microsoft® PowerPoint. He will learn how to make a presentation with different slide layouts, how to insert and move images, and how to add text to slides to classify objects and illustrate a food chain.

Objectives:
- Construct, interpret, and manipulate presentations to classify objects and illustrate a food chain
- Discriminate the similarities between objects to classify and categorize them
- Analyze elements within a food chain

Lesson 1: Classifying Information

Objectives:
- Academic: Identify similarities among objects
- Academic: Classify and categorize objects based on their similarities
- Technology: Demonstrate how to build a presentation by inserting new slides using the New Slide drop-down menu
- Technology: Demonstrate how to incorporate titles within text boxes on each slide to name a category
- Technology: Illustrate classified objects using clip art

Lesson 2: The Food Chain (two-day lesson)

Objectives:
- Academic: Identify and sequence plants and animals in a food chain
- Academic: Create a food chain to illustrate how animals satisfy their need for food
- Technology: Demonstrate how to incorporate new slides in order to build a presentation
- Technology: Demonstrate typing text and adding clip art to illustrate the food chain
- Technology: Demonstrate how to select and moves slides in order to create a food chain

Unit 4: Microsoft® Excel

In this unit, your student will learn how to navigate a Microsoft Excel workbook. Within lesson workbooks, she will navigate between sheets, and learn how to select cells in a specific column and row. She will learn how to copy and paste text and numbers into cells. Your student will also type numbers in a data table, and use the numbers to generate and interpret graphs and charts.

Objectives:
- Identify multiples of 5 and 10 and parts of 10
- Illustrate two parts of 10 on a ten-frame using a cell fill color
- Utilize a hundreds chart to find the missing part of 10 and complete a part-part-whole table
- Demonstrate typing in cells and navigating between cells and worksheets in a Microsoft Excel workbook
• Build, construct, and analyze different graphs to distinguish the more or less across categories

**Lesson 1: Skip Counting by 5s and 10s**

Objectives:
- **Academic:** Identify number patterns for multiples of 5 and 10
- **Academic:** Demonstrate skip counting in increments of 5 and 10 utilizing a hundreds chart
- **Technology:** Demonstrate navigating between cells using the mouse
- **Technology:** Demonstrate changing the cell fill color using the Fill drop-down menu

**Lesson 2: Parts of 10**

Objectives:
- **Academic:** Identify and illustrate parts of 10 using a ten-frame
- **Technology:** Demonstrate typing numbers in cells and navigating between worksheets
- **Technology:** Demonstrate changing the cell fill color using the Fill drop-down menu to illustrate parts of 10

**Lesson 3: Finding the Missing Part**

Objectives:
- **Academic:** Demonstrate counting on a hundreds chart
- **Academic:** Identify the missing part of 10
- **Academic:** Complete a part-part-whole table
- **Technology:** Demonstrate typing numbers in cells and navigating between worksheets
- **Technology:** Demonstrate changing the cell fill color using the Fill drop-down menu

**Lesson 4: Graphing Data (two-day lesson)**

Objectives:
- **Academic:** Collect data in order to generate graphs and charts in Microsoft® Excel
- **Academic:** Analyze graphs to identify and compare the amount in each category
- **Academic:** Identify the similarities and differences between a bar graph and a pie chart
- **Technology:** Demonstrate how to type in cells to add data
- **Technology:** Analyze graphs to compare data

**Unit 5: Keyboarding**

In this unit, your student will explore letter and number recognition. He will be able to locate all letter and number keys. Your student will demonstrate correct posture and finger position while typing and apply proper touch-typing skills to type the home row letters.

Objectives:
- Identify the letters a–z and the numbers 0–9 on the keyboard
- Demonstrate how to type the home row keys and the rows above and below the home row
- Demonstrate how to apply proper touch typing skills to type the letters J and F and the space bar
- Demonstrate correct posture and finger position while typing

**Lesson 1: Keyboarding Numbers and Letters**

Objectives:
- Identify and type the letters A–Z on the keyboard
- Identify and type the numbers 0–9 on the keyboard

**Lesson 2: Keyboarding Rows**

Objectives:
- Identify the home row of the keyboard
Lesson 3: J, F, Space Bar
Objectives:
• Apply proper touch typing skills to type the letters J and F and the space bar
• Demonstrate correct posture and finger position while typing

Lesson 4: D and K
Objectives:
• Apply proper touch typing skills to type the letters D and K
• Demonstrate correct posture and finger position while typing

Lesson 5: S and L
Objectives:
• Apply proper touch typing skills to type the letters S and L
• Demonstrate correct posture and finger position while typing

Lesson 6: A and ;
Objectives:
• Apply proper touch typing skills to type the letter A and ; (semicolon)
• Demonstrate correct posture and finger position while typing

Lesson 7: G and H (two-day lesson)
Objectives:
• Apply proper touch typing skills to type the letters G and H
• Demonstrate correct posture and finger position while typing

Unit 6: Study Skills
In this unit, your student will be introduced to basic study skills. The lessons in this unit include listening skills, organizational skills, and other skills to help your student become a successful learner. Your student will learn how to set realistic goals and will have the opportunity to create her own goals for this course. The important skills taught in this unit apply not only to Educational Technology and Online Learning but to all academic areas, as well as to the real world.

Objectives:
• Identify ways to develop a work environment
• Identify and illustrate skills in listening and following directions
• Explain how maps demonstrate what we know about places
• Recognize the importance of managing time, technology, and activities as an online learner
• Create personal and learning goals

Lesson 1: Creating a Proper Work Environment
Objectives:
• Describe the importance of having a special work environment
• Identify ways to develop a work environment
• Identify good study habits
• Apply digital tools and resources to address a variety of tasks and problems

Lesson 2: Listening and Following Directions
Objectives:
• Recognize the importance of understanding and following directions
• Identify skills in listening and following directions
• Apply digital tools and resources to illustrate skills in listening and following directions

Lesson 3: Using Visuals
Objectives:
- Identify how maps offer ways to understand new information about places
- Explain how maps demonstrate what is known about places
- Communicate about technology using developmentally appropriate and accurate terminology
- Apply digital tools and resources to address a variety of tasks and problems
- Demonstrate the ability to navigate in virtual environments such as electronic books, simulation software, and websites

Lesson 4: Organization

Objectives:
- Learn the importance of managing your time and activities
- List steps to prepare for daily study and activities
- Communicate about technology using developmentally appropriate and accurate terminology
- Independently apply digital tools and resources to address a variety of tasks and problems
- Demonstrate the ability to navigate in virtual environments such as electronic books, simulation software, and websites

Lesson 5: Online Learning

Objectives:
- Compare and contrast online learning with a bricks-and-mortar school
- Describe how an online student may use a computer
- Apply digital tools and resources to address a variety of tasks and problems
- Communicate about technology using developmentally appropriate and accurate terminology

Lesson 6: Goal Setting (two-day lesson)

Objectives:
- Explain what goals are
- Create a personal goal and a learning goal
- Discuss technology using developmentally appropriate and accurate terminology

Unit 7: Internet Safety

In this unit, your student will learn about Internet safety. The goal of the lessons in this unit is to educate your student on how to avoid dangerous, inappropriate, or unlawful online behavior. Your student will become aware of the dangers associated with the Internet by reading stories and scenarios, learning safety tips, and completing related activities.

Objectives:
- Demonstrate an understanding of Cyberspace as a community of real people
- Identify the differences between offline and online bullying
- Discuss what a computer virus is, how a virus spreads, the damage a virus can cause, and virus prevention techniques
- Explain that there are strangers in the cyber community just as there are strangers in the physical community
- Identify and describe the basic danger of revealing personal information online

Lesson 1: Cyber Community

Objectives:
- Demonstrate an understanding of cyberspace as a community of real people
- Demonstrate an understanding that children need to have the help of an adult when exploring the cyber community

Lesson 2: Cyber Citizenship
• Explain that bullying is intentionally hurting or being mean to someone
• Identify the differences between offline and online bullying

**Lesson 3: Cybersecurity**

Objectives:
• Explore e-mail as a means of communication
• Identify when an e-mail or communication on the Internet can make a person feel uncomfortable
• Create a strategy for responding to communication that is inappropriate
• Demonstrate safe and cooperative use of technology

**Lesson 4: Personal Safety, Part 1**

Objectives:
• Describe how computers can become infected with viruses
• Discuss the concept of what a computer virus is, how a virus spreads, the damage a virus can cause, and virus prevention techniques
• Demonstrate safe and cooperative use of technology

**Lesson 5: Personal Safety, Part 2 (two-day lesson)**

Objectives:
• Explain the basic danger of revealing personal information online
• Explain that there are strangers in the cyber community, just as there are strangers in the physical community
• Apply learning by making informed choices about revealing information online
• Demonstrate safe and cooperative use of technology
EDUCATIONAL TECHNOLOGY AND ONLINE LEARNING

2
Educational Technology and Online Learning 2

In this course, students use appropriate technology tools and resources to complete projects, and solve problems. Students use software to draw, write, organize, and present information and data. Students learn listening and organizational skills and set attainable learning goals. Students become responsible users of technology as they learn about Internet safety and appropriate online behavior.

Unit 1: Introduction and Tux Paint

In this unit, your student will learn the basic tools of a draw and paint program. Your student will learn how to use the paintbrush and other drawing tools, the text tool, the shape tool, and the fill bucket. He will also be able to draw pictures and select images from a gallery.

Objectives:
- Describe the correct sounds for the ck blend, th and sh digraphs, and the r-controlled vowels er, ir, and ur
- Identify and demonstrate telling time in hour, half hour and quarter increments
- Demonstrate how to use the Paint tool, Text tool, Magic tool, and Stamp tool in Tux Paint
- Create a Tux Paint illustration using formatting options and the Custom palette
- Apply Tux Paint tools to convey meaning

Lesson 1: Words Ending with -ck (two-day lesson)

Objectives:
- Academic: Describe the correct sound for the -ck blend
- Academic: Identify and read words ending with the -ck blend
- Academic: Define and identify the rhythm in a poem
- Technology: Demonstrate how to use the Stamp tool in Tux Paint to illustrate a poem
- Technology: Demonstrate how to use the formatting options for the Paint and Text tools, to add words ending with -ck

Lesson 2: Diagraphs sh and th (two-day lesson)

Objectives:
- Academic: Identify the correct sounds for the sh and th digraphs
- Academic: Discuss and read words with the /sh/ and /th/ sounds
- Academic: Relate knowledge of the correct sounds for the sh and th digraph to identify other words that have the /sh/ and /th/ sounds
- Technology: Demonstrate how to use the Text tool and Stamp tool in Tux Paint to type and illustrate words with sh and th
- Technology: Demonstrate how to color code the /sh/ and /th/ sounds in words using the Color and Custom palettes

Lesson 3: R-Controlled Vowel Words: er, ir, ur (two-day lesson)

Objectives:
- Academic: Identify the correct sounds for the r-controlled vowels er, ir, and ur
- Academic: Demonstrate how to read words with er, ir, and ur
- Academic: Relate knowledge of the correct /er/ sound for the r-controlled vowels er, ir, and ur to identify other words with er, ir, and ur vowel patterns
- Technology: Demonstrate how to use the Stamp tool in Tux Paint to illustrate words with er, ir, and ur
- Technology: Demonstrate how to use the formatting options for the Paint and Text tools to identify the er, ir, and ur r-controlled patterns in words

Lesson 4: Telling Time (two-day lesson)

Objectives:
- Academic: Demonstrate how to tell time to the hour, half hour, and quarter hour in accurate minute increments

© 2013 Connections Education LLC. All rights reserved.
Unit 2: Microsoft® Word

In this unit, your student will learn basic Microsoft Word techniques including how to type text, insert and format tables, highlight, align, and format text, insert WordArt, and use the Spelling and Grammar tool to check her work.

Objectives:
- Demonstrate how to format text in order to identify consonant blends, common and proper nouns, rhyming words, and different characters within a story dialogue
- Explain how to insert clip art and WordArt in a document to illustrate concepts
- Evaluate and revise writing using the Spelling and Grammar tool
- Demonstrate how to draw tables in various sizes to organize content
- Discuss and construct rhyming, acrostic, and haiku poems

Lesson 1: Words with Consonant Blends: -ng and -nk

Objectives:
- Academic: Identify the correct sounds for -ng and -nk consonant blends
- Academic: Demonstrate how to read words with -ng and -nk consonant blends
- Academic: Relate knowledge of -ng and -nk consonant blends to identify other words with -ng and -nk consonant blends
- Technology: Demonstrate how to insert and format tables in a document, including typing and changing the size of text, and change cell fill color using the Fill drop-down menu
- Technology: Demonstrate how to highlight consonant blends using the Highlighter drop-down menu

Lesson 2: Identifying Common and Proper Nouns

Objectives:
- Academic: Identify common and proper nouns and recognize each in a sentence
- Academic: Compose sentences using common and proper nouns
- Technology: Demonstrate how to type words and sentences in a document
- Technology: Demonstrate how to use the Shift key to type capital letters
- Technology: Demonstrate how to type common and proper nouns into the correct column within a table

Lesson 3: Rhyming Words (two-day lesson)

Objectives:
- Academic: Identify word families to create rhyming words
- Academic: Identify words that rhyme with one another
- Technology: Demonstrate how to type words and sentences within a document
- Technology: Demonstrate how to highlight word families using the Highlighter tool
- Technology: Demonstrate how to create and insert WordArt to label a word family

Lesson 4: Reading and Writing Poetry

Objectives:
- Academic: Discuss and create a poem using rhyming words
- Academic: Identify and describe rhyming words in a poem
- Technology: Demonstrate how to type words and begin separate lines in a poem using the Enter key
- Technology: Demonstrate how to properly use the Center Align button to align the poem in the center of a page
Lesson 5: Writing an Acrostic Poem

Objectives:
- Academic: Identify the structure of an acrostic poem
- Academic: Create a named acrostic poem
- Technology: Demonstrate how to select text using the select all keyboard shortcut Ctrl + A
- Technology: Demonstrate how to format text using the Font Face and Font Color drop-down menus

Lesson 6: Writing a Haiku

Objectives:
- Academic: Identify a haiku poem and describe its structure
- Academic: Compose a haiku poem
- Technology: Demonstrate how to center align text using the Center Align button
- Technology: Demonstrate how to format text, change font face, and change font size using the Font Size drop-down menu
- Technology: Demonstrate how to insert clip art using the Clip Art button in the Insert ribbon

Lesson 7: Identifying Characters in Dialogue (two-day lesson)

Objectives:
- Academic: Identify the different characters speaking within a story and a poem
- Academic: Analyze character interactions and viewpoints within a story dialogue
- Technology: Identify different characters within a story dialogue, and color code them using the Highlighter tool
- Technology: Demonstrate how to insert quotation marks when typing a sentence in a document

Lesson 8: Compare and Contrast (two-day lesson)

Objectives:
- Academic: Create, analyze, compare, and contrast still life artwork
- Academic: Describe patterns or themes found in artwork
- Technology: Demonstrate how to create a table to compare and contrast
- Technology: Demonstrate how to format text within a table
- Technology: Demonstrate inserting an image from the computer into a document using the Picture button

Lesson 9: Writing a Book Report (two-day lesson)

Objectives:
- Academic: Compose a book report
- Academic: Paraphrase text and identify the main idea and supporting details
- Technology: Demonstrate how to type words, sentences, and numbers to create a book report
- Technology: Demonstrate how to use the Spelling and Grammar tool to make corrections

Unit 3: Microsoft® PowerPoint

In this unit, your student will explore and be introduced to a variety of features in Microsoft® PowerPoint. He will learn how create slides, add and change the font color of text, use the Slide Sorter view to sequence and reorganize information, add clip art, as well as play the slideshow from the beginning.

Objectives:
- Describe how to arrange items in the correct sequence of events
- Construct a PowerPoint presentation with text, clip art, and a title slide
- Demonstrate how to use the Slide Sorter view to change the order of events

Lesson 1: Sequencing Events
Objectives:
- Academic: Identify and explain sequence words
- Technology: Demonstrate how to use the Slide Sorter View to move slides within a presentation
- Technology: Identify the main idea and create a title slide using the New Slide drop-down menu
- Technology: Demonstrate how to incorporate appropriate clip art in a presentation to illustrate the main idea
- Technology: Demonstrate how to add text to individual slides within a presentation

Lesson 2: Sequencing Events II (two-day lesson)

Objectives:
- Academic: Identify sequencing words and explain the order of events
- Technology: Demonstrate how to use the Slide Sorter View to sequence slides within a presentation
- Technology: Create a new title slide and add text to individual slides within a presentation
- Technology: Demonstrate how to incorporate appropriate clip art for a presentation
- Technology: Apply a different font color using the Font color drop-down menu to identify sequencing words

Unit 4: Microsoft® Excel

In this unit, your student will use tools and features in Microsoft® Excel in order to solve problems. She will enter text and numbers in cells, navigate between cells, navigate between worksheets, and use formatting tools within cells.

Objectives:
- Utilize Microsoft® Excel to demonstrate an understanding of compound words, prefixes, and suffixes
- Reinforce number sense skills such as addition, subtraction, fact families, and place value
- Demonstrate how to type in cells and navigate cells in Microsoft Excel
- Explain how to use features such as copy/paste, add borders, and change the cell fill color in Microsoft Excel

Lesson 1: Identifying Compound Words (two-day lesson)

Objectives:
- Academic: Identify and explain the two words that make up a compound word
- Academic: Identify compound words
- Technology: Demonstrate how to select and type in cells and navigate between worksheets
- Technology: Apply borders to cells using the Borders drop-down menu in the Home ribbon

Lesson 2: Identifying Prefixes and Suffixes

Objectives:
- Academic: Identify and understand the meaning of prefixes and suffixes
- Academic: Demonstrate how to break down words into root words, prefixes, and suffixes
- Technology: Apply and change the color of borders using the Borders drop-down menu in the Home ribbon
- Technology: Explain how to type in cells and demonstrate individual cell navigation

Lesson 3: Place Value (two-day lesson)

Objectives:
- Academic: Identify how many ones, tens, and hundreds are in a number
- Academic: Demonstrate how to write a number in standard form
- Technology: Explain how to type in cells and demonstrate individual cell navigation
• Technology: Apply cell borders using the Borders drop-down menu
• Technology: Format and apply a cell fill color using the Fill drop-down menu

**Lesson 4: Making 10 to Add 9**

Objectives:
• Academic: Demonstrate how to use ten-frames to help make groups of 10 in order to add 9
• Academic: Solve addition facts to gain fluency and demonstrate an increased sense of number awareness and relationships
• Technology: Demonstrate how use the Fill drop-down menu to change the cell fill color in order to practice addition facts and make groups of 10
• Technology: Demonstrate how to type numbers in cells

**Lesson 5: Making 10 to Add 8 (two-day lesson)**

Objectives:
• Academic: Demonstrate how to use ten-frames to help make groups of 10 in order to add 8
• Academic: Solve addition facts to gain fluency and demonstrate an increased sense of number awareness and relationships
• Technology: Demonstrate how to use the Fill drop-down menu to change the fill color of cells in order to practice addition facts and make groups of 10
• Technology: Demonstrate how to type numbers within cells

**Lesson 6: Adding with Regrouping (two-day lesson)**

Objectives:
• Academic: Explain and use math vocabulary: addend and sum
• Academic: Solve addition problems involving regrouping
• Academic: Evaluate addition strategies, including drawing the addition problem and using virtual manipulatives
• Technology: Demonstrate and evaluate how Microsoft® Excel can be helpful in checking answers
• Technology: Demonstrate how to navigate individual cells in a workbook

**Lesson 7: Thinking Addition to 10 to Subtract**

Objectives:
• Academic: Demonstrate how to subtract using the concept of addition
• Academic: Explain how addition and subtraction strategies work
• Academic: Investigate fact families in order to understand the relationship between subtraction and addition
• Technology: Demonstrate how to use the Fill drop-down menu to change the cell fill color
• Technology: Demonstrate how to type numbers within cells

**Unit 5: Keyboarding**

In this unit, your student will identify and type numbers and letters on the keyboard. Your student will demonstrate correct posture and finger position while typing in home row, as well as the rows above and below home row.

Objectives:
• Apply proper touch typing skills to type simple letters and words
• Identify home row, and the rows above and below home row
• Demonstrate proper touch typing posture and finger position while typing

**Lesson 1: Keyboarding Numbers and Letters**

Objectives:
• Identify and type the letters A–Z on the keyboard
• Identify and type the numbers 0–9 on the keyboard

**Lesson 2: Keyboarding Rows**
Objectives:
- Identify the home row of the keyboard
- Identify the rows above and below the home row
- Demonstrate how to type letters above and below the home row

Lesson 3: Keyboarding Practice Animals
Objectives:
- Identify and type the letters A–Z on the keyboard
- Identify and demonstrate how to type words relating to four animals

Lesson 4: Keyboarding Review
Objectives:
- Identify the home row keys
- Apply proper touch typing skills to type the letters J, F, D, K, and the space bar
- Demonstrate correct posture and finger position while typing

Lesson 5: Y and T (two-day lesson)
Objectives:
- Apply proper touch typing skills to type the letters Y and T
- Demonstrate proper touch typing posture and finger position while typing

Lesson 6: B and N
Objectives:
- Apply proper touch typing skills to type the letters B and N
- Demonstrate proper touch typing posture and finger position while typing

Lesson 7: U and R
Objectives:
- Apply proper touch typing skills to type the letters U and R
- Demonstrate proper touch typing posture and finger position while typing

Lesson 8: V and M
Objectives:
- Apply proper touch typing skills to type the letters V and M
- Demonstrate proper touch typing posture and finger position while typing

Lesson 9: E and I
Objectives:
- Apply proper touch typing skills to type the letters E and I
- Demonstrate proper touch typing posture and finger position while typing

Lesson 10: Review (two-day lesson)
Objectives:
- Apply proper touch typing skills to type simple words using the keys learned in Lessons 1–10
- Demonstrate proper touch typing posture and finger position while typing

Unit 6: Study Skills
In this unit, your student will be introduced to basic study skills. The lessons in this unit include listening skills, organizational skills, and other skills to help your student become a successful learner. Your student will learn how to set realistic goals and will have the opportunity to create her own goals for this course. The important skills taught in this unit apply not only to Educational Technology and Online Learning but to all academic areas, as well as to the real world.
Objectives:
- Apply knowledge of digital tools and resources to complete tasks and problem solve
- Explain how to use technology using accurate terminology
- Evaluate environments that make a good study space
- Discuss the difference between online learning and traditional learning
- Explain how organization and schedules help learning

Lesson 1: Creating a Proper Work Environment

Objectives:
- Identify characteristics of a study space
- Evaluate an environment to determine what makes it a good study space

Lesson 2: Listening and Following Directions

Objectives:
- Identify attributes of a good listener
- Explain why it is important to have good listening skills

Lesson 3: Visualization

Objectives:
- Identify how timelines and pictures make new information easier to understand
- Explain how timelines and pictures provide a way to show what is known about events

Lesson 4: Organization

Objectives:
- Explain why a schedule is an important organizational tool for learning
- Create a study schedule

Lesson 5: Online Learning

Objectives:
- Compare online learning with bricks-and-mortar schools
- Analyze feelings about new aspects of online learning

Lesson 6: Goal Setting (two-day lesson)

Objectives:
- Identify the difference between short-term and long-term goals
- Create one long-term goal and two short-term goals

Unit 7: Internet Safety

In this unit, your student will learn about Internet safety. The goal of the lessons in this unit is to educate your student on how to avoid online dangers and stay safe while using the Internet. Your student will learn about the dangers of cyberbullies, strangers, and computer viruses by reading stories, discussing a variety of scenarios, learning safety tips, and completing other related activities.

Objectives:
- Demonstrate an understanding that children need to have the help of an adult when exploring the cyber community
- Discuss appropriate communication in cyberspace
- Explain the need for caution when opening emails and and examine the concept that computers can become infected with viruses
- Demonstrate an understanding of personal and online identity and making responsible choices to ensure safety in the cyber community
- Develop procedures for responding to unsafe or inappropriate online situations

Lesson 1: Cyber Citizenship: Part 1

Objectives:
- Distinguish between the community and the cyber community
- Demonstrate an understanding that children need to have the help of an adult when exploring the cyber community
Lesson 2: Cyber Citizenship: Part 2

Objectives:
- Describe cyberspace as a community of real people
- Discuss how unkind communication in cyberspace is the same as unkind communication in the physical world
- Identify appropriate online behavior as netiquette
- Explain that children need to have the help of an adult when exploring the cyber community
- Distinguish between bullying in the community and in cyberspace

Lesson 3: Cybersecurity

Objectives:
- Describe e-mail as a means for communication
- Explain that computers can be damaged by e-mails containing computer viruses
- Explain safe procedures for using e-mail

Lesson 4: Personal Safety: Part 1

Objectives:
- Explain the need to make responsible choices to ensure personal safety when using the Internet
- Identify ways to ensure personal safety in cyberspace

Lesson 5: Personal Safety: Part 2

Objectives:
- Explain the need to make responsible choices to ensure personal safety when using the Internet
- Identify ways to ensure personal safety in cyberspace

Lesson 6: Acceptable Use Policy (two-day lesson)

Objectives:
- Create usable and age-appropriate guidelines for safe and responsible technology use
- Discuss consequences for unacceptable use
- Develop procedures for responding to unsafe or inappropriate online situations
EDUCATIONAL TECHNOLOGY
AND ONLINE LEARNING
3
Educational Technology and Online Learning 3

In this course, students use appropriate technology tools and resources to complete projects, manage information, and solve problems. Students use software to write, organize, analyze, and present information and data. Students learn listening and organizational skills and set attainable learning goals. Students become responsible users of technology as they learn about Internet safety and appropriate online behavior.

Unit 1: Keyboarding

In this unit, you will identify the home row and the rows above and below the home row. You will review the keyboarding skills learned in Lessons 6–10 of the Touch Typing Program. You will demonstrate correct posture and finger position while typing and apply proper touch typing skills to type the letters c, w, o, x, q, p, and z, the comma key, period key, and the forward slash key. Finally, you will complete a typing speed test.

Objectives:
- Identify the home row and the rows above and below the home row
- Review the keyboarding skills learned in Lessons 6–10 of the Touch Typing Program
- Demonstrate correct posture and finger position while typing
- Apply proper touch typing skills to type the letters c, w, o, x, q, p, and z, the comma key, period key, and the forward slash key

Lesson 1: Keyboarding Rows

Objectives:
- Demonstrate how to type the home row and the rows above and below the home row
- Demonstrate correct posture and finger position while typing
- Identify the home row of the keyboard
- Identify the rows above and below the home row

Lesson 2: Review Lessons 6–10 (two-day lesson)

Objectives:
- Apply proper touch typing skills and finger position to type the keys learned in Lessons 6–10
- Demonstrate how to type the home row and the rows above and below the home row
- Identify the home row of the keyboard
- Identify the rows above and below the home row

Lesson 3: Letter C and the Comma Key

Objectives:
- Apply proper touch typing skills and finger position to type the letter C and the comma key
- Demonstrate how to type the home row and the rows above and below the home row
- Identify the home row of the keyboard
- Identify the rows above and below the home row

Lesson 4: Letters W and O

Objectives:
- Apply proper touch typing skills and finger position to type the letters W and O
- Demonstrate how to type the home row and the rows above and below the home row
- Identify the home row of the keyboard
- Identify the rows above and below the home row

Lesson 5: Letter X and the Period Key

Objectives:
- Identify the home row of the keyboard
- Identify the rows above and below the home row
Demonstrate how to type the home row and the rows above and below the home row
Apply proper touch typing skills and finger position to type the letter X and the period key

Lesson 6: Letters Q and P
Objectives:
- Identify the home row of the keyboard
- Identify the rows above and below the home row
- Demonstrate how to type the home row and the rows above and below the home row
- Apply proper touch typing skills and finger position to type the letters Q and P

Lesson 7: Letter Z and the Forward Slash Key
Objectives:
- Identify the home row of the keyboard
- Identify the rows above and below the home row
- Demonstrate how to type the home row and the rows above and below the home row
- Apply proper touch typing skills and finger position to type the letter Z and the forward slash key

Lesson 8: Review (two-day lesson)
Objectives:
- Identify the home row of the keyboard
- Identify the rows above and below the home row
- Demonstrate how to type the home row and the rows above and below the home row
- Apply proper touch typing skills and finger position to type simple words

Unit 2: Microsoft® Word
In this unit, your student will learn basic Microsoft® Word tools to organize and communicate information in language arts. He will also learn how to type and format words and sentences, insert and format tables, use the Spelling and Grammar tool, and insert clip art and WordArt. For the portfolio assessment, he will research pollution, and the effects on the environment. He will learn how to reduce air, water, and land pollution. He will then organize the information using the outline view in Microsoft Word. To enhance his learning, he will watch Discovery Education™ streaming movies, eBooks, and BrainPOP® movies.
Objectives:
- Demonstrate how to draw and format tables in various sizes to organize content
- Demonstrate how to type and format text in order to identify consonant blends, contractions, vocabulary words, adjectives, adverbs, multiple meaning words, and story elements
- Evaluate and revise writing using the Spelling and Grammar tool
- Explain how to insert clip art and WordArt to illustrate concepts and visually enhance a document
- Utilize the outline view to organize research on how to reduce air, water, and land pollution

Lesson 1: Consonant Blends
Objectives:
- Academic: Demonstrate how to read and write words with the beginning consonant blends cr-, fr-, pl-, pr-, and sm-
- Technology: Use the Enter key to start a new line of text in a document
- Technology: Demonstrate how to insert a table in a document to sort and organize words
- Technology: Demonstrate how to highlight consonant blends using the Highlighter drop-down menu

Lesson 2: Contractions
Objectives:
• Academic: Demonstrate how to read and write contractions
• Academic: Evaluate and revise writing using the Spelling and Grammar tool
• Technology: Use the Enter key to start a new line of text in a document
• Technology: Demonstrate how to insert a table in a document to organize words
• Technology: Demonstrate how to format text by changing the font face, font size, and font style to bold, italics, or underline in order to identify contractions

Lesson 3: Reference Tools
Objectives:
• Academic: Use an online dictionary to define words
• Technology: Use the Research button to access the online dictionary
• Technology: Minimize and maximize a window to organize documents

Lesson 4: Multiple-Meaning Words
Objectives:
• Academic: Clarify the meaning of multiple-meaning words
• Academic: Use the words that come before and after an unknown word in a sentence to understand its meaning
• Technology: Use the Enter key to start a new line of text in a document
• Technology: Demonstrate how to type sentences with multiple-meaning words within a document
• Technology: Change the font color of clue words in a sentence that help you figure out the correct meaning of multiple meaning words

Lesson 5: Connecting Adjectives to the Real World
Objectives:
• Academic: Use adjectives in sentences to improve descriptive writing skills
• Technology: Use the Enter key to start a new line of text in a document
• Technology: Demonstrate how to type sentences with adjectives within a document
• Technology: Demonstrate how to change the font face, font size, and font style in order to bold, italicize, or underline adjectives
• Technology: Insert clip art in a document and write sentences with adjectives describing the picture

Lesson 6: Adverbs
Objectives:
• Academic: Use adverbs in sentences to improve writing skills
• Technology: Demonstrate how to properly use the Center Align button to align a title in the center of a page
• Technology: Demonstrate how to type words and sentences within a document and wrap text around a picture
• Technology: Demonstrate how to change the font face, font size, and font style to bold, italicize, or underline adverbs
• Technology: Insert clip art in a document and write sentences with adverbs describing the picture

Lesson 7: Choose the Best Title - Main Idea
Objectives:
• Academic: Create a title for a story based on the main idea
• Technology: Type words and sentences within a document to explain how you chose a new title for the story
• Technology: Demonstrate how to use the keyboard shortcuts Ctrl + C and Ctrl + V to copy and paste the best titles for stories from one document to another document quickly
• Technology: Demonstrate how to create and insert WordArt for a title of a story
Lesson 8: Pictures Supporting Stories

Objectives:
- Academic: Explain how illustrations contribute to a story
- Technology: Demonstrate how to type words and sentences within a document
- Technology: Demonstrate how to change the font face, font size, and font style to bold, italics, or underline to draw attention to important ideas
- Technology: Demonstrate how to properly use the Left, Right, or Center Align buttons to align text on a page

Lesson 9: Characters Influencing a Story (two-day lesson)

Objectives:
- Academic: Describe how a character's actions in a story contribute to the sequence of events
- Technology: Demonstrate how to format text, change font face, and change font size to draw attention to important text

Lesson 10: Compare and Contrast (two-day lesson)

Objectives:
- Academic: Compare and contrast the plots of two stories written by the same author
- Technology: Demonstrate how to format text using the Bold button in the Home Ribbon
- Technology: Demonstrate how properly use the Center align button

Lesson 11: Pollution (two-day lesson)

Objectives:
- Academic: Research information on pollution to identify the harmful effects on the environment and how to reduce air, water, and land pollution
- Academic: Organize information into an outline with headings and subtopics
- Technology: Use the outline view to organize research on actions to reduce pollution

Unit 3: Microsoft® PowerPoint

In this unit, you will explore a variety of features in Microsoft® PowerPoint to improve the way you communicate information. You will learn how to insert a text box, tables, shapes, WordArt, and clip art on a slide. You will use the Slide Sorter view to move and insert slides within a presentation. For your portfolio, you will research natural disasters and action plans and create a PowerPoint presentation of the information that you find.

Objectives:
- Research natural disasters and create a presentation detailing an action plan
- Utilize and insert clip art, WordArt, and shapes in a presentation to define quadrilaterals and illustrate a natural disaster
- Demonstrate how to use the Slide Sorter view to change the order of slides and to add slides to a presentation
- Demonstrate how to draw text boxes and tables and format the cell fill color to show comparisons
- Experiment and complete math problems using the annotation features within a presentation

Lesson 1: Ordering Numbers

Objectives:
- Academic: Demonstrate how to order three-digit numbers in standard and expanded form
- Technology: Demonstrate how to insert and format a text box within slides in a presentation in order to compare numbers
- Technology: Use the Slide Sorter view to change the order of the slides to show your understanding of ordering numbers
Lesson 2: Adding Three-Digit Numbers

Objectives:
- Academic: Demonstrate how to add three-digit numbers
- Technology: Demonstrate how to use the Annotation tool in Slide Show view
- Technology: Demonstrate how to save a final copy of the annotated presentation that shows how you solved the math problem

Lesson 3: Fractions (two-day lesson)

Objectives:
- Academic: Identify the numerator and denominator of fractions
- Academic: Utilize pictures in order to compare fractions
- Technology: Demonstrate how to insert and add a table using the Table drop-down menu to organize information on fractions
- Technology: Demonstrate knowledge of comparing fractions by using the Shape Fill drop-down menu to change the cell fill color within a table

Lesson 4: Quadrilaterals

Objectives:
- Academic: Identify and illustrate examples of quadrilaterals, such as a rectangle, square, or rhombus
- Technology: Demonstrate how to insert and format a text box
- Technology: Demonstrate how to insert and format shapes

Lesson 5: Scientific Method (two-day lesson)

Objectives:
- Academic: Explain and sequence the steps of the scientific method
- Academic: Plan and conduct an experiment using the scientific method
- Technology: Explain how to insert WordArt to illustrate concepts in a presentation
- Technology: Demonstrate how to type text within a table to display collected information

Lesson 6: Natural Disasters (two-day lesson)

Objectives:
- Academic: Describe different types of natural disasters and their impact on the environment and society
- Academic: Create an action plan by researching information about a variety of natural disasters to determine societal and environmental impacts
- Technology: Create a Microsoft® PowerPoint presentation that describes an action plan to respond to natural disasters
- Technology: Demonstrate how to insert a new slide and add a text box to add information about natural disasters
- Technology: Demonstrate how to insert WordArt and clip art to illustrate concepts about natural disasters

Unit 4: Microsoft® Excel

In this unit, your student will use tools and features in Microsoft Excel to solve math problems. He will type numbers in cells, insert formulas, make tables, create bar graphs, and use formatting tools to visually present math concepts and analyze data.

Objectives:
- Demonstrate how to create a table with rows and columns to organize content and compare three-digit numbers
- Explain, illustrate, and interpret data in a bar graph
- Apply addition and subtraction concepts to solve one- and two-step problems in order to determine “how many more” and “how many less”
- Demonstrate how to insert a formula to calculate area, perimeter, and convert liquid measurements of gallons, quarts, pints, and cups
- Apply a fill color to rows and columns and borders to tables to emphasize specific information
Lesson 1: Place Value

Objectives:
- Academic: Demonstrate how to compare three-digit numbers from least to greatest
- Academic: Demonstrate how to write a number in standard and expanded form
- Academic: Explain that a three-digit number represents hundreds, tens, and ones
- Technology: Demonstrate how to type numbers in a cell and format the cells to appear in a table using the Borders drop-down menu
- Technology: Demonstrate how to apply a cell fill color using the Fill drop-down menu to show which number is greater

Lesson 2: Multiplication and Repeated Addition (two-day lesson)

Objectives:
- Academic: Solve multiplication and addition problems
- Academic: Identify the relationship between multiplication and repeated addition
- Technology: Demonstrate how to use the AutoSum function to find the sum of an addition problem
- Technology: Demonstrate how to create and type formulas in Microsoft® Excel to solve multiplication problems
- Technology: Explain how to create a table and type data into cells

Lesson 3: Commutative Property

Objectives:
- Academic: Demonstrate how to add three addends using the commutative property
- Academic: Solve a word problem by adding three addends together
- Technology: Demonstrate how to create and type a formula to solve an addition problem
- Technology: Utilize the AutoSum and AutoFill features to add and apply an addition formula to other cells in the workbook

Lesson 4: How Many More, How Many Less

Objectives:
- Academic: Apply subtraction concepts to solve one- and two-step problems to determine “how many more” or “how many less”
- Academic: Apply knowledge of bar graphs to interpret data
- Technology: Identify and label parts of a bar graph in order understand the data
- Technology: Utilize the subtraction formula in Microsoft® Excel to solve problems

Lesson 5: Measuring Liquids: Capacity

Objectives:
- Academic: Apply multiplication concepts in order to convert units of capacity
- Academic: Identify units of capacity: gallons, quarts, pints, and cups
- Technology: Demonstrate how to type and apply a multiplication formula to convert liquid measurements

Lesson 6: Area

Objectives:
- Academic: Apply addition concepts to find the area of a rectangle by adding the square units
- Academic: Demonstrate how to calculate the area of a rectangle by multiplying the length and width
- Technology: Demonstrate how to type and apply a multiplication formula in a spreadsheet to calculate area of a rectangle
- Technology: Add data to a table to organize length and width measurements
Lesson 7: Perimeter

Objectives:
• Academic: Apply addition concepts to calculate the perimeter of a shape when given the length of sides
• Academic: Demonstrate how to find the length of an unknown side when given the perimeter of a shape
• Technology: Use Geoboard software to design shapes and calculate perimeter
• Technology: Demonstrate how to type and apply an addition formula in a Microsoft® Excel spreadsheet to calculate perimeter
• Technology: Add data to a table to organize the lengths of each side of a shape

Lesson 8: Sorting Data (two-day lesson)

Objectives:
• Academic: Describe how to interpret data in a bar graph
• Technology: Demonstrate how to order numbers from least to greatest using the Sort button
• Technology: Demonstrate how to create a bar graph using provided data and label it accordingly

Unit 5: Study Skills

In this unit, you will learn study skills to help you succeed in school and beyond. You will create a study schedule to organize schoolwork, use note taking to make sense of information, use visual organizers to help improve your writing and organize information, and create short and long-term goals for learning. You will watch Discovery Education™ streaming movies on listening skills, organizational skills, and other study skills that will help you become a successful learner. The important skills taught in this unit apply not only to Educational Technology and Online Learning but to all academic areas, as well as to the real world.

Objectives:
• Describe the qualities of an active listener
• Demonstrate how to create a study schedule to organize schoolwork
• Demonstrate how to use note taking strategies to make sense of information
• Utilize visual organizers to improve writing and organize information
• Demonstrate how to create short- and long-term goals for learning

Lesson 1: Listening Skills

Objectives:
• Explain the importance of active listening
• Describe characteristics of an active listener

Lesson 2: Organization and Time Management

Objectives:
• Explain the importance of being organized and having a study schedule
• Create a study schedule

Lesson 3: Note Taking

Objectives:
• Use note-taking strategies to make sense of information

Lesson 4: Using Timelines

Objectives:
• Use visual organizers to improve writing and organize information
• Use a CE-created Timeline to analyze information provided

Lesson 5: Online Learning

Objectives:
• Compare online and bricks-and-mortar schools
• Describe the benefits and challenges of being an online learner
Lesson 6: Goal Setting (two-day lesson)

Objectives:
- Distinguish between short- and long-term goals
- Set short- and long-term goals for learning

Unit 6: Internet Safety

In this unit, you will learn about Internet safety. You will learn to responsibly use technology as a tool to research, organize, evaluate, and communicate information. You will distinguish between appropriate, or safe, and inappropriate, or not safe, websites and privacy, or personal, issues to keep you safe while using the Internet. For the portfolio assignment, you will create rules for safe and responsible technology use in the cyber community in a Microsoft® Word document.

Objectives:
- Demonstrate an understanding of rules to follow to stay safe when online
- Describe how personal information can be made public when taking part in online activities that seem safe
- Describe responsible choices to be sure of personal safety when using the Internet
- Distinguish between appropriate and inappropriate websites

Lesson 1: Cyber Community

Objectives:
- Demonstrate an understanding of rules to follow to stay safe when online
- Distinguish between the physical community and the cyber community
- Describe the concept of cyber citizenship

Lesson 2: Citizenship and Safety

Objectives:
- Distinguish between appropriate and inappropriate websites
- Demonstrate an understanding of rules to follow to stay safe when online
- Explain the concept of cyber citizenship

Lesson 3: Cyberbullying

Objectives:
- Compare and contrast bullying in the physical community to cyberbullying
- Describe kindness and how it relates to Internet behavior
- Demonstrate how to use appropriate resources if confronted with an online bully
- Explain how netiquette relates to cyber citizenship

Lesson 4: Cybersecurity and E-mail Attachments

Objectives:
- Describe how computers can be damaged by e-mails containing computer viruses
- Demonstrate prevention techniques to avoid computer viruses
- Explain safe procedures for using e-mail

Lesson 5: Intellectual Property: Part 1

Objectives:
- Describe different types of media that are intellectual property, such as writings, music, videos, and computer games
- Explain how property on the Internet can be owned just like physical property
- Demonstrate an understanding of the copyright laws that protect intellectual property

• Explain the meaning of the copyright symbol
• Demonstrate use of the copyright symbol to indicates one’s ownership of intellectual property
• Create a project to demonstrate and share knowledge about use of the copyright symbol

**Lesson 7: Personal Safety: Part 1**

Objectives:
• Demonstrate an understanding of the term identity
• Compare how an identity is formed offline to how it is formed online
• Demonstrate why a positive online identity is important
• Explain how a person who communicates online can demonstrate his or her identity

**Lesson 8: Personal Safety: Part 2**

Objectives:
• Explain the terms tag, post, share, blog, upload, download, and social network as they apply to online activities
• Describe how personal information can be made public when taking part in online activities that seem safe
• Demonstrate techniques to maintain personal information privacy while taking part in online activities

**Lesson 9: Safe Interaction (two-day lesson)**

Objectives:
• Demonstrate making responsible choices to be sure of personal safety when using the Internet
• Create a Microsoft® PowerPoint presentation that lists safety tips when using the Internet and appropriate websites for children
EDUCATIONAL TECHNOLOGY AND ONLINE LEARNING
**Educational Technology and Online Learning 4**

In this course, students use appropriate technology tools and resources to complete projects, manage information, and solve problems. Students use software to write, organize, analyze, and present information and data. Students learn listening and organizational skills and set attainable learning goals. Students become responsible users of technology as they learn about internet safety, appropriate online behavior, and effective search and website evaluation strategies.

**Unit 1: Keyboarding**

While learning to type, speed and accuracy are crucial. During this unit, you will learn about proper finger positioning, correct posture, and proper touch techniques to enhance your typing abilities. You will read about the history of keyboarding, new types of keyboards, and a typing competition. You will learn about the components of a computer and digital input, digital output, and processing. You will demonstrate your typing abilities with a typing test during the last lesson of the unit.

Objectives:
- Develop speed and accuracy while copying provided text
- Apply proper touch typing techniques to enter words, phrases, and numbers
- Demonstrate correct posture and finger position while typing

**Lesson 1: Keyboarding Review (two-day lesson)**

Objectives:
- Apply proper touch typing techniques to enter words and phrases
- Demonstrate correct finger positions while typing
- Understand digital input, digital output, and processing

**Lesson 2: Speed and Accuracy: Lesson 1**

Objectives:
- Develop speed and accuracy while copying provided text
- Apply proper touch typing techniques to enter words, phrases, and numbers
- Demonstrate correct finger positions while typing

**Lesson 3: Speed and Accuracy: Lesson 2**

Objectives:
- Develop speed and accuracy while copying provided text
- Apply proper touch typing techniques to enter words, phrases, and numbers
- Demonstrate correct finger positions while typing

**Lesson 4: Speed and Accuracy: Lesson 3**

Objectives:
- Develop speed and accuracy while copying provided text
- Apply proper touch typing techniques to enter words, phrases, and numbers
- Demonstrate correct finger positions while typing

**Lesson 5: Speed and Accuracy: Lesson 4**

Objectives:
- Develop speed and accuracy while copying provided text
- Apply proper touch typing techniques to enter words, phrases, and numbers
- Demonstrate correct typing posture and finger positions while typing

**Lesson 6: Speed and Accuracy: Lesson 5**

Objectives:
- Develop speed and accuracy while copying provided text
- Apply proper touch typing techniques to enter words, phrases, and numbers
- Demonstrate correct typing posture and finger positions while typing
Lesson 7: Speed and Accuracy: Lesson 6

Objectives:
- Develop speed and accuracy while copying provided text
- Apply proper touch typing techniques to enter words, phrases, and numbers
- Demonstrate correct typing posture and finger positions while typing

Lesson 8: Speed and Accuracy: Lesson 7

Objectives:
- Develop speed and accuracy while copying provided text
- Apply proper touch typing techniques to enter words, phrases, and numbers
- Demonstrate correct typing posture and finger positions while typing

Lesson 9: Keyboarding Review 2 (two-day lesson)

Objectives:
- Develop speed and accuracy while copying provided text
- Apply proper touch typing techniques to enter words, phrases, and numbers
- Demonstrate correct typing posture and finger positions while typing

Unit 2: Microsoft® Word

In this unit, you will be given multiple opportunities to polish your word processing skills. You will learn new skills, which include: inserting tables, adapting the font style, size, and color, changing the text alignment, and inserting SmartArt. While using Microsoft® Word, you will learn about figurative language, parts of speech, inferring, folktales, synonyms, and point of view. You will create stories from two different points of view. You will be provided visuals to enhance your learning through BrainPOP® and Discovery Education™ streaming movies.

Objectives:
- Create typed pieces of writing to show understanding of figurative language, making inferences, point of view, and synonyms
- Demonstrate the ability to insert SmartArt, WordArt, and clip art to visually enhance each piece
- Construct text boxes and tables to arrange information
- Design each piece of writing using text alignment and various font choices

Lesson 1: There, Their, They're To, Too, Two (two-day lesson)

Objectives:
- Academic: Compose and define a list of homophones
- Technology: Develop a digital homophone book using homophones correctly in sentences
- Technology: Demonstrate formatting the font size, font face, and font color using the Font Size, Font Face, and Font Color drop-down menus
- Technology: Arrange and highlight text using the text alignment buttons and the Highlighter tool in the Home ribbon
- Technology: Select and insert clip art to illustrate homophones

Lesson 2: Nouns and Pronouns

Objectives:
- Academic: Identify and categorize nouns and pronouns
- Academic: Compose a piece of writing using nouns and pronouns correctly in sentences
- Technology: Demonstrate typing, and indent a paragraph using the Tab key, and Indentation buttons
- Technology: Format and adjust line spacing within the Paragraph menu
- Technology: Apply an underline to nouns and pronouns using the Underline button

Lesson 3: Synonyms

Objectives:
• Academic: Select words with similar but not identical meanings using the Microsoft Word thesaurus
• Academic: Identify synonyms for common words
• Technology: Formulate a table with multiple rows and columns
• Technology: Identify, select, and type synonyms in the correct cells of a table using the thesaurus in Microsoft Word
• Technology: Demonstrate formatting text alignment using buttons in Home ribbon

Lesson 4: Making Inferences (two-day lesson)

Objectives:
• Academic: Analyze clues from text to make inferences
• Technology: Insert SmartArt graphics into a document
• Technology: Organize text clues and inferences in SmartArt graphics
• Technology: Demonstrate the skill of dragging and dropping text boxes

Lesson 5: Points of View (two-day lesson)

Objectives:
• Academic: Generate two pieces of writing correctly implementing first-person and third-person point of view
• Academic: Identify points of view within a text
• Technology: Demonstrate formatting the font size and font face using the Font Size and Font Face drop-down menus
• Technology: Demonstrate using the Spelling and Grammar tool to correct spelling errors in document

Lesson 6: Vivid Language: Similes

Objectives:
• Academic: Identify similes within poems
• Academic: Interpret and create similes
• Technology: Create and insert a table with multiple rows and columns
• Technology: Demonstrate formatting a table by inserting new rows

Lesson 7: Vivid Language: Metaphors

Objectives:
• Academic: Analyze metaphors to understand the underlying meaning
• Academic: Generate original metaphors
• Academic: Differentiate between similes and metaphors
• Technology: Illustrate metaphors using WordArt and clip art

Lesson 8: Summarizing Poetry (two-day lesson)

Objectives:
• Academic: Construct a summary of a poem
• Technology: Demonstrate typing and indenting using the Tab key
• Technology: Examine and correct spelling errors using the Spelling and Grammar tool

Lesson 9: Folktales (two-day lesson)

Objectives:
• Academic: Describe and create a folktale
• Academic: Understand that all folktales have a central theme or message
• Technology: Design a graphic organizer by inserting text boxes from the Insert ribbon
• Technology: Demonstrate knowledge of Microsoft Word formatting: font color, font style, font size, Spelling and Grammar tool, and Tab key

Unit 3: Microsoft® PowerPoint

In this unit, you will have the opportunity to explore Microsoft® PowerPoint. You will insert action buttons, slide designs, slide themes, and slide transitions. You will demonstrate your knowledge of story elements, compare-and-contrast story structure, and life cycles through...
the creation of presentations. You will learn about life cycles through a Discovery Education™ exploration. After completing the exploration, you will design a presentation on life cycles.

Objectives:
- Create presentations demonstrating an understanding of story elements, compare/contrast structure, and life cycles
- Demonstrate the ability to insert action buttons, clip art, and SmartArt from the Insert ribbon
- Design a presentation with slide transitions from the Transitions ribbon
- Formulate a visually appealing presentation by formatting the font face, font size, and font color

Lesson 1: Story Map (two-day lesson)

Objectives:
- Academic: Understand story elements and identify them within a story
- Technology: Formulate a presentation about story elements
- Technology: Demonstrate selecting and inserting clip art and action buttons from the Insert ribbon
- Technology: Apply a theme using the Design ribbon to enhance the presentation

Lesson 2: Compare and Contrast (two-day lesson)

Objectives:
- Academic: Compare and contrast concepts from text
- Technology: Construct a presentation comparing and contrasting alternative forms of energy and animals
- Technology: Implement and apply slide transitions using the Transition to This Slide drop-down menu in the Transitions ribbon
- Technology: Demonstrate selecting and inserting clip art and action buttons in the Insert ribbon

Lesson 3: Life Cycles (two-day lesson)

Objectives:
- Academic: Analyze the life cycle of a plant or animal
- Academic: Evaluate the ability to create a presentation using a rubric
- Technology: Develop a presentation analyzing the life cycle of a plant or animal
- Technology: Demonstrate the ability to apply slide transitions and slide designs to a presentation
- Technology: Insert hyperlinks and clip art in a presentation to create an interactive life cycle

Unit 4: Microsoft® Excel

During the Microsoft® Excel unit, you will learn about using the AutoSum feature to add multiple numbers, insert a formula to round digits, generate line graphs using data, and enter text into specific cells. You will demonstrate the ability to add, subtract, multiply, divide, and calculate data landmarks. You will establish a virtual lemonade stand and track your net profits. You will create a line graph to show the growth or decline of your business. You will use the Lemonade Stand Game, and learn about concepts by watching BrainPOP®, and Discovery Education™ videos within lessons.

Objectives:
- Interpret data and organize it within the cells of a workbook
- Construct line graphs using data
- Solve mathematical equations by embedding formulas within the workbook
- Analyze, sort, and determine the meaning of word parts (prefixes, suffixes, and root words)

Lesson 1: Word Problems: Addition and Subtraction

Objectives:
- Academic: Recognize key words to solve addition and subtraction word problems
Lesson 2: Word Problems: Multiplication and Division

Objectives:
- Academic: Recognize key words to solve multiplication and division word problems
- Technology: Calculate products and quotients using a formula
- Technology: Demonstrate formatting font color of mathematical key words using the Font Color drop-down menu in the Mini toolbar
- Technology: Insert borders around the products and quotients from the Border drop-down menu in the Home ribbon

Lesson 3: Rounding

Objectives:
- Academic: Identify and round numbers to the ones place
- Technology: Insert and apply the ROUND function to round numbers to the nearest ones place
- Technology: Apply the AutoSum feature to add multiple numbers together
- Technology: Adjust the cell alignment using the Center Align button in the Home ribbon

Lesson 4: Graphing Expenses (two-day lesson)

Objectives:
- Academic: Analyze net profits from a lemonade stand over a 5 day period
- Technology: Organize data into cells of a workbook
- Technology: Formulate a line graph based on lemonade net profits and cups sold

Lesson 5: Investigating Bar Graphs (two-day lesson)

Objectives:
- Academic: Calculate the mean, median, and mode of a set of data
- Technology: Construct a bar graph using the Bar drop-down menu in the Insert ribbon
- Technology: Demonstrate formatting by inserting titles and labels for the bar graph

Lesson 6: Root Words from Science

Objectives:
- Academic: Identify and interpret the meaning of words with prefixes and suffixes
- Technology: Segregate and arrange word parts (prefixes, suffixes, and root/base words) into individual cells of a workbook
- Technology: Demonstrate formatting the font size, font face, and font color of word parts (prefixes, suffixes, and root/base words) using the Font Size, Font Face, and Font Color drop-down menus

Unit 5: Study Skills

In this unit, you will learn about and develop important study skills. You will learn about the characteristics of an active listener. You will watch a Discovery Education™ streaming movie about the consequences of not being an active listener. You will also learn about organizing a study schedule, setting short- and long-term goals, and generating a note-taking graphic organizer. Using Microsoft® Word, you will create a tips poster on how to be an active listener. You will use Microsoft PowerPoint to create a presentation comparing online learning to bricks-and-mortar schooling.

Objectives:
Lesson 1: Listening Skills

Objectives:
- Identify the importance and attributes of active listening
- Create a goal for active listening
- Generate a table stating goals for active listening in different settings

Lesson 2: Organization and Time Management

Objectives:
- Understand the importance of being organized and having a study schedule
- Create a study schedule that incorporates flexibility

Lesson 3: Note Taking and Summarizing

Objectives:
- Utilize note taking strategies to learn, think about, and remember important information
- Adapt a note taking template that can be adjusted for various assignments

Lesson 4: Using Graphic Organizers

Objectives:
- Evaluate and validate information on the World Wide Web
- Collect information in a graphic organizer

Lesson 5: Online Learning (two-day lesson)

Objectives:
- Review the similarities and differences of online learning and bricks-and-mortar learning
- Create a presentation that describes the synthesis of a new school combining the advantages of both online learning and bricks-and-mortar learning

Lesson 6: Goal Setting

Objectives:
- Distinguish between short- and long-term goals
- Develop short- and long-term academic goals
- Generate a spreadsheet organizer to track progress toward accomplishing goals

Unit 6: Internet Safety

It is a good idea to begin practicing online safety. In this unit, you will learn about how to be smart and safe when you are online. You will learn about netiquette and its importance in the prevention of cyberbullying. You will learn about how to keep your personal information anonymous, or unknown, so you can be safe from online predators. You will write a story in Microsoft® Word highlighting the importance of copyrighted material and proper use of copyrighted material. You will be able to share this important cyberspace safety information with your friends and family to help safeguard against online threats.

Objectives:
- Compare and contrast the physical world with cyberspace
- Describe copyright laws and the rights created by the laws
- Identify the types of personal information that should never be shared in cyberspace
- Demonstrate the appropriate actions to follow when faced with cyberbullying and/or an online predator
• Create a plan of action when faced with inappropriate web content

Lesson 1: Netiquette in the Cyber Community

Objectives:
• Describe cyberspace as a community of real people
• Compare characteristics of communication in the physical world with communication in cyberspace
• Demonstrate an understanding that unkind communication in cyberspace is the same as unkind communication in the physical world
• Demonstrate how to respond appropriately if faced with unkind communication in cyberspace
• Create a table comparing communication in the physical world with cyberspace

Lesson 2: Cyber Predator Awareness

Objectives:
• Define and discuss the terms predator, prey, inappropriate, and anonymous as they relate to online communication
• Identify and describe basic components of a predator's grooming process
• Create examples of safe responses and/or actions for each step of the grooming process

Lesson 3: Cyberbullying (two-day lesson)

Objectives:
• Identify general key attributes of kindness and being considerate online
• Identify and describe the key attributes of bullying
• Compare and contrast bullying in the physical community and the cyber community
• Analyze the relationship between netiquette and cybercitizenship
• Identify and utilize appropriate resources if confronted with an online bully

Lesson 4: Malicious Code in E-mail

Objectives:
• Identify and describe the security risks associated with e-mail
• Define and discuss the term malicious code and other vocabulary related to cybersecurity risks

Lesson 5: Spam, Scams, and Phishing

Objectives:
• Describe the basic way phishing, spam, and scam e-mails solicit personal information
• Explain age-appropriate ways to deal with phishing, spam, and scam e-mails

Lesson 6: Goldy Locks and IP (two-day lesson)

Objectives:
• Explain the rights of intellectual property on the Internet and the rights copyright provide for creative material
• Explain the potential consequences associated with plagiarism and other forms of intellectual property theft
• Create a story to entertain and teach about copyright in Microsoft® Word

Lesson 7: Keeping it Personal

Objectives:
• Discuss that posted personal information on the Internet is public
• Discuss why it can be unsafe to post personal information on the Internet
• Describe why it is necessary to inform an adult before filling out information online

Appendix A.2.g Educational Technology Course Guides

Educational Technology 4
Lesson 8: Inappropriate Websites

Objectives:
- Explain the concept of the Internet as an online community comparable to the physical community
- Discuss the concept that there are inappropriate places online
- Demonstrate an understanding of how to avoid or exit inappropriate places
- Discuss family policy on inappropriate website access

Lesson 9: Acceptable Use Policy

Objectives:
- Demonstrate an understanding of acceptable use, identify the consequences of unacceptable use, and describe procedures for responding to unsafe or inappropriate online situations
EDUCATIONAL TECHNOLOGY
AND ONLINE LEARNING
5
Educational Technology and Online Learning 5

In this course, students use appropriate technology tools and resources to complete projects, manage information, and solve problems. Students use software to write, organize, analyze, and present information and data. Students learn listening and organizational skills and set attainable learning goals. Students become responsible communicators and users of technology as they learn about intellectual property, Internet safety, and effective search and evaluation strategies.

Unit 1: Keyboarding

In this unit, you will identify and type numbers and letters on the keyboard and type words and phrases. You will demonstrate correct posture and finger position while typing the letters and symbols, and you will apply proper touch typing skills while practicing the home row and the rows above and below the home row.

Objectives:
- Practice posture, finger position, and speed to improve typing fluency
- Apply proper touch typing techniques to enter numbers, words, and phrases
- Develop speed and accuracy while copying provided text

Lesson 1: Speed and Accuracy: Lesson 8

Objectives:
- Demonstrate proper touch typing posture and finger position while typing
- Apply proper touch typing techniques to type sentences from a text
- Develop speed and accuracy while copying provided text

Lesson 2: Speed and Accuracy: Lesson 9

Objectives:
- Demonstrate proper touch typing posture and finger position while typing sentences
- Apply proper touch typing techniques to type text from a story
- Develop speed and accuracy while copying provided text

Lesson 3: Speed and Accuracy: Lesson 10

Objectives:
- Demonstrate proper touch typing posture and finger position while typing sentences from stories
- Apply proper touch typing techniques to type sentences from stories
- Develop speed and accuracy while copying provided text

Lesson 4: Speed and Accuracy: Lesson 11

Objectives:
- Demonstrate proper touch typing posture and finger position while typing sentences from stories
- Apply proper touch typing techniques to type sentences from stories
- Develop speed and accuracy while copying provided text

Lesson 5: Speed and Accuracy: Lesson 12

Objectives:
- Demonstrate proper touch typing posture and finger position while typing
- Apply proper touch typing techniques to type sentences from stories and random text
- Develop speed and accuracy while copying provided text

Lesson 6: Speed and Accuracy: Lesson 13

Objectives:
- Demonstrate proper touch typing posture and finger position while typing
- Apply proper touch typing techniques to type words and phrases
- Develop speed and accuracy while copying provided text
Lesson 7: Speed and Accuracy: Lesson 14

Objectives:
• Demonstrate proper touch typing posture and finger position while typing
• Apply proper touch typing techniques to type sentences from a story
• Develop speed and accuracy while copying provided text

Lesson 8: Keyboarding Review (two-day lesson)

Objectives:
• Demonstrate proper touch typing posture and finger position while typing
• Apply proper touch typing techniques to type numbers, words, and phrases
• Develop speed and accuracy while copying a paragraph

Unit 2: Microsoft® Word

In this unit, you will explore features of Microsoft® Word. You will learn how to correct spelling errors, and decode words using the Spelling and Grammar and Highlighter tools. While reading, you will identify the main idea of the text and relevant supporting details in order to construct an outline using Outline View. You will also interpret figurative language in poetry, and continue practicing text alignment to construct a poem of your own. Mathematically, you will apply your knowledge of coordinate grids by inserting a table and text boxes to show an ordered pair.

Objectives:
• Produce and manipulate tables to show knowledge of fact and opinion and distinguish between words containing Greek roots
• Demonstrate knowledge of subjects and predicates to compare and contrast the two using the Highlighter tool
• Plan, prepare, and generate a friendly letter to practice formatting, typing, and checking spelling and grammar
• Outline information within an article to demonstrate understanding of common text construction
• Compose original sentences and poetry to show knowledge of English language conventions

Lesson 1: Fact Versus Opinion

Objectives:
• Academic: Identify and distinguish the differences between facts and opinions in text
• Technology: Demonstrate selecting text in a document using the mouse
• Technology: Demonstrate using keyboard shortcuts, Ctrl+ C and Ctrl + V in order to copy and paste text in a document and table

Lesson 2: Greek Roots

Objectives:
• Academic: Identify and define the Greek roots photo-, geo-, demo-, and -ology used in context
• Academic: Examine words with Greek roots to compare meanings of words with common roots
• Technology: Demonstrate how to type words and sentences and move to the next line using the Enter key
• Technology: Incorporate and format a table with the correct number of rows and columns using the Table drop-down menu
• Technology: Illustrate Greek roots in context using different colors within the Highlighter drop-down menu

Lesson 3: Subjects and Predicates

Objectives:
• Academic: Identify subjects and predicates within existing sentences
• Academic: Create original sentences containing both a simple subject and predicate

© 2013 Connections Education LLC. All rights reserved.
Lesson 4: Verb Tenses

Objectives:
- Academic: Identify the difference between past, present, and future tense
- Academic: Modify inappropriate use of verb tense within existing sentences
- Technology: Format the font color of text using the Font Color dropdown menu to identify incorrect verb tenses
- Technology: Demonstrate aligning text using the alignment buttons in the Home ribbon

Lesson 5: Editing a Friendly Letter (two-day lesson)

Objectives:
- Academic: Identify and write the components of a friendly letter, such as heading, greeting, body, and closing
- Technology: Generate changes in a document using Track Changes
- Technology: Apply alignment and font formatting using menus and buttons in the Home ribbon
- Technology: Revise a document using the Spelling and Grammar tool

Lesson 6: Drafting an Outline (two-day lesson)

Objectives:
- Academic: Identify the main idea within a text
- Academic: Differentiate between the main idea and the supporting details within a text
- Academic: Apply knowledge of text outlines to real-life applications
- Technology: Construct an outline using Outline View in Microsoft® Word
- Technology: Develop multiple levels within the outline using the Promote and Demote arrow buttons

Lesson 7: Similes and Metaphors

Objectives:
- Academic: Interpret figurative language and include it in a poem
- Academic: Define and identify similes and metaphors
- Technology: Generate a poem on the center of a page using the Center Align button
- Technology: Apply bold and underline formatting to the title of a poem using the Bold and Italics buttons available in the Mini Toolbar

Lesson 8: Poetry

Objectives:
- Academic: Identify the speaker and analyze voice within poetry
- Academic: Create original poetry
- Technology: Arrange a poem on the center of a page using the Center Align button
- Technology: Generate and type a poem with multiple lines using the Enter key

Lesson 9: Coordinate Grids

Objectives:
- Academic: Identify and label the axes of a coordinate grid
- Academic: Identify and define ordered pairs on a coordinate grid
- Technology: Demonstrate inserting a text box and formatting text within the textbox
• Technology: Illustrate ordered pairs on a coordinate grid by inserting shapes using the Shapes drop-down menu

**Lesson 10: Number Prefixes**

Objectives:
- Academic: Identify number prefixes and define words that begin with number prefixes
- Academic: Categorize words with similar meanings within a table
- Technology: Demonstrate inserting shapes to illustrate number prefixes
- Technology: Construct and insert a table and type within it

**Unit 3: Microsoft® PowerPoint**

In this unit, you will explore features of Microsoft PowerPoint. You will learn how to create linear slide shows, ones that proceed from one slide right after another, and non-linear slide shows, ones that involve choices that affect which slide comes next, using action buttons and the slide sorter view. You will insert text boxes in order to identify and define synonyms and antonyms. You will insert SmartArt to create graphic organizers to aid with comparing and contrasting. Mathematically, you will learn about translation, rotation, and reflection and insert shapes. In social studies, you will create a slide show from scratch showing the steps of how a bill becomes a law.

Objectives:
- Create digital presentations to demonstrate sequencing, compare and contrast concepts, and define a process
- Plan and design a presentation using different themes, slide layouts, and fonts styles
- Demonstrate how to incorporate graphics and apply motions and animations to shapes, buttons, and clip art to create an engaging presentation

**Lesson 1: Antonyms and Synonyms**

Objectives:
- Academic: Identify and define antonyms and synonyms using a thesaurus
- Academic: Explain the difference between synonyms and antonyms
- Technology: Demonstrate inserting and typing synonyms and antonyms in new text boxes
- Technology: Demonstrate inserting a new slide using the New Slide drop-down menu
- Technology: Illustrate the definitions of synonyms and antonyms using clip art

**Lesson 2: Reflections, Translations, and Rotations**

Objectives:
- Academic: Describe how to reflect, translate, and rotate a shape
- Academic: Create patterns with translations, reflections, and rotations using shapes
- Technology: Apply animations and motion paths to shapes to simulate transformations

**Lesson 3: Sequence Ideas for Writing**

Objectives:
- Academic: Demonstrate knowledge of main idea and supporting details to sequence ideas during writing
- Technology: Arrange the correct slide sequence using the Slide Sorter view
- Technology: Create a themed presentation with various slide layouts, clip art, text and animations
- Technology: Apply animated entrance effects to sequence text and clip art on a slide

**Lesson 4: Compare and Contrast Fables (two-day lesson)**

Objectives:
- Academic: Identify and define a fable
• Academic: Compare and contrast the similarities and differences between fables
• Academic: Relate similarities in the theme, topic, and main idea between various fables
• Technology: Demonstrate how to insert and format SmartArt graphics to compare and contrast fables
• Technology: Demonstrate how to insert clip art and shapes to illustrate the characteristics of a fable

Lesson 5: How a Bill Becomes a Law (two-day lesson)

Objectives:
• Academic: Explain the process used to make a bill a law
• Academic: Identify and define key vocabulary used during the bill creation process
• Technology: Design a presentation using various slide layouts, clip art, and images to explain the bill process

Lesson 6: Food Chains (two-day lesson)

Objectives:
• Academic: Construct and define organisms in a food chain
• Academic: Examine the interrelationship between plants, animals, and fungi
• Academic: Define an herbivore, omnivore, and carnivore
• Technology: Demonstrate how to insert and format SmartArt to illustrate various stages of a food chain
• Technology: Construct an interactive food chain by adding action buttons and hyperlinks to different slides within a presentation

Unit 4: Microsoft® Excel

In this unit, you will explore features of Microsoft® Excel. You will learn to use borders and colors to display large numbers to represent place value visually and will be able to use these numbers to compare and order decimals. You will learn to insert formulas to show patterns in multiplying numbers by powers of 10 and will also be able to use formulas to convert feet to miles and vice versa, as well as use formulas to find the area of regular and irregular shapes. You will also do research on the world's oceans to collect data and create a table and graph.

Objectives:
• Combine groups of cells to demonstrate place value and area and to compare numbers
• Demonstrate how to incorporate borders and a fill color to create shapes and patterns
• Apply formulas to numbers to create patterns and manipulate numbers
• Classify and collect data to create graphs and display information in an organized way

Lesson 1: Place Value

Objectives:
• Academic: Identify place value of digits
• Academic: Relate groups of 10 to 100 and 1,000
• Technology: Navigate and type within cells
• Technology: Insert shapes into a workbook to represent place values
• Technology: Apply a fill color to shapes to help sort different place values

Lesson 2: Identifying Patterns

Objectives:
• Academic: Identify odd and even numbers in patterns
• Technology: Apply a fill color to cells to illustrate odd and even number patterns
• Technology: Insert an addition formula to build numbers and develop patterns

Lesson 3: Comparing Decimals (two-day lesson)

Objectives:
• Academic: Demonstrate how to compare decimals using the less than <, greater than >, and equal to = symbols
• Academic: Compare decimals to the hundredths place
• Technology: Apply a fill color to cells to illustrate decimals
• Technology: Apply borders to cells to illustrate a hundredths grid

Lesson 4: Multiplying by Powers of Ten

Objectives:
• Academic: Explain movement of a decimal point when a number is multiplied by 10, 100, or 1,000
• Academic: Apply powers of ten to multiplication problems
• Technology: Demonstrate how to insert a multiplication formula to multiply a decimal by 10, 100, or 1,000
• Technology: Navigate and type within cells

Lesson 5: Area

Objectives:
• Academic: Apply variables to replace numerals in mathematical equations
• Academic: Calculate the area of squares and rectangles
• Technology: Create uniform cells by applying a set column width
• Technology: Illustrate a square and rectangle by applying borders to groups of cells
• Technology: Compute the area of a square and rectangle by inserting a multiplication formula

Lesson 6: Area of Irregular Shapes (two-day lesson)

Objectives:
• Academic: Demonstrate how to compute the areas of irregular shapes
• Academic: Apply formulas to find the area of irregular shapes
• Technology: Apply borders to groups of cells to illustrate regular shapes within an irregular shape
• Technology: Demonstrate how to insert a fill color to identify rectangles within irregular shapes

Lesson 7: Converting Customary Units of Length

Objectives:
• Academic: Identify the customary units of length: feet and miles
• Academic: Demonstrate how to convert customary units of length using multiplication and division formulas
• Technology: Insert multiplication and division formulas to convert feet to miles and miles to feet

Lesson 8: Bodies of Water on Earth (two-day lesson)

Objectives:
• Academic: Identify, collect, and categorize data on the major bodies of water on Earth
• Technology: Identify and create a major type of graph (line, pie, or bar graph)
• Technology: Generate graphs to illustrate variations in surface area

Unit 5: Study Skills

In this unit, you will use different software applications to improve your study skills. In Microsoft® Word, you will create a table to help organize information about listening skills and a calendar to help manage your time wisely. You will learn about and use several methods of note taking, and apply note-taking strategies in future lessons. You will use Google Earth as a tool to enhance earning, and you will explore the benefits of online learning. You will identify and create short- and long-term goals toward a career goal and organize them in a brochure.

Objectives:
• Create a schedule to demonstrate time management
• Demonstrate how to use a table note-taking form or an outline for taking notes
• Utilize and evaluate the effectiveness of an online virtual tour
• Define online learning and active listening
• Create an original project illustrating short- and long-term goals

Lesson 1: Listening Skills

Objectives:
• Identify and apply the qualities of an active listener
• Summarize how to use active listening strategies
• Explain the importance of being a good listener by recording active listening strategies using the audio recording tool

Lesson 2: Organization and Time Management

Objectives:
• Demonstrate how to use organizational strategies to track, plan, and manage a schedule
• Create a weeklong calendar to organize tasks

Lesson 3: Note Taking

Objectives:
• Identify different learning styles and different ways to take notes
• Demonstrate how to take notes
• Discuss the purpose of note taking

Lesson 4: Virtual Tours

Objectives:
• Demonstrate the ability to complete an online virtual tour to learn about places without traveling to them
• Evaluate the usefulness of a virtual tour in enhancing learning

Lesson 5: Online Learning

Objectives:
• Describe online learning
• Discuss the pros and cons of online learning

Lesson 6: Goal Setting (two-day lesson)

Objectives:
• Distinguish between short- and long-term goals
• Plan short- and long-term goals for a possible career
• Create a short- and long-term career goals brochure to track progress toward reaching these goals

Unit 6: Internet Safety

In this unit, you will learn about Internet safety. You will learn to identify characteristics of online predators and practice strategies for online safety. You will write a practice blog to understand how online journaling can be a means of communication, and you will be able to create a list of rules for proper etiquette during texting and instant messaging. You will be able to define plagiarism, copyright, and intellectual property, and explain why another person's information cannot be used by someone else unless proper permission is obtained.

Objectives:
• Construct a digital presentation to demonstrate knowledge of intellectual property, fair use, copyright, piracy, and media literacy
• Compose documents demonstrating knowledge of blogging and cyberbullying

Lesson 1: Cybersecurity

Objectives:
• Identify viruses, worms, Trojan horses, and spyware as programs that can make a computer work improperly
• Summarize basic techniques to prevent viruses, worms, Trojan horses, and spyware infection
Lesson 2: Digital Literacy

Objectives:
- Define the term media literacy
- Identify types of media
- Explain the importance of media literacy

Lesson 3: Blogging

Objectives:
- Explain security risks associated with blogging
- Identify specific risky behaviors associated with blogging
- Describe positive techniques for safe blogging

Lesson 4: Cyberbullying

Objectives:
- Identify and describe elements of cyberbullying
- Explain the moral in a contemporary fairy tale

Lesson 5: Text Messaging Safety

Objectives:
- Describe text and instant messaging and their associated vocabulary
- Explain the need to follow basic safety rules and netiquette when text or instant messaging

Lesson 6: Predator Identification

Objectives:
- List safety rules for behavior toward strangers in the physical community that also apply to behavior toward strangers in cyberspace
- Explain the importance of refusing inappropriate online relationships
- Describe how to interact appropriately and safely online

Lesson 7: Intellectual Property, Fair Use, and Copyright I (two-day lesson)

Objectives:
- Demonstrate an understanding that property on the Internet can be owned just like physical property
- Relate the term intellectual property to something that is created in a person's mind
- Understand different types of media as intellectual property: writings, music, videos, games, etc.
- Explain that piracy is stealing from real people

Lesson 8: Intellectual Property, Fair Use, and Copyright II (two-day lesson)

Objectives:
- Identify unauthorized uses of copyrighted materials as acts of piracy and plagiarism
- Define fair use and copyright law

Lesson 9: Cyber Citizenship

Objectives:
- Explain safe and appropriate behavior in cyberspace
- Identify ways to be a good cyber citizen
- Plan the components of an educational story for a younger audience
EDUCATIONAL TECHNOLOGY
AND ONLINE LEARNING
6
Educational Technology and Online Learning 6

Students progress to more sophisticated work in this course, including the use of electronic media and software to apply academic concepts in the creation of meaningful organizers, projects and presentations. Students locate, retrieve and evaluate data in order to construct and analyze databases. Students produce presentations on Internet safety, online predators, and cyberbullying. At the end of the course, students become effective communicators and collaborators as they plan, evaluate and synthesize research emphasizing current issues with technology.

Unit 1: Introduction

In this unit, you will learn the basics about computers. You will learn how computers work and how to troubleshoot problems. You will also work on becoming a more efficient learner as you learn how to manage your files and work to improve your keyboarding skills.

Objectives:
• Apply proper keyboarding techniques to improve accuracy, speed, and overall efficiency in computer operation
• Describe how changes in technology throughout history have impacted different aspects of the world
• Distinguish the difference between hardware, software, components, and the operating system of computer and other technology devices
• Create an effective and efficient file hierarchy for courses and construct the file management system for schoolwork
• Develop and apply strategies for identifying and solving routine hardware and software problems

Lesson 1: Keyboarding Rows

Objectives:
• Apply proper keyboarding techniques to improve accuracy, speed, and overall efficiency in computer operation

Lesson 2: History of Technology

Objectives:
• Examine how computer technology has evolved over time
• Distinguish how changes in technology throughout history have impacted different aspects of the world

Lesson 3: Hardware, Components, and Operating Systems

Objectives:
• Distinguish the difference between hardware and software, and input and output devices
• Identify hardware, software, components and the operating system of a computer and other technology devices

Lesson 4: File Management and Organization

Objectives:
• Identify different file extensions, and demonstrate proper naming conventions of files
• Evaluate course folder structure to ensure that it is effective for the specified purpose
• Create a course folder structure using subfolders to organize and manage files

Lesson 5: Troubleshooting Computer Issues

Objectives:
• Develop and apply strategies for identifying and solving routine hardware and software problems

Unit 2: Microsoft® Word
In this unit, you will increase your understanding of Microsoft® Word as you learn how to efficiently create quality documents. You will learn to use editing features such as highlighting, Track Changes, and add comments. You will also become more efficient using macros, keyboard shortcuts, and outlines. You will explore figurative language as you read Greek mythology and poetry. You will learn strategies for researching Alexander the Great online and use your research to create a final product using the design features within Microsoft® Word.

Objectives:
- Demonstrate command of reading strategies and standard English language using editing tools in a document
- Integrate a variety of file types to produce original narrative works that analyze theme, character development, and figurative language
- Analyze and illustrate plot, character development, and processes by inserting graphics, shapes, and diagrams
- Conduct a scholarly Internet search using filters and Boolean search strategies
- Publish research and enhance documents by inserting text boxes, images, and captions

Lesson 1: Verbs: Past, Present, and Future

Objectives:
- Academic: Use correct verb tense (past, present, and future) when writing or editing text
- Technology: Distinguish correct and incorrect verb tense in sentences, and then demonstrate necessary corrections using the Track Changes feature
- Technology: Select text in a variety of ways and utilize keyboard shortcuts to cut and paste verbs according to past, present, and future tense

Lesson 2: Context Clues

Objectives:
- Academic: Analyze context clues in order to determine the meaning of a word
- Technology: Demonstrate highlighting and modifying text to identify the context clues of an unknown word using a macro
- Technology: Examine sentences to determine which type of context clue is employed in the sentence and label the clue using heading styles available in the Home ribbon

Lesson 3: Analyzing Literature (two-day lesson)

Objectives:
- Academic: Analyze the effect of figurative language on the tone or meaning of a poem
- Academic: Explore how the author’s choice of words shapes the meaning of a poem
- Technology: Insert and modify a quick table in order to compare and contrast poems
- Technology: Add headings to a table and merge cells to allocate more space to analyze poetry

Lesson 4: Greek Mythology

Objectives:
- Academic: Identify and explain the purpose or social message of ancient myths
- Technology: Publish a plan for an original myth, and enhance the document by inserting clip art with text wrapped around it and adding a title using WordArt
- Technology: Determine the theme of a story and then format text using the Mini toolbar to identify what parts of the story support the theme

Lesson 5: Personification

Objectives:
Lesson 6: Drawing Inferences

Objectives:
- Academic: Draw inferences about the main character in a text
- Technology: Utilize the comment feature to answer questions requiring a literature analysis to draw conclusions and inferences
- Technology: Modify text using the Font window to indicate the answers explicitly stated in the text

Lesson 7: Technology for Searching (two-day lesson)

Objectives:
- Academic: Conduct a scholarly search using Boolean operators
- Academic: Locate information about Alexander the Great that supports a research topic
- Technology: Conduct an Internet search about Alexander the Great using filters to narrow results in EBSCO
- Technology: Modify a table to include a hyperlink to the site, proper citation, and brief notes about each resource

Lesson 8: Writing an Outline: Alexander the Great

Objectives:
- Academic: Develop an outline based on research
- Technology: Generate an outline based on notes to plan an expository essay about Alexander the Great

Lesson 9: Writing an Expository Essay (two-day lesson)

Objectives:
- Academic: Construct an expository essay which includes an introduction, thesis, body, and conclusion
- Technology: Utilize multimedia sources to insert images and captions
- Technology: Demonstrate inserting an endnote to cite sources
- Technology: Demonstrate correcting grammatical and punctuation errors using the Spelling and Grammar tool

Unit 3: Microsoft® PowerPoint

In this unit, you will learn advanced features of Microsoft® PowerPoint, including how to record audio on slides and create nonlinear presentations using Action buttons. You will learn to create engaging presentations using animations, transitions, SmartArt, graphics, and the elements of design. You will explore the development of a narrative story including plot, theme, and character development. You will use PowerPoint to create a story with alternate endings, an interactive food web, and a modern version of the “Three Little Pigs.”

Objectives:
- Produce digital presentation with audio to demonstrate understanding of personal narratives
- Create interactive nonlinear presentations to analyze characters, create original stories, and describe scientific interactions
- Apply graphics, transitions, animations, and modified text to enhance presentations

Lesson 1: Technology for Publishing

Objectives:
- Academic: Develop the storyline for a personal narrative
- Technology: Demonstrate using the Record Audio Tool to record a personal narrative story varying the tone of voice, pace, and volume of speech
Lesson 2: Analyzing Plots

Objectives:
• Academic: Order the key events of a plot in the correct sequence
• Academic: Describe the elements of plot and analyze how they impact the readability of a story
• Technology: Use Slide Sorter View to put key events of a story in order to show how the plot of a story unfolds in a series of episodes
• Technology: Insert text boxes to identify the elements of plot in a story
• Technology: Insert a Title slide to add a title to the story

Lesson 3: Narrative Writing (two-day lesson)

Objectives:
• Academic: Alter the character’s decision at a crucial point in the story and analyze how that change will impact the plot resolution
• Academic: Propose a new ending for a known story
• Technology: Create a nonlinear presentation using the Action tool to create a story with alternate endings
• Technology: Apply transitions to slides to make the presentation engaging to the audience

Lesson 4: Values Portrayed in Literature (two-day lesson)

Objectives:
• Academic: Adopt the values portrayed in an old story and recreate and apply them in current setting
• Technology: Apply slide timings to publish a short story
• Technology: Hide and unhide slides to create a cohesive story when the presentation is published
• Technology: Publish a short story created in Microsoft® PowerPoint as a movie

Lesson 5: Food Chains (two-day lesson)

Objectives:
• Academic: Explain how the food chain works
• Academic: Create a simple food chain
• Academic: Formulate a hypothesis predicting what would happen if an organism was removed from the food chain
• Technology: Demonstrate the food chain by inserting shapes and connecting provided images
• Technology: Construct a complex nonlinear interactive presentation using action buttons to demonstrate the interactions between organisms in a food chain

Unit 4: Microsoft® Excel

In this unit, you will learn how to use Microsoft® Excel to create a database and graph data using charts and the histogram add-in. You will work with numerical data using the rounding function (MROUND) and the adding function (SUM). You will learn to analyze data and how to work with the data more, using the sort and filter features. You will create a survey to collect data and use the data to create your own database for analysis.

Objectives:
• Utilize mathematical functions and sort feature in a spreadsheet to analyze, sort, and solve mathematical equations using numeric data
• Create graphs in multiple formats in order to determine advantages and disadvantages of types of graphs and to evaluate numeric data
• Build a database and analyze collected data using the filter and sort functions to identify and describe patterns and solve problems

Lesson 1: Ordering Positive and Negative Numbers

Objectives:
• Academic: Sort integers from greatest to least and from least to greatest
• Technology: Demonstrate keyboard shortcuts to copy and paste and cut and paste data in a spreadsheet
Lesson 2: Estimating by Rounding

Objectives:
- Academic: Identify parts of an equation using mathematical terms
- Academic: Round two-digit numbers involving three addends in an equation
- Technology: Utilize the MROUND function to round two-digit numbers involving three addends in an equation
- Technology: Employ the AutoSum feature to check mental addition of a list of numbers

Lesson 3: Graphing Data

Objectives:
- Academic: Select the type of graph that is most appropriate for the data to be displayed
- Academic: Evaluate advantages and disadvantages of various types of graphs
- Technology: Graph two data series in multiple formats in order to evaluate the graphs’ advantages and disadvantages

Lesson 4: Interpreting Histograms

Objectives:
- Academic: Display provided numerical data in a histogram
- Academic: Explain the difference between a bar graph and a histogram
- Technology: Build a histogram using the Microsoft® Excel add-in with provided data

Lesson 5: Creating a Database

Objectives:
- Academic: Analyze a set of data to answer statistical questions
- Technology: Build a database to analyze data and solve problems

Lesson 6: Filtering a Database

Objectives:
- Academic: Identify and describe patterns in provided data
- Academic: Given specific database formats, determine filter criteria
- Technology: Apply filters and use the Sort feature in a database to identify and describe patterns in data

Lesson 7: Technology for Data Analysis (two-day lesson)

Objectives:
- Academic: Collect and interpret data using filtering options and graphs in Microsoft® Excel
- Technology: Build a database based on data collected in a survey
- Technology: Analyze collected data using the Filter and Sort functions
- Technology: Chart numeric data using appropriate graph

Unit 5: Study Skills

In this unit, you will learn various strategies related to time management, organization, and goal setting. These strategies include color coding by subject, utilizing your student planner, and scheduling. You will use a process and organizer to evaluate information you find on the Internet. You will explore mnemonic techniques to assist with memorization, helpful test-taking tips, and various methods of studying for tests. Finally, you will explore and evaluate games and simulations as learning tools.

Objectives:
- Devise a plan for managing time and organizing a study area and related materials
- Examine and apply note-taking techniques and mnemonic devices as test preparation strategies
• Develop SMART long-term and short-term goals in preparation for long-term success in middle school
• Research examples of simulations and interactive games for online education

**Lesson 1: Organization and Time Management**

Objectives:
• Create and follow a study schedule
• Organize a work/study area
• Describe benefits of developing good study skills

**Lesson 2: Using Graphic Organizers**

Objectives:
• Use a process and organizer to evaluate and validate information from the World Wide Web

**Lesson 3: Memory Aids**

Objectives:
• Devise ways to remember important facts and information

**Lesson 4: Study Strategies**

Objectives:
• Explain the importance of good note taking as a test preparation strategy
• Use one new note-taking strategy while completing homework

**Lesson 5: Test-Taking Strategies**

Objectives:
• Identify test-taking strategies that you will use when taking the next test in each of your current courses

**Lesson 6: Goal Setting (two-day lesson)**

Objectives:
• Describe the importance of goal setting in education
• Develop SMART long-term and short-term goals for middle school

**Lesson 7: Learning Through Games and Simulations**

Objectives:
• Research examples of simulations and interactive games for education online

**Unit 6: Internet Safety**

In this unit, you will learn how to use the Internet in a safe and responsible way as a tool for communication, research, and collaboration. The unit begins by explaining the concept of a virtual community and discusses topics such as online bullying and negative networking. You will recognize Internet safety concerns including the importance of choosing a safe user name and keeping personal information safe from strangers, risks associated with online shopping, and the threat of online predators. Finally, you will learn about intellectual property and copyright concepts. You will also examine the consequences that are associated with piracy and illegal music downloading.

Objectives:
• Describe and demonstrate safe, legal, and responsible digital citizenship in the online community
• Select and evaluate digital resources and describe how to ethically use online information in research

**Lesson 1: Acceptable Use Policy**

Objectives:
• Explain the purpose of rules and define Acceptable Use Policy (AUP)
• Evaluate an AUP and create an AUP for your learning environment
Lesson 2: Cybersecurity (two-day lesson)

Objectives:
• Define spyware and virus
• Describe security risks associated with downloading items online
• Evaluate personal activity on the Internet with regard to putting your computer or information at risk

Lesson 3: Cyber Community

Objectives:
• Compare social roles in the online community to social roles in the physical community
• Identify features of inappropriate websites and how to avoid them
• Discuss how cybercitizenship is a necessary component for online communities

Lesson 4: Text Messaging and Netiquette

Objectives:
• Identify the safety risks associated with cell phones and texting
• Define netiquette and describe how it can help you effectively communicate when texting

Lesson 5: Cyberbullying

Objectives:
• Define cyberbullying and describe ways to prevent it
• Analyze how student actions impact others
• Describe how netiquette can be used to prevent cyberbullying

Lesson 6: Safeguarding Identity

Objectives:
• Describe how to safely engage in online relationships
• Explain risks of providing too much personal information in online profiles, forms, and forums

Lesson 7: Protecting Yourself from Online Predators

Objectives:
• List safety rules for behavior toward strangers in the physical community that also apply to behavior toward strangers in cyberspace
• Explain the importance of refusing inappropriate online relationships
• Describe how to interact appropriately and safely online

Lesson 8: Digital Literacy I: Successful Searches

Objectives:
• Compare different types of search engines
• Write search engine queries that will get quality results and select the most appropriate search string results

Lesson 9: Digital Literacy II: Website Validity

Objectives:
• Explain the importance of using sites that are valid and reliable
• Evaluate online resources for validity and reliability

Lesson 10: Intellectual Property Basics

Objectives:
• Distinguish between tangible property and intellectual property
• Define copyright and identify copyrighted materials

Lesson 11: Plagiarism and Fair Use

Objectives:
• Define plagiarism and identify how plagiarism occurs
Unit 7: Digital Publishing

In this unit, you will combine all of the skills you have learned to create a final product of your choice. You will begin by researching a technology topic, and then you will investigate design elements and software options to create a multimedia product that demonstrates what you have learned. You will have the opportunity to discuss your product with your peers and evaluate their work as well.

Objectives:
- Apply questioning and research skills to research the impact of technology on society
- Evaluate usefulness of software applications for various purposes and select methods for publishing research
- Design and produce a multimedia project that integrates a variety of file types to publish research
- Apply graphics, transitions, animations, and modified text to demonstrate understanding of basic elements of design
- Utilize collaboration software to participate in a peer review

Lesson 1: Exploring a Topic (two-day lesson)

Objectives:
- Research the impact of technology on the workplace or a career of choice using Boolean search strategies
- Apply questioning and research skills to narrow down a topic for investigation

Lesson 2: Investigating Design

Objectives:
- Describe basic elements of design and how they apply to multimedia

Lesson 3: Selecting an Application and Publishing Work (two-day lesson)

Objectives:
- Analyze applications focusing on advantages and disadvantages of each
- Evaluate an application’s usefulness for various purposes
- Select methods for publishing research
- Create a multimedia presentation to reflect your research investigation

Lesson 4: Collaborating Online

Objectives:
- Utilize technology to share ideas and collaborate with peers
- Evaluate others’ works using provided criteria

Lesson 5: Evaluating Your Product (two-day lesson)

Objectives:
- Revise and edit a project based on provided criteria
EDUCATIONAL TECHNOLOGY
AND ONLINE LEARNING
7
Educational Technology and Online Learning 7

Students progress to more sophisticated work in this course, including the use of electronic media and software to apply academic concepts in the creation of meaningful organizers, projects, and presentations. Students locate, retrieve, and evaluate data to construct and analyze databases. Students produce presentations on Internet safety, online predators, and cyber bullying. At the end of the course, students become effective communicators and collaborators as they plan, evaluate, and synthesize research emphasizing current issues with technology.

Unit 1: Introduction

This unit will provide basic computer and technology skills and information to assist you in completing work on a computer and the Internet. You will touch on the history of technology and learn about parts of computers as well as what to do when trouble occurs. You will also focus on basic keyboarding skills that will assist you not only with this course but any online computer activities in the future.

Objectives:
- Identify how changes in technology throughout history have impacted different aspects of the world
- Identify and understand computer operating systems
- Compare and contrast various input, processing, output, and storage devices
- Demonstrate how to use management tools and strategies enabled by a computer's operating system
- Apply troubleshooting techniques in preparation for minor computer problems that may occur

Lesson 1: Keyboarding

Objectives:
- Recognize the home row keys on the keyboard
- Recognize the keys in rows above and below the home row
- Utilize keys from the home row and the rows above and below the home row to type words, phrases, and sentences
- Demonstrate appropriate posture and positioning for keyboarding

Lesson 2: History of Technology

Objectives:
- Identify how changes in technology throughout history have impacted different aspects of the world

Lesson 3: Hardware, Components, and Operating Systems

Objectives:
- Distinguish the difference between hardware and software, and input and output devices
- Identify and define types of hardware, software, operating systems, and components of a computer and other technology devices

Lesson 4: File Management and Organization

Objectives:
- Identify different file extensions, and demonstrate proper naming conventions of files
- Practice saving a document as different files types in Microsoft® Word
- Create a course folder structure using subfolders to organize and manage files
- Organize files into appropriate folders and analyze a folder hierarchy

Lesson 5: Computer Troubleshooting

Objectives:
- Apply troubleshooting techniques in preparation for minor computer problems that may occur

Unit 2: Microsoft® Word

Objectives:
- Identify how changes in technology throughout history have impacted different aspects of the world
- Identify and understand computer operating systems
- Compare and contrast various input, processing, output, and storage devices
- Demonstrate how to use management tools and strategies enabled by a computer's operating system
- Apply troubleshooting techniques in preparation for minor computer problems that may occur
This unit focuses on reading and analyzing different types of texts through the many tools Microsoft® Word has to offer. Personal narratives are developed through the stages utilizing revising and editing features, highlighting, and underlining. Graphic organizers are created to compare texts as well as help structure prewriting and brainstorming. The portfolio assignment stretches across three lessons, the student will learn new skills and work to complete a personal narrative.

Objectives:
- Evaluate different types of text to gain meaning and understanding as a reader and a writer
- Recognize different types of figurative language in texts and express this with original writing
- Analyze different texts to understand the importance of organization and organizing thoughts for writing using graphic organizers within Microsoft Word
- Complete the writing process of a personal narrative beginning with prewriting and following through to the rough draft and revising and editing

Lesson 1: Fact vs. Opinion in Publications

Objectives:
- Academic: Evaluate text to determine whether it is a fact or opinion
- Academic: Provide support of ideas from information in the text that verifies it is fact or opinion
- Technology: Apply an underline to words using the Underline button and the Underline Style drop-down menu available in the Font window
- Technology: Create and insert SmartArt to organize facts and opinions

Lesson 2: Using a Thesaurus

Objectives:
- Academic: Compare similar writings that use synonyms for overused words
- Academic: Utilize different types of thesaurus sources to obtain synonyms and integrate them in previously written sentences
- Technology: Utilize thesaurus.com and the Thesaurus feature in Microsoft® Word to search for synonyms
- Technology: Demonstrate how to highlight text using the Highlighter drop-down menu in order to color code adjectives and adverbs
- Technology: Apply edits to two documents using the View Side by Side feature
- Technology: Construct and insert a table in a document with a specified number of columns and rows and format text within the table

Lesson 3: Idioms

Objectives:
- Academic: Evaluate the use of figurative language in general with the characteristics of idioms
- Academic: Implement idioms within personal writing and research the meaning of idioms
- Technology: Create a document containing two columns and headings at the top of each column
- Technology: Format and edit a SmartArt graphic in order explain an idiom
- Technology: Insert a clip art image into a SmartArt graphic illustrating an idiom

Lesson 4: Organizing Writing (two-day lesson)

Objectives:
- Academic: Analyze a story to discover the importance of order and organization in narrative writing
- Academic: Evaluate different types of graphic organizers that can be used to organize different types of writing including timelines, personal narratives, and fictional story
- Academic: Utilize different graphic organizers to help with organizing writing ideas
Lesson 5: Reading Textual, Functional, and Recreational Text

Objectives:
- Academic: Analyze different types of text and determine attributes associated with factual, textual, and recreational text
- Academic: Identify characteristics of different types of text
- Academic: Determine uses for each type of text in real-life settings
- Technology: Utilize and format a table in a document to identify text characteristics
- Technology: Format a checklist to use as a personal resource when writing

Lesson 6: Points of View

Objectives:
- Academic: Establish point of view by writing from a literal visual point of view
- Academic: Enhance writing by utilizing different points of view for different narratives
- Academic: Analyze points of view and associate different characteristics with each type of view
- Technology: Edit images embedded in a document and create captions using the Insert Caption button
- Technology: Utilize the Highlighter tool to highlight words in captions

Lesson 7: History: Personal Narratives

Objectives:
- Academic: Distinguish between the attributes of spoken speech and written text
- Academic: Recognize both point of view and voice in writing
- Technology: Utilize, insert and format a SmartArt graphic to create a Venn diagram comparing written and spoken word
- Technology: Change orientation of the document from portrait to landscape

Lesson 8: Writing a Personal Narrative (two-day lesson)

Objectives:
- Academic: Utilize prewriting organizers in order to write a personal narrative
- Academic: Incorporate figurative language into writing
- Technology: Develop and type a rough draft personal narrative in a Microsoft® Word document
- Technology: Insert and format text boxes to separate parts of the story

Lesson 9: Revising and Editing Writing (two-day lesson)

Objectives:
- Academic: Evaluate the process of revising and editing to understand the meaning of each
- Academic: Analyze personal writing through the revision and editing process
- Technology: Use the revising and editing features in Microsoft® Word including the Spelling and Grammar tool and the Thesaurus

Unit 3: Microsoft® PowerPoint

This unit focuses on creating Microsoft® PowerPoint presentations to share research and data. It combines math and language skills by providing opportunities for research and then allowing you to turn that research into observable data. The culminating activity in this unit becomes the portfolio as you work from the beginning researching a topic and then turn that into a presentation and timeline.
Objectives:
• Identify the changes and trends in technology over time
• Observe different points of view in history and apply it to writing
• Investigate probability of an action and relationships among chance happenings
• Conduct Internet research and evaluate for credible and reliable sources
• Organize research, convert it to data, and transfer it to a presentation and timeline format

Lesson 1: Technology for Publishing (two-day lesson)

Objectives:
• Academic: Publish a final copy of a personal narrative
• Technology: Record a personal narrative using the Record Audio tool in Microsoft® PowerPoint
• Technology: Insert clip art and sound within the presentation

Lesson 2: Using Context Clues

Objectives:
• Academic: Read and analyze historical text
• Academic: Identify unknown or unfamiliar words and use context clues to determine their meaning
• Technology: Utilize the Thesaurus feature to infer the meaning of the unfamiliar word
• Technology: Demonstrate adding additional slides to a presentation using the New Slide drop-down menu
• Technology: Create a presentation and apply a different font color to text to illustrate the context clues and define unfamiliar words

Lesson 3: Graphing Probability

Objectives:
• Academic: Explore basic probability
• Academic: Observe frequencies of an event by collecting and tallying data
• Academic: Investigate relationships of the event by creating a table to analyze data
• Technology: Demonstrate inserting a graph or chart using the Microsoft® Excel charting function within Microsoft® PowerPoint

Lesson 4: Graphing Probability Part 2

Objectives:
• Academic: Determine probability of events and analyze the relationships
• Academic: Analyze the probability of an event using the terms greater or lesser likelihood
• Technology: Demonstrate inserting a graph or chart using the Microsoft® Excel charting function within Microsoft® PowerPoint
• Technology: Adjust and format graphs in a presentation using the Design, Layout, and Format ribbons
• Technology: Use the Record tool to share information within the presentation

Lesson 5: Technology for Searching

Objectives:
• Academic: Search, examine, and assess research articles to determine authenticity and sound reasoning
• Technology: Create a presentation to share information from research
• Technology: Modify a table and insert hyperlinks to maintain a record of reliable sources and websites

Lesson 6: Technology for Inquiry

Objectives:
• Academic: Conduct an Internet search for information and evaluate the text for authenticity
• Academic: Organize resources from Internet research
Lesson 7: Technology for Communication Geologic Time Scale (two-day lesson)

Objectives:
- Academic: Outline geological research and illustrate the time scale sequence logically
- Technology: Insert and format SmartArt to organize and sequences events
- Technology: Create a presentation to sequence events of the geological time scale

Unit 4: Microsoft® Excel

This unit contains a combination of math and research skills. Students begin the unit rounding decimals and then organizing data into input/output tables. Students also work on balancing a checkbook by inserting formulas. Then they will focus on surveys and organizing that data to create a graph. The portfolio is based on the final topic in which students create a graph from self-created surveys.

Objectives:
- Apply knowledge of rounding and place value to round decimal numbers
- Organize data, create input/output tables, and enter and manipulate that data in an Excel workbook
- Enter data and balance a checkbook by inserting formulas within Excel
- Create a survey, obtain data, organize data, and input data into a workbook to evaluate information
- Create and format graphs using data in a workbook

Lesson 1: Estimate by Rounding

Objectives:
- Academic: Determine when it is appropriate to round decimal numbers up or down to the nearest whole number
- Academic: Solve multi-step problems by rounding decimals
- Technology: Round numbers with decimals to practice estimation using the ROUND function
- Technology: Apply formulas to multiple cells in a workbook using the AutoFill feature

Lesson 2: Function Tables

Objectives:
- Academic: Create input/output tables from expressions
- Academic: Solve word problems and equations using an input/output table
- Technology: Create an input/output table in Excel to show answers to equations
- Technology: Insert and apply multiplication and addition formulas to an input/output table

Lesson 3: Real-World Data

Objectives:
- Academic: Balance a checkbook within a provided resource
- Technology: Insert formulas into an Excel workbook to determine the balance of the checkbook
- Technology: Insert and apply the SUM function to add multiple cells together

Lesson 4: Finding the Mean and Range of Data

Objectives:
- Academic: Organize data to enable easier comparison
Lesson 5: Sorting and Filtering Data

Objectives:
- Academic: Analyze data in a database to identify similarities and differences
- Technology: Organize, sort and filter data in a database to identify trends
- Technology: Define and identify fields, field names and records in a database

Lesson 6: Graphing Data

Objectives:
- Academic: Evaluate different types of graphs and determine appropriate graphs for certain types of data
- Technology: Graph two data series in multiple formats and evaluate the graphs’ advantages and disadvantages

Lesson 7: Survey and Graphing Analysis (two-day lesson)

Objectives:
- Academic: Evaluate a random sample for fair and unbiased questions
- Academic: Compare and analyze collected data
- Technology: Organize information into a data table in Excel
- Technology: Create a graph from the data table in Excel to compare data

Unit 5: Study Skills

This unit focuses on various strategies related to time management, organization, and goal setting. You will create diagrams, and you will use these diagrams to compare and contrast information. You will develop a study plan that will help guide you through your studies. Finally, you will explore mnemonic techniques to assist with memorization, helpful test-taking tips, and various methods of studying for tests.

Objectives:
- Identify and manage personal study skills, memory devices, and time management skills
- Evaluate personal test-taking skills and improve upon them to develop educational goals
- Evaluate purposes for a timeline
- Create a timeline
- Analyze data and predict trends based on online games

Lesson 1: Organization and Time Management

Objectives:
- Identify characteristics of time management
- Identify time management skills that need improving
- Design a weekly schedule to improve time management skills

Lesson 2: Using Graphic Organizers: Timelines

Objectives:
- Evaluate a timeline as a tool to support learning
- Create a timeline

Lesson 3: Memory Aids

Objectives:
- Identify key elements in creating memory tools, acronyms, and acrostics
- Construct original acronyms and acrostics using information from current academic courses

Lesson 4: Study Strategies

Appendix A.2.g Educational Technology Course Guides

© 2013 Connections Education LLC. All rights reserved.
Objectives:
• Identify different study skills
• Formulate a method of studying that works best for you

Lesson 5: Test-Taking Strategies

Objectives:
• Distinguish between characteristics of objective questions and essay questions
• Evaluate personal test-taking strategies
• Utilize test-taking strategies

Lesson 6: Goal Setting (two-day lesson)

Objectives:
• Express the characteristics of successful and well-thought-out goals
• Apply study skills while developing short- and long-term goals

Lesson 7: Learning through Games and Simulations

Objectives:
• Research examples of simulations and interactive games for education online
• Analyze trends that occur when repeating simulations with different data
• Predict outcomes when data in a simulation is changed

Unit 6: Internet Safety

The focus of this unit is to provide guidance for using the Internet in a responsible way as a tool for communication, research, and collaboration—in other words, Internet safety. Good citizenship within virtual communities is presented, as well as topics such as online bullying and negative networking/gangs online. Internet safety concerns, including the importance of choosing a safe user name and keeping personal information safe from strangers, the risks associated with online shopping, and the threat of online predators, are also touched on. Finally, intellectual property and copyright concepts are discussed. You will also examine the consequences that are associated with piracy and illegal music downloading.

Objectives:
• Evaluate different safety rules for Internet use and clarify why safety is important when using the Internet
• Compare online risks with those in real life
• Reflect on what intellectual property is and how the principle is used to protect ideas
• Compare plagiarism and piracy to theft in real life

Lesson 1: Acceptable Use Policy

Objectives:
• Identify necessary components of an acceptable use policy (AUP)
• Review the school's AUP
• Develop AUP guidelines

Lesson 2: Cybersecurity

Objectives:
• Identify key general attributes of the threats to the security of computers and information via the Internet, such as viruses, worms, and Trojan horses
• Understand how to protect computers from viruses, worms, Trojan horses, and spyware
• Understand basic prevention and maintenance that can be done to protect the computer, such as operating system updates, firewalls, spyware checks, virus protection, etc.

Lesson 3: Cyber Community (two-day lesson)

Objectives:
• Describe different ways to communicate
• Differentiate between appropriate and inappropriate websites
• Describe different ways to handle inappropriate websites
Lesson 4: Social Networks

Objectives:
- Identify media that is commonly shared online
- Define the relevance of intellectual property rights to online sharing in an age-appropriate way
- Compare the relationship of intellectual property rights to linking on personal social networking pages

Lesson 5: Cyberbullying

Objectives:
- Identify bystanders who may be involved in a cyberbullying incident
- Use a variety of resources to explore the characteristics and behaviors of bystanders and upstanders
- Draw conclusions about the actions of various participants in bullying incidents

Lesson 6: Safety in Online Gaming

Objectives:
- Evaluate the concept of online gaming
- Understand the safety and security risks associated with online gaming
- Develop an action plan for informing others of how to play online safely

Lesson 7: Safeguarding Identity

Objectives:
- Evaluate the concept of identity theft
- Critique the security risks associated with revealing private information online
- Develop an action plan for dealing with identity theft that can be shared with parents

Lesson 8: Online Shopping

Objectives:
- Evaluate the safety risks associated with online shopping
- Take preventative measures when shopping online to help ensure personal safety and computer security

Lesson 9: Blogging

Objectives:
- Evaluate the security risks associated with online journaling and blogging
- Identify specific risky behaviors associated with online journaling
- Determine positive techniques to blog online

Lesson 10: Cyber Predators

Objectives:
- Evaluate risks involved in engaging in online friendships
- Discuss basic strategies for interacting online
- Demonstrate understanding of risky online interaction through a selected project/activity

Lesson 11: Safety in Online Relationships

Objectives:
- Apply the concept of willing participation
- Evaluate risk-taking in the context of a cyber predator case
- Make conclusions about who is most at risk for potentially dangerous online relationships
- Make conclusions about how to maintain safe and healthy online relationships

Lesson 12: Digital Literacy
• Compare how the Internet and media publications can be used in positive ways, as well as in negative or unethical ways
• Create a code of conduct governing Internet use
• Consider the consequences of various means of online publication

Lesson 13: Understanding Intellectual Property

Objectives:
• Make a distinction between tangible property and intellectual property
• Define intellectual property that has been created in the mind before it is turned into a material item
• Identify copyrighted materials as tangible works that are protected from being copied, distributed, performed, or changed without the creator's or owner's permission
• Identify the impact made when intellectual property rights are not respected
• Relate the concepts of intellectual property to reveal available online materials: music, videos, software, etc.

Lesson 14: Music Copyright Basics

Objectives:
• Apply copyright laws to online usage of music
• Determine legal alternatives when using copyrighted music for school assignments and/or personal use

Lesson 15: Plagiarism and the World Wide Web

Objectives:
• Define plagiarism
• Identify how plagiarism occurs
• Follow the basic guidelines for fair use of intellectual property

Lesson 16: Peer-to-Peer Networks

Objectives:
• Define and understand the concept of peer-to-peer networks
• Identify the safety and security risks, as well as legal issues, surrounding peer-to-peer networks
• Understand and correct misconceptions about the use of peer-to-peer networks

Unit 7: Digital Publishing
This unit contains a focus on digital publishing, in which you will conduct Boolean searches on the Internet, learn about elements of design, and complete a research project. The research project is the culminating project over several lessons. You will research an ethical implication of technology, communicate how it may positively or negatively impact stakeholders, and participate in a collaborative discussion to receive feedback from peers and use that feedback to self-evaluate and revise your work.

Objectives:
• Develop a research plan and conduct Internet research using Boolean strategies
• Create a multimedia presentation to communicate research
• Collaborate with peers to share ideas, evaluate each other's work, and receive feedback
• Self-evaluate work and make revisions to reflect product criteria

Lesson 1: Exploring a Topic (two-day lesson)

Objectives:
• Utilize Boolean search strategies to research ethical implications of technology
• Develop a research plan, and identify stakeholders involved
• Apply questioning and research skills to narrow down a topic for investigation

Lesson 2: Investigating Design
Objectives:
• Define the elements of design including line, shape, texture, color, value, and space
• Understand the uses for line, shape, texture, color, value, and space in design
• Apply the basic elements of design to edit work
• Utilize the GNU Image Manipulation Program, GIMP, to edit images

Lesson 3: Creating a Multimedia Presentation (two-day lesson)

Objectives:
• Create a multimedia presentation to communicate the ethical implications of technology and artificial intelligence

Lesson 4: Collaborating Online

Objectives:
• Utilize technology to share ideas and collaborate with peers
• Evaluate others’ works using provided criteria

Lesson 5: Evaluating the Product (two-day lesson)

Objectives:
• Self-evaluate a product in regard to audience, purpose, design, and content delivery
EDUCATIONAL TECHNOLOGY AND ONLINE LEARNING
Educational Technology and Online Learning 8

Students progress to more sophisticated work in this course, including the use of electronic media and software to apply academic concepts in the creation of meaningful organizers, projects, and presentations. Students locate, retrieve, and evaluate data in order to construct and analyze databases. Students produce presentations on Internet safety, online predators, and cyberbullying. At the end of the course, students become effective communicators and collaborators as they plan, evaluate, and synthesize research emphasizing current issues with technology.

Unit 1: Introduction

In this unit, you will revisit and expand upon basic computer skills. You will practice hand positioning for efficient typing skills and familiarize yourself with various computer components, including personal hardware, operating systems, and software programs. You will examine troubleshooting methods to gain familiarity of common computer issues and ways to effectively overcome them.

Objectives:
- Utilize keys above, below, and on the home row to type individual letters and words
- Create an effective and efficient file hierarchy for courses and construct the file management system for schoolwork
- Develop strategies and recommend solutions to various computer problems
- Distinguish the difference between hardware, software, components, and the operating system of computer and other technology devices

Lesson 1: Typing Skills

Objectives:
- Utilize keys from the home row, and rows above and below the home row to type individual letters and words
- Identify spelling errors with the opportunity to self-correct

Lesson 2: Hardware, Components, and Operating Systems

Objectives:
- Compare and contrast input, output, processing, and data storage devices
- Describe computer hardware, components, and system
- Identify personal software programs
- Create a course folder structure using subfolders to organize and manage files

Lesson 3: Computer Troubleshooting

Objectives:
- Examine troubleshooting techniques related to everyday computer use
- Recommend solutions to various computer problems
- Identify appropriate resolutions to common computer problems

Unit 2: Microsoft® Word

This unit explores common uses for Microsoft® Word in an educational setting while utilizing real-world applications. You will be guided through the digital writing process, construct paragraphs, and format text while using active and passive voice and a variety of verb moods. Narrative and poetic structure will also be analyzed using columns and rows within a table to organize thoughts and ideas. A variety of essays will also be presented for you to utilize. You will conduct a search and update a search log. In your writing, you will learn to accurately reference materials in scholastic documents.

Objectives:
- Explore and create task-specific writing structures to include paragraphs, poetry, expository, and informative writing
- Utilize Microsoft Word to plan and create text-based documents through the research and development phases
- Conduct a search and site sources accurately in a document

Lesson 1: Verbs in the Active and Passive Voice

© 2013 Connections Education LLC. All rights reserved.
Objectives:
• Academic: Apply both active and passive voice in writing
• Academic: Construct a news article with proper paragraph alignment and indentation
• Technology: Compose a typed news article using the Tab key to indent text or apply double spacing between paragraphs using the Enter key

Lesson 2: Verbs Expressing Mood
Objectives:
• Academic: Identify and analyze indicative, imperative, and subjunctive verb moods in context
• Technology: Demonstrate how to bold, italicize, and underline text using buttons and menus available in the Home ribbon
• Technology: Apply the same font face throughout a document

Lesson 3: Characters, Setting, and Plot
Objectives:
• Academic: Identify parts of a story
• Academic: Outline and summarize the characters, setting, and plot of a story
• Technology: Organize the structure of a story within a document by inserting columns and column breaks to add headings

Lesson 4: Thematic Poetry (two-day lesson)
Objectives:
• Academic: Illustrate the rhyme scheme of a favorite song
• Academic: Identify and explain the theme and rhyme scheme of poetry
• Technology: Demonstrate inserting a table to construct and display the rhyme scheme of poetry

Lesson 5: Technology for Searching: Cyberbullying (three-day lesson)
Objectives:
• Academic: Locate articles in a database using specific search parameters
• Technology: Construct a search log to cite works by inserting a table and hyperlinks
• Technology: Apply font formatting to identify key information gained in research
• Technology: Conduct online database searches using Boolean operators

Lesson 6: Technology for Publishing: Cyberbullying (two-day lesson)
Objectives:
• Academic: Design an informative or explanatory text about cyberbullying
• Academic: Identify important information to educate others about cyberbullying
• Technology: Utilize multimedia sources to insert images and captions
• Technology: Demonstrate inserting a footnote to cite sources
• Technology: Demonstrate correcting grammatical and punctuation errors using the Spelling and Grammar tool

Unit 3: Microsoft® PowerPoint
This unit explores common uses for Microsoft® PowerPoint in an educational setting while utilizing real-world applications. Students will research a variety of topics relating to natural disasters and history, with emphasis on the Progressive Era. Students will analyze information using concept maps and incorporating SmartArt graphics and text. Digital enhancements will be examined through the use of timelines and photos.

Objectives:
• Research, analyze, and identify key information on natural disasters and the Progressive Era
• Create multi-dimensional digital presentations using the Photo Album feature and text and images to illustrate a timeline
• Utilize SmartArt graphics to create concept maps in order to organize information within presentations

**Lesson 1: Natural Disasters (two-day lesson)**

Objectives:
- Academic: Identify several types of natural disasters
- Academic: Conduct in-depth research into one natural disaster
- Technology: Utilize Microsoft® PowerPoint to create an informative presentation about a natural disaster
- Technology: Integrate Action buttons, images, and text boxes to create multidimensional slides in a presentation about a natural disaster

**Lesson 2: Today in History (two-day lesson)**

Objectives:
- Academic: Outline historical events in chronological order
- Academic: Utilize visual aids to enhance presentations
- Technology: Create a historical timeline, utilizing transitions between slides in Microsoft® PowerPoint
- Technology: Incorporate animations into a timeline

**Lesson 3: Historical Points of View**

Objectives:
- Academic: Explore the history of the women’s suffrage movement in the United States of America
- Academic: Examine political cartoons to understand differences in opinion
- Technology: Create a Microsoft® PowerPoint presentation of the women’s suffrage movement using the Photo Album feature
- Technology: Provide analysis of images from the women’s suffrage era in a digital presentation

**Lesson 4: Progressive Era**

Objectives:
- Academic: Identify key issues and themes of the Progressive Era
- Academic: Describe aspects of the Progressive Era utilizing a concept map
- Technology: Create a concept map by inserting and formatting a SmartArt graphic in a Microsoft® PowerPoint presentation

**Lesson 5: Technology for Publishing: Progressive Era (two-day lesson)**

Objectives:
- Academic: Analyze and research reforms of the Progressive Era
- Academic: Create a concept map based on research about a Progressive Era topic
- Technology: Search for historical prints and photographs using the Library of Congress database
- Technology: Construct a presentation about the Progressive Era incorporating slide transitions and animations

**Unit 4: Microsoft® Excel**

This unit explores common uses for Microsoft Excel in an educational setting while utilizing real-world applications. You will explore, create, and input various data sets to conduct trend and frequency analyses. You will reorganize and reevaluate two-variable data sets to explore relationships. At the end of the unit, you will conduct a survey and analyze the data by creating and formatting scatter plots and trend lines to show negative and positive correlations.

Objectives:
- Investigate common trends within scatter plot diagrams to analyze information
- Modify two-variable data to support further data analysis
- Create a digital database to analyze information
- Analyze and compare data frequencies among multiple sets of data
Lesson 1: Scatter Plots

Objectives:
- Academic: Create a scatter plot in order to visualize relationships within data
- Academic: Identify and name ordered pairs on a scatter plot using the x- and y-axes
- Technology: Examine data organized in columns and rows in Microsoft Excel
- Technology: Build a scatter plot diagram in Microsoft Excel using given coordinates
- Technology: Interchange the x- and y-axes of a scatter plot in Microsoft Excel

Lesson 2: Scatter Plots: Comparing Variables

Objectives:
- Academic: Create and analyze data in scatter plot diagrams
- Academic: Investigate common trends within scatter plot diagrams
- Technology: Analyze a scatter plot diagram
- Technology: Utilize Microsoft® Excel to create a data table

Lesson 3: Scatter Plots: Trend Lines

Objectives:
- Academic: Explore the relationship between a country’s land area and population
- Academic: Identify and describe reasons for outliers along a trend line
- Technology: Create a digital scatter plot to analyze trends
- Technology: Insert a trend line into a scatter plot to determine negative or positive correlation

Lesson 4: Creating a Database

Objectives:
- Academic: Collect data in order to create a digital database
- Technology: Construct a database in Microsoft® Excel by entering data into fields and records
- Technology: Define and understand the purpose of fields (cells) and records (rows) in a database
- Technology: Reorganize and analyze data in a database using the sorting and filtering options

Lesson 5: Creating a Pivot Table

Objectives:
- Academic: Utilize an existing database to support further data analysis
- Technology: Create and modify a pivot table to analyze data
- Technology: Format data to display percentages and currency using the Format Cells window

Lesson 6: Frequencies

Objectives:
- Academic: Calculate frequencies within a set of data
- Academic: Interpret data trends using a histogram
- Technology: Create a histogram using the column chart option in Microsoft® Excel

Lesson 7: Data Analysis (two-day lesson)

Objectives:
- Academic: Create and conduct an original survey
- Academic: Interpret survey data using tools in Microsoft® Excel
- Technology: Create and analyze a scatter plot using original data
- Technology: Enter original data into a worksheet in Microsoft Excel

Unit 5: Study Strategies
This unit explores necessary study strategies using digital technology enhancements. Students will examine time management, study, and test-taking techniques to support academic success.

Objectives:
- Identify time management skills
- Utilize various types of graphic organizers as study aids
- Examine five types of test-taking strategies
- Align study strategies with educational goals

Lesson 1: Tools for Organization and Time Management
Objectives:
- Identify time management skills
- Create a planning tool to manage time
- Identify time management areas of improvement

Lesson 2: Idea Organization Using Graphic Organizers
Objectives:
- Evaluate the usefulness of a digital graphic organizer
- Analyze idea organization for a Google Earth tour by exploring the tool in terms of your hometown

Lesson 3: Idea Organization Using Memory Aids
Objectives:
- Generate memory aids for academic concepts
- Differentiate between various types of memory aids

Lesson 4: Learning Through Games and Simulations
Objectives:
- Examine personal learning gain through an online science game
- Assess the value of online games and simulations for learning

Lesson 5: Study Strategies
Objectives:
- Identify current study habits
- Construct a presentation on study strategies

Lesson 6: Test-Taking Strategies
Objectives:
- Examine test-taking strategies for five types of test
- Prepare concise summaries of test-taking strategies

Lesson 7: Goal Setting (two-day lesson)
Objectives:
- Identify objectives to reach educational or career goals
- Devise a goal-planning presentation based on academic study skills

Unit 6: Internet Safety
This unit explores the use of cyber communities. Students will examine guidelines for computer and cyber citizenship, risks associated with Internet use, and copyright laws.

Objectives:
- Explore guidelines for cyber citizenship
- Investigate risks associated with Internet use
- Explore different ways that media can be used to convey messages
- Describe the effects of copyright laws on producers and consumers
- Utilize appropriate referencing techniques

Lesson 1: Acceptable Use Policy
Objectives:
- Identify important features of an Acceptable Use Policy
• Review the school’s Acceptable Use Policy

Lesson 2: Proactive Protection Online

Objectives:
• Identify the basic risks associated with Internet use
• Illustrate knowledge of a chosen Internet security topic
• Create a presentation conveying an Internet security topic
• Develop an understanding that those met online are strangers

Lesson 3: Cybersafety and Photo Management

Objectives:
• Identify appropriate behavior for photo management on the Internet
• Recommend alternative actions for cybersafety scenarios

Lesson 4: Your Digital Footprint

Objectives:
• Differentiate between active and passive digital footprints
• Identify reasons why digital footprints matter
• Create an informative brochure about digital footprints

Lesson 5: Cyberbullying

Objectives:
• Gain a basic understanding of cyberbullying through reading and discussion
• Summarize theme and key learning points from a story in a Microsoft® PowerPoint presentation
• Discuss strategies for coping with an online bullying situation

Lesson 6: Computer and Internet Health Issues

Objectives:
• Explore health issues that result from prolonged computer usage
• Identify strategies to maintain health and body while using digital technologies

Lesson 7: Media Literacy

Objectives:
• Define media literacy
• Identify sources of bias in media
• Create a media product to promote media literacy

Lesson 8: The Power of Media

Objectives:
• Identify media sources
• Define and assess public service announcements (PSAs)
• Understand the power the media have in changing perceptions and behavior
• Utilize media to put a message out

Lesson 9: Predator Awareness

Objectives:
• Identify online behavior that is unsafe, demonstrating an understanding of how to avoid online predators
• Understand the grooming process as it relates to online predators
• Promote Internet usage related to predator awareness

Lesson 10: Cyber Community Citizenship

Objectives:
• Define communities in both the physical and virtual worlds
• Evaluate website safety and appropriateness
Lesson 11: Creation and Copyright

Objectives:
- Categorize tangible and intellectual property
- Develop an understanding of online piracy
- Explain the importance of obeying copyright laws

Lesson 12: Music Makers: Scripts

Objectives:
- Recognize terminology related to copyrights in the music industry
- Describe the effects of copyright laws on a group of people

Lesson 13: Plagiarism

Objectives:
- Define plagiarism and paraphrase
- Illustrate ways to avoid plagiarism

Lesson 14: Fair Use

Objectives:
- Identify fair use and recommend actions for its application
- Create a poster of tips for copyright rules and fair-use exceptions

Lesson 15: Integrated Literacy (two-day lesson)

Objectives:
- Review security concepts related to the online community
- Plan and prepare the components of an educational story
- Write a story relating online safety measures to a younger audience

Unit 7: Digital Publishing

This unit explores the impact of technology on the world. You will conduct research as an advocate for the use of technology in education, design a logo for that cause, and create a movie to convince others that technology is a vital aspect to building stronger schools. As a culminating activity, you will participate in a class discussion to showcase your knowledge and provide your peers with feedback.

Objectives:
- Research and advocate the use of technology in education
- Explore different ways that media can be used to convey messages
- Design and produce a multimedia project that integrates the basic elements of design to communicate research
- Utilize collaboration software to participate in a peer review

Lesson 1: Exploring a Topic

Objectives:
- Investigate the impact that technology has had on education
- Utilize Boolean search operators to conduct research

Lesson 2: Investigating Design

Objectives:
- Identify and define elements of design
- Analyze how the design element was used to create a logo
- Apply various design elements within a digital project

Lesson 3: Creating a Movie (two-day lesson)

Objectives:
- Design an informative presentation using movie software to communicate the impact of technology on education

Lesson 4: Collaborating Online

Objectives:
- Evaluate and provide feedback on student work
Lesson 5: Evaluating the Product (two-day lesson)

Objectives:
- Conduct a self-assessment of a project based on the criteria presented in a rubric
APPENDIX A
CURRICULUM

A.2 COURSE GUIDES

h. ADVANCED PLACEMENT®
This document is part of Appendix A: Curriculum.

It includes syllabi for the Advanced Placement courses that will be provided at Reach.

- Advanced Placement® Art History
- Advanced Placement® Biology
- Advanced Placement® Calculus AB
- Advanced Placement® Calculus BC
- Advanced Placement® Computer Science A
- Advanced Placement® English Language and Composition
- Advanced Placement® English Literature and Composition
- Advanced Placement® Environmental Science
- Advanced Placement® Human Geography
- Advanced Placement® Macroeconomics
- Advanced Placement® Microeconomics
- Advanced Placement® Psychology
- Advanced Placement® Spanish Literature & Culture
- Advanced Placement® Statistics
- Advanced Placement® U.S. Government & Politics
- Advanced Placement® U.S. History

Curricular Requirements

CR1a  Students and teachers use a college-level art history textbook.
   • See page 1

CR1b  Students and teachers use primary sources of different types.
   • See pages 1, 5, 7, 8, 9, 13

CR1c  Students and teachers use secondary sources.
   • See pages 1, 3, 4, 5, 6, 8, 9, 10, 11, 12, 13

CR2  The big ideas and essential questions in the *AP Art History Course and Exam Description* are used as a conceptual foundation for the course.
   • See pages 1, 2, 3, 4, 5, 6, 8, 9, 10, 11, 12

CR3  Each of the 10 AP Art History content areas in the *AP Art History Course and Exam Description* receives explicit attention.
   • See pages 2, 3, 4, 5, 6, 8, 9, 10, 11, 12

CR4  Students have opportunities to engage with all 12 course learning objectives in the *AP Art History Course and Exam Description* through specific assignments and activities.
   • See pages 2, 3, 4, 5, 6, 7, 8, 9, 10, 11, 12, 13

CR5  Students are provided opportunities to analyze works of art both visually and contextually.
   • See pages 2, 3, 4, 5, 6, 7, 8, 9, 10, 11, 12, 13

CR6  Students are provided opportunities to analyze interpretations of works of art from primary or secondary sources.
   • See pages 2, 3, 4, 6, 7, 8, 9, 10, 12, 13

CR7  Students are provided opportunities to analyze relationships between works of art across cultures and from different content areas.
   • See pages 2, 3, 4, 5, 6, 7, 8, 9, 10, 11, 12, 13

CR8  Students have opportunities to use enduring understanding and essential knowledge statements as a foundation to conduct research on a specific work of art.
   • See pages 2, 3, 4, 5, 6, 7, 8, 9, 10, 12

CR9  Students are provided opportunities to experience actual works of art or architecture.
   • See pages 5, 9
AP Art History Syllabus

"A lot of people come from elsewhere, the idea of an authentic singular culture is a modern myth."—Yinka Shonibare

Course Description
Within AP Art History, students will explore the interconnections between art, culture, and historical context using critical analysis through the critical lenses of artistic expression, cultural awareness, and purpose. Using a defined art historical skill set and reflective learning, students will analyze relationships across cultures with a global lens. The examination of how people have responded to and communicated their experiences through art will enable students to think conceptually about art ranging from prehistoric to contemporary. Students will be active participants, engaging with art and its context as they read, research, and collaborate to learn about art, artists, art making, and responses to and interpretations of art. [CR2]

Resources:

The AP Art History Framework
[CR2]

Supplementary Sources:
Primary Sources: Sources that originate with or are contemporary with the works of art under discussion (i.e., written documents, performances on video, interviews).
Secondary Sources: Sources written by scholars (i.e., journal articles, scholarly videos, museum interpretive materials).
Students are provided and expected to consider primary sources, articles, and excerpts that provide a comprehensive examination, interpretation, and exposure to other contrasting thoughts and ideas about art and architecture including:

- Museum of Modern Art
- The Guggenheim Museum
- The Web Gallery of Art
- National Gallery of Art
- The Tate Museum
- The British Museum
- Metropolitan Museum of Art
- Artcyclopedia
- Art Lexicon
- Gardner Audio Pronunciation Guide
- Art History Resources

[CR1b, CR1c]
Gallery One—Introduction to Art History [CR3] 16 days

"Art is not what you see, but what you make others see."—Edgar Degas

Gallery Essential Questions [CR2]
What is art and how is it made?
Why and how does art change?
How do we describe our thinking about art?

Enduring Understanding 1-1, 1-2, 1-3
- Students are introduced to Art History through the introduction to the AP Art Framework—Big Ideas, Essential Questions, Enduring Understanding statements, and Essential Questions; comparison of aesthetics and art history and the goals of art historical study; an introduction to contextual analysis of art; an exploration of themes and subthemes; and application of the Big Ideas and Essential Questions to an artwork. Students complete a multiple-choice diagnostic exam. (LO 1.1) [CR2]
- Formal analysis of art and the differences between formal and contextual analysis are introduced. Students apply formal and contextual analysis to research #7 Jade cong using resources beyond the provided sources within the course in order to examine 1-1a, 1-1b, 1-2a, 1-2c, and 1-3c Essential Knowledge statements. (LO 1.1, 1.2, 1.3, 1.4, 2.1, 2.2, 3.2, 3.3) [CR7, CR6, CR8]
- A breakdown of the College Board AP Art History Exam is provided to help students understand how the course assessments will emulate components of the May exam. An examination of provided prompts and rubrics leads students in the practice of breaking down prompts against a rubric to understand how their work will be scored. Students dissect the components of a prompt to demonstrate their understanding of how to achieve success. (LO 1.1, 2.1) [CR2]
- The examination of architecture, architectural floor plans, and the connection between the two are introduced. Students are provided generic architectural plans to discuss and compare how floor plans exemplify the function of the structures and the culture they were created within. Students complete a short response assessment to identify the art historical period of a given structure and analyze how the formal qualities of both the plan and the exterior exemplify the style of that art historical period. (LO 1.1, 1.3, 1.4, 2.2) [CR5, CR7]
- A discussion of Geological eras that define periods before written record is presented to help students understand the contextual and formal elements of art as it spread from Africa in the Paleolithic, Mesolithic, and Neolithic eras. The role of stratigraphic archaeology in art historical studies is examined. Students complete a lesson-level multiple-choice quiz. (LO 1.1, 1.3, 1.4, 2.1, 3.4) [CR5]
- Students are provided a long response prompt, written response, and corresponding rubric to score the response. Students discuss their evaluation with direct references to the response and rubric to support their scoring. (LO 1.1, 1.3, 1.4, 2.1, 3.1, 3.3, 3.5) [CR4]
- Students complete a multiple-choice exam modeled on the College Board AP Art History Exam. Each question prompts students to apply art historical skills, including contextual understanding and in-depth knowledge of specific works of art from the curriculum, to demonstrate achievement. (LO 1.1, 2.3, 3.1, 3.2, 3.3, 3.5) [CR7]

Resources
Newton, Douglas. “Figure of a divinity (tino).” Joseph Freed and Associates, LLC. The Sullivan Center. [CR1c]

Gallery Two—Indigenous Americas [CR3] 15 days

"The aim of art is to represent not the outward appearance of things, but their inward significance."—Aristotle

Gallery Essential Questions [CR2]
How do artists communicate religious beliefs and practices?
How is the difference between natural and the supernatural depicted?
How can art and architecture communicate a patron's power?

Enduring Understanding 5-1, 5-2, 5-3, 5-4, 5-5
• The Indigenous Americas are introduced through discussion of how varied manifestations of a sacred space reflect and are designated by its cultural and religious context, purpose, and function. Students complete a long response assessment using visual and contextual evidence to discuss art and architecture that reflect sacred themes. (LO 1.3, 1.4, 2.1, 3.2, 3.3, 3.5) [CR5, CR7]
• Students examine the Mayan culture to gain an understanding of how the lack of cultural context leads to misinterpretation of cultural and artistic rituals. Imagery that represents pain and suffering with a cultural or religious intention is compared and contrasted. Students apply formal and contextual analysis to research #163 Bandolier bag and #233 Trade (Gifts for Trading Land with White People) using resources beyond the provided sources within the course in order to examine 5-1b, 5-2a, 5-2d, 5-3b, and 5-5e Essential Knowledge statements (LO 1.1, 1.2, 1.3, 1.4, 2.1, 2.2, 3.2, 3.3) [CR5, CR6, CR8]
• A discussion of cultural and artistic characteristics of the Andean region cultures leads an examination of architectural function as a representation of the terrestrial, power, and social hierarchy. Students complete a lesson-level multiple-choice quiz. (LO 1.3, 1.4, 3.2, 3.5) [CR5]
• Students investigate the cultural and artistic characteristics of the Native North American region through discussion of the representation of the transformative experience of the shaman within art that is aesthetic, functional, and participatory and how sacred structures are misconstrued as marks of solar events. Students analyze the European cross-cultural influence on indigenous cultures, artworks, and the architecture produced, and the reaction of the indigenous cultures to preserve their cultural art. Students complete a short response using specific visual evidence to justify their attribution of an artwork to the artist or culture that created it, and then comparing two works and the naturalistic representations of deities. (LO 1.3, 1.4, 3.2, 3.3, 3.4, 3.5) [CR4, CR5]
• Students will use the three Big Ideas and three Essential Questions to investigate and compare two artworks that communicate power and authority through the use of materials to discuss how this communication reflects the culture of the artworks. (LO 1.1, 1.3, 1.4, 2.1, 3.1, 3.3, 3.5) [CR3, CR5, CR7]
• A two-part exam is modeled after the College Board AP Art History Exam. Part A is comprised of multiple-choice questions, and Part B contains both a short and a long response question. Each question prompts students to apply art historical skills, including contextual understanding and in-depth knowledge of specific works of art from the curriculum, to demonstrate achievement. (LO 1.3, 1.4, 3.2, 3.3, 3.4, 3.5) [CR4, CR5, CR7]
Resources

Gallery Three—Asia [CR3] 17 days

“All religions try to benefit people, with the same basic message of the need for love and compassion, for justice and honesty, for contentment.”—Dalai Lama

Gallery Essential Questions [CR2]
How is art and architecture evidence of cross-cultural connections and influences?
How are religious beliefs and practices represented within art and architecture?
How does patronage influence artistic and architectural production?

Enduring Understanding 7-1, 7-1, 7-3, 7-4, 8-1, 8-2, 8-3, 8-4

- Students are introduced to Islam, its religious foundations, connection to sacred monuments, aniconism, and how the architectural elements of a mosque serve to accommodate the needs of the practitioners. Students investigate how other cultures impacted Islamic architecture, and how Islam conversely impacted the architecture of other cultures. Students complete a short response assessment using specific visual evidence to attribute and justify architecture to the patron or culture that created it and how it demonstrates the function or purpose designated by the patron or culture. (LO 1.1, 1.3, 1.4, 2.1, 3.4) [CR4, CR5]

- Students examine calligraphy as sacred text to affirm and spread religious beliefs and support Islamic aniconism. This is contrasted with calligraphy used in luxury arts such as manuscript paintings, ceramics, textiles, and metalwork as examples of both the range and quality of Islamic skill. The influence of Islamic art on surrounding cultures and the artwork produced as a result are discussed. The production of sacred Islamic architecture in non-Islamic regions is explored. Students apply formal and contextual analysis to research #203 Night Attack on the Sanjô Palace and #235 Rebellious Silence using resources beyond the provided sources within the course in order to examine 7-1b, 7-3c, and 8-1c Essential Knowledge statements. (LO 1.1, 1.2, 1.3, 1.4, 2.1, 2.2, 2.3, 3.2, 3.3) [CR5, CR6, CR7, CR8]

- Hinduism is introduced and compared with Islam. Students examine Hindu cultural and religious ideas through the cultural background of polytheism, narratives of Hindu deities, deity-specific iconography, and sensuality to represent natural abundance. Buddhism is introduced and contrasted with Hinduism, and the influence of Buddhism on Hinduism is examined. An investigation of Hindu temples and shrines assists in understanding sacred space and its function in rituals and worship. Funerary art and patronage are discussed to connect varied cultures thematically rather than geographically. Students complete a lesson-level multiple-choice quiz. (LO 1.3, 1.4, 2.3, 3.2, 3.5) [CR5, CR7]

- A deeper examination of Buddhism and its iconography is achieved through a contrast with Islam and Hinduism. Cross-cultural fertilization is revisited as students learn how the spread of Buddhism, its expansion, and its absorption of other religions through the Silk Route and trade were interconnected. Daoism is presented in connection with the technique of ink on silk, use of multiple perspectives, use of scale to represent belief, and connection with nature. Propagandistic techniques and the representation of the power of the patron and state in artworks and architecture are discussed. Confucianism is explored in conjunction...
with Confucian loyalty to the king and how the representation of nature’s power and symbolism is treated and perceived by different audiences. Students complete a long response assessment using specific visual or contextual evidence to analyze the similarities between two works in terms of how they exemplify cultural interaction and its influence on art and cultures. (LO 1.3, 1.4, 2.1, 2.3, 3.2, 3.3, 3.5) [CR5, CR7]

- Students identify and visit a sacred space in their community, take pictures of it, and investigate the religious and/or cultural needs that support the purpose of the space, identify the architectural elements that reflect the religion or culture it was created for, and compare it to sacred spaces encountered in the gallery. (LO 1.1, 1.3, 1.4, 2.1, 3.1, 3.3, 3.5) [CR4, CR5, CR7, CR8, CR9]

- Students complete a multiple-choice exam modeled on the College Board AP Art History Exam. Each question prompts students to apply art historical skills, including contextual understanding and in-depth knowledge of specific works of art from the curriculum, to demonstrate achievement. (LO 1.1, 2.3, 3.1, 3.2, 3.3, 3.5) [CR7]

- Students complete a long response assessment addressing tradition expressed within art and architecture. Once their responses are complete, they collaborate and exchange their written responses with a peer to evaluate each other’s work against the provided rubric to provide feedback to one another in support of improving their writing and understanding of how an AP Art History reader will rank their written responses on the College Board AP Art History Exam. (LO 1.3, 1.4, 2.1, 2.2, 3.1, 3.3, 3.4, 3.5) [CR4, CR5, CR7]

**Resources**

Asian Art Museum. Buddhist Cave Shrines of Longmen. [CR1c]

**Gallery Four—The Pacific [CR3] 9 days**

"An artist is a dreamer consenting to dream of the actual world."—George Santayana

**Gallery Essential Questions [CR2]**

How are groups of people defined by their relationship with the natural world?

How is this relationship depicted through their art?

How do artists intertwine the representation of human and animal forms to represent both the natural and supernatural?

**Enduring Understanding 9-1, 9-2, 9-3, 9-4**

- The Pacific cultures are introduced through their ecological situation, social structure, and external influences based on the classification by French explorer Jules Sebastien Cesar Dumont d’Urville’s assessment of geographical, racial, and linguistic distinctions. Recognizable trends in Pacific art are explored and explained by common origins and the influence of spiritual aspects like the Dreamings and animals. Students investigate the concepts of how mana and tapu are used to communicate and represent the power and status of a ruler, paralleled with the objects that symbolize power and the ritual nature of both their materials and creation. The use and ceremonial significance of tapa cloth are presented. Students complete a lesson-level multiple-choice quiz. (LO 1.3, 1.4, 3.2, 3.3, 3.5) [CR5]

- Students investigate media used in art of the Pacific, the sacred nature of creation, and how construction supports the use of the object as a representation of power and authority. The
wrapping of individuals and representations of deities to symbolize protection are explored in conjunction with mana. The concept of ancestors that represent protection and mediation within Oceanic groups is introduced, layered with the performance nature of masks, how masks adapt human and animal forms to depict natural and supernatural beings to create and preserve memory, and how the mask acts as an active channel to enable a dancer to become the spirit the mask embodies. Students apply formal and contextual analysis to research #218 Buk (mask), #229 A Book from the Sky, and #241 Pure Land using resources beyond the provided sources within the course in order to examine 9-1c, 9-3a, 9-3b, 9-4a, and 9-4d Essential Knowledge statements. (LO 1.1, 1.2, 1.3, 1.4, 2.1, 2.2, 3.2, 3.3) [CR5, CR6, CR7, CR8]

- Students investigate how Nan Madol, Machu Picchu, the Forbidden City, and the Palace at Versailles represent the power of the elite, are spaces that communicate power, and represent their patrons within their construction, materials, and location. Students complete a short response assessment using specific visual evidence to attribute the art historical period of a specific work of architecture and how it exemplifies the power and authority of the patron and/or of those who inhabited the architecture. (LO 1.1, 1.3, 1.4, 2.1) [CR5, CR7]

- Students research, identify, and discuss two artworks that represent how artists intertwine the representation of human and animal forms to symbolize both the natural and the supernatural. (LO 1.1, 1.3, 1.4, 2.1, 3.1, 3.2, 3.3, 3.5) [CR5, CR7]

- A two-part exam is modeled after the College Board AP Art History Exam. Part A is comprised of multiple-choice questions, and Part B contains both a short and a long response question. Each question prompts students to apply art historical skills, including contextual understanding and in-depth knowledge of specific works of art from the curriculum, to demonstrate achievement. (LO 1.3, 1.4 3.2, 3.3, 3.5) [CR4, CR5, CR7]

Resources
Aukland Art Gallery. Whakaahua Maori (Maori Portraits). [CR1c]

Gallery Five—Ancient Near East and Africa [CR3] 16 days

"If you do not know where you come from, then you don't know where you are, and if you don't know where you are, then you don't know where you're going. And if you don't know where you're going, you're probably going wrong."—Terry Pratchett

Gallery Essential Questions [CR2]
How does geography shape a culture’s worldview and values?
How is this depicted within the art and architecture created within that culture?

Enduring Understanding 2-1, 2-2, 2-3, 6-1, 6-2, 6-3, 6-4

- Students are introduced to the cultures of the Ancient Near East (SANBAN) through the transition of power and the reaction to and rejection of the previous culture. Students analyze the use of architecture as propaganda, a reflection of administrative authority, and representation of a sacred space. Art as propagandistic narration through the use of hierarchical scale and manipulation of figures through size and placement to convey power are investigated. Students complete a lesson-level multiple-choice quiz. (LO 1.3, 1.4, 3.2, 3.3, 3.5) [CR5, CR7]

- Egypt is introduced, compared, and contrasted with the cultures of the Ancient Near East. Egypt’s cosmology, religious practices, and political organization are discussed in the context of artistic innovations—registers, hierarchical scale, composite view, stylized
portraiture, and hieroglyphics. The Old and Middle Kingdoms are contextualized within the concepts of the afterlife, ka, and the funerary functions of art and architecture. Students investigate the portrayal of the afterlife within works to identify and understand Egyptian conventions of idealized depictions of gods and pharaohs in contrast with the realistic depiction of common beings. (LO 1.1, 1.4, 2.3, 3.2, 3.5) [CR5, CR7]

- The New Kingdom is analyzed through the use of mortuary and pylon temples and contrasted with tombs of the Old Kingdom. The meaning, narrative aspects, and function of the Book of the Dead are explored as a guidebook for the soul's difficult passage to the afterlife. The revolutionary nature and culture of the Amarna period is discussed, along with the influence of Akhenaten and the artistic and stylistic break from Egyptian conventions to convey lack of ruler divinity. Students investigate the reinstatement of Egyptian conventions and the return to traditional religion and artistic traits as evidenced in the artwork from Tutankhamun’s tomb. Students complete a short response assessment using specific visual and contextual evidence from an artwork and text from the Book of the Dead to analyze how both the quote and the artwork reflect the Egyptian views of death and afterlife. (LO 1.3, 1.4, 2.1, 3.2, 3.3, 3.5) [CR1b, CR5, CR6]

- Students are introduced to the cultures of Africa by addressing and dispelling the common cultural misconceptions that it is a single country with one people as compared to a vast continent with many peoples. The elements of a mosque are revisited to contextualize the re-appropriation and communication of sacred spaces. Students investigate the interconnectedness of religious and secular power along with the representation of power through figural representations that utilize facial expression, gesture, body language, and attitude as a symbolic representation of political power as a message to observers. Students explore figural representations and other symbols of power, like thrones, commissioned by leaders as evidence of chronological history and oral narrative traditions for future generations. (LO 1.1, 1.4, 2.3, 3.2, 3.5) [CR5, CR7]

- Students explore how memory is visualized or created through cultures in Africa that engage performance as a ritual component in both public and private rituals. The concepts of ritual specialists and the use of figures to connect humans to the supernatural world are presented, and students examine the role of figures in specific ritual and ceremonial practices. Students investigate the roles of masks as they are performed during ceremonies and rituals as symbols of both honor and change. Students examine the influence of African art in the 20th century. Students apply formal and contextual analysis to research #243 Darkytown Rebellion using resources beyond the provided sources within the course in order to examine 6-3a, 6-4a, and 6-4b Essential Knowledge statements. (LO 1.1, 1.2, 1.3, 1.4, 2.1, 2.2, 3.2, 3.3) [CR5, CR7, CR6, CR8]

- Students reflect on previous assessments, lesson quizzes, gallery exams, and practice exams to assess their strengths and areas in need of improvement for discussion of and preparation for their segment exam. (LO 1.1, 1.3, 1.4, 2.1, 3.1, 3.3, 3.5)

- A two-part segment exam is modeled after the College Board AP Art History Exam. Part A is comprised of multiple-choice questions, and Part B contains two short and one long response questions. Each question prompts students to apply art historical skills, including contextual understanding and in-depth knowledge of specific works of art from the curriculum, to demonstrate achievement. (LO 1.3, 1.4, 2.2, 3.2, 3.3, 3.5) [CR1b, CR4, CR5, CR6, CR7]

**Gallery Six—Ancient Mediterranean [CR3]** 12 days

"I found Rome a city of bricks and left it a city of marble."—Augustus

**Gallery Essential Questions [CR2]**

How do stylistic elements represent a culture?

How are cultural influences and shifts represented within stylistic evolution?

**Enduring Understanding 2-4, 2-5**

- Students are introduced to the Aegean, Greek, Etruscan, and Roman cultures as foundational understanding of the subsequent influence they had on other cultures. Students explore major themes in Greek art and evaluate the evolution in statuary, architecture, architectural sculpture, painting, and pottery as a cultural representation throughout the stylistic periods of Greek art. Etruscan art and architecture are contextualized through trade with Greece and the Near East, emphasizing the styles the Etruscans assimilated and their absorption into Rome. The historical context of Rome, its transition from a republic to an empire, is presented to help students understand the stylistic elements of Roman architecture, painting, mosaics, and sculpture. Students complete a multiple-choice diagnostic exam. Students will formal and contextual analysis to research #37 *Winged Victory of Samothrace* using resources beyond the provided sources within the course in order to examine 2-4a, 2-4c, and 2-5b Essential Knowledge statements. (LO 1.1, 1.2, 1.3, 1.4, 2.1, 2.2, 2.3, 3.2, 3.3) [CR5, CR6, CR8]

- Students explore the thematic connections of and influence of trade in Greek and Etruscan cultures in funerary art, figural representations, and sacred spaces, including the influence of external cultures like those of Egypt and the Orient. Students complete a short response assessment using specific visual and contextual evidence to connect a quote about the Hellenistic representation of the individual and the artwork provided to address how they both exemplify the characteristics of the Hellenistic period. (LO 1.1, 1.3, 1.4, 2.1, 2.3) [CR1b, CR5, CR6]

- Students explore the thematic connections of and influence of trade in Greek, Etruscan, and Roman cultures including propagandistic, realistic, and idealistic figural representations and the evolution of Roman painting styles. The sacred, civic, and domestic architecture of Rome and its unique characteristics and embellishments are explored. The evolution of portraiture is discussed. The use of narrative is explored in all three cultures, thematically connecting different mediums and functions. Students complete a lesson-level multiple-choice quiz. (LO 1.3, 1.4, 2.3, 3.2, 3.3, 3.5) [CR5, CR7]

- Students are provided two architectural examples to compare, use specific evidence to explain how one influenced the design, function, and setting of the other, and discuss how both complexes exemplify Greek ideas of order and rationality. They will write a response and rank it while reflecting on their response skills. (LO 1.1, 1.3, 1.4, 2.1, 3.1, 3.3, 3.5) [CR4, CR5]

- Students complete a multiple-choice exam modeled on the College Board AP Art History Exam. Each question prompts students to apply art historical skills, including contextual
understanding and in-depth knowledge of specific works of art from the curriculum, to
demonstrate achievement. (LO 1.1, 2.3, 3.1, 3.2, 3.3, 3.5) [CR7]

"We shape our buildings; thereafter they shape us."—Winston Churchill

Gallery Essential Questions [CR2]
How does patronage affect artistic and architectural production, and how are cultural exchanges
reflected in art?  
How are cultural exchanges reflected in art?

Enduring Understanding 3-1, 3-2, 3-3
- The cultural influence of Egypt, Greece, and Rome is examined in the Arabian region
  through an overarching introduction to and contextualization of the overlap of cultures,
  influences, and resulting architectural representations of religious beliefs after the fall of the
  Roman Empire beginning with Constantine and continuing with the evolution of Christianity.
  Students explore Byzantine and early Christian iconography, cultural context, tombs, and
  catacombs and connect stylistic elements that reflect Etruscan practices and Roman
  Second-Style painting. Students apply formal and contextual analysis to research #57 Pyxis
  of al-Mughira using resources beyond the provided sources within the course in order to
  examine 3-1a, 3-1b, and 3-2c Essential Knowledge statements. (LO 1.1, 1.2, 1.3, 1.4, 2.1,
  2.2, 2.3, 3.2, 3.3) [CR5, CR7, CR6, CR8]  
- Students compare and contrast the Jewish, Christian, and Islamic religions within their
  methods of worship as a base for the lesson. Iconography is revisited in context with the
  Iconoclastic controversy, Byzantine Christian Icon veneration, and manuscripts. Students
  explore migratory art, art of conversion, and narrative art in different mediums. Students
  complete a long response assessment using specific visual and contextual evidence to
  identify the intended audience of a work of art and describe and analyze how the artwork
  conveys a propagandistic agenda. (LO 1.3, 1.4, 2.1, 3.2, 3.3, 3.5) [CR5, CR7]  
- The cultural context of Romanesque and Gothic architecture is presented and compared to
  Buddhist and Islamic context and architecture. Pilgrimage and the search for relics are
  discussed with the interest in humanizing biblical figures in the Late Gothic period. The shift
  of bookmaking from monasteries to urban workshops is explored. Students complete a
  lesson-level multiple-choice quiz. (LO 1.3, 1.4, 3.2, 3.3, 3.5) [CR5, CR7]  
- Students identify and visit a structure that represents religious traditions and a civic structure
  that reflects classical influence in their community. For each structure, they create a floor
  plan, identify the principal materials, identify the components reflecting historical
  architectural influences, and analyze how it meets its intended function. (LO 1.1, 1.3, 1.4,
  2.1, 3.1, 3.2, 3.3, 3.5) [CR4, CR5, CR7, CR8, CR9]  
- A two-part exam is modeled after the College Board AP Art History Exam. Part A is
  comprised of multiple-choice questions, and Part B contains both a short and a long
response question. Each question prompts students to apply art historical skills, including contextual understanding and in-depth knowledge of specific works of art from the curriculum, to demonstrate achievement. (LO 1.3, 1.4, 3.2, 3.3, 3.5) [CR4, CR5, CR7]

Resources

Gallery Eight—Early Modern Atlantic World [CR3] 14 days

"If I am not mistaken, the words art and artist did not exist during the Renaissance and before; there were simply architects, sculptors, and painters, practicing a trade."—M.C. Escher

Gallery Essential Questions [CR2]
How are the historical developments of each period reflected in the art and architecture?

Enduring Understanding 3-3, 3-4, 3-5, 4-1

- The Renaissance is introduced and contextualized within the Crusades, cultural and economic exchanges, rise of urban culture, revival of Humanism, and the social upheaval of the Black Death. The transition from Gothic and classical influence is explored within characteristics of Renaissance architecture, and the continued progression of naturalism and symbolic representation is discussed within the context of Italy and Northern Europe. Students complete a short response assessment using specific visual evidence to attribute a given artwork to an artist, to justify the attribution, and to discuss how the work demonstrates the artist’s background and the influence of geographical artistic traditions. (LO 1.1, 1.3, 1.4, 2.1, 3.4) [CR4, CR5]

- The emotional aspects of Northern European art during the Renaissance are explored. Students investigate the Reformation and its impact on artistic production, including the increased demand for non-religious works. Works representative of the Italian Renaissance are explored specifically in terms of their use of narrative, chiaroscuro, perspective, realism, and naturalism. Mannerism, disegno, and colorito are introduced along with the cultural changes extended beyond Europe in Central America and Turkey during the Renaissance. Students apply formal and contextual analysis to research #67 Pazzi Chapel using resources beyond the provided sources within the course in order to examine 3-3a and 3-4c Essential Knowledge statements. (LO 1.1, 1.2, 1.3, 1.4, 2.1, 2.2, 3.2, 3.3) [CR5, CR6, CR8]

- Southern Baroque art and architecture are presented in context with the Counter-Reformation and the Scientific Revolution and in contrast to the opposing views of naturalistic and anti-Classical style or idealistic and classically inspired style. The evolution of religious spaces as they accommodate the needs of those who ministered and worshiped in them is contextualized in secular Baroque art. Portraiture and architecture intended to convey the power of the patron or ruler are explored. Students investigate the impact of the expeditions from Spain in art of the viceroy territories throughout the Indigenous Americas. Students complete a lesson-level multiple-choice quiz. (LO 1.3, 1.4, 3.2, 3.3, 3.5) [CR5]

- The historical context of the Enlightenment is presented through modes of expression. Rococo, Neoclassicism, and Romanticism are explored through their reflection of social, political, and cultural ideals of the time. Students complete a long response assessment using specific visual and contextual evidence to analyze, compare, and contrast two works
that convey religious meaning through symbolism. (LO 1.3, 1.4, 2.1, 3.2, 3.3, 3.5) [CR5, CR7]

- Students select two artworks from two selected categories including Dutch genre scenes, art reflective of the Counter-Reformation, art created for royal patrons, art reflective of international conflict, or art reflective of transoceanic colonization and trade. Students identify stylistic elements in each selected artwork to justify why it is representative of the category they selected. (LO 1.1, 1.3, 1.4, 2.1, 3.1, 3.2, 3.3, 3.5) [CR4, CR5, CR7]
- Students complete a multiple-choice exam modeled on the College Board AP Art History Exam. Each question prompts students to apply art historical skills, including contextual understanding and in-depth knowledge of specific works of art from the curriculum, to demonstrate achievement. (LO 1.1, 2.3, 3.1, 3.2, 3.3, 3.5) [CR7]

Gallery Nine—Later Europe Americas [CR3] 13 days

"Art must no longer be the expression of individual satisfaction, but should aim to become a fighting, educative art for all."—David Alfaro Siqueiros

Gallery Essential Questions [CR2]
How do works of art reflect the rapidly-changing modern world?
How are patronage, artistic training, artistic tradition, and perceived functions of art transformed in Europe and the America during this time period?
How do modern and contemporary artists respond to world events and social trends?

Enduring Understanding 4-2, 4-3
- Students dive in to the “isms”, the context and characteristics of Realism, Impressionism, Post-Impressionism, Symbolism, Fauvism, and Expressionism and the rapid change between each style as they reject and react to the previous style. Lithographs and sculpture are explored as propaganda. The concept and portrayal of the female form through the “male gaze” is analyzed. Students investigate portrayals of landscapes and the use of symbolism of different stylistic representations. Gothic-revival and innovations are discussed within architecture. Photography and its controversy are introduced. Students complete a lesson-level multiple-choice quiz. (LO 1.3, 1.4, 3.2, 3.3, 3.5) [CR5, CR7]
- Exploration of the context and characteristics of the “isms” continues with Cubism, Futurism, Dadaism, Suprematism, Constructivism, Abstraction, and Surrealism. Cubism and the varied impacting factors on the movement are discussed. Students explore the impact of Freud’s theories on art, the use of color as an emotional representation, and the use of art as social commentary. Students investigate the International style in architecture to compare it to styles that emphasize communion with nature. The social reactions of Dada and Surrealism are explored. Students complete a short response assessment using specific visual and contextual evidence to discuss the artist’s break from tradition and explain the personal and cultural significance of the work. (LO 1.1, 1.3, 1.4, 2.1) [CR5, CR7]
- The “isms” conclude with Postwar Expressionism, Abstract Expressionism, Minimalism, Abstract Expressionism, Pop Art, Superrealism, Performance Art, and Environmental Art. Students analyze the evolution of art as social commentary. The Abstract Expressionists’
representations of women revisit the concept of the “male gaze”. Social commentary within Pop Art is discussed. The influence of Oriental culture and the environment in modern art is assessed, and the continued change within architecture is examined. Students apply formal and contextual analysis to research #227 Summer Trees using resources beyond the provided sources within the course in order to examine 4-2a, 4-2c, 4-3a, and 4-3b Essential Knowledge statements. (LO 1.1, 1.2, 1.3, 1.4, 2.1, 2.2, 3.2, 3.3) [CR5, CR6, CR7, CR8]

- Students select two modern artworks that each represent one of the following themes: environmental art, portrayal of women, natural world, cultural commentary, or transoceanic colonization and trade. Students identify the formal and contextual elements that support the theme of each artwork and how the work reflects the culture it was created in. (LO 1.1, 1.3, 1.4, 2.1, 3.1, 3.3, 3.5) [CR4, CR5, CR7]

- A two-part exam is modeled after the College Board AP Art History Exam. Part A is comprised of multiple-choice questions, and Part B contains both a short and a long response question. Each question prompts students to apply art historical skills, including contextual understanding and in-depth knowledge of specific works of art from the curriculum, to demonstrate achievement. (LO 1.3, 1.4, 3.2, 3.3, 3.5) [CR4, CR5, CR7]

"I may be interested in a number of issues—identity, politics—but primarily I am an artist, and my job is to take people elsewhere."—Yinka Shonibare

Gallery Essential Questions [CR2]
How do contemporary artists move beyond traditional concepts about art and artists?
How do information technology and global awareness together shape contemporary art?

Enduring Understanding 10-1 and 10-2

- Students explore contemplative art that functions as environmental installations, propaganda, social commentary, expression of identity, and a reaction to culture, trade, and stereotypes. Students complete a lesson-level multiple-choice quiz. (LO 1.3, 1.4, 3.2, 3.3, 3.4, 3.5) [CR5, CR7]

- Students investigate video installations and digital art. Works in which artists appropriate media to explore and reflect power relationships, define the home and individual within society, address mass production, spiritual journey, immigration and its impact, and architectural domination and evolution are discussed. Students apply formal and contextual analysis to research #247 Preying Mantra using resources beyond the provided sources within the course in order to examine 10-1b, 10-d, 10-2a, 10-2c, and 10-2d Essential Knowledge statements. (LO 1.1, 1.2, 1.3, 1.4, 2.1, 2.2, 2.3, 3.2, 3.3, 3.4) [CR5, CR6, CR7, CR8]

- Students reflect on previous assessments, lesson quizzes, gallery exams, and practice exams to assess their strengths and areas in need of improvement for discussion of and
preparation for their segment exam and the College Board AP Art History Exam. (LO 1.1, 1.3, 1.4, 2.1, 3.1, 3.3, 3.5)

- A two-part segment exam is modeled after the College Board AP Art History Exam. Part A is comprised of multiple-choice questions, and Part B contains two short and one long response questions. Each question prompts students to apply art historical skills, including contextual understanding and in-depth knowledge of specific works of art from the curriculum, to demonstrate achievement. (LO 1.3, 1.4, 2.2, 3.2, 3.3, 3.5) [CR1b, CR4, CR5, CR6, CR7]

</tr>
</tbody>
</table>
Course Overview
The course design supports the AP Biology Curriculum Framework. The content focuses on living systems and their connections to everyday life. The curriculum framework provides students with the opportunities to investigate the practical application of biology as well as the connections to other natural, human, and social sciences. Through inquiry-based activities and laboratory investigations, students explore the components of life, from molecules to ecosystems.

Textbooks/Resources
Each student has access to the investigations contained in *AP Biology Investigative Labs: An Inquiry Based Approach*, as well as other laboratory investigations as deemed necessary. We also recommend the Campbell and Reece *Biology* 9th Edition Active Reading Guide as a supplemental resource.

Teaching Strategies
AP Biology is structured around four Big Ideas (Evolution, Energy Processes, Information, and Interactions) described in the Curriculum Framework, which encompass the core scientific principles, theories, and processes governing living organisms and biological systems. At least one of the Big Ideas will be incorporated in every lesson throughout the course. [CR2] Because evolution is the foundation upon which the entire course is based, it will be referenced throughout the entire course, and science as a process will be threaded throughout both the investigations and the class activities outside of the investigations.

Students begin each lesson with a list of learning objectives and essential questions to guide them throughout the main points of each lesson and to frame students’ class notes. Students are encouraged to add to these notes, listing all questions that arise. Lessons may be based on multimedia resources from various sources (textbook, CDs, Internet, etc.) to help the students make critical connections between what they are learning and their everyday lives. Quizzes are interspersed throughout the module. These assessments provide information on how teachers may need to adjust instruction to improve student learning.

Students will have regular discussions with their instructor to apply biological, scientific knowledge and critical-thinking skills to major issues of social concern. During these discussions, students must explain the science and science processes being applied. In addition, students will need to be prepared to demonstrate their content mastery through a variety of assessment formats, some of which will be
informed by readings from recent scientific journals. Students will also be given the opportunity to see that biology is in their everyday lives and is not just a chapter in a textbook. [CR5]

Investigative Laboratory Component
Laboratory investigations make up a minimum of 25 percent of instructional time. [CR7] Students will conduct a minimum of eight inquiry-based investigations (two per Big Idea). [CR6] Supplemental labs and activities are also used to widen the range of topics covered in a hands-on, discovery mode. By undertaking a variety of investigations throughout the course, students will use all seven science practice skills on a regular basis with a goal of moving toward open-inquiry investigations. Students’ science practice skills need to be honed over the entire course and reinforced through opportunities to make observations, ask questions based on those observations, and investigate their own questions both in and out of the designated lab activities. It is critical to help students discover how the biological world works as we know it—and to learn how to investigate the biological world that is still unknown. That is why the investigations are a key to this entire course.

Students will maintain a written record (lab notebook and field notes) of investigations conducted. In addition, they will be asked for the following throughout the course: [CR8]

- Formal lab report that emphasizes the development and testing of a hypothesis, the ability to organize collected data, and the ability to analyze and clearly discuss the results.
- Multimedia presentations (create presentations with main investigation components, present the material, and field questions).
- Self-reflection of their ability to work in group investigations that will often be conducted in teams of two or three so that students develop group skills and learn the importance of collaboration among scientists.

Course Schedule
The following table describes how the enduring understandings/essential knowledge statements, learning objectives, and seven science practices are the focus of each unit within the course. Due to the reduction in required content for AP Biology, all sections of each chapter will not be covered and/or may be used for reference as needed. The included timeline is approximate. Assignments include many ways to meet the objectives (self-assessment, quizzes, readings, dry labs, wet labs, Free Response writing, projects, etc.), and a few of these activities have been elaborated upon to fully demonstrate the incorporation of curricular requirements. These assignments connect biological content across Big Ideas.

Big Ideas and enduring understandings connect with science practice skills; thus all assignments will help students meet the learning objectives identified throughout the AP Biology Curriculum Framework.

Many of the Free Response questions used for practice also cross Big Ideas and apply various science practices (e.g., read/create graphs, calculate rate, apply mathematical formulas, analyze data to draw conclusions, etc.).

Module 0: Getting Started (2–4 days)

Reading: Getting Started lessons 1, 2, and 3, Course Syllabus, and College Board AP Central resources

Scientific Practices addressed: 1–7

Essential questions are presented here to demonstrate how the Big Ideas cross the entire curriculum:

• How do scientists work together to investigate the science behind the concepts of biology?
• How have scientists built upon the discoveries of other scientists to develop a more complete picture of the world around us?
• How are scientists able to test the validity of their ideas?

Topics:

Processes of science reviewed:

• Introduction to the AP Biology Curriculum Framework
• Connecting Big Ideas and enduring understandings with scientific practices
• Lab expectations and safety
• Scientific method, with emphasis on the fact that there is not one way to do science
• Scientific theory and investigation
• Scientific lab safety practices
• Practice with data collection, analysis, and presentation
Activities:
- AP Exam Requirements: self-assessment: emphasis on expectations for AP-level coursework and the AP Exam
- Nature of Science: self-assessment: emphasis on development of testable hypothesis; identification of independent, dependent, and controlled variables; procedure development; and data analysis using mathematics and graphing
- Graphing Practice: self-assessment: emphasis on fine-tuning graphing skills and presentation
- Experimental Design Activity: focuses on best practices in experimental design and provides students with criteria for successful completion

Module 1: Evolution (15–20 days) [CR2][CR3a][CR3b][CR3c][CR3d]

Enduring understandings to be addressed: 1B1, 1B2, 1D1, and 1D2
Scientific Practices addressed: 1.1–1.5, 2.1, 2.2, 3.1, 3.3, 4.1, 4.2, 4.4, 5.1–5.3, 6.1, 6.3–6.5, 7.1, 7.2

Essential questions are presented here to demonstrate how the Big Ideas cross the entire curriculum:
- How is the origin and evolution of life on Earth supported by evidence of conserved core processes and shared features?
- What is the role of natural selection in the evolution of a population?
- How can data reflect the evolutionary changes of a population over time?
- How can mathematical and biological data support the theory of evolution and analyze its mechanisms?
- How can extinction and speciation support predictions for future populations?
- How can we use models to represent evolutionary relationships?
- How does convergent evolution affect the field of taxonomy and the construction of a phylogeny?

Topics:
Evolution established as foundational theme [CR3a]
- Hypotheses about the origin of life on Earth
- Selection of ecological, physical, and chemical data that reveal early Earth conditions
- Conserved core biological processes and features that support the concept of common ancestry for all organisms
- Evolutionary changes in a population over time
- Natural selection
- Genetic drift, migration, and artificial selection
- Hardy-Weinberg equilibrium
- Speciation and extinction throughout Earth's history
- Phylogenetic trees and cladograms

Activities and Assignments [CR4a][CR6][CR8]:
- Tutorial: Natural Selection
- Tutorial: Mechanisms of Evolution
• Hardy-Weinberg Collaborative Lab: hands-on lab [CR7]
• Math problems for allele frequency and graphical analysis of data
• Tutorial: Defining Species
• Investigation: How do environmental changes affect a population?
• Investigation: The Uninvited Guest
• Tutorial: Constructing Phylogenetic Trees
• Cladograms and phylogenetic trees: Students will understand the nature of cladograms and phylogenetic trees based on various types of data; learn how to read and analyze cladograms and phylogenetic trees; and construct cladograms and phylogenetic trees from provided data. [CR3d]
• AP Practice: Grid-in Response and Reflection
• Comprehensive Module Discussion

Module 2: Cells and Homeostasis (15–20 days) [CR2][CR3b][CR3d]
Reading: e-Text sections [CR1]: 3.1–3.3, 4.1–4.2, 6.2–6.5, 7.1–7.5, 36.2 and supplemental lesson content and activities from lessons 2.01–2.05

Enduring understandings to be addressed: 2A3, 2B3, and 4A2
Scientific Practices addressed: 1.1, 1.4, 2.2, 3.1, 4.1, 6.2, 6.4, 7.1, and 7.2

Essential questions are presented here to demonstrate how the Big Ideas cross the entire curriculum:
• How do bonding, polarity, and other chemical properties determine the structure and properties of matter?
• How does structure facilitate function for each part of the cell?
• How does the unique structure and properties of cell membranes account for their broad impact on cell processes and transport?

Topics:
Energy Processes at the Cellular Level [CR3b]
• Properties of Carbon and Water
• Chemical Bonding
• Cell Structure and Function
• Biogeochemical Cycles
• Cell Membranes and Homeostasis

Activities and Assignments [CR4b][CR6][CR8]:
• Activity: Cohesion of Water
• Tutorial: Hydrogen Bonding in Water
• Activity: The Endomembrane System
• Tutorial: Tour of Animal Cells: Structure and Function
• Tutorial: Tour of Plant Cells: Structure and Function
• Activity: Prokaryotic Cell Structure and Function
• Video: Golgi Complex in 3D
• Video: Mitochondria in 3D
• Video: Chloroplast Movement
• Activity: Membrane Structure
• Membranes and Homeostasis Collaborative Lab: hands-on lab [CR7]
• AP Practice: Data-Based Questions and Reflection
• Comprehensive Module Discussion

Module 3. Capturing and Using Energy (20–25 days) [CR2] [CR3b] [CR3d]

Reading: e-Text sections [CR1]: 8.1–8.3, 9.1–9.6, 10.1–10.3, 40.3, 40.4, 53.3, 53.4, and 55.1–55.3 and supplemental lesson content and activities from lessons 3.01–3.06

Enduring understandings to be addressed: 2A1 and 2A2

Scientific Practices addressed: 1.4, 3.1, 6.1, 6.2, and 6.4,

Essential questions are presented here to demonstrate how the Big Ideas cross the entire curriculum:

- How does the amount of available free energy affect biological systems, from cells to ecosystems?
- How are the various chemical processes that occur within an organism organized and regulated?
- How are increased disorder and entropy offset by biological processes that maintain or increase order?
- How does the need for free energy influence the structures and functions of all living organisms?
- How do the structures and processes of plant and animal cells suit the needs for capturing, storing, and using free energy effectively?

Topics:

Capturing and Using Energy [CR3b]

- Energy and Living Systems
- Math Applications in Energy Transfer
- Energy Pathways
- Energy Processes
- Photosynthesis and Cellular Respiration

Activities and Assignments [CR4b] [CR6] [CR8]:

- Tutorial: Basic Energy Concepts
- Activity: Chemical Reactions and ATP
- Activity: Modeling Population Growth
- Interpreting Data: Net Primary Production
- Tutorial: Energy Flow through Ecosystems
- Activity: Consuming at Different Trophic Levels
- Math Practice: Trophic Levels and Energy Transfer
- Activity: Glucose Metabolism
- Tutorial: Thermoregulation
- Tutorial: Cellular Respiration
- Tutorial: Photosynthesis
- Tutorial: Energy Flow in Plants
- Short Essays on cycles
**Photosynthesis and Cellular Respiration Collaborative lab: hands-on lab [CR7]**

- AP Practice: Multiple Choice Strategies and Reflection
- Comprehensive Module Discussion

**Module 4. Biological Responses (25–30 days) [CR2] [CR3a][CR3b][CR3d][CR4a]**

**Reading:** e-Text sections [CR1]: 11.1, 11.5, 18.2–18.4, 24.1, 38.1, 39.2, 39.3, 39.5, 40.2, 40.3, 43.1–43.4, 44.1, 44.2, 51.1–51.4, 52.2, 53.1–53.5, 54.1–54.5, 55.1–55.4, and supplemental lesson content and activities from lessons 4.01–4.11

**Enduring understandings to be addressed:** 2C1, 2C2, 2D1, 2D2, 2D3, 2D4, 2E1, 2E2, and 2E3

**Scientific Practices addressed:** 1.1–1.4, 3.2, 4.1, 4.2, 5.1, 5.3, 6.1, 6.2, 6.4, 7.1, and 7.2

**Essential questions are presented here to demonstrate how the Big Ideas cross the entire curriculum:**

- How do various mechanisms allow organisms to respond to changes in their internal and external environment?
- How can various biotic and abiotic factors interact to affect biological systems such as cells, organisms, populations, and communities?
- How do adaptations in homeostatic mechanisms reflect both common ancestry and divergence?
- How have organisms evolved to defend themselves from attack by various forms of pathogens?
- How do various mechanisms work together to coordinate the specific events necessary for an organism's development?
- How do multiple mechanisms work together to regulate the timing and coordination of physiological events?
- How does the coordination of behaviors play a role in natural selection?

**Topics:**

**Biological Responses [CR3b]**

- Feedback and Mechanisms for Response
- Biotic and Abiotic Interactions
- Lab Design
- Homeostatic Mechanisms
- Chemical Defenses
- Regulation of Development
- Physiological Events
- Environment and Behavior

**Activities and Assignments [CR4b][CR6][CR8]:**

- Activity: Negative and Positive Feedback
- Activity: Homeostasis
- Activity: Experiment Critique
- Tutorial: Energy Flow in Ecosystems
- Experimental Inquiry: Can a species’ niche be influenced by interspecific competition?
- **Experimental Design: Abiotic and Biotic Interactions [CR7]**
- Activity: What do you need to consider when analyzing communities of organisms?
Module 5. Genetics (20–25 days) [CR2][CR3c][CR3d]

Enduring understandings to be addressed: 3A1, 3A2, 3A3, 3A4, 3B1, 4A3

Scientific Practices addressed: 1.1µ1.4, 2.2, 3.1, 4.1, 5.3, 6.2–6.5, 7.1, and 7.2

Essential questions are presented here to demonstrate how the Big Ideas cross the entire curriculum:

- How do eukaryotes pass on heritable information to the next generation of cells?
- How do Mendelian genetics and the chromosomal basis of inheritance help us understand the pattern of gene transmission from parents to offspring?
- How do scientists study the inheritance pattern of traits that cannot be explained by simple Mendelian genetics?
- How does the inheritance of organelle genes affect inheritance patterns?
- How are replicated DNA strands proofread and edited?

Topics:

- Cell Cycle and Mitosis
- Review cell Theory
- Cancer As a Disruption of Cell Cycle Control
- Mitosis and Meiosis
- Asexual and Sexual reproduction
- Rules of Probability
- Chromosomal Inheritance
- Dihybrid Cross Design
- Incomplete and Codominance
- Genetic Disorders
- Civic Issues in Genetics
Non-Mendelian Genetics
- Sex-Linked Genes

DNA and RNA
- Hershey-Chase Experiment
- Avery-McLeod-McCarty Experiments
- Microbial Genetics
- Coordination of Gene Control
- Inducers and Repressors
- DNA Replication
- Transcription and Translation
- Salient Features
- Genetic Engineering Techniques
- Microbial Genetics
- Gene Expression

Activities and Assignments [CR4c][CR6][CR3d][CR8]:
- Tutorial: Mitosis
- Tutorial: Meiosis
- Tutorial: Comparing Mitosis and Meiosis
- Activity: Asexual and Sexual Life Cycles
- Video: Mitosis vs. Meiosis
- Mitosis and Meiosis Lab [CR7]
- Dihybrid Cross Practice
- Tutorial: Mendel’s Law of Independent Assortment
- Tutorial: Chromosomal Mutations
- Pedigree Analysis: Galactosemia
- Tutorial: Inheritance in Fur Color of Mice
- Case Study Research with Peer Review Collaboration: Chromosomal Disorders
- Tutorial: Chromosomal Basis of Inheritance
- Investigative Case: X-Files
- Activity: The Hershey-Chase Experiment
- Activity: DNA Double Helix
- Activity: DNA and RNA Structure
- Tutorial: DNA Structure and Replication Machinery
- Tutorial: DNA: Synthesis of the Leading and Lagging Strands
- Activity: The Genetic Code
- Activity: RNA Synthesis
- Activity: Transcription
- Activity: Protein Synthesis
- Activity: Analyzing DNA Fragments Using Gel Electrophoresis
- Tutorial: DNA to RNA to Protein
- Electrophoresis Virtual Lab [CR7]
Activity: Regulation of Gene Expression in Bacteria
Creative Presentation: Interactions of External Stimuli and Gene Expression
Case Study: Shhh ... Silencing the Hedgehog Pathway
Comprehensive Module Discussion

Module 6. Transmission (15–20 days) [CR2] [CR3a] [CR3b][CR3c][CR3d]

Enduring understandings to be addressed: 3B2, 3C1, 3C2, 3C3, 3D1, 3D2, 3D3, 3D4, 3E1, 3E2, 4C1

Scientific Practices addressed: 1.1, 1.2, 1.4, 1.5, 3.1, 5.1, 6.1, 6.2, 7.1, and 7.2

Essential questions are presented here to demonstrate how the Big Ideas cross the entire curriculum:

- How can alterations of chromosome number or structure cause some genetic disorders?
- How do proteins work together in DNA replication and repair?
- How do mutations of nucleotides affect protein structure and function?
- How do genome sizes vary among the domains of life?
- How does genetic variation in sexual life cycles contribute to evolution?
- How are external signals converted to responses within a cell?
- How can sensory inputs stimulate simple and complex behaviors?
- How do neuron organization and structure reflect function?

Topics:
- Genotype to Phenotype
- DNA Mutations
- Pesticide Resistance Mutations
- Sickle Cell Disorder
- Genetic Variation
- Transformation, Transduction, Conjugation and Transposition
- Reproduction Processes That Increase Genetic Variation
- Viruses
- Viral Replication
- HIV
- Transduction in Bacteria
- Cell Communication
- Signal Transmission
- Chemical Messengers
- Pheromones
- Neurotransmitters
- Plant Immune Response
- Endocrine signals
- Signal Transduction Pathways
- Receptor Proteins
- G-protein Linked Receptors
- Receptor Tyrosine Kinases
- Signaling Cascades
- Effects of Neurotoxins, Poisons, and Pesticides
- Drugs That Effect Signal Transduction
- Information Exchange
- Herbivory Responses
- Territorial Marking
- Migration Patterns
- Pack Behavior in Animals
- Nervous System
- Na+/K+ Pumps
- Neurotransmitters
- Cerebral Hemispheres in Humans

Activities and Assignments [CR4a][CR4c][CR4d][CR6][CR8]:
- Activity: Mistakes in Meiosis
- Tutorial: Chromosomal Mutations
- Tutorial: Experimental Inquiry: Does DNA Replication Follow the Conservative, Semi-conservative, or Dispersive Model?
- Tutorial: Protein Synthesis: Translation and Protein Targeting Pathways
- Experimental Inquiry: Did Natural Selection of Ground Finches Occur When the Environment Changed?
- Creative product and explanation: illustration and an explanation how changes in DNA nucleotide sequence can result in the polypeptide produced
- Make Connections: Bacterial Conjugation
- Make Connections: Binary Fission
- Tutorial: Meiosis: Determinants of Heredity and Genetic Variation
- Activity: Retrovirus (HIV) Reproductive Cycle
- Essay with banked prompts: lysogenic cycle, lytic cycle, DNA viruses, RNA viruses, retroviruses
- Tutorial: Homeostasis: Regulating Blood Sugar
- Activity: Cell Signaling
- Activity: Reception
- Activity: Signal Transduction Pathways
- Activity: Build a Signaling Pathway
- Activity: Cellular Responses
- Essay: Based on prompt for Signal Transduction Pathways
- Video: Honeybee Waggle Dance
- Lab: Animal Behavior [CR7]
- Activity: illustration of nervous system processes
- Creative product: illustration and description about how the vertebrate brain integrates information to produce a response.
Comprehensive Module Discussion

**Module 7. Systems and Populations (15–20 days)** [CR2] [CR3a] [CR3b] [CR3c] [CR3d]

**Reading:** e-Text sections [CR1]: 5.1–5.4, 8.4, 8.5, 35.1, 36.1–36.3, 40.1, 41.2–41.4, 42.1–42.7, Chapter 53 Overview, 53.1–53.6, 55.1, 56.1, and supplemental lesson content and activities from lessons 7.01–7.07

**Enduring understandings to be addressed:** 4A1, 4B1, 4C1

**Scientific Practices addressed:** 1.3, 1.4, 2.2, 3.3, 4.1, 5.1, 6.1, 6.2, 6.4, and 7.1

**Essential questions are presented here to demonstrate how the Big Ideas cross the entire curriculum:**

- How do molecular interactions affect structure and function?
- How is the basic functioning of enzymes affected by its shape, active sites, and interaction with specific molecules and the environment?
- How does structure relate to function in living systems from the cellular to the organismic level?
- How do specialized organs contribute to the overall function of the organism?
- How do interactions between organ systems allow organisms to function more efficiently?
- How does an interruption in one system impact other systems and ultimately the organism?
- How do populations change?
- How can you use mathematical models to predict population trends?
- How can interactions among ecosystems result in movement of matter and energy?

**Topics:**

- Biochemistry
- Form and Function of Macromolecules
- System Interactions
- Digestion of Food
- Stomach and Small Intestines
- Roots, Stems, and Leaves
- Respiratory and Circulatory Systems
- Plant Vascular and Leaf Systems
- Form and Function of Organisms
- Populations and Communities
- Structure of Communities
- Population Growth Models
- Predator/Prey Relationships
- Demographics Data
- Ecosystems
- Energy and Matter Flow in Ecosystems
- Primary Productivity
- Ecosystem Limitations
- Human Impact on Ecosystems
- Adaptations of Organisms in Response to Environment

**Activities and Assignments [CR4a][CR4d][CR6][CR8]:**
Module 8. Change and Biodiversity (20–25 days) [CR2][CR3a][CR3c][CR3d]

Reading: e-Text sections [CR1]: 14.3, 23.1–23.3, 25.4, 54.1, 54.2, 56.1, 56.4, and supplemental lesson content and activities from lessons 8.01–8.07

Enduring understandings to be addressed: 4B3, 4B4, 4C2, 4C3, 4C4

Scientific Practices addressed: 5.2, 6.1, 6.2, 6.3, and 6.4

Essential questions are presented here to demonstrate how the big ideas cross the entire curriculum:

- How do human activities impact Earth’s biodiversity?
- How does Earth change as a result of human actions?
- How do geological and meteorological events impact diversity?
- How does nature and nurture impact phenotype?
• How does genetic variation make evolution possible?

Topics:
• Species Interactions
• Human Impact on Ecosystems
• Interactions between Populations
• Geological and Meteorological Events and Impact on Ecosystem Distribution
• Impacts on Biological Diversity
• Ecosystem Changes
• Environmental Influence on Genotype Expression
• Diversity and Dynamics
• Population Response to Environmental Change
• Biodiversity
• Species Richness vs. Relative Abundance
• Predicting Species Diversity in an Ecosystem

Activities and Assignments [CR4a][CR4d][CR6][CR8]:
• Activity: Introduced Species: Fire Ants
• Activity: The Greenhouse Effect
• Research/Position Paper: Ecosystem Changes [CR5]
• Activity: Adaptive Radiation
• Essay: Environmental Influence on Genotype Expression
• Lab: Data Analysis of Species Diversity [CR7]
• Lab: Population Genetics and Evolution [CR7]
• Comprehensive Module Discussion

Practice Tests; Semester Tests; Review of Course (10–15 days)
• Released FRQ items used throughout the course for practice
• Full-length, practice exam used for review purposes prior to the AP Exam.
• Review format and study plans determined by needs of students.
ADVANCED PLACEMENT®
CALCULUS AB
Advanced Placement Calculus AB

Primary Text

Course Long Plan

---Semester 1---

Unit 0: Preparation for Calculus Suggested Pace: 2 weeks

Topics
- Understanding the properties of real numbers and the number line
- Using the Cartesian coordinate system to graph functions
- Comparing relative magnitudes of functions – contrasting exponential, logarithmic and polynomial growth

Content
- Orientation to course
- Graphs and models
- Linear models and rates of change
- Functions and their graphs

Major Assignments and Assessments
- Problem Sets
- Entry Quiz
- Oral Review: Discussion about using Calculator zoom features to examine a graph in a good viewing window and calculator operations to find the zeros of a graph and the point of intersection of two graphs
- Live Lesson Session: Tour of (i) College Board Student Website for AP (ii) Features of Textbook (iii) Tour of Course features.
- Quiz – Functions, Graphs, and Rates of Change

Unit 1: Limits and Continuity Suggested Pace: 2 weeks

Topics
- Intuitive understanding of limit process
- Calculating limits using algebraic methods
- Estimating limits using tables of data
- Estimating limits using graphs
- Understanding asymptotes graphically
- Describing asymptotic behavior in terms of limits involving infinity
Intuitive understanding of continuity
Understanding continuity in terms of limits
Understanding graphs of continuous or non-continuous functions geometrically

Content
Preview of calculus
Finding limits graphically and numerically
Evaluating limits analytically
Continuity and one-sided limits
Infinite limits

Major Assignments and Assessments
Problems sets
Quiz – Calculating Limits
Oral Review: Discussion about using the Calculator to experiment and produce a table of values to examine a function and estimate a limit as x approaches a point and as x grows without bound. Discussion about the limitation of a graphing calculator to show discontinuities in functions and the value of using a calculator to support conclusions found analytically.
Live Lesson Session: Discussion about conditions of continuity. Look at AP style FRQ on Continuity.

Test – Limits and Continuity

Unit 2: Differentiation Suggested Pace: 5 weeks

Topics
Derivative defined as the limit of the difference quotient
Graphic, numeric and analytic interpretations of the derivative
Knowledge of derivatives of power and trigonometric functions
Basic rules for the derivatives of sums, products, and quotients of functions
Derivative interpreted as instantaneous rate of change
Continuity and differentiability
Slope of curve at a point
Tangent line to a curve at a point
Local linear approximation
Instantaneous rate of change as the limit of average rate of change
Approximate rate of change from graphs and tables of values
Chain rule and implicit differentiation
Equations involving derivatives and problems using their verbal descriptions
Modeling rates of change and solving related rates problems

Content
The derivative and the tangent line problem
Basic differentiation rules and rates of change
The product and quotient rules
The chain rule
Implicit differentiation
Related rates

Major Assignments and Assessments
Problem sets
Quiz – Definition and computation of derivatives
Oral Review: Discussion about using a calculator to find the value of a derivative at a point, and how to graph the derived function using a calculator. Discussion about the limitations of the calculator to find the numerical derivative (for example, f′(0) for f(x) = |x|).
Live Lesson Session: AP style FRQs on Related Rates – interpretation of oral presentation of problems and writing out solutions correctly including using sentences.

Test – Differentiation

Unit 3: Applications of Differentiation Suggested Pace: 6 weeks

Topics
- Corresponding characteristics of graphs of f and f′
- Relationship between the increasing and decreasing behavior of f and the sign of f′
- Corresponding characteristics of graphs of f, f′, and f′′
- Relationship between the concavity of f and the sign of f′
- Points of inflection as places where concavity changes
- Mean Value Theorem and geometric consequences.
- Analysis of curves including monotonicity and concavity
- Optimization – absolute and relative extrema.
- Equations involving derivatives and problems using their verbal descriptions

Content
- Extrema on an interval
- Rolle’s Theorem and the Mean Value Theorem
- Increasing and decreasing functions
- Concavity and the second derivative test
- Limits at infinity
- Curve sketching
- Optimization
- Differentials

Problem sets
Quiz – Extrema and Concavity
Oral Review: Discussion about using the calculator to find the critical values of a function by examining the graph of the function and the graph of the function’s derivative.
Live Lesson Session: AP style questions on interpretation of the graphs of f ‘ and f and written description of analysis of functions.
Test – Applications of Derivatives
Semester Exam

---Semester 2---

Unit 4: Integration Suggested Pace: 3 weeks

Topics
Definite integral as a limit of Riemann sums
Definite integral of the rate of change of a quantity over an interval interpreted as
the change of the quantity over the interval:

\[ \int_{a}^{b} f'(x) \, dx = f(b) - f(a) \]

Basic properties of definite integrals
Use of the Fundamental Theorem of Calculus to evaluate definite integrals
Use of the Fundamental Theorem of Calculus to represent a particular
antiderivative, and the analytical and graphical analysis of functions so defined
Find antiderivatives including the use of substitution
Finding specific antiderivatives using initial conditions, including applications to
motion along a line
Solving separable differential equations and using them in modeling
Use of Riemann sums and trapezoidal sums to approximate definite integrals of
functions represented algebraically, graphically and by tables of values

Content

Antiderivatives and Indefinite Integration
Kinematic Equations & Area
Riemann sums and definite integrals
The Fundamental Theorem of Calculus
Integration by substitution
Numerical integration
Application of definite integrals including area, volume,
position/velocity/acceleration and accumulation functions
The Integral as a function

Major
Assignments
and
Assessments
Problem Sets
Quizzes
Quiz – Integration and Area
Quiz – The Fundamental Theorem of Calculus
Oral Review: Discussion about using the calculator to estimate the value of a
definite integral and to support solutions derived analytically.
Live Lesson Session: AP style questions about analysis of functions defined in a
table of values. Students have opportunity to share their mathematical concepts
both verbally and in written form.
Test – Integration

**Module Unit 5: Transcendental Functions Suggested Pace: 3 weeks**

**Topics**
- Basic properties of definite integrals
- Use of the Fundamental Theorem of Calculus to evaluate definite integrals
- Use of implicit differentiation in finding the derivative of the inverse of a function
- Geometric interpretation of differential equations via slope fields
- Relationship between slope fields and solution curves for differential equations
- Knowledge of derivatives of exponential, logarithmic, and inverse trigonometric functions
- Basic properties of definite integrals
- Use of the Fundamental Theorem of Calculus to evaluate definite integrals
- Find antiderivatives including the use of substitution
- Application of integrals

**Content**
- The natural logarithmic function and differentiation
- The natural logarithmic function and integration
- Inverse functions including the relationship between the derivative of a function and its inverse at a point
- Exponential functions
- Bases other than e and applications
- Differential equations: growth and decay
- Differential equations: separation of variables
- Slope fields
- Inverse trigonometric functions and differentiation
- Inverse trigonometric functions and integration

**Major Assignments and Assessments**
- Problem sets
- Quiz – Natural Logarithmic Functions
- Quiz – Exponential Functions
- Quiz – Inverse Trigonometric Functions

Oral Review: Examine the limitations of the graphing calculator in graphing Natural Log functions. Students are required to verbally express the concepts related to the derivatives and integrals of exponential, logarithmic, and inverse trigonometric functions.

Live Lesson Session: Discussion of AP style questions on domain restrictions for solutions to Differential Equations and analysis of Slope Fields. Students are required to explain their mathematics both verbally using the audio feature and in written form on the whiteboard and chat area during this session.

**Unit 6: Applications of Integration Suggested Pace: 3 weeks**
Topics
Application of integrals – area and volume

Content
Area of a region between two curves
Volume

Major Assignments and Assessments
Problem Sets
Oral Review – Discuss setup on a graphing calculator to find volumes for functions that cannot be integrated by hand. Students are required to be able to explain how the calculator is used to assist with the integration portion of solving a volume problem.
Live Lesson Session: AP Style questions on area and volume that require a calculator to find the limits of integration. Students have opportunity to demonstrate their solutions to other members of the class as well as the teacher using the whiteboard, application sharing of MathType and Graphmatica solutions, and the audio feature during this session.
Test – Applications of Integration

Unit 7: Integration Techniques  Suggested Pace: 3 weeks

Topics
Techniques of Integration
Techniques for using Differentiation to find Limits

Content
Basic rules of integration
Integration by parts
Indeterminate forms and L'Hopital’s Rule

Major Assignments and Assessments
Problem Sets

Oral Review – Students must verbally demonstrate the ability to use a calculator generated table to show limiting values of functions and comparative rates of growth of functions.
Live Lesson Session: Examination of rates of comparable rates of growth of functions. Students have opportunity to demonstrate their solutions to other members of the class as well as the teacher using the whiteboard, application sharing of MathType and Graphmatica solutions, and the audio feature during this session.
Test – Integration Techniques

Unit 8: Exam Review Suggested Pace: 4 weeks

Topics
All previously noted topics

Content
Multiple Choice Practice Sets
Free Response Tutorials
Topic Explorations
Study Island

Major Assignments and Assessments
Review Question Sets
Practice Tests
Live Lesson Sessions: Online free response style question practice sessions. Discussion about format and grading of AP Exam approaches to problems using a numerical, analytical and graphical approach, preferred ways to communicate solutions in written form.
Oral Review: Calculator practice

Other Instructional Materials
Math Type – Math symbol creation software
Graphmatica – Graphing software
Adobe Live Lesson– Whiteboard, application sharing, voice, and video communication software
College Board approved calculator
2003 AP Calculus Released Exam Booklet
Previously released AP Calculus Free Response Questions
Study Island

Notes
This course is designed to be highly teacher facilitated. Instructors give specific and timely feedback for each of the 100 plus lessons. Students are required to complete one-on-one oral examinations with their teacher for each module unit, discussions with other students where they practice communicating their mathematical concepts verbally, and have opportunity to schedule whiteboard sessions with the teacher. Teachers conduct synchronous Adobe Live Lesson session(whiteboard, application sharing, audio and video sharing) that require students to practice critical thinking and analysis with free response type questions and present their work verbally to the teacher and other students during those sessions.

Each assignment gives students practice in communicating their mathematics in written form using sentences as well as symbols. The oral reviews done in each unit and the synchronous Live Lesson Sessions give students opportunities to express their understanding of mathematics verbally.

Most lessons include practice using the calculator as required for the AP exam. The students are informed in the first lesson of the type of calculator needed and the four
operations required to be used during the AP Exam. Students are required throughout
the course to give evidence of calculator proficiency. The required calculator operations
and techniques for using the calculator appropriately are discussed in the oral reviews of
each unit and in the synchronous Live Lesson Sessions as well as in 10 scheduled
one-on-one monthly phone conferences held between the teacher and each student.

This course is accompanied by an online tutorial and review that uses released AP
Exams. Students are given systematic and timed practice for all portions of the exam.
Students receive specific feedback on progress and mastery levels on the practice
exams.

Quiz – Definition and computation of derivatives
Oral Review: Discussion about using a calculator to find the value of a derivative at a point, and how to graph the derived function using a calculator. Discussion about the limitations of the calculator to find the numerical derivative (for
example, \( f'(0) \) for \( f(x) = |x| \).

Adobe Live Lesson session: AP style FRQs on Related Rates – interpretation of oral presentation of problems and writing out solutions correctly including using sentences.

Test – Differentiation

**Unit 3: Applications of Differentiation**
Suggested Pace: 5 weeks

**Topics**
- Corresponding characteristics of graphs of \( f \) and \( f' \)
- Relationship between the increasing and decreasing behavior of \( f \) and the sign of \( f' \)
- Corresponding characteristics of graphs of \( f, f', \) and \( f'' \)
- Relationship between the concavity of \( f \) and the sign of \( f' \)
- Points of inflection as places where concavity changes
- Mean Value Theorem and geometric consequences.
- Analysis of curves including monotonicity and concavity
- Optimization – absolute and relative extrema.
- Equations involving derivatives and problems using their verbal descriptions

**Content**
- Extrema on an interval
- Rolle’s Theorem and the Mean Value Theorem
- Increasing and decreasing functions
- Concavity and the second derivative test
- Limits at infinity
- Curve sketching
- Optimization
- Differentials

**Major Assignments and Assessments**

- Problem sets
- Quiz – Extrema and Concavity
- Oral Review: Discussion about using the calculator to find the critical values of a function by examining the graph of the function and the graph of the function’s derivative.

Adobe Live Lesson session: AP style questions on interpretation of the graphs of \( f' \) and \( f \) a written description of analysis of functions.

Test – Applications of Derivatives

**Unit 4: Integration**
Suggested Pace: 3 weeks

**Topics**
- Definite integral as a limit of Riemann sums
- Definite integral of the rate of change of a quantity over an interval interpreted as

\[
F(x) = \hat{Q}(x) \int_a^b f'(x)dx
\]

the change of the quantity over the interval:
- Basic properties of definite integrals
- Use of the Fundamental Theorem of Calculus to evaluate definite integrals
- Use of the Fundamental Theorem of Calculus to represent a particular
antiderivative, and the analytical and graphical analysis of functions so defined
Find antiderivatives including the use of substitution
Finding specific antiderivatives using initial conditions, including applications to
motion along a line
Use of Riemann sums and trapezoidal sums to approximate definite integrals of
functions represented algebraically, graphically and by tables of values
Content
Antiderivatives and Indefinite Integration
Integration by substitution
Area
Riemann sums and definite integrals
The Fundamental Theorem of Calculus
Numerical integration using the Trapezoidal Rule
Application of definite integrals including area, position/velocity/acceleration and
accumulation functions
The Integral as a function

Major Assignments and Assessments
Problem Sets
Quiz – Integration and Area
Quiz – The Fundamental Theorem of Calculus
Oral Review: Discussion about using the calculator to estimate the value of a
definite integral and to support solutions derived analytically.
Adobe Live Lesson session : AP style questions about analysis of functions
defined in a table of values. Students have opportunity to share their
mathematical concepts both verbally and in written form.
Test – Integration and Applications

Unit 5: Transcendental Functions Suggested Pace: 3 weeks
Topics
Exponential functions
Bases other than e and applications
The natural logarithmic function and differentiation
The natural logarithmic function and integration
Inverse functions including the relationship between the derivative of a function
and its inverse at a point

Major Assignments and Assessments
Problem Sets
Quiz – Natural Logarithmic Functions
Quiz – Exponential Functions
Quiz – Inverse Trigonometric Functions
Oral Review: Examine the limitations of the graphing calculator in graphing Natural Log functions. Students are required to verbally express the concepts related to the derivatives and integrals of exponential, logarithmic, and inverse trigonometric functions.
Adobe Live Lesson session: Discussion of AP style questions that require a calculator to find the value of a derivative at a point and the value of a definite integral. Students are required to explain their mathematics both verbally using the audio feature and in written form on the whiteboard and chat area during this session.

Unit 6: Slope Fields and Differential Equations: 3 weeks
Topics
Slope fields
Euler’s Method as a numerical Solution of a differential equation
Differential equations: growth and decay
Differential equations: separation of variables
Differential equations: Logistical Models
Geometric interpretation of differential equations via slope fields
Relationship between slope fields and solution curves for differential equations

Major Assignments and Assessments
Problem Sets
Quiz – Differential Equations Applications
Oral Review: Examine how the graphing calculator can be utilized to help students solve differential equations and make connections to slope fields. Students are required to verbally express the concepts related to the various differential equation applications and slope fields.
Adobe Live Lesson session: Discussion of AP style questions on domain restrictions for solutions to Differential Equations and analysis of Slope Fields. Students are required to explain their mathematics both verbally using the audio feature and in written form on the whiteboard and chat area during this session.

Semester Exam

---Semester 2---

Unit 7: Applications of Integration Suggested Pace: 3 weeks
Topics
Application of integrals – area and volume
Content
Area of a region between two curves
Volume using Disk Method
Volumes of Cross Sections
Volumes using Shell Method
Arc Length
Application of integration involving particle motion and distance traveled
Work Applications

**Major Assignments and Assessments**

**Problem Sets**
Oral Review – Discuss setup on a graphing calculator to find volumes for functions that cannot be integrated by hand. Students are required to be able to explain how the calculator is used to assist with the integration portion of solving a volume problem and its applications.

Adobe Live Lesson session: AP Style questions on area and volume that require a calculator to find the limits of integration. Students have opportunity to demonstrate their solutions to other members of the class as well as the teacher using the whiteboard, application sharing of MathType and Graphmatica solutions and the audio feature during this session.

Test – Applications of Integration

**Unit 8: Integration Techniques Suggested Pace: 3 weeks**

**Topics**
Techniques of Integration:
Basic rules of integration
Integration by parts
Trigonometric Integrals
Integration by Trig Substitution
Integration using Partial Fractions
Indeterminate forms and L'Hopital’s Rule
Improper Integrals including divergence and convergence

**Major Assignments and Assessments**

**Problem Sets**
Oral Review – Given an integral students must be able to determine which integration technique is applicable.

Adobe Live Lesson session: Examination of various integration techniques and L'Hopital’s rule in evaluating limits. Students have opportunity to demonstrate their solutions to other members of the class as well as the teacher using the whiteboard, application sharing of MathType and Graphmatica solutions, and the audio feature during this session.

Test – Integration Techniques

**Unit 9, Part I: Sequences and Series Suggested Pace: 3 weeks**

**Topics**
Sequences
Convergence and divergence of sequences
Definition of series as sequence of partial sums
Convergence of series defined in terms of the limit of the sequence of partial sums of a series
Introduction to convergence and divergence of a series by using technology
Geometric series and applications
Nth term Test for divergence
Integral Test
Comparisons of series
Alternating series and alternating series remainder
Ratio and root tests

Major Assignments and Assessments
Problem Sets
Oral Review – Students must verbally demonstrate the ability to use their graphing calculator to show an intuitive understanding of convergence.
Adobe Live Lesson session: Examination of various convergence tests. Students have opportunity to demonstrate their solutions to other members of the class as well as the teacher using the whiteboard, application sharing of MathType and Graphmatica solutions, and the audio feature during this session.
Quiz: Mid-Chapter Review
Test: Convergence Tests

Unit 9, Part II: Taylor and Maclaurin Series: 3 weeks
Topics
Taylor polynomials and approximations
Power series and radius and interval of convergence
Taylor and Maclaurin series for given function
Maclaurin series for sinx, cosx, exponential function, and 1/1-x
Manipulation of series, including substitution, addition of series, multiplication of series by a constant/variable, differentiation and integration of series, and forming a new series from known series
Taylor’s Theorem with Lagrange Form of Remainder

Major Assignments and Assessments
Problem Sets
Oral Review – Students must verbally demonstrate the ability to use their graphing calculator to determine Taylor Polynomials and approximations along with error bound.
Adobe Live Lesson session: Examination of Taylor polynomials and Maclaurin/Taylor series. Students have opportunity to demonstrate their solutions to other members of the class as well as the teacher using the whiteboard, application sharing of MathType and Graphmatica solutions, and the audio feature during this session.
Quiz: Mid-chapter quiz
Test: Taylor polynomials and series, approximating using a series, power series and radius/interval of convergence
Unit 10, Parametric, Polar and Vectors: 2 weeks

Topics
Plane curves and parametric equations
Parametric equations and calculus
Parametric equations and vectors: motion along curve, position, velocity, acceleration, speed, distance traveled
Analysis of curves given in parametric and vector form
Polar coordinates and polar graphs
Analysis of curves given in polar form
Area of region bounded by polar curves

Major Assignments and Assessments
Problem Sets
Oral Review – Students must verbally demonstrate the ability to use their graphing calculator to apply parametrics, polars and vectors to application problems. Adobe Live Lesson session: Examination of parametric, polar, and vector applications. Emphasize finding area of polar regions. Students have opportunity to demonstrate their solutions to other members of the class as well as the teacher using the whiteboard, application sharing of MathType and Graphmatica solutions, and the audio feature during this session
Quiz: Parametric Equations
Test: Parametric, Polar equations, vectors.

Unit 11: Exam Review Suggested Pace: 4 weeks

Topics
All previously noted Topics
Content
Multiple Choice Practice Sets
Free Response Tutorials
Topic Explorations

Major Assignments and Assessments
Review Question Sets
Practice Tests
Adobe Live Lesson session: Online free response style question practice sessions. Discussion about format and grading of AP Exam approaches to problems using a numerical, analytical and graphical approach, preferred ways to communicate solutions in written form.
Oral Review: Calculator practice

Semester Exam
Other Instructional Materials
Math Type – Math symbol creation software
Graphmatica – Graphing software
Adobe Live Lesson session – Whiteboard, application sharing, voice, and video communication software
College Board approved calculator
2003 AP Calculus Released Exam Booklet
Previously released AP Calculus Free Response Questions
Study Island

Notes
This course is designed to be highly teacher facilitated. Instructors give specific and timely feedback for each of the 100 plus lessons. Students are required to complete one-on-one oral examinations with their teacher for each unit, discussions with other students where they practice communicating their mathematical concepts verbally, and have opportunity to schedule whiteboard sessions with the teacher. Teachers conduct synchronous Live Lesson sessions (whiteboard, application sharing, audio and video sharing) that require students to practice critical thinking and analysis with free response type questions and present their work verbally to the teacher and other students during those sessions.

Each assignment gives students practice in communicating their mathematics in written form using sentences as well as symbols. The oral reviews done in each unit and the synchronous sessions give students opportunities to express their understanding of mathematics verbally.

All lessons and assessments require students to respond to verbal, numerical and graphical prompts and require them to analyze and answer using written sentences and correct mathematical notation.

Most lessons include practice using the calculator as required for the AP exam. The students are informed in the first lesson of the type of calculator needed and the four operations required to be used during the AP Exam. Students are required throughout the course to give evidence of calculator proficiency. The required calculator operations and techniques for using the calculator appropriately are discussed in the oral reviews of each unit and in the synchronous sessions as well as in 10 scheduled one-on-one monthly phone conferences held between the teacher and each student. This course is accompanied by an online tutorial and review that uses released AP Exams. Students are given systematic and timed practice for all portions of the exam. Students receive specific feedback on progress and mastery levels on the practice exams.
AP Computer Science A

The AP Computer Science A course is an introductory computer course. A large part of the course involves developing the skills to write programs or parts of programs that correctly solve specific problems. The course also emphasizes the design issues that make programs understandable, adaptable, and when appropriate, reusable. At the same time, the development of useful computer programs and classes is used as a context for introducing other important concepts in computer science, including the development and analysis of algorithms, the development and use of fundamental data structures, and the study of standard algorithms and typical applications. In addition, an understanding of the basic hardware and software components of computer systems and the responsible use of these systems are integral parts of the course.

The goals of the AP Computer Science course are comparable to those in the introductory sequence of courses for computer science majors offered in college and university computer science departments. Students completing the AP Computer Science course will be able to:

  o design and implement computer-based solutions to problems in a variety of application areas.
  o use and implement commonly-used algorithms and data structures.
  o develop and select appropriate algorithms and data structures to solve problems.
  o code fluently in an object-oriented paradigm using the programming language Java. Students will be familiar with and be able to use standard Java library classes from the AP Java subset.
  o read and understand a large program consisting of several classes and interacting objects. Students will be able to read and understand a description of the design and development process leading to a program such as the AP Computer Science Case Study (such as GridWorld).
  o identify the major hardware and software components of a computer system, their relationship to one another, and the roles of these components within the system.
  o recognize the ethical and social implications of computer use.
This course is designed to be highly teacher facilitated. Instructors give a great deal of specific and timely feedback. Students have opportunities for oral examinations, discussions, and whiteboards. Teachers conduct synchronous Elluminate sessions, which require critical thinking and analysis.

Student assessment occurs at a variety of levels throughout the lesson and course. Students are assessed via oral assessment and other synchronous sessions. Actual course assessment types include student assessed work, auto-graded, partially auto-graded, and totally instructor graded assignments.

Resources: Institute of Computer Technology: ICT’s Advanced Placement (AP) Computer Science Java Curriculum v 2.0 (http://www.ict.org/java.html)
GridWorld, AP Computer Science Case Study. (Available from College Board)

- Objectives which are addressed repeatedly throughout the course are identified with an asterisk when introduced.
- The specific element of a multipart objective is underlined when introduced.

ADVANCED PLACEMENT®
ENGLISH LANGUAGE
AND
COMPOSITION
An AP course in English Language and Composition engages students in becoming skilled readers of prose written in a variety of periods, disciplines, and rhetorical contexts and in becoming skilled writers who compose for a variety of purposes. Both their writing and their reading should make students aware of the interactions among a writer's purposes, audience expectations, and subjects as well as the way generic conventions and the resources of language contribute to effectiveness in writing. The college composition course for which the AP English Language and Composition course substitutes is one of the most varied in the curriculum.

This course is designed to be highly teacher facilitated. Instructors give a great deal of specific and timely feedback. Students have opportunities for oral examinations, discussions, and whiteboards. Teachers conduct synchronous Elluminate sessions, which require critical thinking and analysis.

Student assessment occurs at a variety of levels throughout the lesson and course. Students are assessed via oral assessment and other synchronous sessions. Actual course assessment types include student assessed work, auto-graded, partially auto-graded, and totally instructor graded assignments.

**Semester One**

**Objectives:**

- To create and sustain arguments based on readings, research, and/or personal experience
- To improve writing skills
- To effectively incorporate a balance of generalization and specific illustrative detail in their writing
- To demonstrate understanding and mastery of standard written English as well as stylistic maturity in their own writings
- To learn and apply various rhetorical devices used by writers
- To produce expository, analytical, and argumentative compositions that introduce a complex central idea and develop it with appropriate evidence drawn from primary and/or secondary sources, cogent explanations and clear transitions
- To apply effective strategies and techniques in their own writing
- To analyze images as text
- To further develop vocabulary and word study skills
- To use a wide range of vocabulary appropriately and effectively
- To analyze and interpret samples of good writing, identifying and explaining an author’s use of rhetorical strategies and techniques
- To write for a variety of purposes
- To revise a work to make it suitable for a different audience
AP English Language
and Composition Syllabus

• To recognize and analyze the use of imagery and detail in a wide range of writers and their works

Module One: The Early Edition

Topics Addressed: components of the course and the AP exam, planning and committing time and effort to successfully complete the course, utilizing the grading policy while completing assessments, MLA Citation and Documentation, results of not properly using citation and documentation, understanding text to facilitate analysis of writing conventions, Rhetorical Devices, Analysis of Characterization

Readings: F Scott Fitzgerald’s The Great Gatsby

Essay: Gatsby and the American Dream, the individual’s concept of success

Community Activity: Visit and interview at a local newspaper office

Exam: Oral Assessment

Estimated Completion Time: 3 weeks

Subject/Verb Agreement
Module Two: The Colonial Revolutionary Edition

Topics Addressed: basic concerns of the early Americans, founding ideas for our democracy, narratives and speeches of several great writers, roles of the writers during this period of time, Analysis of tone, rhetorical questioning, repetition, allusion, diction, logical fallacies, figurative language, persuasive essay, parallel structure, concrete details, aphorisms, synthesis of images and text

Readings:
- John Smith’s Letter to Queen Anne Regarding Pocahontas"
- Patrick Henry’s Liberty or Death"
- Jonathan Edwards’ Sinners in the Hands of an Angry God"
- Thomas Jefferson’s Declaration of Independence"
- Benjamin Franklin excerpts from Autobiography” and Po or Richard’s Almanack”
- Frederick Douglas excerpt from Narrative of the Life of Frederick Douglass”
- Essay: Persuasive Essay, defend and support OR challenge and refute the topic of stem cell research
- Persuasive Speech (Defense/ Challenge of Henry)
- Style Analysis of Henry’s speech
Projects:
- Creating a personal Declaration of Independence,
- Viewing and responding to the documentary Hotel Rwanda in writing,
- Analysis of local artifact in community

Exams: Logical Fallacies, Tone Words

Estimated Completion Time: 4 weeks

Module Three: The Romantic Edition
AP English Language and Composition Syllabus

Topics Addressed: the flowering of literature during the period of American romanticism, the philosophy of Transcendentalism and its importance in the literature of this period, getting acquainted with a wide range of writers and their works including short stories and poetry, Clichés and sexist language, style analysis, AP multiple choice strategies, diction, denotation and connotation.

Readings:
- Emerson “Concord Hymn” and excerpt from “Self-Reliance”
- Dickens Chapter One from “Great Expectations”
- Thoreau excerpts from “Walden”
- Poe “Masque of the Red Death,” “The Raven,” “Annabel Lee”
- Melville “Baryley the Scrivener” Option A
- Hawthorne D. R. Heideger’s Experiment” Option B
- Joseph Rotblat’s Nobel Prize Acceptance Speech
- Thoreau excerpts from “Civil Disobedience”

Essays:
- Synthesis Essay on Materialism with three sources
- Style Analysis
- Response to Television Documentary

Projects: Interview with a family member on the topic of Thoreau’s belief in the power of simplicity

Exams:
- Diction Quiz
- AP Multiple Choice Practice
- Fluency Assessment on “Civil Disobedience”

Estimated Completion Time: 4 weeks

Topics Addressed: thematic approach to a virtual newspaper, analyzing a novel from several perspectives, real work connections based on a novel's theme, persuasive writing through the book review,

Reading: (Select One)
- Yezierska Bread Givers
- Ellison Invisible Man
- McCourt Angela’s Ashes
- Kingston The Woman Warrior
- Hawthorne The Scarlet Letter
- O’Brien The Things They Carried
- Chopin The Awakening
- Jan Krakauer Into Thin Air

Essays:
- Book Review
- Analysis of Author’s Style

Projects: Artistic Expression of Novel’s Theme (Original artwork, music, among other options)

Exams: Semester Exam comprised of AP Multiple Choice passages and synthesis essay prompt

Estimated Completion Time: 4 weeks

**This course is accompanied by an online tutorial and review that uses released AP Exams. Students are given systematic and timed practice for all portions of the exam. Students receive specific feedback on progress and mastery levels as they complete the practice exams.
ADVANCED PLACEMENT®
ENGLISH LITERATURE
AND
COMPOSITION
AP English Literature and Composition

For a year, students participate in the AP Dinner Party in the AP Literature and Composition course. Menu items include reading, analyzing, writing, rewriting, and discussing creations by the master chefs, renowned authors. Through close reading of the text of these authors, students will discover the various ways writers use language to provide meaning and pleasure for their readers. The AP Literature and Composition course requires intensive concentration on composition skills (both yours and the author's) in areas of structure, style, and theme. You'll also analyze authors' narrative techniques, like use of figurative language, imagery, symbolism, and tone. The AP Literature and Composition dinner party equips students with recipes for success in college, in a career and the AP exam.

This course is designed to be highly teacher-facilitated. Instructors give a great deal of specific and timely feedback. Students have opportunities for oral examinations, discussions, and whiteboards. Teachers conduct synchronous Elluminate sessions, which require critical thinking and analysis. Student assessment occurs at a variety of levels throughout the lesson and course. Students are assessed via oral assessment and other synchronous sessions. Actual course assessment types include student-assessed work, auto-graded, partially auto-graded, and instructor-graded assignments.

Semester One

Objectives:

- Develop a wide-ranging vocabulary used with denotative accuracy and connotative resourcefulness.
- Use a variety of sentence structures, including appropriate use of subordinate and coordinate constructions.
- Develop a logical organization, enhanced by specific techniques of coherence such as repetition, transitions, and emphasis.
- Create a balance of generalization with specific illustrative detail.
- Write with an effective use of rhetoric, including controlling tone, maintaining a consistent voice, and achieving emphasis through parallelism and antithesis.
- Write informally about what you think in the process of writing about your reading.
- Create a research document, which includes analysis of literary elements and negotiation of differing critical perspectives.
- Write effectively under the time constraints on essay exams in college courses in many disciplines, including English.
- Analyze authors' narrative techniques, like use of figurative language, imagery, symbolism, and tone.
- Evaluate and develop composition skills in areas of structure, style, and
theme. Study representative literary works from various genres and periods.

- Understand a work’s complexity, to absorb its richness of meaning, and to analyze how that meaning is embodied in literary form.
- Reflect on the social and historical values a literary work reflects and embodies.
- Experience, interpret, and evaluate a work of literature with consideration to its social and cultural values writing response and reaction papers.
- Write for a variety of purposes.
- Analyze and interpret aspects of language and structure.
- Make and explain judgments analyzing and interpreting the material involves students in learning how to make careful observations of textual detail, establish connections among their observations, and draw from those connections a series of inferences leading to an interpretive conclusion about a piece of writing’s meaning and value.
- Have an awareness of literary tradition and the complex ways in which imaginative literature builds upon the ideas, works, and authors of earlier times.
- Analyze a work of literature in regards to its artistry and explore its underlying social and cultural values through analysis, interpretation, and argument.
- Write and read with increasing complexity and sophistication.
- Analyze short prose passages and poems and through practicing with “open” analytical questions.
- Analyze a passage or poem in which students are required to discuss how particular literary elements or features contribute to meaning.
- Select a literary work and discuss its relevant features in relation to questions provided.

Introduction to Course:
Topics Addressed:
Theme and motif of course, getting organized in the online environment, purpose of AP Literature and Composition course, grading policy, plagiarism, personal essay, structure of the AP College Board Exam, note taking on major works in the course, style sheet, key literary terms.

Exams:
Quiz on literary terms
Essay:
Write a college essay
Estimated Completion Time: 2 weeks

Module 1:
Topics Addressed:
allusion, paraphrasing, quoting, romanticism, timed essay, research essay
Readings:
- *Frankenstein* by Mary Shelley
- Excerpts from *Faust* by J.W. Von Goethe (translated by Anna Swanwick)
- "The Rime of the Ancient Mariner" by Samuel Taylor Coleridge
- "Siren Song" by Margaret Atwood
- "The Myth of Prometheus"
- "The Boarded Window" by Ambrose Bierce
- "Interpreter of Maladies" by Jhumpa Lahiri

Essays:
- Bibliotherapy essay on *Frankenstein*
- Timed essay on prose: Locate and analyze allusions in a major work, and then explain how they develop the work.
- Banked essay questions, students will receive one of the following:
  - misconceptions of self and the world, and how they develop meaning in a work of literature
  - how a reader sees the immoral or evil character and how that reaction impacts the author’s purpose in a novel
  - how do scenes containing violence affect the meaning of the overall work of literature
  - select an alienated character and analyze what that character reveals about society
  - identify a question raised by a major work of literature and explain how the question impacts the reader’s understanding of the work

Exams:
Quizzes on all works of literature, banked essay topics as noted above, multiple-choice practice exam.

**Estimated Completion Time:** 4 weeks

Module 2

**Topics Addressed:**
- meter, imagery, allegory, symbolism, quoting, paraphrasing, parenthetical citations, works cited, literary criticism, note taking for the research paper

**Readings:**
- A novel from the list of available choices presented in the module
- *Death of a Salesman* by Arthur Miller
- "Because I Could Not Stop for Death" by Emily Dickinson
- "A Noiseless Patient Spider" by Walt Whitman
- "Where Are You Going, Where Have You Been?" by Joyce Carol Oates

**Essays:**
- AP Practice Essay on poetry – symbolism and imagery
- Students will receive one of the following banked essay topics:
inanimate objects in a work of literature and how they develop an author’s purpose
- analyze an author’s use of setting in a novel; a character’s illusion and how it develops the theme of a literary work
- a character’s illusion and how it develops the meaning of a literary work
- the significance of parallel or recurring events in a work of literature

Projects:
Choose one: write and record a eulogy, create a visual representation of a piece of literature, or analyze song lyrics, serving as literary inspiration.

Exams:
Oral assessment, banked essay topics as noted above, quizzes on works of literature, multiple choice practice exam

Estimated Completion Time: 4 weeks

Module 3
Topics Addressed:
personal writing, thesis statement, developing parts of the essay, creating a rubric, scoring an essay, symbolism, allegory, characterization, diction, connotation, denotation, syntax, tone, mood, style, setting, theme, MLA documentation, free response, Venn diagram, traits of a hero, character, protagonist, antagonist

Readings:
- Heart of Darkness by Joseph Conrad
- "Ulysses" by Lord Alfred Tennyson
- "The Road Not Taken" by Robert Frost
- "Sailing to Byzantium" by William Butler Yeats
- "A Dream Deferred" by Langston Hughes
- "The Soldier" by Rupert Brooke
- "The Hollow Men" by T. S. Eliot
- "The Knight" from the "General Prologue" to The Canterbury Tales by Geoffrey Chaucer
- "A Good Man Is Hard to Find" by Flannery O’Connor
- "The Most Dangerous Game" by Richard Connell

Essays:
- Heart of Darkness – banked essay questions, students choose from the following topics:
  - a novel's ending and its contribution to the work overall
  - the functions of the first chapter of a novel
  - a character's response to colliding cultures and how that response affects the work overall
• how a character's struggle for power affects the overall meaning of a work
• how the physical journey in a novel contributes to its overall meaning
• Research paper on one of the novels in module 1, module 2, or a work of literary merit.
• AP practice essay on prose – character, protagonist, antagonist

Projects:
Students choose one of the following:
• Storyboard to trace the journey of Heart of Darkness
• Create a character shield.

Exams:
Quizzes on works of literature, essay on Heart of Darkness (banked topics noted above)

Estimated Completion Time: 4 weeks

Module 4:
Topics Addressed:
lyric poetry, sonnet, iambic pentameter, rhyme scheme, pattern, tone, mood, voice, style, women in literature, research paper, poetry analysis, literary criticism

Readings:
• Wuthering Heights by Emily Brontë
• "To His Coy Mistress" by Andrew Marvell
• "The Valediction: Forbidding Mourning" by John Donne
• "My Mistress' Eyes" by William Shakespeare
• "Shall I Compare Thee" by William Shakespeare
• "How Do I Love Thee?" by Elizabeth Barrett Browning
• "Remembrance" by Emily Brontë
• "A Haunted House" by Virginia Woolf
• "The Gift of the Magi" by O. Henry

Choose one of the following major works read in module 1, module 2, or a work of literary merit, for research paper.

Essays:
Timed essay: relevance of Wuthering Heights in today's society

Projects:
• Compare the song "Fortress Around Your Heart" song by The Police to Wuthering Heights using a Venn diagram.
• Compare the actions and feelings of Heathcliff in the final chapter of Wuthering Heights to the feelings of the speaker in the final stanza of "Remembrance."
• Research paper on a single work of literature using one of the choices noted above.
• Write an original sonnet.

**Exams:**
Quizzes on works of literature, oral exam, timed essay (topic noted above),
Multiple Choice practice exam, Semester Exam

**Estimated Completion Time:** 4 weeks

**Semester Two**

**Objectives:**

• Develop a wide-ranging vocabulary used with denotative accuracy and
  connotative resourcefulness.

• Use a variety of sentence structures, including appropriate use of
  subordinate and coordinate constructions.

• Develop a logical organization, enhanced by specific techniques of
  coherence such as repetition, transitions, and emphasis.

• Create a balance of generalization with specific illustrative detail.

• Write with an effective use of rhetoric, including controlling tone,
  maintaining a consistent voice, and achieving emphasis through
  parallelism and antithesis.

• Write informally about what you think in the process of writing about
  your reading.

• Create a research document, which includes analysis of literary
  elements and negotiation of differing critical perspectives.

• Write effectively under the time constraints on essay exams in college
  courses in many disciplines, including English.

• Analyze authors' narrative techniques, like use of figurative language,
  imagery, symbolism, and tone.

• Evaluate and develop composition skills in areas of structure, style, and
  theme. Study representative literary works from various genres and
  periods.

• Understand a work's complexity, to absorb its richness of meaning, and
  to analyze how that meaning is embodied in literary form.

• Reflect on the social and historical values a literary work reflects and
  embodies.

• Experience, interpret, and evaluate a work of literature with
  consideration to its social and cultural values writing response and
  reaction papers.

• Write for a variety of purposes.

• Analyze and interpret aspects of language and structure.

• Make and explain judgments analyzing and interpreting the material
  involves students in learning how to make careful observations of textual
  detail, establish connections among their observations, and draw from
  those connections a series of inferences leading to an interpretive
  conclusion about a piece of writing's meaning and value.

• Have an awareness of literary tradition and the complex ways in which
imaginative literature builds upon the ideas, works, and authors of earlier times.

- Analyze a work of literature in regards to its artistry and explore its underlying social and cultural values through analysis, interpretation, and argument.
- Write and read with increasing complexity and sophistication.
- Analyze short prose passages and poems and through practicing with "open" analytical questions.
- Analyze a passage or poem in which students are required to discuss how particular literary elements or features contribute to meaning.
- Select a literary work and discuss its relevant features in relation to questions provided.

Module 5:
Topics Addressed:
setting, character, protagonist/antagonist, stereotyping, imagery, tone, mood

Readings:
- *The Grapes of Wrath* by John Steinbeck
- "Good Times" by Lucille Clifton
- "Queens, 1963" by Julia Alvarez
- "Daddy" by Sylvia Plath
- "Life with Father" by Walter McDonald
- "Do Not Go Gentle Into that Good Night" by Dylan Thomas
- "The Lottery" by Shirley Jackson
- "Everyday Use" by Alice Walker

Essays:
- Timed essay on prose: tone and mood
- Students will receive one of the following banked essay topics:
  - connect society’s stereotypes with the theme(s) of *The Grapes of Wrath*
  - analyze how a novel's title develops the meaning of the work
  - choose a scene from *The Grapes of Wrath* and analyze its relationship to the novel and its significance to the novel's meaning
  - analyze the attitudes, traditions, and stereotypes John Steinbeck wishes to change in *The Grapes of Wrath*
  - analyze a scene portraying a social occasion in *The Grapes of Wrath* for its significance to the meaning of the novel
  - analyze the physical journey that takes place in *The Grapes of Wrath* for its importance to the overall meaning of the novel.

Exams:
quizzes on all works of literature, timed essay (topic noted above), multiple
choice practice exam

Estimated Completion Time: 4 weeks

Module 6:
Topics Addressed:
allusion, soliloquy, trilogy, irony, rhyme, rhythm, repetition, alliteration, imagery

Readings:
- Hamlet by William Shakespeare
- Oedipus the King by Sophocles (translated by F. Storr)
- "The Book of Sand" by Jorge Luis Borges
- "The Lovesong of J. Alfred Prufrock" by T.S. Eliot
- "A Poison Tree" by William Blake
- "Prisoner of Chillon" by Lord Byron
- "Paul's Case" by Willa Cather
- "A Jury of Her Peers" by Susan Glaspell

Essays:
- Timed Essay: Students will receive one of the following banked topics:
  - analyze the ghost's role in Hamlet
  - analyze the conflict a character experiences in a major work
  - identify a mystery in a major work and explain its contribution to the overall meaning of the work
  - analyze an author's use of psychological events in a major work
  - analyze a conflict between a parent and child for its impact on the meaning of the work

Projects:
Students will choose from the following
- Connect Shakespeare and art
- Compare Hamlet to the movie The Lion King
- Bio-Poem for Historical or Literary Character
- Analysis of Hamlet the movie

Exams:
Quizzes on all works, oral exam, timed essay (topics noted above), multiple choice practice exam

Estimated Completion Time: 4 weeks

Module 7:
Topics Addressed:
imagery, point of view, plot, character, tone, mood, stereotypes, fairy tales

Readings:
- The Awakening" by Kate Chopin
- "Aunt Jennifer’s Tigers" by Adrienne Rich
• "Barbie Doll" by Marge Piercy
• "Woman Work" by Maya Angelou
• "Quinceanera" by Judith Ortiz Cofer
• "The Yellow Wallpaper" by Charlotte Perkins Gilman
• "To Autumn" by John Keats

**Essays:**
- Essay on Prose – point of view
- Timed Essay: Students will receive one of the following banked topics:
  - the significance of the title *The Awakening* and how it contributes to the overall meaning of the work
  - identify a healthy confusion or disquietude in *The Awakening* and explain its significance to the overall work
  - identify psychological events in a major work, analyze how they are developed in the work, and how they contribute to the work's overall meaning
  - identify a character who conforms to society but mentally questions that conformity, and analyze how those conflicting events contribute to the work's overall impact and meaning
  - the struggle for power in a novel and how it enhances the meaning of the work

**Projects:**
- Choose a popular fairy tale and rewrite it from a different point of view
- Digital storytelling: contrasting main characters in major works

**Exams:**
- Quizzes on all works, timed essay (topics noted above)

**Estimated Completion Time:** 4 weeks

**Module 8:**
**Topics Addressed:**
satire, irony, musical adaptation, tone, theme, point of view

**Readings:**
- *The Importance of Being Earnest* by Oscar Wilde
- "The History Teacher" by Billy Collins
- "Richard Cory" by Edwin Arlington Robinson
- "Ozymandias" by Percy Bysshe Shelley
- "The Cask of Amontillado" by Edgar Allan Poe
- *A Modest Proposal* by Jonathan Swift

**Essays:**
- Timed Essay on poetry – satire and irony
- Students will receive one of the following banked essay topics:
  - choose a scene containing thoughtful laughter and analyze its
contribution to the work overall
  o choose a morally ambiguous character and analyze his or her significance to the work overall
  o identify standards of a fictional society and analyze how a character’s responses to those standards develop the theme of the work overall
  o the significance of a work's title and how it develops the overall meaning of the work
  o discuss the significance of recurring events in a work; use of contrasting settings in a major work and how they develop meaning in the work

Exams:
Quizzes on all works, oral exam, essay (banked topics noted above)

Estimated Completion Time: 4 weeks

Module 9: Project Module

Readings:
Students will choose one of the following works:
  • Things Fall Apart by Chinua Achebe
  • Cry, the Beloved Country by Alan Paton
  • Othello by William Shakespeare
  • House Made of Dawn by N. Scott Momaday

Projects:
Write an original dialogue depicting a scene between characters in major works you have read throughout the course, and a character or characters from the novel read in this module.

Exams:
Test on major work

Estimated Completion Time: 2 weeks
ADVANCED PLACEMENT®
ENVIRONMENTAL SCIENCE
Name of the Course
AP Environmental Science

Textbooks for class consultation:

Supplementary Course Texts and Ancillary Materials

Resources

Required reading texts are included within the course as lectures, Power Point presentations, Internet resources, and course outlines. Topics included are in compliance with the College Board AP guidelines and recommendations. All required and recommended reading is linked appropriately within each scheduled lesson in accordance with copyright law.

Course Prerequisites

Students taking AP Environmental Science should have completed two years of high school science consisting of one year of biology and one year of either physical science or chemistry. Students should also have completed Algebra 1.

Course Goal

Students will master the practical concepts and applications of environmental science at an advanced high school level in accordance with the College Board AP Environmental Science guidelines.

Course Objectives

At the conclusion of the course, students will be able to:

- Define science as a process.
- Discuss science as a method of learning more about the world.
- Describe how science constantly changes the way we understand the world.
- Discuss how energy conversions underlie all ecological processes.
• Explain that energy cannot be created but that it must come from somewhere.
• Illustrate the properties of energy flow within systems.
• Describe the Earth as one interconnected system.
• Examine how natural systems change over time and space.
• Analyze how biogeochemical systems vary in the ability to recover from disturbances.
• Describe how humans alter natural systems.
• Identify the impact that humans have had on the environment for millions of years.
• Discuss how technology and population growth have enabled humans to increase both the rate and scale of their impact on the environment.
• Identify environmental problems as having a cultural and social context.
• Understand and explain the role of cultural, social, and economic factors and explain how they are vital to the development of solutions.
• Discuss how human survival depends upon developing practices that achieve sustainable systems.
• Determine a suitable combination of conservation and development is required to reach sustainability.
• Examine how management of common resources is essential to reaching a sustainable environment.

Learning Outcomes

At the conclusion of this course, students will thoroughly understand the practical concepts and applications of environmental science at an advanced high school level and be well prepared to participate in the AP Environmental Science Exam.

Assessments

Assessments are conducted and submitted online in compliance with accreditation standards. Assessments are created using all 6 levels of Bloom's Taxonomy, but primarily focused on analysis, synthesis and evaluation and will incorporate 3 different learning styles, so students are challenged to learn at all levels. Assessment questions appear in a variety of formats: True/False, Define/Identify, Multiple Choice, Map Identification, Multiple Answer, Lab Write-ups Discussion-based, Short Answer, Projects and Essay. Assessments are comprehensive of the lesson content and some are conducted in a timed online environment.

Course Long Plan

Course Description

AP Environmental Science is a 1 credit course with 10 units of study. Each unit takes 20-25 hours to complete and includes online readings, laboratory experiments, interactive activities, threaded discussion, peer-to-peer learning, and a variety of formative and summative assessments. Although the course is structured to accommodate seat time requirements in some states, students may progress at their own speed throughout the course.

The goal of AP Environmental Science is to provide students with the scientific principles, concepts, and methodologies required to understand the interrelationships of the natural world and to identify and analyze environmental problems that are both natural and human-made. Students will evaluate the relative risks associated with these problems and examine alternative solutions for resolving or preventing problems. Required laboratory Internet-based activities are included with each unit, each
taking a minimum of one hour to complete. Additionally, hands-on laboratory assignments are included in each unit to challenge student abilities on the following tasks:

- Critically observe environmental systems
- Develop and conduct well-developed experiments
- Analyze and interpret data, including appropriate statistical and graphical presentations
- Think analytically and apply concepts to the solution of environmental problems
- Make conclusions and evaluate their quality and validity
- Propose further questions for study
- Communicate accurately and meaningfully about observations and conclusions

Environmental science is interdisciplinary; the course includes a wide variety of topics from different disciplinary areas. The course is organized in accordance with six themes:

- **Science is a process**
  - a. Science is a method of learning more about the world.
  - b. Science constantly changes the way we understand the world.

- **Energy conversions underlie all ecological processes.**
  - a. Energy cannot be created; it must come from somewhere.
  - b. As energy flows through systems, it becomes less usable at each step.

- **The Earth is one interconnected system.**
  - a. Natural systems change over time and space.
  - b. Biogeochemical systems vary in ability to recover from disturbances.

- **Humans alter natural systems**
  - a. Humans have an impact on the environment and have had for millions of years.
  - b. Technology and population growth have enabled humans to increase both the rate and scale of their impact on the environment.

- **Environmental problems have a cultural and social context.**
  - a. Understanding the role of cultural, social, and economic factors is vital to the development of solutions.

- **Human survival depends upon developing practices that achieve sustainable systems.**
  - a. A suitable combination of conservation and development is required to reach sustainability.
  - b. Management of common resources is essential to reaching a sustainable environment.

Throughout the course, students are given the opportunity to participate in critical thinking exercises which require research, analysis and presentation. Lessons, written with a global perspective in mind, enable students to collaborate with students around the world on projects, presentations, and assignments. Students develop 21st century skills, including cross-border perspectives and solutions, and apply “tangible” skills such as language proficiency as well as skills that are less tangible, including greater sensitivity to cultural differences, openness to new and different ideas, and the ability to adapt to change (as stated by the Partnership for 21st Century Skills).

This course is designed to be highly teacher facilitated. Instructors give a great deal of specific and timely feedback per lesson as students progress through the course. Students have opportunities for oral examinations, discussions, and whiteboard interactions. Additionally, teachers conduct online synchronous Elluminate sessions that require critical thinking and analysis.

In addition, this course is accompanied by an online tutorial and review that uses released AP Exams. Students are given systematic and timed practice for all portions of the exam. Students receive specific feedback on progress and mastery levels on the practice exams.

**Laboratory Experience**
Laboratory activities are a critical component of the AP Environmental Science course. There are 22 labs provided for students to learn about the environment through experience. These 22 labs are completed through a variety of methodologies including hands-on student conducted labs and virtual or simulated labs. Simulated activities are correlated to the corresponding AP Lab and structured so that students are familiar with key concepts, experimental design, and data analysis as presented in the lab write-ups. At all stages of lab work, students have one-on-one access to their instructors. Synchronous opportunities, such as graded oral assessment, phone calls, chats and/or whiteboard sessions, are utilized to maximize student understanding of lab processes, design and concepts.

Lab Materials:
This AP Environmental Science course will utilize a variety of household items in its hands-on labs. Few items listed will require purchase from a local grocery or home improvement store.

For a list of the AP Environmental Science Labs and required materials, please go to: http://develop.flvs.net/Collaborate/ravery/educator_ap_environ_aplabs/

Conceptual Connections and/or Skills:
The AP Environmental Science course promotes connection to concepts by providing students with opportunities for manipulation of information and ideas related to the major topics and themes through a variety of methodologies including:

- reading of the course content
- readings and activities from text referenced sources, ancillary texts, and a wide variety of current, external Web resources
- use of interactive content components in which data is often collected and analyzed
- streaming video and multimedia components that dimensional learning opportunities
- expression of thought and understanding through writing
- exposure to released AP Environmental Science tests and practice with free response question types
- student-conducted hands-on and simulated laboratory investigations

Student assessment occurs at a variety of levels throughout the course. Students are assessed via discussion-based assessment and other synchronous sessions. Actual course assessment types include student assessed work, auto-graded, partially auto-graded, and totally instructor graded assignments.

Course Outline

Each module of study contains the following:

- Readings
- Supplemental Online Readings
- Map and Data Sets
- Mapping Activities
- Laboratory Experiments and Activities
- Interactive Online Activities
- Threaded Discussion
- Discussion-based (oral assessment)
- Formative and Summative Assessments
---Semester 1--- (18 Weeks)

Topics, Themes and Laboratory Experiences (by module)

- **Module 1** (Environmental Science and Sustainability)
  - **The main themes** covered in module 1 include: Science as a process, The Earth is one interconnected system, Environmental problems have a cultural and social context, and Human survival depends upon developing practices that achieve sustainable systems.
  - **The topics** covered will include: strategies for sustainability, sustainable land use strategies, resource use, Tragedy of the Commons, relevant laws and treaties, scientific method, worldviews, economic impacts, cost-benefit analysis, external costs, marginal costs, sustainability, Agricultural Revolution, Industrial Revolution.
  - **The lab experience** in module 1 will be:
    - **1.01 Sustainability Lab** (60 – 90 minutes) - This lab activity is a hands-on, student conducted lab during which the student carries out the experiment using materials gathered at home. The Sustainability lab is an activity that focuses student attention on creating a sustainable island using resources provided. Students will create a data table and graph to depict their outcomes and evaluate the effectiveness of their choices during the lab.
    - **1.04 Experimental Design** (60 minutes) - This activity inspires students to design a lab based on choice scenarios. Students will incorporate the Scientific Method in developing their experimental design.
    - **Research and Design Project: Eco-Vacations** - (120 minutes) - Students collaboratively research and design a “green” vacation. Project includes information on transportation, lodging, food, and entertainment options, evaluating different choices for their environmental impact. Cost calculations are included.

- **Readings and Ancillary Resources**
  - “The Tragedy of the Commons” by Garrett Hardin [http://dieoff.org/page95.htm](http://dieoff.org/page95.htm)

- **Module 2** (The Living World)
  - **The main themes** covered in this module include: Science as a process, Energy Conversions underlie all ecological processes, The Earth is one interconnected system, Humans alter natural systems, Environmental problems have a cultural and social context, and Human survival depends upon developing practices that achieve sustainable systems.
  - **The topics** in this module include: biological populations and communities, ecological niches, interactions among species, keystone species, species diversity, photosynthesis, cellular respiration, laws of thermodynamics, food webs, trophic levels, ecological pyramids, biodiversity, natural selection, evolution, ecosystem resources, ecological succession, natural biogeochemical cycles (carbon, nitrogen,
The lab experiences in module 2 will be:

- **2.02 Eating at a Lower Trophic Level Activity (60 minutes)** - Students hypothesize and predict the effect of human food consumption at lower trophic levels. Students then perform calculations based on provided data to create an energy pyramid and biomass pyramid. Additionally, students calculate the number of humans that could be supported at the various trophic levels and evaluate the feasibility of vegetarian diets for the world’s population.

- **2.04 Cloud Lab (60 minutes)** - This lab activity is a hands-on, student-conducted lab during which the student carries out the experiment using materials gathered at home. The student simulates the hydrologic cycle within a plastic bottle to create a cloud.

- **2.07 Predatory/Prey Lab (90 minutes)** - This lab activity is a student-manipulated virtual simulation. Students experiment with the relationship between killer whales and seals. Students design three different experiments and test their assumptions by manipulating their choice of five different variables: initial predator population, initial prey population, prey growth rate, predator death rate, and capture efficiency. Data is collected and evaluated in a formal lab write-up with proposed ideas for future experiments.

Readings and Ancillary Resources

- Bagheera: A Website for Earth’s Endangered Animals

- Ecological Studies of Wolves on Isle Royale
  [http://www.isleroyalewolf.org/ann_rep_pdf/ISRO_annrep07-08.pdf](http://www.isleroyalewolf.org/ann_rep_pdf/ISRO_annrep07-08.pdf)

Module 3 (The Living World)

The main themes covered in module 3 include: Science as a process, The Earth is one interconnected system, Humans alter natural systems, Environmental problems have a cultural and social context, and Human survival depends upon developing practices that achieve sustainable systems.

The topics covered will include: weather and climate, seasons, solar intensity and latitude, major terrestrial and aquatic biomes, plate tectonics, earthquakes, volcanism, greenhouse gases and the greenhouse effect, rock cycle, mineral formation, extraction, global mining reserves, relevant laws and treaties.

The lab experiences in module 3 will be:

- **3.02 Water Lab on Sustainability (90 minutes)** - This lab activity is a student-manipulated virtual simulation. Students experiment with sustainability, balancing a fish population with human harvesting, environmental variations, and carrying capacity. Students design three different experiments and test their assumptions by manipulating their choice of five different variables. Data is collected and evaluated in a formal lab write-up with proposed ideas for future experiments.

- **3.04 Cookie Mining Lab (60-90 minutes)** – This lab activity is a hands-on, student-conducted lab during which the student carries out the experiment using materials gathered at home. Students simulate mining and reclamation activities, including economic considerations and calculations. Students...
arrange loan, purchase or rent equipment and resources, calculate recovery percentage and profit/loss. Students discuss relevant mining laws and reclamation effectiveness.

- **Readings and Ancillary Resources**
  - Hippocampus Educational Resources
    [http://www.hippocampus.org/AP%20Environmental%20Science](http://www.hippocampus.org/AP%20Environmental%20Science)
  - Major Biomes of the World

- **Module 4 (Population)**
  - **The main themes** covered in module 4 include: Science is a process, The Earth is one interconnected system, Humans alter natural systems, Environmental problems have a cultural and social context, and Human survival depends upon developing practices that achieve sustainable systems.
  - **The topics** covered will include: historical population sizes, human population distribution, fertility rates, growth rates and doubling times, demographic transition, age-structure diagrams, case studies, national policies, economic effects, carrying capacity, survivorship, reproductive strategies, tree plantations, old growth forests, forest fires, forest management, national forests, federal rangelands, deforestation, public and federal lands, relevant laws and treaties.
  - The lab experiences in module 4 will be:
    - **4.02 Lab on Habitat Loss** (90 minutes) – This is a student-manipulated virtual simulation lab. Students experiment with habitat loss and its effect on species populations. Variables to be manipulated are habitat loss rate, habitat loss amount, and food production rate. Students design two different experiments and test their assumptions by manipulating the variables, obtaining output data on population, carrying capacity, and the effects of habitat fragmentation. Data is collected and evaluated in a formal lab write-up with proposed ideas for future experiments.
    - **4.03 Cemetery Lab** – (120 minutes) - This lab activity is a hands-on, student conducted lab during which the student carries out the experiment using materials gathered at home. The students then collect and compare age-specific mortality data from gravestones in two cemeteries, one representing a historical population, and the other, a modern one. Students construct life tables and graphically illustrate survivorship and mortality rates.
    - **4.04 Tree Lab** (120 min) – This is a hands-on lab activity and math practice. Students measure circumference of a tree and the length of its shadow. Using geometry, students calculate tree diameter and height. Using US Forest Service models, students then calculate tree weight, dry weight, and mass of carbon in tree. Using percent composition, students calculate mass of carbon dioxide sequestered by tree. Stoichiometric calculations allow students to calculate the gallons of combusted gasoline their tree represents. Students evaluate the number of trees needed to sequester one family’s yearly gasoline combustion and the accuracy of mathematical models.

- **Readings and Ancillary Resources**
  - US Census Bureau Age Structure diagrams
    [http://www.census.gov/ipc/www/idb/pyramids.html](http://www.census.gov/ipc/www/idb/pyramids.html)
  - The Population Reference Bureau: “India’s Population” Case Study
Module 5 (Energy)

The main themes in module 5 include: Science is process, Energy Conversions underlie all ecological processes, The Earth is one interconnected system, Humans alter natural systems, Environmental problems have a cultural and social context, and Human survival depends upon developing practices that achieve sustainable systems.

The topics covered will include: energy forms, power, units, conversions, global energy use, formation of coal, oil, and natural gas, extraction methods, world reserves, global demand, nuclear fission process, nuclear fuel, electricity production, nuclear reactor types, safety issues, radioactive wastes, dams, flood control, hydroelectric power, energy conservation, solar energy, hydrogen fuel cells, biomass, wind energy, ocean waves and tidal energy, geothermal, environmental advantages and disadvantages for all types of energy production, relevant laws and treaties.

The lab experiences in module 5 will be:

- **5.01 Energy Flow Lab** (90 minutes) – This is a student manipulated virtual simulation lab. Students experiment with the energy use of a home that has several sources of energy available: wind power, a hydropower system that stores elevated water with excess wind energy, and a gasoline-powered electric generator. Variables to be manipulated are wind speed, energy usage rate, and water tank capacity. Students design three different experiments and test their assumptions by manipulating the variables, obtaining output data on all energy production and consumption. Data is collected and evaluated in a formal lab write-up with proposed ideas for future experiments.

- **5.06 Global Energy Options** (90 minutes) – This is a student manipulated virtual simulation lab. Students manipulate sources for the world, adjusting the percentage of energy use from coal, oil, natural gas, solar power, wind power, biofuel, hydro power and nuclear power. Students can also manipulate energy efficiencies and carbon sequestration rates. Based on these variables, students attempt to achieve equilibrium between energy supply and demand, while maintaining atmospheric CO2 levels below 500 ppm. Data is collected and evaluated in a formal lab write-up with predictions for the world’s future.

- **5.07 Hands-on Personal Energy Assessment Lab** – (180 min) - This lab activity is a hands-on, student conducted lab during which the student carries out the experiment using materials gathered at home. Students conduct energy use audit of their family home over a one week period. Energy use is categorized and summarized in table format. Students then calculate kilowatt hours, cost information, and evaluate fuels for electricity production.

- **5.08 Global Warming Lab** – (90 min) – This is a student manipulated virtual simulation lab. Students experiment with a simple model of global warming, balancing greenhouse forcing, feedback loops, and time. Students design two different experiments and test their assumptions by manipulating their choice of three different variables, obtaining output data on albedo and
surface temperature. Data is collected and evaluated in a formal lab write-up with proposed ideas for future experiments.

- **Readings and Ancillary Resources**
  - “The Big Energy Gamble” PBS Nova
    [http://www.pbs.org/wgbh/nova/energy/program.html](http://www.pbs.org/wgbh/nova/energy/program.html)
  - Coal Mine Virtual Tour
    [http://www2.illinoisbiz.biz/coal/virtualtour/index.html](http://www2.illinoisbiz.biz/coal/virtualtour/index.html)
  - Chernobyl Accident

--- Semester 2 --- (18 Weeks)

Topics, Themes and Laboratory Experiences (by module)

**Module 6 (The Atmosphere and Climate Change)**

- **The main themes** in module 6 include: Science as a process, The Earth is one interconnected system, Humans alter natural systems, Environmental problems have a cultural and social context, and Human survival depends upon developing practices that achieve sustainable systems.

- **The topics** covered in this module include: composition of the atmosphere, stratospheric ozone, primary and secondary air pollution, major air pollutants, smog, thermal inversions, indoor air pollution, acid deposition causes and effects, human health effects of air pollution, Clean Air Act and other relevant laws and treaties.

- **The lab experiences** in module 6 will be:
  - **6.00 Collaborative Lab on Solid Waste** (240 minutes) – This lab activity is a long-term, hands-on, student conducted lab during which the student carries out the experiment using materials gathered at home. Students collaboratively design their own experiment, focusing on sound scientific experimentation. The degradability of various landfill items is evaluated over several weeks in simulated landfill conditions. Students collect data, graph data, and evaluate/interpret results.
  - **6.01 Air Pollution Lab**: (90 minutes) – This is a student manipulated virtual simulation lab activity. Students experiment with the release of air pollutants from a tall smokestack located on a flat plain. The atmosphere is modeled with a simple set of factors: wind, temperature, diffusion, and convection. Variables to be manipulated are temperature gradient in the atmosphere, humidity, and wind speed. Students design three different experiments and test their assumptions by manipulating the variables, obtaining output data on the vertical and horizontal dispersion of the pollutants. Data is collected and evaluated in a formal lab write-up with proposed ideas for future experiments.
  - **6.05 Climatography Activity**: (60 minutes) – This is a hands-on student conducted lab. Students create climatographs using precipitation/temperature data for known biomes. Unknown biome climate data is presented to students for graphing and biome determination.

- **Readings and Ancillary Resources**
  - El Nino Theme Page
    [http://www.pmel.noaa.gov/tao/elnino/nino-home.html](http://www.pmel.noaa.gov/tao/elnino/nino-home.html)
Module 7 (Soil)

- **The main themes** in module 7 include Science as a Process, The Earth is one interconnected system, Humans alter natural systems, Environmental problems have a cultural and social context, Human survival depends upon developing practices that achieve sustainable systems.

- **The topics** covered in this module include soil formation, composition, physical and chemical properties, soil types, erosion, soil conservation, deforestation, irrigation, types of agriculture, Green Revolution, genetic engineering, sustainability, food distribution, hunger, human nutritional requirements, fishing techniques, overfishing, aquaculture, types of pesticides, costs and benefits of pesticide use, integrated pest management, relevant laws and treaties.

- **The lab experiences** in module 7 will be:
  - 7.01 Soil Lab (90 minutes) – This is a hands-on student conducted lab. Students perform hands-on investigation of soil near their home, evaluating horizons and physical/chemical characteristics of soil (texture, permeability, leaching). Data is recorded and plotted on interactive map, and students compare/contrast their local soil type with soil types from other locations.
  - 7.02 Experimental Design (60 minutes) - This is a suggested activity that inspires students to design a lab based on desertification. Students will incorporate the Scientific Method in developing their experimental design.
  - 7.06 Hands-on Lab on Pest Management: (60 minutes) – This is a hands-on student conducted lab. Students examine household food products for pests, identifying them with the help of online resources. Students investigate integrated pest management and propose different methods of pest control.

- **Readings and Ancillary Resources**
  - New Neighbors: Suburbs and Pesticides
  - Rachel Carson Council: “Pesticides, Chemicals, and Alternatives”

Module 8 (Water)

- **The main themes** in module 8 include Science as a Process, The Earth is one interconnected system, Humans alter natural systems, Environmental problems have a cultural and social context, and Human survival depends upon developing practices that achieve sustainable systems.

- **The topics** covered in this module include global water resources, water use, surface and groundwater issues, global water problems, water conservation, dissolved oxygen, watersheds, floodplains, water pollution types and sources, groundwater pollution, maintaining water quality, water purification, wastewater treatment, Clean Water act, relevant laws and treaties.

- **The lab experiences in** module 8 will be:
  - 8.02 Hands-on Water Usage Lab: (90 minutes) – This lab activity is a hands-on, student conducted lab during which the student carries out the experiment using materials gathered at home. Students collect and average data for water use while brushing teeth with water continuously running and water running only when necessary. Data is collected for at least three individuals and averaged. Students calculate savings in gallons per person, gallons per town, gallons per state, and gallons per country.
Calculations are repeated using a standard cost per gallon to determine monetary savings. Students evaluate other water saving methods for their own family, and develop government programs to encourage water conservation.

- 8.03 Virtual Lab on Water Pollution: (120 minutes) – This is a student manipulated virtual simulation lab activity involving water sampling.

**Readings and Ancillary Resources**
- Florida Estuaries
  [http://kwanga.net/apesnotes/estuary-article.pdf](http://kwanga.net/apesnotes/estuary-article.pdf)
- DC Water and Sewer Virtual Tour
  [http://www.dcwas.com/about/vtour/virtual_tour.html](http://www.dcwas.com/about/vtour/virtual_tour.html)

**Module 9 (Toxicology and Risk)**
- The main themes in module 9 are Science as a Process, Environmental problems have a cultural and social context, and Human survival depends upon developing practices that achieve sustainable systems.
- The topics covered in this module include risk analysis, acute and chronic effects, dose response relationships, smoking, types of hazardous waste, treatment/disposal of hazardous wastes, cleanup of contaminated sites, remediation, mitigation, restoration, epidemiology, toxicology, relevant laws and treaties.

- The lab experiences in module 9 will be:
  - 9.03 Human Health Dose Response Activity: (90 minutes) – This is a student manipulated virtual simulation lab. Students experiment with a linear-fit zero-threshold dose-response curve. Variables to be manipulated are dose and number of individuals tested. Students design three different experiments and test their assumptions by manipulating the variables, obtaining output data and creating dose-response curves. Data is collected and evaluated in a formal lab write-up with proposed ideas for future experiments.

**Readings and Ancillary Resources**
- National Library of Medicine: Tox Town

**Module 10 (Recycling and Sustainability)**
- The main themes in module 10 are Science as a Process, The Earth is one interconnected system, Humans alter natural systems, Environmental problems have a cultural and social context, and Human survival depends upon developing practices that achieve sustainable systems.
- The topics covered in this module include solid waste types, solid waste disposal, reduction, landfills, recycling, reuse, relevant laws and treaties.

- The lab experiences in module 10 will be:
  - 10.01 Hands-on Personal Garbage Analysis: (120 minutes) – This lab activity is a hands-on, student conducted lab during which the student carries out the experiment using materials gathered at home. Students sort and analyze family household garbage, categorizing each item and calculating percentages for each category. Family data is then compared to national averages and student evaluates family solid waste production by category. Waste reduction plans are created and analyzed.

---Long-term Projects and Field Experience---

**Long-term Projects**

- **6.00 Collaborative Lab on Solid Waste** (240 minutes) – This lab activity is a long-term, hands-on, student conducted lab during which the student carries out the experiment using materials gathered at home. Students collaboratively design their own experiment, focusing on sound scientific experimentation. The degradability of various landfill items is evaluated over several weeks in simulated landfill conditions. Students collect data, graph data, and evaluate/interpret results.

**Field Experience**

- **4.03 Cemetery Lab** – (120 minutes) - This lab activity is a hands-on, student conducted lab during which the student carries out the experiment using materials gathered at home. The students then collect and compare age-specific mortality data from gravestones in two cemeteries, one representing a historical population, and the other, a modern one. Students construct life tables and graphically illustrate survivorship and mortality rates.

- **4.04 Tree Lab** (120 min) – This is a hands-on lab activity and math practice. Students measure circumference of a tree and the length of its shadow. Using geometry, students calculate tree diameter and height. Using US Forest Service models, students then calculate tree weight, dry weight, and mass of carbon in tree. Using percent composition, students calculate mass of carbon dioxide sequestered by tree. Stoichiometric calculations allow students to calculate the gallons of combusted gasoline their tree represents. Students evaluate the number of trees needed to sequester one family’s yearly gasoline combustion and the accuracy of mathematical models.

- **5.07 Hands-on Personal Energy Assessment Lab** – (180 min) - This lab activity is a hands-on, student conducted lab during which the student carries out the experiment using materials gathered at home. Students conduct energy use audit of their family home over a one week period. Energy use is categorized and summarized in table format. Students then calculate kilowatt hours, cost information, and evaluate fuels for electricity production.

- **8.02 Hands-on Water Usage Lab**: (90 minutes) – This lab activity is a hands-on, student conducted lab during which the student carries out the experiment using materials gathered at home. Students sort and analyze family household garbage, categorizing each item and calculating percentages for each category. Family data is then compared to national averages and student evaluates family solid waste production by category. Waste reduction plans are created and analyzed.
ADVANCED PLACEMENT®
HUMAN GEOGRAPHY
Course Description

AP Human Geography is a rigorous, entry level college, 1 credit course with 10 units of study. Each unit takes an average of 2-5 weeks (1-2.5 weeks for block schedule students) to complete and includes online readings, interactive activities, threaded discussion, peer-to-peer learning, and a variety of formative and summative assessments. Although the course is structured to accommodate seat time requirements in some states, students may progress at their own speed throughout the course with the goal of completing the course and being best prepared for the May Advanced Placement Exam.

Additionally, interactive assignments are included in each unit/module to challenge student abilities on the following tasks:

- critically observe human systems
- study and evaluate case studies
- develop and conduct well-developed analysis of cultures, peoples and their environments.
- analyze and interpret data, including appropriate statistical and graphical presentations
- think analytically and apply concepts to the solution of geographic problems
- make conclusions and evaluate their quality and validity
- propose further questions for study
- communicate accurately and meaningfully about observations and conclusions

Human Geography is by nature an interdisciplinary course. The units/modules are organized around the topics of population, migration, culture, language, religion, ethnicity, political geography, urban structures and land use, political structures, agricultural systems and land use and industrialization and economic development.

Throughout the course, students are given the opportunity to participate in critical thinking exercises which require research, analysis and presentation. Lessons, written with a global perspective in mind, enable students to collaborate with students around the world on projects, presentations, and assignments. Students develop 21st century skills, including cross-border perspectives and solutions, and apply “tangible” skills such as language proficiency as well as skills that are less tangible, including greater sensitivity to cultural differences, openness to new and different ideas, and the ability to adapt to change (as stated by the Partnership for 21st Century Skills). Career connections are built into each module.

This course is designed to be highly teacher facilitated by certified teachers that have attended College Board trainings in the area of Advanced Placement Human Geography. Students have opportunities for oral examinations, discussions, and whiteboard interactions. Additionally, teachers conduct online synchronous Blackboard Collaborate sessions that require critical thinking and analysis.

In addition, this course is accompanied by an online tutorial and review that uses released AP Exams. Students are given systematic and timed practice for all portions of the exam. Students receive specific feedback on progress and mastery levels on the practice exams in effort to better prepare themselves for the Advanced Placement exam in May.
Course Goal

Students will seek to master the practical concepts and applications of an entry college level human geography course in accordance with the College Board AP Human Geography guidelines. Likewise they will be prepared to take the College Board AP test in May.

At the conclusion of the course, students will be able to:

- Define human geography as a discipline that helps them understand the patterns and processes that have shaped the human understanding, use, and alterations of the Earth’s surface.
- Discuss the changing interconnections among places focuses on people in their spatial patterns, their cultural variations, spatial systems and human-environmental interrelationship.
- Analyze and studies how culture and basic needs affect all human interaction.
- Understand how the concept of diffusion and movement is a key concept in understanding how cultural traits move through time and space, and in turn change and shape population.
- Define the regions and evaluate the regionalization process and changes occurring at the local and global level.
- Examine land use and its variations from the geographical perspective.
- Examine and evaluate the basic economics concepts and its impact on people, resources and economic development at the local, regional and global level.
- Evaluate how and why political patterns reflect ideas about how Earth’s surface should be organized and affect a wide range of activities and understanding.
- Understand the theories of urban development and the relationship of city-structure to geography and vice-versa.

Learning Outcomes

At the end of this course the student will have a solid understanding of the patterns and processes that have shaped the human understanding, use, and alterations of the Earth’s surface. Students will know how to analyze maps and spatial data sets. They will be able to define the regions and evaluate the regionalization process that is happening at a global level. Emphasis will be placed on the dynamic nature of geography, the development of analytical skills, and the application of geographical concepts.

World Data Bank: http://data.worldbank.org/country

Yale Divinity School Library: http://guides.library.yale.edu/freeweb

Resources

Required reading texts are included within the course as lectures, PowerPoint presentations, internet resources, and course outlines. This is a self-contained curriculum developed using the approved and recommended bibliography by the College Board. (See above) Topics included are in compliance with the College Board AP guidelines and recommendations. All required and recommended reading is linked appropriately within each scheduled lesson in accordance with copyright law.

Course Prerequisites

There are no prerequisites for this course, but strong reading and writing skills are recommended.

Assessments

Assessments are conducted and submitted online in compliance with accreditation standards. Assessments are created using all 6 levels of Webb’s Depth of Knowledge Levels, but primarily focused on strategic and extended thinking and will incorporate various learning styles, so students are challenged to learn at all levels. Assessment questions appear in a variety of formats: true/false, define/identify, multiple choice, map identification and analysis, map creation
activities, multiple answer, journal reflections, individual discussion-based with instructor, Free-
Response Questions (including released AP exam questions), and projects. Assessments are
comprehensive of the lesson content and many are conducted in a timed online environment.

Course Long Plan

Course Outline

Each module of study contains the following:

- College Level Readings
- Supplemental Online Readings
- Map and Data Analysis Sets
- Interactive Mapping Activities
- Reflection Activities (Geo Journal)
- Interactive Online Activities
- Threaded Discussion
- Discussion-based (oral assessment)
- Case Studies
- AP Exam Preparation Test Taking Skill Builders
- Formative and Summative Assessments

---Semester 1--- (16-18 Weeks)

Module 1 – What is Human Geography? Estimated Timeframe: 3 weeks (1.5 for block schedule)

In this module students will study the nature of geography that will allow them to fully
comprehend the new concepts of Human Geography. At the end of the module, the student will
have the tools that will allow them to locate places in a map, to read accurately any type of map,
to analyze human activities in relation to their spatial patterns, their cultural variations, spatial
systems and human-environmental interrelationship.

- The main themes and topics covered in module 1 include activities on:
  - The Earth’s Structure
  - Landforms and Climates
  - Resources
  - Location: Absolute, Relative
  - Place -- What makes a place different from other places? Site, Situation.
  - Human-environment interaction: Environmental Determinism, Possibilism
  - Movement
    - Spatial Distribution: density, dispersion and pattern
    - Spatial Interaction: accessibility and connectivity.
    - Direction and Distance (bias)
  - Regions:
  - Functional, Formal, Perceptual
  - Maps: mapping as a basic tool to record spatial data and to identify and analyze
    regions. They will understand and apply the concepts of:
Essential Questions

- How do maps represent different perspectives of Earth?
- How do people’s actions affect the environment in which they live?
- How is the study of human geography relevant to everyday life and decision making?
- Is geography destiny? How does the environment impact societies?
- Through what lens do geographers view the world, and what skills are needed to develop that lens?
- What is a spatial perspective, and how can it be applied to better understand phenomena and places on Earth?
- What themes do geographers use to explain and analyze phenomena and places on Earth?
- What tools do geographers use in the practice of their craft?
- Why are different places similar?
- Why are some map types more effective than others at representing specific information about Earth?
- Why are some map types more effective than others at representing specific information about Earth?
- Why are some places similar?
- Why is human geography a relevant field of study?

AP Human Geography Syllabus

- Projection
- Push-pull factors
- Reference maps
- Relation location
- Relative scale
- Relocation
- diffusion

- Rural
- Simplification
- Spatial
- organization
- Spatial perspective
- Stimulus diffusion
- Thematic maps

- Toponyms
- Transnational
- Trilateration
- Urban

- Readings
  - Required reading: Module 1, Florida Virtual School APHG course V10.

- Ancillary Resources
  - Interactive videos timelines: evolution of geography, change over time,
  - Case Study: Ireland Potato Famine
  - Interactive maps: for location, movement, region, place, types of maps.
  - Interactive maps: GIS and GPS Technology
  - Videos: Latitude and Longitude Defined
  - Effects of Global Warming in Alaska
  - British Columbia: Pacific Gateway
  - Accents and Expressions
  - The Nile and Egyptian Architecture
  - The Function of the Aswan Dam
  - Displacement of the Nubians

- Activities: students will have to complete a variety of activities including: diagnostic test, vocabulary activities, Geo-Journal activity (formal regions), map analysis, GPS and Location activity, reflection essays, self check quizzes, geography application assignment, one-on-one discussion based assessment, case study: push and pull factors, FRQ practice activity: “Global Village”, exam prep multiple choice, analyze two maps of student’s community. Identify evidence of cartographer’s choices and evidence of problems with land use, create a Spatial Perception Model

Collaborative Extension Project: Using and Interpreting Maps

- Locate two maps to compare.
- Find maps that fit in one of the following categories: Two maps of a region from different time periods
- Two maps of a region that show the same region using different projections
- Two maps of a region that show different political boundaries
- Two maps of a region that show different themes (ex: population map and migration map)
- Two maps of a region that are designed by different cartographers or nationalities
2. For each map, create a Map Lab Observation Chart in which you record the map title, map scale, map elements, missing elements, map purpose, and any cultural perspectives or biases of the cartographer.

3. Consider the following Map Lab Analysis Questions.
   - What are the advantages and disadvantages of each map?
   - How does studying the maps together increase your knowledge of the region versus using only one map?
   - What conclusions can you make about the region based on your map study?
   - If you were a cartographer commissioned to create a map of this region, what information would you include and what information do you feel is missing from the maps you have viewed and why?

- **Module 2: Population**
  
  Estimated Timeframe: 3 weeks (1.5 weeks for block schedule)

  In this module the students will learn and apply the concept, theories and models of population and population growth.

- **The main themes and topics** covered in module 2 include activities on:
  - Population Definitions: Birth rates, fertility rates, death rates, natural increase, doubling times
  - Population Pyramid: gender, dependency ratio, developed and developing nation comparisons
  - Demographic transition model: Europe and developing nations model.
  - Population Momentum
  - World population distributions and density.
  - Population controls: Malthus, Neo-Malthusians, Cornucopians

**Essential Questions**

- How do geographers measure, track, and predict population changes?
- How have different societies responded to issues regarding population growth?
- Is geography destiny?
- What causes populations to grow, decline, or remain steady?
- What impact do population trends, such as population growth or population distribution, have on regions?
- Why are some areas of the world more desirable places to live than others?
- Why is population growth an issue that matters to societies?

**Essential Terms**

- Aftershocks
- Agricultural density
- Agricultural Revolution
- Baby boom
- Baby bust
- Bulge
- Anti-natalist policies
- Arable land
- Arithmetic density
- Census
- Cohort
- Cornucopians
- Arithmetical rate
- Crude birth rate (CBR)
- Crude death rate (CDR)
- Demographic

© 2012 Connections Education LLC. All rights reserved.
### Demographic Transition Model
- Industrial revolution
- Infant mortality rate (IMR)
- Population distribution
- Population pyramid
- Pro-natalist policies
- Silt
- Natural increase rate (NIR)
- Storm surge
- Total fertility rate (TFR)
- Tsunami
- Zero population growth

### Readings
- Required reading: Module 2, Florida Virtual School APHG course V10.

### Ancillary Resources:
- Interactive: Population pyramids, population maps, world life expectancies
- Interactive Demographic Transition model
- Interactive maps: Analyzing Global Population Density
- Debate: Reliability of Population Theories
- Case Study: Apply Demographic Transition Model to a Nation
- Video: Haiti’s Killer Quake: Why it Happened

### Sample Activities:
Students will have to complete a variety of activities including: vocabulary activities, map analysis activities, population chart and graph analysis, Geo-Journals (demographics: population and place, demographic transition model activity, Neo-Malthusians and Cornucopians), case study: The Red River Floods, self check quizzes, geography application assignment.

### Collaborative Extension Projects

#### Population Statistics

1. Students will complete an uncompleted chart on population data.
2. Explain possible reasons for the differences between the population data for Pakistan (infant mortality, total rate of fertility, life expectancy, and natural increase rate) and the same data for Spain.
3. Based on the numbers given for Pakistan and Spain, predict what the missing data will be for Indonesia, the Philippines, Kazakhstan, the United Kingdom, and Australia. Predictions don’t need to be exact but can be given in ranges *(between one and two, or between 60 and 70).*
4. Choose any two of the nations shown in the table and suggest public policies that would affect the data you predicted, giving reasons for your suggestions.

Create a presentation that explains what you have learned. Remember, your presentation must answer all of the questions from Step 3.
Population Pyramids

Choose one country from each of the three categories. Each category represents a country with a certain type of population growth.

<table>
<thead>
<tr>
<th>Category 1</th>
<th>Category 2</th>
<th>Category 3</th>
</tr>
</thead>
<tbody>
<tr>
<td>Denmark</td>
<td>Kenya</td>
<td>Bulgaria</td>
</tr>
<tr>
<td>Finland</td>
<td>Iraq</td>
<td>Hungary</td>
</tr>
<tr>
<td>France</td>
<td>Malawi</td>
<td>Latvia</td>
</tr>
<tr>
<td>Iceland</td>
<td>Samoa</td>
<td>Poland</td>
</tr>
<tr>
<td>Netherlands</td>
<td>Uganda</td>
<td>Russia</td>
</tr>
</tbody>
</table>

Now that you have chosen a country from each category, locate demographic data for each country from The World Factbook and use that data to construct a population pyramid.

After you construct your three population pyramids, respond to the following questions:

1. Compare the data of the three countries. How are they similar? How are they different?
2. In this lesson, you studied countries with various types of population growth. Based on the information in the lesson and what you learned from the assessment, what conclusions can you draw about the characteristics of rapidly growing countries, countries with moderate growth, and shrinking countries?
3. Based on the data in your pyramid, what might you expect the pyramid to look like in five years? In 10 years? In 50 years?
4. Use the population pyramids to make predictions about each country’s future. What problems might each country face if its population trends continue?
5. What are the implications of each type of pyramid structure?
6. Think about the demographics of your town or state. What shape do you think a population pyramid of your town or state would have and why?

You have several choices for presenting your responses to the questions from Step four.

- Slide Presentation
- Essay
- Weblog (blog)
- Podcast
- Video
Module 3: Movement

Estimated Timeframe: 3 weeks (1.5 weeks for block schedule)

In this module the students will learn the basic geographical concepts and perspectives of movement and people of ideas including the demographic transition model, migration patterns and residential mobility. Likewise the student will apply such concepts and theories to migration and immigration to case studies.

The main themes and topics covered in module 3 include activities on:

- Basis of Interaction: Complementarity, Transferability and Intervening Opportunities.
- Measuring interaction concepts: Distance decay, Gravity Concept, Potential Model
- Information and Perception
- Migration: Main migration patterns, Push-pull factors, Types of Migration, Globalization, forced migration.
- Residential Mobility
- Displacement: causes and types

Essential Questions:

- How are intervening opportunities related to push-pull factors?
- How do migrants affect the regions they enter?
- How do migrants affect the regions they leave and the regions they enter?
- How is complementarity related to push-pull factors?
- What are the characteristics of people who migrate?
- What characteristics of a region influence migration?
- What effect might locational pull factors have on migration distance when intervening opportunities are present?
- What factors might force people to migrate?
- What is about a region that influences migration?
- What role do migrants play in cultural diffusion?
- Who migrates?
- Who moves?
- Why do immigrants come to the United States?
- Why do people move?

Essential Terms:

- Acculturation
- Assimilation
- Anglo-Celtic
- Asylum
- Bible Belt
- Distance decay
- Hearth
- Brain drain
- Emigration
- Hierarchical diffusion
- Brain gain
- Environmental
- Host country
- Breadbasket
degradation
- Human trafficking
- Bright flight
Ethnic enclave
- Immigration
- Chain migration
Forced migration
- Internal displacement
- Complementarity
Friction of distance
- Internal migration
- Conflict-induced
Gentrification
- Internally displaced
- displacement
Gravity model of
- persons
- Counter migration
migration
- International migration
Interregional migration | Push-pull factors | Soviet
Intervening opportunity | Quantitative data | Spatial interaction
Intraprovincial migration | Quota | Step migration
Jim Crow Laws | Ravenstein’s “laws” of migration | Suburbs
Melting pot theory | Refugee | Sun Belt
Migration | Relocation diffusion | Taliban
counterstreams | Remittance | Transferability
Migration selectivity | Repatriation | Undocumented alien
Migration streams | Return migration | Voluntary migration
Multicultural | Rust Belt | White flight
Native country | Salad bowl theory | 
Net migration | 

- **Readings**

  - Required reading: Module 3, Florida Virtual School APHG course V10.

- **Ancillary Resources:**
  - Interactive: spatial interaction, migration maps,
  - Interactive Demographic Transition model
  - Interactive maps and activities related to movement
  - Case study: The Lost Boys
  - Videos: Personal Costs
    - Cities and Suburbs
    - Rural-Urban Rush
    - Populations Old and New
    - Immigration: The Key to History
    - Listening to a Blues Selection

**Sample Activities:** students will have to complete a variety of activities including:
- vocabulary activities, Geo-Journal (Ravenstein’s Law, internal and international migration, magnet & sticky states), self check quizzes, geography application assignment, one-on-one discussion based assessment, quiz, exam, FRQ: immigration, research brief on an example of recent forced migration
  - Web 2.0 Tool- Create Global Migration Blog
  - Cause and Effect Chart: Forced Migration
  - Analyze Trends in Modern Migration to the United States including impact on the cultural fabric of the U.S.
  - Create Family Migration Map

**Collaborative Extension Project:**

**Migration**

To get a personal perspective on the importance of internal migration and its effects, you will construct a personal migration map accompanied by a narrative account of one family’s experiences.
1. Gather information through an interview. Prepare a set of questions that will help you trace the family's migration history, including instances of internal migration. Specifically address the types of immigration (internal or international), the characteristics of the immigrants (age, sex, and economic and family status at the time), reasons for the migration, where the migrants settled (Was it an ethnic enclave?), the existence of chain migration, and intervening obstacles in the migration process.

2. Prepare a map that is illustrated and annotated with the names of towns and cities of the migration and include arrows to indicate movements, dates for moves, and basic push-pull factors (such as job opportunities) that prompted migration. Organize the information you will use to present a narrative account of the migrations. Note that your narrative should also address what types of social, cultural, economic, and political effects each step in the migration had.

3. Select a way to present a narrative account of the family's migrations. You have several choices for presenting your narrative.
   1. Slide Presentation
   2. Essay
   3. Weblog (blog)
   4. Podcast
   5. Video

Module 4 – Culture and Language

Estimated Timeframe: Estimated Timeframe: 2 weeks
(1 week for block schedule)

The main themes and topics: in this module students will learn how cultural traits, with emphasis on language, move through time and space, and in turn change and shape population. Students will have an understanding of the concepts of ethnocentrism and racism, and the origin of conflict and separatists groups based on cultural traits, specifically language.

The main themes and topics: in module 4 include activities on:

- Ethnicity, ethnic diversity and the changing immigration streams to multiethnic Anglo America.
- Acculturation and the persistence of ethnic clusters and identities in Anglo America and elsewhere.
- Anglo American hearths and folk buildings traditions
- Nonmaterial folk culture: foods, music, medicines and folklore.
- Folk regions and regionalism
- The nature and patterns of popular culture
- Diffusion and regionalism in popular culture.
- Anglo America and world urban ethnic diversity and patterns of segregation.
- The landscape patterns and residues of ethnic diversity
- Classification, spread and distribution of world languages
- Language standards and variations, from dialects to official tongues.
- Cultural identity and cultural landscape

Essential Questions

- Does folk culture or global culture have a stronger influence?
- How has globalization shaped world cultures?
How is language a product of place and time?
What cultural characteristics make a place or region unique?
What forces encouraged assimilation and acculturation?
What have been the benefits of assimilation and acculturation?
What is culture?
What makes a place or region unique?
What role does language play in culture?
Why are different places similar?

Readings

- Required reading: Module 4, Florida Virtual School APHG course V10.

Ancillary Resources:

- Interactive: McDonalds in the world, Cultural Traits
- Interactive Cultural Maps
- Interactive World Language Maps
- Case study: Censorship in Iran
- Debate: Should English be the official language of the United States?
- Videos: Non-traditional African Music and Dance

Sample Activities: students will have to complete a variety of activities including:

- vocabulary activities
- create a time capsule for a cultural area
- Geo-Journal activities (government restrictions and Iran, position statement on English as the official language in the U.S.),
- self check quizzes
- geography application assignment
- quiz, exam, one-on-one discussion based assessment
- released FRQ 3, 2010 scoring activity
Collaborative Extension Project

Pop Culture

1. First, you will research TV shows to find out how the portrayal of the average American family has changed over time. You will need to find four clips from television shows: one from the 1950s or 1960s, one from the 1970s, one from the 1980s or 1990s, and one on today. You can select from the list below or use TV shows of your choosing:
   - 1950s and 1960s: I Love Lucy, Father Knows Best, Leave It to Beaver
   - 1970s: The Brady Bunch, All in the Family, Good Times
   - 1980s and 1990s: The Cosby Show, The King of Queens, Everybody Loves Raymond
   - 21st century: Modern Family, Parenthood

Use Web 2.0 to create a presentation that includes the four clips you found and that answer the following questions:

1. How do television shows reflect the way of life for American families? Give concrete examples from each show that demonstrate the popular culture of the time. This can include any of the following examples: forms of entertainment, fashion or what was considered appropriate dress, music, fads, homes, food, education, sports, daily routines, means of communication, and popular sayings or phrases.
2. Based on your analysis of the shows, how has popular culture changed over time? What has remained the same?
3. What role do you think television plays in the transmission of popular culture? How have TV shows affected pop culture in the United States and elsewhere?
4. How do television shows reflect the influence of globalization? Provide examples from the clips that show the influence of cultural exchange of different cultures on U.S. society or the impact of U.S. society on other cultures?

Module 5 – Religion  Estimated Timeframe: 3 weeks (1.5 weeks for block schedule)

In this module students will apply the basic geographical concepts of location, movement and culture to the study of the major religions in the world. In addition they will learn the implications of religious conflict in the global scene.

The main themes and topics: in module 5 include activities on:

- The cultural significance and role of religion.
- Classification and distributions of world religions.
- Origins, nature and diffusion of Judaism, Christianity and Islam, Buddhism and Hinduism
- Cultural significance and placement of minor religions
- Religious conflicts: causes and consequences.

Essential Questions

- How do the principles of a religion influence environmental interaction?
- How does the environment influence the practice of religion?
What impact does geography have on religious conflict?
What is the difference between universalizing and ethnic religions?
What is the relationship between religion and place?
Why do some religions merge with others and other religions fight one another?
Why do some religions spread throughout the world while others remain local?
Why does a geographer look at religion when considering human-environment interaction?

Readings

Required reading: Module 5, Florida Virtual School APHG course V10.

Ancillary Resources:

- Interactive: McDonalds in the world, Cultural Traits
- Interactive Religion location and diffusion maps and time lines
- Interactive Geographer vies of religion: Religion and the Environment
- Case study: Santeira, Aminimistic religions
- Videos: A Brief History of the Conflict (Israel)
  - Catholicism and Voodoo: A Spiritual Profile
  - Hinduism
  - The Caste System
World of Faith: Sikhism: The Golden Temple (The 5 Ks Found)
Arlington National Cemetery
Arab & Jew: Return to the Promised Land

Sample Activities: students will have to complete a variety of activities including:
vocabulary activities, review of a position paper: *Is Islam a peaceful religion or a radical religion?*, Geo-Journal activities (Christianity, Islam, Buddhism, Hinduism, Sikhism, Baha’i, animism, and syncretic religions), self check quizzes, one-on-one discussion based assessment, geography application assignment, position paper: *Which religion has had the most global impact?*, 2002 released FRQ questions, exam

Position Paper Project

Read the questions below and choose one question to answer in your position paper.

- How significant is the diffusion of religion in shaping place?
- Does every religion have the potential to become a global religion? Or are some religions destined to remain local?
- Which influence is stronger: religion’s influence on the environment or the environment’s influence on religion?
- How significant is regional geography as a cause of religious conflict?
- Choose two world religions. Imagine that 1 million adherents of one religion and 1 million adherents of the other religion moved within the borders of the same country. How high would the level of religious conflict be in the country given your knowledge of the religions’ past interactions and understanding of the religions’ belief systems?

Include:

- a title page
- a two- to three-page paper
- a works cited/bibliography page

Module 6 –Ethnicity and Gender

Estimated Timeframe: 2 weeks (1 week for block schedule)

In this module the student will learn the differences and relationships between race, ethnicity and nationalities as well as the relationship between gender, ethnicity and culture. Likewise they will be exposed and analyze the major global ethnic conflicts.

- The main themes and topics in module 6 include activities on:
  - Ethnicity and race
  - Ethnic clusters, Ethnic diversity and patterns of segregation.
  - Gender and culture: controls and identity
  - Gender and the economy: gender gaps and inequalities
  - Ethnic cluster is North America and Charter groups
  - Ethnic conflicts

Essential Questions
• Are there geographic similarities among the regions where ethnic conflicts occur?
• How do ethnic groups impact the cultural landscape?
• How do gender roles vary according to culture?
• How do geography and migration affect the formation of individual and cultural identity?
• How does geography affect the opportunities and life course of different genders?
• What are the causes and effects of ethnic conflict?
• What factors impact the migration and distribution of ethnic groups?
• What role does geography play in the formation of individual and cultural identity?
• Why do some ethnicities become nationalities?

• Readings

  • Required reading: Module 6, Florida Virtual School APHG course V10.

• Ancillary Resources:

  • Interactive: race and ethnicity
  • Interactive genocide and separatism
  • Interactive Geographer: Impact of ethnicity on space
  • Interactive: Ethnic migration
  • Interactive maps: ethnic conflicts
  • Case study: Apartheid
  • Case Study: Women Issues and HIV
  • Videos: Exploration and Colonization
    Civil War in Yugoslavia
Rich and Poor: Exploring the Differences in North and South Korea
Al’Queda After 9/11: Jema’ah Islamiyyah
An Unfinished Nation: The Collapse of Peace (A New World Order)
The House of Representatives

Sample Activities: students will have to complete a variety of activities including: vocabulary activities, Geo-Journal activities (race and ethnicity, ), self check quizzes, geography application assignment, quiz, FRQ Human Geography, FRQ gender and culture, one-on-one discussion based assessment, create map of ethnicity and nationality map of your community, exam

Collaborative Extension Project

1. Choose three people from your community to participate in the interview. Your participants may be close friends, family members, or neighbors. They should be people who know you and are comfortable being interviewed by you.
2. Review the following questions that you will ask your interviewees.
   1. Where were you born?
   2. How long have you lived in your current town? Where else have you lived?
   3. What is your nationality (American, Japanese)?
   4. How would you describe or identify your ethnicity? What are some events and/or traditions that you participate in that highlight your ethnic heritage?
   5. Which cultural affiliation do you consider most important to you personally: ethnicity or nationality? Why do you consider it most important?
3. Prepare at least three follow-up questions for your interviewees.
4. Schedule a time to meet with each of your interviewees.
5. Ask the interview questions listed above as well as any that you have prepared. You may need to be flexible and reword the questions or ask the interviewees to give more specific examples to explain their answers. Remember that all questions should be respectful of the individual. Record their answers in your Geo Journal.
6. Create a chart to record your findings (it should look similar to the chart below :)

<table>
<thead>
<tr>
<th>Ethnic Group</th>
<th>Ethnic Group</th>
<th>Regional Group</th>
<th>Reason for Identification</th>
</tr>
</thead>
<tbody>
<tr>
<td>Name #1</td>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td>Name #2</td>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td>Name #3</td>
<td></td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

7. Reflect upon the answers of the interviewees and look for common threads or themes.
   - Which factors do you think have the greatest influence on the formation of one’s identity?
   - Summarize the conclusions that you have drawn based on this sampling of interviewees.
   - Give specific examples to support your conclusions.
   - Write your conclusions in a two-paragraph response.

**Segment I Exam**
Module 7 Political Geography  

In this module the student will learn that political patterns reflect ideas about how earth’s surface should be organized and affect a wide range of activities and understanding.

- **The main themes and topics** in module 7 include activities on:
  - National political units: geographic characteristics and boundary concerns
  - Nationalism and projection of power: Centripetal and centrifugal forces
  - Local and regional political forms: representation and fragmentation
    - Natural/physical boundaries
    - Cultural boundaries
    - Geometric boundaries
    - Drawing boundaries
    - Law of Sea
  - International political system: the U.N, maritime law and regional alliances.
  - Electoral Geography: Gerrymandering, Internal boundaries (gender), Census and reliability

**Essential Questions**

- How are societies organized into political units?
- How do demography and political geography interrelate?
- How do forces work to unify or divide a state’s regions and people?
- How do physical features affect the political and economic activities within a state?
- How do political alliances affect governments and people on regional and global levels?
- How does geography affect political power and economic development?
- How does geography affect political power?
- How does governmental structure affect a country’s distribution of power?
- How has conflict affected political boundaries?
- How has nationalism shaped political boundaries, alliances, and conflicts?
- How have imperialism and colonialism impacted the development of the modern state?
- How have imperialism and colonialism shaped political boundaries, alliances, and conflicts?
- How have political conflicts shaped the modern world?
- In what ways do centripetal forces and centrifugal forces affect the viability of a state?
- What are the geographic and political impacts of irredentism, devolution, and dissolution on a region?
- What are the similarities and differences between terrorist organizations and terrorist individuals?
- What forces influence the government and relative power of a state?
- What influence does electoral geography have on human activities?
- What is a superpower and how does it impact an international alliance?
- What is the relationship between geography and terrorism?
- What is the relationship between nationalism and geography?
- What spatial patterns can be found in the distribution of power?
- Why do geographers study political geography?
- Why do people divide land into distinct political units?
- Why do societies organize into political units?
- Why do terrorist organizations exist?
- Why is there a need for cooperation among states?

Supranationalism  

- **Readings**
  - Required reading: Module 8, Florida Virtual School APHG course V10.

- **Ancillary Resources**:
  - Interactive: Political Maps
  - Interactive maps: types of boundaries
  - Case Studies: Boundary Conflicts Korea,
  - Case study: Irredentism and Devolution: Kashmir and the United Kingdom

**Sample Activities**: students will have to complete a variety of activities including: diagnostic test & reflection, Geo-Journal activities (political cartoon analysis: imperialism, link between geography and terrorism, rationale to join or not join UNASUR), self check quizzes, geography application assignment, quiz, state creation profile with mapping and demographics, FRQ: boundaries, FRQ: political systems, redistricting writing assignment, exam

**Collaborative Extension Project**

Centripetal and Centrifugal Forces

- Choose three questions from the interactive to focus on in this assignment.
- Imagine that you have to explain to a classmate how to arrive at the correct answer for each question you chose. How would you describe your reasoning to him or her? For each of the three questions you chose, answer the questions below. Write your answers to the questions as if you are addressing a classmate.
  - What is the question asking you to identify?
  - What is the correct response? Why is this choice the best answer to the question?
  - Read each distractor. What makes each distractor incorrect?
  - How could you rewrite each distractor to make it a correct choice?
Module 8 Agriculture and Land Use 4 weeks (2 weeks for block schedule)

In this module the student will learn the impact of agriculture in the geographical landscape and human livelihood. They will understand the different theories and models used to analyze the use and value of land.

The main themes and topics in Module 8 include activities on:

- Classification of productive activities and economies.
- Types and prospects of subsistence agriculture.
- Von Thunen's Model of agricultural land use
- Commercial agriculture: controls and specialization.
- Non farming primary activities: fishing, forestry, trapping, mining.
- Trade in primary products.
- Green Revolution

Essential Questions

- How are regions interdependent for food production?
- How can countries balance the need to increase food supply and the need to conserve resources?
- How does a state's economic level of development determine global agricultural regions?
- How has the way societies use land to provide food and resources changed over time?
- How have diffusion and globalization changed global food supply?
- How is the world's food supply distributed and why?
- Is geography destiny- how does the type of agriculture practiced in a region affect the living conditions and use of space within the region?
- What factors determine how humans organize agricultural production?
- What factors determine how humans organize agricultural spaces?
- What factors impact global food production and distribution? (Cultural, economic, and social factors)
- What geographic, cultural, or economic factors impact agricultural land use?
- What are the impacts of biotechnology on agriculture and society?
- What impact has large scale agriculture had on the environment?
- Where does our food supply come from? (Agricultural regions)
- Why did societies develop agriculture and domestic animals?

Essential Terms

- Agribusiness
- Agricultural hearth
- Agricultural region
- Agriculture
- Animal domestication
- Biodiversity
- Biotechnology
- Cash crop
- Climatic region
- Columbian Exchange
- Commercial agriculture
- Commercial gardening
- Corporate farm
- Crop rotation
- Dairy farming
- Deforestation
- Desertification
- Domesticate
- Double cropping
- Extensive agriculture
- Factory farm
- Factory farming
- Food security
- Fossil fuels
- Genetic modification
- Genetically Modified Organisms (GMOs)
- Grain farming
- Green Revolution

© 2012 Connections Education LLC. All rights reserved.
Hectare  Monoculture  Seed planting
Herding  Neolithic Agricultural  Selective breeding
Horticulture  Revolution  Shifting cultivation
Hunter-gatherer  Organic farming  Slash-and-burn agriculture
Hybrid seeds  Pastoral nomadism  Subsistence agriculture
Intensive agriculture  Plantation farming  Sustainable agriculture
Intertillage  Primary economic activity  Swidden
Johann Heinrich von Thünen  Quaternary economic activity  Tertiary economic activity
Köppen climate  Quinary economic activity  Third Agricultural Revolution
classification system  Rain shadow  Transhumance
Livestock ranching  Root planting  Vegetative planting
Mid-latitudes  Salinization  Von Thünen Model of Agricultural Land Use
Mediterranean agriculture  Second Agricultural Revolution
Mixing  Revolution
Mixed crop and livestock farming  Secondary economic activity

- **Readings**
  - Required reading: Module 8, Florida Virtual School APHG course V10.

- **Ancillary Resources:**
  - Interactivity: Application Von Thunen Model
  - Interactive Map: Compare agricultural land use across regions
  - Case Studies: Agriculture diffusion from various Agricultural hearths
  - Videos: The Hadza People in Tanzania
    - The Contrast between the Green Revolution and Subsistence Farming in India
    - The Future of the World Hunger With and Without Genetic Modification
    - The Need for Labor Agriculture and the Environment Population and World Resources

**Sample Activities:** students will have to complete a variety of activities including: Geo-Journal (food choices and the environment), self check quizzes, quiz, geography application assignment, FRQ: Agriculture, one-on-one discussion based assessment, exam

- Evaluate various examples of human modifications of land to increase food supply
- Apply Von Thunen’s Model to student’s community, a domestic and international region
- Debate the impact of the Green Revolution on agriculture industry
- Spatial Relationships: Global, Regional, Local Analysis Agriculture Land Use

**Collaborative Extension Project**

Choose one of the following biotechnology issues and take a stand either pro or con. Each issue has some suggestions to help you think about the issue. Present your position in a position paper.
1. Read each prompt below. Choose one prompt to respond to in a writing assignment.

Prompt #1
Nnimmo Bassey, a Nigerian environmental activist, once said, “Biotech crops are not a solution to solve hunger in Africa or elsewhere.” Think about Bassey’s stance. Do you agree or disagree with his position? Why?

Prompt #2
In 2011, the president of the National Council of Farmer Cooperatives testified that “Biotechnology is the key to sustainably feeding a growing world population.” Think about the president’s stance. Do you agree or disagree with his position? Why?

Prompt #3
In 2007, former U.S. President Jimmy Carter said, "We must combat the false propaganda of some European extremists who condemn the use of genetically modified seeds. Their misleading statements have been extremely damaging to Africa, where some misguided leaders have rejected such imports." Think about Carter’s stance. Should African leaders ignore arguments condemning the use of genetically modified seeds? Why?

2. After choosing your prompt, create a list of five to six points that explain why you agree or disagree with the quote. While you should use information you learned in this lesson to develop your argument, you may want to consult outside resources to learn more about the pros and cons of biotechnology and GMOs to help support your argument.

3. Use your list of points to write a paragraph that clearly describes your stance on the issue.

Module 9-Agriculture and Rural Land Use 4 weeks (2 weeks for block schedule)

The students will understand that the means of production determine the level of development of a country. The student will also understand the process of Globalization and how does it affect their lives.

The main themes and topics in Module 9 include activities on:

- Principles and considerations for manufacturing locational decisions and analysis of industrial location theories.
- Other non-theoretical considerations including transnational ownership affect, distort, or reinforce classical locational controls.
- Older world patterns of manufacturing regions and the effect of High Tech locational industries in their locational displacement.
- Identifying characteristics of tertiary, quaternary and quinary service activities, and their impact in the world economic patterns and international trade.
- Definitions and explanations of development and underdevelopment.
- Economic measures and models of development: income, energy, farming and foods, and stages of growth. (Rostow's Model)
- Non-economic measures of development: education, services, health, and cultural satisfaction, and their relationship to economic indexes.
Women's roles and rewards: determinants of patterns of genders relationships.

Essential Questions

- How are businesses relying on the field of geography, specifically GIS to determine location?
- How are resources and wealth used and distributed around the world?
- How are the activities in the different economic sectors used to satisfy people's needs?
- How do economies balance development and environmental protection?
- How do we define and measure economic development?
- How does the nature of the product/service determine the location?
- How has globalization changed world economies?
- How have societies maximized the use of land and natural resources to support economic development?
- How have societies maximized the use of land to support economic development?
- How is location important in the manufacturing process?
- To what extent do women contribute to economic development?
- What are the costs of industrialization?
- What are the limitations of development models?
- What global initiatives have been created to increase the economic power of women?
- What is sustainable development?
- What patterns of development are seen in different regions of the world?
- What role has geography played in economic development?
- Why are there disparities in economic development around the world?

### Readings

- Required reading: Module 9, Florida Virtual School APHG course V10.

### Ancillary Resources:

- Interactive Map: Spatial Awareness: Analysis of World Economic Development
- Interactive maps: Rostow’s Model of Economic Growth on various countries
- Interactive map: Analyze male and female labor force in the United States
- Case Studies: Apply Hotelling Location Theory on Disney World
- Case Study: Consequences of Economic Growth: BP Oil Spill
- Videos: World Poverty
  - Volvo in Brazil
  - Moving American Jobs to China
  - International Organizations
  - The World Bank and the International Monetary Fund
  - Ecological Globalization
  - Disaster in The Gulf
  - A Sea Disappears
  - Planet Earth: The Future; Living Together Segment Sustainable Development
  - Planet Earth: The Future; Living Together Segment Balancing Conservation and Industrial Growth

### Sample Activities:

- students will have to complete a variety of activities including: quiz, Geo-Journal (weight-gaining industry, agglomeration, deglomeration), self check quizzes, geography application assignment, FRQ: Locational Theory, Weber’s least-cost theory factory location assignment, FRQ: Globalization, level of development graph
Collaborative Extension Project

1. Choose one of the following six countries:
   a. Albania
   b. Bolivia
   c. Chad
   d. Federated States of Micronesia
   e. Mozambique
   f. Nepal

2. Research the country you chose by visiting the CIA World Factbook or the World Data Bank.

3. Gather information about the country’s development indicators, such as HDI and literacy rate, access to health care, environmental health, and overall quality of life for the citizens.

4. Brainstorm a plan for development for the country you chose that takes the following questions into account:
   a. What is the overall quality of life like in the country? What indicators helped you arrive at this conclusion?
   b. What are the country’s most important natural resources? What is the skill set of the population?
   c. On what types of industries should the country focus? Why?
   d. What strategies can the country use to promote investment in its industries?
   e. What steps can the country’s leaders take to promote sustainable development?

5. After brainstorming your plan for development, write a letter to the country’s leaders in which you convince them of your development plan. Be sure to emphasize why the leaders should target specific industries, how the population will develop as a result, and how they will go about protecting the environment in the process.

- Analyze how the U.S. has shifted from a secondary to a tertiary or quaternary
- Use of GIS to determine appropriate business location
- Identify and discuss locational theories using maps
- Apply Human Development Index to determine states of economic development of various countries
- Debate the impact of global economic initiatives and agencies on development?

Module 10-Cities and Urban Land Use (and final exam prep) 5 weeks (2.5 weeks for block schedule)

In this module the student will also understand the theories of urban development and what is the relationship of city-structure to geography and vice-versa.

The main themes and topics in module 10 include activities on:

- The nature of cities in an urbanizing world: origins, definitions, locations and theories
- The economic base and systems of cities: functions, hierarchies and networks.
Inside the city: land uses, social areas and patterns of change.
Models of Internal City Structure
World urban diversity: cities in Anglo America, Europe and developing nations.

**Essential Questions**

- How are cities organized?
- How are cities unique reflections of place and location?
- How does life course vary according to where people live in a city?
- How is space organized in urban areas to meet multiple needs and uses?
- Is geography destiny (does birthplace dictate your destiny)?
- What are some commonalities between cities?
- What are the characteristics of well-designed urban places
- What are the political advantages and challenges in urban areas?
- What are the political, social, and economic advantages and challenges in urban areas?
- What challenges do urban planners face?
- What is the relationship between urban and non-urban areas?
- What patterns have geographers found in city structures?
- Where are cities located and why?
- Why is the world becoming more urbanized and how has this affected place?

**Readings**

- Required reading: Module 10, Florida Virtual School APHG course V10.

**Ancillary Resources:**

- Interactive maps: Spatial Organization of Urban Centers
- Case Study: Understand, recognize and apply the Burgess Concentric Zone Model: Detroit Vs Los Angeles
- Case Study: Louisiana Levee System
- Case Study: Modern Urban Social Patterns: Edge City, Primate City and Mega City
- Videos: Boomtown Lagos
  Brazil Revealed: Short Stories

**Sample Activities:** students will have to complete a variety of activities including: Geo-Journal Activity (city mapping), self check quizzes, geography application assignment, exam, weighing sides: gentrification speech activity, quiz, case study: urbanization

- Analyze land value in determining Central Business District
- Apply Central Place Theory to Urban Centers
- Debate: Risks Benefits of Gentrification

**Collaboration Extension Project**

Now it is your turn to design your own city. Make a short list of important features to include in your city and prioritize it according to its level of importance. After you have an idea of the features to include, create a map of your city using the interactive below. The interactive includes a map of a fictional region that shows only physical features. Use the drawing tool to
create the boundaries of your city. On the side of the map, there is a key that includes icons for residential and non-residential buildings, roads, and parks. Click on the icon from the key to place it on the map. Use the text tool to label the features you place on the map. For example, if you add a non-residential building and would like it to be a school, then you can use the text tool to label it as such. Be sure to label the central business district, non-basic sectors, and basic sectors on the map. When you are finished making your city, save and print a copy of your map and place it in your Geo Journal. Then, write a one to two paragraphs explaining why you placed the features where you did.

**Segment II Exam**
(Complete AP Exam experience, 75 multiple-choice questions & 3 free-response questions)
ADVANCED PLACEMENT®
MACROECONOMICS
AP Macroeconomics

AP Macroeconomics is a challenging course that is meant to be the equivalent of a freshman college course and can earn students college credit. It is a semester survey course of macroeconomics designed to give students a thorough understanding of the principles of economics that apply to an economic system as a whole. This course places particular emphasis on the study of national income and price-level determination, and also familiarizes students with economic performance measures, the financial sector, stabilization policies, economic growth and international economics. Solid math and writing skills, along with a willingness to devote considerable time to homework and study, are necessary to succeed. Emphasis is placed on critical and evaluative thinking skills.

Student assessment occurs at a variety of levels throughout the course. Students are assessed via oral examination and other synchronous sessions. Actual course assessment types include student assessed work, auto-graded, partially auto-graded, and totally instructor graded assignments.

This course is designed to be highly teacher facilitated. Instructors give a great deal of specific and timely feedback. Students have opportunities for oral examinations, discussions, and whiteboard sessions. Teachers conduct synchronous elluminate sessions, which require critical thinking and analysis.

Course Objectives:
Students will
• master a broad body of knowledge related to facts, concepts, and theories pertaining to aggregate economics activity;
• understand and explain the critical evaluation of determinants of economic progress and economic decisions made by policymakers;
• explain the utilization of resources within and across countries;
• effectively use analytical skills of evaluation, cause and effect, and compare and contrast;
• work effectively to produce graphic products and solve problems;
• prepare for and successfully pass the Advanced Placement Exam.

Primary Text

Class Synchronous Sessions
Students will participate in instructor led discussions of important concepts in each module using a real-time virtual classroom. Students will have the opportunity to practice free response questions, graphing, and multiple choice questions in the AP format as well as interact with other students while discussing the major content areas.

**Additional Resources**

- My EconLab (Bade & Parkin On-line)
  - Practice tests
  - Practice exercises
  - Graphing problems
  - Glossary flashcards
  - Economics in the News
  - The New York Times eThemes
- Newspaper Articles from local and national newspapers
- National Statistics Websites

---**Semester 1---**

**Module 1: Basic Economic Concepts**

**Suggested Pace:** 2 weeks

**Chapters Included in Module 1**

_Bade and Parkin, Chapters 1, 3, and 4_

**Content**

- The functions of any economic system: what, how, for whom to produce
  - Describe and analyze the "economic way of thinking"
- Scarcity: the nature of economic systems
  - Identify the conditions that give rise to the economic problem of scarcity
  - Compare and contrast different types of economic systems
  - Developed vs. undeveloped countries
  - Apply the concept of scarcity to different economic situations
- Opportunity costs
  - Define it and explain how it affects the macroeconomy
  - Identify opportunity costs of various situations
- Production possibilities
  - Graph and interpret data
  - Apply the concept of opportunity costs to a production possibilities curve
Different shapes of production possibilities curves and their meaning

- Absolute and comparative advantage
  - Define and give examples of comparative and absolute advantage

- Demand, supply, price determination
- Describe the behavior of buyers and sellers in a competitive marketplace
  - List and explain the determinants of supply and demand
  - Construct supply and demand graphs
  - Distinguish between demand and quantity demanded and supply and quantity supplied and illustrate each graphically
  - Evaluate the laws of supply and demand
  - Define and distinguish between income and substitution effects
  - Define, analyze the advantages and disadvantages of, and graph price ceilings and floors
  - Define and graph surpluses and shortages
  - Define and graph market equilibrium on schedules and graphs

Major Assessments
Comprehensive Module Exam
Free Response Questions
  - Opportunity Costs/Absolute and Comparative Advantage/ Behaviors of Buyers and Sellers in a Competitive Market

Functions of Economic Systems Assessment
Scarcity Assessment
Opportunity Cost Assessment
Production Possibilities Graphing Practice and Assessment
Demand, Supply and Price Determination Graphing Practice and Assessment
Behaviors of Buyers and Sellers in a Competitive Market Graphing Practice and Assessment

Module 2: Measurement of Economic Performance

Suggested Pace: 2 weeks

Chapters Included in Module 2
Bade and Parkin, Chapters 2, 20, 21, 22 and 28

Content
- Gross national product and gross domestic product
  - What is and is not included
  - Calculate using income and expenditures approach
Nominal versus real
The GDP gap
Other measures of national income (NNP, NI, PI, DI)
Circular flow
Inflation and price indices
  Define and identify types of inflation
  Analyze types of price indices: CPI, PPI, GDP Deflator
  Nominal versus real
  Effects of inflation
Unemployment
  Define and identify types of unemployment
  Define natural and identify natural rate of unemployment
  Determine how unemployment is calculated
The business cycle

Major Assessments
Comprehensive Module Exam
Free Response Questions
  Circular Flow/Unemployment/ GDP
GNP and GDP Assessment
Other measures of national income (NNP, NI, PI, DI), Newspaper based Assessment
Inflation and price indices Assessment
Unemployment; Oral Examination
The Business Cycle Interactive Assessment

Module 3: Open Economy: International Trade and Finance

Suggested Pace: 2 weeks

Chapters Included in Module 3
Bade and Parkin, Chapters 34 and 35

Content
  Define and explain the balance of payments
  Foreign exchange markets
    Explain how exchange rates are determined
    Analyze appreciation or depreciation
    Analyze and create foreign exchange graphs
  Links to financial goods and markets
  Net exports and capital flow
    Interest rates and its impact on financial capital
    What are the arguments for and against free trade
    Trade barriers and their impact on trade
Major Assessments
Comprehensive Module Exam
Module Oral Examination
Free Response Questions
  Foreign Exchange Markets/ Net Exports and Capital Flow
Balance of payments Assessment
Foreign Exchange Markets Graphing Practice and Assessment
Links to Financial Goods and Markets Assessment

Module 4: National Income, Price Determination, and Economic Growth

Suggested Pace: 4 weeks

Chapters Included in Module 4
Bade and Parkin, Chapters 24, 25, and 29

Content
• Aggregate supply
  o List and explain the determinants of aggregate supply
  o Sticky versus flexible wages and prices
  o Short run and long run aggregate supply
  o Keynesian vs. Classical view of aggregate supply
• Aggregate demand
  o List and explain the determinants of aggregate demand
  o Define and distinguish between the interest rate, net export, and wealth effects
  o Crowding out effects
• Multipliers
  o Government Multiplier
  o Investment Multiplier
  o Tax Multiplier
• Equilibrium
  o Short and long run analyses
  o Actual versus full-employment output
  o Create and analyze aggregate demand and aggregate supply graphs
• Economic Growth and Productivity
  o Growth policy
  o Investment in human capital
  o Investment in physical capital
  o Research and development, and technological progress
• Classical Economics and Say’s Law
• Aggregate Expenditures and Keynesian Economic – discussion board
AP Macroeconomics Syllabus

- Analyze and explain the consumption and investment functions
- Marginal and average propensities

Major Assessments
Comprehensive Module Exam
Free Response Questions
  - AD and AS/Economic Growth and Productivity
Module Oral Examination
Aggregate supply Graphing Practice and Assessment
Aggregate demand Graphing Practice and Assessment
Multipliers Graphing Practice and Assessment
Economic Growth and Productivity Graphing Practice and Assessment
Classical Economics and Say’s Law Assessment
Aggregate Expenditures and Keynesian Economic

Module 5: Financial Sector

Suggested Pace: 1 week

Chapters Included in Module 5
Bade and Parkin, Chapters 24, 26, 27, and 28

Content
- Money and banking
  - Identify the functions and characteristics of money
  - Defining financial assets: money stocks and bonds
  - Time value of money: present and future value
  - Measures of money
  - Real vs. nominal interest rates
- The Loanable Funds Market
  - Money market and demand for money
- Describe and analyze the creation of money
  - Money multiplier

Major Assessments
Comprehensive Module Exam
Free Response Questions
  - Loanable Funds/Creation of Money
Module Oral Examination
Synchronous Discussion Session
Money, banking, and financial markets Graphing Practice and Assessment
Module 6: Inflation, Unemployment, and the Stabilization Policies

Suggested Pace: 5 weeks

Chapters Included in Module 6
Bade and Parkin, Chapters 31, 32, and 33

Content

- Tools of fiscal policy
  - Balanced-budget multiplier
  - Deficit versus debt and the impact on the economy
  - Discretionary fiscal policy
  - Automatic stabilizers
  - Shortcomings of fiscal policy
  - The effect of fiscal policy on interest rates
- The Federal Reserve System and monetary policy
  - Origins and organizational structure
  - Powers and tools of the Fed
  - Shortcomings of monetary policy
- Supply Side Policies
- Monetarists and the economy
- Rational Expectations Theory
- The Phillips Curve
  - Inflation versus unemployment in the short and long run

Major Assessments
Comprehensive Module Exam
Free response Questions
  - Fiscal and Monetary Policy
Oral Examination
Tools of Fiscal Policy Graphing Practice and Assessment
Federal Reserve and Monetary Policy Graphing Practice and Assessment
Supply Side Policies Assessment
Monetarists and the economy Assessment
Rational Expectations Theory Assessment
The Phillips Curve Graphing Practice and Assessment
Synchronous Discussion Session
Module 7: Final Review

Suggested Pace: 1 week

Content
- Free Response Questions
- Essential graphs review
- On-line tutorial using 1995 and 2000 released exams **

**This course is accompanied by an online tutorial and review that uses released AP Exams. Students are given systematic and timed practice for all portions of the exam. Students receive specific feedback on progress and mastery levels as they complete the practice exams.

Major Assessment
Comprehensive Final Exam and Essay
ADVANCED PLACEMENT®
MICROECONOMICS
Advanced Placement Microeconomics

AP Microeconomics is a challenging course that is meant to be the equivalent of a freshman college course and can earn students college credit. It is a semester survey of microeconomics designed to give students a thorough understanding of the principles of economics that apply to the function of individual decision-makers, both consumers and producers, within larger economic systems. It places primary emphasis on the nature and function of product markets. It also examines factor markets and the role of government in promoting greater efficiency and equity in the economy. Solid math and writing skills, along with a willingness to devote considerable time to homework and study, are necessary to succeed. Emphasis is placed on critical and evaluative thinking skills.

Student assessment occurs at a variety of levels throughout the course. Students are assessed via oral examination and other synchronous sessions. Actual course assessment types include student assessed work, auto-graded, partially auto-graded, and totally instructor graded assignments.

This course is designed to be highly teacher facilitated. Instructors give a great deal of specific and timely feedback. Students have opportunities for graphing practice, oral examinations, discussions, and whiteboard sessions. Teachers conduct synchronous Elluminate sessions, which require critical thinking and analysis.

Course Objectives:
Students will

♦ master a broad body of knowledge related to facts, concepts, and theories pertaining to households, firms, and the public sector
♦ develop critical-thinking skills through the understanding, application, and analysis of fundamental economic concepts
♦ apply economic logic to a wide variety of real-world and hypothetical situations
♦ prepare for and successfully pass the Advanced Placement Exam

Primary Text

Class Discussion Board
Students will participate in instructor led discussions of important concepts in each module using a real-time virtual classroom. Students will have the opportunity to practice free response questions and multiple choice questions in the AP format as well as interact with other students while discussing the major content areas.
Additional Resources

- My EconLab (Bade & Parkin On-line)
  - Practice tests
  - Practice exercises
  - Graphing problems
  - Glossary flashcards
  - Economics in the News
  - The New York Times eThemes
- Newspaper Articles from local and national newspapers
- National Statistics Websites

---Semester 1---

Module 1: Basic Economic Concepts

Suggested Pace: 2 Weeks

Readings and Materials: Chapters Included in Module 1
Bade and Parkin, Chapters 1 and 3

Content

**Scarcity: the nature of economic systems**
- Identify the conditions that give rise to the economic problem of scarcity
- Compare and contrast different types of economies
- Apply the concept of scarcity to different economic situations

**Opportunity costs**
- Define it and explain how it affects the microeconomy
- Identify opportunity costs of various situations

**Production possibilities**
- Graph and interpret data
- Apply the concept of opportunity costs to a production possibilities curve

**Specialization and comparative advantage: the basis for international trade**
- Define and give examples of comparative and absolute advantage
- Explain gains of trade

**The functions of any economic system (what, how, for whom to produce)**
- Describe and analyze the “economic way of thinking”
- Differentiate between economic and accounting costs
Utilize marginal analysis to make viable economic decisions

Major Assessments:
Comprehensive Module Exam
Free Response Question
  Opportunity Costs/Absolute and Comparative Advantage/Economic Reasoning
Synchronous Discussion Session – Opportunity Cost
Functions of Economic Systems Assessment
Scarcity Assessment
  Opportunity Cost Assessment
Production Possibilities Graphing Practice and Assessment
  Absolute and Comparative Advantage Interactive Assessment

Module 2: Nature and Function of Product Markets

Suggested Pace: 4 Weeks

Readings and Materials: Chapters Included in Module 2
Bade and Parkin, Chapters 4, 5, 6, 7, and 11

Content:

Demand, supply, price determination
  • Describe the behavior of buyers and sellers in a competitive marketplace
  • List and explain the determinants of supply and demand
  • Equilibrium Price, Equilibrium Quantity and the Interrelation of Markets
  • Consumer and Producer Surplus
  • Define and distinguish between income and substitution effects
Elasticity and applications
  • Define and identify types of elasticity - Price, income, and cross-price elasticities of demand
  • Price elasticity of supply
  • Analyze applications of types of elasticity
Models of Consumer Choice
  • Consumer Behavior - Total utility and marginal utility
  • Utility Maximization - equalizing marginal utility per dollar
  • Income and Substitution Effects Revisited
  • Indifference Curves
Impact of Government Policies – Price and Quantity Controls
  • Price Ceilings and Shortages
  • Price Floors and Surpluses
  • Effect of Excise Taxes, Tariffs, and Quotas on free market price and quantity exchanged
AP Microeconomics Syllabus

- Apply price theory to a variety of situations

Major Assessments
Comprehensive Module Exam
Free Response Question
  Demand and Supply/Price and Quantity Controls
Oral Examination – Price Controls
Demand, Supply and Price Determination Graphing Practice and Assessment
Consumer and Producer Surplus Graphing Practice and Assessment
Income and Substitution effects Assessment
Elasticity Interactive Assessment
Behaviors of Buyers and Sellers in a Competitive Market Graphing Practice and Assessment

Module 3: Theory of the Firm: Production - Costs & Revenue and Four Market Models

Suggested Pace: 5 Weeks

Readings and Materials: Chapters Included in Module 3
Bade and Parkin, Chapters 12, 13, 14, 15, 16, and 17

Content:

Production Costs
- Accounting vs. economic profit
- Define and analyze economic costs, normal profit, and economic profit
- Short run production relationships: Law of Diminishing Returns
- Short run production costs: fixed, variable, total; average and marginal
- Long run production costs and Economies/Diseconomies of Scale & Returns to Scale
- Cost minimizing input combination

Pure Competition
- Identify the characteristics of a purely competitive seller
- Profit Maximization in the Short run: MR=MC (Firm & Industry)
- Marginal cost: short run supply and shutdown decision
- Profit maximization in the Long Run: MR=MC at minimum ATC (Firm & Industry)
- Pure Competition and Efficiency

Pure Monopoly
- Identify the characteristics of a purely monopolistic seller
- Output and price determination
• Economic Effects of Monopoly: Compare Perfect Competition to Monopoly
• Model of Price Discrimination
• Regulated Monopoly & Efficiency
• Natural Monopoly

Monopolistic Competition
• Identify the characteristics of a monopolistic competitor
• Price and Output in Monopolistic Competition – Profit Maximization & Short-run and long-run equilibrium
• Monopolistic Competition and Efficiency - Excess capacity and inefficiency
• Product Differentiation and the Role of Advertising

Oligopoly
• Identify the characteristics of an oligopolistic seller
• Interdependence, collusion, and cartels
• Oligopoly Behavior: Game Theory
• Oligopoly and Advertising
• Oligopoly and Efficiency

Major Assessments:

Comprehensive Module Exam
Free Response Questions:
  Production Costs in Product Market/Comparison of Perfect & Imperfect Firm in Product Market/Game Theory

Synchronous Discussion Session – Regulated Monopoly and Efficiency
Production Costs Assessment
Perfect Competition (Profit Maximization in Short and Long Run & Shutdown decision)
Graphing Practice and Assessment
Monopoly: Output and Price Determination Graphing Practice and Assessment
Monopolistic Competition Assessment
Oligopoly/Game Theory Assessment
Comparison of Perfect and Imperfect Firms Interactive Assessment

Module 4: Resource Markets

Suggested Pace: 3 Weeks

Readings and Materials: Chapters Included in Module 3
Bade and Parkin, Chapters 2 and 18

Content:
Circular Flow Model
Marginal Productivity Theory of Resource Demand
  • Resource Demand as a Derived Demand
  • Marginal Resource Product
  • Rule for Employing Resources: MRP=MRC
  • Resource Demand under Imperfect Product Market Competition
Determinants of Resource Demand
Optimal Combination of Resources
  • Least-Cost Rule
  • Profit-Maximizing Rule
Wage Determination
  • Real Wages and Productivity
  • Purely Competitive Labor Market: Demand and Supply of Labor
  • Monopsony Model: Demand and Supply of Labor
  • Labor Market Equilibrium
  • Analyze the effects of resource market structure on wages and employment
Financial Markets
  • Demand for Financial Capital
  • Supply of Financial Capital
  • Financial Market Equilibrium and the Interest Rate
Land and Natural Resource Markets
  • The Market for Land (Renewable Natural Resources)
  • Economic Rent and Opportunity Cost
  • The Supply of a Nonrenewable Natural Resource

Major Assessments:
Comprehensive Module Exam
Free Response Questions
  Circular Flow Model/Marginal Productivity of Resource Demand/Wage Determination
Circular Flow Assessment
Synchronous Discussion Session – Financial Markets
Oral Examination – Economic Rent and Opportunity Cost
Marginal Productivity Theory of Resource Demand Assessment
Determinants of Resource Demand and Optimal Combination of Resources Interactive Assessment
Wage Determination Graphing Practice and Assessment
Module 5: Market Failure and the Role of Government

Suggested Pace: 2 Weeks

Readings and Materials: Chapters Included in Module 3
Bade and Parkin, Chapters 8, 9, and 10

Content:

Private vs. Public Goods
- Describe the characteristics of private and public goods
- Develop a rationale for determining which goods should be produced by the private sector and which by the public sector
- Free Rider Problem
- Common Resources & Efficient Outcome

Externalities
- Positive Externalities/Spillover Benefits – Private and Social
- Negative Externalities/Spillover Costs – Private and Social
- Cost-Benefit Analysis
- Describe the Coase Theorem and use it to analyze how negotiations among private owners can resolve market-allocation problems
- Government Actions in the Face of External Costs & Benefits

Efficiency, Equity, and the Effects of Government Policies
- Define and differentiate between the ability-to-pay and the benefits-received theories of taxation
- Income Tax and Social Security Tax – Define and Analyze Effects
- Economic Inequality - The Lorenz Curve and the Gini Ratio
- Effect of Government Redistribution on economic inequality and poverty

Major Assessments:
Comprehensive Module Exam
Free Response Question
  Free Rider Problem/Externalities/Effect of Government Redistribution on Economic Inequality and Poverty
Oral Examination – Government Actions in the Face of External Costs and Benefits
Private vs. Public Good Assessment
Common Resources & Efficient Outcome and Cost-Benefit Analysis Interactive Assessment
Externalities Graphing Practice and Assessment
Efficiency, Equity, and Effect of Government Redistribution of Income Assessment
Module 6: Review of Microeconomics & Simulated AP Micro Final Exam

Suggested Pace: 1 Week
Content
Review of all content
Free Response Questions
Essential graphs review

Major Assessment
Comprehensive Final Exam and Free Response Questions
ADVANCED PLACEMENT®
PSYCHOLOGY
Advanced Placement Course Audit

**Course:** Advanced Placement Psychology

**Part I: Course Explanation and Syllabus provide to students**

**COURSE DESCRIPTION:**
AP Psychology provides an overview of current psychological research methods and theories. The students will explore the therapies used by professional counselors and clinical psychologists and examine the reasons for normal reactions: how people learn and think, the process of human development and human aggression altruism, intimacy, and self-reflection. The student will study core psychological concepts, such as the brain and sense functions, and learn to gauge human reactions, gather information, and form meaningful syntheses. Along the way, the student will also investigate relevant concepts like study skills and information retention. The equivalent of a 100-level college survey course, AP Psychology prepares the student for the AP Exam and for further studies in psychology and life sciences.

**COURSE OBJECTIVES:**
After successfully finishing the course, students will be able to:

1. Understand the concepts, terminology, and research findings presented in an introductory college psychology course.
2. Utilize investigative and critical thinking skills necessary in the study of psychology.
3. Express interest in the study of psychology and appreciate the place of psychology as a science in modern society.
4. Demonstrate their knowledge of introductory psychology on the Advanced Placement Psychology Examination.

**COURSE OUTLINE:**

**Unit I: Introduction to Psychology**
- Introduction to Psychology
- History of Psychology
- Thinking Like a Psychologist
- Research Strategies

**Unit II: The Biological Basis of Behavior**
- The Nervous and Hormonal Systems
- Nature, Nurture, and Human Diversity

**Unit III: Human Development and Awareness**
- Life Span Development
- Sensation and Perception
- States of Consciousness

**Unit IV: Human Cognition**
- Human Cognition
- Memory
- Thinking & Language
- Intelligence

**Unit V: Human Motivation and Emotion**
- Motivation
- Emotion
- Stress and Health

**Unit VI: Human Interaction**
- Personality
- Psychological Disorders
- Therapy
- Social Psychology

Unit VII: Course Review
- Course Review Part 1
- Course Review Part 2
- Course Review Part
Part II: Overview of all learning objectives, major assignments and assessments

Unit 1 Introduction to Psychology
Objectives:

- Become familiar with the history and scope of psychology.
- Practice thinking like a psychologist.
- Research strategies used in psychology.

Lesson 1: Introduction to Psychology
Students will be able to:
1. Trace the history and scope of psychology
2. Define psychology and its associated fields
   - Fact or Falsehood

Lesson 2: History of Psychology
Students will be able to:
1. Trace the history and scope of psychology
2. Identify historic and modern perspectives in psychology
3. Define psychology and its associated fields

Discussion 1: History of Psychology
Journal Reflection: Modern Perspectives in Psychology
Reading: What is Psychology?
Fields of Psychology Practice
Discovering Psychology Video: Past, Present, and Promise
Lesson 2 Checkup: History of Psychology
History of Psychology Quiz

Lesson 3: Thinking like a Psychologist
Students will be able to:
1. Explain the strengths limitations of research methods in psychology
2. Identify and construct the various elements of an experiment
3. Identify the requirements of ethical research in psychology
4. Apply critical thinking skills to the study of psychology.

Lesson 3 Checkup Thinking Like a Psychologist
Reading: Chapter 1 The science of Psychology
Journal Reflection
Discovering Psychology Video: Understanding Research
Thinking like a Psychologist Quiz

Lesson 4: Research Strategies
Students will be able to:
1. Explain the strengths and limitations of research methods in psychology.
2. Identify and construct the various elements of an experiment.
3. Identify the elements of ethical research in psychology.

Discussion 2: Research Strategies
Journal: Research Methods in Psychology
Research Strategies Quiz

Lesson 5: Unit Review
1. Review concepts from this unit in order to prepare for the Unit Exam.

Read: Statistics in Psychology
Discussion
Introduction to Psychology - Unit Exam

Unit 2 The Biological Basis of Behavior
Objectives:

- Become familiar with the nervous and hormonal systems.
- Describe diversity found in nature, nurture, and humans

Lesson 1: The Nervous and Hormonal Systems
Students will be able to:

1. Explain how the parts of the nervous system function together to create human experience.
2. Describe the nature and functions of the endocrine system and how it interacts with the nervous system.
3. Explain how the parts of the brain function together to create human experience.
4. Describe the methods used to study the brain.

Journal: Neuron and Neural Impulses
Journal: The Nervous System
Crossword Puzzle
Journal: The Brain
Brain-Tools of Discovery
Discussion 1: The Nervous and Hormonal Systems
Discovering Psychology Video: The Behaving Brain
The Nervous and Hormonal Systems Quiz

Lesson 2: Nature, Nurture, and Human Diversity
Students will be able to:

1. Define chromosomes, DNA, genes and genomes, and describe their relationship.
2. Define heritability and understand its application to behavior.
3. Discuss the focus of molecular and evolutionary psychology.
4. Discuss gender differences.
5. Discuss the effects of nature and nurture in development.
6. Discuss culture and its affect on development.
Lesson 3: Unit Review
Discussion 2: Unit Review The Biological Basis of Behavior
Unit 2 Exam: The Biological Basis of Behavior

Unit 3 Human Development and Awareness
Objectives:

- Describe life span development.
- Become familiar with sensation and perception.
- Describe states of consciousness

Lesson 1: Life Span Development
Students will be able to:
1. Explain the major events in prenatal development and the effects of teratogens on the health of newborns
2. Explain the physical, social, emotional and cognitive development of infants and children
3. Explain the major events in adolescent development
4. Explain the major events in adult development and identify the challenges of old age

Discussion 1: Life Span Development
Journal: Parental Development
Journal: Newborns
Reading: Development Across the Life Span
Infant Cognitive Development Video
PBS Video Inside the Teenage Brain
Discovering Psychology Video: Maturity and Aging
Human Development and Awareness Assessment
Life Span Development Quiz

Lesson 2: Sensation and Perception
Students will be able to:

1. Contrast sensation and perception and explain the difference between bottom-up and top-down processing.
2. Distinguish between absolute and difference threshold and discuss whether you can perceive sensations below your absolute threshold.
3. Define transduction and explain its importance.
4. Describe the major structures of the eye and ear and how they are involved in sensation.
5. Explain the major theories of sight, hearing, and color.
6. Describe Gestalt psychology contribution to perception and the rules.
7. Explain depth perception and how monocular and binocular cues contribute to it.

Discovering Psychology Video: Sensation and Perception
Journal: Sensation
Journal: Sensation Experiment
Journal: Perception
Discussion 2: Sensation and Perception
Sensation and Perception Quiz
Lesson 3: States of Consciousness
Students will be able to:

1. Compare and contrast consciousness and altered states.
2. Describe circadian rhythm and the biological clock.
3. List the stages of sleep and what happens in each stage.
4. Discuss risks associated with sleep apnea.
5. Identify the major sleep disorders.
6. Define hypnosis and give arguments for and against hypnosis as an altered state.
7. Identify and give examples of the major divisions of psychoactive drugs. Give examples of their effect on the body and behavior.

Reading: Consciousness
Journal: Levels of Consciousness
Discussion 3: States of Consciousness
Journal: Sleep
Assessment 2: States of Consciousness
States of Consciousness Quiz

Lesson 4: Unit Review
Students will be able to:
1. Review concepts from this unit in order to prepare for the Unit Exam.

Discussion 4: Human Development and Awareness Unit Review
Unit 4 Exam: Human Development and Awareness

Unit 4 Human Cognition
Objectives:

- Become familiar with the use of the terms learning, memory, cognition, and intelligence as used in the field of psychology.

Lesson 1: Human Cognition
Students will be able to:
1. Explain the elements of classical conditioning
   Explain the elements of operant conditioning
   Explain social learning theory
Lesson 2: Memory
Students will be able to:

1. Define memory and explain flashback memories and how they are different from other types of memories.
2. Describe the 3-stage model of memory and how it has been expanded.
3. Contrast effortless processing with automatic processing.
4. Describe the benefits of chunking and hierarchies in expanding memory.
5. Describe the duration and working capacity of short-term and long-term memory.
6. Describe the types of memories that are encoded and explain forgetting.
7. Explain the connection of the brain with memory.

Lesson 3: Thinking and Language
Students will be able to:

1. Define concept and describe the role of categories, hierarchies, and prototypes.
2. Compare algorithms and heuristics.
3. Contrast concept bias and fixation.
4. Explain how "set" can distract our logic.
5. Explain the pros and cons of overconfidence.
6. Describe the basic structural units of language and trace the course of language acquisition.
7. Contrast Skinner's and Chomsky's ideas of language acquisition.

Lesson 4: Intelligence
Students will be able to:

1. Discuss the difficulties in defining intelligence as one or more mental abilities.
2. Compare the one ability and multiple ability theories of intelligence.
3. Define intelligence tests and discuss the history of them.
4. Distinguish between aptitude and achievement tests.
5. Explain the terms validity, reliability, and standardization, and apply them to intelligence tests.
6. Understand the "group" issues in looking at the results of testing.
Lesson 5: Unit Exam
1. Review concepts from this unit in order to prepare for the Unit Exam.
   Discussion: Human Cognition Unit Review
   Lesson Checkup: Human Cognition
   Unit 4 Exam: Human Cognition

Unit 5: Human Motivation and Emotion

Lesson 1: Motivation
1. Define motivation as psychologists use the term today and name four perspectives useful for studying motivated behavior.
2. Describe the physiological, psychological, and cultural determinants of hunger.
3. Discuss the importance of flow and identify the three subfields of industrial-organizational psychology.

Lesson 2: Emotion
Students will be able to:
1. Explain three components of emotions and contrast the James-Lange, Cannon-Bard, and two-factor theories of emotion.
2. Describe the physiological, psychological, gender, and cultural determinants of emotion, expressed emotion, and interpreting emotion.
3. Describe several basic emotions and two dimensions psychologists use to differentiate emotions.
4. Discuss biological triggers of fear and consequences of anger.
5. Analyze the relationship between affluence and happiness.
6. Describe how adaptation and relative deprivation affect our appraisals of our achievements.
7. Summarize ways we can influence our own level of happiness.

Lesson 3: Stress and Health

Students will be able to:

1. Identify some behaviors and related concerns of illness and death and describe health psychologists’ contributions.
2. Describe the role of appraisal in the way we respond to stressful events; describe the dual-track system by which our bodies respond to stress.
3. Discuss General Adaptation Syndrome and the three steps involved in it.
4. Discuss the health consequences of catastrophic, significant life changes and the hassles of daily life.
5. Discuss the role of stress in coronary heart disease and its relationship to Type A and B personalities.
6. Contrast problem-focused coping and emotion-focused coping; describe the effects of social support; understand why people smoke and why it is so hard to stop.
7. Discuss the reason that we store fat and why the battle to lose weight is so hard; describe the social effects of obesity.

Lesson 4: Unit Review

1. Review concepts from this unit in order to prepare for the Unit Exam.

Unit Test: Human Motivation and Emotion

Unit 6: Human Interaction

Lesson 1: Personality

Students will be able to:

1. Define personality and identify various personality assessments.
2. Explain personality theories from the four main perspectives.
3. Identify important historical figures associated with psychoanalytic, trait, humanistic, and social-cognitive perspectives.

Reading: Theories of Personality
Journal: Personality
Discovering Psychology Video: The Self
Personality Quiz

© 2008 Connections Education LLC. All rights reserved.
Lesson 2: Psychological Disorders
Students will be able to:

1. Identify the criteria for judging whether behavior is psychologically disordered; and contrast the medical model of psychological disorders with the biospsychological approach.
2. Describe the DSM-IV and its goals; and contrast the pros and cons of using the DSM-IV.
3. Define anxiety disorders and how they differ from the normal feelings of stress and anxiety.
4. Explain phobias and how they differ from normal fears.
5. Describe the symptoms of obsessive-compulsive disorder; describe post traumatic stress disorder; describe dissociative disorders; and describe personality disorders.
6. Define mood disorders and distinguish major depression from bipolar disorder.
7. Describe the symptoms and types of schizophrenia; and explain how the different perspectives account for the various disorders.

Journal: Psychological Disorders I
Reading: Psychological Disorders
Journal Psychological Disorders II
Discovering psychology Video: Psychopathology
Journal: Schizophrenia
Discussion: Psychological Disorders
Writing Assessment: Psychological Disorders
Psychological Disorders Quiz

Lesson 3: Therapy
Students will be able to:
1. Describe the historic and current psychotherapies
2. Evaluate the effectiveness of the historic and current psychotherapies
3. Identify and evaluate the available biomedical therapies

Journal: Therapy
Reading: Psychological Therapies
Discussion Therapy
Discovering Psychology Video: Psychotherapy
Therapy Quiz

Lesson 4: Social Psychology
Students will be able to:
1. Explain how humans explain the behavior of others
2. Explain how humans develop attitudes and the extent to which attitudes influence behavior
3. Explain the influence of others on behavior
4. Explain how humans relate to each other

   Reading: Social Psychology
   Journal: Issues with diversity in Psychology
   Discussion: Social Psychology
   Journal: Important Experiments in Social Psychology
   Writing Assessment: Social Psychology
   Social Psychology Quiz

Lesson 5: Unit Review
Students will be able to:
1. Review concepts from this unit in order to prepare for the Unit Exam.

   Discussion: Personality Unit Review
   Unit Test: Human Interaction

Unit 7: Course Review
Objectives:
- Review for the final exam
- Prepare for the AP Psychology exam

Lesson 1: Course Review Part 1
Students will be able to
1. Assess their level of preparation for the AP Psychology Exam
2. Identify test-taking strategies appropriate for the AP Psychology Exam
3. Review common terms, concepts, and theories on the AP Psychology Exam

   Journal: AP Exam Multiple Choice Preparation
   Journal: AP Exam Free Response

Lesson 2: Course Review Part 2
   AP Psychology Practice Exam
   Multiple Choice and short answer

Lesson 3: Course Review Part 3
   AP Psychology Final Exam
Part III: Required Texts

Part IV: Other details required for audit

</tr>
<tr>
<td></td>
<td>• Define psychology.</td>
</tr>
<tr>
<td></td>
<td>• Explain how the early psychologists sought to understand the mind’s structure and functions, and identify some of the leading psychologists who worked in these areas.</td>
</tr>
<tr>
<td></td>
<td>• Describe the evolution of psychology as defined from the 1920s through</td>
</tr>
</tbody>
</table>
• Identify the three main levels of analysis in the biopsychosocial approach, and explain why psychology’s varied perspectives are complementary.
• Identify some of psychology’s subfields, and explain the difference between clinical psychology and psychiatry.

The course provides instruction in research methods

Unit 1: Why Study Psychology
Lesson 3: Thinking Like a Psychologist
Lesson 4: Research Strategies

• Explain how the scientific attitude encourages critical thinking.
• Describe how psychological theories guide scientific research.
• Explain why psychologists study animals, and discuss the ethics of experimentation with both animals and humans.
• Identify an advantage and a disadvantage of using case studies to study behavior.
• Identify the advantages and disadvantages of using surveys to study behavior and mental processes, and explain the importance of wording effects and random sampling.
• Identify an advantage and a disadvantage of using naturalistic observation to study behavior.
• Describe positive and negative correlations, and explain how correlational measures can aid the process of prediction.
• Explain why correlational research fails to provide evidence of cause-effect relationships.
• Explain how experiments help researchers isolate cause and effect.
• Explain why the double-blind procedure and random assignment build confidence in research findings.
• Explain the difference between an independent and a dependent variable.
• Describe the three measures of central tendency, and tell which is most affected by extreme scores.

The course provides instruction in the biological bases of behavior

Unit 2: The Biological Basis of Behavior
Lesson 1: The Nervous and Hormonal Systems

Objectives:
• Describe the parts of a neuron, and explain how its impulses are generated.
• Describe how nerve cells communicate.
• Explain how neurotransmitters affect behavior, and outline the effects of acetylcholine and the endorphins.
• Explain how drugs and other chemicals affect neurotransmission, and describe the contrasting effects of agonists and antagonists.
• Describe the nervous system’s two major divisions, and identify the three types of neurons that transmit information through the system.
• Identify the subdivisions of the peripheral nervous system, and describe their functions.
• Describe the nature and functions of the endocrine system and its interaction with the nervous system.
• Describe several techniques for studying the brain.
• Describe the components of the brainstem, and summarize the functions
<table>
<thead>
<tr>
<th>of the brainstem, thalamus, and cerebellum.</th>
</tr>
</thead>
<tbody>
<tr>
<td>• Describe the structures and functions of the limbic system, and explain how one of these structures controls the pituitary gland.</td>
</tr>
<tr>
<td>• Define cerebral cortex, and explain its importance to the human brain.</td>
</tr>
<tr>
<td>• Identify the four lobes of the cerebral cortex.</td>
</tr>
<tr>
<td>• Summarize some of the findings on the functions of the motor cortex and the sensory cortex, and discuss the importance of the association areas.</td>
</tr>
<tr>
<td>• Describe the five brain areas that would be involved if you read this sentence aloud.</td>
</tr>
<tr>
<td>• Discuss the brain’s plasticity following injury or illness.</td>
</tr>
<tr>
<td>• Describe split-brain research, and explain how it helps us understand the functions of our left and right hemispheres.</td>
</tr>

<tr>
<td>Lesson 2: Sensation and Perception</td>
</tr>
<tr>
<td>Objectives:</td>
</tr>
<tr>
<td>• Contrast sensation and perception, and explain the difference between bottom-up and top-down processing.</td>
</tr>
<tr>
<td>• Distinguish between absolute and difference thresholds, and discuss whether we can sense stimuli below our absolute thresholds and be influenced by them.</td>
</tr>
<tr>
<td>• Describe sensory adaptation, and explain how we benefit from being unaware of unchanging stimuli.</td>
</tr>
<tr>
<td>• Describe the interplay between attention and perception.</td>
</tr>
<tr>
<td>• Define transduction, and specify the form of energy our visual system converts into the neural messages our brain can interpret.</td>
</tr>
<tr>
<td>• Describe the major structures of the eye, and explain how they guide an incoming ray of light toward the eye’s receptor cells.</td>
</tr>
<tr>
<td>• Contrast the two types of receptor cells in the retina, and describe the retina’s reaction to light.</td>
</tr>
<tr>
<td>• Discuss the different levels of processing that occur as information travels from the retina to the brain’s cortex.</td>
</tr>
<tr>
<td>• Define parallel processing, and discuss its role in visual information processing.</td>
</tr>
<tr>
<td>• Explain how the Young-Helmholtz and opponent-process theories help us understand color vision.</td>
</tr>
<tr>
<td>• Explain the importance of color constancy.</td>
</tr>
<tr>
<td>• Describe the three regions of the ear, and outline the series of events that triggers the electrical impulses sent to the brain.</td>
</tr>
<tr>
<td>• Contrast place and frequency theories, and explain how they help us to understand pitch perception.</td>
</tr>
<tr>
<td>• Describe how we pinpoint sounds.</td>
</tr>
<tr>
<td>• Contrast two types of hearing loss, and describe some of their causes.</td>
</tr>
<tr>
<td>• Describe how cochlear implants function, and explain why Deaf culture advocates object to these devices.</td>
</tr>
<tr>
<td>• Describe the sense of touch.</td>
</tr>
<tr>
<td>• State the purpose of pain, and describe the biopsychosocial approach to pain.</td>
</tr>
<tr>
<td>• Describe the sense of taste, and explain the principle of sensory interaction.</td>
</tr>
<tr>
<td>• Describe the sense of smell, and explain why specific odors so easily trigger memories.</td>
</tr>
<tr>
<td>• Distinguish between kinesthesis and the vestibular sense.</td>
</tr>
<tr>
<td>The course provides instruction in stages of consciousness</td>
</tr>
<tr>
<td>----------------------------------------------------------</td>
</tr>
</tbody>
</table>
|  - Explain how illusions help us to understand some of the ways we organize stimuli into meaningful perceptions.  
  - Describe Gestalt psychology’s contribution to our understanding of perception.  
  - Explain the figure-ground relationship, and identify principles of perceptual grouping in form perception.  
  - Explain the importance of depth perception, and discuss the contribution of visual cliff research to our understanding of this ability.  
  - Describe two binocular cues for perceiving depth, and explain how they help the brain to compute distance.  
  - Explain how monocular cues differ from binocular cues, and describe several monocular cues for perceiving depth.  
  - Explain the importance of perceptual constancy.  
  - Describe the shape and size constancies, and explain how our expectations about perceived size and distance contribute to some visual illusions.  
  - Discuss lightness constancy and its similarity to color constancy.  
  - Define perceptual set, and explain how it influences what we do and do not perceive.  
  - Explain why the same stimulus can evoke different perceptions in different contexts. | Lesson 3: States of Consciousness |
|                                                                                   | Objectives:                           |
|                                                                                   |  - Describe the cycle of our circadian rhythm, and identify some events that can disrupt this biological clock.  
  - List the stages of the sleep cycle and explain how they differ.  
  - Explain why sleep patterns and duration vary from person to person.  
  - Discuss several risks associated with sleep deprivation.  
  - Identify modern theories of why we sleep.  
  - Identify the major sleep disorders.  
  - Compare the major perspectives on why we dream.  
  - Define hypnosis, and note some similarities between the behavior of hypnotized people and that of motivated non-hypnotized people.  
  - Define psychoactive drug.  
  - Discuss the nature of drug dependence and identify three common misconceptions about drug addiction.  
  - Name the main categories of psychoactive drugs and list ways these substances can interfere with neurotransmission in the brain.  
  - Discuss the biological, psychological, and social-cultural factors that contribute to drug use. | |
|                                                                                   | Unit 4: Human Cognition               |
|                                                                                   | Lesson 1: Human Cognition             |
|                                                                                   | Objectives:                           |
|                                                                                   |  - Define learning, and identify two forms of learning.  
  - Define classical conditioning and behaviorism and describe the basic components of classical conditioning. |
The course provides instruction in learning

<table>
<thead>
<tr>
<th>Objectives</th>
</tr>
</thead>
<tbody>
<tr>
<td>• Describe the timing requirements for the initial learning of a stimulus-response relationship.</td>
</tr>
<tr>
<td>• Summarize the processes of extinction, spontaneous recovery, generalization, and discrimination.</td>
</tr>
<tr>
<td>• Discuss the survival value of generalization and discrimination.</td>
</tr>
<tr>
<td>• Discuss the importance of cognitive processes in classical conditioning.</td>
</tr>
<tr>
<td>• Summarize Pavlov’s contribution to our understanding of learning.</td>
</tr>
<tr>
<td>• Identify the two major characteristics that distinguish classical conditioning from operant conditioning.</td>
</tr>
<tr>
<td>• State Thorndike’s law of effect, and explain its connection to Skinner’s research on operant conditioning.</td>
</tr>
<tr>
<td>• Describe the shaping.</td>
</tr>
<tr>
<td>• Compare positive and negative reinforcement, and give examples of each of a primary reinforcer, a conditioned reinforcer, an immediate reinforcer, and a delayed reinforcer.</td>
</tr>
<tr>
<td>• Discuss the strengths and weaknesses of continuous and partial (intermittent) reinforcement schedules, and identify four schedules of partial reinforcement.</td>
</tr>
<tr>
<td>• Discuss the ways negative punishment, positive punishment, and negative reinforcement differ, and list some drawbacks of punishment as a behavior-control technique.</td>
</tr>
<tr>
<td>• Explain how latent learning and the effect of external rewards demonstrate that cognitive processing is an important part of learning.</td>
</tr>
<tr>
<td>• Identify the major similarities and differences between classical and operant conditioning.</td>
</tr>
<tr>
<td>• Describe the process of observational learning and explain the importance of the discovery of mirror neurons.</td>
</tr>
<tr>
<td>• Describe Bandura’s findings on what determines whether we will imitate a model.</td>
</tr>
</tbody>
</table>

Unit 4: Human Cognition
Lesson 2: Memory and Lesson 3: Thinking and Language

Objectives:

<table>
<thead>
<tr>
<th>Objective</th>
</tr>
</thead>
<tbody>
<tr>
<td>• Define memory, and explain how flashbulb memories differ from other memories.</td>
</tr>
<tr>
<td>• Describe the types of information we encode automatically.</td>
</tr>
<tr>
<td>• Contrast effortful processing with automatic processing, and discuss the next-in-line effect, the spacing effect, and the serial position effect.</td>
</tr>
<tr>
<td>• Compare the benefits of visual, acoustic, and semantic encoding in remembering verbal information, and describe a memory-enhancing strategy related to the self-reference effect.</td>
</tr>
<tr>
<td>• Discuss the use of chunking and hierarchies in effortful processing.</td>
</tr>
<tr>
<td>• Contrast two types of sensory memory.</td>
</tr>
<tr>
<td>• Describe the duration and working capacity of short-term memory and long-term memory.</td>
</tr>
<tr>
<td>• Distinguish between implicit and explicit memory, and identify the main brain structure associated with each.</td>
</tr>
<tr>
<td>• Explain how retrieval cues can help us access stored memories, and describe the process of priming.</td>
</tr>
</tbody>
</table>
- Cite some ways that context can affect retrieval.
- Describe the effects of internal states on retrieval.
- Explain why we should value our ability to forget, and distinguish three general ways our memory fails us.
- Discuss the role of encoding failure in forgetting.
- Discuss the concept of storage decay, and describe Ebbinghaus’ forgetting curve.
- Contrast proactive and retroactive interference, and explain how they can cause retrieval failure.
- Summarize Freud’s concept of repression, and state whether this view is reflected in current memory research.
- Explain how misinformation and imagination can distort our memory of an event.
- Define cognition.
- Describe the roles of categories, hierarchies, definitions, and prototypes in concept formation.
- Compare algorithms and heuristics as problem-solving strategies, and explain how insight differs from both of them.
- Contrast confirmation bias and fixation, and explain how they can interfere with effective problem solving.
- Contrast the representativeness and availability heuristics, and explain how they can cause us to underestimate or ignore important information.
- Describe the drawbacks and advantages of overconfidence in decision making.
- Describe how others can use framing to elicit from us the answers they want.
- Describe the basic structural units of a language.
- Trace the course of language acquisition from the babbling stage through the two-word stage.
- Discuss Skinner’s and Chomsky’s contributions to the nature-nurture debate over how children acquire language, and explain why statistical learning and critical periods are important concepts in children’s language learning.
- Summarize Whorf’s linguistic determinism hypothesis and comment on its standing in contemporary psychology.

| The course provides instruction in motivation | Unit 5: Human Motivation and Emotion |
| Lesson 1 Motivation and Lesson 2 Emotion |

**Objectives:**
- Define motivation as psychologists use the term today and name perspectives useful for studying motivated behavior.
- Explain how drive-reduction theory views human motivation.
- Discuss the contribution of arousal theory to the study of motivation.
- Describe Maslow’s hierarchy of needs.
- Describe the physiological determinants of hunger.
- Discuss psychological and cultural influences on hunger.
- Explain how the eating disorders anorexia nervosa and bulimia nervosa demonstrate the influence of psychological forces on physiologically
motivated behavior.

- Describe the adaptive value of social attachments, and identify both healthy and unhealthy consequences of our need to belong.
- Discuss the importance of flow, and identify the three subfields of industrial-organizational psychology.
- Define achievement motivation, and explain why organizations would employ an I/O psychologist to help motivate employees and foster employee satisfaction.

| The course provides instruction in developmental psychology | Unit 3: Human Development and Awareness
Lesson 1: Life-Span Development

Objectives:
- Identify the major issues in developmental psychology.
- Explain how teratogens can affect development.
- Describe some abilities of the newborn, and explain how researchers use habituation to assess infant sensory and cognitive abilities.
- Explain why maturation accounts for many of our similarities.
- Outline four events in the motor development sequence from birth to toddlerhood, and evaluate the effects of maturation and experience on that sequence.
- Explain the importance of Piaget's theory of cognitive development and discuss the importance of assimilation and accommodation in this process.
- Outline Piaget's four main stages of cognitive development, and explain how children’s thinking changes during these four stages.
- Discuss psychologists’ current views on Piaget’s theory of cognitive development.
- Define stranger anxiety.
- Discuss the effects of nourishment, body contact, and familiarity on infant social attachment and explain Harlow’s contribution to our understanding of how attachments form.
- Trace the onset and development of children’s self-concept.
- Describe three parenting styles, and offer three potential explanations for the link between authoritative parenting and social competence.
- Define adolescence.
- Identify the major physical changes during adolescence.
- Discuss moral development from the perspectives of moral thinking, moral feeling, and moral action.
- Identify Erikson’s eight stages of psychosocial development and their accompanying issues.
- Identify the major physical changes that occur in middle and late adulthood
- Summarize the contributions of cross-sectional and longitudinal studies to our understanding of the normal effects of aging on adult intelligence.
- Discuss the importance of love, marriage, and children in adulthood, and comment on the contribution of one’s work to feelings of self-satisfaction.
### The course provides instruction in personality

#### Unit 6: Human Interaction

#### Lesson 1: Personality

**Objectives:**
- Define personality.
- Explain how Freud's experiences in private practice led to his theory of psychoanalysis.
- Discuss Freud's view of the mind as an iceberg, and explain how he used this image to represent conscious and unconscious regions of the mind.
- Describe Freud's view of personality structure, and discuss the interactions of the id, ego, and superego.
- Identify Freud's psychosexual stages of development, and describe the effects of fixation on behavior.
- Describe the function of defense mechanisms, and identify them.
- Contrast the views of the neo-Freudians and psychodynamic theorists with Freud's original theory.
- Describe two projective tests used to assess personality, and discuss some criticisms of them.
- Summarize psychology's current assessment of Freud's theory of psychoanalysis.
- Summarize Abraham Maslow's concept of self-actualization, and explain how his ideas illustrate the humanistic perspective.
- Discuss Carl Rogers' person-centered perspective, and explain the importance of unconditional positive regard.
- State the major criticisms of the humanistic perspective on personality.
- Describe some of the ways psychologists have attempted to compile a list of basic personality traits.
- Explain how psychologists use personality inventories to assess traits, and discuss the most widely used inventory.
- Identify the Big Five personality factors, and discuss some of the strengths of this approach to studying personality.
- Describe the social-cognitive perspective, and explain how reciprocal determinism illustrates that perspective.
- Discuss the effects of a perception of internal or external control, and describe the concept of learned helplessness.
- Discuss the link between performance and optimistic or pessimistic attributional style, and describe the goals of positive psychology.
- Summarize the criticisms of the social-cognitive perspective.
- Discuss some evidence for self-serving bias, and contrast defensive and secure self-esteem.

### The course provides instruction in testing and individual differences

#### Unit 4: Human Cognition

#### Lesson 4: Intelligence

- Discuss the difficulty of defining intelligence, and explain what it means to "reify intelligence."
| The course provides instruction in abnormal psychology | • Present arguments for and against defining intelligence as one general mental ability.  
• Compare Gardner’s and Sternberg’s theories of intelligence.  
• Describe the four aspects of emotional intelligence, and discuss criticisms of this concept.  
• Identify the factors associated with creativity, and describe the relationship between creativity and intelligence.  
• Define intelligence test, and discuss the history of intelligence testing.  
• Distinguish between aptitude and achievement tests, and describe modern tests of mental abilities such as the WAIS.  
• Discuss the importance of standardizing psychological tests, and describe the distribution of scores in a normal curve.  
• Explain what it means to say that a test is reliable.  
• Explain what it means to say a test is valid, and describe two types of validity.  
• Describe the stability of intelligence scores over the life span.  
• Discuss the two extremes of the normal distribution of intelligence.  
• Describe similarities and differences in intelligence test scores, and discuss some genetic and environmental factors that might explain them.  
• Discuss whether intelligence tests are biased, and describe the stereotype threat phenomenon. |

| Unit 6: Human Interaction  
Lesson 2: Psychological Disorders  
Objectives: | • Identify the criteria for judging whether behavior is psychologically disordered.  
• Contrast the medical model of psychological disorders with the biopsychosocial approach to disordered behavior.  
• Describe the goals and content of the DSM-IV.  
• Discuss the potential dangers and benefits of using diagnostic labels.  
• Define anxiety disorders, and explain how these conditions differ from normal feelings of stress, tension, or uneasiness.  
• Contrast the symptoms of generalized anxiety disorder and panic disorder.  
• Explain how a phobia differs from the fears we all experience.  
• Describe the symptoms of obsessive-compulsive disorder.  
• Describe the symptoms of post-traumatic stress disorder, and discuss survivor resiliency.  
• Discuss the contributions of the learning and biological perspectives to our understanding of the development of anxiety disorders.  
• Discuss the contributions of the learning and biological perspectives to our understanding of the development of dissociative identity disorder and anxiety disorders.  
• Contrast the three clusters of personality disorders, and describe the behaviors and brain activity associated with antisocial personality disorder. |
### The course provides instruction in treatment of psychological disorders

#### Objectives:
- Define mood disorders, and contrast major depressive disorder and bipolar disorder.
- Summarize the contributions of the biological perspective to the study of depression, and discuss the link between suicide and depression.
- Summarize the contributions of the social-cognitive perspective to the study of depression, and describe the events in the cycle of depression.
- Describe the symptoms of schizophrenia, and differentiate delusions and hallucinations.
- Distinguish the five subtypes of schizophrenia, and contrast chronic and acute schizophrenia.
- Outline some abnormal brain chemistry, functions, and structures associated with schizophrenia, and discuss the possible link between prenatal viral infections and schizophrenia.
- Discuss the evidence for a genetic contribution to the development of schizophrenia.

### Unit 6: Human Interaction

#### Lesson 3: Therapy

**Objectives:**
- Define psychotherapy, and explain what we mean by an eclectic approach to therapy.
- Define psychoanalysis, describe some of the methods used, and discuss the aims and the criticisms of this form of therapy.
- Identify the basic characteristics of the humanistic therapies, and describe the specific goals and techniques of Carl Rogers’ client-centered therapy.
- Explain how the basic assumption of behavior therapy differs from those of traditional psychoanalytic and humanistic therapies.
- Define counter conditioning, and describe the techniques used in exposure therapies and aversive conditioning.
- Describe the views of proponents and critics of behavior modification.
- Contrast cognitive therapy and cognitive-behavior therapy, and give some examples of cognitive therapy for depression.
- Discuss the rationale and benefits of group therapy, including family therapy.
- Give some reasons why clinicians and clients tend to overestimate the effectiveness of psychotherapy, and describe two phenomena that contribute to clients’ and clinicians’ misperceptions in this area.
- Describe the importance of outcome studies in judging the effectiveness of the psychotherapies, and discuss some of these findings.
- Summarize the findings on which psychotherapies are most effective for specific disorders.
- Evaluate the effectiveness of eye movement desensitization and reprocessing (EMDR) and light exposure therapies.
- Describe the three benefits attributed to all psychotherapies.
- Define psychopharmacology, and explain how double-blind studies help researchers evaluate a drug’s effectiveness.
- Discuss the characteristics of antipsychotic drugs, and discuss their use in treating schizophrenia.
### Characteristics of Antimanic and Antidepressant Drugs

- **Describe the characteristics of anti-anxiety drugs.**
- **Describe the characteristics of antidepressant drugs, and discuss their use in treating specific disorders.**
- **Describe the use and effects of mood-stabilizing medications.**
- **Describe the use of electroconvulsive therapy in treating severe depression, and discuss some possible alternatives to ECT.**
- **Summarize the history of the psychosurgical procedure known as a lobotomy, and discuss the use of psychosurgery today.**

---

### The Course Provides Instruction in Social Psychology

#### Unit 6: Human Interaction

**Lesson 4: Social Psychology**

**Objectives:**

- Describe the three main focuses of social psychology.
- Contrast dispositional and situational attributions, and explain how the fundamental attribution error can affect our analysis of behavior.
- Define attitude.
- Describe the conditions under which attitudes can affect actions.
- Explain how the foot-in-the-door phenomenon, role-playing, and cognitive dissonance illustrate the influence of actions on attitudes.
- Describe the chameleon effect, and give an example of it.
- Discuss Asch’s experiments on conformity, and distinguish between normative and informational social influence.
- Describe Milgram’s experiments on obedience, and outline the conditions in which obedience was highest.
- Describe the conditions in which the presence of others is likely to result in social facilitation, social loaing, or de-individuation.
- Discuss how group interaction can facilitate group polarization and groupthink.
- Identify the characteristic common to minority positions that sway majorities.
- Identify the three components of prejudice.
- Discuss the social factors that contribute to prejudice.
- Explain how scape-goating illustrates the emotional component of prejudice.
- Cite four ways that cognitive processes help create and maintain prejudice.
- Explain how psychology’s definition of aggression differs from everyday usage.
- Describe three levels of biological influences on aggression.
- Outline four psychological triggers of aggression.
- Describe the influence of proximity, physical attractiveness, and similarity on interpersonal attraction.
- Describe the effect of physical arousal on passionate love, and identify two predictors of enduring companionate love.
- Define altruism, and give an example.
- Describe the steps in the decision-making process involved in bystander intervention.
- Explain altruistic behavior from the perspective of social exchange theory.
The course provides instruction in empirically supported psychological facts, findings, terminology, associated phenomena, major figures, perspectives and psychological experiences.

Course Summary:

The main objective of the AP Spanish Language course is to develop students’ interpersonal, interpretive, and presentational communication skills in Spanish and to prepare the students for the AP language examination. Three or four years of Spanish, or the equivalent, are prerequisites for this course. The fundamental objective is for the students to achieve a high level of ability in listening, speaking, reading, and writing. In this course students develop a strong command of the Spanish language, with proficiency in integrating language skills and synthesizing written and aural materials. They increase proficiency in the formal writing process, extensive interpersonal and presentational speaking and writing techniques, and aural comprehension skills through quality, authentic, and level-appropriate audio and video recordings. Students are exposed to literature and historical and current events of Spanish-speaking countries through authentic newspapers and magazines, music, movies, radio and television productions, literary texts, and virtual visits online. Students will also use Spanish to access information and to compare and contrast cultural elements of Spanish-speaking countries with their own. This course includes continuous integration of language skills (reading, writing, listening, and speaking) with a rigorous review of grammatical structures. Therefore, the students must not only be aware of the considerable amount of work required by the course, but they must also have a high level of motivation and interest to use the language outside of class. It is imperative that the students read, write, hear, and speak the target language in and out of class.

Teaching Strategies

Listening and speaking (interpersonal, presentational, and interpretative modes)

These are integral parts of this class. The teacher will conduct the class entirely in Spanish, offering students opportunities to demonstrate their proficiency across the modes of communication in the Intermediate to Pre-Advanced range. [CR1]. While in class, the students are expected to speak to the teacher in Spanish. The students will also respond to conversational prompts, such as interviews, asking for directions and advice. The students will give oral presentations participate in class, and have group discussions in Spanish. There will be at least one oral assessment every three weeks. The students will listen to dialogues and narratives to make inferences and predictions. They will interpret messages, lectures, and other spoken materials using a variety of authentic regional accents to become familiar with pronunciation and dialects of various Spanish-speaking countries. They will also complete spoken homework assignments that are recorded and submitted to teachers as audio files for grading.

Authentic Listening Resources

Las Voces de las mujeres de Xelajú

Nuevos horizontes
www.nuevoshorizontes.org
Think Spanish
www.thinkspanish.com
Reading
The students will read and interpret selected samples of authentic literary prose and poetry from the AP Spanish Literature list. This preview of literary works has various goals. Some of these students will enroll in AP Literature next year and/or they will acquire confidence that they can continue to the next level of Spanish (AP Spanish Literature). Students will read individually, followed by group discussions. After reading each work, the students will also complete a graphic organizer for each work. The students will discuss the characters, the plots, and the themes. Thus, the students have opportunities to integrate reading, writing, and speaking skills. Students will also read contemporary topics in newspapers from the Spanish-speaking countries. Students will select a global issue affecting a Spanish-speaking country of their choice. Students are asked to read newspaper(s) from that country. Using his or her own words, the student will write a summary of the newspaper article. Written discussions are held to discuss the news the students have read. Each student will prepare an oral presentation on what he or she has learned about the country. Thus, the students have opportunities to integrate reading, writing, and speaking.

BBC Mundo www.bbc mundo.com

Grammar
Students will review important grammatical aspects of the Spanish language. The course will include advanced grammatical structures. The areas include, but are not limited to, verb tenses and moods (ser v. estar, preterit v. imperfect, sequence of tenses, commands, complex constructions using the subjunctive, irregular and spelling change verbs, perfect tenses), nouns and their modifiers (direct and indirect object pronouns, relative pronouns, adjective placement), and other verbal and syntactic constructions (passive voice, reflexives, making comparisons, por v. para, prepositions, transitions, accentuation, etc.).

Writing
Every semester, each student writes formal, well-organized analytical or persuasive presentational essays on an appropriate topics in reaction to a text or information discussed or viewed, which are evaluated for their content, organization, range, appropriateness of vocabulary, and grammatical accuracy. There are weekly writing activities related to topics covered, such as writing journal entries, letters, e-mails [CR3b], poems, dialogues, abstract writing, creative writing, or writing reactions to articles and lectures.

Culture
The culture of Latin America and Spain will also be studied. Culture is integrated throughout the year with meaningful authentic materials such as literary pieces, newspapers, and auditory pieces.

Materials
Text books:
Abriendo Paso: Gramática ©2007, José M. Diaz
0131660985

- Gramatica Student Edition (hard cover)

Abriendo Paso: Lectura ©2007, José M. Diaz
0131660977
Lectura Student Edition (hard cover)

- AP Spanish, José M. Diaz 0131660942
Student Edition (softcover)

- A bilingual Spanish English dictionary (or have access to online equivalent)

Computer components
Microsoft® Office software, including Word and PowerPoint
A microphone with headphones or speakers

Use of Spanish
This course is designed for and assumes that teachers and students will communicate almost exclusively in Spanish. All the course materials are written in Spanish (with vocabulary and grammar containing some English). Students regularly interact with each other and with the teacher in Spanish in discussion activities. In addition, they conduct interviews of native speakers to practice using the language in real-life settings [CR9]. They also complete spoken interpersonal and presentational homework assignments that are recorded and submitted to teachers as audio files for grading. In addition, teachers give feedback on assignments and tests in Spanish and communicate by e-mail and voice exclusively in Spanish.

Activity Description
The following activities will be incorporated during the course:

- Diagnostic pre- or post-test: This is used to help students assess their mastery and understanding of the material introduced in the unit.
- Instruction: Students study primary instructional online content that teaches new concepts through multimedia and interactivity.
- Discussion: Students discuss topics in an online bulletin-board-style forum. Teachers participate in these discussions as well, and students receive credit for their participation.
- Exam: A test is administered at each semester’s end covering all material from the course.
- Practice: Students answer questions regarding what they have learned. Activities include grammar and vocabulary exercises, reading comprehension, literary analysis, writing tasks, and speaking practice.
- Quizzes: Students take computer-administered and automatically graded formative assessments.
- Review: Review of the material covered in a unit or over a semester is completed.
- Exam/Test: These are administered at each unit’s end covering the material presented in each unit.
## Course Planner

<table>
<thead>
<tr>
<th>Introduction</th>
<th>Semester A, Unit 1: Introduction</th>
</tr>
</thead>
<tbody>
<tr>
<td>Students are introduced to the course and the online format. They learn how to create work files, download files, and save work. They learn how to submit assessments and they become familiar with course requirements, discussion requirements, and discussion-based assessments. They also become familiar with teamwork expectations.</td>
<td></td>
</tr>
<tr>
<td>Students learn about the format of the AP Spanish Language Exam and become familiar with the College Board website. They learn about exam scores 0–5. They reflect on their goals and how to reach them.</td>
<td></td>
</tr>
<tr>
<td>Students are also introduced to the types of work they will carry out, such as assignments, projects, and assessments.</td>
<td></td>
</tr>
</tbody>
</table>

superior? ¿Cuáles son algunas actividades extracurriculares, y por qué es importante participar en ellas?

Students do pre-reading or pre-viewing exercises, read or watch videos, and complete post-reading or post-viewing exercises about the fundamental right to education, differences by country, standardized testing, and academic integrity, including taking notes to summarize important points. [CR2a] & [CR8]

Students play a game to match characteristics of education systems in different countries. [CR8]

Students complete a Venn diagram on differences in the educational systems of Argentina and Spain. [CR8]

Students read a review of the movie *La historia oficial* and complete activities before, during, and after watching the movie. [CR2a], [CR2b] & [CR7]

Students listen to an audio selection about types of schools in the United States and, after writing important points on a graphic organizer, focus on the question of whether they like the type of school they are in or would prefer a different type. [CR8]

Students listen to two Spanish-speaking members of the U.N. debate on education and complete an activity with new vocabulary, to a school principal advising new students about opportunities at school and complete a listening comprehension activity, to three new friends (one Venezuelan, one Mexican, and one Uruguayan) talking about their experiences in school and complete a listening comprehension activity. [CR4a]

Students write an essay about education as a fundamental right, how it is protected, and what its purpose is. They conduct research on websites about writing, MLA, and the Real Academia Española. [CR5b]

Students practice vocabulary related to education, advantages and disadvantages of different types of schools, standardized exams, academic honesty and plagiarism, choosing a college or university, and extracurricular activities. [CR4b]

Students practice grammar related to verbs (person and number, active and passive voice, indicative v. subjunctive mood, and tense;
conjugation, auxiliary verbs, regular and irregular verbs; future tense; reflexive verbs and pronouns) and adjectives (comparatives and superlatives), completing formative assessments on these topics. [CR4b]

Students use the embedded recording tool to practice presentational speaking about these topics: the right to education, outstanding characteristics of the education system in different countries, recommendations to ensure academic integrity, requirements for studying for a career, a principal’s speech to students at a school, and on some people’s extracurricular activities. [CR5a]

Students write an outline of ideas about what educational and career path they will take in the future. [CR6c]

Students begin writing in *Mi voz*, a journal in which they will write informally throughout the course and include research results from authentic sources (e.g., radio station, online newspaper) on the topics being written about, and which they will share with other students in an informal interpersonal writing exercise. [CR3b]

<table>
<thead>
<tr>
<th>Assessments</th>
<th>Spoken Interpersonal Communication:</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>In pairs, students discuss the multimedia brochure they are preparing to present on types of schools in the U.S. for Hispanics or immigrants who want to study in this country. [CR3a]</td>

</tbody>
</table>

<table>
<thead>
<tr>
<th>Written Interpersonal Communication</th>
</tr>
</thead>
<tbody>
<tr>
<td>Students write a letter to their grandmother, explaining plans to study computer science and pursue a career in that field instead of being a lawyer like their father, and promising to talk about it at her 75th birthday party. [CR3b]</td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th>Audio, Visual, and Audiovisual Interpretive Communication</th>
</tr>
</thead>
<tbody>
<tr>
<td>Students listen to a dialogue between two people about the</td>
</tr>
</tbody>
</table>
education systems of Germany and Argentina and answer questions about them. [CR2a], [CR4a] & [CR8]

In pairs, students create and present a multimedia brochure (including photographs, interactive images, sound, and color) on types of schools in the U.S. for Hispanics or immigrants who want to study in this country. [CR5a] & [CR5b]

**Written and Print Interpretive Communication:**

Students conduct research and create a list of resources to use on a project about their education in the future, including information on extracurricular activities in college or the community. [CR4b] & [CR5b]

**Spoken Presentational Communication**

Students prepare an oral presentation in relation to reading and listening passages focusing on these questions: ¿Qué opinas del uso de los exámenes estandarizados para la admisión a la educación superior en los Estados Unidos? ¿Qué importancia deben tener los exámenes estandarizados para la admisión a la educación superior en los Estados Unidos? [CR5a]

**Written Presentational Communication:**

Students write an essay in which they compare and contrast the education system of the United States (or country where they are from) with that of Argentina, focusing on these questions: Is education a fundamental right? How is the right to education protected? What is the purpose of education systems? [CR5b]

Students write an essay in which they express their opinions on what the consequences should be when a classmate violates the principles of academic integrity, after reading and listening to passages on the topic. [CR5b]

**Contexts**
- Introducción a la literatura/El drama hispanoamericano/Periódicos y revistas/Las artes/Las artes: Los muralistas/Las artes: Baile y música

**Essential Questions**
- ¿Cómo influyen los productos culturales, las prácticas y las perspectivas de la gente en la vida contemporánea, localmente y globalmente?
- ¿Cómo contribuyen los individuos a través de la literatura al bienestar de las comunidades?
- ¿Cómo influyen los ideales de la belleza y la estética en la vida cotidiana?
- ¿Cómo las artes desafían y reflejan las perspectivas culturales?

**Sample Learning Activities/Resources**
- Student-centered questions: ¿Cómo puedes relacionar un cuento corto con algo que hayas experimentado en tu vida? ¿Cuáles son algunas novelas y dramas importantes de la literatura hispanoamericana? ¿Qué características tienen algunos de los periódicos y revistas más populares en español? ¿Cuáles son y qué características tienen algunas formas y expresiones artísticas de la cultura hispanoamericana, y cuáles son las influencias de varios artistas? ¿Cómo los artistas se inspiran en el trabajo de otros artistas para completar sus propias obras? ¿Cuáles son algunas expresiones artísticas y formas de cultura latina? ¿Qué influencias africanas hay en la música y el baile del Caribe?
- Students read “El dinosaurio” by Augusto Monterroso, and analyze the plot, theme, setting, time, ambiguity, and tone. [CR2c] & [CR4b]
- Students read “El Apocalipsis” by Marco Denevi, answer self-check comprehension questions, and analyze themes. [CR2c] & [CR4b]
- Students read a poem about poetry to think about poems and songs, and then read about what poetry is, its elements, literary movements, the twentieth century, and Latin American poets. [CR2c] & [CR4b]
Students hear and read the poem “Balada de los dos abuelos” and analyze the symbols that relate to each grandfather, the connection or conflict between them, and whom the poet identifies with. They also read about author Nicolás Guillén and about the ballad. [CR2c], [CR4a] & [CR4b]

Students practice audio interpretive communication by listening to the dialogue of a situation in a classroom with a professor teaching about *realismo mágico*, completing a formative assessment on the ideas and themes of the dialogue. [CR4a]

Students research Miguel de Cervantes Saavedra and his work *El ingenioso hidalgo Don Quijote de la Mancha*. They read an outline version of the history of Latin American literature, background information on the Nobel Prize in literature, a fragment from Gabriel García Márquez’s *Cien años de soledad*, the short story “La carta” de José Luis González and an analysis of it, and complete self-checking formative assessments on the readings. [CR2c] & [CR4b]

Students listen to audio text and read print text about el canillita, a common local character in Hispanic towns and cities. [CR4a] & [CR7]

Students practice audio interpretive communication by listening to an interview of a well-known singer and composer. [CR4a]

Students conduct a survey in Spanish of people on their magazine-reading and news-sourcing habits, practicing interpersonal writing. [CR3a] & [CR9]

Students read an authentic online newspaper article about the use and status of Spanish in the U.S. and about Walmart and the Hispanic market. [CR2b]

Students read and view video on the topic of analyzing a work of art (line, volume, space, color, light, composition), practice visual interpretive communication by reflecting on sample paintings, conduct research on the Colombian artist Fernando Botero, and compare his work to that of another visual artist. [CR4a], [CR4b] & [CR7]

Students read about Pablo Picasso and his painting *Guernica*, and about Diego de Velázquez and his work. Reading about Octavio Ocampo comes with vocabulary and comprehension practice.
<table>
<thead>
<tr>
<th>Students read a comparison of the styles of Octavio Ocampo and Salvador Dali. [CR4b] &amp; [CR7]</th>
</tr>
</thead>
<tbody>
<tr>
<td>Students complete a Venn diagram on two murals by Latin American painters. Then they practice written interpretive communication by reading about three famous Mexican muralists. They read about Latin American music, dance, and religion, and the African contribution to Hispanic culture. [CR7], [CR4b] &amp; [CR8]</td>
</tr>
<tr>
<td>They review the format of the AP Spanish Language and Culture exam, and project the steps necessary to prepare for it. [CR4b]</td>
</tr>
<tr>
<td>Students continue writing in <em>Mi voz</em>, the informal journal with reflections on the topics or ideas in the unit, including further research to enhance description of their favorite music, dance, or art, and they share their writing for peer review and comments in a version of written interpersonal communication. [CR3b]</td>
</tr>
<tr>
<td>Students practice vocabulary related to literature, short story, plot, narrator, fiction, poetry, art, race, Octavio Ocampo, the muralists, the canillita, the Hispanic food market, bomba of Puerto Rico, and cumbia of Colombia, completing formative assessments on these topics. [CR4b] &amp; [CR7]</td>
</tr>
<tr>
<td>Students practice grammar topics related to reflexive verbs, direct and indirect objects (completing activities on a 21-slide interactive slideshow presentation), prefixes, the subjunctive (with link to interactive formative assessment), the imperfect, the preterite, the future, and adverbs, completing formative assessments on these topics. [CR4b]</td>
</tr>
<tr>
<td>Students use the embedded recording tool to practice presentational speaking about these topics: what a narrative work is, what some literary styles are, what the “Boom” was and why it was important, an analysis of the poem “Balada de los dos abuelos,” why Miguel de Cervantes Saavedra is important, how some characteristics of realism and avant-garde manifest themselves in literature, who the character of “el canillita” is and when the holiday devoted to him occurs, the similarities and differences between two murals, and the influence of African culture on society. [CR5a], [CR7] &amp; [CR8]</td>

La juventud y sus valores/La juventud y la mayoría de edad/La juventud, la familia y las relaciones/La graduación

**Essential Questions:**
- ¿Cómo definen los individuos y las sociedades a la juventud y sus valores?
- ¿Cómo se expresan los distintos aspectos de la identidad en diversas situaciones?
- ¿Cómo se desarrolla la identidad de una persona a lo largo del tiempo?
- ¿Cómo influyen los ideales de la belleza y la estética en la vida cotidiana?

**Sample Learning Activities/Resources**

<table>
<thead>
<tr>
<th>Student-centered questions: ¿Cuales son algunos diferentes aspectos de la vida de los jóvenes en dos culturas? ¿Cuáles son los valores de los jóvenes? ¿Qué factores afectan a los jóvenes hoy e impactan sus oportunidades en la vida? ¿Cómo se comparan las celebraciones de alcanzar la mayoría de edad en dos culturas diferentes? ¿Cómo se comparan la vida familiar y las relaciones a lo largo de las generaciones en los Estados Unidos con varias culturas? ¿Cuáles son algunos usos apropiados de la comunicación verbal y no verbal? ¿Cuáles son algunos caminos hacia unas carreras profesionales en otras culturas? ¿Qué oportunidades de carreras profesionales que cruzan culturas hay en las universidades?</th>
</tr>
</thead>
</table>

Students practice audiovisual interpretive communication by listening to video of various young people describing themselves and their lives in relation to the above questions. Questions for reflection are provided. [CR4a]

Students read the authentic article “Así piensan nuestros jóvenes,” and complete a self-checking underlining and note-taking exercise, and then they read a second authentic article “Los jóvenes españoles son rebeldes, marchosos y comunistas” and complete an underlining and note-taking exercise. They will then use these notes to compare Mexicans and Spaniards. [CR2b] & [CR8]

Students read the poem “Canción de otoño en primavera” by Rubén Darío and reflect on its themes and ideas. [CR2c] & [CR4b]
Students read a slideshow about celebrations of people reaching adulthood in Japan, Israel, Mexico, Argentina, Cuba, Dominican Republic, Puerto Rico, and the United States. There are links to visuals in the form of photographs. [CR4a], [CR4b] & [CR7]

Students complete a KWL graphic organizer about *quinceañeras*, read an article about the history of the celebration, compare how the *quinceañera* is celebrated in Mexico and Argentina, read an article from the socials column of an online newspaper, hear audio about the family in Arab cultures, read about nonverbal communication and idiomatic expressions, and read on a website about etiquette and protocol. [CR4a], [CR4b], [CR2b], [CR5b] & [CR8]

Students read articles about stereotypes of Hispanic people and cultural differences that enrich the culture; hear and read Nicolás Guillén’s poem “Balada de los dos abuelos” and analyze its structure and themes; and practice presentational writing about the difference between a job and a career. [CR7], [CR4a], [CR4b], [CR2c] & [CR5b]

Students continue writing in Mi voz, the journal for informal interpersonal writing practice, on the topic of study abroad. Then they exchange for peer review and comments. [CR3b]

Students practice vocabulary related to describing Mexican and Spanish young people; differences between childhood, youth, adolescence, adulthood, and old age; icons attractive to young people; comparison of attitudes and perspectives of Mexican and Spanish young people; celebrations of reaching adulthood; graduation; and the difference between a job and a career, completing formative assessments on many of these topics. CR4b] & [CR7]

Students read about youth and being young, the poem “Canción de otoño en primavera” by Rubén Darío, and access articles and audio about *quinceañera* celebrations, jobs, and careers. A variety of self-checking formative assessment formats are provided. [CR2b], [CR2c], [CR4a] & [CR7]

Students practice grammar topics related to the verb *ser*, the verb *estar*, reflexive verbs, the preterite and the imperfect, conjunctions, future tense, conditional tense, present subjunctive mood, and
complete formative assessments on these topics. [CR4b]

Students use the embedded recording tool to practice presentational speaking about these topics: some values of young people in Mexico and Spain, Rubén Darío and his poem “Canción de otoño en primavera,” characteristics of a quinceañera in Mexico and in Argentina, extended families and their activities, and use of the future tense. [CR5a], [CR2c] & [CR8]

### Desafíos Globales [CR6a]

**Ciencia y Tecnología [CR6b]**

### Contexts

La tecnología en el pasado/La tecnología en China y Japón/La tecnología en Estados Unidos/La tecnología en mi vida/La tecnología en mi futuro

### Essential Questions

¿Cuáles son los desafíos tecnológicos que enfrentan las sociedades del mundo, cuáles son los orígenes de esos desafíos y cuáles son algunas posibles soluciones a esos desafíos?

¿Qué impacto tiene el desarrollo científico y tecnológico en nuestras vidas?

¿Qué factores han impulsado el desarrollo y la innovación en la ciencia y la tecnología?

### Sample Learning Activities/Resources

**Student-centered questions:** ¿Cuáles son algunos avances tecnológicos significativos de los últimos 100 años, y qué efectos han tenido en la vida cotidiana? ¿Cómo son las situaciones tecnológicas actuales de China y Bolivia, y de qué manera es la tecnología relativa a la cultura? ¿Cómo se compara la tecnología de Japón con la de otros países estudiados? ¿Qué control tienen los gobiernos en la tecnología de ciertos países? ¿De qué manera los términos tecnológicos están impactando las culturas y el lenguaje? ¿Qué son las mejores prácticas y la etiqueta para usar con la tecnología personal? ¿Cómo se puede predecir el uso del contexto tecnológico en diferentes áreas?

Students practice written interpretive communication by reading an article about Mexican streetcars, followed by a comprehension activity. [CR4b]

Visual and audiovisual interpretive communication is practiced by seeing and hearing about different inventions, followed by a self-checking formative assessment. [CR4a]

Students read and hear about communication in the past, and take down a Spanish-speaker’s answers to a questionnaire about their use of technology, to be followed by an oral presentation of the results. [CR4a], [CR4b], [CR9] & [CR5a]

Students practice visual interpretive communication, viewing and describing images of Chinese and Bolivian objects. [CR4a]
<table>
<thead>
<tr>
<th>Students read about technology in China and Bolivia, and then conduct a web search for more information. They read about technological challenges in Bolivia, and then conduct a web search for more information. They consider the issue of accessibility to technology and complete an activity about it. [CR4b] &amp; [CR8]</th>
</tr>
</thead>
<tbody>
<tr>
<td>Students conduct a voice discussion in which students’ recordings of their opinions are interchanged and commented on, for interpersonal speaking practice. [CR3a]</td>
</tr>
<tr>
<td>Students practice written interpretive communication by reading texts about technology in Japan; then practice audio interpretive communication by listening as they complete a graphic organizer of ideas about using technology of the future. [CR4b] &amp; [CR4a]</td>
</tr>
<tr>
<td>Students conduct research about technological advances in the U.S.; complete a Y-diagram to compare and contrast different inventions’ impact on culture and language; read about technical vocabulary in English and Spanish; consider what they would save in a time capsule; read about new forms of technology; write recommendations for online privacy, security, and netiquette; write a description of an invention they predict for the future; practice the order of sentences in paragraphs, and complete an informational chart about social media. [CR4b] &amp; [CR9]</td>
</tr>
<tr>
<td>Students make and write predictions for the technology of the future and hear and read texts on technology of the future. [CR4a], [CR4b] &amp; [CR9]</td>
</tr>
<tr>
<td>Students continue the informal journal Mi voz by writing on their opinions about the influence of technology on young people. This journal entry is exchanged with other students, who leave their written questions and comments. [CR3b]</td>
</tr>
<tr>
<td>Students practice vocabulary related to modes of transportation, technology in the past, innovations, use of technology, comparison of use of technology between the U.S. and Japan, neologisms, netiquette, predictions about future technologies, and types of paragraphs, completing formative assessments on several of these topics. [CR4b] &amp; [CR8]</td>
</tr>
<tr>
<td>Students practice grammar topics related to present tense, present perfect and past perfect tenses (with contextualized fill-in-the-blank</td>
</tr>
</tbody>
</table>

APPENDIX A.2.H Advanced Placement® Course Guides

self-checking exercise), the verb haber, conjunctions, preterite tense, future tense, regular and irregular verbs, subject-verb agreement, the subjunctive, the paragraph, types of paragraphs, the topic sentence, the supporting sentences, and the closing sentence, completing formative assessments on several of these topics. [CR4b]

Students view video, read, and hear passages about electric streetcars in Mexico, present-day China, present-day Bolivia and its technology challenges, technology in Japan, Japanese innovations, technology culture, the difference between fact and opinion, new technology, how to protect your computer, how to protect your identity online, how to otherwise protect yourself online, and predictions of how technology will change people’s lives in 50 years. [CR2a], [CR7] & [CR8]

Students use the embedded recording tool to practice presentational speaking about these topics: methods of communication since the Morse code was invented, some important Chinese inventions, how technology has influenced the ways people communicate, a Japanese invention that “translates” the barking of dogs to human language, the politics of communication, advantages of smartphones, predicting technological change for the next 100 years, and summarizing types of paragraphs. [CR5a] & [CR7]

clarifying what improvements in Bolivia this money would bring, thanking them, and saying goodbye. [CR3b] & [CR7]

Students write an e-mail to the proposals committee of next year’s technology convention in Geneva, and describe a product to help prevent identity theft: what it is, its advantages, its cost, changes it will produce in the future, and finally say goodbye. [CR3b]

Students write an announcement for the school newspaper regarding the dangers of using a cell phone while driving. [CR3b]

Students write a post card about the use of cell phones in modern everyday life. [CR3b]

Students write an e-mail to the school principal concerning the use of cell phones at school during the school day. [CR3b]

**Spoken Presentational Communication**

Students prepare a presentation on the impact of technology on young people, expressing their views in relation to two articles they have read about the topic. [CR5a] & [CR2b]

**Written Presentational Communication**

Students prepare a comparison of functions of social media sites that can help in learning a language. [CR5b]

¿Cuáles son algunos desafíos en cuanto a la comunicación que enfrentan las sociedades del mundo?
¿Cómo influyen los medios de comunicación en la vida contemporánea?
¿Cómo influye la comunicación en la identidad de una persona o un pueblo?

Sample Learning Activities/Resources

Student-centered questions: ¿Qué características tienen algunos medios de comunicación, y cómo han evolucionado? ¿Cómo nos afecta la publicidad? ¿Qué efectos tiene la censura en China y en los países árabes? ¿Cuáles son las influencias de los hispanohablantes en la radio, el cine y la televisión en los Estados Unidos? ¿Qué estereotipos de los hispanohablantes se ven en el cine y la televisión? ¿Cuáles son algunas formas en que los medios publicitarios se enfocan en ciertos grupos, especialmente en los jóvenes? ¿Cómo la publicidad puede moldear los valores en la juventud? ¿De qué manera la publicidad afecta tu forma de elegir las cosas?

Students complete a graphic organizer on means of communication and answer questions about which is their favorite and about how communication will be in the future. [CR4b]

Students read about freedom of the press, then go on to ask Spanish speakers questions to complete a survey on TV and Internet use. [CR2a], [CR3a] & [CR9]

Students read about communications in Mexico and Puerto Rico, and then go on to complete a graphic organizer with ideas about the advantages of TV news versus news on the Internet. [CR4b], [CR2a] & [CR7]

Students read about the nature of news and then go on to play a game matching themes with the nature of their news value. [CR4b]

Students research the two Hispanic reporters Jorge Ramos Ávalos and María Celeste Arrarás, and complete a Venn diagram comparing and contrasting them. Then they compare these to Katie Couric and Matt Lauer. [CR4b] & [CR8]

Students practice audio interpretive communication by listening to a podcast interview of María Celeste Arrarás on topics related to journalism and the news. [CR4a]

Students complete a graphic organizer with their ideas on how publicity affects their lives, then listen to an interview about the
2008 presidential campaign and the influence that publicity had on it, before completing self-checking comprehension exercises. [CR4a] & [CR4b]

Students read about censorship in China and in the Arab world and then complete a Venn diagram comparing and contrasting the effects of censorship on citizens. Students go on to read about censorship in Cuba and in Spain during the time of Franco and then complete self-checking comprehension exercises. [CR4b], [CR2b], [CR5b] & [CR8]

Students watch a video about censorship and complete pre-viewing, during-viewing, and post-viewing activities. [CR2a]

Students play a game to find out how much they know about Hispanics in the media. Then they complete a table on their opinions of Hispanic music. [CR4b]

Students listen to an article about Internet piracy, take notes, and complete questions at the end. [CR2a]

Students read about Rita Moreno and José Ferrer, two important Hispanic actors in the U.S. Then they complete a comprehension activity. [CR4b] & [CR7]

Students view the movie Bajo la misma luna. Then they complete an activity putting the elements of the plot in the correct order. [CR2a] & [CR4a]

Students consider Dora the Explorer and other bilingual television programming and then complete an opinion chart and a comprehension activity. [CR4b]

Students listen to and read a text about how publicity appeals to viewers’ emotions. Then they go on to hear about how a company plans an advertising campaign to promote their product, jeans for young people. Students complete an activity while listening and after listening. [CR2a], [CR4a] & [CR4b]

Students consider how the images they see in advertising influence them. Then they go on to read about advertising techniques, completing a comprehension activity on the topic. [CR2b] & [CR4b]

Students conduct a survey of other students on the influence of fast

</tbody>
</table>
Students view a video ad for a supermarket in Chinese and then create a script in Spanish to match the ad. [CR4a] & [CR8]

**Written and Print Interpretive Communication**

Students complete a semester exam containing reading comprehension exercises on topics relating to communications and advertising. [CR4b]

**Spoken Presentational Communication**

Students prepare an oral presentation on the topic “¿Cómo afectan nuestra vida los medios de comunicación?” in relation to ideas from a print article and a listening passage. [CR5a]

Students prepare an oral presentation on the topic “Explica si tus costumbres de gastar dinero han sido influenciadas o no por la publicidad” in relation to ideas from a print article and a listening passage. [CR5a]

**Written Presentational Communication**

Students write an essay on the topic of the influence of publicity and advertising in everyday life, in relation to ideas from print and audio sources. [CR5b]

<td></td>
</tr>
<tr>
<td>Students view video, read, and hear passages about the environment in Spain, China, Puerto Rico, India, and the United states; drought in India; water, air, climate, and recycling; and complete pre-, during-, and post-viewing reading, and/or listening activities. [CR2a], [CR2b], [CR4a], CR4b] &amp; [CR8]</td>
<td></td>
</tr>
</tbody>
</table>
Students read and conduct further research on recycling in different countries, including Spain, Puerto Rico, and Mexico and Central America. Students complete a Venn diagram comparing and contrasting the recycling situation in these three parts of the world. Then they create a brochure, including text, photographs, and the unit vocabulary and grammar, on these issues. [CR2b], [CR4b], [CR8] & [CR5b]

Students work in groups to create a multimedia presentation outlining a recycling program for their community, focusing on electronic waste. [CR5a] & [CR5b]

Students complete a chart comparing and contrasting forms of recycling in their community, a large state, and a small city. [CR4b]

Students read about and practice reading strategies: activating prior knowledge, predicting, making connections, drawing conclusions, forming questions, rereading, looking up vocabulary, rephrasing and restating aloud, and creating mental images. [CR4b]

Students read about and conduct further research on factors influencing recycling and forms of recycling in the United States. [CR2b] & [CR8]

 Students practice vocabulary related to pollution and the environment, drought, trash, and recycling, and deducing and predicting, completing formative assessments on several of these topics. [CR4b]

Students practice grammar topics related to the present subjunctive, past participles, the imperfect tense, the future tense, the conditional tense in si-clauses, the future perfect and conditional perfect, and the indicative mood compared to the subjunctive mood, completing formative assessments on these topics. [CR4b]

Students use the embedded recording tool to practice presentational speaking about these topics: environmental issues in Spain, what Greenpeace is and what it promotes, sentences for vocabulary practice, the 2008 environmental disaster in Tennessee compared to the Exxon Valdez disaster, and how to reuse, reduce, and recycle. [CR5a], [CR7] & [CR8]

speaking practice. [CR4b] & [CR3a]

Students read about the culture and economy of Mexico and Japan as factors influencing globalization and complete a comprehension activity. [CR4b] & [CR8]

Students compare two argumentative paragraphs about how the Internet has helped globalization and then choose a thesis that they justify by writing reasons on a graphic organizer. [CR5b]

Students finish completing the KWL activity and practice speaking about what they have learned. [CR4b] & [CR5a]

Students use a graphic organizer to write reasons justifying a thesis either in favor of or against multinational companies. [CR5b] & [CR8]

Students read about folklore in Spain and consider the different types of folklore: superstition, joke, tongue twister, legend, or riddle. They read about flamenco as a popular art form, and complete comprehension activities. [CR4b] & [CR7]

Students read about oral literary traditions in Spain and in American indigenous cultures, including the Aztecs, Mayas, Incas, and Navajo. They complete comprehension activities and conduct further research on the Internet. [CR4b], [CR7] & [CR8]

Students complete a pre-reading game on American vs. Hispanic attitudes and beliefs, and then complete a graphic organizer categorizing attitudes and beliefs by culture. Then they go on to read about values, beliefs, and social classes, specifically about American values and beliefs, and complete a table with information in the form of complete sentences. [CR4b], [CR8] & [CR5b]

Students read an article about how culture affects the choice of profession or career, and compare American and Hispanic factors in this choice. [CR4b] & [CR8]

Students play a game to choose the country of origin of various surnames and complete a pre-reading graphic organizer with ideas about why people immigrate. [CR4b]

Students read an article about worldwide migration and complete
post-reading comprehension activities.  [CR2b]

Students practice audio interpretive communication by listening to a passage about the society and cultures of the United States. Then they practice print interpretive communication by reading about Irish and Arab immigrants in the U.S., followed by post-reading comprehension activities. [CR4a], [CR4b] & [CR8]

Students work in pairs to research a U.S. immigration topic and prepare a debate on the influence immigration will have on U.S. society by the year 2050, organizing their pro and con ideas on a graphic organizer that will later also serve as a basis for writing on the topic. [CR7] & [CR5b]

Students play an interactive game on popular proverbs and their origins. [CR4b]

Students read an article about U.S. immigration laws, and complete a comprehension activity based on it. Then they complete a chart with opinions on immigration issues, followed by a listening selection on culture and immigration and a post-listening activity. [CR2b], [CR4b] & [CR2a]

Students complete a graphic organizer about countries of origin of Hispanics in the U.S. Then they read an article about Hispanic immigration, followed by a comprehension activity and a speaking activity. [CR4b] & [CR3a]

Students complete a chart with reasons for learning or not learning another language and then go on to read about being bilingual, loss of the first language, and speaking English only, with a comprehension activity following. [CR8]

Students complete a questionnaire on their views about immigration. Then they take notes while listening to three characters of different nationalities speaking about their decision to immigrate. [CR4a] & [CR4b]

Students hear and read about the documentary Mojados, about illegal immigration to the U.S. [CR2a] & [CR8]

Students create and present a multimedia collage about the influence of immigrants on their community. [CR4b] & [CR5a]

</tbody>
</table>
Students read an article about renewable energy and complete a comprehension activity. [CR4b] & [CR7]

Students complete a graphic organizer with ideas about suggestions for job creation and benefits of job creation, listen to an audio selection about job creation in Spain and the European Union, and complete post-listening comprehension activities. [CR4b], [CR2a] & CR4a

Students read an article about jobs in the U.S. and complete a post-reading comprehension activity. They play a game matching salaries to careers and consider what type of job or business they would like to have, followed by an oral presentation on the topic. [CR2b], [CR4b] & [CR5a]

They practice audio interpretive skills by listening to a selection about the growth and development of small businesses in the U.S. [CR2b] & [CR4a]

Students read an article about choosing a job or career, and complete a self-checking comprehension activity about it. Then they complete a survey on opinions about the necessity of education to get a job. Then they practice audio interpretive skills by listening to a conversation between two friends about getting a job, followed by a post-listening comprehension activity. [CR2b], [CR4a] & [CR9]

Students express opinions about jobs of the future before reading about population growth, life expectancy, and the future job market, followed by self-checking comprehension activities. Then they read an article about the future of medicine and science and complete comprehension activities. [CR3a] & [CR2b]

Students listen to a conversation between two friends about jobs of the future, and complete a comprehension activity. Then they complete a chart with their ideas about which jobs will cease to exist in the future, prior to listening to a conversation between two friends about jobs that will cease to exist. Then they complete a comprehension activity. [CR4a] & [CR4b]

Students begin a graphic organizer of advantages and disadvantages of credit cards and then read about credit cards. Then they listen to a conversation between a college student and his mother concerning money issues and complete a post-listening activity.
Students play an interactive game to see how they can achieve different lifestyles in the future. Then they read about why they should budget, how to budget, and suggestions for budgeting, followed by identifying goals and actually budgeting money to achieve them. [CR4b]

Students continue writing/recording in the informal interpersonal writing/speaking journal Mi voz about characteristics of different jobs or about the advantages of being bilingual in the workplace. Then they exchange journals and write or record questions and comments. [CR3b]

Students view video, read, and hear passages about the Chinese economy, youth and unemployment in China, work and education in Mexico and Spain, renewable energy, work in the United States, choosing a job, jobs of the future, credit cards, personal finance, and complete pre-, during-, and post-viewing, reading, or listening activities. [CR2a], [CR2b], [CR4a], [CR4b] & [CR8]

Students practice vocabulary related to jobs in China, famous buildings in China, careers and professions, the Spanish economy and unemployment rate, the European Union’s measures to promote renewable energy, self-employment, job-hunting, jobs of the future, credit cards, and personal finance, completing formative assessments on several of these topics. [CR4b]

Students practice grammar topics related to si- clauses in the present, future, and past tenses; the imperfect tense of regular and irregular verbs; the past perfect subjunctive; the conditional perfect; sequence of tenses; and preterite tense. They also complete formative assessments on these topics. [CR4b]

Students use the embedded recording tool to practice presentational speaking about these topics: salaries in different countries, ideas on having one’s own business, jobs that will cease to exist in the future, and jobs in the United States. [CR5a]

**Assessments**

**Spoken Interpersonal Communication**

Students participate in a simulated conversation, an interview by a newspaper reporter of someone who speaks Spanish and works in
the business world (the students). [CR3a]

Students participate in a simulated conversation with a credit card company representative trying to sell a credit card, where they inquire about interest rates and ask for information on other terms and conditions. [CR3a]

Audio, Visual, and Audiovisual Interpretive Communication

Students listen to a dialogue between two classmates about finding a job in the U.S. Then they complete a listening comprehension activity. [CR4a]

Written and Print Interpretive Communication

Students participate in a conversation based on three job ads from Spanish-speaking countries that they have researched, including salary information that they have read and compared with jobs in the United States. [CR4b]

Spoken Presentational Communication

Students prepare a presentation on the topic “¿Qué necesito lograr para obtener el estilo de vida que quiero en el futuro?” in relation to information from print and audio sources. [CR5a]

¿Cómo influyen los sistemas de salud en la vida contemporánea? ¿Cómo contribuyen los sistemas de salud al bienestar de las comunidades?

| Sample Learning Activities/Resources | Student-centered questions: ¿Cómo es el sistema de salud en Costa Rica y Francia? ¿Cuáles son algunos cognados relacionados con las enfermedades en diferentes comunidades hispanohablantes? ¿Cómo se comparan los beneficios del sistema de salud de Costa Rica, Francia y Puerto Rico? ¿Cuáles son las fortalezas y debilidades del sistema de salud de los Estados Unidos? ¿Cuáles son las controversias dominantes de salud en el mundo y en los Estados Unidos? ¿Cuáles son los riesgos de salud en tu vida, hoy en día? ¿De qué maneras la actividad física y una dieta saludable contribuyen a tener una vida saludable? ¿Qué ideas puedes sugerirles a tu familia, a tus amigos y a ti mismo para mejorar la salud?

Students consider population and per capita income of residents of France and Costa Rica before reading about what a health-care system is and listening to a passage about the World Health Organization, completing comprehension activities. [CR8], [CR2a] & [CR4a]

Students create a KWL graphic organizer to complete with ideas about health care. Then they read about traditional and alternative medicine and after further research, complete a Venn diagram about the two types. [CR5b] & [CR7]

Students compare and contrast the health care systems of Costa Rica and France and then complete the KWL chart. [CR5b] & [CR8]

Students read and listen to information about the health care system in Puerto Rico and then complete a chart comparing and contrasting the health care system of Puerto Rico with those of Costa Rica and France. Students conduct further research on Puerto Rico. [CR2a], [CR4a] & [CR8]

Students read about health challenges faced by Hispanics, and complete a comprehension activity. [CR2b] & [CR4b]

Students practice expressing cognates in English and Spanish and then with translating a patient’s medical record. [CR4b]

Students consider the strengths and weaknesses of the United States health care system and then read and listen about the topic and conduct further research. This is followed by reading about traditional versus alternative medicine, and comprehension
Students prepare ideas for a debate on the health care system of the U.S., conducting further research and practicing note taking. [CR8]

Students complete an activity on health priorities worldwide, then read about the Panamerican Health Organization and complete comprehension activities. They complete a chart about health priorities (climate change, child mortality, poverty, hunger, malnutrition, and HIV-AIDS), their descriptions, statistics, and possible solutions; and they listen to a radio broadcast about world health, completing comprehension activities. [CR2b], [CR2a] & [CR4b]

Students read about how health issues affect them and complete a post-reading activity. They learn about the food pyramid and conduct further research on a healthy diet and benefits of exercise. They identify health dangers or risks that affect them and recommend how to minimize them. They write letters with recommendations for people with various health issues, along with a chart showing the basics of this information. [CR2b], [CR4b] & [CR3b]

In pairs, students create and present a multimedia brochure on how physical activity and a healthy diet contribute to overall health. [CR3a], [CR4a], [CR4b] & [CR5a]

Students read and complete activities about the format of the AP Spanish Language and Culture Exam, and on how to prepare for the different sections of the test. [CR4b]

Students view videos, read, and hear passages about what a health care system is, concepts related to health care, types of medicine, illnesses affecting Hispanics, the U.S. health care system, types of medicine in the U.S., alternative medicine, world health issues, exercise, and a healthy diet, completing comprehension activities before, during, and/or after viewing, reading, or listening. [CR2a], [CR2b], [CR4a], [CR4b] & [CR8]

Students practice vocabulary related to health and health care, cognates, diseases and illnesses, world health, the World Health Organization, and reducing health risks, completing formative
Students practice grammar topics related to present indicative, preterite, past perfect, imperfect progressive, subjunctive to express will or emotion, and subjunctive with impersonal expressions, completing formative assessments on these topics. [CR4b]

Students use the embedded recording tool to practice presentational speaking about these topics: differences between conventional and alternative medicine, results of a KWL chart about health systems of Costa Rica and France, a patient’s medical record, sentences using preterite and imperfect tenses, the status and obstacles of the health care system in the United States, the Panamerican Health Organization, a radio report on world health, recommendations for being healthy, and sentences using the subjunctive mood. [CR5a]

ADVANCED PLACEMENT®
STATISTICS
Course Overview

Statistics are used everywhere from fast food businesses ordering hamburger patties to insurance companies setting rates to predicting a student’s future success by the results of a test. Students will become familiar with the vocabulary, method, and meaning in the statistics which exist in the world around them. This is an applied course in which students actively construct their own understanding of the methods, interpretation, communication, and application of statistics. [C4] Each unit is framed by enduring understandings and essential questions designed to allow students a deep understanding of the concepts at hand rather than memorization and emulation. Students will also complete several performance tasks throughout the year consisting of relevant, open-ended tasks requiring students to connect multiple statistical topics together. [C4] The TI-83+/84 OR 89 calculator and computers will be used to explore the world of data and the patterns which can be found by analyzing this information as well as statistical relationships. [C5] General topics of study include "exploring data," "planning and design of a study," anticipating patterns," and "statistical inference."

Primary Textbook References and Resource Materials

AP Statistics content located in Blackboard coursework.

Selected, released free response questions from The College Board.

Various website resources including but not limited to: Exploring Data, Surfstat.australia, Hyperstat, and Online Statbook.

Overarching Enduring Understandings for the course

• Mathematics is a useful language for symbolically modeling and thus simplifying and analyzing our world.
• Mathematics is a logical and objective means of analyzing and solving problems.
• The effective communication of mathematics is essential to its application. [C4]

Topical Enduring Understandings for the course

• Students will understand that statistical information is a powerful, pervasive force in our world.
• Exploratory analysis of data makes use of graphical and numerical techniques to study patterns and departures from patterns. [C2a]
• Data must be collected according to a well-developed plan if valid information is to be obtained. [C2b]
• Probability is the tool used for anticipating what the distribution of data should look like under a given model. [C2c]
• Statistical inference guides the selection of appropriate models. [C2d]
• Students will understand that statistics can be used to make valuable, reliable inferences from empirical information. [C2d]
• The appropriate communication and interpretation of statistics is essential to avoiding statistical abuse and/or misunderstanding. [C4]
• Analysis of data is made possible through the use of calculator and computer technology. [C5]
Unit 1 – Exploring Univariate Data (3.5 Weeks)

Enduring Understandings
• Interpretation of data is dependent upon the graphical displays and numerical summaries. [C2a]
• Graphical displays are created for the purpose of analysis and communication. [C4]

Essential Questions
• How do we communicate data?
• How do we understand data?
• Can you lie with statistics? How and to what extent?

Knowledge and Skills
• Construct dotplots, stemplots, histograms, and cumulative frequency plots.
• Interpret dotplots, stemplots, histograms, and cumulative frequency plots.
• Describe center, shape, spread, clusters, gaps, outliers and other unusual features
• Measure center using mean and median
• Measure spread using range, interquartile range, and standard deviation
• Measure position using quartiles, percentiles, and standardized (z) scores
• Use boxplots (and modified) with the five number summary
• Understand the effect of changing units on summary measures
• Do normal calculations
• Use dotplots, back-to-back stemplots, and parallel boxplots
• Compare center and spread both within a group and between groups
• Discuss shape, outliers, center, and spread of distributions
• Compare position of different distributions using standardization

Sample Assessments/Activities
• Using one of the sites below (from the DASL website), students perform an analysis of the distribution of the data. Analysis includes graphically displaying the data, evaluating its ‘normalcy’, describing it numerically, and making claims about the distribution of individual data values. Students then locate an individual data point, find its standardized value, and determine its percentile ranking. Findings are presented in a format of their choice. [C2a, C4, C5]
• Students complete a variety of released free response items focused on summarizing and comparing univariate data.
Unit 2 – Exploring Bivariate and Categorical Data (4 Weeks)

Enduring Understandings
• Regression is an effective model for prediction. [C2a]
• There is a difference between causation and correlation. [C2a]

Essential Questions
• To what extent can we predict the future?
• Is correlation ever causation?
• How can modeling data help us to understand patterns?

Knowledge and Skills
• Create and analyze patterns in scatterplots
• Understand correlation and linearity
• Construct, interpret and use least-squares regression lines
• Construct and interpret residual plots
• Identify and describe outliers and influential points
• Make transformations to achieve linearity (logarithmic and power)
• Create and interpret frequency tables and bar charts
• Create and interpret marginal and joint frequencies for two-way tables
• Create and interpret conditional relative frequencies and determine association
• Compare distributions using bar charts

Sample Assessments/Activities
• Choose a problem that interests you involving a dependent variable and an independent variable. The sample data for this problem must consist of at least 20 data points and must come from your own research or from an official, reputable site on the World Wide Web. Using technology (TI-Interactive or other application), construct a scatterplot and then perform a correlation & regression analysis on this data set. Write a report on the data and its analysis which includes a complete reference for the source of your data, the computer analysis of your data (must consist of a scatterplot, correlation analysis and regression analysis) and one or two well-written paragraphs summarizing your interpretation of these results. Be sure to address both sides of the story statistically. [C2a, C5]
• Students complete a variety of released free response items focused on linear and non-linear regression.
Unit 3 – Planning and Conducting Studies and Experiments (3 Weeks)

Enduring Understandings
- Careful planning is essential to obtaining valid data. [C2b]
- Clarifying the question leads to appropriate methodology. [C2b]
- The analysis is only as good as the data. [C2b]
- Students will understand how to deconstruct statistical information in an effort to evaluate its validity and assess the aims of the authors in presenting the information. [C2b]

Essential Questions
- How do we obtain data?
- To what extent is all data biased?
- To what extent does data collection methodology affect results?
- How can variable be eliminated through randomization?
- How does one decide between an observational study, an experiment, and a simulation?
- To what extent can data be purposefully biased?

Knowledge and Skills
Methods of data collection:
- Census, Sample survey, Experiment, Observational study
Planning and conducting surveys
- Know the characteristics of a well-designed survey
- Understand populations, samples, and random selection
- Recognize sources of bias in sampling and surveys (undercoverage, voluntary response, etc.)
- Recognize and apply sampling methods (simple random sampling, stratified random sampling, and cluster sampling)
Planning and conducting experiments
- Know the characteristics of a well-designed and well-conducted experiment
- Understand treatments, control groups, experimental units, random assignments, and replication
- Recognize sources of bias (including confounding variables, the placebo effect, and blinding)
- Recognize and apply completely randomized designs
- Recognize and apply different experimental designs (randomized block design, matched pairs design)
Generalize results from collected data
Understand the types of conclusions that may be drawn from collected data

Sample Assessments/Activities

- Students find and statistically analyze an article in a newspaper, magazine, or other current publication. Students consider: [C2b, C4, C3]
  - Is this an observational study or an experiment?
  - What was the sampling design or experimental design?
  - What are the possible biases in the study?
  - How was randomization utilized?
  - To what extent are the conclusions in the article justified and able to be generalized?

- Students complete a variety of released free response items focused on sampling methods, simulations, and experimental design.
Unit 4 – Probability and Random Variables (3.5 Weeks)

Enduring Understandings

- Probability models are useful tools for making decisions and predictions. [C2c]
- Students will understand that probability is the basis of statistical inference. [C2c]
- The notion and behavior of a random variable is foundational to understanding probability distributions. [C2c]

Essential Questions

- When is probability a sure thing?
- How can we base decisions on chance?
- What is a random variable?
- How may random variables be combined?

Knowledge and Skills

- Create and interpret probability models
- Find and interpret long-run relative frequencies
- Apply the Law of Large Numbers
- Apply the addition and multiplication rules
- Understand independence and disjoint
- Understand conditional probability
- Create and apply simulations to access their probability distributions [C5]
- Mean and standard deviation for sums and differences of independent random variables.

Sample Assessments/Activities

- Students design and play a game of chance (using dice or cards) to illustrate their understanding of the rules of probability, expected value, the law of large numbers, and the nature of random variables. Students first use simulation [C5] to 'test' the variance of their game and follow up by actually playing the game with classmates and subsequently write a summary of their results. Results help students to conceptualize the notions of sampling variability and set the stage for the study of sampling distributions. [C2c]
- Students complete a variety of released free response items focused on probability and expected value.
Unit 5 – Binomial, Geometric, and Sampling Distributions (3.5 Weeks)

Enduring Understandings

- Many discrete phenomena may be described and thus predicted by binomial and geometric models. [C2b, C2c]
- The normal distribution and central limit theorem are essential to analyzing samples of data. [C2b, C2c]

Essential Questions

- How can modeling predict the future?
- To what extent does our world exhibit binomial and geometric phenomena?
- How do sampling distributions relate to population distributions?
- What is a normal distribution?
- How does the normal distribution apply to the real world?

Knowledge and Skills

- Recognize and apply the binomial distribution
- Find the mean and standard deviation of a binomial distribution
- Recognize and apply the geometric distribution
- Find the geometric mean
- Properties of the normal distribution
- The normal distribution as a model for measurements
- Sampling distribution of a sample proportion
- Sampling distribution of a sample mean
- Central Limit Theorem
- Sampling distribution of a difference between two sample proportions
- Sampling distribution of a difference between two sample means

Sample Assessments/Activities

- Students visit the Rice Virtual Lab to explore the Central Limit Theorem and sampling distributions. Students construct their understanding of how sample size and the shape of the population distribution affect the sampling distribution of the mean (and other statistics). [C2c, C5]
- Students complete a variety of released free response items focused on binomial, geometric, and sampling distributions.
Unit 6 – Introduction to Inference (3.5 Weeks)

Enduring Understandings
- Students will understand the underpinnings of statistical inference. [C2d]
- Inference is based upon chance. [C2d]
- Confidence intervals are effective tools for estimation. [C2d]
- Tests of significance and confidence intervals drive decision making in our world. [C2d]
- Error analysis is a critical component of significance testing. [C2d]

Essential Questions
- What is inference?
- How can decisions be based on chance?
- To what extent should decisions be based on chance?
- How can we determine the mean of a population with a “small” sample?
- When are tests of significance and confidence intervals used?
- How can one prepare for errors from significance tests?

Knowledge and Skills
- Check assumptions for confidence intervals and significance tests
- Find confidence intervals
- Conduct significance tests
- Type I, Type II errors, and Power
- Find the probability of Type I errors
- Understand the relationship between the probabilities of Type I and Type II errors

Sample Assessments/Activities
- Class activity to determine which students had ESP (extra sensory perception). Students work in pairs setting up an experiment to determine if their partner has ESP. Data is then analyzed through conducting a significance test as well as a discussion of significance level and probability of Type I and Type II errors. [C2d, C4]
Unit 7 – Inference for Means and Proportions (3.5 Weeks)

Enduring Understandings
- Confidence intervals are effective tools for estimating the mean of a population. [C2d]
- Significance tests determine the likelihood of a sample. [C2d]
- The analysis is only as good as the data. [C3]
- Confidence intervals are effective tools for estimating the proportion of a population. [C2d]
- Significance tests determine the likelihood of a sample. [C2d]

Essential Questions
- How can we determine the mean of a population with a “small” sample?
- To what extent are significance tests reliable?
- How can we determine the proportion of a population with a “small” sample?
- To what extent are significance tests reliable?

Knowledge and Skills
- Check assumptions for confidence intervals and significance tests of means (both 1 sample and 2 sample)
- Find confidence intervals for means (both 1 sample and 2 sample)
- Conduct significance tests for means (both 1 sample and 2 sample)
- Determine sample size for a desired margin of error
- Check assumptions for confidence intervals and significance tests of proportions (both 1 sample and 2 sample)
- Find confidence intervals for proportions (both 1 sample and 2 sample)
- Conduct significance tests for proportions (both 1 sample and 2 sample)
- Determine sample size for a desired margin of error

Sample Assessments/Activities
- Parking lot proportions: Students venture out to the school parking lot and collect data about the vehicles in the staff lot as well as the student lot. Data such as car color, make, country of origin, and type of car. Students then construct confidence intervals and run significance tests to determine if and what differences there are between the students' cars and staffs' cars. [C2d, C4]
- Students complete a variety of released free response items focused on inference for means and proportions.
Unit 8 – Inference for Goodness of Fit, Independence, Homogeneity, and Regression (4 Weeks)

Enduring Understandings

• Significance tests can also determine the likelihood of a sample from a series of proportions. [C2d]
• Significance tests can also determine whether two variables are independent. [C2d]
• Significance tests can determine the likelihood of a bivariate sample’s slope. [C2d]

Essential Questions

• How can we test a series of proportions?
• How can we verify that two variables are independent?
• How can we test the slope of a correlation?

Knowledge and Skills

• Check assumptions for both chi-squared goodness of fit and chi-squared test of independence
• Conduct significance tests for both chi-squared goodness of fit and chi-squared test of independence
• Check assumptions for inference for regression or a linear regression test.
• Conduct significance tests for linear regressions

Sample Assessments/Activities

• Have you ever wondered why the package of M&Ms you just bought never seems to have enough of your favorite color? Or, why is it that you always seem to get the package of mostly brown M&Ms? What’s going on at the Mars Company? Is the number of the different colors of M&Ms in a package really different from one package to the next, or does the Mars Company do something to insure that each package gets the correct number of each color of M&M? Students run a complete significance test both in groups and as an entire class to justify their results. [C2d, C3, C4]
• Students complete a variety of released free response items focused on inference for independence, goodness of fit, and regression.
Unit 9 – Review (3 Weeks)

Students review and prepare for the AP exam. Students take released exams and practice released free response questions. Students participate in peer scoring free response questions.

Unit 10 – Culminating Project (3 Weeks)

The purpose of the AP course in statistics is to introduce students to the major concepts and tools for collecting, analyzing, and drawing conclusions from data.

Overarching ideas:

- Mathematics is a useful language for symbolically modeling and thus simplifying and analyzing our world.
- Mathematics is a logical and objective means of analyzing and solving problems.
- The effective communication of mathematics is essential to its application.

Statistics Ideas:

- Students will understand that statistical information is a powerful, pervasive force in our world.
- Exploratory analysis of data makes use of graphical and numerical techniques to study patterns and departures from patterns.
- Data must be collected according to a well-developed plan if valid information is to be obtained.
- Probability is the tool used for anticipating what the distribution of data should look like under a given model.
- Statistical inference guides decision making.

Students’ task: To work in groups of 2 or 3 to complete a project that demonstrates thorough understanding of the ideas completed in class.

Stage 1: Design a proposal.

Students decide in what way they will demonstrate an understanding of the aforementioned ideas. This is completely open-ended, many ideas will be brainstormed in class. The proposal must include a timeline and date for presentation to the class. A
typical project is a complete statistical study. [C3, C4, C5]

Stage 2: Criteria for final presentation.

Stage 3: Complete the project.

There will be several checkpoints along the way (most determined by the students). These include but are not limited to: initial proposal, data collection, inference calculations, generalizations, rough draft of presentation.
ADVANCED PLACEMENT®
U.S. GOVERNMENT
& POLITICS
AP US Government and Politics Course Syllabus

**COURSE DESCRIPTION:** AP US Government and Politics presents an analytic perspective on American politics. The course introduces students to the ideals, institutions, and processes that direct the daily operations of our government and shapes our public policies. Students will use a variety of theoretical perspectives and explanations to interpret and analyze the political landscape to develop a better understanding of the strengths and weaknesses of our system of government.

**COURSE OBJECTIVES:**
- Explain the American system of government and evaluate its strengths and weaknesses
- Read, understand, and interpret primary source documents and contemporary news analyses related to American government and public policy
- Analyze and interpret data and other relevant information to US government and politics
- Write analytical and interpretive essays demonstrating an understanding of the ideals, institutions and processes of the American political system

**COURSE LENGTH:** One Semester

**REQUIRED TEXTS:** Government in America: People, Politics, and Policy, 14/E

Advanced Placement U.S. History

AP U.S. History is a college-level survey course of United States history from the pre-Colombian period to the present.

Themes

The course is structured both chronologically and thematically with support from the textbook and various primary and secondary sources. The seven themes from the AP U.S. History course description can be found woven throughout the units. [CR4] These themes include the following:

1. Identity (ID)
2. Work, Exchange, and Technology (WXT)
3. Peopling (PEO)
4. Politics and Power (POL)
5. America in the World (WOR)
6. Environment and Geography (ENV)
7. Ideas, Beliefs, and Culture (CUL)

Historical Thinking Skills

Activities and assessments in this course are designed around and utilize the historical thinking skills identified in the AP U.S. History course description. These skills include the following:

- Chronological Reasoning
  - Historical Causation
  - Patterns of Continuity and Change Over Time
  - Periodization
- Comparison and Contextualization
  - Comparison
  - Contextualization
- Crafting Historical Arguments from Historical Evidence
  - Historical Argumentation
  - Appropriate Use of Historical Evidence
- Historical Interpretation and Synthesis
  - Interpretation
  - Synthesis

Textbook

Fraser, James W. By the People: A History of the United States, AP® Edition.

Boston: Pearson, 2015 [CR1a]
**Primary Source Analysis:**

This course uses a variety of primary sources that the student can analyze for historical study and interpretation. In many cases, the student uses these sources as the evidential basis for a writing prompt. Specific examples of primary sources used throughout the course can be found in the unit descriptions of this syllabus. [CR1b]

**Secondary Sources:**

Secondary sources are scattered throughout the course and provide the student the opportunity to evaluate the author’s thesis based upon evidence that may or may not have been available to the author. Specific examples of secondary sources used throughout the course can be found in the unit descriptions of this syllabus. [CR1c]

**Writing Focus**

Historical writing, including synthetic development and evidential defense of a thesis, will be a main focus of this course. The student will regularly practice scholarly writing, and will be given opportunities to improve this skill based upon analysis of and comparison to both high- and low-quality sample responses to the same prompt. The grading of such writing will be based upon factors such as the strength of the thesis statement, the amount and quality of supporting evidence, the overall organization of the argument and, to a lesser extent, the mechanics of the writing itself.
Semester A

Unit 1: Can the Colonies Survive?

**Period 1:** 1491–1607  [CR2]
**Period 2:** 1607–1754

**Text Readings:** *By the People*, Chapters 1, 2, 3, and 4

**Major Topics:** In Unit 1, the student studies the diverse variety of social, political, and economic structures of Native American peoples before the arrival of Europeans (PEO-1); the first European contact with native peoples and the Columbian exchange (PEO-4) (WXT-1); national and personal reasons for colonization (ENV-1); British colonial evolution into three distinct regions (CUL-1) (ID-4) (ID-5) (CUL-4); and the rise of slavery in the colonies (ID-6) (POL-1).  [CR4]

**Primary Sources (sampling of examples, not full list):** *Description of Tenochtitlán* (1520); *Mayflower Compact, Model of Christian Charity* by John Winthrop; *Mayflower Compact mural* painted by Allyn Cox; *The Enlarged Salem Covenant of 1636*  [CR1b]

**Maps:** interactive map of 13 colonies; town map of colonial New England

**Secondary Sources:** *Slavery and Freedom: The American Paradox* by Edmund Morgan  [CR1c]

**Assignments and Assessments:** Complete homework questions on the topics listed above; primary source analysis where the student weighs the benefits of the New Laws of 1542; direct instruction and assessment on thesis writing; written essay for art analysis of the significance of the Mayflower Compact; long-essay response to one of these prompts: comparing Spanish and British colonization efforts, defending or refuting the claim that American society became more democratic in the period 1750–1780, analyzing how domestic and international trade shaped the New England and Chesapeake regions into distinct societies  [CR11]; essay comparing two native American cultures before European contact (ENV-2); multiple choice test on topics above
Unit 2: The Constitutional Challenge

**Period 2:** 1607–1754

**Period 3:** 1754–1800 [CR2]

**Text Readings:** *By the People*, Chapters 5 and 6

**Major Topics:** Unit 2 focuses on the birth of a new nation and the creation of the Constitution (ID-1) (ENV-3). The student will research and write about the events that led to the founding of this new nation of colonies, as well as the Founding Fathers and colonists who helped determine the path of the nation (WOR-2). [CR4]

**Primary Sources (sampling of examples, not full list):** *Paul Revere’s engraving of the Boston Massacre* (1770); *The Rights of the Colonists* by Sam Adams (1772); *Grenville Defends Britain’s Right to Tax* (1766); *Franklin Testifies About Colonial Loyalty* (1766); *Common Sense* by Thomas Paine (1776), *Declaration of Independence* (1776); *Articles of Confederation* (1777); *U.S. Constitution* (1787); *Federalist 10* and *Federalist 51* (1787)

**Image analysis:** *Paul Revere’s engraving of the Boston Massacre* (1770) [CR1b]

**Maps:** triangular trade map; selected events of the French and Indian War (interactive), North America before 1754 and after 1763

**Assignments and Assessments:** Write an argumentative essay persuading the king to continue or repeal mercantilist policies (WOR-1); document analyzer for Stamp Act sources; construct chronology of events leading to revolution; opening paragraph with thesis statement about the Articles of Confederation and how its features were developed to solve problems that were present under colonial rule by Great Britain [CR13b] (WOR-5); document-based question (DBQ) on ratification debate; essay (including a thesis statement and supporting historical evidence) defending or refuting the claim that the English colonies were settled haphazardly [CR5] (ENV-2); multiple choice test on topics above
Unit 3: The Dawn of a New Nation

Period 3: 1754–1800
Period 4: 1800–1848 [CR2]
Text Readings: By the People, Chapters 7, 8, and 9

Major Topics: In Unit 3, the student will closely follow the first several presidents and the establishment of a two-party political system (POL-2). The student will also spend some time learning how to analyze maps, political cartoons, and court documents. [CR4]

Primary Sources (sampling of examples, not full list): George Washington’s Inaugural Address (1789); George Washington’s Farewell Address (1796); George Washington’s Whiskey Rebellion Proclamation (1794); Hamilton’s Opinion as to the Constitutionality of the Bank of the United States (1791); The Alien and Sedition Acts (1798); Abigail Adams personal letter (1776); Martha Ballard Diary; The Interesting Narrative of the Life of Olaudah Equiano, or Gustavus Vassa, The African (1789); Monroe Doctrine (1823)

Image analysis: Embargo Act of 1807 political cartoon; Mad Tom in a Rage political cartoon (1802; presentation on how to analyze political cartoons) [CR7] (WXT-2)

Maps: map of the Lewis and Clark Expedition (ID-2); War of 1812 Gulf region; slavery in the United States 1790 vs. 1830; presentation on how to analyze historical maps

Assignments and Assessments: Assume role of Jefferson and Hamilton and write arguments related to the necessary and proper clause (WXT-6) (POL-5); historical interpretation opening paragraph and thesis on Adams’ presidency; Jefferson political cartoon analysis with respect to audience, argument, format, and purpose (sources for this activity are cited above) [CR7] (POL-6); long-essay on how contributions of women, African Americans, and Native Americans caused cultural shifts [CR8] (CUL-2); analysis of John Marshall Supreme Court opinions; essay identifying and defending a date that best describes the beginnings of American independence [CR5] [CR10]; multiple choice test on topics above; stimulus-based multiple choice test based on Units 1, 2, and 3; DBQ requiring students to explain how the French and Indian War altered the economic, political, and ideological relations between Great Britain and the American Colonies [CR9]

CR7—The course provides opportunities for students to analyze evidence about the past from diverse sources, such as written documents, maps, images, quantitative data (charts, graphs, tables), and works of art.

—Appropriate use of historical evidence

CR8—The course provides opportunities for students to examine relationships between causes and consequences of events or processes.

—Historical causation

CR10—The course provides opportunities for students to investigate and construct different models of historical periodization.

—Periodization
Unit 4: Antebellum America

Period 4: 1800–1848
Period 5: 1844–1877 [CR2]
Text Readings: By the People, Chapters 9, 10, 11, and 12

Major Topics: In Unit 4, the student will study the growth of the country in several areas, including population, land expansion (POL-6) (WOR-6), economics (WXT-5) (WXT-6), immigration (PEO-2), and reform movements (PEO-6) (CUL-5). [CR4]

Primary Sources (sampling of examples, not full list): Bank Veto Message (1832); Transcript of President Andrew Jackson’s Message to Congress “On Indian Removal” (1830); James Monroe calls for Indian removal (1825); Cherokee Wish to Stay on Their Land (1830)

Data analysis: voter participation in elections 1812–1840; number of different newspapers published in the United States 1775–1835 [CR1b]

Political cartoon analysis: King Andrew the First cartoon (1833)

Maps: Oregon Trail

Assignments and Assessments: Write opening paragraph and thesis for analysis of Andrew Jackson’s election in 1828 (POL-5); research then interview Andrew Jackson; DBQ defending or opposing the passage of the Indian Removal Act based on primary-source articles for and against its passage [CR13a] (ID-5) (POL-3) (PEO-5); essay identifying Thomas Jefferson or Andrew Jackson as the most-qualified claimant of the title “representative of the common man” [CR3]; multiple choice test on topics above

CR13a—The course provides opportunities for students to combine disparate, sometimes contradictory evidence from primary sources and secondary works in order to create a persuasive understanding of the past.

CR3—The course provides opportunities for students to apply detailed and specific knowledge (such as names, chronology, facts, and events) to broader historical understandings.
Unit 5: Sectional Strife Rising

Period 4: 1800–1848  
Period 5: 1844–1877  
Text Readings: By the People, Chapters 11, 12, and 13

Major Topics: In Unit 5, the student examines the growth of the abolitionist movement and the Southern defense of slavery in the pre-Civil War period (CUL-6). This examination includes the role of the Mexican War in fueling sectional tension about land and slavery, and the events of the 1850s and early days of the 1860s that resulted in Lincoln’s election and the Southern secession (WOR-6) [CR4].

Primary Sources (sampling of examples, not full list): Library of Congress collection of early anti-slavery sources; excerpt of Liberator (1831), Excerpt from Narrative of the Life of Frederick Douglass, an American Slave (1845); Letter to Garrison from Harriet Beecher Stowe (1853), Polk’s War Message (1846), Thoreau defends Harpers Ferry Raid (1859), John Brown defends himself (1859)

Data analysis:
chart differentiating between Northern and Southern economies in 1860

Maps: U.S. in 1860: Free States, Slave States, and Territories; Distribution of Votes in the House of Representatives on the Declaration of War, June 4, 1812; Routes of American Indian Removal, 1830s

Assignments and Assessments: Complete a long-essay on how supporters defended slavery (WXT-4); document analyzer for Mexican War; DBQ analyzing territorial expansion 1800–1855 and how opponents and supporters shaped public policy in various ways across this period (PEO-5); short answer analysis of works of art—that support either the Union or the Confederacy—explaining the artists’ purpose and argument and identifying evidence used (and ignored) by the by the artist in their claim that the Union or the Confederacy was “on the side of right” [CR7]; multiple choice test on topics above
Unit 6: The United States of America?

Period 5: 1844–1877
Text Readings: By the People, Chapters 14 and 15

Major Topics: In Unit 6, the student analyzes the Civil War and Reconstruction, including contributions of military generals, soldiers, African Americans, authors, and political leaders. The unit examines the tensions that defined the Civil War and the new tensions that Reconstruction policies sought to address (CUL-2).

Primary Sources (sampling of examples, not full list): Confederate and Union accounts of Fort Sumter (1861); the Gettysburg Address (1863); O Captain! My Captain! (1888) (CUL-3); Lincoln’s Second Inaugural Address (1865); various primary sources on PBS.org’s Reconstruction: The Second Civil War website

Political Cartoon analysis: And Not This Man? (1865)

Image analysis: Matthew Brady Civil War photographs [CR1b]

Data analysis: significant differences between the North and the South during the Civil War; Venn diagram of qualitative data comparing North, South, and West during the Civil War; bar graph of casualty rates of American wars

Maps: map of major Civil war battles 1861–63; African American and White Participation in Constitutional Conventions, 1867–1868

Assignments and Assessments: Analysis of Matthew Brady Civil War photographs; comparison of primary documents from Northern and Southern view of the events at Fort Sumter [CR11]; opening paragraph and thesis for essay of Civil War casualty rates; long-essay on contextualizing the causes of changes in Lincoln’s rhetoric from 1858 debates to the Emancipation Proclamation [CR12]; interpret graph of American war casualty rates; reconstruction primary document analysis (POL-5); essay supporting or refuting the claim (using evidence) that former slaves would identify the period following the Compromise of 1877 as “worse than slavery.” [CR3] [CR5] (POL-6); multiple choice test on topics above; stimulus-based multiple choice test based on Units 4, 5, and 6; DBQ where students support or refute a claim that the Constitution was partly to blame for the breakdown of the Union

Semester B

Unit 1: The Gilded Age

Period 6: 1865–1898
Period 7: 1890–1945 [CR2]

Text Readings: By the People, Chapters 16, 17, and 18

Major Topics: In Unit 1, the student analyzes the extent to which society changed once Reconstruction ended in 1877 (CUL-3). Political corruption, westward expansion and new frontiers, new immigration, and Populist discontent and reform will all be examined (ENV-4) (ENV-5) (ID-7). [CR4]

Primary Sources (sampling of examples, not full list): Atlanta Compromise (1895); The Souls of Black Folk (1903); The Significance of the Frontier in American History (1893); Gospel of Wealth (1889); Ida Tarbell Criticizes Standard Oil (1904)

Political Cartoon analysis:
The Bosses of the Senate (1889)

Image analysis:
Female Typists photo (1902)

Data analysis:
European immigration 1871–1910; immigration 1880–1930; indexed price 1870–1899

Assignments and Assessments: Write diary of an Indian Fighter [CR12]; document analysis of various viewpoints on Standard Oil monopoly, write recommendation for public policy; creative writing piece on immigration and urban growth (WOR-3); one-paragraph reflection on the Gilded Age; change over time long-essay, choice of topics: Social Darwinism leading to conservatism and reform, immigration impact on American life, impact of industrialization on farmers during the Gilded Age [CR9] (WXT-3) (WXT-7); essay where students compare and contrast challenges and opportunities available to immigrants in the North and West between 1865–1910 (PEO-3); multiple choice test on topics above

CR12—The course provides opportunities for students to connect historical developments to specific circumstances of time and place, and to broader regional, national, or global processes.

—Contextualization

CR9—The course provides opportunities for students to identify and analyze patterns of continuity and change over time and connect them to larger historical processes or themes.

—Patterns of continuity
Unit 2: Progressive or Regressive? The Road to World War

Period 7: 1890–1945
Text Readings: By the People, Chapters 19 and 20

Major Topics: Unit 2 focuses on the expansion of the United States as a result of American imperialism (POL-6), a movement that bettered the lives of many Americans through progressive reforms (WXT-8), and a global conflict that had domestic and foreign consequences for the United States (ID-3) (WOR-4). [CR4]

Primary Sources (sampling of examples, not full list): Grover Cleveland Message to Congress (1893); The Jungle (1906); Carrie Chapman Catt address to Congress (1917); Eugene V. Debs speech at sentencing (1918); Wilson’s 14 Points Address (1918); competing statements from 1920 presidential candidates on foreign policy

Secondary Sources:

Maps:
Spanish American War Strategic Map; Allied and Central Powers of World War I [CR1b]

Political Cartoon analysis:
Sugar Means Ships World War I cartoon; Bad Trusts (1907)

Data analysis:
European immigration 1871–1910; immigration 1880–1930; indexed price 1870–1899

Assignments and Assessments: Complete a written analysis of competing primary sources on Hawaii annexation (statements by Queen Liliuokalani and Senator Albert Beveridge) [CR11] [CR13a]; multi-paragraph editorial supporting or refuting claim that yellow journalism caused the Spanish-American War [CR8] (WOR-7); reform movement document analysis; long-essay on arguments Wilson used for declaration of war; National Archives poster analysis; Treaty of Versailles DBQ; essay analyzing the success of progressive reformers in politics, urban life, and working conditions; multiple choice test on topics above

© 2008 Connections Education LLC. All rights reserved.
Unit 3: It Was the Best of Times, It Was the Worst of Times

Period 7: 1890–1945
Text Readings: By the People, Chapters 21 and 22

Major Topics: In Unit 3, the student examines the 1920s, a decade filled with social, cultural, moral, and technological change (CUL-6) (CUL-7). Immigration restrictions, racial tension, evolving rights of women, and the stock market crash that sparked the Great Depression will all be analyzed (PEO-7) (ID-8) (ID-3). [CR4]

Primary Sources (sampling of examples, not full list): *four poems by Langston Hughes; What the Civilian Conservation Corps Is Doing for Colored Youth* (1937); *Civilian Conservation Corps Reforestation Relief Act* (1933)

Political Cartoon analysis: *It is Evolution not Revolution Gentleman* (1934)

Image analysis: government advertisement for Social Security (1935)

Data analysis: unemployment figures 1920–1945

Assignments and Assessments: Complete a first-person creative writing piece assuming role of 1920s’ figure; long-essay on what caused the economy to collapse in the 1920s [CR8]; primary document analyzer on Civilian Conservation Corps; short answer writing analyzing two descriptions of the New Deal and evaluating which one accurately assesses its effectiveness [CR6] [CR13a] (WXT-8) (POL-4); multiple choice test on topics above; stimulus-based multiple choice test based on Units 1, 2, and 3; DBQ describing the extent that women were affected by the political and economic developments during 1890–1925 [CR9]

CR8—The course provides opportunities for students to examine relationships between causes and consequences of events or processes.

—Historical causation

CR6—The course provides opportunities for students to identify and evaluate diverse historical interpretations.

—Interpretation

CR13a—The course provides opportunities for students to combine disparate, sometimes contradictory evidence from primary sources and secondary works in order to create a persuasive understanding of the past.
Unit 4: World War Once Again Plagues the Planet

Period 7: 1890–1945
Period 8: 1945–1980 [CR2]
Text Readings: By the People, Chapters 22, 23, and 24

Major Topics: In Unit 4, the student analyzes the foreign policy tensions of the 1930s that led to the outbreak of World War II. The war itself is examined with a focus on the foreign policies and military strategies of the United States, and the effect the war had on the American home front (ID-7). The unit ends with an analysis of the origins and early years of the Cold War (ID-3).

Primary Sources (sampling of examples, not full list): Franklin Roosevelt’s address to Congress after Pearl Harbor (1941); Japanese Americans Pledge Loyalty (1941); the Fourteenth Amendment (1868)

Political Cartoon analysis:
Who’s next to be liberated from freedom, comrade? (1948)

Image analysis:
The student creates a photomontage using images from a web-inquiry on the Holocaust.

Data analysis:
Gallup poll data on U.S.-Soviet relations 1945–1948

Assignments and Assessments: Complete an editorial arguing a position (isolation or intervention) on U.S. involvement in World War II based upon evidence available at the time [CR13b]; DBQ on internment of Japanese Americans, including interpretation of the Fourteenth Amendment—which was passed following the Civil War—to this era [CR13b]; web-inquiry on the Holocaust; creative writing assignment advising president on how the U.S. should act after World War II, describing expected outcomes from taking militaristic or diplomatic stances with the USSR [CR8]; essay providing evidence to defend or refute the claim that U.S. foreign-policy decisions during 1917–1945 were legitimized by the idea that the U.S. was making the world “safe for democracy” [CR5] (ID-3); multiple choice test on topics above

CR13b—The course provides opportunities for students to apply insights about the past to other historical contexts or circumstances, including the present.

CR5—The course provides opportunities for students to develop coherent written arguments that have a thesis supported by relevant historical evidence. —Historical argumentation

CR8—The course provides opportunities for students to examine relationships between causes and consequences of events or processes. —Historical causation
Unit 5: The Postwar Era

Period 8: 1945–1980
Text Readings: By the People, Chapters 24, 25, 26, and 27

Major Topics: In Unit 5, the student analyzes the two decades that followed World War II, with emphasis on the Red Scare, the civil rights movement, the Vietnam War, and the rise of protest movements (POL-7) (WOR-8) (CUL-6) (ID-8). [CR4]

Primary Sources (sampling of examples, not full list): Video clip of Joe McCarthy testimony (1954); Richard Nixon’s Checkers Speech (1952); Martin Luther King speech on Montgomery Bus Boycott (1955); John F. Kennedy civil rights address (1963); Martin Luther King’s I Have a Dream speech (1963); Malcolm X’s The Ballot or the Bullet speech (1964); Bob Dylan’s The Times They Are A-Changin’ (1964)

Political Cartoon analysis: Pursuit of Nixon Scandals (1973)

Image analysis:Untitled by Jackson Pollack (1951)

Data analysis:

Assignments and Assessments: Complete short answer writing contextualizing reasons why many Americans have an unfavorable view of Joe McCarthy; long-essay on the impact of Eisenhower’s presidency; speech analysis on civil rights movement rhetoric; DBQ on the evolution of the civil rights movement [CR9]; music review of Bob Dylan and the Beatles; short answer writing identifying one piece of evidence from the Cold War era that supports one of two differing viewpoints on the appropriateness of the government’s search for communists among its own ranks (sources for this question are cited in the “Secondary Sources” section above) [CR6]; multiple choice test on topics above

CR1c—The course includes secondary sources written by historians or scholars interpreting the past.

CR9—The course provides opportunities for students to identify and analyze patterns of continuity and change over time and connect them to larger historical processes or themes.
—Patterns of continuity and change over time

CR6—The course provides opportunities for students to identify and evaluate diverse historical interpretations.
—Interpretation
Unit 6: A New Age... A New Era

Period 8: 1945–1980
Text Readings: By the People, Chapters 27, 28, 29, and 30

Major Topics: In Unit 6, the student examines the most recent era of U.S. history with emphasis on scandals, the end of the Cold War, the changing nature of terrorism, new technologies, and expanding equal protection for more groups of Americans (POL-4) (WOR-8).

Primary Sources (sampling of examples, not full list): Watergate audiotapes

Data analysis:

Assignments and Assessments: Complete a comparison chart of Presidents Ford and Carter and a paragraph arguing which president was most effective; creative writing time capsule [CR10]; ranking historical events paragraph [CR11]; essay assessing the importance and pervasiveness of new technologies from the last two or three decades on economics, society, and politics [CR3] (CUL-7); multiple choice test on topics above; stimulus-based multiple choice test based on Units 4, 5, and 6; short answer writing identifying one piece of evidence from the late 1990s or early twenty-first century that supports one of two differing viewpoints on the cause of the collapse of the Soviet Union; short answer writing explaining the link between controversial government programs and the outcome of the election of 2012

CR1—The course provides opportunities for students to compare historical developments across or within societies in various chronological and geographical contexts.

CR10—The course provides opportunities for students to investigate and construct different models of historical periodization.

CR3—The course provides opportunities for students to apply detailed and specific knowledge (such as names, chronology, facts, and events) to broader historical understandings.

ELEMENTARY SCHOOL ELECTIVE COURSES (K-5)

ELEMENTARY CHINESE I

Availability: Grades 3-5

Chinese I is an introductory-level course that will introduce the student to Mandarin Chinese. The units are designed to introduce the student to Chinese language and culture through familiar topics such as my family, my week, and food. Culture is presented throughout the course to help the student make connections between his culture and the culture of people in the Mandarin-speaking world.

Units

My World

You will begin to study Mandarin, the official language of China and many other countries. Millions of people around the world speak Mandarin. This unit will teach you about Mandarin's importance in the world. You will also learn Mandarin words that describe your family. By the end of the unit, you will know how to introduce yourself and your family to others.

My Time

How is your life different from the life of a student who speaks Mandarin? In this unit, you will learn how students spend their time in countries where Mandarin is spoken. You will look for ways their activities are alike and different from yours. This unit will also introduce you to the Mandarin words that describe your everyday activities and time at school.

My Food

All cultures have different traditional foods, these are foods that are eaten for special occasions or have been eaten since a long time ago. Just like you have your own food traditions, other cultures have their own food traditions, too. In this unit, you will learn about food customs in Mandarin-speaking countries. You will also learn words that describe food in Mandarin.
**ELEMENTARY CHINESE II**

Availability: **Grades 3-5**

In this course, the student will further develop communication skills in Mandarin Chinese at a more advanced level. The student will continue to learn about Chinese culture by exploring historic places in China and other Mandarin-speaking countries, and by learning about holidays and special traditions celebrated there. In addition, the student will practice Mandarin Chinese skills by continuing to converse with a native Mandarin speaker.

**Units**

**My Travels**

You will take a trip through historical places in China and other Mandarin-speaking countries. During this experience, you will learn to describe people, yourself, places, and types of transportation.

**My Holidays**

What holidays do you celebrate? The people in the Mandarin-speaking world may celebrate some of your favorite holidays. They also have their own special holidays, too. In this unit, you will learn about the important holidays celebrated in China and other Mandarin-speaking countries. You will learn about why the holiday is celebrated, its history, and its importance to students your age in the Mandarin-speaking world. You will compare what you learn about the Mandarin-speaking world with your own country.

**My Home**

What are homes like in the Mandarin-speaking world? How are they different from homes in the United States? In this unit, you will learn about a typical home in some Mandarin-speaking countries, including the uses for different rooms of the home. You will find out how the activities that happen in the rooms are alike and different from yours. In this unit, you will also learn the names of some objects that can be found in a home, like furniture, clothes, flowers, and pets.
**ELEMENTARY SPANISH I**

Availability: **Grades 3-5**

Elementary Spanish I is an introductory-level course that will introduce the student to Spanish. The units are designed to introduce the student to Spanish language and culture through familiar topics such as family and friends, my home, and food. Culture is presented throughout the course to help the student make connections between his culture and the culture of people in the Spanish-speaking world.

**Units**

**My Family and Friends**

Did you know that millions of people speak Spanish in countries all around the world? In this unit, you will begin your study of Spanish, the language of Spain and many other countries. This unit will teach you about the importance of Spanish to the world at large, as well as where the language comes from and the different ways it is spoken. You will also learn the Spanish words for the members of your family, how to say your name and where you are from, and how to count from 1 to 10. By the end of the unit, you will know the expressions to introduce yourself and your family to others.

**My Home**

How does your home life compare to that of a student in the Spanish-speaking world? In this unit, you will learn about the housing and lifestyle of a Spanish-speaking student.

You will be introduced to the Spanish words for the rooms of a house, as well as the activities and traditions that relate to those rooms. This unit will also introduce you to the Spanish words for objects and actions related to each room, how to count from 11 to 19, and how to count from 20 to 100 by tens.

**My Food**

What kinds of food do people eat in the Spanish-speaking world? In this unit, you will take a trip through South America to learn about the popular food and drinks of several Spanish-speaking countries. You will be introduced to Spanish words related to mealtime, learn about Spanish dining traditions, and compare the dishes eaten in the Spanish-speaking world with those eaten in the U.S.
**ELEMENTARY SPANISH II**

Availability: **Grades 3-5**

Elementary Spanish II enables the student to further develop the communicative skills of listening, speaking, reading, and writing of Spanish at a more advanced level. The units are designed to develop the student’s knowledge of Spanish language and culture through familiar topics such as my school, my clothes, and my community. Culture is presented throughout the course to help the student make connections between his culture and the culture of people in the Spanish-speaking world.

**Units**

**My School**
What is a normal day of school like in the Spanish-speaking world? In this unit, you will learn about the daily life of a student in Puerto Rico. You will be introduced to the Spanish words related to school, including people and objects found in classrooms, as well as activities that take place at school. You will also explore Puerto Rico and other Spanish-speaking countries to learn about the local cultural traditions, sports, and wildlife.

**My Clothes**
How does clothing in the Spanish-speaking world compare to what people wear in the U.S.? In this unit, you will learn about the different styles of clothing native to the Spanish-speaking world. You will also explore the widespread influence of Spanish culture in the U.S. Lastly, you will learn the Spanish words for pieces of clothing for each season, and you will be introduced to some important Spanish Americans.

**My Community**
How important are communities in the Spanish-speaking world? In this unit, you will experience life in an average Central American neighborhood and learn about the strong sense of community in the Spanish-speaking world. You will be introduced to some Spanish words for the buildings, people, and activities that make a town lively and fun.
EXPERIENCING MUSIC I

Available: Grades K-2

Designed for students in grades K–2, this course explores differences between music and everyday sounds, and also how the body hears and responds to music. Aligning to the National Core Arts Standards, the course introduces skills that assist the student in making music individually and with another person. The student will identify instrument characteristics and sounds and begin to consider the way music of the student’s own culture might sound different to a person from another culture. With audio, visual, and interactive technologies, this course provides a unique and advanced learning experience.

Units

Music and Me!
Your student will begin to explore the differences between sound and music. He will begin by differentiating between sounds and musical patterns. Over the course of the unit, your student will explore ways in which people listen to and create music. This exploration will include performing simple melodies with his voice and with an instrument.

Fast and Slow, Stop and Go
Your student will learn to recognize simple rhythms using ta, ti-ti, and sh. Your student will use her listening skills to move her body in appropriate ways to match musical patterns. As she explores rhythm, your student will learn to recognize and perform rhythmic patterns and melodies with changes in tempo.

High and Low, Loud and Soft
Your student will use his listening skills to identify high and low pitches, and soft and loud sounds. He will move his body in appropriate ways to symbolize extremes of pitch and dynamic contrast. He will also learn the names for the pitches that make up the scale on the Virtual Xylophone.

Music Around the World
Your student will identify characteristics and sounds related to a selection of instruments and music from around the world. She will create instruments from various cultures. Finally, she will write her own song about her family’s background and culture.
EXPERIENCING MUSIC II

Available: Grades K-2

Designed for students in grades K–2, this course introduces younger students to the basic components of music: melody and rhythm. Aligning to the National Core Arts Standards, the course teaches the student to explore an individual voice by creating beats and rhythms. In addition, the student will use critical listening skills to analyze music while participating in interactive experiences. With audio, visual, and interactive technologies, this course provides a unique and advanced learning experience.

Units

Singing, Moving, and Shaking!

Focusing on Music Standards 1 and 2, your student will learn how to use the human body to experience and create music. He will explore the differences between rhythm and beat by using body percussion and learning about the one instrument people carry everywhere: the human voice.

A Musical Adventure!

Students will create melodies and rhythm patterns through basic symbols and notation. Students will experience these concepts through a variety of instructional strategies that induce engagement of aural, tactile, and kinesthetic learning components.

High, Low, Loud, Soft!

Your student will use his listening skills to identify and explain high, low, soft, and loud sounds.

Sound Familiar?

Your student will identify characteristics and traits of American folk music and connect those traits to the music and instruments from three different cultures around the world.
EXPERIENCING MUSIC III

Availability: Grades K-2

Designed for students in grades K–2, this course deepens the student’s understanding of the roles musicians play in today's society. Aligning to the National Core Arts Standards, this course uses dynamic media to help the student discover a musical identity while expanding knowledge of the foundations of music. The student will apply foundational knowledge to different musical styles and literature. With audio, visual, and interactive technologies, this course provides a unique and advanced learning experience.

Units

Creative Foundations
Your student will explore musical concepts. He will learn about new rhythms and experience melodic contour through movement and performance.

A Musician’s Role
Your student will gain an understanding of different musical roles. She will learn how being a composer, performer, and listener changes interpretation of music.

The Art of Music
Your student will experience different forms of art. He will integrate another discipline of art into his own work.

Musical Cultures
Your student will explore the music she engages in. She will share her musical culture and compare it with various other musical identities.
**ELEMENTARY SIGN LANGUAGE**

Available: **Grades K-5**

In this course, students are introduced to the fundamental concepts of American Sign Language. Students explore vocabulary, grammar, and conversational skills using basic signing and fingerspelling techniques.

**Units**

**Introduction**

Your student will be introduced to American Sign Language, or ASL. He will study the history of ASL and learn how it became the standard language for deaf and hard of hearing people in North America. He will also learn about some of the accepted rules of etiquette in Deaf culture. This introductory unit also teaches your student how to sign the letters of the alphabet and the mechanics of fingerspelling.

**Numbers**

This unit introduces the signing of numbers. Your student will learn how to sign numbers 1–100, as well as the signs for dollars and cents. A variety of fun activities give your student a chance to practice using ASL to discuss counting and using money.

**Time**

Your student will study various aspects of time. Not only will he learn how to communicate time using ASL, he will also learn the signs for the 7 days of the week and the 12 months of the year. The signs for various holidays as well as the four seasons are also taught in this unit.

**Nouns**

Your student will learn the signs for some commonly used nouns. The categories of family, places, food, colors, and animals are explored as your student practices these signs to add to her growing library of American Sign Language knowledge.

**Descriptions**

The lessons in this unit will teach your student how to sign various descriptions using American Sign Language. He will learn how to sign descriptive words that express feelings, sizes, possessions, and locations. In addition, he will combine some previously taught signs for numbers, time, and nouns, with descriptive signs taught in this unit.
HOME LIFE

Available: Grades K-5

Here, students select from a number of projects that develop skills through fun, experiential learning projects. Activities include cooking, crafts, sewing, home maintenance, family outings, and genealogy. Recently added projects include Lemonade Stand and Backyard Ecosystems.

Units

In the Kitchen
Explore and complete projects using kitchen implements and recipes. And as an added benefit, you get to eat your project!

In the Garage
Choose from an assortment of activities that use many of the tools you will find right in your garage. Activities include home and car maintenance, building a functional birdhouse, and building your own bridge.

In the Store
Learn how to manage your money and practice your entrepreneurial skills by building a lemonade stand business.

In the Garden
Choose from activities that include planting an herb garden, exploring your environment and your backyard ecosystem, orienteering, and stargazing.

In the Family
Plan and participate in a variety of enjoyable family activities. You may choose to plan a family outing, research your genealogy, research and play board games, improve the care of your pet, and/or create your own product using textiles.
WEBQUEST (STEM FOCUSED)

Availability: Grades K-5

Students help scientists monitor frog and toad populations across the country using FrogWatch USA™. Managed by the Association of Zoos & Aquariums, FrogWatch USA uses data collected by students to develop new ways to protect amphibians, which are extremely sensitive to ecological changes. Students visit a local wetland site once a week, make careful observations, and submit their data online. This online project joins students from other schools supported by Connections throughout the country and scientists around the country as they gather and analyze data.
DISCOVERING MUSIC I

Availability: Grades 3-5

Designed for students in grades 3–5, this course teaches fundamental musicianship skills from a Western-Classical approach, while aligning to the National Core Arts Standards. The course challenges the student to improve listening, notation, analysis, performance, and improvisation skills. With audio, visual, and interactive technologies, this course provides a unique and advanced learning experience.

Units

Expressing Groovy Beats

Your student will learn the rhythmic notation found in music. Performing at a steady tempo with proper rhythms is essential to any great musician. Upon learning the value in beats of basic notes and rests, your student will read, perform, and compose rhythms at a steady tempo in various time signatures. Your student will also learn expressive markings in music for dynamic levels and tempo changes. In addition, your student will explore the Virtual Music Tools, using them to perform, compose, and improvise music.

Musical Palette

Your student will learn the notation for pitch found in classical and popular music. The ability to interpret standard notation will enable your student to read, perform, and compose music. Pitch-related concepts of music theory will be learned and applied to these skills. Your student will learn expressive markings in music notation for reading, composing, and performing music.

Instrument Family Reunion

Your student will explore the different instrument families found in the standard orchestra. Your student will learn to identify the sections of the orchestra and the individual instruments within them. Instruments will be compared by traits including size, construction, appearance, and sound. The role of the conductor will also be introduced. Your student will practice reading, performing, and composing music with the sounds of various instruments.

Traveling Through Time: A Musical Journey

This unit will introduce the historical timeline of western Classical music from the fifteenth through twenty-first centuries. Students will learn the organization of this timeline into major style periods. The important composers, compositional techniques, and musical characteristics of each style period will be explored.
**DISCOVERING MUSIC II**

Availability: **Grades 3-5**

Designed for students in grades 3–5, this course builds on fundamental musicianship skills introduced in Discovering Music I. Aligning to the National Core Arts Standards, the course teaches the student to explore new concepts in rhythm and notation, as well as improve listening, notation, analysis, performance, and improvisation skills. The student will use a basic understanding of the orchestra to explore instrumentation and orchestration in more depth, and analyze compositional style from a range of periods. With audio, visual, and interactive technologies, this course provides a unique and advanced learning experience. Discovering Music I is a prerequisite for this course.

**Units**

**Rock-Solid Rhythm**
Your student will review knowledge of rhythm and practice recognizing rhythmic patterns by sight and sound. New types of note values, rests, rhythmic patterns, and time signatures will be introduced and explored. These concepts will be used in combination with previously learned notes and patterns as your student develops a sense of rhythmic security.

**Musical Tapestry**
Your student will improve her ability to recognize pitches on the grand staff. Your student will review the key signatures and scales she has already learned while also learning new ones. Learning more about harmony will enable her to change music to different keys. She will compare the sounds of different articulations, scales, and harmonies while examining their impact on music.

**Colors of the Orchestra**
Your student will review his knowledge of the orchestra. Your student will take a closer look at the differences among instruments within families of the orchestra. His ability to recognize their individual sounds will improve. Lastly, your student will learn about arranging instruments and how instruments interact together.

**Musical Makings**
Your student will get to know some famous composers and explore their musical styles. She will be introduced to new composers from each time period and learn more about composers previously studied. Lastly, your student will discover how history and culture shaped music around the world.
DISCOVERING MUSIC III

Availability: Grades 3-5

Designed for students in grades 3–5, this course enhances the student's knowledge of musical cultures as he or she discovers a musical identity. Aligning to the National Core Arts Standards, this course provides the student with engaging opportunities to combine musical knowledge with an exploration of different art forms to create new personal works. The student will apply foundational knowledge of music to a variety of musical styles and cultures. With audio, visual, and interactive technologies, this course provides a unique and advanced learning experience. Discovering Music I and Discovering Music II are prerequisites for this course.

Units

Creative Foundations
You will learn about the elements of music and learn how musicians skillfully use these elements to create and perform music. You will also apply your knowledge of the elements of music to create and perform music yourself.

Many Musical Roles
You will gain a deeper understanding of different musical roles. You will learn how being a composer, performer, and listener changes your interpretation of music.

Musical Influences
You will explore different forms of art. You will integrate another discipline of art into your own work while exploring the combination of music with other arts throughout history.

A Musical Community
You will explore the music you engage in. You will share your musical culture with others and explore the various musical identities of your peers.
**MIDDLE SCHOOL ELECTIVE COURSES (6-8)**

**MIDDLE CHINESE I**

Availability: Grades 6-8

Chinese I is an introductory-level course that will introduce the student to Mandarin Chinese. The units are designed to introduce the student to Chinese language and culture through familiar topics such as my family, my week, and food. Culture is presented throughout the course to help the student make connections between his culture and the culture of people in the Mandarin-speaking world.

**Units**

**My World**

In this unit, you will begin to study Mandarin, the official language of China and many other countries. Millions of people around the world speak Mandarin. This unit will teach you about Mandarin's importance in the world. You will also learn Mandarin words that describe your family. By the end of the unit, you will know how to introduce yourself and your family to others.

**My Time**

How is your life different from the life of a student who speaks Mandarin? In this unit, you will learn how students spend their time in countries where Mandarin is spoken. You will look for ways their activities are alike and different from yours. This unit will also introduce you to the Mandarin words that describe everyday activities and time at school.

**My Food**

All cultures have different traditional foods, these are foods that are eaten for special occasions or have been eaten for a very long time. Just like you have your own food traditions, other cultures have their own food traditions, too. In this unit, you will learn about food customs in Mandarin-speaking countries. You will also learn Mandarin terms that describe food.
**MIDDLE CHINESE II**

Availability: **Grades 6-8**

Middle Chinese II enables the student to further develop his communication skills as studies Mandarin Chinese at a more advanced level. The student will continue to learn about Chinese culture as the student studies about historic places in China and other Mandarin-speaking countries and learns of the holidays and special traditions celebrated there. The student will practice his acquisition of Mandarin Chinese skills by continuing to converse with a native Mandarin speaker.

**Units**

**My Travels**

In this unit, you will take a trip through historical places in China and other Mandarin-speaking countries. During this experience, you will learn to describe people, yourself, places, and types of transportation.

**My Holidays**

What holidays do you celebrate? The people in the Mandarin-speaking world may celebrate similar holidays. They also have their own special holidays. In this unit, you will learn about the important holidays celebrated in China and other Mandarin-speaking countries. You will learn about why the holiday is celebrated, its history, and its importance to students your age in the Mandarin-speaking world. You will compare what you learn about the Mandarin-speaking world with your own country.

**My Home**

What are homes like in the Mandarin-speaking world? How are they different from homes in the United States? In this unit, you will learn about a typical home in some Mandarin-speaking countries, including the uses for different rooms of the home. You will find out how the activities that happen in the rooms are alike and different from yours. In this unit, you will also learn the names of some objects that can be found in a home, like furniture, clothes, flowers, and pets. Finally, in this unit, you will learn some stories and traditions about home life in the Mandarin-speaking world.
**MIDDLE SPANISH I**

**Availability:** Grades 6-8

Middle Spanish I is an introductory-level course that will introduce the student to Spanish. The units are designed to introduce the student to Spanish language and culture through familiar topics such as my family, my week, and food. Culture is presented throughout the course to help the student make connections between his culture and the culture of people in the Spanish-speaking world.

**Units**

**My Family and Friends**

Did you know that millions of people speak Spanish in countries all around the world? In this unit, you will begin your study of Spanish, the language of Spain and many other countries. This unit will teach you about the importance of Spanish to the world at large, as well as where the language comes from and the different ways it is spoken. You will also learn the Spanish words for the members of your family, how to say your name and where you are from, and how to count from 1 to 10. By the end of the unit, you will know the expressions to introduce yourself and your family to others.

**My Home**

How does your home life compare to that of a student in the Spanish-speaking world? In this unit, you will learn about the housing and lifestyle of a Spanish-speaking student. You will be introduced to the Spanish words for the rooms of a house, as well as the activities and traditions that relate to those rooms. This unit will also introduce you to the Spanish words for objects and actions related to each room, how to count from 11 to 19, and how to count from 20 to 100 by tens.

**My Food**

What kind of food do people eat in the Spanish-speaking world? In this unit, you will take a trip through South America to learn about the popular food and drinks of several Spanish-speaking countries. You will be introduced to Spanish words related to mealtime, learn about Spanish dining traditions, and compare the dishes eaten in the Spanish-speaking world with those eaten in the U.S.
**MIDDLE SPANISH II**

Availability: Grades 6-8

Middle Spanish II enables the student to further develop the communicative skills of listening, speaking, reading, and writing of Spanish at a more advanced level. The units are designed to develop the student’s knowledge of Spanish language and culture through familiar topics such as my school, my family, and my neighborhood. Culture is presented throughout the course to help the student make connections between his culture and the culture of people in the Spanish-speaking world.

**Units**

**My School**

What is a normal day of school like in the Spanish-speaking world? In this unit, you will learn about the daily life of a student in Puerto Rico. You will be introduced to the Spanish words related to school, including people and objects found in classrooms, as well as activities that take place at school. You will also explore Puerto Rico and other Spanish-speaking countries to learn about the local cultural traditions, sports, and wildlife.

**My Clothes**

How does clothing in the Spanish-speaking world compare to what people wear in the U.S.? In this unit, you will learn about the different styles of clothing native to the Spanish-speaking world. You will also explore the widespread influence of Spanish culture in the U.S. Lastly, you will learn the Spanish words for pieces of clothing for each season, and you will be introduced to some important Spanish Americans.

**My Neighborhood**

How important are communities in the Spanish-speaking world? In this unit, you will experience life in an average Central American neighborhood and learn about the strong sense of community in the Spanish-speaking world. You will be introduced to some Spanish words for the buildings, people, and activities that make a town lively and fun.
EXPLORING MUSIC I

Availability: Grade 6-8

Designed for students in grades 6–8, this course teaches fundamental musicianship skills approached from a Western-Classical style, while aligning to National Core Arts Standards. The course challenges the student to improve listening, notation, analysis, performance, and improvisation skills. With audio, visual, and interactive technologies, the course provides a unique and advanced learning experience for the student.

Units

Feel the Pulse
You will learn the rhythmic notation found in standard music. Performing rhythms accurately and at a steady tempo is an essential skill for any musician.

Building Blocks
You will learn the notation of pitch. The ability to read and write music allows you to read and perform standard musical works and create your own compositions to share with the rest of the world.

What Is an Orchestra?
You will learn about the orchestra, the families of instruments, and their roles in making the characteristic sound of the orchestra. Composing and arranging activities will further develop your understanding.

Time Travel
You will look at various periods of development over the course of music history. You will examine the lives and works of some of the great composers of Western classical music, as well as the tools they used to compose their masterpieces. The unit will end with a composition assessment and a unit test.
**EXPLORING MUSIC II**

Availability: **Grades 6-8**

Designed for students in grades 6–8, this course reviews and expands fundamental musicianship skills approached from a Western-Classical style, while aligning to the National Core Arts Standards. The student will review and expand basic skills and concepts of rhythm and notation that were introduced in Exploring Music I. The student will use classic repertoire to analyze compositional style and improve listening, notation, analysis, performance, and improvisation skills. With audio, visual, and interactive technologies, the course provides a unique and advanced learning experience. Exploring Music I is a prerequisite for this course.

**Units**

**Cool Pulsations**
You will review essential elements of music such as rhythmic notation, reading notes on a staff, composing basic forms and phrases, and identifying key terms that relate to tempo and dynamics. For much of this unit, you will be refreshing skills you have already acquired, but you will be introduced to new concepts and skills as well. You will need to download Finale NotePad® and the Virtual Music Tools to complete a variety of activities.

**Absolutely**
You will review basic music notation and build on the fundamentals to learn advanced concepts in pitch and enhance your understanding of musical structures. You will learn about intervals, scales, and chords, and apply these elements in listening, thinking about, reading, playing, and composing music.

**Stylistic Imprints**
You will take a historical journey and learn about the major style periods and composers of Western classical music. You will also learn about the compositional techniques from these style periods, which will help you understand how music was written. This will enable you to compose and perform music from different style periods with authenticity.

**Architecturally Sound**
You will learn how to analyze music while using technical terms and constructs. This unit explores the idea of organized sounds. The study of how sounds are put together to form a musical composition will aid you in analyzing and critiquing music. You will learn the elements of music and how to apply these elements to an interpretation of a musical composition through hearing, thinking, reading, playing, and composing.
EXPLORING MUSIC III

Availability: Grades 6-8

Designed for students in grades 6–8, this course enhances the student's knowledge of musical cultures as he or she discovers a musical identity. Aligning to the National Core Arts Standards, this course provides the student with engaging opportunities to combine musical knowledge with an exploration of different art forms to create new personal works. The student will apply foundational knowledge of music to a variety of musical styles and cultures. With audio, visual, and interactive technologies, this course provides a unique and advanced learning experience. Exploring Music I and Exploring Music II are prerequisites for this course.

Units

Creative Foundations
You will review the foundations of music and observe how musicians engage in the fundamentals to create original works of music. You will explore these topics through your own performance and composition.

A Musician’s Role
You will gain a deeper understanding of different musical roles. You will learn how being a composer, performer, and listener affects your relationship to music.

The Art of Music
In this unit, you will explore different forms of art. You will combine music with another form of art while exploring the historical context of multidisciplinary art.

Musical Cultures
You will work to understand the various factors that influence musical styles and preferences. You will do this by developing an understanding of personal tastes, input of cultural practices, available resources, and varied genres.
MIDDLE SIGN LANGUAGE

Availability: Grades 6-8

In this course, students are introduced to the fundamental concepts of American Sign Language. Students explore vocabulary, grammar, and conversational skills using basic signing and fingerspelling techniques.

Units

Introduction

Your student will be introduced to American Sign Language, or ASL. He will study the history of ASL and learn how it became the standard language for deaf and hard of hearing people in North America. He will also learn about some of the accepted rules of etiquette in Deaf culture. This introductory unit also teaches your student how to sign the letters of the alphabet and the mechanics of fingerspelling.

Numbers

This unit introduces the signing of numbers. Your student will learn how to sign numbers 1–100, as well as the signs for dollars and cents. A variety of fun activities give your student a chance to practice using ASL to discuss counting and using money.

Time

Your student will study various aspects of time. Not only will he learn how to communicate time using ASL, he will also learn the signs for the 7 days of the week and the 12 months of the year. The signs for various holidays as well as the four seasons are also taught in this unit.

Nouns

Your student will learn the signs for some commonly used nouns and pronouns. She will also be introduced to the ASL concepts of Indexing, Agency, and Nonmanual Markers. Combining these new concepts and the signs your student has learned will expand her growing library of American Sign Language knowledge.

Descriptions

This unit will teach your student how to sign various descriptions using American Sign Language. He will learn how to sign comparative adjectives and show comparison between two or more nouns or pronouns. Also, he will learn the signs for descriptive words that express size, shape, possession, color, and location. In addition, he will combine some previously taught signs for numbers, time, and nouns, with descriptive signs taught in this unit.
HOME LIFE

Availability: Grades 6-8

Here, students select from a number of projects that develop skills through fun, experiential learning projects. Activities include cooking, crafts, sewing, home maintenance, family outings, and genealogy. Recently added projects include Lemonade Stand and Backyard Ecosystems.

Units

In the Kitchen
Explore and complete projects using kitchen implements and recipes. And as an added benefit, you get to eat your project!

In the Garage
Choose from an assortment of activities that use many of the tools you will find right in your garage. Activities include home and car maintenance, building a functional birdhouse, and building your own bridge.

In the Store
Learn how to manage your money and practice your entrepreneurial skills by building a lemonade stand business.

In the Garden
Choose from activities that include planting an herb garden, exploring your environment and your backyard ecosystem, orienteering, and stargazing.

In the Family
Plan and participate in a variety of enjoyable family activities. You may choose to plan a family outing, research your genealogy, research and play board games, improve the care of your pet, and/or create your own product using textiles.
WEBQUEST (STEM FOCUSED)

Availability: Grades 6-8

Students help scientists monitor frog and toad populations across the country using FrogWatch USA™. Managed by the Association of Zoos & Aquariums, FrogWatch USA uses data collected by students to develop new ways to protect amphibians, which are extremely sensitive to ecological changes. Students visit a local wetland site once a week, make careful observations, and submit their data online. This online project joins students from schools supported by Connections throughout the country and scientists around the country as they gather and analyze data.
DIGITAL ARTS I (STEM FOCUSED)

Availability: Grades 6-8

In this course you will become familiar with basic concepts essentially to visual and digital art, such as line, shape, form, color, value, space, and texture. Using Inkscape, a free open-source program, you will also develop core artistic skills through the creation of original digital art. You will have the opportunity to express yourself as well through a course-long art project that involves the creation of a still life scene.

Units

Course Overview
You will learn how to use the course technology. You will learn how to navigate through the course, find and zip files, set up your Web browser, and complete coursework. You will also learn about using trustworthy sources, avoiding plagiarism, and making proper citations.

Introduction to Digital Art
You will learn about basic concepts that inform visual arts, digital arts, and computer graphics. You will also start to learn how to use Inkscape, a software program for creating digital art.

Lines
You will explore the use of lines in art. Using Inkscape, you will create different types of lines, including a special kind of curve called the Bezier Curve. You will also start an art project that you will continue to work on throughout the course. This project will involve the creation of a still life scene depicting a glass, a decanter, and a bowl of fruit.

Shape and Form
You will explore the use of shapes and forms in art. Using Inkscape, you will create different types of shapes. You will also continue with your art project, adding shapes and forms to your still life.

Color
You will learn how color is related to light and how color is used in art. You will use Inkscape’s color sliders to practice using color. You will also continue with your art project, adding grapes and colors to your still life.

Value
You will learn how value, or the lightness or darkness of a color, is used in art. Using Inkscape, you will create a color value scale. You will also continue with your art project, adding value to your still life through highlights.

Space
You will explore how space and perspective is used in art. Using Inkscape, you will draw two-dimensional objects that look three-dimensional. You will also continue with your art project. You will add a table and book to your still life to create the illusion of 3D space.
Texture

You will explore how texture is used in art. You will create different textures using Inkscape’s filters. You will also complete your art project by adding texture to different parts of your still life.
**INTRODUCTION TO ENTREPRENEURSHIP I**

**Availability:** Grades 6-8

In this course you will learn the basics needed to plan and launch your own business. Do you have what it takes to start a new business? Do you have an idea for a business but need the tools to get started? This course will provide you with the core skills you need to become successful. In this course you will study the characteristics of successful entrepreneurs. You will also learn about self-employment and basic economic concepts related to small businesses, such as competition and production. This course will also walk you through the steps of setting up a business, including developing a business plan, a mission and a vision, attracting investors, and marketing your company.

**Units**

**Course Overview**

You will receive a basic overview of the course. You will learn how to navigate through the course, find and zip files, set up your Web browser, and complete coursework. You will also learn about using trustworthy sources, avoiding plagiarism, and making proper citations.

**The Role of the Entrepreneur**

You will receive an introduction to what it means to be an entrepreneur. You will learn about types of entrepreneurs and the role of entrepreneurs in society. This unit will also explain basic economic concepts related to entrepreneurship, including producers and consumers, strong and weak economies, and capitalism and competition.

**Entrepreneurship as a Career**

You will learn more about the life of an entrepreneur. This unit will explore some of the advantages and disadvantages of self-employment as well as detail the characteristics, skills, and education of successful entrepreneurs. This unit will also discuss reasons why a person becomes an entrepreneur and career paths that help develop entrepreneurial skills and characteristics.

**Economic Principles**

You will learn more about some basic economic concepts related to entrepreneurship. You will learn about profit and loss, profit motive, and competition. You will also learn about production, goods, scarcity, and the law of supply and demand.

**Production and Delivery**

You will learn how entrepreneurs produce and deliver goods and services to markets. You will explore some of the different industries and delivery methods. You will also learn about related economic concepts, including economic utility, economies of scale, market saturation, and product life cycle.
Small Business Basics
You will explore the stages and forms of small businesses. Related to this, you will learn about how to form departments and factors that contribute to success and failure. You will also become more familiar with the importance of business ethics.

Business Ideas and Opportunities
You will learn the role of entrepreneurs and small businesses in society and the global economy. Related to this, you will explore how business trends affect entrepreneurial ideas and opportunities. You will also learn about methods and resources that will help you generate business ideas and wisely select the best plan based on your goals, skills, personality, and resources.

Defining Your Business
You will learn about the importance and parts of a business plan. Related to this, you will learn how to craft a mission and vision statement. You will also learn how to determine the scope of a business, including the products and services that will be offered.

Business Organization
You will learn about various forms of business organization as well as accompanying legal and tax procedures. Related to this, you will learn about franchising, business licenses, and permits. You will also explore ways to organize and manage employees, records, purchasing, and inventory.

Marketing Basics
You will explore basic concepts related to marketing an entrepreneurial initiative or business, including market positioning, penetration, and research. You will also learn about establishing a corporate and brand image and the steps involved in developing a marketing message.

Promoting Your Company
You will learn about diverse methods for promoting an entrepreneurial initiative or business. Related to this, you will explore promotional methods, costs, and evaluation. You will also learn about advertising methods and goals as well as the parts of a marketing plan.
BUSINESS KEYBOARDING (STEM FOCUSED)

Availability: Grades 6-8

In this course, the student will explore a variety of keyboarding strategies including learning the function of all the keys, how to find them quickly, and the importance of keyboarding for his future career. Major concepts of this course include the alphabetic and numeric keyboard, history of the keyboard and new technology, and keyboard skill building (speed and accuracy).

Units

Learning the Game Part 1

Learning the Game is an introduction to the course. The game motif is expanded as it relates learning a new game to learning the rules of the course and the concept of keyboarding. Welcome to the Keyboarding Game! Working through Unit 1 will be much like opening the box to a new game and learning the rules and how to use the game board and game pieces. Here, you will familiarize yourself with the basic rules of the game, including electronic communication rules (Netiquette), and begin to work on becoming accustomed to the game board. Finally, you will perform some of the beginning moves in playing the game of keyboarding. As with any game, learning the rules and becoming proficient with the moves will make playing the game easier and increase your chance of success. Remember to have fun!

Learning the Game Part 2

In Unit 1, you focused on learning the Alpha keys. In Unit 2, you will continue to practice your keying skills while learning the number keys (both alphanumeric and keypad).

Playing the Game

You have now learned the basics of proper keying. You will now begin to learn about formatting business documents while you continue to practice your keying skills using MT3. Now that you have learned the basic skills of the keyboarding game, you are ready to move on to applying those skills. In Unit 3, you will continue to practice your keyboarding skills, as well as learning proper formatting for letters, memos, and reports. In addition, you'll spend some time learning more about your favorite game.

Games in Your Future?

This unit focuses on career choices and is referred to as a reality check (we can't all play games for a living). You will complete an interest inventory and select a career to research. This research project will be the final project for the course, worth 20% of the course grade when combined with the timed writing score. Instead of taking a single exam at the end of the course to show that you've mastered all of the skills needed to play the keyboarding game, you will complete a final project. Unit 4 is that project. All of the career assignments in Unit 4 must be completed satisfactorily in order for you to receive a passing grade in this course. The tasks you will be asked to perform include all of the skills you've been practicing throughout the course. As in the other units of this course, you will also take a timed writing exam at the end of Unit 4. You will continue to do some skill building activities to improve your speed throughout this unit.
CAREER PLANNING

Availability: 8th grade

In this course, you will focus on your own career planning. Over the span of your school career, you will cover topics ranging from interest inventories to skill building. The purpose of this program is to help you explore options for potential careers that would be a good fit for you, based on your interests, skills, and values. By exploring options during your secondary schooling, you will have opportunities to prepare yourself for your future, through hands-on experiences, course work, LiveLessons, and planning exercises.
HIGH SCHOOL ADDITIONAL COURSES (9-12)

ADVANCED ALGEBRA WITH FINANCIAL APPLICATIONS A (STEM FOCUSED)

Grades: 9, 10, 11, and 12

Credits: 0.50

In this course, the student will apply knowledge of algebra as he explores topics such as saving money, spending money, and dealing with debt. The student will apply formulas to determine account balances, monthly payments, and total costs. As the student applies knowledge in real-world scenarios, he will learn skills that provide a foundation for financial decisions.

Units

Saving
You are introduced to the concept of earning interest as opposed to saving your money in a piggy bank or under the mattress. You discover how interest allows an account balance to grow and how simple interest is different than compound interest. You will learn about the different variables that affect the total balance in a compound interest savings account while making connections between that type of exponential growth and that of population and other real-world scenarios.

Spending
You will learn about different algebraic models that can be used to represent data. You also see how a verbal model or written scenario can be translated into an algebraic equation or two that can then be solved for the missing variable(s). The examples throughout the unit connect back to the spending theme. When you reach the middle of the unit you are introduced to the concept of income tax and then to purchasing and financing options.

Debt
You will learn about factors that can get you into debt and then how to get yourself out of it. The unit starts with basics behind credit cards and then moves into credit scores/reports and cash management. After learning the many ways people can easily get themselves into debt, you will learn how to create a budget and get out of debt.
ADVANCED ALGEBRA WITH FINANCIAL APPLICATIONS B (STEM FOCUSED)

Grades: 9, 10, 11, 12

Credits: 0.50

In the second part of this course, the student will extend knowledge of the financial applications of algebra by exploring investments, mortgages, and retirement savings plans. While participating in real-world scenarios, the student will reflect on learning and evaluate progress as he continues to exercise financial decision-making skills.

Units

Mortgage

The Mortgage unit is all about what goes into borrowing a large sum of money to purchase a home. This is one of the biggest purchases you will make. Knowing some of the pros and cons will help you to be more knowledgeable for future decision making.

Investment

You will learn about the basics behind investing. You are given the opportunity to research some stock prices, make some predictions and calculate rates of return. By the end of this unit you should be able to describe risk tolerance and provide advice for someone looking to diversify his investment portfolio.

Retirement

You learn about what retirement is, how to plan for it and how to protect your assets for future dependents and loved ones.
**CALCULUS A (STEM FOCUSED)**

Grades: 9, 10, 11, and 12

Credits: 0.50

Calculus A introduces limits, differentiation, and applications of differentiation. The student will find and evaluate finite and infinite limits graphically, numerically, and analytically. The student will find derivatives using a variety of methods including the chain rule and implicit differentiation. Then the student will use the first derivative test and the second derivative test to analyze and sketch functions. Finally, the student will find derivatives using a variety of methods including substitution.

The use of a graphing calculator is considered an integral part of the course and the student will use a graphing calculator throughout this course.

**Units**

**Introduction**

Welcome to Calculus A. This brief unit introduces the course objectives and presents tips and grading guidelines for the Research Paper, which you will work on throughout the semester.

**Limits and Their Properties**

In this unit you will learn how to calculate limits and explore their central role in calculus. You will study the notation, domain, and range of functions as well as the families, transformations, and compositions of functions. Throughout the unit you will apply what you learn to real-world situations. You will also continue to work on your research paper.

**Differentiation**

In this unit you will learn how to calculate derivatives, one of the two major tools of calculus. You will study the rules of differentiation, explore the connection between differentiability and continuity, use derivatives to find rates of change, distinguish between functions written in implicit and explicit form, and apply related rates to solve real-world problems. Also, you will continue to work on your research paper.

**Applications of Differentiation**

In this unit, you will learn the fundamental applications of differentiation using the first and second derivatives. You will find extrema over closed intervals, sketch and analyze the graph of a function, solve applied minimum and maximum problems, and use a tangent line approximation. In addition, you will apply several tests and theorems including Rolle's Theorem, the Mean Value Theorem, and the First and Second Derivative tests. You will complete your research paper by the end of this unit.
Final Review and Exam
In this unit, you will have the opportunity to prepare for and take the final exam. The final exam may include any material that has been presented throughout the semester. Since this is a comprehensive exam, it may be helpful to organize your notes and answers to questions before you begin to review.

eText Thomas’ Calculus: Early Transcendentals

Textbook

Thomas’ Calculus: Early Transcendentals
CALCULUS B (STEM FOCUSED)

Grades: 9, 10, 11, and 12

Credits: 0.50

Calculus B introduces integration of functions, differential equations, and applications of integration. The student will calculate antiderivatives using a variety of methods including substitution. The student will evaluate integrals using a variety of methods including numerical integration. Then the student will understand and apply Riemann sums, definite integrals, and the Fundamental Theorem of Calculus. In particular, the student will differentiate and integrate logarithmic, exponential, and inverse trigonometric functions. The student will solve simple differential equations, which can be solved by separation of variables, and use the calculations to solve applied problems. The student will use integration to determine the area between two curves, volume, and surface area. Finally, the student will apply integration to determine work, center of mass, and fluid force.

The use of a graphing calculator is considered an integral part of the course and the student will use a graphing calculator throughout this course.

Units

Integration

In this unit, you will learn the fundamentals of integration, a key concept of calculus. You will use integration to find the area of regions, apply the Fundamental Theorem of Calculus, compare differentiation and integration, and study the Trapezoidal Rule and Simpson’s Rule. In addition, you will research Georg Riemann, a German mathematician who made significant contributions to geometry and calculus.

Logarithmic, Exponential, and other Transcendental

In this unit, you will learn to apply integration to different functions, including trigonometric and hyperbolic functions. You will also explore how integration applies to the natural logarithmic function. You will learn how to use different functions to solve real-world problems, including the design of suspension bridges.

Differential Equations

In this unit, you will use differentiation and integration to solve differential equations. You will use differential equations to solve real-world problems involving cooling and falling objects, temperature variance, and bacterial growth. In addition, you will learn how to solve logistic differential equations, first-order linear differential equations, and Bernoulli differential equations.

Applications of Integration

In this unit, you will continue to apply the technique of integration. Specifically, you will learn how to calculate the area of a section between two curves; determine volumes, arc lengths, and areas of a surfaces; and use the disc, washer, and shell methods to solve problems. In addition, you will learn how calculus applies to physics as you calculate the work done by a constant force.
**Final Review and Exam**

In this unit, you will have the opportunity to prepare for and take the final exam. The final exam may include any material that has been presented throughout the course. Since this is a comprehensive exam, it may be helpful to organize your notes and answers to questions before you begin to review.

**Textbook**

*Thomas' Calculus: Early Transcendentals*
EXPLORATIONS IN MATHEMATICS A (STEM FOCUSED)

Grades: 9, 10, 11, 12

Credits: 0.50

This course provides students with a foundation in fundamental mathematic concepts, allowing them to apply these concepts to real-world situations. Prime factorization and operations with rational numbers and integers are covered, establishing a solid base for the study of more complex math.

Units

Working with Rational Numbers
In this unit, you will learn the necessary skills to establish a solid mathematics foundation. Concepts emphasized in this unit will reappear throughout the course, so take the time to complete each lesson carefully.

As you work through the unit, you will expand your knowledge of rational numbers. You will explore divisibility patterns and prime factorization. You will use this knowledge to identify and determine the greatest common factor and the least common multiple of rational numbers. Then, you will learn how to add and subtract rational numbers with like and unlike denominators and how to reduce the answer to its simplest form. Finally, you will solve rational number problems by multiplying and dividing.

Variables, Equations, and Properties
In this unit, you will recognize and solve mathematical expressions and equations involving variables. You will identify, understand, and simplify expressions using the following properties: Associative Property of Addition and Multiplication, Commutative Property of Addition and Multiplication, Additive and Multiplicative Identity Property, Additive and Multiplicative Inverse Properties, and the Distributive Property. Finally, you will learn how to use the order of operations to evaluate expressions.

Explorations of Mathematics A Final
In this unit, you will have the opportunity to prepare for and take the final exam. Since this is a comprehensive exam, it may be helpful to organize your notes in the order of the course outline before you begin to review. Using the test-taking strategies that you have previously learned can help you be successful with both objective and essay questions.
EXPLORATIONS IN MATHEMATICS B (STEM FOCUSED)

Grades: 9, 10, 11, 12

Credits: 0.50

In the B course, students build on fundamental math concepts and examine integers and solving equations. Probability and statistics round out the course; students explore mean, mode, and median, as well as more advanced concepts, such as permutations and combinations.

Units

Integers and Solving Equations

In this unit, you will explore the addition, subtraction, multiplication, and division properties of equality and use these properties to solve simple and one-step equations. You will be introduced to the concept of absolute values of integers in order to compare two or more integers. Then, you will learn how to add, subtract, multiply, and divide integers. You will solve simple equations using the reflexive, symmetric, transitive, and substitution properties of equality. Finally, you will expand your knowledge of one-step equations skills to solve real-world application problems and multi-step equations.

Probability and Statistics

In this unit, you will be introduced to and solve equations using the concepts of direct and inverse variation. You will learn the measures of central tendency including mean, median, mode, and range, and determine these measures in a data set. You will expand on the measures of central tendency by calculating the quartiles of an ordered data set. Then, you will explore some common concepts of probability including the counting principle, permutations, combinations, and probability of simple events. At the end of the unit, you will calculate real-world probability problems.

Explorations of Mathematics B Final

In this unit, you will have the opportunity to prepare for and take the final exam. Since this is a comprehensive exam, it may be helpful to organize your notes in the order of the course outline before you begin to review. Using the test-taking strategies that you have previously learned can help you be successful with both objective and essay questions.
PERSONAL FINANCE (STEM FOCUSED)

Grades: 9, 10, 11, and 12

Credits: 0.50

Through real-world applications and clear, engaging lessons, Personal Finance prepares students for making sound financial decisions. Exercises illustrate the influence of economics in daily life and how financial decisions made today affect the future.

Units

Money Management and Career Planning
You will define personal financial planning, and explore the six steps of financial planning. You will also identify economic factors that affect personal financial decisions and explain how opportunity costs are associated with personal financial decisions. Finally, you will identify strategies for achieving financial goals at different stages of life.

Taxes, Retirement, and Health Insurance
You will learn to identify the personal issues to consider when choosing and planning your career. You will also understand how education and training affect career advancement. You will study tax strategies, insurance and risk management, health insurance and financial planning, and culminate with a discussion of retirement planning.

Consumer Credit and Investing
You will identify different types of financial services, and calculate the cost and benefits of different savings plans. You will study how to build and protect your credit rating. You will discuss ways to obtain funds for investing and identify the factors that affect their investment choices. You will also identify the main types of savings and investment alternatives and explain the steps involved in developing a personal investment plan. As you explore your own personal plan, you will identify sources of financial information.

Starting a Business
You will study the three essential types of business arrangements, namely sole proprietorship, general and limited partners, and types of corporations. As you study how to form a corporation and explore its advantages and disadvantages, you will consider the broader concern of financial management for a business. As the lessons progress, you will formulate a business plan and explain its components. Similarly, you will describe the aspects of a financial plan and explain the importance of accounting in financial management. Finally, you will explore the primary functions of accounting.

Operating Your Business
You will be defining terms such as: start-up costs, operating costs, and reserve funds, and you will show how this is related to entrepreneurship. You will also identify sources of personal and private financing, and discuss the options available through bank funding. Additionally, you will examine the role of accounting and record keeping. Finally, you will explore the nuances of accounting, and you will apply this analysis to how businesses run from their inception to their perpetuation and growth.
Review and Final Exam

You will have the opportunity to prepare for and take the final exam. Since this is a comprehensive exam, it may be helpful to organize your notes in the order of the course outline before you begin to review.
**PHYSICS A (STEM FOCUSED)**

Grades: 9, 10, 11, and 12

Credits: 0.50

The goal of physics is to describe the physical world using a small number of basic assumptions, concepts, and equations. In this course, emphasis is placed on relating physics to the everyday world. The student will explore the concepts involved with motion in one- and two-dimensions, forces, work and energy, momentum and collisions, circular motion and gravitation. The students will recognize the importance of the laws of thermodynamics.

Approximately 40 percent of the course involves virtual laboratory investigations. Some activities will require ordinary household items such as rulers, meter sticks, balls or marbles, string, paper, and pencils.

Physics A focuses on understanding motion. The student will learn kinematic equations and apply them to various situations. The student will explore forces, work, and energy and apply these concepts in the special case of circular motion. Heat and the laws of thermodynamics are covered.

**Units**

**Introduction**

Welcome to Physics A. This unit introduces the course objectives and explains the grading guidelines for research assignments and laboratory reports. In addition, the unit reviews the scientific method.

**Physics and Laws of Motion**

You will explore the motion of objects. Most of the types of motion described in this unit are likely familiar to you. You will learn about these common types of motion by studying laws of motion, performing calculations, and conducting virtual laboratory experiments.

**Energy and Motion**

You will learn about work, energy, and motion. You will study the different kinds of energy that are involved when things move and learn how energy is converted from one form to another during collisions. In addition, you will learn about the forces involved with circular motion and gravitation. You will continue to solve real-world problems and conduct virtual laboratory experiments.

**Heat and Thermodynamics**

In the previous unit you studied energy. In this unit you will learn about a particular form of energy: heat. Thermodynamics involves understanding how the transfer of heat affects the work done by a system. You will also study the first and second laws of thermodynamics and continue to solve real-world problems and conduct virtual laboratory experiments.
**Final Review and Exam**

You will have the opportunity to prepare for and take the final exam. The final exam may include any material that has been presented throughout the semester. Since this is a comprehensive exam, it may be helpful to organize your notes and answers to questions before you begin to review.

**Online Text/eBook**

eText Physics
**PHYSICS B (STEM FOCUSED)**

Grades: 9, 10, 11, and 12

Credits: 0.50

The goal of physics is to describe the physical world using a small number of basic assumptions, concepts, and equations. In this course, emphasis is placed on relating physics to the everyday world. The student will learn the characteristics of waves and describe the behavior of waves with emphasis on light and sound. The student will understand the relationship between electricity and magnetism. Finally, the student will gain a simple understanding of atomic physics.

Approximately 40 percent of the course involves virtual laboratory investigations. Some activities will require ordinary household items such as rulers, meter sticks, balls or marbles, string, paper, and pencils.

Physics B focuses on waves, in particular sound and light. Then the course moves to understanding electricity and magnetism and the relationship between the two. It concludes with a basic exploration of atomic physics.

**Units**

**Waves**
You will explore the behavior of oscillations and waves. You will study periodic motion, analyze the characteristics of sound and light, and learn how waves transport energy. You will perform virtual labs to investigate the relationship between the length and period of a pendulum, and the correlations among frequency, speed, and amplitude of sound waves.

**Electricity**
You will explore the properties of electric charges. You will calculate the electric force produced by point charges, interpret electric field lines, learn how capacitors store electrical energy, and compare series and parallel circuits. You will perform a virtual lab to investigate the relationships between voltage and current and resistance and current. In an interactive discussion with your classmates, you will debate if using hybrid electric vehicles may help to solve some of our energy problems and discuss some of the environmental problems associated with carbon emissions.

**Magnetism and Atomic Physics**
You will explore the relationship between electricity and magnetism. You will learn how electromagnets work, analyze the forces exerted on charges in a magnetic field, and study a field of physics known as quantum mechanics, which describes the physics of the particles that make up atoms. You will perform virtual labs to investigate the magnitude of the magnetic fields of solenoids and the relationship between kinetic energy, emitted electrons, and the wavelengths of light.
**Final Review and Exam**

You will have the opportunity to prepare for and take the final exam. The final exam may include any material that has been presented throughout the semester. Since this is a comprehensive exam, it may be helpful to organize your notes and answers to questions before you begin to review.

eText Physics
WORLD GEOGRAPHY

Grades: 9, 10, 11, and 12

Credits: 0.50

Students master basic geography skills and principles in this course, which covers major locations, the United States, world economic activity, and understanding and using maps. Students acquire an understanding of multiculturalism and the relationships between people and their environment.

Units

People and Places

In this unit, you'll gain some background in the origins of geography in order to get a sense of where and how this science began. This brief history will also give you some perspective on just how much our knowledge of geography has changed and grown. Glimpses into the travel journals of Marco Polo and the epic story of Odysseus, among others, reflect how imagination took the wheel when facts could go no further. You'll also follow a timeline of maps, from the Babylonians simplistic clay-tablet world map to the minutely detailed satellite maps of today.

After delving in the beginnings of geography, you will familiarize yourself with the basics of physical geography, a necessary prerequisite to exploring human geography. You will scrutinize the anatomy of our planet, from its interior to its ionosphere. The science of plate tectonics will be introduced, and then you will dive into the topics of oceans and continents. You'll also examine the concepts of the latitude and longitude, hemisphere, equator, and prime meridian.

Climate and its effects on human populations

You will learn what defines human geography and how it is different than physical geography. You will also familiarize yourself with the aspects of study that fall under the umbrella term of human geography, how each in some way is intricately woven into the natural landscape of the planet.

Europe

You'll first examine the topographical characteristics of Europe and become acquainted with its flora and fauna (the plants and animals) of the continent, and take a trip in the process. You'll then get an overview of the many nationalities that make up Europe and pay a virtual visit to a selected country, keeping a travel journal of your stay. In the final lesson of the unit, you'll learn about the European Union, a group of 27 (to date) European nations that have made a commitment to work together as one entity to keep peace and grow economically.

Africa

You will examine the topographical characteristics of Africa and discover its incredible animals and plants. In the process, you will take a virtual field trip to an African nation to study one of its ecosystems. You will get an overview of the many peoples and tribes that make up Africa and pay a virtual visit to a selected country, keeping a travel journal of your stay. Finally, you will learn about the economic and political climates in Africa, and the efforts being made to include this continent into the globalization movement.
Asia
You have a lot of ground to cover—millions of miles, in fact. Your virtual trek now takes you to the vast and extraordinarily diverse continent of Asia. Because Asia encompasses vast stretches of the planet, scores of countries, and hundreds of individual cultures, economies, and governments, the first lesson in this unit will include a general introduction to Asia through video clips. Once you have an overview of the region, you will explore its physical geography. In lesson 2, you'll explore the culture of India, in which ancient traditions and religions meet modern technology and lifestyles. China's economic and political identity will be examined in lessons 3 and 4, as this country rides the fast track to becoming a global economic superpower.

North America
You will first examine the physical terrain of the continent and become acquainted with its rich biodiversity. You will also have the chance to pay a virtual visit to one of the few mega diverse countries in the world. Then, you will get an overview of the many peoples and cultures that make up North America and take another virtual trip to a selected country, keeping a travel journal of your stay. In the final lesson of the unit, you will learn about the political and economic landscape of this continent's major players and take a look at the economic phenomenon of free trade agreements, in particular, the North American Free Trade Agreement (NAFTA). If you are from North America, this unit gives you the grand tour of your own backyard. If you are from another part of the world, it may provide a rich and informative guide to this amazing continent.

South America
You arrive on the next continent in your whirlwind virtual world tour: South America. Like all the other continents you've studied thus far, South America has its own character, both physically and culturally. Its culture is similar to that of Central America, but with a stronger Latin influence. Even with all the cultural diversity found throughout this continent's 13 nations, the Latin flavor is ever present.

For starters, you'll take a look at the physical features of South America, which presents a varied landscape and holds several "world's no. 1" titles in the physical geography hall of fame (longest mountain range, biggest river, to name two). In the first lesson, you'll also take a little excursion off the coast of Ecuador to discover the weird and wonderful flora and fauna of the Galapagos Islands. In Lesson 2, you will learn how the story of the Spanish invasion of Mexico and Central America was continued into South America, and how its effects are evident in today's South American culture. Yet the continent has attracted an ethnic rainbow of people from throughout the world, and you'll discover how these immigrants have adapted while still maintaining their cultural identities. For the unit's final lessons, you will review the frequently changing political scene in South America and learn how South America, too, is working to facilitate economic growth.

Australia, New Zealand, and the Pacific Islands
You will study the final region in your virtual world tour: Oceania. You will learn more about its diverse and beautiful physical geography, as well as the diversity of cultures that have shaped Oceania's history. You will examine Australia, New Zealand, and some of the Pacific Island nations of Oceania.
Current Issues

You will gain an understanding of the characteristics of populations, including how they are distributed over the land, what spurs populations to grow, and the stages of growth—known as demographic transition. You will then study the topic of overpopulation, learn about exponential growth, and learn the world’s population—6.6 billion. As well, you will explore the causes and consequences of human overpopulation. In lessons 3 and 4, you will delve into what is arguably the most dire environmental issue we face—global warming. You will examine such questions as how did this phenomenon happen. Then you will be introduced to possible ways to mitigate this predicament while exploring what sustainability entails.

Final Review and Exam

You will have the opportunity to prepare for and take the final exam. Since this is a comprehensive exam, it may be helpful to organize your notes in the order of the course outline before you begin to review. Using the test-taking strategies that you have previously learned can help you be successful with the questions.
HIGH SCHOOL ELECTIVE COURSES (9-12)

TECHNOLOGY

3D ART I – MODELING (STEM FOCUSED)

Grades: 9, 10, 11, and 12

Credits: 0.50

This course will introduce you to 3D modeling tools and concepts. Using Blender, a popular open-source 3D modeling package, you will learn the basics of creating shapes, adding textures and lighting, and rendering. By the end of the course, you will have produced a series of increasingly sophisticated projects for your 3D portfolio. This course is suitable for students with no prior experience in 3D design or digital media authoring tools.

Units

Course Overview

You will learn what you need your computer to have in order to take the course and software you will have to download. You will also learn about creating the 3D model and navigating through 3D space.

Project 1: Make a Hat

You'll make a hat for Suzanne the monkey.

Project 2: Build a House

You will learn to build a house using basic shapes, manipulated vertices and used image files. You will also create an animation in which a camera will follow a path.

Project 3: Create a Creature

You will begin creating the creature by using a background image as a guide to get started. You will have a completed creature by applying modifiers, materials and textures you will learn about as you get through the lessons.

Project 4: Animate a Character

You will be able to make the creature you created in the previous unit walk.

Project 5: Create Terrain

You will use various tools to create a terrain with a daytime and nighttime sky.
Project 6: Build a Car
You will build a car from top to bottom. In addition, you will create asphalt for the car to drive on and make a movie of the car driving.

Project 7: Make a Scene
You will create an animated scene in which the door of the house you built in Unit 2 will open. The creature you created and rendered in Units 3 and 4 will then walk in the house.

Build Your Own Project
You will create your own original project.
BUSINESS KEYBOARDING (STEM FOCUSED)

Grades: 9, 10, 11, and 12

Credits: 0.50

In this course, the student will explore a variety of keyboarding strategies including learning the function of all the keys, how to find them quickly, and the importance of keyboarding for his future career. Major concepts of this course include the alphabetic and numeric keyboard, history of the keyboard and new technology, keyboard skill building (speed and accuracy), business ethics, formatting various academic and business documents.

Units

Learning the Game Part 1

Description Learning the Game is an introduction to the course. The game motif is expanded as it relates learning a new game to learning the rules of the course and the concept of keyboarding. Welcome to the Keyboarding Game! Working through Unit 1 will be much like opening the box to a new game and learning the rules and how to use the game board and game pieces. Here, you will familiarize yourself with the basic rules of the game, including electronic communication rules (Netiquette), and begin to work on becoming accustomed to the game board. Finally, you will perform some of the beginning moves in playing the game of keyboarding. As with any game, learning the rules and becoming proficient with the moves will make playing the game easier and increase your chance of success. Remember to have fun!

Learning the Game Part 2

In Unit 1, you focused on learning the Alpha keys. In Unit 2, you will continue to practice their keying skills while learning the number keys (both alphanumeric and keypad).

Playing the Game

You have now learned the basics of proper keying. You will now begin to learn about formatting business documents while you continue to practice your keying skills using MT3. Now that you have learned the basic skills of the keyboarding game, you are ready to move on to applying those skills. In Unit 3, you will continue to practice your keyboarding skills, as well as learning proper formatting for letters, memos, and reports. In addition, you'll spend some time learning more about your favorite game.

Games in Your Future?

This unit focuses on career choices and is referred to as a reality check (we can't all play games for a living). You will complete an interest inventory and select a career to research. This research project will be the final project for the course, worth 20% of the course grade when combined with the timed writing score. Instead of taking a single exam at the end of the course to show that you've mastered all of the skills needed to play the keyboarding game, you will complete a final project. Unit 4 is that project. All of the career assignments in Unit 4 must be completed satisfactorily in order for you to receive a passing grade in this course. The tasks you will be asked to perform include all of the skills you've been practicing throughout the course. As in the other units of this course, you will also take a timed writing exam at the end of Unit 4. You will continue to do some skill building activities to improve your speed throughout this unit.
DIGITAL ARTS I (STEM FOCUSED)

Grades: 9, 10, 11, and 12

Credits: 0.50

In this course you will become familiar with basic concepts essential to visual and digital art, such as line, shape, form, color, value, space, and texture. Using Inkscape, a free open-source program, you will also develop core artistic skills through the creation of original digital art. You will have the opportunity to express yourself as well through a course-long art project that involves the creation of a still life scene.

Units

Course Overview
You will learn how to use the course technology. You will learn how to navigate through the course, find and zip files, set up your Web browser, and complete coursework. You will also learn about using trustworthy sources, avoiding plagiarism, and making proper citations.

Introduction to Digital Art
You will learn about basic concepts that inform visual arts, digital arts, and computer graphics. You will also start to learn how to use Inkscape, a software program for creating digital art.

Lines
You will explore the use of lines in art. Using Inkscape, you will create different types of lines, including a special kind of curve called the Bezier Curve. You will also start an art project that you will continue to work on throughout the course. This project will involve the creation of a still life scene depicting a glass, a decanter, and a bowl of fruit.

Shape and Form
You will explore the use of shapes and forms in art. Using Inkscape, you will create different types of shapes. You will also continue with your art project, adding shapes and forms to your still life.

Color
You will learn how color is related to light and how color is used in art. You will use Inkscape’s color sliders to practice using color. You will also continue with your art project, adding grapes and colors to your still life.

Value
You will learn how value, or the lightness or darkness of a color, is used in art. Using Inkscape, you will create a color value scale. You will also continue with your art project, adding value to your still life through highlights.
Space
You will explore how space and perspective is used in art. Using Inkscape, you will draw two-dimensional objects that look three-dimensional. You will also continue with your art project. You will add a table and book to your still life to create the illusion of 3D space.

Texture
You will explore how texture is used in art. You will create different textures using Inkscape’s filters. You will also complete your art project by adding texture to different parts of your still life.
**EMERGENT COMPUTER TECHNOLOGY (STEM FOCUSED)**

Grades: 9, 10, 11, and 12

Credits: 0.50

In this course, students learn the basics of building safe Web sites. Starting with the basic concepts of Web design (including using hypertext markup language, or HTML), students move on to planning their site and learning how to link and navigate pages. Students are introduced to more complex design techniques, including how to make sites more attractive and interesting through the use of graphics.

**Units**

**Introduction to Website Design**

In this unit you will be introduced to the fundamentals of website design which includes an introduction to html and its history, information on how to create links to other web pages, and how to organize your web page through text formatting.

**Graphics and Multimedia**

In this unit you will plan the graphics and multimedia that you will use to enhance your web page. This includes learning how to create inline images, create and adjust graphic size, and manipulate background and text colors on your web page.

**Forms and Tables**

In this unit you will practice form planning and design. Forms allow you to collect information from visitors on your website. You will also discover the usefulness and importance of tables to lay out any page content and provide you more control over the appearance of your web pages.
ENGINEERING DESIGN I (STEM FOCUSED)

Grades: 9, 10, 11, and 12

Credits: 0.50

In this introductory course you will learn computer-aided design skills necessary for a career in engineering. To this end, you will learn the basics of using CAD software to draw engineering plans and diagrams. Using CAD, you will become familiar with creating points, lines, geometric forms, drawings, and 3-D models. As you learn these basics, you’ll gain the foundation that you need to translate abstract concepts into functional designs, a core engineering skill. During this course, you will create a diverse portfolio of projects that include orthographic projections, sectional views of 3-D objects, isometric drawings, and 3-D walkthroughs. Through these projects, you’ll develop the skills you need to design and create CAD projects of your own.

Units

Course Overview

Create Shapes
In this unit, you will learn how to set up and use CAD tools to draw lines and shapes. Using CAD, you will learn how to edit, copy, mirror, and rotate lines. You will also learn how to draw lines and shapes at specific points on other lines and shapes.

Create Orthographic Drawings
In this unit, you will learn how to create orthographic projections that show three-dimensional (3-D) objects in a two-dimensional drawing. You will learn how to define layers, dimensions, scale, and layout. You will also learn how to use visible lines, construction lines, hidden lines, and center lines. Additionally, you will draw an orthographic drawing of an object with a hole in it.

Draw Sectional Views
In this unit, you will learn how to draw sectional views of 3-D objects in CAD. You will also draw cutting plane lines that reveal the most important features of 3-D objects.

Create an Isometric Drawing
In this unit, you will analyze different types of pictorial drawings that create a realistic 3-D effect. You will also learn to use distance and angles to create isometric drawing.

Create an Oblique Drawing
In this unit, you will learn to use foreshortening to make oblique drawings look more realistic.

Create a Perspective Drawing
In this unit, you will learn about perspective drawing and vanishing points. To this end, you will analyze how vanishing points make things look realistic. You will also create a two-point perspective drawing.
**Draw an Auxiliary View**

In this unit, you will learn about the purpose of auxiliary views. You will also create an auxiliary view of a 3-D object.

**Dimension Drawings**

In this unit, you will learn and apply guidelines and CAD standards for dimensioning. You will learn to add dimensions to a rectangular block and interpret drawings with complex features. You will also learn about baseline dimensioning and use this knowledge to dimension a three-view orthographic drawing. Additionally, you will learn to apply a leader line to dimension a circle.

**Create Working Drawings**

In this unit, you will learn about the types of information that goes into working drawings. You will add a title block with text to a blank drawing. You will also create a bill of materials for your set of working drawings. Additionally, you will learn about working with clients, including how to save files in appropriate formats for client usage.

**Create a 3-D Design**

In this unit, you will learn how to navigate a 3-D CAD environment and use basic shapes to create 3-D objects. To this end, you will learn how to draw edges and surfaces in SketchUp to create a house. Additionally, you will create objects with specific dimensions—a swimming pool and a bird bath—as well as learn how to import a chair. Finally, you will learn about ways to view your design and share it with others.
GAME DESIGN (STEM FOCUSED)

Grades: 9, 10, 11, and 12

Credits: 0.50

This course is for anyone who loves gaming and wants to design games. You’ll learn how to use popular game design software to create engaging, interactive games in a variety of genres. In addition, you’ll get a solid foundation in the basic concepts of game development. By the end of this course, you will have a variety of polished games for your game development portfolio.

Units

Game Design Overview
In this unit, you will learn what you need your computer to have in order to take the course and how to move through the course.

Ping
In this unit, you will create a two-player video game called Ping.

Ice Breakers
In this unit, you will create a one-player video game called Ice Breakers.

Cat Burglar
In this unit, you will create a one-player maze game called Cat Burglar.

Alien Attack
In this unit, you will learn how to create a one-player shooter game called Alien Attack.

Pest Busters
In this unit, you will learn how to create a one-player version and a two-player version of a shooter game called Pest Busters.

Amazon Adventure
In this unit, you will learn how to create a one-player platform game called Amazon Adventure.
INTRO TO COMPUTERS & INFORMATION TECHNOLOGY: IC3 A (STEM FOCUSED)

Grades: 9, 10, 11, and 12

Credits: 0.50

In this course, the student will gain an understanding of computing and common features of popular applications. The student will practice and apply computer skills needed in today’s academic and business environments including word processing, spreadsheet, and presentation applications. Skills needed for working in an Internet or networked environment are also covered. This course prepares the student for the three Internet and Computing Core Certification (IC3) tests.

Units

Unit 1: Exploring Computers
In this unit, you will explore Pegasus, read about the history of computers, and gain an understanding of your own computer hardware and software.

Unit 2: Exploring Input and Output
In this unit you will learn the basics of inputs and outputs as well as some specialized input and output functionality.

Unit 3: Analyzing Storage
In this unit you will learn some basics about storage, classify storage devices, and explore how data storage works on hard drives, flash drives, and optical storage devices.

Unit 4: Exploring Systems Software
In this unit you will be introduced and explore operating systems and utilities.

Unit 5: Analyzing Applications
In this unit you will examine and use types of application software and explore software versions and documentation.

Unit 6: Word Processing
In this unit you will learn the basics of word processing that includes creating, editing, formatting, publishing, viewing, and enhancing documents.

Unit 7: Spreadsheets
In this unit you will explore the basics of spreadsheet creation by entering and editing data, using formulas, formatting and managing worksheets, and sharing data among programs.

Unit 8: Databases
In this unit, you will explore the essentials and types of a database, as well as utilize database techniques such as creating and maintaining databases and using queries and filters.
INTRO TO COMPUTERS & INFORMATION TECHNOLOGY: IC3 B (STEM FOCUSED)

Grades: 9, 10, 11, and 12

Credits: 0.50

In this course, the student will continue to practice and apply computer skills needed in today’s academic and business environments including word processing, spreadsheet, and presentation applications. Skills needed for working in an Internet or networked environment are also covered. This course prepares the student for the three Internet and Computing Core Certification (IC3) tests.

Units

Unit 1: Graphics
In this unit you will explore graphics programs, prepare computer graphics, and use image editing programs and drawing and animation features of those programs.

Unit 2: Presentation Programs
In this unit you will create, enhance and finalize presentations using presentation software.

Unit 3: Multimedia
In this unit you will learn some multimedia basics, explore virtual reality, and develop online multimedia to include in your presentation.

Unit 4: Review
In this unit you will apply your new understanding and complete some projects using the software programs that you have learned about.

Unit 5: Communications
In this unit you will explore high speed telecommunications and discuss cell phone technology and choice of digital options.

Unit 6: Networks
In this unit you will learn some networking basics, differentiate local and wide area networks, and discuss the utilization of local and remote networks.

Unit 7: The Internet
In this unit you will compare Internet Services, explore internet structure, access data on the Internet, and explore internet communications.
Unit 8: The World Wide Web
In this unit you will be introduced to e-commerce, explore hypertext, and discuss designing and working on the Web.

Unit 9: E-mail and Other Messaging Systems
In this unit you will describe challenges and solutions around email communications and develop best practices.

Unit 10: Online Safety
In this unit you will discuss ethics around using your computer responsibly, protecting your data, and troubleshooting any computer issues.

Unit 11: Certificate Exam Review
In this unit you will apply your knowledge of Microsoft Word, Excel, PowerPoint, and Access by taking practice exams to prepare for the certification exam.
JAVA PROGRAMMING I (STEM FOCUSED)

Grades: 9, 10, 11, and 12

Credits: 0.50

The student explores programming fundamentals, variables and assignments, conditional expressions, selection statements, loops, arrays, methods, string manipulation, program troubleshooting, and the basics of class design, object creation, and object interaction. The student will use Oracle’s Java programming language throughout this course.

Online Text/eBook

eText Introduction to Java Programming, Brief Version
JAVA PROGRAMMING II (STEM FOCUSED)

Grades: 9, 10, 11, and 12

Credits: 0.50

The student will learn essential object-oriented programming concepts, exception handling, recursion, generics, and important data structures in the Java Collections Framework. Advanced topics include algorithm analysis using Big O notation, a comparison of major sorting algorithms, and creation and traversal of a binary search tree. Lessons are accompanied by frequent programming exercises.

Online Text/eBook

eText Introduction to Java Programming, Comprehensive Version
LEARNING MICROSOFT OFFICE 2010 A (STEM FOCUSED)

Grades: 9, 10, 11, and 12

Credits: 0.50

In the Learning Microsoft Office® 2010 course, the student will learn, practice, and apply the practical capabilities of the Microsoft Office productivity suite. The course begins with an introduction to essential Microsoft Office skills, including using the mouse and keyboard, as well as basic tools and functions. Through guided practice, the student will then learn to create, format, edit, and revise a variety of document types in Microsoft Word. Finally, the student will learn and use the tools and features of Microsoft PowerPoint to create engaging presentations. As the student learns the most commonly used software in today's academic and business environments, he prepares for Microsoft Office Specialist Core certification testing.

Units

Office Basics: Common Features in Microsoft Office
You will learn to use tools and features that are common to all applications in Microsoft Office 2010.

Getting Started with Microsoft Word 2010
You will learn how to format and edit documents, adjust alignment and spacing, and insert and format graphics into a Word document.

Editing Documents and Working with Tables
You will use the spelling and grammar check functions, create tables, use the find and replace and autocheck functions, and work with document templates.

Creating Reports and Newsletters
You will change case, manage document properties, create columns, and use other features to enhance a document. You will also create mailing labels.

Learning More About Merge and the World Wide Web
You will continue applying your knowledge of mail merge and begin exploring the World Wide Web.

Getting Started with Microsoft PowerPoint
You will insert and arrange slides, format, edit, and add slide transitions in creating PowerPoint presentations.

Working with Lists and Graphics
You will insert graphics, text boxes, and symbols. You will also apply your knowledge of WordArt and SmartArt in the creation of a photo album.
Enhancing a Presentation
You will modify themes and backgrounds and use effects and animations when creating your presentation.

Finalizing a Presentation
You will fine-tune your work by customizing, enhancing, reviewing, finalizing, and distributing your presentation.
LEARNING MICROSOFT OFFICE 2010 B (STEM FOCUSED)

Grades: 9, 10, 11, and 12

Credits: 0.50

In this course, the student will continue to learn, practice, and apply the practical capabilities of the Microsoft Office® productivity suite. The student will use Microsoft Access to use, create, build, and modify databases. Within a database, the student will view, add, navigate, manipulate, and report information. In Microsoft Excel, the student will learn tools, features, and navigation of spreadsheets. The student will work with cells, ranges, and formulas and will display data in a variety of formats. As the student learns the most commonly used software in today’s academic and business environments, he prepares for Microsoft Office Specialist Core certification testing.

Units

Getting Started with Microsoft Excel 2010
You will learn the basics of Excel by creating worksheets and formatting cells.

Working with Formulas, Functions, and Charts
You will explore functions, use tables, and manage worksheet operations.

Charting Data
You will build, format, and enhance charts by adding special effects and elements. You will also utilize the charts to compare and analyze data.

Advanced Functions, PivotCharts, and PivotTables
You will use advanced functions to create pivot tables and charts to predict trends and analyze data.

Advanced Printing, Formatting, and Editing
You will work with graphics and web data. You will also link data between workbooks and work with 3-D formulas.

Getting Started with Microsoft Access 2010
You will create a database, modify fields, add data, import and protect data, and use table templates.

Working with Queries
You will manipulate and summarize data, create queries, use comparison operators, and calculated fields.

Working with Forms and Reports
You will create and use lists and forms, reports, and tables.
WEB DESIGN I A (STEM FOCUSED)

Grades: 9, 10, 11, and 12

Credits: 0.50

This course provides a comprehensive introduction to the essentials of website design. From creating page layouts to coding with CSS and JavaScript, the student will create a complete website. Through real-world design scenarios and hands-on projects, the student will create compelling, usable websites using KompoZer, one of the Internet's easiest to use open source editing tools.

Units

Course Overview
You will learn to use the Procedure Library, make your course folder and to change your folder view. Also you will learn to show file name extensions.

Favorite Page
You will create a web page while navigating in KompoZer, the website creation program used in this course. Also, you will have the opportunity to add text and images to your website.

Linked Site
You will explore setting up the navigation and color palette for your web page. You will learn to format your site and to make thumbnail images.

HTML Portfolio
You will learn to write HTML code, add headings, and add body text to the web page.
WEB DESIGN I B (STEM FOCUSED)

Grades: 9, 10, 11, and 12

Credits: 0.50

This course provides a comprehensive introduction to the essentials of web design, from creating page layouts to coding with CSS and JavaScript to create a complete website. Through real-world design scenarios and hands-on projects, the student will create compelling, usable websites using KompoZer, one of the Internet's easiest to use open source editing tools.

Units

Styled Site
Your web page has been created, and now you will have the opportunity to style the page as you wish. You will learn how to title and name pages as you create your navigation bar. This unit will introduce cascading style sheets (CSS) and their usage in web page creation.

CSS Code
You will work exclusively with cascading styles sheets (CSS). You will explore inline, external and second style sheets.

JavaScript
The final unit introduces you to JavaScript including how to add image links, dialog boxes, and rollover images to your web page. You will also be able to create dynamic web pages by the end of this unit.
HEALTH AND PHYSICAL EDUCATION

HEALTH, FITNESS, AND NUTRITION A

Grades: 9, 10, 11, and 12

Credits: 0.50

The benefits of nutrition and exercise are among the many health-related topics covered in this course. Students gain awareness of their own fitness level and nutritional needs through the study of the body’s musculature and respiratory system.

Units

Unit 1
You will learn about the different aspects of being fit and why these aspects are important. You will also learn factors that determine fitness but are out of your control. Various tests, components, and guidelines for exercise, joints, flexibility, stretching, and the mind-body connection are covered.

Unit 2
You will study the anatomy of the heart and its relation to exercise and muscle strengthening. Aerobic training and the importance of training properly will also be discussed. You will discover why developing positive exercise habits at young age will help increase longevity and quality of life.

Final Exam
HEALTH, FITNESS, AND NUTRITION B

Grades: 9, 10, 11, and 12

Credits: 0.50

In the second of two courses, students learn first aid, personal wellness, and the dangers of alcohol and drug use. Students learn how to adopt long-term, healthy habits and lifestyle changes to improve and inspire an overall state of well-being. Students also explore how fitness can influence self-image and how to develop social strategies to understand peer pressure.

Units

Unit 1

Students will begin to explore the causes of obesity and the steps to prevent obesity and other diseases that arise from a sedentary lifestyle. You will learn about weight control and the different types of diets that are common today. You will also be able to determine which diets can and cannot work. Stress and stress management will also be explored in this unit.

Unit 2

In this unit, you will learn about first aid, personal wellness, and the dangers of alcohol and drug use. Students will discover myths that surround exercise and identify ways to prevent injury while exercising. You will also explore how fitness can influence self-image and how to develop and design a personal exercise program.

Final Exam
PERSONAL FITNESS

Grades: 9, 10, 11, and 12

Credits: 0.50

The lessons in Personal Fitness help students gain an understanding of the proper ways to exercise and diet, as well as learn how to assess their own fitness level. The course also teaches strategies to attain the highest possible fitness level.

Units

Fitness Awareness and Understanding
You will learn about the importance of fitness and be able to describe your fitness level. Topics covered include the five health-related factors and the six skill-related factors. You'll be able to define and perform a series of fitness tests to evaluate cardiovascular fitness, body composition measurements, and body fat evaluation. You will also be able to explain the principles of overload, progression, and specificity. With this knowledge, you will learn how to plan your own exercise sessions, including the warm-up and cool down. Flexibility, the different kinds of joints, and how to apply principles to flexibility will also be covered.

Cardiovascular Fitness
You will be able to define cardiovascular fitness, describe the functioning of the cardiovascular system, and will be familiar with the major structural features of the heart. You will learn about blood pressure, the respiratory process, features of the lungs, benefits of aerobic exercise, the types of muscle fibers, how to develop cardiovascular fitness and muscular strength and endurance, oxygen transport, how blood is carried, and body fat.

Nutrition
You will learn about the best food sources for the six major nutrients as well as the basic food groups to optimize your health benefits. Sports nutrition myths are debunked. Other topics include: hydration, weight control, fad diets, eating disorders, and the effect of stress.

Designing Your Personal Exercise Program
You will learn about common exercises and how to avoid injuries. You will learn how to track your progress and as well as how to reach specific goals. This program design will improve a) cardiovascular endurance, b) muscular strength and endurance, and c) promote positive changes in flexibility.
**PHYSICAL EDUCATION**

Grades: 9, 10, 11, and 12

Credits: 0.50

This course places priority on self-motivated physical activities that students can participate in throughout life. Students’ proficiency in the activities most important for personal development are measured with written assignments, class evaluations, and demonstrated physical skill competencies.

**Units**

**Fitness**
You will learn about the mechanics of several muscle specific stretches, the benefit of cardiovascular fitness, self-evaluations of personal fitness level, and proper technique and spotting for safe weight lifting.

**Team Sports**
You will learn the rules and regulations of various team sports, including basketball, volleyball, softball, baseball, and soccer. You will also acquire the skills that accompany these activities.

**Individual Sports**
You will learn various activities that can be performed on your own that promote lifelong fitness. Included in the unit are lessons on hiking, swimming, and running, among other activities. You will gain an appreciation for fitness and how it contributes to a higher quality of life.

**Final Exam**
JOURNALISM A

Grades: 9, 10, 11, and 12

Credits: 0.50

From examining the guidelines of proper journalism to firsthand practice in writing news, sports, and feature articles, students experience the media writing process and how it applies to today's world of journalism. In Journalism A, students review the guidelines for good journalism and learn the elements of news, feature, and sports writing.

Units

The Guidelines of Good Journalism

This unit introduces the guidelines for good journalism. In addition, you learn how to manage time and research so that publication deadlines are met on time. More importantly, you will learn about the legal issues that are important to avoid when using sources and information. To avoid these problems, skills such as summarizing, paraphrasing and attributing sources are practiced.

Learning the Process

This unit provides you with the skills and applications for mastering the process of writing a story for publication. You will learn to use a variety of sources to brainstorm for story ideas and sources as well as develop some strategies for designing and implementing surveys and interviews to provide primary sources for your stories. Overall, by the completion of this unit, you will be prepared to be a well-informed, efficient, and effective reporter.

News Writing

Within each lesson of this unit, you apply the process of thinking about stories, writing, brainstorming for ideas and sources, researching sources, drafting the first versions, copyediting, and writing the final stories. Each type of reporting has its own unique organization and writing style. To provide audience interest in your story, you may use published data, statistics, and survey results, as well as your own interviews and surveys.

Sports Writing

Whether or you are personally involved in a specific sport, you will find so many interesting topics to write about. If you are not interested in sports, you still have the ability to write about them. At the heart of all journalism is a similar set of skills that can be used to write about a football game, a bank robbery, a new film, or a tax bill. You will learn the criteria of sports reporting and develop story ideas.

Feature Writing

You use interviews and surveys for primary sources by using observations of an event or setting, including "on-the-spot" interviews. One of the best ways to make a feature story come to life is through photographs of the places and events covered, so if you are handy with a camera, you will be asked to start thinking about a story idea and looking for good photo opportunities.

Journalism A Review and Final Exam
**JOURNALISM B**

Grades: 9, 10, 11, and 12

Credits: 0.50

The second course in Journalism reviews the evolution of journalism and its role in today’s world. Students learn critical writing (reviews) as well as the steps for crafting editorials. The final unit introduces students to the basics in media design, including topics in multimedia presentation.

**Units**

**Evolution in Journalism**
You will understand the evolution of competitive journalism by analyzing the motives of William Randolph Hearst. You will explain how yellow journalism shaped the Spanish-American War. Later in this unit, you will define media and identify ways media changed in the 20th Century, including how television affected the habits and opinions of the American family. You will learn how new forms of media have changed journalism and analyze how the Internet has impacted the power of media.

**Journalism in the World Today**
You will examine the reciprocal effect that media have on political and international events. It might be said that a successful global community hinges on fair and accurate reporting. Communication among people of the world is dependent on the commitment and honesty of its journalists. When those factors are missing, communication breaks down.

**Review Writing**
You will conduct evaluations of the two products or services about which you will write. Time-management is important for setting up surveys or interviews, so make sure you have enough time to gather the information and determine your opinion. For most students, review writing is a rewarding and enjoyable endeavor!

**Opinion Writing (Op-eds)**
You have the opportunity to express your opinion on a variety of topics of your choice. The first two lessons will give you lots of ideas and links for forming an opinion about a written opinion or even creating your own opinion cartoon.

**Copy and Design**
You will learn some of the criteria for being an editor. You will learn more about the roles of the various editorial positions and what each entails. You will also consider the importance of honing your grammar and writing skills, and you will spend time practicing each. Finally, you will learn about writing good headlines.

**Journalism B Review and Final Exam**
**SPEECH AND DEBATE**

Grades: 9, 10, 11, and 12

Credits: 0.50

In this course, the student will learn how to apply visuals, style, stories, organization, and nonverbal communication to speeches. The student will learn tactics to help overcome fear, participate in debates, and rehearse effectively. The student will also learn how to evaluate great speeches from history as well as more modern media messages.

This Speech and Debate course was developed by Connections with content and video excerpts provided by TJ Walker, Media Training Worldwide. Connections’ use of all content, including any video excerpts, is for educational purposes only, and specifically, for purposes of review, criticism, illustration or comment. All images, names, logos, and depictions belong to their respective parties.

**Units**

**Unit 1: Style and Nonverbal Communication**

Welcome to Speech and Debate. You will learn and practice skills that will help you as a public speaker for the rest of your life. You will be guided through this course by TJ Walker, one of the world’s leading authorities on media and presentation. Enjoy the learning experience as you, too, evolve into an excellent public speaker.

**Unit 2: Fear of Public Speaking**

Do you have a fear of speaking in public? Do you get nervous even when recording your outgoing voicemail message? If so, you are not alone! You will explore ways to deal with this common problem.

**Unit 3: Organizing a Presentation**

What good is a speech if the audience does not remember what was said? The more organized you are, the more likely it is that your message will be clear and memorable. You will learn strategies for organizing your speeches.

**Unit 4: Making Presentations Memorable**

Stories, as you now know, are essential components of a great presentation. You don’t want to tell a story just to tell a story, though. You need to have a message behind your story. A powerful message gets the audience thinking about and visualizing what you are saying and encourages people to take some sort of action.

**Unit 5: Using Visuals**

We are fortunate to live in an age of advanced technology. When used properly, tools such as Microsoft® PowerPoint can enhance a presentation. When used improperly, such tools can put an audience to sleep. You will learn some of the fundamentals of using visual aides.
Unit 6: Debate and Persuasion

Though Presidents Richard M. Nixon and John F. Kennedy were leaders before your time, you have certainly heard of them. What do you know about their landmark television debate?

Television had recently entered mainstream American households at that time. The Nixon/Kennedy debate went down in history because it was the first time that people running for President of the United States debated on television. Previously, the presidential debates were listened to over the radio or watched in front of an audience. How do you think a television debate might differ from a radio debate for the people debating? How would it be different for the audience?

You will learn the fundamentals of debate and analyze the famous Nixon/Kennedy television debate.

Unit 7: Great Speeches in History

You will observe some of the greatest speeches ever recorded. From memorable politicians to powerful business leaders, these speakers will give you a taste of what it means to speak in ways that create a lasting legacy.

Unit 8: Media Communication

You will examine media communication and strategies, politics in the media and media in our society.

Unit 9: Preparation, Rehearsal and Continuous Improvement

No matter how great the information you have to deliver is, no matter how witty your stories are, your presentation will not be the best it can be without rehearsing. Rehearsing is an important part of the preparation process.

You will have the opportunity to explore and develop effective preparation and rehearsal tactics to ensure your continued improvement and success as a public speaker and presenter

Final Exam
STATISTICS A (STEM FOCUSED)

Grades: 9, 10, 11, 12

Credits: 0.50

In this course, the student will become familiar with the vocabulary, method, and meaning in the statistics, which exist in the world around them. This is an applied course in which students actively construct their own understanding of the methods, interpretation, communication, and application of statistics. Each unit is framed by enduring understandings and essential questions designed to allow students a deep understanding of the concepts at hand rather than memorization and emulation. The TI-83+/84 OR 89 calculator and computers will be used to explore the world of data and the patterns which can be found by analyzing this information as well as statistical relationships. General topics of study include exploring data, planning and design of a study, and anticipating patterns.

Units

Univariate Data and Graphical Displays: Part 1
This unit begins with an introduction to univariate data, beginning with a video that covers the basics of statistics using real-world examples. Next, you will learn about different kinds of data, such as qualitative and quantitative. Different ways to display data is introduced, such as bar charts, pie graphs, plots, and histograms. You will begin to learn about data distribution in regards to center, shape, and spread. Then you will have the opportunity to practice displaying data using different methods, including using an interactive histogram. Finally, you will review and use all the information introduced in this unit prior to taking the unit test.

Univariate Data and Graphical Displays: Part 2
In this unit, you will continue the process of describing distributions by using quantities to describe the data set. Specifically, you will learn how to describe the center using the mean or the median and the spread using the range, quartiles, variance, and standard deviation. You will learn how this information contributes to the five-number summary and how to display this information in a boxplot. You will also learn about Tukey's Rule which can be used to determine if a data point is an outlier.

Introduction to Bivariate and Categorical Data
This unit provides an introduction to bivariate data beginning with classifying and identifying different types of variables, such as explanatory and response variables. You will then learn how to plot bivariate data using a scatterplot to determine if there is a relationship between the two variables. Interpreting scatterplots involves identifying and describing associations such as direction, form and strength and identifying any data points that do not seem to follow the pattern, called outliers. You will learn about correlation, such as how to calculate and interpret, and the difference between correlation and causation. Using a scatterplot, you will learn how data can be modeled with a least squares regression line and use this model to make predictions. Regressions will be evaluated through the use of residuals, as well as influential points and coefficient of determination.
Exploring Bivariate and Non-linear Data

In this unit, you will continue working with modeling and interpreting bivariate data. However, the focus will be on data in which linear regression is not the best model. You will learn about exponential data and the power function and how these can be used to model and interpret bivariate data. You will also get an opportunity to analyze bivariate data that is categorical rather than quantitative. Other concepts will include Simpson's Paradox, lurking variables, causation, and extrapolation.

Conducting Studies - Samples and Surveys

This unit introduces how reliable data can be obtained for studies, experiments, and simulations. You will learn how a sample can be used to represent a population and how to identify bias, including its affect on any conclusions drawn from the collection of data. Opportunities are provided for you to design samples and surveys, including how randomization should be used in order to obtain reliable data. You will also learn about the different types of good sampling methods that should be used to obtain reliable data as well as sampling cautions that can contribute to sampling error.

Semester Review and Exam

In this unit, you will have the opportunity to review and pull together all the information introduced in the first semester of the course in order to prepare for the semester exam.

Stats: Modeling the World AP Edition
STATISTICS B (STEM FOCUSED)

Grades: 9, 10, 11, 12

Credits: 0.50

In this course, the student will become familiar with the vocabulary, method, and meaning in the statistics, which exist in the world around them. This is an applied course in which students actively construct their own understanding of the methods, interpretation, communication, and application of statistics. Each unit is framed by enduring understandings and essential questions designed to allow students a deep understanding of the concepts at hand rather than memorization and emulation. The TI-83+/84 OR 89 calculator and computers will be used to explore the world of data and the patterns which can be found by analyzing this information as well as statistical relationships. General topics of study include exploring data, planning and design of a study, and anticipating patterns.

Units

Conducting Experiments

In this unit, you will learn about experiments and what information you can expect to obtain. Terminology related to experiments such as experimental units, treatments, factors, and levels are explained. You will learn about the different kinds of experiments and experimental designs. Experimental cautions are explained as well as how to conduct a simulation. The concept of generalizability, making generalizations about a population, is covered as well as how to control for variables that you know will affect the results, such as blocking.

Probability

In this unit, you will learn about experiments and what information you can expect to obtain. Terminology related to experiments such as experimental units, treatments, factors, and levels are explained. You will learn about the different kinds of experiments and experimental designs. Experimental cautions are explained as well as how to conduct a simulation. The concept of generalizability, making generalizations about a population, is covered as well as how to control for variables that you know will affect the results, such as blocking.

Random Variables

In this unit you will learn about random variables, such as discrete random variables and continuous random variables, including notation convention and probability distributions related to each. You will also learn how to calculate expected values and determine if a game is fair using mean, standard deviation, and variance.

Binomial and Geometric Distributions

In this unit you will learn that certain events can be described and predicted using binomial and geometric models. The criteria for each model is introduced as well as how to find the probabilities of each using mean, standard deviation, and formulas.
Sampling Distributions

This unit explores sampling distributions which provide descriptive measurements, such as mean, median, and standard deviation of a sample. You will learn how sampling statistics relate to the population through the Central Limit Theorem, normal approximations, and sample proportions and means.

Semester Review and Exam

In this unit, you will have the opportunity to review and pull together all the information introduced in the second semester of the course in order to prepare for the semester exam.

Stats: Modeling the World AP Edition
HUMANITIES

ART HISTORY A

Grades: 9, 10, 11, and 12

Credits: 0.50

In Art History, students explore the basic elements and principles of art and its role in human history and the development of early cultures. Students look at how art impacted cultures from Paleolithic times to ancient Egypt, and explore the factors that affect the analysis and interpretation of art.

Units

Journey Through Ancient Art History

This unit offers a foundation of the elements and principles of art and the knowledge of what to look for when the student critiques and explores various works of art. Creating art is an important part of experiencing life. It allows the student the opportunity to express himself in a unique form. It forces the student to seek out new ways to convey his thoughts and feelings to others. Studying the art that has been created by others helps the student to understand the thoughts and feelings that motivated them to create. It opens the student’s mind to the similarities and differences among cultures and societies.

Art at the Start: Early Civilization

This unit explores Prehistoric art as well as the art and architecture of the civilizations of the fertile crescent. Historians usually consider works of art to be prehistoric if they were produced more than 5,000 years ago. This is the case with the works you will study in this unit. However, it is important to note that not all societies and cultures developed at the same time in history.

You will study the Sumerians who were responsible for the first forms of writing, law, a complex economy, irrigation methods, and singular expressions of art and architecture. The visual arts of the Sumerians were so influential that their legacy carried on in the cultures that followed: those of the Assyrians, the Babylonians, and the neo-Babylonians.

Egypt: Art on the Nile

Images of ancient Egypt abound in our imagination. The great treasures of the ancient world, such as the pyramids and the Sphinx, are instantly recognizable. In this particular unit, the student will begin by familiarizing himself with the geography and history of ancient Egypt. Then, the student will build a foundation of knowledge by getting an overview of the ancient art and architecture of this amazing civilization through the Old, Middle, and New Kingdoms.

Final Review and Exam

In this unit, you will have the opportunity to prepare for and take the final exam. Since this is a comprehensive exam, it may be helpful to organize your notes in the order of the course outline before you begin to review. Using the test-taking strategies that you have previously learned can help you be successful with both objective and essay questions.
ART HISTORY B

Grades: 9, 10, 11, and 12

Credits: 0.50

In Art History, students embark on a journey of discovery examining the artistic endeavors of early Western civilizations. Students use art theory to analyze works from ancient Greece and the Roman Empire. Students gain an enhanced understanding of ancient history, as well as how art is both a reflection and engine of history.

Units

Greece: Gods and Glory

You will discover the world of Ancient Greece and the many wonders that have stemmed from this civilization. Ancient Greece is such an integral part of our modern view of the world that we see the evidence nearly everywhere we look, in our institutions and civil organizations as well as behind our ideas about beauty in art and architecture. The distinguishing periods of the ancient Greek civilization: the Archaic, the Classical, and the Hellenistic, will also be explored.

You will also look at the architecture of Ancient Greece and understand how its different styles reflect the different periods of ancient Greek history. You will explore the individual buildings and temples of Ancient Greece, namely those found on the Acropolis, the "sacred hill."

The history and beauty of Greek pottery will be explored. More than mere containers, the vases, amphorae, and other ceramics of this culture were beautiful objects that often told stories, myths, and legends on their painted surfaces.

Ancient Rome: Art of an Empire

Unit 2 embarks on a journey toward understanding life and artistic developments in ancient Rome. Early Rome, during the Roman republic, sheds light on a driving desire for territorial expansion, military initiatives, an advantageous geographical position, and views on citizenship. These topics set the stage for a gaining a deeper insight into the people, culture, and artistic legacy of ancient Rome. You will learn that Roman portrait sculptures not only serve as beautiful art pieces, but also serve as models for learning artistic influences from other societies, individualized national innovation, and esteemed ideals and perspectives. The concluding lessons on Roman architecture will demonstrate Roman ingenuity in its purest and highest manifestation.

Final Review and Exam

You will have the opportunity to prepare for and take the final exam. Since this is a comprehensive exam, it may be helpful to organize your notes in the order of the course outline before you begin to review. Using the test-taking strategies that you have previously learned can help you be successful with both objective and essay questions.
DIGITAL PHOTOGRAPHY (STEM FOCUSED)

Grades: 9, 10, 11, and 12

Credits: 0.50

This course contains lessons in digital photography and graphic design. Students learn general photographic concepts and composition skills, elements of graphic design, and digital image-editing and special effects techniques. Students are introduced to the fields of photography, advertising, and illustration as possible career choices.

Units

Photo Essentials
In this introductory unit, you will be given a basic overview of digital photography. You will learn how the composition of a photograph is defined by framing, the angle at which the photo was taken, and the photographer’s intended perspective. You will also learn how pixels and resolution determine file size and the quality of your photographs.

You will be asked to take a photograph of an object from three different angles. You will also be asked to choose one of your photos and try different cropping techniques on it. Finally, you will experiment with saving photo files in specific file formats.

Exploring Color and Shape
You will explore color and shape with regard to digital photography. You will study the color wheel—defining primary, secondary, analogous, and complementary colors. In addition, you will explore saturation, value, and contrast, and you will complete activities on image adjustment and capturing different shapes in photographs.

You will complete a lesson on abstract art. You will learn that abstract art relies on shape, color, and brush stroke to convey a particular theme. You will be asked to use the GIMP image-editing program to create and save your own sample of abstract art.

Drawing with GIMP
You will practice drawing in GIMP. You will learn how to use layers in drawings and how to create different effects with a variety of brush types. You will be asked to make a drawing from a photograph of your choice. This activity will show you just how creative you can be when experimenting with digital photography.

You will complete a lesson on pattern and texture. You will learn how different design programs can help you show depth and contrast in your work. You will be asked to identify patterns and textures in various objects and photographs. Finally, you will complete a lab, Creating a Desktop Tile, which will require your creativity.
Creating Special Effects

You will be introduced to filters, or effects that can be applied to an image so that it is changed in unusual ways. You will explore a variety of special-effect filters in GIMP before completing the lab Adding Filters and Effects. You will also learn how to cut around a part of your image with the ellipse selection tool in GIMP.

You will complete the lab Experimenting with Filters. This lab will give you the opportunity to play with up to nine filters at once. By completing this lab, you will learn how the overuse of filters can completely distort an image.

Combining Images

You will learn how to make a composite image, or an image formed by combining two or more images to make a unified picture. You will be asked to use photographs of yourself and someone else to complete this activity. Next, you will complete the lab Creating a Double Exposure. In this lab you will learn how to combine two photographs to create a new photograph.

You will build your own panoramic picture. You will be asked to shoot a series of photos, which you will then combine to form a panorama in GIMP. Finally, you will use your imagination and creativity to create a visual hoax in GIMP.

Experimenting with Type Effects

You will study typefaces, or fonts. You will experiment with type effects, including pattern overlays, filter effects, and perspective. In addition, you will learn how to use text effectively with font type, spacing, color, and positioning.

You will complete the lab Creating Text Effects. In the lab you will experiment with different text-modifying tools in GIMP. You will find that you can change the mood of your chosen text in a variety of ways.

Building Your Portfolio

You will begin to create your own portfolio. First, you will learn how to optimize your images for viewing, which means making your image file size as small as possible. Smaller file sizes take up less computer space. Next, you will learn how to create a web gallery of your photographs in the photo-sharing program Picasa.

You will be able to share your portfolio with your teacher, family, and friends.
**LIVING MUSIC I**

Grades: 9, 10, 11, and 12

Credits: 0.50

Designed for students in grades 9–12, this course teaches fundamental musicianship skills from a Western-Classical approach, while aligning to National Core Arts Standards. The course challenges the student to improve listening, notation, analysis, performance, and improvisation skills. With audio, visual, and interactive technologies, the course provides a unique and advanced learning experience for the student.

**Units**

**Keeping Time: Understanding Rhythm**

Performing at a steady tempo with accurate rhythms is an essential skill for all musicians. In this unit, you will learn how to read, write, and interpret the rhythmic notation found in music. Composers use rhythmic notation to indicate the intended timing of their music. You will learn to interpret this notation accurately while clapping, singing, and playing an instrument.

**Keeping Score: Understanding Music Notation**

You will learn how to read, write, and interpret the common notation found in music. Being able to use music notation gives you the ability to read masterwork compositions, perform music, and create your own works to share with the rest of the world.

**It’s All Relative: The Musical Family Tree**

You will explore the many different instruments in the standard orchestra as well as instruments that are only sometimes found in the orchestra. You will learn how the use of the orchestra has evolved over time and how composers use groups of instruments for various purposes besides symphony concerts. You will learn about the conductor’s role and the special challenges a performer faces when playing with other musicians. You will also practice your music reading, you will perform, and you will compose using the sounds of orchestral instruments.

**The Big Picture: Music History and Styles**

You will travel back in time to learn about composers, compositional techniques, and styles from the Common Era of Western classical music. You will learn to recognize stylistic tendencies of each period, from the Baroque to the present. You will also try your hand at composing using techniques from past eras.

**LIVING MUSIC II**

Grades: 9, 10, 11, and 12

Credits: 0.50

Designed for students in grades 9–12, this course enhances the student’s fundamental musicianship skills from a Western-Classical approach, while aligning to National Core Arts Standards. The student will review and deepen skills and concepts of rhythm and notation learned and practiced in Living Music I. Through the use of virtual tools and analysis of classic repertoire, the student will work to improve listening, notation, analysis, performance, and composition skills. With audio, visual, and interactive technologies, the course provides a unique and advanced learning experience for the student. Living Music I is a prerequisite for this course.

**Units**

**Inspired to Move**

Performing rhythms at a steady tempo is an important musical skill. You will build upon your prior knowledge of rhythmic notation and learn how to read, write, and perform rhythms of greater complexity.

**Inspired to Relate**

The elements of pitch and harmony create color and depth in music. You will build upon your prior knowledge of melodic notation and learn how to read, write, and perform melodies and harmonic progressions of greater complexity.

**Inspired to Create**

Music is a powerful means of human expression. It can reflect the thoughts and values of an individual composer, and it can be representative of an entire culture. You will discover how Western music has changed over the last several centuries in response to cultural trends.

**Inspired to Understand**

Possessing knowledge of compositional techniques and historical context enriches your experience as a listener and performer of music. You will study four great works by Johann Sebastian Bach, Wolfgang Amadeus Mozart, Franz Schubert, and Johannes Brahms to gain a deeper understanding and appreciation of their work.
CHINESE I A

Grades: 9, 10, 11, and 12

Credits: 0.50

This is a beginning level course that will introduce the student to a variety of areas of Mandarin Chinese. In this course, the student will learn listening, speaking, reading, and writing skills through a variety of activities. Throughout the four units, or themes, of material (introduction to Chinese, greetings, calendar, weather, and time), the student will learn to express himself using an ever-increasing vocabulary. Grammar is introduced and practiced in innovative and interesting ways with a variety of learning styles in mind. Culture is presented throughout the course to help the learner focus on the Chinese-speaking world, people, geographical locations, and histories.

Units

Greetings

Each unit consists of a variety of activities that are designed for you to meet certain standards. These standards are a part of the objectives listed for each unit. You will learn how to greet people and exchange basic information like name and nationality in Chinese.

Family

You will learn how to present your family members to your peers in Chinese. Each Unit also has a rubric for a "final performance" which tells you what to do in order to show you how you have met the standards for the Unit.

Friends

Unit 3 focuses on your understanding of the nature of language through comparisons of the language studied and your own. You will learn how to introduce your friend's name, age, address and hobby in conversation while also presenting information and concepts on a variety of topics related to Chinese culture.

Time

Chinese festivals are a cultural spotlight for this unit along with teaching you how to express time in the Chinese language.
**CHINESE I B**

Grades: 9, 10, 11, and 12

Credits: 0.50

This is a beginning level course that will introduce the student to a variety of areas of Mandarin Chinese. In this course, the student will learn listening, speaking, reading, and writing skills through a variety of activities. Throughout the four units, or themes, of material (places, family, food, activities, and school), the student will learn to express himself using an ever-increasing vocabulary. Grammar is introduced and practiced in innovative and interesting ways with a variety of learning styles in mind. Culture is presented throughout the course to help the learner focus on the Chinese-speaking world, people, geographical locations, and histories.

**Units**

**Clothes and Food**

You will learn how to describe people and things; how to state likes and dislikes; and how to communicate on the topics of food, drinks, colors, and clothes. Unit 1 also transitions from Semester 1 to Semester 2 in the course, beginning with a review of the topics in Semester 1.

**Hobbies**

You will learn how to talk with somebody about hobbies, make an appointment, and ask directions properly in Chinese.

**Art**

You will learn how to describe some art patterns and how to talk about film and art works. You will also learn a series of vocabulary which have something to do with arts. In "Visit China," you will learn typical Chinese folk art like Chinese knot, paper cutting.

**Business**

Unit 8 is the last unit in the course. You will learn how to ask and describe price and brand and learn some famous company names in Chinese. You will also learn a series of vocabulary for currency.
CHINESE II A

Grades: 9, 10, 11, and 12

Credits: 0.50

Chinese II enables the students to further develop the communicative skills of listening, speaking, reading and writing of Mandarin Chinese at a more advanced level. Students are immersed in Chinese culture as virtual exchange students in China. Virtual excursions from one Chinese city to another expand their vocabulary helping them learn to interact with others and use appropriate terms to communicate in various everyday situations.

Units

School Life
You will first complete a knowledge review from Chinese 1 to help them with the transition between the two courses. Then you will learn about different aspects related to school life such as ways to greet classmates or teachers, and how to describe a typical school schedule in Chinese. For the cultural lesson, you will study the differences between Chinese and U.S educational system, you will also learn about some historical sites in Beijing, China. You will also learn to write 20 Chinese characters that appear in this unit, and study 4 radicals and their origins and meanings.

Sports and Leisure Activities
Unit 2 focuses on sports and leisure activities. You will learn the vocabulary of popular sports and leisure activities in China, ways to ask for directions or express personal opinions or feelings. You will also learn to discuss about sports injury and to use the word Zhengzai to express present tense. For the cultural lesson, you will learn about the Shaolin temple monks’ everyday rituals, and compare and contrast different styles of Chinese martial arts. You will have the opportunity to learn to write 20 Chinese characters that appear in the unit and study four radicals and their origins and meanings.

Careers
You will learn to discuss about popular occupations in China. You will accumulate the vocabulary of different occupation titles and identify skills required for different occupations in Chinese. In addition, you will learn to discuss in Chinese the process of job hunting. For the cultural lesson, you will learn about and reflect on the importance of learning a foreign language in seeking employment and career choice. You will also learn to writer 20 Chinese characters that appear in this unit, and study 4 radicals and their origins and meanings.

Travel
Unit 4 focuses on the “four corners” in China. You will learn to discuss travel arrangements such as transportation, weather, things to bring, and travel activities in Chinese. For the cultural lesson, you will learn about four beautiful cities in different regions of China and compare and contrast them with the four corners in the U.S. You will also learn to write 20 Chinese characters that appear in this unit and study 4 radicals and their origins and meanings.
**CHINESE II B**

Grades: 9, 10, 11, and 12

Credits: 0.50

Chinese II enables the students to further develop the communicative skills of listening, speaking, reading and writing of Mandarin Chinese at a more advanced level. Students are immersed in Chinese culture as virtual exchange students in China. Virtual excursions from one Chinese city to another expand their vocabulary helping them learn to interact with others and use appropriate terms to communicate in various everyday situations.

**Units**

**Places Where We Live**

Chinese architecture is discussed. You will learn new vocabulary and sentence structures used to describe various architectural formats and styles including Suzhou garden architecture, school architecture, as well as Feng Shui related to Chinese people’s general dwelling. For the culture lesson, you will learn about Feng Shui tips and traditions related to Chinese architecture. You will compare and contrast the Chinese and U.S. architecture styles. You will also learn to write 20 Chinese characters that appear in this unit and study 4 radicals and their origins and meanings.

**Community and Celebrations**

You will study the vocabulary, sentence structures, and grammar points related to Chinese festivals and traditions. Several typical Chinese festivals are introduced including the moon festival and Chinese Valentine’s Day. For the cultural lesson, you will learn about the origins of several Chinese festivals and compare and contrast the Chinese festivals with your favorite western festivals. You will also learn to write 20 Chinese characters that appear in this unit, and study 4 radicals and their origins and meanings.

**Food and Clothes**

You will study ways to order in a restaurant using Chinese. You will also learn the vocabulary, sentence structure, and grammar points related to buying items in a supermarket. In addition, you will learn about being a guest in someone’s house. For the cultural lesson, you will study about some famous Chinese dishes or food items as well as their origins. You will also learn about traditions and etiquettes in Chinese banquets. You will also learn to write 20 Chinese characters that appear in this unit and study 4 radicals and their origins and meanings.

**Art, Music, and Recreation**

You will learn about art and music in China in Unit 4. You will study about an art form that is very popular in China – yu (jade). You will learn about different forms of jade arts, as well as the origins and traditions behind the jade. You will then learn about pop music in China, as well as the vocabulary, sentence structures, and grammar points related to Chinese pop music. For the cultural lesson, you will study and discuss the origin and tradition of jade ornament used as presents between family members. You will also learn to write 20 Chinese characters that appear in this unit and study 4 radicals and their origins and meanings.
**CHINESE III A**

Grades: 9, 10, 11, and 12

Credits: 0.50

In Chinese III, the student will continue to expand his abilities in various aspects of Chinese Mandarin learning. The student will continue to build his knowledge in vocabulary, sentence patterns, and grammar points in communicative contexts. He will also enhance his Chinese Mandarin listening and speaking skills such as pronunciations and intonations. The student will learn more in-depth Chinese reading and writing strategies and skills. His Chinese reading abilities and efficiency will be greatly improved and will be able to write in Chinese in various formats such as a journal, letter, invitation, and an essay. The student's knowledge and skills in writing simplified Chinese characters will also be enriched and fortified.

The student will learn more about the essential Chinese culture knowledge including the origins, histories, anecdotes, and etiquettes for various cultural settings, events, or occasions. He will also gain the ability to compare and contrast the Chinese culture with his own cultures in many different aspects.

**Units**

**Family and Friends**

You are going to learn about typical family structure. You will be working on an interactive family tree by completing it according to the audio prompts. Then you will study Chinese surnames and given names. You will learn the five most popular Chinese surnames, their meanings and origins. You are also required to choose a Chinese name and discuss about its meaning and origin, as well as other background information. Besides the two main topics, you will also learn about dating rituals, different ways to communicate, and expressions of love. You will be able to learn about the famous Chinese love story Liangzhu, and compare it with Romeo and Juliet. At the end of the unit, you will review the entire unit and take the unit exam.

**Anatomy and Medicine**

You will focus on body parts and Chinese medicine. In the first lesson “Body Movements and Chinese Medicine”, you will study the five famous Chinese folk dances, and learn about terms for body movements. Then you will study typical Chinese herbal treatments that can help heal common illness such as cough or fever. In this unit, you are also exposed to some interesting Chinese medicine concepts such as homeopathic remedies, acupuncture, and diet treatment. In the end, you will also learn the special terms used by patients and doctors to describe pain and injury. At the end of the unit, you will review the entire unit and take the unit exam.

**Li Bai Poetry**

You are taught the basic concepts about Chinese poetry. First you will be engaged by poems written by famous poets in Chinese history such as Li Bai, Du Fu, and Li Qing Zhao. You will then learn about the basic principles of writing a traditional Chinese poetry. You will also learn about the Du’ou and Du Zhang rules that are commonly used when writing a Chinese poem. You are required to write a Chinese poem by applying these rules. In addition, you will also compare and contrast Chinese folk songs and poetry. At the end of the unit, you will review the entire unit and take the unit exam.
**Education and Community**

You are going to learn about college life. In the beginning, you will be introduced the college application process in China, and you will learn about the college life in China including the college course setup, everyday schedule, and about students’ leisure activities in Chinese colleges. You will be required to create a college application of your own in Chinese after you have learned these lessons. In addition, you are going to study about Chinese college art festival and create a brochure for an art festival. Toward the end of the unit, parental influence on students is discussed, and you will learn about the alternatives to higher education in China. At the end of the unit, you will review the entire unit and take the unit exam.
**CHINESE III B**

Grades: 9, 10, 11, and 12

Credits: 0.50

In Chinese III, the student will continue to expand his abilities in various aspects of Chinese Mandarin learning. The student will continue to build his knowledge in vocabulary, sentence patterns, and grammar points in communicative contexts. He will also enhance his Chinese Mandarin listening and speaking skills such as pronunciations and intonations. The student will learn more in-depth Chinese reading and writing strategies and skills. His Chinese reading abilities and efficiency will be greatly improved and will be able to write in Chinese in various formats such as a journal, letter, invitation, and an essay. The student's knowledge and skills in writing simplified Chinese characters will also be enriched and fortified.

The student will learn more about the essential Chinese culture knowledge including the origins, histories, anecdotes, and etiquettes for various cultural settings, events, or occasions. He will also gain the ability to compare and contrast the Chinese culture with his own cultures in many different aspects.

**Units**

**Environment and Health**

You are going to learn about pollution in China and discuss about suggestions that can be made to help with the pollution situation in China. Then you will study the current affairs about recycling in China. A collaborative assessment is provided here for you to work with others as a group, to provide constructive suggestions for environment in China. Then reforestation is discussed, and you will learn about pandas and panda natural reserves. You will also study about environmental clubs and environmental art in China. You are also required to create an art piece from a recycled item such as a coke cam. At the end of the unit, you will review the entire unit and take the unit exam.

**Entertainment and Generations**

You are going to learn about popular activities from different points of view. You will learn how to communicate formally and informally. On grammar, you will learn how to express past, present, and future tenses in Chinese correctly. An interesting topic, Karaoke, will be discussed, and you are going to compare and contrast western and Chinese music, popular recreational activities, as well as Chinese and Western economics and their mutual impact. At the end of the unit, you will review the entire unit and take the unit exam.

**Finding Work**

This is a short unit but you are going to learn very useful knowledge about job hunting in China. You will learn about finding employment in China, and you will study useful tips to be used during job interviews. In addition, volunteerism in China is discussed. By studying this unit, you will realize the importance of learning Chinese in the modern society, to bring more job opportunities. At the end of the unit, you will review the entire unit and take the unit exam.
**FRENCH I A**

Grades: 9, 10, 11, and 12

Credits: 0.50

The goal of this course is to give the student basic listening, speaking, reading, and writing skills through interesting and engaging activities. Semester Exam
This unit contains the Semester Exam
GERMAN I A

Grades: 9, 10, 11, and 12

Credits: 0.50

This is a beginning level course that will introduce the student to a variety of areas of language learning. In this course, the student will learn listening, speaking, reading, and writing skills through a variety of activities. Throughout the five units, or themes, of material (greetings, the date, weather, time, and colors), the student will learn to express himself using an ever-increasing vocabulary, present-tense verbs, articles, and adjectives. Grammar is introduced and practiced in innovative and interesting ways with a variety of learning styles in mind. Culture is presented throughout the course to help the learner focus on the German-speaking world, people, geographical locations, and histories.

Units

Unit 1: Die Grüße
Understanding the German language and culture offers great opportunities for appreciating art, history, and science. You will learn and recite the German alphabet, respond appropriately to good and bad news regarding various topics, greet, ask where others are from, and bid farewell in written German.

Unit 2: Der Kalender
Learning the basics of any language is essential to communicating effectively. You will learn the days of the week, numbers, and dates in German. You will examine calendars and participate in activities that require you to write, recite, and discuss.

Unit 3: Das Wetter
The climate of German-speaking countries and the climate in the United States are similar. You will examine the weather in these two countries. You will also learn how to discuss your likes and dislikes and use interrogatives and conjugating verbs.

Unit 4: Die Uhrzeit
In this unit, you will use the location and time vocabulary that you have learned to provide and obtain information, present information about everyday activities, and solve and explain solutions to simple math problems orally.

Unit 5: Die Farben
You will be taking a closer look at the German school system, school supplies, and school subjects. You will learn new adjectives to describe items, colors, and cognates. You will also identify, discuss, and analyze themes, ideas, and perspectives related to cultural products.
**GERMAN I B**

Grades: 9, 10, 11, and 12

Credits: 0.50

German I B is the second semester of a beginning level course that will introduce the student to a variety of areas of language learning. In this course, the student will learn listening, speaking, reading, and writing skills through a variety of activities. Throughout the five units, or themes, of material (city, family, food, leisure time, and school and chores), the student will learn to express himself using an ever-increasing vocabulary, present-tense verbs, articles, and adjectives. Grammar is introduced and practiced in innovative and interesting ways with a variety of learning styles in mind. Culture is presented throughout the course to help the learner focus on the German-speaking world, people, geographical locations, and histories.

**Units**

**Unit 1: Die Stadt**

This unit will present you with vocabulary and skills which are essential for understanding and communicating in authentic German. In this unit you will compare living in the city versus the country, express living preferences and desires, obligations, and abilities. You will also learn about the Austrian culture and its parallels and differences to the United States.

**Unit 2: Die Familie**

You will learn about German culture and history, by creating a family tree and comparing our shared national history. You will also learn how to express family information, including relationships and birthdays through writing and speaking.

**Unit 3: Das Essen**

There are many types of foods and preferred meals in the world. You will be exploring what mealtimes and food consist of in Germany's Black Forest. You will learn new vocabulary that will help you describe these foods and the culture of the Black Forest.

**Unit 4: Die Freizeit**

There are many different types of leisure activities and most vary from one culture to the next. You will learn what German speakers enjoy doing in their free time. You will also share your own leisure activities and compare the cultural similarities and differences.

**Unit 5: Die Schule und Pflichten**

You will study the German school system. You will identify common school objects that all cultures recognize. Then you will compare and contrast cultural similarities and differences between German and American schools and create a school schedule that showcases the similarities and differences.
**GERMAN II A**

Grades: 9, 10, 11, and 12

Credits: 0.50

German II A is an intermediate level course that will introduce the student to a variety of areas of language learning. In this course, the student will continue to learn listening, speaking, reading, and writing skills through a variety of activities. Throughout the five units, or themes, of material (daily routine, animals, pastimes, the body, and descriptions), the student will learn to express himself using an ever-increasing vocabulary, past-tense verbs, demonstrative articles, and adjectives. Grammar is introduced and practiced in innovative and interesting ways with a variety of learning styles in mind. Culture is presented throughout the course to help the learner focus on the German-speaking world, people, geographical locations, and histories.

**Units**

**Unit 1: Der Tagesablauf**

You will review German vocabulary and grammar structures and will talk about daily routines in German. You will learn how to introduce yourself in German, use reflexive verbs to describe daily activities, and tell and ask time. Then you will explore Bavarian culture through reading and discussion activities.

**Unit 2: Die Tiere**

You will cover three major topics throughout this unit including German vocabulary for animals, describe various animal features, and the comparative forms of adjectives to communicate about caring for pets. Then you will learn how to use the correct negative forms of words depending on its sentence structure, and you will also adjust demonstrative articles according to case. Finally, you will learn about the development of the German capital and common expressions that people use Berlin.

**Unit 3: Die Freizeit**

You will explore sports and pastimes enjoyed by German people and engage in conversations about your own hobbies and interests. You will also learn how to make comparison and superlative statements, proper placement of direct object pronouns in a sentence, and use the future tense of the verb to describe upcoming plans.

**Unit 4: Der Körper**

You will learn German vocabulary for the parts of the body. You will explore common expressions that people use for the different parts of the body using indirect object pronouns. Then, you will learn how to report and describe physical complaints or illnesses to a doctor.

**Unit 5: Die Beschreibung**

You will practice and review how to describe people’s nationalities and learn the German names for many of their fellow European Union member countries. You will also learn how to describe yourself and others using “sein” and adjectives, obtain and present information about people's nationalities and use verbs of motion in the past tense.
GERMAN II B

Grades: 9, 10, 11, and 12
Credits: 0.50

This course is a continuation of German II A. In this course, the student will continue to learn listening, speaking, reading, and writing skills through a variety of activities. Throughout the five units, or themes, of material (house, shopping, leisure, travel destinations, and flying), the student will learn to express himself using an ever-increasing vocabulary, past-tense verbs, dative expressions, and adjectives. Grammar is introduced and practiced in innovative and interesting ways with a variety of learning styles in mind. Culture is presented throughout the course to help the learner focus on the German-speaking world, people, geographical locations, and histories.

Units

Unit 1: Das Haus
The focus of this unit is on the home. You will learn new vocabulary for the rooms of a house and the types of furnishings that can be found within each room. In addition, you will learn about the differences between homes in German-speaking countries and other countries throughout the world. By the end of the unit, you will discuss events in the past, explore cognate patterns, and learn more about prepositions.

Unit 2: Das Einkaufen
You will go shopping. You will use numbers greater than 100 to understand prices of items and practice your German by asking for and understanding information as it related to shopping for various items. You will also compare the shopping habits between Germans and Americans, explore European currency, and learn more about Germany's largest department store.

Unit 3: Die Freizeit Angebot
You will learn about leisure activities in Germany in this unit including sports, entertainment, and food. You will learn new vocabulary throughout the unit, and you will continue to expand your grammar skills in German. You will practice German using more past terms, adjective and adverbial phrases of time, and negative responses to various questions.

Unit 4: Reiseziele
You will explore various modes of transportation. In particular, you will learn that the most common transportation method is by train. You will also learn new German vocabulary for traveling and camping. By the end of the unit, you will be able to demonstrate your understanding of dependent clauses, use indirect questions, and give commands.

Unit 5: Flugreisen
You will continue your study German by exploring air travel as a mode of transportation. You will continue to build on your German vocabulary and grammar skills by using terms related to travel, airports, and other methods of public transportation. You will also learn about the economic importance of Airport Frankfurt Hahn in Frankfurt, Germany, which is the third busiest international airport in Europe.
**GERMAN III A**

Grades: 9, 10, 11, and 12

Credits: 0.50

German III A is a continuation of the first two years of German instruction. In this course, the student will continue to learn and practice successful communication through speaking, writing, reading, and listening. Throughout the five units, or themes, of material (Die Gefühle, Der Verkehr, Bei der Arbeit, Land und Leute, and Die Zukunft), the student will learn to express himself using an ever-increasing vocabulary, present-tense verbs, articles, and adjectives. Grammar is introduced and practiced in innovative and interesting ways with a variety of learning styles in mind. Culture is presented throughout the course to help the learner focus on the German-speaking world, people, geographical locations, and histories.

**Units**

**Unit 1: Ferien**

Germans are among some of the most traveled people in the world. When provided the opportunity to get away, most Germans take off for places all over the world. Even within Germany’s borders, the places to visit are abundant. You will explore vacation destinations in Germany, discuss leisure activities, learn new vocabulary, and keep a travel log.

**Unit 2: Gesund Leben**

You will learn about Kurort’s or “towns with a health resort and spa.” Baden-Baden, Germany is known across Europe as a premier place to come to relax and tend to one’s overall health. You will examine the culture of Baden-Baden through reading, discussion, and writing activities.

**Unit 3: Rechte und Pflichten**

You will learn about the German school system and its requirements for graduation. Throughout the unit, you will also examine the rights and responsibilities of 18-year-olds; the Abitur, which is similar to an associate’s degree; Gymnasium, or high school, studies; and military and civilian service professions.

**Unit 4: Miteinander Leben**

Relationships between and among people and countries are very important. You will learn how to talk about relationships. In addition, you will explore friendships, fashions and trends, and the culture that existed between East and West Germany.

**Unit 5: Märchen**

Most Americans think of fairy tales when they hear a mention of the Grimm Brothers. However, many German speakers think not only of the Kinder- und Hausmärchen, but they also think of the major contributions to scholarly work that these two men made as well as their devotion to democracy and the preservation of the German culture. You will learn about the brothers and the fairy tales that have been made famous by them.
**GERMAN III B**

Grades: 9, 10, 11, and 12

Credits: 0.50

This course is a continuation of German III A. In this course, the student will continue to learn and practice successful communication through speaking, writing, reading, and listening. This course presents material according to a specific theme, and the student will learn to express himself through a variety of activities using his ever-increasing vocabulary and grammar knowledge. Culture is presented throughout the course to help the learner focus on the German-speaking world, people, geographical locations, and histories.

**Units**

**Unit 1: Medien**

Movies, television, newspapers, and magazines transcend the entire world. You will learn vocabulary that is used when talking about media and how media affects culture in German-speaking countries. You will also explore the use of propaganda in German media.

**Unit 2: Meine Kindheit**

People often reminisce about their childhood memories. You will learn how to talk about the events that happened during your childhood. You will also read short selections and learn about Franz Marc, Haribo, Diddl, Ligretto, and other aspects and figures of German pop culture.

**Unit 3: Meine Zukunft**

Students in Germany may attend university for various studies, or they may begin an occupation after high school. You will learn more about university and vocational options for German students. You will also learn the vocabulary that is used when talking about occupations and review relative pronouns.

**Unit 4: Guten Appetit**

Food is at the center of many cultures, and German culture is not an exception. You will explore various items relating to food. You will learn how to read German menus and recipes in German cookbooks. You will also learn about the vocabulary that is used when talking about restaurants and cooking, review adjective endings, and practice using the subjunctive to make polite requests.

**Unit 5: Die Umwelt**

Understanding the problems that involve the environment and taking care of it is the focus of this unit. You will learn about the environment in Germany, the problems of the environment there, and any possible solutions. You will also learn new vocabulary that is related to the environment and how to form and use the past tense of the passive.
**JAPANESE I A**

Grades: 9, 10, 11, and 12

Credits: 0.50

Japanese I A is a beginning-level course that will introduce the student to a variety of areas of the Japanese language. In this course, the student will learn listening, speaking, reading, and writing skills through a variety of activities. This course is organized into five topics: greetings, the date, time, colors, and places. The student will learn to express himself using an ever-increasing vocabulary, present-form verbs, particles, and adjectives. Grammar is introduced and practiced in innovative and interesting ways with a variety of learning styles in mind. The student will also learn about the Japanese people, their culture, society, and history.

**Units**

**Unit 1: Greetings**

Students will learn to:

- Introduce themselves to someone and ask their name
- Ask how someone is
- Ask where someone lives
- Ask some basic information from others in real conversations
- Recognize and recite _hiragana_, one of the Japanese phonetic characters
- Spell words using _hiragana_
- Use appropriate basic vocabulary for greeting people at different times of day
- Choose a farewell appropriate in various situations
- Begin to learn about the complex nature of language
- Investigate the Japanese culture and how it differs from theirs with regard to talking to an individual
- Begin to realize the contributions that Japanese have made to world culture

**Unit 2: Calendar**

Students will learn to:

- Talk about the day of the week
- Learn the numbers 0–31
- Talk about the date
- Talk about what things they like to do on different days
- Talk about their birthdays
- Learn about several cultural aspects of Japan
• Learn about additional hiragana characters and sounds
• Learn to identify someone or something
• Learn to ask yes or no questions

Unit 3: Time
Students will:
• Talk about time
• Talk about places in a town
• Talk about things to do in school
• Talk about things students do at different places in town
• Learn to ask yes/no and information questions
• Learn more numbers, up to 100
• Learn about an old capital city of Japan, Kyoto
• Learn to give feedback in communication
• Practice typing in hiragana

Unit 4: Colors
Students will:
• Describe themselves and others using adjectives
• Learn to describe things using colors
• Learn how to talk about basic things that might be in a school, desk, or backpack
• Learn how to talk about their school day
• Learn how to talk about what you like or dislike
• Learn katakana

Unit 5: Places
Students will:
• Talk about their own cities or towns
• Talk about stores or places in their towns
• Describe where things are in relation to other things in their town
• Talk about things they do or are doing, like and dislike to do, or want to do
• Review katakana
**JAPANESE I B**

Grades: 9, 10, 11, and 12

Credits: 0.50

Japanese I B is a beginning-level course that will introduce the student to a variety of areas of the Japanese language. In this course, the student will learn listening, speaking, reading, and writing skills through a variety of activities. This course is organized into five topics: family, weather, food, pastimes, and school. The student will learn to express himself using an ever-increasing vocabulary, present-form verbs, particles, and adjectives. Grammar is introduced and practiced in innovative and interesting ways with a variety of learning styles in mind. The student will also learn about the Japanese people, their culture, society, and history.

**Units**

**Unit 1: Family**

Students will:

- Talk about family members
- Talk about family members' birthdays and ages
- Review dates and numbers
- Learn the dictionary forms of verbs
- Investigate cultural practices in Japanese families
- Start to read and write kanji

**Unit 2: Weather**

You will learn to:

- Talk about the weather
- Talk about the seasons
- Convert degrees from the Fahrenheit scale to Centigrade and vice versa
- Talk about what to wear in various situations
- Talk about what they like to do
- Learn new kanji
Unit 3: Food
Students will:

- Talk about foods
- Learn to order food and converse in a restaurant
- Learn about a verb form, so called “て form” of verbs
- Learn expressions to make requests using ～て form
- Learn about dining habits in Japan

Unit 4: Pastime
Students will:

- Talk about sports and leisure time activities in Japan
- Learn how to talk about what they like to do
- Learn how to talk about what they do well
- Learn how to invite someone for some activities
- Learn how to make a phone call

Unit 5: School
Students will:

- Talk about schools and school activities in Japan
- Learn to talk about their school day in more detail
- Learn to talk about their houses
- Learn to talk about chores and responsibilities they have at home
- Learn to talk about their plans
- Review verb structures they have had in this year of Japanese
JAPANESE II A

Grades: 9, 10, 11, and 12

Credits: 0.50

This course builds on the skills the student learned in Japanese I. In this course, the student will learn listening, speaking, reading, and writing skills through a variety of activities. This course is organized into five topics: daily life, animals, activities, the body, and descriptions. The student will learn to express himself using an ever-increasing vocabulary, present-tense verbs, and adjectives. Grammar is introduced and practiced in innovative and interesting ways with a variety of learning styles in mind. Throughout the course, the student will explore the Japanese people, their culture, lifestyle, geographical locations, and histories.

Units

Unit 1: Daily Life

Students will learn to:

- Review Japanese sounds, Hiragana and Katakana
- Review introducing themselves
- Review verbs
- Talk about what they do in a typical day
- Review numbers 1–100
- Review telling time
- Continue to develop conversational skills
- Learn more about the history of Japan

Unit 2: Animals

Students will:

- Learn to talk about domestic animals
- Learn to talk about many other animals
- Compare nouns
- Use demonstrative adjectives to talk about which things they prefer
- Learn about different musical styles in Japan
- Learn the present progressive in Japanese
Unit 3: Activities

Students will:

• Talk about hobbies
• Talk about sports and other pastime activities
• Make comparison statements
• Make superlative statements
• Study art from Japan and Japanese artists
• Talk about things they like to do (Noun / Dictionary Form of Verb十の）がす・shy;です。)
• Talk about preferences and desires （Pre-MASU form of Verb +たいです。Nounがほしいです。）
• Talk about plans (Dictionary Form of Verb +つもりです)

Unit 4: The Body

Students will:

• Talk about the body
• Talk about what different body parts
• Talk about a doctor's visit
• Talk about various illnesses
• Begin to learn past tense verb forms

Unit 5: Descriptions

Students will:

• Describe themselves and others using I-adjective and NA-adjective
• Describe themselves and others using a Noun and です
• Learn more of the past tense verbs in Japanese.
• Learn to talk about people's nationalities
• Learn about how to quote
• Learn about some of famous sites in Japan
• Learn about Japanese poet Kenji Miyazawa
**JAPANESE II B**

Grades: 9, 10, 11, and 12

Credits: 0.50

This course is a continuation of Japanese II A. In this course, the student will learn listening, speaking, reading, and writing skills through a variety of activities. This course is organized into five topics: house, shopping, entertainment, spare time, and travel. The student will learn to express himself using an ever-increasing vocabulary, present-tense verbs, and adjectives. Grammar is introduced and practiced in innovative and interesting ways with a variety of learning styles in mind. Throughout the course, the student will explore Japanese culture, people, lifestyle, geographical locations, and histories.

**Units**

**Unit 1: House**

Students will learn to:

- Talk about their homes (rooms and furnishings)
- Talk about activities that happened in the past
- Learn about homes in Japan
- Continue to develop conversational skills in Japanese

**Unit 2: Shopping**

Students will:

- Learn to talk about shopping
- Learn to shop at Japanese stores
- Compare items in Japanese
- Talk about fashions
- Talk about their preferences
- Learn to use the numbers beyond 100 in conversational Japanese and especially when dealing with shopping
- Practice talking about activities that happened in the past
Unit 3: Entertainment

Students will:

- Talk about events they can go to for entertainment
- Talk about eating at a restaurant
- Learn to make negative responses in answering questions
- Learn to talk about things they love or like
- Talk about how frequently they do things
- Talk about when things happen (today, yesterday, tomorrow)

Unit 4: Spare Time

Students will:

- Talk about sports and other activities
- Learn expressions to talk about feelings they are experiencing
- Learn to talk about to whom things belong
- Review talking about activities in the past
- Talk about what hobbies or activities they like to do in their spare time

Unit 5: Travel

Students will:

- Learn to talk about taking a trip internationally
- Plan an international trip
- Learn to ask about where things are located in a city
- Express activities that are going to happen in the near future
- Talk about activities that happened in the past
- Talk about things you know and people or places you are familiar with
- Learn additional false cognates
- Review telling time
LATIN I A

Grades: 9, 10, 11, and 12

Credits: 0.50

The student will be building a Roman Information Highway—the Via Latina. The student will be the builder, or aedificator. The building blocks for this Roman road will include the following: 1) laying the foundation of bedrock comprised of Latin grammatical structures; 2) cementing the layers of rock together with the mortar—new Latin vocabulary; 3) fitting the top layer of cobblestones together for a smooth translation into English of Latin stories and sentences; 4) connecting your new road to other paths through words and customs derived from Latin and the Romans; and finally, 5) stopping at the rest stops along the road to learn more about Roman culture and daily life.

Unit 1 covers grammar basics, the nominative and accusative cases, first declension, first conjugation, the present active tense and the present tense of sum. Unit 2 covers the genitive, dative, and ablative cases, and the imperfect and future tenses of sum. Unit 3 covers second declension nouns, ablative of means, vocatives, imperatives, the perfect active system, and the perfect system of sum. Unit 4 covers second conjugation, infinitives, and first and second declension adjectives. Unit 4 also contains both parts of the Semester 1 Exam. Numerous cultural lessons are scattered throughout each unit.

Units

Unit 1
Lucia, Pausanias, and Magister Grammaticus will guide you through the entire course.

- Use derivatives to recognize Latin words
- Identify mottoes, abbreviations, and Roman quotations
- Use first declension nouns, present tense first conjugation verbs, and the present tense of the verb sum
- Translate sentences and short stories from English into Latin and from Latin into English
- Identify cultural aspects of ancient Rome, the Roman Forum, and Roman daily life

Unit 2
Lucia's presence indicates there is new vocabulary to learn.

- Translate and interpret written Latin
- Use the ablative, genitive, and dative cases; apply the imperfect and future tenses to first conjugation verbs; apply the imperfect and future tenses to sum
- Use Latin vocabulary and English derivatives within Latin and English sentences
- Recognize and use Latin abbreviations
- Identify aspects of Roman culture as revealed in mottoes, quotations, and gladiatorial games
Unit 3
Magister Grammaticus indicates that there are grammar rules to learn. You will usually want to print the information on these pages.
  • Translate and interpret written Latin
  • Use the vocative case, imperative mood, second declension masculine and neuter, and the perfect system of first conjugation verbs
  • Use Latin vocabulary and English derivatives within Latin and English sentences
  • Identify aspects of Roman culture as revealed in the art and architecture of ancient Rome

Unit 4
You will learn about Roman culture through its education system. You will also increase knowledge of your own language by understanding elements of Latin.
  • Translate and interpret written Latin
  • Use second conjugation verbs, adjectives, Roman numerals, and infinitives
  • Use Latin vocabulary and English derivatives within Latin and English sentences
  • Recognize and use the Roman numeral system
  • Identify aspects of Roman culture as revealed in the education of the children of ancient Rome
LATIN I B

Grades: 9, 10, 11, and 12

Credits: 0.50

The student will be building a Roman Information Highway—the Via Latina. The student will be the builder, or aedificator. The building blocks for this Roman road will include the following: 1) laying the foundation of bedrock comprised of Latin grammatical structures; 2) cementing the layers of rock together with the mortar—new Latin vocabulary; 3) fitting the top layer of cobblestones together for a smooth translation into English of Latin stories and sentences; 4) connecting your new road to other paths through words and customs derived from Latin and the Romans; and finally, 5) stopping at the rest stops along the road to learn more about Roman culture and daily life.

Unit 1 covers the present passive system, the ablative of agent, -er adjectives, questions, and adverbs. Unit 2 covers the perfect passive system and appositive. Unit 3 covers third conjugation and Latin idioms. Unit 4 covers fourth conjugation and personal pronouns. Unit 5 contains a comprehensive review of the entire course, as well as both parts of the Semester 2 Exam. Numerous cultural lessons are scattered throughout each unit.

Units

Unit 1

Pausanias indicates that you will learn about Roman culture.

- Translate and interpret written Latin
- Differentiate between the passive and active voice; apply the passive voice
- Apply the ablative of agent; use -er adjectives and adverbs
- Use Latin vocabulary and English derivatives
- Identify aspects of Roman culture as revealed in ancient Roman and Greek religion and mythology

Unit 2

You will learn about perspectives of the Roman culture through myths in the Roman calendar. You will also learn more about your own language through connectors, appositives, and idioms in Latin.

- Translate and interpret written Latin
- Apply the passive voice perfect system, connectors, appositives, and idioms
- Use Latin vocabulary and English derivatives
- Identify mottoes and abbreviations of the Romans
- Identify aspects of Roman culture as revealed in mythology and the Roman calendar
**Unit 3**

You will read famous epic the *Aeneid*, learn about third conjugation, and continue increasing your vocabulary.

- Translate and interpret written Latin
- Use third conjugation verbs and epic conventions
- Identify mottoes and Roman abbreviations
- Use Latin vocabulary and English derivatives
- Identify aspects of Roman culture as revealed in the life of Virgil, the story of the Trojan War, and the *Aeneid*

**Unit 4: Optional Semester 2 Exam Review**

In this optional unit, you will have the chance to review nouns, adjectives, verbs, culture, and Vergil before taking the Semester 2 Exam.

- Recall, recognize, and use Latin nouns, adjectives, and verbs
- Recall and identify major aspects of Roman culture
- Recall and identify key ideas and characters from Virgil's *Aeneid*

**Unit 5**

Tempus fugit! Time flies! The final unit of the course is here! You will continue studying Latin grammar as well as interview people for the Latin Lives! assessment.

- Translate and interpret written Latin
- Use fourth conjugation verbs and personal pronouns
- Use Latin vocabulary and English derivatives
- Identify aspects of Roman culture as revealed in Virgil's *Aeneid*
- Examine the etymology of English technical words and create a chart presenting their etymology and definitions
LATIN II A

Grades: 9, 10, 11, and 12

Credits: 0.50

The student will continue his journey to the time of the ancient Romans, but this time, the student will be a film student in the Roman movie, An Epic of Great Proportion. The student will be the director, and his script will include visits with some of the men who made Rome great. The student will learn about the Roman government and how Rome grew to rule most of the known world. This epic movie will also take the student back to the Trojan War where he will accompany the Greeks on a great adventure.

In Unit 1, the student will review first year grammar, the third declension, and relative pronouns. Then the student will also learn about a classical hero, common Latin roots and derivatives, epic conventions, mottoes, and abbreviation. Unit 2 continues with more information about the third declension and also Sum and Possum. The student will learn about the stories of Cyclops, Circe, and the Sirens. Unit 3 builds on what was learned in Unit 2. The student will continue with more third declension work along with further readings from The Odyssey and more on derivatives. The study of The Odyssey comes to an end with "Ulixes ad Ithacam." In Unit 4, the student will study pronouns and the fourth and fifth declensions and begin his instruction on Roman history, learning about Romulus and Remus, and the Kings of Rome. The student will also study the ablative absolute and future participles.

Units

Unit 1: Act I: Monsters, Inc.
Now, ab ovo usque ad mala ... from soup to nuts ... you will begin your study of the individual units.

In this unit, you will review first year grammar, the third declension, and relative pronouns. You will also learn about a classical hero, common Latin roots and derivatives, epic Conventions, mottoes, and abbreviation.

Unit 2: Call of the Wild
This unit continues with more information about the third declension and also Sum and Possum. You will learn about The Odyssey along with derivatives of Latin words.

Unit 3: The Castaway
Unit 3 builds on what was learned in the previous unit. You will continue with more third declension work, further readings from The Odyssey, and more on derivatives. The study of The Odyssey comes to an end with "Ad Ithacam."

Unit 4: The Twins
You will study pronouns and the fourth and fifth declensions. You will begin your instruction on Roman history, learning about the history of the monarchy and geography. Finally, you will continue your work on derivatives.
**LATIN II B**

Grades: 9, 10, 11, and 12

Credits: 0.50

The student will continue his journey to the time of the ancient Romans, but this time, the student will be a film student in the Roman movie, An Epic of Great Proportion. The student will be the director, and the script will include visits with some of the men who made Rome great. The student will learn about the Roman government and how Rome grew to rule most of the known world. This epic movie will also take him back to the Trojan War where the student will accompany the Greeks on a great adventure.

In Unit 1, the student will learn about participles and ablative absolutes. Then the student will continue his discussion of Roman history focusing on the beginnings of the Republic. The student will also review quotes and continue working on derivatives.

Unit 2 has a considerable amount of culture and history. Much happened during the Republic! Caesar; the Roman army; famous battles, mottoes, and abbreviations pertinent to the times; Cincinnatus; and Regulus are covered.

Unit 3 contains the study of the empire. The student will look at various emperors and the factors that caused the demise of the empire. This unit is an anomaly since it has no translation story in it. The reason is that it contains the hardest grammar concept in the course, which is indirect statement. A heavy dose of history in this unit gives the student a break from the heavy dose of grammar.

In Unit 4, the student will apply the mythological stories to his life. Unit 5 is one of review. There are no assignments. The student will find appendix links, rollovers, concentration games, practice sites, self-drill opportunities, and matching games to review the course material and to prepare for the final exams. The student may take as much time as necessary with these and use them as often as needed before taking the exams in Unit 4.

**Units**

**Unit 1: King of Kings**

In this unit, you will learn about participles and ablative absolutes. You continue your discussion of Roman history by focusing on the beginnings of the Republic. You will also review quotes and continue working on derivatives.

**Unit 2: Arms and the Man**

This unit has a considerable amount of culture and history. Much happened during the Republic! Caesar, the Roman army, famous battles, mottoes, and abbreviations pertinent to the times; Cincinnatus and Regulus are covered.
**Unit 3: Silent Movie**

Unit 3 contains the study of the Empire. You will look at various emperors and the factors that caused the demise of the empire. This unit is also an anomaly since it has no translation story in it. The reason is that it contains the hardest grammar concept in the course, which is indirect statement. The heavy dose of history in this unit gives you a break from the heavy dose of grammar.

**Unit 4: Metamorphoses**

This entire unit is one of review. There are no assessments. You will find appendix links, rollovers, concentration games, practice sites, self-drill opportunities, and matching games to review the course material and to prepare for the final exams. You may take as much time as necessary with these and use them as often as needed before taking the exams in Unit 4.

**Unit 5: Goldfinger**

You will apply the mythological stories to your own life.
LATIN III A

Grades: 9, 10, 11, and 12

Credits: 0.50

The design of Latin III is the Library of Celsus at Ephesus, Turkey. Since this is a survey course of Latin literature, each unit is a Caesar reading room, a Cicero reading room, etc. The student will check in at the reading room when he finds the "ask the librarian" on the oral assessments and discussions regarding content and style of each author. There is also a liber mensis, or book of the month, where the student will read additional works by the author or learn other information connected with the chosen author. The ex bibliotheca assignments will take the student away from the computer, and the interlibrary loan assignments will require the student to study something connected to the author (e.g., the region of Provence, France, in the Caesar unit) or to exchange thoughts with classmates in the discussion area.

The first half of the course is the prose of Caesar and Cicero. In Cicero, the student will look at the figures of speech. The student will also work on his clarity of writing and defense of his arguments. The student will expect this course to demonstrate why a classic is a classic, whether in a foreign language or in English, and to provide tools to appreciate the author’s talent and to understand why he is enjoying a particular novel.

Units

Unit 1: Checking In
You will review your syllabus and assignments and prepare to read Julius Gaius Caesar.

Unit 2: Julius Caesar Collection
No name is more associated with Rome than Julius Gaius Caesar and no quote more famous than his "Veni, vidi, vici." In this collection, you will examine his writing style in Latin and read some of his adventures in translation.

Unit 3: Marcus Tullius Cicero Collection
This is an extensive unit. It can be divided into two parts mentally. The lessons through lesson 27 are all preparatory work for the translations and grammar assessments that conclude the unit in lesson 45.
**LATIN III B**

Grades: 9, 10, 11, and 12

Credits: 0.50

The design of Latin III is the Library of Celsus at Ephesus, Turkey. Since this is a survey course of Latin literature, each unit is a Caesar reading room, a Cicero reading room, etc. The student will check in at the reading room when he finds the "ask the librarian" on the oral assessments and discussions regarding content and style of each author. There is also a liber mensis, or book of the month, where the student will read additional works by the author or learn other information connected with the chosen author. The ex bibliotheca assignments will take the student away from the computer, and the interlibrary loan assignments will require the student to study something connected to the author (e.g., the region of Provence, France, in the Caesar unit) or to exchange thoughts with classmates in the discussion area.

The second half of the course is the poetry of Ovid, Catullus, and Vergil. There is an emphasis on the craft of writing using figures of speech, scansion, and SWIMTAG. The student will also work on his clarity of writing and defense of arguments. This course will demonstrate to the student why a classic is a classic, whether in a foreign language or in English, and to provide tools to appreciate the author's talent and to understand why he is enjoying a particular novel.

**Units**

**Unit 1: Checking In**
You will review your syllabus and assignments and prepare to read Vergil and his epic poem the *Aeneid*.

**Unit 2: Poetae Collection**
Welcome to the world of poetry! You will again look at the beauty of Latin through the versatility of meter, stylistic devices and purpose, but this time, you will do so in poetry, not prose.

**Unit 3: Tantae molis erat Romanam condere gentem**
Units 2 and 3 are Vergil. Unit 2 is the first 33 lines of the *Aeneid*, the introduction to the work. Unit 3 is selected readings from Book 1 of the *Aeneid*.

**Unit 4: O tergue quaterque beati!**
Unit 4 is selected readings from Book 1 of the *Aeneid*.
SIGN LANGUAGE I A

Grades: 9, 10, 11, and 12

Credits: 0.50

Students are introduced to the fundamental concepts of American Sign Language. Students explore vocabulary, grammar, and conversational skills using basic signing and fingerspelling techniques, and are exposed to activities and exercises that help them understand the culture of deaf and hard-of-hearing people.

Units

Intro
Your student will be introduced to American Sign Language, or ASL. He will study the history of ASL and learn how it became the standard language for deaf and hard of hearing people in North America. He will also learn about some of the accepted rules of etiquette in Deaf culture. This introductory unit also teaches your student how to sign the letters of the alphabet and the mechanics of fingerspelling.

Numbers
This unit introduces the signing of numbers. Your student will learn how to sign numbers 1–100, as well as the signs for dollars and cents. A variety of fun activities give your student a chance to practice using ASL to discuss counting and using money.

Time
Your student will study various aspects of time. Not only will he learn how to communicate time using ASL, he will also learn the signs for the 7 days of the week and the 12 months of the year. The signs for various holidays as well as the four seasons are also taught in this unit.

Nouns
Your student will learn the signs for some commonly used nouns and pronouns. She will also be introduced to the ASL concepts of Indexing, Agency, and Nonmanual Markers. Combining these new concepts and the signs your student has learned will expand her growing library of American Sign Language knowledge.

Descriptions
This unit will teach your student how to sign various descriptions using American Sign Language. He will learn how to sign comparative adjectives and show comparison between two or more nouns or pronouns. Also, he will learn the signs for descriptive words that express size, shape, possession, color, and location. In addition, he will combine some previously taught signs for numbers, time, and nouns, with descriptive signs taught in this unit.
SIGN LANGUAGE II A

Grades: 9, 10, 11, and 12

Credits: 0.50

This course follows Sign Language I A. The goal of Sign Language I B is for the student to become a confident signer by mastering American Sign Language grammar and building vocabulary. Lessons incorporate the various important components of signs including handshape, position, movement, palm orientation, and non-manual markers. The student’s vocabulary is strengthened by studying special categories such as lexicalized signs, classifiers, and topic-related signs. The student will learn to translate from Standard English into American Sign Language gloss. Videos and interactive websites provide abundant practice. A unit on Deaf Culture and Community provides a good perspective and context for practicing American Sign Language.

Units

Signing and Fingerspelling
You will continue to build on the fundamental concepts of American Sign Language. You will increase your vocabulary, grammar, and conversational skills using signing and fingerspelling techniques.

Language in Practice
You will engage in American Sign Language conversations that involve giving, receiving, providing, and retaining information. To assist in developing your skills, you will learn about and use classifiers, space, eye gaze, palm orientation, and body shift.

Deaf vs. Hearing Culture
You will demonstrate an understanding of the relationship between the practice and perspective of Deaf Culture and its subcultures.

Looking Beyond the Sign
You will reinforce and strengthen your knowledge of various American Sign Language features including mouth morphemes, non-manual markers, gestures, and negation. You will learn the difference between an actual sign and a gesture, as well as study the evolution of American Sign Language.

More American Sign Language Grammar
You will come to understand different American Sign Language statement and question grammatical structures including yes or no vs. WH- questions, declarative sentences, negative declarative sentences, neutral declarative sentences, conditional sentences, rhetorical questions, topicalized WH- questions, and commands.
SPANISH I A

Grades: 9, 10, 11, and 12

Credits: 0.50

Students cover basic vocabulary, grammar, spelling, and punctuation to build a solid foundation for further study. Assignments include engaging in simple conversation, writing paragraphs, and listening to Spanish dialogue. Students also study the history and culture of Spanish-speaking peoples.

Units

Bienvenidos
You will learn vocabulary related to greeting and saying goodbye, numbers, time, parts of the body, classroom objects, the date, the calendar, the weather, the seasons, and how to ask for help. You will also learn about several grammar topics: the lexical use of estar, ser, and hacer, plural commands, nouns, and singular definite articles. Finally, in terms of culture, you will examine appropriate behavior when greeting someone in the Spanish-speaking world, as well as the reversed seasons in the Northern and Southern hemispheres. Be sure to keep a notebook on hand as you work through the unit so that you can take notes and answer activity questions as you go.

Lo que nos gusta
You will learn vocabulary related to activities that you and others like and don't like to do. You will also examine three grammar concepts: infinitives, making affirmative and negative statements, and expressing agreement or disagreement. In terms of culture, you will explore the similarities and differences between the popular activities of the Spanish-speaking world and the United States, as well as notable aspects of Spain, Argentina, and Mexico, including their popular destinations, activities, and social life. Be sure to keep a notebook on hand as you work through the unit so that you can make notes and answer activity questions as you go.

Como somos
You will learn about personality traits and how to describe what people are like. You will also examine three grammar concepts: adjectives, definite and indefinite articles, and word order: the placement of adjectives. In terms of culture, you will compare cultural perspectives on friendship, explore the geographical and cultural characteristics of Cuba, and examine popular games and famous works of art and literature from the Spanish-speaking world. Be sure to keep a notebook on hand as you work through the unit so that you can make notes and answer activity questions as you go.

Mis clases
You will learn vocabulary related to school schedules, subjects you study in school, and school supplies. You will also learn about several grammar topics: subject pronouns and how to use -ar verbs in the present tense. Finally, when we talk about culture, you will examine how schools in the Spanish-speaking world compare with schools in the United States in terms of daily routines, classes, buildings, and graduation ceremonies. Be sure to keep a notebook on hand as you work through the unit so that you can take notes and answer activity questions as you go.
A estudiar
You will learn vocabulary related to communication, computer-related activities, and Internet and digital products. You will also examine two grammar concepts: how to use the present tense of pedir and servir and how to use the verbs saber and conocer. In terms of culture, you will explore the technological and occupational characteristics of several Spanish-speaking regions of the United States, including the technology institutes that characterize Silicon Valley, California, and the aerospace centers found in Houston, Texas, and Cape Canaveral, Florida. You will also examine how to prepare for a technological career, including the role of Spanish-speakers and outreach programs such as The Hispanic Foundation of Silicon Valley. Lastly, you will examine the lives and works of Alfredo Quiñones-Hinojosa, a physician, author, and researcher, Ellen Ochoa and José Moreno Hernández, notable space engineers, and Luis Walter Álvarez, an experimental physicist, inventor, professor, and winner of the Nobel Prize in Physics. Be sure to keep a notebook on hand as you work through the unit so that you can make notes and answer activity questions as you go.

Mis comidas
You will learn vocabulary related to foods and beverages for breakfast and lunch, as well as adverbs of frequency and expressions to show surprise. You will also examine two grammar concepts: the present tense forms of -er and -ir verbs and how to indicate preferences for what you like and don’t like using me gustan and me encantan. Finally, in terms of culture, you will explore the concept of meals in the Spanish-speaking world, including cultural practices and traditions related to meal schedules and table manners, as well as the cultural significance of staple foods such as rice and chiles. You will also examine the lives and works of several Nobel Prize winners throughout the Spanish-speaking world and analyze the ability of food to inspire artistic creation. Be sure to keep a notebook on hand as you work through the unit so that you can make notes and answer activity questions as you go.

Comida y salud
You will learn vocabulary related to foods and beverages for dinner and dessert, as well as adjectives to describe food and expressions to discuss health and indicate preference, agreement, disagreement, and quantity. You will also examine two grammar concepts: the plural forms of adjectives and the use of the verb ser. Finally, in terms of culture, you will express and compare cultural opinions regarding diet and health in the Spanish-speaking world with those in the United States and examine the traditional foods and exercise routines of various Spanish-speaking countries. Be sure to keep a notebook on hand as you work through the unit so that you can make notes and answer activity questions as you go.

Mi tiempo libre
In this unit, you will learn vocabulary related to leisure activities and social locations in a community. You will also examine two grammar concepts: the use of the verb ir and interrogative words used to ask questions about where and with whom someone is going. Finally, in terms of culture, you will explore the concept of leisure activities in the Spanish-speaking world, including popular activities and places to go, as well as how these activities compare to those in the United States. Be sure to keep a notebook on hand as you work through the unit so that you can make notes and answer activity questions as you go.
**Vamos a jugar**

You will learn vocabulary related to sports and other after-school activities, as well as expressions used for extending, accepting, and declining invitations and expressions to tell when something happens. You will examine two grammar concepts: the use of the grammatical construction ir + a + infinitive and the verb jugar. Finally, in terms of culture, you will explore the role of sports in the Spanish-speaking word, including traditional games, famous athletes, and the significance of fan clubs. Be sure to keep a notebook on hand as you work through the unit so that you can make notes and answer activity questions as you go.

**Semester Test**

You will review vocabulary related to greetings, activities, words used to describe people, school and classroom items, food, places for leisure activities, and playing sports. You will review grammar concepts related to asking for help, infinitives, adjectives, subject pronouns, plurals of nouns and articles, regular –ar, –er, and –ir verb conjugations, and ir + a + infinitive phrases. Finally, in terms of culture, you will review characteristics of the Spanish language, popular activities, Pan American games, the diversity of meal schedules, baseball in the Caribbean, and other leisure activities throughout the Spanish-speaking world. Be sure to keep a notebook on hand as you work through the unit so that you can make notes and answer activity questions as you go.
SPANISH I B

Grades: 9, 10, 11, and 12

Credits: 0.50

Students cover basic vocabulary, grammar, spelling, and punctuation to build a solid foundation for further study. Assignments include engaging in simple conversation, writing paragraphs, and listening to Spanish dialogue. Students also study the history and culture of Spanish-speaking peoples.

Units

Students will:
- Learn to talk about what others have said
- Learn about the fine arts in the Spanish-speaking world
- Review the correct sequencing of tenses for expressing thoughts in the past, present and future
- Learn additional proverbs or sayings that are well known in the Spanish-speaking world and will help gain insight to the Hispanic thought process
- Learn about artists, both contemporary and historic, of great significance
- Learn to talk about other art forms and learn ways in which they relate to the Spanish-speaking world
Ahora
Students will:

- Learn vocabulary that will allow them to talk about electrical items that are very common in today's world
- Learn to talk about actions that happen that were not planned
- Review irregular verbs in Spanish in order to be able to use them in conversation
- Learn shortcuts in order to be able to use colloquial expressions instead of always using the noun
- Learn additional idioms and sayings in Spanish and learn to analyze them for understanding
- Sharpen listening skills

Se Acaba
Students will:

- Review talking about happenings in the past, present, and future
- Review "shortcuts" for talking about others using a variety of pronouns
- Review ways to talk about how you do things
- Learn of additional writers important to the Latin Americans, both contemporary and historical
- Learn of additional traditions that are important to Hispanics

Examen
This unit contains the semester exam.
**OTHER COURSES**

**INTRODUCTION TO ENTREPRENEURSHIP I**

Grades: 9, 10, 11, 12

Credits: 0.50

In this course you will learn the basics needed to plan and launch your own business. Do you have what it takes to start a new business? Do you have an idea for a business but need the tools to get started? This course will provide you with the core skills you need to become successful. In this course you will study the characteristics of successful entrepreneurs. You will also learn about self-employment and basic economic concepts related to small businesses, such as competition and production. This course will also walk you through the steps of setting up a business, including developing a business plan, a mission and a vision, attracting investors, and marketing your company.

**Units**

**Course Overview**

You will receive a basic overview of the course. You will learn how to navigate through the course, find and zip files, set up your Web browser, and complete coursework. You will also learn about using trustworthy sources, avoiding plagiarism, and making proper citations.

**The Role of the Entrepreneur**

You will receive an introduction to what it means to be an entrepreneur. You will learn about types of entrepreneurs and the role of entrepreneurs in society. This unit will also explain basic economic concepts related to entrepreneurship, including producers and consumers, strong and weak economies, and capitalism and competition.

**Entrepreneurship as a Career**

You will learn more about the life of an entrepreneur. This unit will explore some of the advantages and disadvantages of self-employment as well as detail the characteristics, skills, and education of successful entrepreneurs. This unit will also discuss reasons why a person becomes an entrepreneur and career paths that help develop entrepreneurial skills and characteristics.

**Economic Principles**

You will learn more about some basic economic concepts related to entrepreneurship. You will learn about profit and loss, profit motive, and competition. You will also learn about production, goods, scarcity, and the law of supply and demand.

**Production and Delivery**

You will learn how entrepreneurs produce and deliver goods and services to markets. You will explore some of the different industries and delivery methods. You will also learn about related economic concepts, including economic utility, economies of scale, market saturation, and product life cycle.
Small Business Basics
You will explore the stages and forms of small businesses. Related to this, you will learn about how to form departments and factors that contribute to success and failure. You will also become more familiar with the importance of business ethics.

Business Ideas and Opportunities
You will learn the role of entrepreneurs and small businesses in society and the global economy. Related to this, you will explore how business trends affect entrepreneurial ideas and opportunities. You will also learn about methods and resources that will help you generate business ideas and wisely select the best plan based on your goals, skills, personality, and resources.

Defining Your Business
You will learn about the importance and parts of a business plan. Related to this, you will how to craft a mission and vision statement. You will also learn how to determine the scope of a business, including the products and services that will be offered.

Business Organization
You will learn about various forms of business organization as well as accompanying legal and tax procedures. Related to this, you will learn about franchising, business licenses, and permits. You will also explore ways to organize and manage employees, records, purchasing, and inventory.

Marketing Basics
You will explore basic concepts related to marketing an entrepreneurial initiative or business, including market positioning, penetration, and research. You will also learn about establishing a corporate and brand image and the steps involved in developing a marketing message.

Promoting Your Company
You will learn about diverse methods for promoting an entrepreneurial initiative or business. Related to this, you will explore promotional methods, costs, and evaluation. You will also learn about advertising methods and goals as well as the parts of a marketing plan.
INTRODUCTION TO ENTREPRENEURSHIP II

Grades: 9, 10, 11, and 12

Credits: 0.50

In this course you will continue to learn the skills and key concepts that you’ll need to plan and launch your own successful business. You will learn about establishing a personal vision and setting goals for your business. You will also learn about the lives of entrepreneurs and inventors. Additionally, you will gain a better understanding of the stages involved in entrepreneurship, including identifying opportunities, planning, developing strategies, and making sales. You will likewise learn financial concepts and skills involved in entrepreneurship, such as budgeting, financing, costs, pricing, accounting, bookkeeping, and financial reporting. Through this course, you will also learn the basics of working with others and managing employees.

Units

Course Overview
You will receive a basic overview of the course technology. You will learn how to navigate the course, find and zip files, set up your browser, and complete coursework. You will also learn about using trustworthy sources, avoiding plagiarism, and making proper citations.

Sales
You will learn the principles of selling, including the stages and steps involved in sales. You will learn to identify and take advantage of selling opportunities through various tools and strategies. You will also learn about meeting sales quotas, earning commissions, and network marketing.

Pricing
You will learn about setting the price of goods and services. You will learn how to calculate costs and take into account variable and fixed costs as well as break-even points and external pricing factors. You will also learn about elastic and inelastic demand, price fixing, and bait-and-switch advertising.

Personal Finance
You will learn about personal finance. You will learn how to develop a personal vision statement and establish financial goals. You will also become familiar with concepts and strategies related to budgeting, banking, and investing.

Credit, Funding and Risk
You will learn how to build good credit, obtain funding, and manage risk. To this end, you will learn about credit history and scores. You will also learn about loans and lines of credit. Additionally, you will become familiar with business and opportunity costs, cash flow, and insurance.
Accounting
You will learn the concepts and skills important to accounting. You will become familiar with financial health factors, such as revenue. You will also learn bookkeeping principles and become familiar with financial reporting and ratios.

Taxes and Laws
You will learn about taxes and laws that particularly affect small businesses and entrepreneurs. You will learn about preparing taxes and the government’s role in the economy. You will also explore legal practices that affect small businesses, such as contracts, torts, and intellectual property.

Culture, Globalization and Technology
You will focus on business culture and the impact of globalization and technology on entrepreneurship. You will explore global trade and the various benefits. Likewise you will learn about the uses of technology in the workplace and how to conduct business over the internet.

Workplace Skills
You will become familiar with attitudes and behaviors that ensure success in the workplace. You will also learn skills that translate into workplace success, such as proper communication, management, and leadership. Likewise, you will learn the skills necessary to obtain a job, including interviewing well and developing a strong resume. Finally, you will learn how to locate, hire, and orientate employees.
CRITICAL THINKING AND STUDY SKILLS

Grades: 9, 10, 11, and 12

Credits: 0.50

In this course, the student will implement thinking strategies, learn test-taking strategies, time management and organization skills, build verbal competence, and sharpen his mathematics reasoning. Specifically, the student will learn strategies for acquiring, storing, and retrieving knowledge, and strategies for linking new information with prior knowledge.

Units

Starting Your Sojourn
You will begin creating a rapport with the instructor while discussing their future goals in education and thoughts of careers.

Begin Your Vocabulary Adventure
You will begin the vocabulary section. Giving good feedback is the important key for the teacher in this and other units.

In Flight “Air”ithmetic
Unit 3 begins the algebra and math portion of the course. It is important to give good feedback and be available for help when you need it.

Traveling Europe for Verbal Adventure
Unit 4 begins the verbal learning portion of the course. By learning more about Greek and Latin root words, you can only see improvement in the areas of analogies, sentence completion and critical reading skills.

Ambling Through Africa
Unit 5 begins the higher level math content. As this is a critical unit, it is recommended that you contact your teacher to go over missed questions in order to be successful and understand the question types.

Asian Adventures
Unit 6 contains the reading portion of the course. Here, you will need to think about the topics and current items used, and decipher content in different ways. Should you miss a main point, it is important for the teacher to help them either through lesson feedback, discussions, chats, or phone calls.

South American Adventures
Unit 7 covers Geometry and other miscellaneous math topics required for standardized testing success.

What’s New in North America?
Unit 8 contains the writing portion and the final exam.
LIFE MANAGEMENT SKILLS

Grades: 9, 10, 11, and 12

Credits: 0.50

This course provides an opportunity for the student to explore important decisions he may have to make as a teenager. The course provides important information pertaining to issues such as nutrition, substance abuse, coping with stress, and sexual abstinence. In this course, the student will also learn how to be a savvy consumer in a world of advertising and credit cards as well as review Earth-friendly practices.

Units

Construction Site
Unit 1 is an introduction to the course and includes four assessments. Caution: Life Skills Under Construction is the signpost and it will be used to construct and enhance self-esteem, build strong families and explore basic parenting responsibilities.

The Crosswalk
This unit includes an overview of nutrition, which addresses eating disorders, nutrient needs, dietary guidelines, food preferences, and alternatives to junk foods. Learning about nutrition will help you establish and maintain a healthier lifestyle.

Two-Way Street
After successfully completing this unit, you will know techniques for communicating effectively and for dealing with hostile, threatening, or dangerous situations. In addition, you will know methods for effectively expressing your feelings and opinions.

Warning: Dangerous Chemicals
You will learn various strategies to employ when making decisions related to health issues. Peer pressure skills will be practiced to help equip you with personal skills needed to help you refuse alcohol, tobacco, and other harmful substances.

Points of Interest
Unit 5 teaches you that coping skills are essential in a world that can be filled with constant stress and decision making. In this unit you'll discover some decision-making techniques, goal-setting activities, time management strategies, and stress management skills. This unit will aid you in facing the many "curves" they receive in life by equipping them with coping skills.
**Turn Right for Consumer Savvy**

Love to shop? Influenced by advertising? This section of Life Management Skills will help you make sound consumer decisions by evaluating consumer information, advertisements, services, and products. Consumer savvy is a must in an economy that encourages spending.

Plastic cards, interest rates, checkbooks, advertising fraud, consumer rights and other consumer issues will be addressed to help you make the right turn when deciding how to spend money.

**Mixed Messages**

It may often seem that peers, society, parents, school, media, and clergy are giving you many mixed messages about your body and sexuality. You explore some facts and factors that affect adolescent sexuality and the consequences of making misinformed turns.

**The Safe Way is the Best Way**

"It can't happen to me." This unit will provide you with facts about the dangers of believing that you are invincible. This section can be a "life saver" for you and your friends. The unit explores the HIV immune response, medications, and other relevant information, as well as a study of other sexually transmitted diseases (STDs). This unit will also target injury prevention and safety habits.

**The Passing Zone**

The last sign post will guide you in the completion tasks for this course. This unit will include instructions for CPR certification submission and the final exam review. Pat yourself on the back; you have followed the signposts to course completion!

**COLLEGE PREP WITH ACT**

Grades: 9, 10, 11, and 12

Credits: 0.50

This course will help the student navigate through the ACT's Online Test Preparation™ Web site, access two full ACT® practice tests, and learn the necessary skills in order to take the ACT test. This course also includes several lessons on other critical aspects of preparing for college, including developing a college resume, writing effective personal essays, and requesting letters of recommendation.

This course is intended to prepare the student to take the ACT test. As the student works through the course, he will focus on learning more about his strengths and weaknesses as well as learn test-taking strategies that are specific to the ACT test. That way, when the student takes the actual test, the scores will be a good representation of the student's abilities.

Finally, the student will submit a Personal Improvement Plan, which will reflect the areas for improvement that the student has identified throughout this course.
**COLLEGE PREP WITH SAT**

Grades: 9, 10, 11, and 12

Credits: 0.50

This course will help you navigate through the Official SAT Practice from the Khan Academy website, access SAT practice tests, and learn the necessary skills in order to be prepared to take the SAT test. This course also includes several lessons on other critical aspects of preparing for college, including developing a college resume, writing effective personal essays, and requesting letters of recommendation. As part of this course, you will create a College Planning Portfolio containing college planning and application elements.

This course is intended to prepare you for the SAT test. As you move through the course, you should focus on learning more about your strengths and weaknesses as well as specific test-taking strategies for the SAT test. When you take the actual test, your scores will be a good representation of your abilities.
**DRIVERS EDUCATION**

Grades: 9, 10, 11, and 12

Credits: 0.50

In this course, the student will learn the fundamental skills for responsible driving. The emphasis of this course is placed upon the mechanics of driving, execution of driving operations, and rules of safe driving. The student will identify and recognize traffic laws, signs and other markings, and basic checks on a vehicle, and the student will learn the rules for sharing the roadway, responding to weather conditions, and other vehicle emergencies.

**Units**

**The Driving Task**

You will learn about the highway transportation system and the driving task. You need to develop good social, physical, and mental skills to become a low-risk driver. You will learn how the licensing process, driver education, and driving practice work together to produce better drivers.

**Being a Responsible Drive**

In this unit, you will learn about the IPDE process and how to use it while driving. You will also examine how changes in emotional, mental, and physical states affect driving. You will address different types of distractions and how to minimize them while driving. Finally, you will continue completing your driver’s log.

**Controlling Your Vehicle**

You will learn how to drive in various weather conditions and share the road with pedestrians and other types of vehicles. You will also examine different types of driving emergencies and how to respond in each. You will continue completing your driver’s log.

**Driving in Different Environments**

You will learn about the challenges and safety procedures for driving in cities and rural areas. You will also distinguish different types of highways and how to safely navigate them. You will submit their completed driving log portfolio for grading.

**Final Exam**

You will complete your final exam for Driver’s Education. You will be required to recall the foundations of driving that you have learned throughout this course.
**EARTH SPACE SCIENCE A (STEM FOCUSED)**

Grades: 9, 10, 11, and 12

Credits: 0.50

Why did early explorers risk their lives to reach the North Pole? Why does Earth look so beautiful when seen from space? What is really down at the bottom of the ocean? Discovering new things about Earth has been the dream of scientists and explorers for centuries. Today, it is your turn to continue that journey of discovery. Earth Space Science is a laboratory course focusing on the study of space and the geologic and atmospheric forces that shape the world. Through experimentation and investigation, the student will explore Earth cycles including the geosphere, hydrosphere, cryosphere, atmosphere, and the carbon cycle. The student will learn about scientific inquiry, geologic time, space exploration, the solar system, and the universe. The student will use web 2.0 tools, interactive experiences, higher-order thinking, collaborative projects, and real-world application through labs and a variety of assessments. Upon completion of the course, the student will have a clear understanding of the dynamic forces at work in the surrounding world, becoming better caretakers of planet Earth.

**Course Objectives**

- Define Earth science and identify skills that scientists use to solve problems
- Explain why Earth is studied as a system of structures and spheres
- Relate solar energy and the water cycle to weather and climate
- Describe the composition of Earth's water
- Describe the impact of water pollution

**Units**

**Introduction and Foundation**

This unit is an introduction to the course. Some items covered include the motif, pace, lab safety, Scientific Method, and basic skills.

**Weather and Climate**

You will explore the motion of objects. Most of the types of motion described in this unit are likely familiar to you. You will learn about these common types of motion by studying laws of motion, performing calculations, and conducting virtual laboratory experiments.

**The Water**

You will learn about the water cycle and the processes involved in that cycle; watersheds and their importance; sea water; ocean currents; maps; and sea floor features.
**EARTH SPACE SCIENCE B (STEM FOCUSED)**

Grades: 9, 10, 11, and 12

Credits: 0.50

Why did early explorers risk their lives to reach the North Pole? Why does Earth look so beautiful when seen from space? What is really down at the bottom of the ocean? Discovering new things about Earth has been the dream of scientists and explorers for centuries. Today, it is your turn to continue that journey of discovery. Earth/Space Science is a laboratory course focusing on the study of space, and the geologic and atmospheric forces that shape the world. Through experimentation and investigation, the student will explore Earth cycles including the geosphere, hydrosphere, cryosphere, atmosphere, and the carbon cycle. The student will learn about scientific inquiry, geologic time, space exploration, the solar system, and the universe. The student will use web 2.0 tools, interactive experiences, higher order thinking, collaborative projects, and real-world application through labs and a variety of assessments. Upon completion of the course, the student will have a clear understanding of the dynamic forces at work in the surrounding world, becoming better caretakers of planet Earth.

Course Objectives

- Summarize the theory of plate tectonics and related phenomena
- Describe the composition of Earth's surface and interior
- Explain the rock and carbon cycles; explain the causes and impact of erosion
- Describe and differentiate energy sources
- Explain geologic time and differentiate relative and absolute dating techniques
- Describe components of the solar system and the universe and theories related to the origin of the universe
- Explain Earth/moon/sun relationships that relate to time, tides, and seasons
- Discuss pros and cons of space exploration

**Units**

**Lands**

In this unit, you will learn about the theory of plate tectonics, volcanoes, earthquakes, and other phenomena related to this theory. You will also learn about minerals, rocks and the rock cycle.

**The Past**

In this unit, you will learn about geologic time; relative and absolute dating techniques; the principles and laws by which geologists make assumptions about time; and fossils.
Space: The Final Frontier

In this unit, you will learn about the scientific beliefs about the origin of the universe; the components of the universe; galaxies; our galaxy; our solar system; the planets; and will take a closer look at earth/moon/sun relationships that result in our year, day, tides, and seasons.
ENVIRONMENTAL SCIENCE A (STEM FOCUSED)

Grades: 9, 10, 11, and 12

Credits: 0.50

Environmental Science A offers students the opportunity to understand the concepts fundamental to ecology and measures to prevent damage to the environment. Lessons in the A course review the scientific method, discuss biodiversity, and review earth processes, including the rain and carbon cycles. Students take a detailed look at the various types of pollution and study how to safeguard resources.

Units

The Methods and Nature of Environmental Science

Welcome to environmental science, the study of the interactions between the physical, chemical, and biological components of the environment, including their effects on all types of organisms. In this opening unit you will learn about the job of an environmentalist, review the scientific method, and explore how organisms are classified.

Earth’s Processes

Several natural processes and cycles affect organisms that inhabit the Earth. In this unit, you will learn about such phenomena as you analyze the water and carbon cycles, examine the greenhouse effect, and explore causes of air, water, and food chain pollution.

Final Review and Exam

In this unit, you will have the opportunity to prepare for and take the final exam. The final exam may include any material that has been presented throughout the semester. Since this is a comprehensive exam, it may be helpful to organize your notes before you begin to review.
ENVIRONMENTAL SCIENCE B (STEM FOCUSED)

Grades: 9, 10, 11, and 12

Credits: 0.50

In the second course of Environmental Science, students learn about environmental programs and policies, including waste management and conservation. Students study the effect of environmental organizations as well as government agencies charged with protecting the environment. The final unit examines technology and its impact on the environment; topics include energy production, modern agriculture, and public land management.

Units

Environmental Science Programs and Policies
The United States has several agencies and departments that are dedicated to monitoring and protecting the nation’s natural resources. In this unit, you will learn about how these local and federal agencies work together to effect policy changes, regulate environmental concerns, and prevent further harm to the environment as we move into the future.

The Effects of Environmental Science Technology
There have been many recent advancements in environmental science technology. Many of the previous methods of energy and fuel production have caused harm to the world around you. Today, there are new and innovative methods geared towards preserving and protecting the environment. In this unit you will examine these technological advances and learn how environmental science is changing.

Final Review and Exam
In this unit, you will have the opportunity to prepare for and take the final exam. The final exam may include any material that has been presented throughout the semester. Since this is a comprehensive exam, it may be helpful to organize your notes before you begin to review.
**MARINE SCIENCE A (STEM FOCUSED)**

Grades: 9, 10, 11, and 12

Credits: 0.50

As our amazing planet continues to change over time, it becomes increasingly more apparent how human activity has made environmental impacts. In the marine science course, you will delve deep into Earth's bodies of water and study geologic structures and how they impact the oceans. You will investigate characteristics of various populations, patterns of distribution of life in our aquatic systems, and ongoing changes occurring every day in our precious ecosystems. You will be amazed and enlightened at just how much our oceans and lakes affect climate, weather, and seasonal variations. You will have the opportunity to explore the relationships among living organisms and see how they are affected by our oceans currents, tides, and waves. Hold on, it is one amazing journey.

**Units**

**Nature of Science**

Unit 1 reviews the scientific method, how to write a hypothesis, independent and dependent variables, the properties of water, origins of the earth's oceans, and information about the Bay of Fundy.

**Ocean Exploration**

Unit 2 covers navigation, early ocean expeditions, the rocky shore habitat, crustaceans, and ocean zones. This unit gets you started on your voyage around the world, so it starts with navigation, then discusses earlier ocean research. You will explore the rocky shores of New England, and the organisms that live there. The end of the unit looks at the different ocean zones beginning at the continental shelf and moving outward.

**Sea Turtles and Sandy Beaches**

In Unit 3, you continue to travel south along the east coast of the United States and explore the sandy beach ecosystem. In Lessons 1-4, you will begin learning about sea turtles. Lesson 5 deals with the problems of the shrimping industry related to turtles, and then Lessons 6 and 7 deal with the sandy beach. Lessons 8 and 9 deal with pollution on the beach, and Lesson 9 with oil spills specifically.

**Phytoplankton and Energy**

Unit 4 has you traveling through the Panama Canal into the Pacific Ocean where you will explore the Galapagos Islands and then travel down the coast of South America. During the end of the unit you will look at organisms in the Galapagos, and complete some assignments looking at organisms adapting to the environment. At the very end of the unit, you will learn about food webs, and the energy pyramid.
**MARINE SCIENCE B (STEM FOCUSED)**

Grades: 9, 10, 11, and 12

Credits: 0.50

As our amazing planet continues to change over time, it becomes increasingly more apparent how human activity has made environmental impacts. In the marine science course, you will delve deep into Earth’s bodies of water and study geologic structures and how they impact the oceans. You will investigate characteristics of various populations, patterns of distribution of life in our aquatic systems, and ongoing changes occurring every day in our precious ecosystems. You will be amazed and enlightened at just how much our oceans and lakes affect climate, weather, and seasonal variations. You will have the opportunity to explore the relationships among living organisms and see how they are affected by our oceans currents, tides, and waves. Hold on, it is one amazing journey.

**Units**

**Currents and the Antarctic**

In Unit 1 you travel to the Antarctic and explore the different ocean currents, El Nino and La Nina, hurricanes and organisms in the Antarctic and their adaptations.

**Mollusks and Estuaries**

In Unit 2 you will travel past Madagascar and then on to Australia. In this unit you will look at coral reefs, mollusks, estuaries, and nutrient cycles. You will also complete a dissection lab where you dissect a squid and an oyster.

**What we do not see under the Sea**

Unit 3 has you traveling from Australia to Hawaii. You will look at the abyss, waves, tides, plate tectonics, as well as fish classification and adaptations.

**Marine Mammals**

Unit 4 takes you from Hawaii to the west coast of the US, up the coast into Alaska. This unit covers marine mammal classification and characteristics, human involvement with marine mammals, the kelp ecosystem, and the commercial fishing industry.
PSYCHOLOGY A

Grades: 9, 10, 11, and 12

Credits: 0.50

The exploration of psychology begins with a historical review of how man has sought to explain human behavior from ancient times to today. Students learn about the research methods and how the scientific method of inquiry moved psychology from hypnosis and mesmerism to serious inquiry utilizing hard science to prove theories.

Units

Introducing Psychology

You will learn about the importance of psychology as a field of inquiry and how for thousands of years man has sought to understand the inner workings of the human mind. You will explore psychology’s early roots in philosophy, religion, and mythology; marvel in the strange early "pseudo sciences;" and begin to understand how the rise of science set the stage for psychology as we know it today. The unit begins with an exploration of the value of psychology as a field of study through its practical applications to your everyday life. Through this, you will develop an appreciation for the goals of psychology and an understanding of its scientific basis. The road to modern day psychology is a long and twisting one that is marked by various conflicting perspectives. Because of this, our journey through this unit will take us through the last few centuries where we will meet the major players and the various schools of thought they represent. By building on these early perspectives you will come to understand how modern psychology is indeed a reflection of our current view of the world.

Research Methods Statistics

You learned about the scientific method and that psychologists rely on formal systematic observations to address their questions. It is this methodology that makes psychology scientific. In this unit, we will deepen your understanding of these methods so that you will be able to evaluate the research-based information that is presented to you in your daily life. It is important to think critically about data because you are bombarded with research findings nearly every day. The government, advertisers, scientists and others use research data to draw conclusions about everything from the state of the economy and the safety of products to how to improve your health. Learning how to evaluate these reports from a research perspective will help you use this information wisely and to know which reports you should disregard because of flaws and/or limitations with the study.

Basics of the Nervous System

You will explore the depths of the nervous system and its components. You will begin by understanding the form and functions of the most basic unit of the nervous system, the neuron. You will discover how electrochemical impulses stimulate neurons and nervous system pathways that affect both physical activities and thoughts. You will dissect the human brain in all its beauty and explore the amazing findings that have occurred as a result in technological advances in modern medicine and neuroscience. You will also examine the effects of other factors on behavior, both hormonal and genetic.
This investigation of the nervous system and the brain will further your understanding of the biological bases of behavior and lay the foundation for understanding how people think and perceive the world, and how drugs, sleep, and dreams affect the brain and behavior.

**Altered States**

The phrase "altered state of consciousness" was coined in the 1970s and describes intentionally, unnaturally induced changes in one's mental state, sometimes attained through the use of recreational drugs and psychedelic substances such as LSD and marijuana.

To understand altered states of consciousness, you will build on what you have learned about the normal functioning of the brain and the nervous system and will explore what occurs in the brain during unconscious states. In this exploration, you will attempt to understand the mysteries of the most common unconscious states: sleep and dreams. You will discover that dreams are a language of imagery and that this imagery ranges from the normal to the surreal and can include frightening nightmares. You will come to realize that although this is an area of psychology research that has intrigued scientists and has been the subject of considerable research, no one is actually certain about the function of dreams and sleep.

**Sensation and Perception**

How do you obtain reliable and useful information about the environment through your senses? That is to say, how do you come to be aware of the stimuli in your surroundings? What can illusions tell you about how the visual system normally works?

You will look at behavior (how does an outfielder catch a fly ball?) and neurophysiological evidence (what parts of the brain are most active when we view a spot of red light?). You will explore the anatomical structure of the various sensory systems (how is light transformed into a neural signal within the eye?); the functional architecture of the perceptual parts of the human brain; psychophysics (the quantitative measurement of perceptual experience); form, depth, and motion perception; color vision; visual attention; perceptual memory; auditory perception, and the sense of touch. You will learn about conscious awareness.

**Development Theories**

You will be introduced to the field of developmental psychology, which is the study of behavior across the life span. You will survey the major theorists of this field and discern the key themes of various theoretical perspectives on human development related to cognitive, social, and emotional development, from birth through adolescence. You will learn that psychologists face two critical problems in understanding human development: 1) determining how environmental variables (such as parental attitudes) and biological characteristics (such as health) interact and influence behavior, and 2) understanding how behavioral changes influence one another. Finally, you will look at current research trends that stress the interaction of environmental events and biological traits that influence behavior and development, and understand how and why this research provides methods for helping children with risk factors to develop more normally.

**Final Review and Exam**
PSYCHOLOGY B

Grades: 9, 10, 11, and 12

Credits: 0.50

In Psychology B, students investigate the brain personality theories in order to understand the complex mental processes of learning, memory, thought, and language. Mental health issues, ranging from stress to disorders, are discussed, and the last unit reviews various methods of therapy.

Units

Psychological Testing

What is the nature of intelligence? All of us have some vague notion as to what intelligence means, but do we really know? In this unit, you will look at how psychologists seek to define this elusive notion of intelligence and how the various definitions of this phenomenon influence the development of instruments used to measure intelligence. Some of the instruments for measuring intelligence that you will look at will be very familiar. In fact, you have probably taken a few or more of these tests. You will learn what these tests really seek to measure and how such tests measure different things. In this unit, you will learn about the difference between objective and projective tests, and you will begin to understand the difference between what an SAT or MMPI measures in contrast to some other measurement devices such as the Rorschach Ink Blot tests. Finally, you will have an opportunity to take a few of these tests online and see what the experts say about your personality.

Theories of Personality

On personality theories, you will examine a number of theories from Sigmund Freud’s psychoanalysis to Carl Roger’s cognitive theory of "self." While the sheer volume of personality theories will amaze you, you might find this area a bit confusing. You might ask, "who’s right?" Interestingly, this aspect of psychology is the least amenable to research and provides a great number of complimentary and sometimes conflicting theories. Another interesting thing about the exploration of personality theories is that you might expect it to be the easiest of all since we all come to it with direct access to our own thoughts and feelings and since we have plenty of experience dealing with people. But do not mistake familiarity with knowledge. In fact, the topic of theories of personality is probably one of the most difficult and most complex in the field of psychology. Finally, in this unit, you will come to realize that the study of personality theories is less scientific than you might hope. There will be theories that fit in better with your experiences of self than others. You will also find that there will be times that several theorists say similar things, even though they are taking very different approaches.

Learning, Memory, and Motivation

Learning is involved in almost every phenomenon psychologists study and occurs in many different ways. In this unit, you will explore the major learning theories that shape your understanding of learning principles and applications. Once you have an understanding of how learning occurs, you will begin your study of memory including the memory processes and systems and the nature of forgetting. In the later lessons, you will apply the foundational principles of learning and memory to explore the various forms of human thought and reasoning. This exploration will culminate in your study of the most complex cognitive product that humans have – language.
Stress, Coping, and Mental Health

What is stress? We think that we know what it means, but what does it have to do with psychology or mental health? In this unit, you will not only look at how psychologists define stress, but also what role stress plays in our psychological and physical well-being.

You will be very familiar with some of the ways that stress is defined. However, you will also look at the positive and necessary role that stress plays in our lives through functions such as "fight or flight" and "eustress."

And since it seems that people are constantly looking for ways to reduce the amount of stress in their lives, you will also investigate various methods of stress management.

Disorders

You will learn about the various disorders that can strike during a lifetime. Yet, while you will examine a range of disorders from schizophrenia to drug addiction, you will begin your exploration of disorders by considering an age-old question: "What is normal?" You will discover and learn to evaluate what constitutes normalcy within any given society. You will find that there are many more distinct, recognized disorders than you could have imagined, and you will learn the general characteristics of each. Along the way you will also gain some insight into the cause and prevalence of these disorders. You might be surprised to find which of them are influenced by biological factors (such as genetics and chemical imbalance) as well as how many of them strike adolescents and very young adults.

Therapy and Change

If you are at all familiar with Greek mythology, you will know or recognize the story of Pandora's Box. In the story, Pandora, in her curiosity, briefly released from the box all Disease, Sorrow, Vice, and Crime that plague humanity. Yet, among all of the evil unfurled upon humanity was Hope. And Hope's mission was to heal the damage that was caused by the other inhabitants of the box.

This story is especially fitting for this unit on therapy and change because that is exactly what it represents: hope. With this idea in mind, you will learn about the history and modern practice of various methods of therapy, such as Psychoanalytic, Cognitive, and many others. You will also investigate the potential for change that these methods, and the therapists who practice them, bring to the millions of people who suffer everyday with emotional and mental disorders.

Final Review and Exam
CAREER TECHNICAL EDUCATION (CTE)

ACCOUNTING I (STEM FOCUSED)

Grades: 9, 10, 11, and 12

Credits: 0.50

This course introduces you to accounting concepts and principles, financial statements, internal control design, and accounting for partnerships. By the end of the course, you will be able to:

- Define terms related to business accounting
- Apply accounting concepts and principles
- Prepare financial statements
- Analyze financial statements for decision making
- Evaluate internal controls
- Account for partnership transactions
- Differentiate international financial reporting standards from generally accepted accounting principles

**CAREER EXPLORATION**

Grades: 9, 10, 11, and 12

Credits: 0.50

From writing an effective resume to giving the perfect interview and succeeding at a chosen career, this course introduces students to a broad scope of future career opportunities and outlines steps to ensure success. Students start planning their transition from secondary school to college and then to the workplace.

Career Exploration is designed for high school students that are ready to begin exploring the workplace and the many paths towards an interesting and fulfilling career. Career Exploration looks at the many career options available and examines the qualifications needed to reach personal career goals.

**Units**

**Unit 1: Career Exploration Introduction**
You will get started in exploring careers and begin to plan your career planning portfolio.

**Unit 2: Knowing the Plan**
You will explore the reasons why it is good to have a career plan and study the changes happening in the world of work.

**Unit 3: Getting to Know Yourself**
The theme of this unit is introspection, or in other words, thinking about yourself. You will think about your personality, skills and interests, and start picturing yourself in the world of work.

**Unit 4: Knowing What You Want**
You will have the opportunity to not only decide what is important to you—what you want—but you will also spend some time figuring out the financial cost of your desires. This information will help you figure out, in the Cheshire Cat’s terms, what career “road” is best for you.

**Unit 5: Getting to Know the Job Market**
You will be exploring careers in a more in-depth manner. You will also explore entrepreneurship.

**Unit 6: Getting Ready for a Career**
You will continue the career exploration process by narrowing down your career list to one career or field of interest based on all of the information that you have gathered in previous units. Specifically, you will be comparing your career research to your personal profile, which should include information about what you are good at, what you are interested in, and how much money you would need to make to maintain a lifestyle that you want.
Unit 7: Getting a Job

So now you have a general idea of what you may pursue, so how do you get the job you want when you are ready for it? And once you have the job/career that you want, how can you make sure you will be successful? In this unit you will examine how to create documents that will help you get a job; learn proper interviewing techniques; examine and analyze workplace scenarios.

Unit 8: Keeping Your Career Going

You will analyze some key elements of keeping a top. These include developing and strengthening a work ethic, developing effective workplace etiquette, and continuing to prepare for your future.
CRIMINAL INVESTIGATION (STEM FOCUSED)

Grades: 9, 10, 11, and 12

Credits: 0.50

In this course, the student will examine the process of identifying and arresting criminal suspects, types of crimes and offenses, and preparing for court. The student will study the history of criminal investigation and explore the relationship between investigation and the courtroom process by examining case studies. By the end of the year, the student will be able to:

- Define terms related to criminal investigation
- Outline the history of criminal investigation
- Analyze the process of criminal investigation
- Examine types of criminal offenses
- Explain the relationship between criminal investigation and the courtroom process

Online Text/eBook

**DEVELOPMENTAL WRITING**

Grades: 9, 10, 11, and 12

Credits: 0.50

In this course, the student will explore the fundamental tools and techniques needed to write clear sentences, effective paragraphs, and well-organized essays for general education courses and employment settings. Using Standard American English, the student will learn to organize, clarify, and communicate written ideas, as well as how to use correct sentence structure, grammar, and parts of speech in written communication. The student will also develop skills in revising and editing to clarify voice, tone, style, and mode. By the end of the course, the student will be able to do the following:

- Assess a written passage for clear writing
- Write using Standard American English
- Write a variety of complex sentences
- Use sentence mechanics properly
- Analyze the writing process
- Analyze writing modes and their purpose
- Write an essay

HUMAN RESOURCE MANAGEMENT

Grades: 9, 10, 11, and 12

Credits: 0.50

In this course, students will explore the important role human resource management (HRM) professionals play in organizations, as well as the key functions within HRM. Some of these functions include recruitment, selection, training and development, appraisal, engagement and retention, compensation, and employee relations. Students will also examine how HRM is being affected by an increasingly global business environment.

- Develop a strategic HR plan for an organization
- Develop a personnel planning and recruiting plan for an organization
- Identify key deficits in employee training and development programs
- Develop performance appraisal criteria for multiple positions in an organization
- Determine which type of pay plan and benefits mix would be suitable to an organization’s strategic initiatives and employee base
- Identify legal, health, and safety issues in the workplace
- Identify the need for global HR expansion and develop a hiring strategy that best suits the new business environment

- Prepare a variety of different speech types

Online Text/eBook

eText Public Speaking: An Audience-Centered Approach
**RESEARCH METHODS**

Grades: 9, 10, 11, and 12

Credits: 0.50

In this course the student will explore and apply the fundamentals of scientific research methodology by examining a social issue. The student will develop a research question, find and evaluate existing research, and design and implement an objective research method. By the end of the course, the student will be able to:

- Demonstrate an understanding of the fundamentals of qualitative research
- Design an original research question to draw valid conclusions
- Gather data using an appropriate method
- Synthesize research
- Evaluate the methodology, evidence, and conclusions of others' research
- Analyze the challenges and ethical issues in social research
SPORTS MANAGEMENT

Grades: 9, 10, 11, and 12

Credits: 0.50

This course will introduce you to the fast-growing field of sports management. You will explore topics such as sports marketing, branding, ticket sales, public relations, broadcasting, and breaking into the business of sports management. This course will also discuss the role of sports in society and the importance of an ethical approach to sports management.

Units

Introduction to Sports Management
This unit will serve as an introduction to the entire course. You will be introduced to basic terms and phrases associated with sports management. You will also learn the differences between leagues and levels of play, key roles in front offices, revenue for teams, the relationship between teams and the facilities they play in, and most importantly, what sports management is in industry terms.

Sports Marketing and Sales
You will become more familiar with sports marketing, brand management, and the major revenue streams of ticketing and sponsorship. Additionally, you will learn about pricing of those revenue streams, how they are promoted, and what profit margins are involved.

Media and Public Relations
This unit will illustrate the role the media plays in sports management and the relationship between the media and sports franchises. You will learn how teams work with various forms of media to communicate with the public. Lastly, you will learn the importance of public relations in sports management and why it is one of the most important aspects of sports management. You may not hear much about the role of public relations in sports, but it is one of the most important aspects of sports management.

Ethics in Sports Management
This unit will demonstrate why ethical business practices are important for sports franchises. Additionally, you will learn how a team's actions, policies, and business practices can impact its local community, both fans and non-fans alike.

Careers in the Sports Industry
You will learn the most common ways to start a career in sports management. You will also learn the financial and workload realities of working in the industry. Lastly, you will learn how to prepare yourself and differentiate yourself to be more attractive as a potential employee.
