## Electives

### Technology
- 3D Art I - Modeling
- Business Keyboarding
- Digital Arts I
- Emergent Computer Technology
- Engineering Design I
- Game Design
- Intro to Computers & Information Technology: IC3
- Java Programming I & II
- Learning Microsoft Office 2010
- Web Design I

### Humanities
- Art History
- Digital Photography
- Living Music I and II
- Chinese I, II, and III
- French I, II, III, and IV
- German I, II, and III
- Japanese I and II
- Latin I, II and III
- Sign Language I A and IIA
- Spanish I, II, III, and IV

### Health and Physical Education
- Health, Fitness, and Nutrition
- Personal Fitness
- Physical Education

### Other Courses
- Introduction to Entrepreneurship I & II
- Critical Thinking and Study Skills
- Life Management Skills
- College Prep with ACT
- College Prep with SAT
- Drivers Education

### Career Technical Education (CTE)
- Accounting I
- Accounting II
- Administrative Duties and Office Management
- Anatomy and Physiology
- Business Communication
- Business Information Systems
- Business Law
- Business Math
- Career Exploration
- Criminal Investigation
- Developmental Writing
- Health, Safety, and Nutrition
- Human Resource Management
- Introduction to Business
- Introduction to Criminal Justice
- Introduction to Early Childhood Education
- Introduction to Finance
- Introduction to Homeland Security
- Introduction to Law
- Introduction to Medical Assisting
- Introduction to the Paralegal Profession
- Introduction to Psychology
- Introduction to Sociology
- Introductory Astronomy
- Leadership and Supervision in Business
- Medical Law and Ethics
- Medical Terminology
- Principles of Management
- Principles of Marketing
- Public Speaking
- Research Methods
- Sports Management

APPENDIX A
CURRICULUM

A.2 COURSE GUIDES

a. LANGUAGE ARTS
This document is part of Appendix A: Curriculum.

It includes course guides for each Language Arts class for students in Kindergarten through Grade 12.

- Language Arts K A
- Language Arts K B
- Language Arts 1 A
- Language Arts 1 B
- Language Arts 2 A
- Language Arts 2 B
- Language Arts 3 A
- Language Arts 3 B
- Language Arts 4 A
- Language Arts 4 B
- Language Arts 5 A
- Language Arts 5 B
- Language Arts 6 A
- Language Arts 6 B
- Language Arts 7 A
- Language Arts 7 B
- Language Arts 8 A
- Language Arts 8 B
- English 9 A
- English 9 B
- English 10 A
- English 10 B
- English 11 A
- English 11 B
- English 12 A
- English 12 B

Course guides provide detailed information on the curriculum including course descriptions, unit summaries, lesson objectives, activities, and assessment types. Course guides include information on:

- Planned instruction (provided in the unit summary of each unit within individual Course Guides)
- Course objectives (provided in the unit and lesson objectives within individual Course Guides)
- Activities (provided in the unit summary and lesson objectives of each unit within individual Course Guides)
LANGUAGE ARTS K A
Language Arts K A

In this course, students build a foundation for successful reading as they explore topics and apply reading, writing, speaking, and listening practices outlined in national and state standards. Learning activities consist of phonics, listening, comprehension, and vocabulary instruction with daily exposure to books, including literature and informational texts. A combination of interactive and hands-on exercises encourages the development of fine motor skills. Students learn language skills as well as letter formation, and they practice these with drawing, dictating, and writing. By the end of kindergarten, many students will be reading, and all students should be able to recognize consonant as well as long and short vowel sounds.

Unit 1: How Do We Live, Work, and Play Together?

Your student will answer the Big Question “How do we live, work, and play together?” while reading The Little School Bus, We Are So Proud!, Plaidypus Lost, Miss Bindergarten Takes a Field Trip with Kindergarten, Smash! Crash!, and Dig, Dig, Digging. In stories, rhymes, and songs, he will develop phonological awareness of rhyming words, syllables, initial, and final sounds. He will also practice sequencing, classifying, and categorizing as he learns about character and setting. Decodable Readers and Get Set, Roll! Readers will reinforce high-frequency words and letter recognition and develop oral vocabulary. Your student will practice recognizing and writing uppercase and lowercase letters, writing his name, and dictating or writing sentences.

Objectives:
- Describe how people live, work, and play together
- Recognize and write uppercase letters and dictate and compose sentences
- Develop oral vocabulary using high-frequency words and Amazing Words
- Identify rhyming words, syllables, and initial and final word sounds
- Sequence, classify, and categorize character and setting

Lesson 1: Ways to Ride (two-day lesson)

Objectives:
- Recognize and write uppercase and lowercase letters and dictation
- Develop oral vocabulary using high-frequency words and Amazing Words
- Sequence and classify character and setting
- Discuss concept of transportation, clarifying information when necessary
- Apply rules for speaking and listening

Lesson 2: A Bus Ride

Objectives:
- Recognize and write uppercase and lowercase Bb
- Develop oral vocabulary using high-frequency words
- Identify rhyming words
- Identify details in The Little School Bus
- Apply rules for speaking and listening

Lesson 3: Happy Riders

Objectives:
- Recognize and write uppercase and lowercase Cc
- Develop oral vocabulary using high-frequency words
- Apply rules for speaking and listening
- Describe details of a picture verbally or in writing

Lesson 4: Trucks Roll

Objectives:
- Recognize and write uppercase and lowercase Dd
- Develop oral vocabulary using high-frequency words
- Apply rules for speaking and listening
- Retell a story and identify its characters

Lesson 5: Getting Around

Objectives:
- Recognize and write uppercase and lowercase Aa, Bb, Cc, Dd, Ee
- Develop oral vocabulary using high-frequency and transportation words
- Identify characters in a story
- Identify rhyming words
- Apply rules for speaking and listening

Lesson 6: Proud of a Job (two-day lesson)

Objectives:
- Recognize and write uppercase and lowercase Ff and Gg
- Develop oral vocabulary using high-frequency and color words
- Recognize and write names
- Identify ways that children work and play together
- Apply rules for speaking and listening

Lesson 7: Cooperation

Objectives:
- Recognize and write uppercase and lowercase Hh and Ii
- Develop oral vocabulary using high-frequency and color words
- Identify and count syllables in words
- Follow words in a text from left to right, top to bottom, and page by page

Lesson 8: Our Creations

Objectives:
- Recognize and write uppercase and lowercase Jj and Kk
- Develop oral vocabulary using high-frequency and color words
- Write or dictate information for an invitation
- Apply rules for speaking and listening

Lesson 9: Our Guide

Objectives:
- Recognize and write uppercase and lowercase Ll and Mm
- Develop oral vocabulary using high-frequency and color words
- Recognize and write names
- Retell a story and identify its characters and setting
- Apply rules for speaking and listening

Lesson 10: Cooperating to Solve a Problem

Objectives:
- Recognize and write uppercase and lowercase Nn
- Develop oral vocabulary using high-frequency words
- Identify the setting of a story
- Apply rules for speaking and listening

Lesson 11: Cooperation in My Family (two-day lesson)

Objectives:
- Recognize and write uppercase and lowercase Oo
- Develop oral vocabulary using high-frequency and shape words
- Identify initial sounds in words
- Apply rules for speaking and listening

Lesson 12: Lost and Found

Objectives:
- Recognize and write uppercase P and lowercase p
- Develop oral vocabulary using high-frequency and shape words
- Identify initial sounds in words
- Follow words in a text from left to right, top to bottom, and page by page

Lesson 13: Good Listening

Objectives:
Lesson 14: Doing Steps in Order

Objectives:
- Recognize and write uppercase R and lowercase r
- Develop oral vocabulary using high-frequency and shape words
- Retell a story and identify its events in sequence
- Describe familiar people, places, things, and events
- Identify characters and setting in a story

Lesson 15: Machines Can Help Us

Objectives:
- Recognize and write uppercase S and lowercase s
- Recognize uppercase and lowercase Oo, Pp, Qq, Rr
- Develop oral vocabulary using high-frequency and shape words
- Identify ways that machines help families

Lesson 16: Community Cooperation (two-day lesson)

Objectives:
- Recognize and write uppercase and lowercase <em>Tt</em> and <em>Uu</em>
- Develop oral vocabulary using high-frequency and location words
- Identify community locations and the helpers that work in those locations

Lesson 17: Field Trip Fun

Objectives:
- Recognize and write uppercase and lowercase <em>Vv</em>
- Develop oral vocabulary using high-frequency and location words
- Identify initial sounds in words

Lesson 18: Giving Instructions

Objectives:
- Recognize and write uppercase and lowercase <em>Ww</em> and <em>Xx</em>
- Develop oral vocabulary using high-frequency and location words
- Write or dictate information for instructions

Lesson 19: People in My Community

Objectives:
- Recognize and write uppercase and lowercase Yy and Zz
- Develop oral vocabulary using high-frequency and location words
- Retell a story naming important details
- Classify and categorize items from a story

Lesson 20: Helping My Community

Objectives:
- Recognize and write uppercase and lowercase letters
- Develop oral vocabulary using high-frequency words
- Identify community helpers’ locations of and types of work
- Classify and categorize items from a text

Lesson 21: Doing Things with Friends (two-day lesson)

Objectives:
- Develop oral vocabulary using high-frequency and position words
- Describe activities we can do with friends
- Identify and use nouns for people, animals, and things
Lesson 22: Games Friends Play

Objectives:
- Develop oral vocabulary using high-frequency and position words
- Identify initial and final /m/ in words, write and read /m/ spelled Mm

Lesson 23: Friends Have Fun

Objectives:
- Develop oral vocabulary using high-frequency and position words
- Identify initial and final /m/ in words, write and read /m/ spelled Mm
- Write or dictate captions for pictures

Lesson 24: Friends Can Be Different or Alike

Objectives:
- Develop oral vocabulary using high-frequency and position words
- Retell a story and identify characters from the story

Lesson 25: Words for Friends

Objectives:
- Develop oral vocabulary using high-frequency and position words
- Identify and use nouns for people, animals, and things

Lesson 26: Machines I Use (two-day lesson)

Objectives:
- Develop oral vocabulary using high-frequency words and words for sizes
- Describe how machines help people

Lesson 27: Construction Machines

Objectives:
- Develop oral vocabulary using high-frequency words and words for sizes
- Read, write, and blend initial and final /t/ spelled Tt in words
- Draw pictures to represent ideas for a story

Lesson 28: Machine Movements

Objectives:
- Read and write initial and final /t/ spelled Tt in words
- Develop oral vocabulary using high-frequency words and words for sizes
- Identify and use nouns for people, animals, places, and things in sentences
- Brainstorm and write or dictate the beginning, middle, and end of a story

Lesson 29: Kinds of Machines

Objectives:
- Develop oral vocabulary using high-frequency words and words for sizes
- Retell a story including key details
- Sort and categorize common items
- Collaborate to write and share a story

Lesson 30: Machines for Writing

Objectives:
- Collaborate to write and share a story
Unit 2: How Are Animals and Plants Unique?

Your student will answer the Big Question, How are plants and animals unique?, while reading Flowers, Nature Spy, Animal Babies in Grasslands, Bear Snores On, and A Bed for Winter. In stories, rhymes, and songs, she will develop phonological awareness of rhyming words; syllables; and initial, medial, and final sounds. While reading informational texts, she will practice comparing and contrast, classifying and categorizing, and finding the main idea. She will also continue to develop her understanding of setting as she sequences events and distinguishes between realism and fantasy. Decodable Readers and Get Set, Roll! Readers will reinforce high-frequency words and letter recognition as well as develop oral vocabulary. Finally, your student will practice recognizing and writing uppercase and lowercase letters, labeling illustrations, and dictating or writing sentences.

Objectives:
- Describe what makes plants and animals unique
- Recognize and write uppercase and lowercase letters and dictate and compose sentences
- Develop oral vocabulary using high-frequency words and Amazing Words
- Identify rhyming words; syllables; and initial, medial, and final sounds
- Identify the main idea of informational texts and distinguish between realism and fantasy

Lesson 1: Parts of a Flower (two-day lesson)

Objectives:
- Develop oral vocabulary and use color words
- Read high-frequency words have, is
- Read /a/ spelled Aa
- Identify characteristics of plants
- Form regular plural nouns orally

Lesson 2: We Like Flowers

Objectives:
- Develop oral vocabulary and use color words
- Read high-frequency words have, is
- Identify initial and medial /a/ in words, write and read /a/ spelled Aa
- Identify experiences with flowers

Lesson 3: Fruit from Flowers

Objectives:
- Develop oral vocabulary and use color words
- Read high-frequency words have, is
- Identify initial and medial /a/ in words, write and read /a/ spelled Aa
- Identify and use plural nouns in sentences
- Identify parts of a flower

Lesson 4: Many Kinds of Flowers

Objectives:
- Develop oral vocabulary and use color words and regular plural nouns
- Read high-frequency words have, is
- Identify initial and medial /a/ in words, write and read /a/ spelled Aa
- Compare and contrast flowers
- Retell key details of a text

Lesson 5: Flowers Have a Job

Objectives:
- Develop oral vocabulary and use color words
- Read high-frequency words have, is
- Identify initial and medial /a/ in words, write and read /a/ spelled Aa
- Identify and use plural nouns in sentences
- Identify and describe the many purposes of flowers

Lesson 6: Nature Discoveries (two-day lesson)
Objectives:
- Develop oral vocabulary using high-frequency and nature words
- Identify initial /s/ in words
- Read /s/ spelled Ss
- Make observations while exploring nature

Lesson 7: Spying on Nature
Objectives:
- Develop oral vocabulary using high-frequency and nature words
- Identify initial and final /s/ in words
- Recognize and write upper- and lowercase Ss
- Read /s/ spelled Ss

Lesson 8: Where to Look
Objectives:
- Develop oral vocabulary and use high-frequency and nature words
- Identify initial and final /s/ in words
- Write and read /s/ spelled Ss
- Identify and use nouns, plural nouns, and proper nouns in isolation and in sentences
- Write a list identifying places in nature

Lesson 9: Looking Closely
Objectives:
- Develop oral vocabulary and use nature words
- Read high-frequency words have and is
- Identify initial /s/ in words, and read /s/ spelled Ss
- Identify proper nouns
- Retell a selection naming the setting and key details

Lesson 10: Nature Cycles
Objectives:
- Develop oral vocabulary using high-frequency and nature words and proper nouns
- Identify initial and final /s/ in words
- Write and read /s/ spelled Ss
- Identify the setting of a story
- Illustrate the life cycle of a plant

Lesson 11: Grassland Animals of the United States (two-day lesson)
Objectives:
- Develop oral vocabulary and use words for baby animals
- Read and write high-frequency words we, my, like
- Read words with /p/ spelled Pp
- Identify animal names and the name of each animal’s baby

Lesson 12: Other Grassland Animals
Objectives:
- Develop oral vocabulary and use words for baby animals
- Read high-frequency words we, my, like
- Identify initial and final /p/ in words and write and read words with /p/ spelled Pp
- Isolate and pronounce initial, medial, and final sounds in consonant-vowel-consonant words

Lesson 13: Grassland Babies
Objectives:
- Develop oral vocabulary and use words for baby animals
- Read high-frequency words we, my, like
- Read words with /p/ spelled Pp
- Identify and use adjectives for color and shape
- Write notes about an elephant

**Lesson 14: Caring Mother Animals**

Objectives:
- Develop oral vocabulary and use words for baby animals
- Read high-frequency words we, my, like
- Identify initial and final /p/ in words and write and read words with /p/ spelled Pp
- Identify and use adjectives for color and shape
- Retell a selection and identify its main idea

**Lesson 15: How Grassland Animal Babies Behave**

Objectives:
- Develop oral vocabulary and use words for baby animals
- Read high-frequency words we, my, like
- Identify initial and final /p/ in words and write and read /p/ spelled Pp
- Identify and use adjectives for color and shape
- Identify the main idea of a selection

**Lesson 16: Hibernation (two-day lesson)**

Objectives:
- Read /k/ spelled Cc
- Develop oral vocabulary and use words for seasons
- Read high-frequency words we, my, and like
- Explain the concept of hibernation

**Lesson 17: Why Bears Hibernate**

Objectives:
- Identify initial /k/ in words and write and read /k/ spelled Cc
- Develop oral vocabulary and use words for seasons
- Read high-frequency words we, my, and like

**Lesson 18: Preparing to Hibernate**

Objectives:
- Read high-frequency words we, my, and like
- Identify initial /k/ in words, and write and read /k/ spelled Cc
- Develop oral vocabulary, and use words for seasons
- Identify and use adjectives in sentences
- Write a poem using words that rhyme with cat

**Lesson 19: Real or Make-Believe Animals?**

Objectives:
- Identify initial /k/ in words, and write and read /k/ spelled Cc
- Develop oral vocabulary and use words for seasons
- Read high-frequency words we, my, and like
- Retell a reading selection and identify whether it is real or fantasy
- Identify and use adjectives in sentences

**Lesson 20: Animals That Hibernate**

Objectives:
- Identify initial /k/ in words, and write and read /k/ spelled Cc
- Develop reading and oral vocabulary using high-frequency words we, my, like and words for seasons
- Identify whether a selection is real or fantasy
- Identify animals that hibernate like a bear
- Identify and use adjectives in sentences

**Lesson 21: Domestic and Wild Animals (two-day lesson)**

Objectives:
- Read /k/ spelled Cc
- Develop reading and oral vocabulary using high-frequency words we, my, like and words for seasons
- Identify whether a selection is real or fantasy
- Identify animals that hibernate like a bear
- Identify and use adjectives in sentences
Objectives:
- Recognize /i/ spelled Ii
- Develop oral vocabulary and use sequence words
- Read high-frequency words he, for
- Identify sequence words first, second, next, last
- Identify different types of homes for different animals

Lesson 22: Different Kinds of Animal Homes
Objectives:
- Identify initial and medial /i/ in words and write and read /i/ spelled Ii
- Develop oral vocabulary and use sequence words
- Read high-frequency words he, for
- Identify and use adjectives in sentences
- Write a caption for an illustration of an animal’s home

Lesson 23: Animals That Build Homes
Objectives:
- Identify initial and medial /i/ in words and write and read /i/ spelled Ii
- Develop oral vocabulary and use sequence words
- Read high-frequency words he, for
- Identify and use adjectives in sentences

Lesson 24: Animals that Find Homes
Objectives:
- Identify initial and medial /i/ in words and write and read /i/ spelled Ii
- Develop oral vocabulary and use sequence words
- Read high-frequency words he, for
- Retell a selection and identify its events in sequence
- Identify and use adjectives in sentences

Lesson 25: Animal Neighborhoods
Objectives:
- Identify initial and medial /i/ in words and write and read /i/ spelled Ii
- Develop oral vocabulary and use sequence words
- Read high-frequency words he, for
- Identify events of a selection in sequence
- Identify and use adjectives in sentences

Unit 3: How Does Change Affect Us?
In this unit, your student will learn about how animals grow and change over time, and identify how life is different today than long ago. Your student will read and discuss how change affects us and animals in the books Little Panda, Little Quack, and George Washington Visits. Your student will practice reading the high-frequency words me, with, she, see, and look when reading Decodable eBooks and eReaders from the Reading Street Interactive Digital Path website. He will also continue to identify initial, medial, and final sounds of words when learning how to blend, spell, and write. Your student will practice identifying initial /r/, /d/, and /k/, and initial and final /n/ and /b/ in words. Your student will build comprehension by comparing and contrasting information from texts, identify the plot of a story, and identify cause-and-effect relationships. Your student will identify meaningful word groups in order to construct sentences, in past, present, and future tense. Lastly, he will learn how to write an invitation and a persuasive statement to express understanding.

Objectives:
- Develop understanding of oral vocabulary, color, action, position, feelings, opposites, and high-frequency words
- Identify, read, and write words with initial /r/, /d/, and /k/, and initial and final /n/ and /b/
- Identify meaningful words groups to construct a sentence and use verbs in the past, present, and future tenses
- Retell a selection to identify plot and compare and contrast its features
- Analyze how living things grow and change

Lesson 1: A Healthy Panda (two-day lesson)
Objectives:
• Develop understanding of oral vocabulary, color, and high-frequency words
• Read words with /n/ spelled Nn
• Infer how a panda stays healthy
• Illustrate how a panda stays healthy while it grows

Lesson 2: A Mother Panda’s Care 🐼
Objectives:
• Develop oral vocabulary, color, and high-frequency words
• Identify initial and final /n/ and /b/ in words
• Write and read words with /n/ spelled Nn and /b/ spelled Bb
• Explain how a baby panda depends on his mother

Lesson 3: Curious Baby Panda 🐼
Objectives:
• Develop oral vocabulary, color, and high-frequency words
• Identify initial and final /n/ and /b/ in words
• Write and read words with /n/ spelled Nn and /b/ spelled Bb
• Identify and use verbs in sentences
• Summarize the events of a panda’s first year of life

Lesson 4: Eating to Grow 🍓
Objectives:
• Develop oral vocabulary, color, and high-frequency words
• Identify initial and final /n/ and /b/ in words and write and read words with /n/ spelled Nn and /b/ spelled Bb
• Identify and use verbs in sentences
• Retell a selection and compare and contrast its features
• Review main idea in a selection

Lesson 6: Growing and Learning (two-day lesson) 🌸
Objectives:
• Develop oral vocabulary and use action words
• Read high-frequency words me, with, she
• Read words with initial /r/ spelled Rr
• Identify ways a child grows and changes

Lesson 7: Ducklings Grow and Change 🐗
Objectives:
• Develop oral vocabulary and use action words
• Read high-frequency words me, with, she
• Read words with initial /r/ spelled Rr
• Blend words with initial /r/
• Identify what ducklings learn as they grow

Lesson 8: All Animals Grow and Change 🐋
Objectives:
• Develop oral vocabulary using action and high-frequency words
• Identify, read, and write words with initial /r/ spelled Rr
• Identify past and present tense verbs to use in sentences
• Dictate or write an invitation
• Identify similarities in how animals grow and change

Lesson 9: Feelings About Changes 🌸
Objectives:
• Develop oral vocabulary using action and high-frequency words
• Identify initial /r/ in words and write and read initial /r/ spelled Rr
• Identify and use verbs in sentences
• Retell a story and identify its plot
• Recall realism and fantasy and categorize the story
Lesson 10: Learning to Migrate

Objectives:
• Develop oral vocabulary, action words, and high-frequency words
• Identify initial /r/ in words and write and read initial /r/ spelled Rr
• Identify and use verbs in sentences
• Identify plot in a story
• Identify reasons why animals migrate as they grow

Lesson 11: Finding Out About Life Long Ago (two-day lesson)

Objectives:
• Develop oral vocabulary using high-frequency and position words
• Identify, read, and write words with initial /d/ spelled Dd
• Complete sentences using high-frequency words
• Identify examples of how life was different long ago

Lesson 12: Jobs Hundreds of Years Ago

Objectives:
• Identify and read words with initial /d/ and /k/
• Write and read words spelled with Dd and Kk
• Develop oral vocabulary using high-frequency and position words
• Compare and contrast modern life to the past

Lesson 13: Travel Hundreds of Years Ago

Objectives:
• Identify initial and final /d/ and initial /k/ in words
• Write and read words spelled with Dd and Kk
• Develop oral vocabulary using high-frequency and position words
• Recognize and use verb endings –s and –ed
• Compose a persuasive statement about life today or in the past

Lesson 14: Cause and Effects Long Ago

Objectives:
• Identify words with initial /d/ and /k/
• Write and read words spelled with Dd and Kk
• Develop oral vocabulary using high-frequency and position words
• Retell events of a story
• Identify cause and effect in a story

Lesson 15: Celebrations Then and Now

Objectives:
• Identify words with initial /d/ and /k/
• Write and read words spelled with Dd and Kk
• Develop oral vocabulary using high-frequency and position words
• Recognize and use verb endings –s and –ed
• Identify cause and effect in a story
LANGUAGE ARTS K B
Language Arts K B

In this course, students build a foundation for successful reading as they explore topics and apply reading, writing, speaking, and listening practices outlined in national and state standards. Learning activities consist of phonics, listening, comprehension, and vocabulary instruction with daily exposure to books, including literature and informational texts. A combination of interactive and hands-on exercises encourages the development of fine motor skills. Students learn language skills as well as letter formation, and they practice these with drawing, dictating, and writing. By the end of kindergarten, many students will be reading, and all students should be able to recognize consonant as well as long and short vowel sounds.

Unit 1: How Does Change Affect Us?

In this unit, your student will learn how animals grow and change over time, and identify how life is different today than long ago. Your student will read and discuss how change affects people and animals in the books Farfallina and Marcel and Then and Now. Your student will also practice reading the high-frequency words see, look, they, you, and of when reading Decodable eBooks and eReaders from the Reading Street Interactive Digital Path website. He will continue to identify initial, medial, and final sounds of words when learning how to blend, spell, and write. Your student will practice identifying initial and final /f/ and initial and medial /o/ in words. He will build comprehension by identifying the plot of a story and drawing conclusions. In addition, your student will identify meaningful word groups in order to construct sentences in past, present, and future tense. Lastly, he will learn how to write captions to express understanding.

Objectives:
- Develop understanding of oral vocabulary, color, action, position, feelings, opposites, and high-frequency words
- Identify, read, and write words with initial and final /f/ and initial and medial /o/
- Identify meaningful words groups to construct a sentence and use verbs in the past, present, and future tenses
- Retell a selection to identify plot and draw conclusions about its features
- Analyze how living things grow and change

Lesson 1: Animals Grow and Change (two-day lesson)

Objectives:
- Develop oral vocabulary using high-frequency words and words for feelings
- Identify, read, and write words with /f/ spelled Ff
- Identify how an animal or insect changes as it grows
- Form future tense verbs

Lesson 2: Geese Grow and Change

Objectives:
- Identify initial /f/ in words and write and read /f/ spelled Ff
- Develop oral vocabulary using high-frequency words and words for feelings
- Retell a story including important details
- Identify and use future tense verbs

Lesson 3: I Have Grown and Changed

Objectives:
- Identify initial and final /f/ in words and write and read /f/ spelled Ff
- Develop oral vocabulary and use high-frequency words and words for feelings
- Identify and use verbs in sentences
- Illustrate one way that a child grows and changes
- Write a caption that identifies details of an illustration

Lesson 4: Friends Forever

Objectives:
- Identify initial and final /f/ in words and write and read /f/ spelled Ff
- Develop oral vocabulary and use high-frequency words and words for feelings
- Identify and use verbs in sentences
- Retell the plot of a story and identify the story's characters
Lesson 5: Big Changes to Caterpillars (two-day lesson)

Objectives:
- Identify initial and final /f/ in words and write and read /f/ spelled Ff
- Develop oral vocabulary and use high-frequency words and words for feelings
- Identify and use verbs in sentences
- Identify plot in a story
- Describe the life cycle of a butterfly

Lesson 6: Technology Changes Our Lives (two-day lesson)

Objectives:
- Identify and read words with /o/ spelled Oo
- Develop oral vocabulary and use high-frequency words
- Draw conclusions using text information and prior knowledge
- Describe how common household items have changed over time

Lesson 7: Machines Help Us at Home

Objectives:
- Identify initial and medial /o/ in words, write and read /o/ spelled Oo
- Develop oral vocabulary, and use high-frequency words and words for opposites
- Identify an item used in the present that has changed from the past
- Draw conclusions about how machines have changed the way people live
- Rearrange groups of words in order to construct meaningful sentences

Lesson 8: Toys and Games Then and Now

Objectives:
- Identify initial and medial /o/ in words, write and read /o/ spelled Oo, and add or substitute sounds in words
- Develop oral vocabulary and use high-frequency words and words for opposites
- Identify and illustrate how games and toys have changed from long ago to today
- Arrange groups of words to create meaningful sentences

Lesson 9: Schools in the Past and Today

Objectives:
- Identify initial and medial /o/ in words, write and read /o/ spelled Oo
- Develop oral vocabulary and use high-frequency words and words for opposites
- Retell a story comparing and contrasting and drawing conclusions about the story’s content
- Identify and illustrate similarities and differences of schools in the past and today
- Identify and orally form meaningful word groups

Lesson 10: Some Things Stay the Same (two-day lesson)

Objectives:
- Identify initial and medial /o/ in words, and write and read /o/ spelled Oo
- Develop oral vocabulary and use high-frequency words and words for opposites
- Draw conclusions based on information in text and prior knowledge
- Identify, illustrate, and describe similarities and differences of objects from the past and today
- Form meaningful word groups to create a sentence

Unit 2: Where Will Our Adventures Take Us?

Your student will answer the Big Question “Where Will Our Adventures Take Us?” while reading Rooster’s Off to See the World, My Lucky Day, One Little Mouse, Goldilocks and the Three Bears, and Abuela. In stories, rhymes, and songs, he will develop phonological awareness of rhyming words, syllables, and initial, medial, and final sounds. He will also practice sequencing, comparing and contrasting, and drawing conclusions as he continues to develop his understanding.
of plot and character. While reading informational texts, he will identify cause and effect and summarize the main idea. Decodable Readers and Get Set, Roll! Readers will reinforce high-frequency words and letter recognition and develop oral vocabulary. Your student will practice recognizing and writing uppercase and lowercase letters, dictating or writing sentences, and applying speaking and listening skills.

Objectives:
- Describe what people can learn from adventures
- Recognize and write uppercase and lowercase letters
- Develop oral vocabulary using high-frequency and amazing words
- Sequence, compare and contrast, and draw conclusions about plot and character
- Identify cause and effect and summarize the main idea of informational texts

Lesson 1: Adventure Time (two-day lesson)

Objectives:
- Develop oral vocabulary using high-frequency words and words for adventure
- Identify, read, and write initial /h/ in words
- Identify the naming part of sentences
- Recall the sequence of events

Lesson 2: Adventures with Friends

Objectives:
- Develop oral vocabulary using high-frequency words, words for sequence, and words for adventure
- Identify, read, and write initial /h/ in words
- Identify the naming part of sentences

Lesson 3: Adventures at Home

Objectives:
- Develop oral vocabulary using high-frequency words and words for adventure
- Identify, read, and write initial /h/ in words
- Identify a sentence
- Write and give directions

Lesson 4: Adventures Away from Home

Objectives:
- Develop oral vocabulary using high-frequency words, words for sequence, and words for adventure
- Identify and read the sound made by the consonant /h/ and vowel /o/
- Retell the correct sequence of a story

Lesson 5: Learning from Adventures (two-day lesson)

Objectives:
- Develop oral vocabulary using high-frequency words and words for adventure
- Identify and read the sound made by the consonant /h/
- Identify naming part of sentences
- Retell the correct sequence of a story

Lesson 6: Being Lucky (two-day lesson)

Objectives:
- Develop oral vocabulary using high-frequency words and words for adventure
- Identify, read and write words that begin with /l/
- Identify action part of sentences
- Identify cause and effect

Lesson 7: Lucky Adventures

Objectives:
- Develop oral vocabulary using high-frequency words, words for texture, and words for adventure
- Identify, read, and write words that end with /l/ that sounds /l/
- Identify action part of sentences
- Retell story events

Lesson 8: Exciting Adventures

Objectives:
- Develop oral vocabulary using high-frequency words and words for adventure
- Identify words with initial and final /l/
- Identify naming part of sentences
- Compare and contrast objects

Lesson 9: Lucky Surprises

Objectives:
- Develop oral vocabulary using high-frequency words, words for texture, and words for adventure
- Identify cause and effect
- Identify action part of sentences
- Read and write words with /l/

Lesson 10: I Feel Lucky (two-day lesson)

Objectives:
- Develop oral vocabulary using high-frequency words and words for adventure
- Identify, read, and write words that begin and end with /l/ that sounds /l/
- Identify action part of sentences
- Retell a story

Lesson 11: Animal Adventures (two-day lesson)

Objectives:
- Identify words with the consonant blend /l/
- Develop oral vocabulary using high-frequency words and words for animal habitats
- Identify story sequence
- Identify the naming and action parts of a sentence
- Write or dictate a complete sentence and question using the word <em>why</em>

Lesson 12: Curious Animals

Objectives:
- Distinguish between words that begin with consonant blends /l/, /r/, /t/, /p/
- Develop oral vocabulary using high-frequency words and shape words
- Identify the name and action parts of a sentence
- Write a sentence that describes

Lesson 13: Animal Homes

Objectives:
- Distinguish between words that end with consonant blends and those that end with consonants
- Develop oral vocabulary using high-frequency words and words for animal habitats
- Identify the correct sequence of a story
- Identify the naming and action parts of a sentence
- Write a sentence that describes

Lesson 14: Animals Try New Things

Objectives:
- Develop oral vocabulary using words for shapes and story words comfortable and shadows
- Retell the events of a story and identify story sequence
Lesson 15: Animal Adventure Places (two-day lesson)

Objectives:
- Distinguish and read words with consonant blends
- Develop oral vocabulary using high-frequency words for numbers
- Retell the events of a story in sequence
- Identify the sequence of direction in nonfiction procedural text
- Write or dictate a complete sentence

Lesson 16: Helping Someone in Trouble (two-day lesson)

Objectives:
- Identify words that begin and end with /g/
- Write the letter Gg
- Develop oral vocabulary using high-frequency words and story words
- Develop ideas about how adventures can cause trouble
- Identify the reason people tell stories and story characters
- Write a story using telling sentences

Lesson 17: Rules

Objectives:
- Identify and write words that begin and end with /g/
- Develop oral vocabulary using compound words, high-frequency words, and story words
- Retell the events of a story
- Identify different rules for different locations
- Write or identify a telling sentence

Lesson 18: Being Careful

Objectives:
- Identify, read, and write words that begin and end with /g/
- Develop oral vocabulary using high-frequency words and story words: big, cottage
- Identify the naming and action part of a sentence
- Name story characters
- Dictate a list

Lesson 19: Being Safe

Objectives:
- Identify and spell words with /g/ and consonant blends with /l/
- Develop oral vocabulary using compound words
- Distinguish between character and setting
- Identify a telling sentence
- Write a list

Lesson 20: Making Good Decisions

Objectives:
- Identify and read words that begin and end with /g/
- Develop oral vocabulary using high-frequency words and story words bears, cottage, middle-sized, porridge, big, small
- Retell a story
- Distinguish between a folktale and other types of literature
- Write a telling sentence using capitalization and punctuation
Lesson 21: In the City (two-day lesson)

Objectives:
• Develop oral vocabulary using high-frequency words, pronouns, and words for adventure
• Recognize character and settings in a story
• Identify and write letter Ee and initial sounds /e/, /h/, /l/, and /g/
• Write a list

Lesson 22: City and Country

Objectives:
• Develop oral vocabulary using high-frequency words, pronouns, and time words
• Identify, read, and write letter Ee, initial and medial /e/ and other initial sounds
• Retell a story and distinguish between a city and a country setting
• Identify media sources for research

Lesson 23: Buildings in the City

Objectives:
• Develop oral vocabulary using high-frequency words and story words
• Identify, read, and write letter Ee, initial and medial /e/ and other initial sounds
• Identify buildings found in the city
• Recognize story setting
• Write a complete sentence and a list

Lesson 24: Places to Visit

Objectives:
• Develop oral vocabulary using high frequency words, pronouns, and time words
• Read high-frequency words and blend sounds to read words with /e/
• Identify places in a city
• Distinguish between realism and fantasy
• Make and revise a list

Lesson 25: Traveling in the City (two-day lesson)

Objectives:
• Develop oral vocabulary using high frequency words and pronouns
• Identify and read initial and medial /e/
• Retell a story and identify types of transportation in a city
• Distinguish characteristics of an informational text
• Edit and share a list

Unit 3: How Do People And Things Get From Here to There?

Your will student will answer the Big Question: How do people and things get from here to there? while reading Max Takes the Train, Mayday! Mayday!, Trucks Roll, On the Move!, and This Is the Way We Go to School. In stories, rhymes, and songs, he will develop phonological awareness of rhyming words, syllables, initial, and final sounds. He will also practice sequencing, drawing conclusions, and identifying cause and effect as he learns about plot, character, and theme. Decodable Readers and Get Set, Roll! Readers will reinforce high-frequency words and letter recognition, as well as develop oral vocabulary. Your student will practice spelling words, composing questions, and dictating or writing sentences.

Objectives:
• Describe modes of transportation
• Write words, sentences, and questions using uppercase and lowercase letters
• Develop oral vocabulary using high-frequency words and Amazing Words
• Identify rhyming words, syllables, initial, and final word sounds
• Sequence, draw conclusions, and analyze cause and effect in plot, character, and theme

Lesson 1: What Is Transportation? (two-day lesson)

Objectives:
• Develop oral vocabulary using high-frequency color words and words for transportation
• Identify, read, and write words that begin with /j/
• Distinguish between realism and fantasy
• Identify and ask questions

Lesson 2: Land, Water, and Sky

Objectives:
• Develop oral vocabulary using high-frequency color words and words for transportation
• Identify and write words that begin with /w/
• Distinguish between realism and fantasy
• Ask and answer questions

Lesson 3: Alike and Different

Objectives:
• Develop oral vocabulary using high-frequency color words and words for transportation
• Identify, read, and write words that begin with /j/ and /w/
• Distinguish between realism and fantasy
• Write a caption

Lesson 4: Transportation Helps Us Go Places

Objectives:
• Develop oral vocabulary using high-frequency color words and words for transportation
• Identify, read, and write words with /j/, /w/, and /e/
• Identify questions
• Identify story plot

Lesson 5: Traveling Far (two-day lesson)

Objectives:
• Develop oral vocabulary using high-frequency color words and words for transportation
• Read words with /j/ and /w/
• Distinguish between realism and fantasy
• Retell a story

Lesson 6: Help! Emergency! (two-day lesson)

Objectives:
• Use oral vocabulary using high-frequency color words and words for transportation
• Identify and read words that end in /ks/
• Write the letter Xx and words ending in /ks/
• Demonstrate understanding of cause and effect
• Write or dictate a question

Lesson 7: Helicopters Can Help

Objectives:
• Develop oral vocabulary using high-frequency words, position words, and words for transportation
• Identify words that end in /ks/
• Write the letter Xx and words ending in /ks/
• Write or dictate a question

Lesson 8: Coast Guard to the Rescue

Objectives:
• Develop oral vocabulary using high-frequency words and words for transportation
• Identify, read, and write words that end in /ks/
• Identify cause and effect relationships
• Identify questions and add correct punctuation
• Respond to literature
Lesson 9: Emergency Transportation

Objectives:
- Develop oral vocabulary using high-frequency words, position words, and words for transportation
- Identify, read, and write words that end in /ks/ and write the letter Xx
- Identify cause and effect relationships
- Identify a sequence of events
- Write a question

Lesson 10: Emergency Transportation Is Important

Objectives:
- Develop oral vocabulary using high-frequency words and words for transportation
- Identify, read, and write words that end in /ks/
- Identify cause and effect relationships
- Write a question

Lesson 11: Transportation for Jobs Is Important (two-day lesson)

Objectives:
- Develop oral vocabulary using high-frequency words and words for transportation
- Identify prepositions in sentences
- Identify, read, and write words with initial and medial /u/ spelled Uu
- Compare and contrast transportation

Lesson 12: Transportation for Jobs

Objectives:
- Develop oral vocabulary using high-frequency words, words for jobs, and words for transportation
- Use prepositions in sentences
- Identify, read, and write words with initial and medial /u/ spelled Uu
- Compare and contrast transportation

Lesson 13: Parts of a Truck

Objectives:
- Develop oral vocabulary using high-frequency words and words for transportation
- Identify, read, and write words with initial and medial /u/ spelled Uu
- Compare and contrast transportation
- Write a poem
- Respond to literature

Lesson 14: I Need Transportation to Do My Job

Objectives:
- Develop oral vocabulary using high-frequency words, words for jobs, and words for transportation
- Identify prepositions in sentences
- Identify, read, and write words with initial and medial /u/ and final /ks/
- Compare and contrast transportation
- Draw conclusions to identify various settings in a story

Lesson 15: Trucks Haul

Objectives:
- Develop oral vocabulary using high-frequency words and words for transportation
- Identify and use prepositions
Lesson 16: Traveling in a City (two-day lesson)

Objectives:
- Recognize and write uppercase and lowercase Vv and Zz
- Develop oral vocabulary using high-frequency, compound words, transportation words, and nouns
- Identify words with initial /v/ and /z/
- Describe how people in different parts of the world travel
- Summarize the main idea of a story

Lesson 17: Transportation

Objectives:
- Develop oral vocabulary using high-frequency, compound, and transportation words
- Identify, read, and write words with initial /v/ and /z/
- Identify nouns
- Describe how people in different parts of the world travel

Lesson 18: Traveling with Animals

Objectives:
- Develop oral vocabulary using high-frequency, compound, and transportation words
- Identify, read, and write words with final /v/ and /z/
- Identify nouns
- Describe how people in different parts of the world travel
- Summarize the main idea of a story

Lesson 20: Best Ways to Travel (two-day lesson)

Objectives:
- Develop oral vocabulary using high-frequency, compound, and transportation words
- Read, write, and identify words with initial and final /v/ and /z/
- Identify nouns
- Describe how people in different parts of the world travel
- Summarize the main idea of a story

Lesson 21: Ways of Going to School (two-day lesson)

Objectives:
- Recognize and write uppercase and lowercase Qq and Yy
- Develop oral vocabulary using high-frequency words, words for transportation, and verbs
- Identify and read words with initial /y/ and /kw/
- Draw conclusions about how students around the world get to school
- Generate a topic for a how-to report

Lesson 22: Why Do You Go to School that Way?

Objectives:
- Recognize and write uppercase and lowercase Qq and Yy
- Develop oral vocabulary using high-frequency words, words for transportation, and verbs
- Identify and read words with /y/ and /kw/
- Identify media sources used in research

Lesson 23: Where on Earth?

Objectives:
- Develop oral vocabulary using high-frequency words, words for transportation, and nouns
• Identify and read words with initial /y/ and /kw/
• Draw conclusions about how students around the world get to school
• Retell the plot of a story
• Draft a how-to report

Lesson 24: Children Travel Differently

Objectives:
• Develop oral vocabulary using high-frequency words, words for transportation, and verbs
• Identify and read words with initial /y/ and /kw/ 
• Draw conclusions about how students around the world get to school
• Identify main idea
• Revise a how-to report

Lesson 25: Going to School (two-day lesson)

Objectives:
• Develop oral vocabulary using high-frequency words, words for transportation, and verbs
• Read and write words with /y/ and /kw/ 
• Draw conclusions about the plot of a story
• Edit and share a how-to report
• Apply speaking and listening skills
LANGUAGE ARTS 1 A
Language Arts 1 A

The emergent reader will begin to become a fluent reader throughout this course. The student will read and write daily, practice new skills, and uncover the patterns that are the foundations of words, sentences, and stories. The student will apply new skills to read and understand fiction and nonfiction stories presented in Scott Foresman’s *Reading Street* series.

Stories are organized into themes such as "Communities" and "Animals, Tame and Wild." Examining literature through themes helps the student to make connections between texts and to connect reading topics to personal knowledge and interests. The student will also read *Ira Sleeps Over*, a fun book about a child’s first sleep over. Reading instruction includes sound manipulation, phonics, vocabulary, comprehension, and fluency. The student will also read short, decodable readers that are linked and printable from the student's lesson page. In addition to formal reading instruction, the student will have the opportunity to complete engaging extension activities.

As the student learns to read, he will also learn to write. The student’s vocabulary will grow through discussions of ideas and opinions. Listening and speaking will help the student learn grammar skills and correct sentence and story construction. Guided instruction and practice in Zaner-Bloser’s *Handwriting* will teach the student proper manuscript technique. Spelling instruction correlates to the phonics skills taught through the student's stories. Language skills and handwriting come together as the student composes journal entries and writes pieces of increasing length and complexity. Students gain speaking and listening skills through questioning and the use of audio recording.

**Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.**

Note: This course contains applications that are not compatible with a Mac computer. The use of these applications is not necessary for successful completion of the course but serves as additional instructional resources.

Unit 1: You're in First Grade Now

In this unit, your student will review letters and letter-sounds introduced in kindergarten. He will build on existing reading skills by reading brief, easily decodable books that give him the opportunity to practice both phonics and comprehension skills. These decodable books are linked and printable from your student's lesson page. Reading selections also improve your student's understanding of fantasy, realistic fiction, and nonfiction. Your student will learn and practice essential skills for decoding and understanding text, such as blending and segmenting sounds. Phonics and spelling instruction reviews each letter of the alphabet. Comprehension skills include understanding the main idea of a selection and retelling key events of a story. Reading instruction also addresses fluency skills and the development of sight vocabulary. Brief writing assignments introduce your student to the writing process.

Objectives:
- Review letter-sound patterns and word structure to read and spell words correctly
- Read fiction and nonfiction selections and learn to distinguish between the two
- Apply reading comprehension skills and strategies before, during, and after reading
- Follow the steps of the writing process

**Lesson 1: Apples to Hippos: Lesson 1**

Objectives:
- Recall the alphabet by singing the alphabet song and pointing to letters
- Identify letters Aa, Bb by pointing to the letter
- Recognize correspondence between Bb and sound /b/
- Identify rhyming words
- Dictate a story
- Demonstrate handwriting knowledge by writing letters
- Read sight words see, the, and you

**Lesson 2: Apples to Hippos: Lesson 2**

Objectives:
- Recognize letters Cc, Dd by pointing to each letter
- Recognize correspondence between letter c and /k/
- Recognize correspondence between letter d and /d/
Lesson 3: Apples to Hippos: Lesson 3
Objectives:
- Identify letters Ee, Ff by pointing and tracing each letter
- Recognize correspondence between Ff and sound /f/
- Read sight words from and am
- Segment sounds into syllables
- Practice proper handwriting postures

Lesson 4: Apples to Hippos: Lesson 4
Objectives:
- Identify letters Gg, Hh by pointing to each letter
- Recognize correspondence between Gg and /g/
- Recognize correspondence between Hh and /h/
- Read sight words go, we
- Identify onsets and rimes verbally
- Preview handwriting models and guidelines

Lesson 5: Apples to Hippos: Lesson 5
Objectives:
- Review letters and consonant sounds Aa through Hh by pointing to and naming each letter
- Produce and identify rhyming words orally
- Count syllables in a spoken word
- Review handwriting guidelines

Lesson 6: Ice Cream to Penguins: Lesson 1
Objectives:
- Identify letters Ii and Jj by pointing and naming
- Recognize correspondence between Jj and sound /j/
- Read sight words have, little, do
- Segment onsets and rimes
- Brainstorm words about school
- Practice writing vertical lines

Lesson 7: Ice Cream to Penguins: Lesson 2
Objectives:
- Identify letters Kk and Ll by pointing and naming
- Recognize correspondence between Kk and sound /k/
- Recognize correspondence between Ll and sound /l/
- Read sight words are, look, they
- Isolate initial sounds in a spoken word
- Dictate a story
- Practice writing horizontal lines using a pencil

Lesson 8: Ice Cream to Penguins: Lesson 3
Objectives:
- Identify letters Mm and Nn by pointing and naming
- Recognize correspondence between Mm and sound /m/
Lesson 9: Ice Cream to Penguins: Lesson 4
Objectives:
- Identify letters Oo and Pp by pointing and naming
- Recognize correspondence between Pp and sound /p/
- Read sight words my and here
- Isolate final sounds in a spoken word
- Build groups of sight words
- Practice writing backward circles using a pencil

Lesson 10: Ice Cream to Penguins: Lesson 5
Objectives:
- Segment and isolate sounds in spoken words
- Review letters Ii through Pp and associated consonant and vowel sounds by pointing and naming sounds
- Review handwriting guidelines by practicing taught strokes
- Read sight words

Lesson 11: Quails to X-Ray Fish: Lesson 1
Objectives:
- Identify the letters Qq and Rr by pointing and naming
- Recognize correspondence between Qq and sound /kw/
- Recognize correspondence between Rr and sound /r/
- Segment syllables in a spoken word
- Brainstorm ideas for a story about a farm
- Practice writing forward circles using a pencil

Lesson 12: Quails to X-Ray Fish: Lesson 2
Objectives:
- Identify letters Ss and Tt by pointing and naming
- Recognize correspondence between Ss and sound /s/
- Recognize correspondence between Tt and sound /t/
- Read sight words is, he, me
- Segment sounds in a spoken word
- Dictate a story

Lesson 13: Quails to X-Ray Fish: Lesson 3
Objectives:
- Identify the letters Uu and Vv by pointing and naming
- Recognize correspondence between Vv and sound /v/
- Read sight words was, for, she
- Blend spoken words into sentences
- Revise a story about a farm
- Practice writing slant lines using a pencil

Lesson 14: Quails to X-Ray Fish: Lesson 4
Objectives:
- Identify letters Ww, Xx by pointing and naming
- Recognize correspondence between Ww and sound /w/
- Recognize correspondence between Xx and sound /ks/
- Read sight words said, to
- Blend spoken syllables into words
- Build sentences and phrases with sight words
- Practice writing numerals 1 through 5

Lesson 15: Quails to X-Ray Fish: Lesson 5
Objectives:
- Review letters and consonant sounds Qq through Xx
- Segment and blend sounds in spoken words
Lesson 16: Yaks and Zebras: Lesson 1

Objectives:
- Identify letters Yy, Zz by pointing and naming
- Recognize correspondence between Yy and sound /y/
- Read sight words one, two, and three
- Delete syllables from spoken words
- Practice writing numerals 11 through 15 with a pencil
- Brainstorm items to take on a trip to a city

Lesson 17: Yaks and Zebras: Lesson 2

Objectives:
- Identify short sounds for vowels a and e by listening and naming
- Delete syllables from spoken words
- Dictate a story about a trip to a city
- Read sight words what and of

Lesson 18: Yaks and Zebras: Lesson 3

Objectives:
- Substitute sounds in spoken words
- Identify short sounds for vowels i, o, and u by listening and naming
- Revise a story about a city
- Write numerals 16 and 20 with a pencil
- Read sight words four and five

Lesson 19: Yaks and Zebras: Lesson 4

Objectives:
- Recall and identify letters of the alphabet by pointing and naming
- Substitute sounds and syllables in spoken words
- Practice writing numerals 1 through 20 with a pencil
- Read sight words where and that
- Reread dictated stories

Lesson 20: You're in First Grade Now Unit Test

Unit 2: Animals, Tame and Wild

In this unit, your student will learn about animals through reading selections that improve her ability to distinguish between fantasy, realistic fiction, and nonfiction. Your student will learn and practice essential skills for decoding and understanding text. She will continue to practice blending and segmenting sounds. Phonics and spelling instruction focuses on consonants, short vowels, and inflected endings for base words. Comprehension skills include self-monitoring comprehension, using fix-up strategies, summarizing, and visualizing. Reading instruction also addresses fluency skills, such as reading with expression, and vocabulary development, such as using context clues. Additionally, your student will learn the characteristics of nouns and verbs and the parts of a simple sentence. She will apply this knowledge in weekly writing assignments that teach her to write sentences in response to a given prompt. Writing models, graphic organizers, and checklists for drafting and revising are provided as support.

Objectives:
- Apply knowledge of letter-sound patterns and word structure to read and spell words correctly
- Read fiction and nonfiction selections and learn to distinguish between the two
- Apply reading comprehension skills and strategies before, during, and after reading
- Understand the parts of a simple sentence
- Follow the steps of the writing process to write simple sentences in response to a writing prompt

Lesson 1: Sam, Come Back!: Lesson 1

Objectives:
- Associate the sound /a/ with the letter a
- Blend, read, and build regular short a words
- Segment sounds to spell words
Lesson 2: Sam, Come Back!: Lesson 2

Objectives:
- Isolate final sounds
- Associate the final sound /k/ with the letters ck
- Blend, read, and build final ck words
- Segment sounds to spell words
- Recognize high frequency words
- Identify sentences
- Speak to communicate ideas

Lesson 3: Sam, Come Back!: Lesson 3

Objectives:
- Listen to and say phonemes
- Create short a and final ck words
- Identify and spell words with short a
- Discuss and use sentences in writing
- Identify characters in a story
- Identify who is telling the story
- Demonstrate fluency and accuracy when reading aloud

Lesson 4: Sam, Come Back!: Lesson 4

Objectives:
- Identify position of sounds
- Recognize high frequency words
- Review consonant sounds
- Spell words with short a (CVC)
- Respond to a sing-along
- Read aloud fluently with accuracy
- Write a description

Lesson 5: Sam, Come Back!: Lesson 5

Objectives:
- Decode short a words and final ck words
- Read high-frequency words
- Identify and describe character

Lesson 6: Pig in a Wig: Lesson 1

Objectives:
- Blend and segment phonemes
- Associate the sound /i/ with the letter i
- Blend, read, and build regular short i words
- Practice fluency with oral rereading
- Build background and oral vocabulary
- Distinguish realism and fantasy
- Identify naming parts of sentences

Lesson 7: Pig in a Wig: Lesson 2

Objectives:
- Apply knowledge of letter-sounds to decode unknown words when reading
- Use context with letter-sounds to confirm the identification of unknown words
- Identify characters in a story
- Practice fluency with oral rereading

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.
Lesson 8: Pig in a Wig: Lesson 3
Objectives:
- Blend and segment phonemes
- Build short i and final x words
- Spell words with short i
- Learn selection words
- Recognize realism and fantasy
- Summarize the events in a story
- Use naming parts of sentences in writing

Lesson 9: Pig in a Wig: Lesson 4
Objectives:
- Isolate initial and final sounds
- Recognize high frequency words
- Review short a and final ck words
- Spell words with short i
- Recognize rhyme and rhythm in a song
- Identify sentences

Lesson 10: Pig in a Wig: Lesson 5
Objectives:
- Spell words with short i
- Decode short i and final x words
- Read high-frequency words
- Distinguish between realism and fantasy

Lesson 11: The Big Blue Ox: Lesson 1
Objectives:
- Blend and segment phonemes
- Blend, read, and build regular short o words
- Spell words with short o
- Practice fluency with oral rereading
- Build background and oral vocabulary
- Identify character and setting
- Identify action parts of sentences

Lesson 12: The Big Blue Ox: Lesson 2
Objectives:
- Add ending phonemes
- Associate the letter s with /s/ and /z/
- Blend, read, and sort -s plural words
- Spell words with short o
- Recognize high-frequency words
- Identify action parts of sentences
- Speak to communicate information
Lesson 13: The Big Blue Ox: Lesson 3

Objectives:
- Blend and segment phonemes
- Sort short o words
- Spell words with short o
- Learn selection words
- Visualize characters, setting, and events
- Read aloud fluently using an appropriate pace/rate
- Use sentences in writing

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 14: The Big Blue Ox: Lesson 4

Objectives:
- Isolate initial and final sounds
- Recognize high-frequency words
- Spell words with short o
- Recognize text structure: nonfiction
- Read aloud fluently using an appropriate rate and pace
- Review action parts of sentences
- Write sentences

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 15: The Big Blue Ox: Lesson 5

Objectives:
- Spell words with short o
- Decode short o and -s plurals
- Read high-frequency words
- Recognize and describe a character and identify and describe a setting

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 16: A Fox and a Kit: Lesson 1

Objectives:
- Add ending phonemes /s/, /z/
- Blend, read, and sort words with the inflected ending -s without spelling changes
- Spell words with inflected ending -s
- Practice fluency with oral rereading
- Build background and oral vocabulary
- Identify main idea
- Identify correct word order

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 17: A Fox and a Kit: Lesson 2

Objectives:
- Blend and segment syllables
- Blend, read, and sort words with the inflected ending -ing without spelling changes
- Spell words with inflected ending -s without spelling changes
- Recognize high-frequency words
- Practice fluency with oral rereading
- Identify correct word order
- Speak and listen to participate in large and small group discussions

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 18: A Fox and a Kit: Lesson 3

Objectives:
- Blend and segment syllables
- Sort words with inflected endings -s and -ing
- Spell words with inflected ending -s with no spelling changes
Lesson 19: A Fox and a Kit: Lesson 4

Objectives:
- Identify position of sounds
- Recognize high frequency words
- Review short o and -s plurals
- Spell words with inflected ending -s without spelling changes
- Read aloud fluently with accuracy and appropriate rate
- Recognize correct word order
- Write a title for a story

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 20: A Fox and a Kit: Lesson 5

Objectives:
- Review words with inflected endings -s and -ing without spelling changes
- Spell words with inflected endings -s
- Decode words with inflected endings -s and -ing
- Read high-frequency words
- Recognize main idea

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 21: Get the Egg!: Lesson 1

Objectives:
- Blend and segment phonemes
- Blend, read, and build regular short e words
- Spell words with short e
- Practice fluency with oral rereading
- Distinguish realism and fantasy
- Identify telling sentences

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 22: Get the Egg!: Lesson 2

Objectives:
- Add initial phonemes
- Blend, read, and sort words with initial consonant blends
- Spell words with short e
- Practice fluency with oral rereading
- Recognize high-frequency words
- Identify telling sentences
- Speak to retell a story

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 23: Get the Egg!: Lesson 3

Objectives:
- Listen to and blend and segment phonemes
- Read and group words with short e and initial consonant blends
- Read and spell words with short e
- Preview selection words
- Recognize realism and fantasy in a selection
- Identify story structure
- Identify words and phrases that suggest feelings

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 24: Get the Egg!: Lesson 4

Objectives:
- Blend and segment syllables

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.
Lesson 25: Get the Egg! Lesson 5

Objectives:
- Spell words with short e
- Decode words with short e and initial consonant blends
- Read high-frequency words
- Distinguish realism and fantasy

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 26: Animal Park: Lesson 1

Objectives:
- Blend and segment phonemes
- Blend, read, and build regular short u words
- Spell words with short u
- Practice fluency with oral rereading
- Ask and answer questions
- Recognize cause and effect
- Identify questions

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 27: Animal Park: Lesson 2

Objectives:
- Delete final phonemes
- Blend, read, and sort words with final consonant blends
- Spell words with short u
- Recognize high-frequency words
- Identify questions
- Capitalize questions
- Speak to communicate information and ask questions

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 28: Animal Park: Lesson 3

Objectives:
- Listen to, blend and segment phonemes
- Create short u and final consonant blend words
- Spell words with short u and high frequency words
- Preview selection words
- Identify cause and effect in a story
- Use illustrations and text to learn more about a story
- Demonstrate fluency while attending to punctuation when reading aloud

Lesson 29: Animal Park: Lesson 4

Objectives:
- Discuss the unit theme
- Connect content across selections
- Combine content and skills in meaningful activities that build literacy
- Respond to unit selections through a variety of modalities

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Unit 3: Communities

In this unit, your student will explore the theme of communities. Your student will read fiction and nonfiction selections about communities as he continues to learn essential skills.
for decoding and understanding text. He will continue to practice blending and segmenting phonemes and words, including words with the consonant digraphs *th* and *sh*. Phonics and spelling instruction focuses on long vowel sounds spelled with the CVCe pattern. Students also learn about contractions and the inflected ending –ed. Reading comprehension skills include finding the main idea, understanding causes and effects, understanding sequence, comparing and contrasting, and thinking about the author’s purpose for writing. Reading instruction also addresses fluency skills, such as reading accurately and paying close attention to punctuation, as well as vocabulary development skills, including understanding categories of words such as time-order words and directional terms. Additionally, your student will further develop his understanding of nouns, including proper nouns and the function of nouns in sentences. Writing instruction provides additional practice in writing sentences and builds to writing short paragraphs. Writing models, graphic organizers, and checklists for drafting and revising are provided as support.

Objectives:

- Apply knowledge of letter-sound patterns and word structure to read and spell words correctly
- Read fiction and nonfiction selections that explore the theme of communities
- Apply reading comprehension skills and strategies before, during, and after reading
- Understand the characteristics of nouns, including proper nouns
- Follow the steps of the writing process to respond to writing prompts, developing compositions in a variety of genres

**Lesson 1: Max and Ruby: A Big Fish for Max: Lesson 1**

**Objectives:**

- Segment and count phonemes
- Blend, read, and sort words with digraphs *sh*, *th*
- Spell words with digraphs *sh*, *th*
- Build background and oral vocabulary
- Identify main idea
- Identify nouns

*Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.*

**Lesson 2: Max and Ruby: A Big Fish for Max: Lesson 2**

**Objectives:**

- Blend and segment phonemes
- Associate /ô/ with the letter a followed by *l* or *ll*
- Blend, read, and build words that have the vowel sound in ball
- Spell words with digraphs *sh*, *th*
- Practice fluency with oral rereading
- Recognize high-frequency words
- Identify nouns

*Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.*

**Lesson 3: Max and Ruby: A Big Fish for Max: Lesson 3**

**Objectives:**

- Listen to, blend and segment phonemes
- Create digraph *sh*, *th* words and words that have the vowel sound in ball
- Use spelling words with digraphs *sh*, *th* in sentences
- Discuss and use action verbs in writing
- Identify the main idea of a story
- Use illustration and text to identify key ideas
- Make predictions after reading a story

**Lesson 4: Max and Ruby: A Big Fish for Max: Lesson 4**

**Objectives:**

- Segment and count phonemes
- Recognize high-frequency words
- Spell words with digraphs *sh*, *th*
- Recognize text structure: nonfiction
- Read aloud fluently with accuracy and appropriate rate
- Identify nouns

*Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.*
Lesson 5: Max and Ruby: A Big Fish for Max: Lesson 5

Objectives:
- Decode words with digraphs sh, th and words with the vowel sound in ball
- Spell words with digraphs sh, th
- Read high-frequency words
- Recognize main idea

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 6: The Farmer in the Hat: Lesson 1

Objectives:
- Distinguish long and short vowel sounds
- Blend, read, and build regular long a words
- Spell words with long a (CVCe)
- Build background and oral vocabulary
- Recognize cause and effect
- Identify proper nouns

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 7: The Farmer in the Hat: Lesson 2

Objectives:
- Blend and segment phonemes
- Blend, read, and build words with c /s/ , g /j/
- Spell words with long a (CVCe)
- Practice fluency with oral rereading
- Identify proper nouns
- Use proper nouns in writing
- Speak to dramatize a story

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 8: The Farmer in the Hat: Lesson 3

Objectives:
- Blend and segment phonemes
- Blend, read, and sort regular long a words (CVCe) and short a words (CVC)
- Spell words with long a (CVCe)
- Learn selection words
- Recognize cause and effect
- Use illustrations to monitor and fix up
- Use proper nouns in writing

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 9: The Farmer in the Hat: Lesson 4

Objectives:
- Segment and count phonemes
- Review digraphs sh, th and vowel sound in ball
- Spell words with long a (CVCe)
- Recognize text structure: nonfiction
- Read aloud fluently, attending to exclamation marks
- Identify proper nouns
- Write an invitation

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 10: The Farmer in the Hat: Lesson 5

Objectives:
- children learn by working together in 4-H.
Lesson 11: Who Works Here?: Lesson 1

Objectives:
- Distinguish long/short vowel sounds
- Blend, read, and build regular long i words
- Spell words with long i (CVCe)
- Build background and oral vocabulary
- Speak in complete sentences
- Identify author's purpose
- Identify special titles

Lesson 12: Who Works Here?: Lesson 2

Objectives:
- Blend and segment phonemes
- Blend, read, and sort words with digraphs wh, ch, tch
- Spell words with long i (CVCe)
- Recognize high-frequency words
- Capitalize special titles
- Speak or sing clearly with appropriate volume

Lesson 13: Who Works Here?: Lesson 3

Objectives:
- Listen to, blend and segment phonemes
- Blend, read, create, and group regular long i words and words with digraphs
- Spell words orally with long i
- Identify and use conventions in writing
- Identify author's purpose
- Ask questions to better understand a selection
- Draw a picture that illustrates text

Lesson 14: Who Works Here?: Lesson 4

Objectives:
- Distinguish long and short vowel sounds
- Review long a, c /s/, and g /j/
- Spell words with long i (CVCe)
- Recognize text structure: nonfiction
- Read aloud fluently, attending to periods
- Identify special titles
- Write a want ad

Lesson 15: Who Works Here?: Lesson 5

Objectives:
- Spell words with long i (CVCe)
- Decode words with long i (CVCe) and with digraphs wh, ch, tch
- Read high-frequency words
- Identify author's purpose

Lesson 16: The Big Circle: Lesson 1

Objectives:
- Blend, read, and build regular long o words CVCe
Lesson 17: The Big Circle: Lesson 2

Objectives:
- Blend and segment phonemes
- Use structural cues to recognize contractions n't, 'm, 'll
- Read and sort contractions n't, 'm, 'll
- Spell words with long o (CVCe)
- Recognize high-frequency words
- Capitalize days, months, holidays
- Apply knowledge of letter-sounds and word parts to decode unknown words when reading

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 18: The Big Circle: Lesson 3

Objectives:
- Blend and segment phonemes
- Build words with long o and contractions
- Spell words with long o
- Learn selection words
- Recognize sequence
- Recognize and use organization in writing
- Use names of days, months, and holidays in writing

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 19: The Big Circle: Lesson 4

Objectives:
- Listen to words, identify and separate phonemes: initial, medial, final
- Read, review, and sort words with long i and digraphs
- Review and write spelling words with long o (CVCe)
- Use text structure to better understand a nonfiction selection
- Write advice about celebrating a holiday
- Write a paragraph using words that show order
- Identify proper nouns: days, months, holidays

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 20: The Big Circle: Lesson 5

Objectives:
- Spell words with (CVCe) long o
- Decode words with long o (CVCe)
- Decode contractions n't, 'm, 'll
- Read aloud with accuracy and at an appropriate rate
- Identify sequence of events
- Retell a story

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 21: Life in the Forest: Lesson 1

Objectives:
- Substitute phonemes
- Associate the sound /u/ and the sound /e/ with the CVCe spelling pattern
- Blend, read, and build regular long u words (CVCe)
- Spell words with long u (CVCe)
- Build background and oral vocabulary
- Identify author’s purpose
- Identify one and more than one

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.
Lesson 22: Life in the Forest: Lesson 2

Objectives:
- Add final phonemes
- Blend, read, and sort words with inflected ending -ed, /t/, /d/, /ed/
- Spell words with long u (CVCe)
- Recognize high-frequency words
- Identify one and more than one
- Write about one and more than one
- View to recall the details and overall impact of the photo or illustrations

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 23: Life in the Forest: Lesson 3

Objectives:
- Blend and segment phonemes
- Sort long u and long e (CVCe) words and words with inflected ending -ed
- Spell words with long u (CVCe)
- Learn selection words
- Recognize author's purpose
- Use text features to preview text
- Use one and more than one in writing

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 24: Life in the Forest: Lesson 4

Objectives:
- Blend and segment phonemes
- Write a report
- Spell words with long u (CVCe)
- Recognize text structure: nonfiction
- Discuss meanings of multiple meaning words
- Read aloud fluently, attending to periods
- Identify one and more than one

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 25: Life in the Forest: Lesson 5

Objectives:
- Review long u, long e (CVCe); inflected ending -ed /t/, /d/, /ed/
- Spell words with long u (CVCe)
- Decode words with long u, long e (CVCe)
- Decode words with inflected ending -ed
- Read high-frequency words
- Recognize author's purpose
- Retell a story

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 26: Honey Bees: Lesson 1

Objectives:
- Substitute phonemes
- Associate the sound /e/ with e and ee
- Blend, read, and build long e words
- Spell words with long e: e, ee
- Build background and oral vocabulary
- Identify similarities and differences
- Identify nouns in sentences

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 27: Honey Bees: Lesson 2

Objectives:
- Blend and segment syllables
- Use structural clues to decode words with syllable pattern VCCV

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.
Lesson 28: Honey Bees: Lesson 3

Objectives:

- Listen to, blend and segment syllables
- Blend, read, and group long e: e, ee words and VCCV words
- Read and write spelling words with long e: e, ee
- Use nouns when writing sentences
- Identify similarities and differences within text
- Demonstrate fluency while attending to accuracy and appropriate rate when reading aloud
- Create an informational bookmark about bees

Optional Extension

Watch the Discovery Education™ streaming movie with your student and answer any questions he may have.

Lesson 29: Honey Bees: Lesson 4

Objectives:

- Identify and isolate medial phonemes
- Review long u (CVCe), long e (CVCe), and inflected ending -ed
- Spell words with long e: e, ee
- Read aloud fluently, attending to accuracy and appropriate rate
- Identify nouns in sentences
- Recognize high-frequency words

Lesson 30: Communities Unit Test

Unit 4: Ira Sleeps Over

In this unit, your student will read the book *Ira Sleeps Over* by Bernard Waber. This enjoyable story focuses on Ira's sleepover at his friend Reggie's house. Ira must decide whether or not to take his beloved teddy bear to the sleepover and risk being teased. As your student explores this conflict, she will give her opinion of what Ira should do as well as relate Ira's experiences with her own. She will work with long vowel words as well as compound words. Your student will work with a group of vocabulary words in a variety of contexts. Your student will have the opportunity to read the story aloud, building her fluency.

Objectives:

- Relate a fiction text to personal experience
- Apply reading comprehension skills and strategies before, during, and after reading
- Apply knowledge of letter patterns and word structure to spell compound words correctly
- Build oral and written vocabulary
- Follow the steps of the writing process to form an opinion and support it

Lesson 1: Ira Sleeps Over: Lesson 1

Objectives:

- Distinguish short and long vowel a sounds in a spoken word
- Associate the long a sound with the CVCe pattern and build words with this pattern
- Preview compound words before reading them in a story
- Learn new vocabulary words by identifying known and unknown words
- Recall events in a story
- Form an opinion about sleepovers and discuss it
Lesson 2: Ira Sleeps Over: Lesson 2

Objectives:
- Distinguish between long and short vowel e sounds in a spoken word
- Build CVCe words with letter I
- Read and build compound words from the story
- Read vocabulary words and recognize as nouns
- Infer meaning from a story read aloud
- Form an opinion and support it

Lesson 3: Ira Sleeps Over: Lesson 3

Objectives:
- Distinguish between long and short vowel o sounds in a spoken word
- Build CVCe words with the letter o
- Read and spell compound words
- Identify vocabulary words as nouns
- Infer meaning from a story read aloud
- Write a first draft of an opinion in complete sentences

Lesson 4: Ira Sleeps Over: Lesson 4

Objectives:
- Distinguish between long and short vowel u sounds in a spoken word
- Build CVCe words with letter u
- Build new compound words
- Create an invitation to a sleepover using vocabulary words
- Make predictions about future events in a story
- Edit and revise opinion sentences

Lesson 5: Ira Sleeps Over: Lesson 5

Objectives:
- Differentiate between long and short vowel sounds in spoken words
- Associate long vowel sounds with CVCe pattern
- Spell compound words
- Read and understand unit vocabulary words
- Check predictions, infer meaning, and practice fluency with oral reading
- Write final draft of opinion sentences and illustrate
LANGUAGE ARTS 1 B
**Language Arts 1 B**

The emergent reader will blossom into a fluent reader throughout this course. The student will read and write daily, practice new skills, and uncover the patterns that are the foundations of words, sentences, and stories. The student will apply new skills to read and understand fiction and nonfiction stories presented in Scott Foresman's *Reading Street* series. Stories are organized into themes such as "Treasures" and "Great Ideas." Examining literature through themes helps the student to make connections between texts and to connect reading topics to personal knowledge and interests. Reading instruction includes sound manipulation, phonics, vocabulary, comprehension, and fluency. The student will also read short, decodable readers that are linked and printable from the student's lesson page. In addition to formal reading instruction, the student will have the opportunity to complete engaging extension activities.

As the student learns to read, he will also learn to write. The student’s vocabulary will grow through discussions of ideas and opinions with the Learning Coach. Listening and speaking will help the student learn grammar skills and correct sentence and story construction. Guided instruction and practice in Zaner-Bloser *Handwriting* will teach the student proper manuscript technique. Spelling instruction correlates to the phonics skills taught through the student’s stories. Language skills and handwriting come together as the student composes journal entries and writes pieces of increasing length and complexity. Students gain speaking and listening skills through questioning and the use of audio recording.

**Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.**

**Unit 1: Changes**

In this unit, your student will explore the theme of changes. Your student will read fiction and nonfiction selections about human and animal characters as he continues to learn essential skills for decoding and understanding text. He will continue to practice blending and segmenting phonemes and syllables. Phonics and spelling instruction focuses on the long *e* and long *i* sounds; words with *ng* and *nk*; words with *er*, *ir*, and *ur*; and words with the added endings *–es*, *–ed*, *–er*, and *–est*. Comprehension skills include comparing and contrasting, drawing conclusions, and understanding plot, theme, and story sequence. Reading instruction also addresses fluency skills, such as reading accurately and paying attention to punctuation cues, as well as vocabulary development skills, such as understanding synonyms and antonyms and using a dictionary. Additionally, your student will learn about how to use verbs correctly, including singular and plural verb forms, past- and present-tense verbs, forms of the verb *to be*, and verbs used within contractions. Your student will apply this knowledge as he completes a variety of writing assignments, including numbered steps and lists, a greeting card, a poem, and a song. Writing models, graphic organizers, and checklists for drafting and revising are provided as support.

**Objectives:**

- Apply knowledge of letter-sound patterns and word structure to read and spell words correctly
- Read fiction and nonfiction selections that explore the theme of change
- Apply reading comprehension skills and strategies before, during, and after reading
- Understand the characteristics of verbs
- Follow the steps of the writing process to respond to writing prompts in a variety of genres

**Lesson 1: An Egg Is an Egg: Lesson 1**

**Objectives:**

- Segment phonemes
- Associate the vowel sounds /i/ and /e/ with *y*
- Spell words with the vowel sounds of *y*
- Build background and oral vocabulary
- Compare and contrast
- Identify action verbs

**Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.**
Lesson 2: An Egg Is an Egg: Lesson 2

Objectives:
- Substitute phonemes
- Blend, read, and sort CV words
- Spell words with the vowel sounds of y
- Write steps
- Identify action verbs
- Speak to communicate information
- Listen to follow directions

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 3: An Egg Is an Egg: Lesson 3

Objectives:
- Segment, blend, and echo the sound of phonemes
- Blend and sort words with the vowel sound of y and long vowels (CV)
- Spell and sort words with the vowel sounds of y
- Read informational text with support
- Compare and contrast information from a selection
- Demonstrate understanding of action verbs in writing
- List steps in a process

Lesson 4: An Egg Is an Egg: Lesson 4

Objectives:
- Segment and count phonemes
- Review long e: e, ee and syllables VCCV
- Spell words with the vowel sounds of y
- Respond to a realistic story
- Read aloud fluently with accuracy and at an appropriate rate
- Identify action verbs
- Write steps

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 5: An Egg Is an Egg: Lesson 5

Objectives:
- Spell words with vowel sounds of y
- Decode vowel sounds of y and long vowels (CV)
- Read high-frequency words
- Read aloud with appropriate speed and accuracy
- Compare and contrast
- Retell a story

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 6: Ruby in Her Own Time: Lesson 1

Objectives:
- Say, blend, and segment onset/rime for select words
- Recognize the sound /ng/ stands for –ng and /ngk/ stands for –nk
- Spell words that end with –ng and –nk
- List and demonstrate verbs that add –s
- Identify plot in a selection
- Collaborate with diverse partners about a topic
- Use digital tools to create and publish a list

Lesson 7: Ruby in Her Own Time: Lesson 2

Objectives:
- Blend and segment word parts
- Use blending and understanding of word parts to identify compound words
- Spell words ending with –ng and –nk
- Identify high-frequency words in a selection
• Identify images that clarify ideas, thoughts, and feelings
• Provide clear directions when speaking
• Use good listening skills to follow directions in the order given

Lesson 8: Ruby in Her Own Time: Lesson 3

Objectives:
• Say, blend, and segment onset and rime for selected words
• Use understanding of word parts to read and sort compound words
• Spell words ending in –ng and –nk
• Use digital tools to create and publish a list
• Recognize plot in a reading selection
• Summarize a story
• Read and complete sentences with action verbs

Lesson 9: Ruby in Her Own Time: Lesson 4

Objectives:
• Listen and count sounds
• Review vowel sounds of y and long vowels CV and sort by number of syllables
• Spell words with ending in –ng and –nk
• Use text structure to understand nonfiction
• Demonstrate fluency, attending to question marks while reading aloud
• Talk about and identify verbs that add –s
• Use digital tools to create and publish a list

Lesson 10: Ruby in Her Own Time: Lesson 5

Objectives:
• Identify words ending in –ng and –nk, and compound words
• Spell words ending in –ng and –nk
• Say, spell, and identify high-frequency words
• Answer questions about the plot of a story
• Retell a passage
• Use digital tools to create and publish a list

Lesson 11: Jan's New Home: Lesson 1

Objectives:
• Listen, blend, and add phonemes /ez/
• Blend, read, and recognize the difference between ending –es words with plural –es words
• Complete spelling pretest of words with ending –es; plural –es
• Collaborate with diverse partners about a topic
• Build background and oral vocabulary to understand a selection
• Recognize the theme of a story
• Recognize verbs that do not add –s

Lesson 12: Jan's New Home: Lesson 2

Objectives:
• Blend and segment onset/rime
• Associate the sound /ôr/ with or, ore
• Blend, read, and build r-controlled or, ore words
• Spell words with ending -es; plural -es
• Recognize high-frequency words
• Determine if the verb is for two or more
• Speak to make introductions

Lesson 13: Jan's New Home: Lesson 3

Objectives:
• Say, blend, and segment onset/rime
• Recognize and sort words with ending –es; plural –es and r-controlled or, –ore words

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.
• Identify images that clarify ideas, thoughts, and feelings
• Use digital tools to create and publish a greeting card
• Recognize the theme of a story
• Summarize details to understand a text
• Use verbs in sentences

Lesson 14: Jan's New Home: Lesson 4

Objectives:
• Listen, segment, and count syllables
• Review words ending in final –ng and –nk and compound words
• Review and spell words with ending –es; plural –es
• Use text structure to understand a letter
• Demonstrate fluency, attending to periods and exclamation marks when reading aloud
• Identify and sort verbs that do not add –s
• Use digital tools to create and publish a greeting card

Lesson 15: Jan's New Home: Lesson 5

Objectives:
• Use words with ending –es; plural –es
• Identify words ending –es, plural –es, and r-controlled or, ore
• Use high-frequency words in a rhyme
• Identify the theme of a story
• Retell a reading passage
• Use digital tools to create and publish a greeting card

Lesson 16: Frog and Toad Together: Lesson 1

Objectives:
• Blend and segment phonemes
• Blend, read, and sort words with the inflected endings -ed, -ing
• Spell words with inflected ending -ed
• Practice fluency with oral rereading
• Build background and oral vocabulary
• Identify the plot of a story
• Identify verbs for now and the past

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 17: Frog and Toad Together: Lesson 2

Objectives:
• Substitute phonemes
• Blend, read, and build regular /är/ words
• Spell words with inflected ending -ed
• Identify verbs for now and the past
• Speak to retell a story in sequence
• Listen to understand a story

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 18: Frog and Toad Together: Lesson 3

Objectives:
• Blend and segment phonemes
• Build, read, and sort words with inflected endings -ed, -ing
• Spell words with -ed ending
• Learn selection words
• Recognize plot
• Visualize characters, settings, and events
• Use verbs for now and the past in writing

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 19: Frog and Toad Together: Lesson 4

Appendix A.2.a Language Arts Course Guides

Language Arts 1 B

© 2016 Connections Education LLC. All rights reserved.
Objectives:
- Add initial and final phonemes
- Review ending -es; plural -es and r-controlled or, -ore
- Spell words with inflected ending -ed
- Recognize text structure: nonfiction
- Read aloud fluently with expression
- Write a poem
- Identify verbs for now and the past

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 20: Frog and Toad Together: Lesson 5

Objectives:
- Spell words with inflected ending -ed
- Decode inflected endings -ed, -ing and r-controlled ar
- Read high-frequency words
- Recognize story plot
- Retell a story

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 21: I'm a Caterpillar: Lesson 1

Objectives:
- Build and segment onset/rime
- Blend, read, and build /er/ words
- Spell words with er, ir, ur
- Build background and oral vocabulary
- Draw conclusions about the characters and events in a story
- Identify am, is, are, was, and were

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 22: I'm a Caterpillar: Lesson 2

Objectives:
- Delete final phonemes
- Read and sort contractions 's, 've, 're
- Spell words with er, ir, ur
- Recognize high-frequency words
- Identify am, is, are, was, and were
- Speak to summarize information

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 23: I'm a Caterpillar: Lesson 3

Objectives:
- Blend and break words into sounds: onset and rime
- Use understanding of sounds including regular r-controlled er, ir, ur words and contractions 's, 've, 're to build, spell, and read select words
- Spell and sort words with er, ir, ur
- Preview selection words
- Identify who is telling a story
- Draw conclusions from a reading selection
- Use chronological/sequential text structure to understand a selection

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 24: I'm a Caterpillar: Lesson 4

Objectives:
- Substitute phonemes
- Recognize high-frequency words
- Review inflected endings -ed, -ing and r-controlled ar
- Recognize text structure: nonfiction illustrations with captions
- Read aloud fluently, attending to end punctuation
- Identify am, is, are, was, and were
- Spell words with er, ir, ur
Lesson 25: I'm a Caterpillar: Lesson 5

Objectives:
- Spell words with er, ir, ur
- Decode r-controlled er, ir, ur and contractions 's, 've, 're
- Read high-frequency words
- Draw conclusions
- Retell a story

Lesson 26: Where Are My Animal Friends?: Lesson 1

Objectives:
- Add phonemes
- Blend, read, and build words with comparative endings -er, -est
- Spell words with comparative endings
- Build background and oral vocabulary
- Identify the sequence of events
- Identify contractions with not

Lesson 27: Where Are My Animal Friends?: Lesson 2

Objectives:
- Segment phonemes
- Blend, read, and build -dge words
- Spell words with comparative endings
- Recognize high-frequency words
- Identify contractions with not
- Speak to communicate information
- Practice fluency with oral rereading

Lesson 28: Where Are My Animal Friends?: Lesson 3

Objectives:
- Blend and segment phonemes
- Build, read, and sort words with comparative endings and dge /j/ words
- Spell words with comparative endings
- Learn selection words
- Recognize sequence
- Activate and use prior knowledge
- Use contractions with not in writing

Lesson 29: Where Are My Animal Friends?: Lesson 4

Objectives:
- Blend and segment onset and rime
- Review r-controlled er, ir, ur words and contractions 's, 've, 're
- Spell words with comparative endings -er, -est
- Respond to poetry read aloud
- Read aloud fluently with expression and intonation
- Identify contractions with not
- Write a song

Lesson 30: Changes Unit Test

Unit 2: Treasures
In this unit, your student will explore the theme of treasures. Your student will read fiction and nonfiction selections about different kinds of treasures as she continues to learn essential skills for decoding and understanding text. She will continue to practice blending and segmenting phonemes and words, including words with three-letter consonant blends. Phonics and spelling instruction focuses on long vowel sounds spelled with digraphs, such as _ay, _ai, _ea, _oa_, and _ow_. Your student will also learn about word endings, such as possessives endings, – _er, –_est, –_ly, and –_ful, and learn about base words whose spelling changes when an ending is added. Reading comprehension skills include drawing conclusions; and understanding character, setting, plot, and theme; understanding causes and effects; and thinking about the author’s purpose for writing. Reading instruction also addresses fluency skills, such as reading accurately and with expression, as well as vocabulary development skills, such as understanding homophones and identifying words borrowed from other languages. Additionally, your student will learn about how to use adjectives correctly, including adjectives to describe color, size, shape, and other characteristics. Writing instruction focuses on learning to write paragraph-length compositions, including a book review, numbered steps, a poster, and explanatory paragraphs. Writing models, graphic organizers, and checklists for drafting and revising are provided as support.

Objectives:
- Apply knowledge of letter-sound patterns and word structure to read and spell words correctly
- Read fiction and nonfiction selections that explore the theme of treasures
- Apply reading comprehension skills and strategies before, during, and after reading
- Understand the characteristics of adjectives
- Follow the steps of the writing process to respond to writing prompts, developing paragraph-length compositions in a variety of genres

Lesson 1: Mama's Birthday Present: Lesson 1
Objectives:
- Substitute initial phonemes
- Blend, read, and build long a: _ai words
- Spell words with long a: _ai, _ay
- Practice fluency with oral rereading
- Build background and oral vocabulary
- Draw conclusions
- Identify adjectives

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 2: Mama’s Birthday Present: Lesson 2
Objectives:
- Add phoneme /z/
- Use structural cues to decode possessives: singular and plural
- Spell words with long a: _ai, _ay
- Recognize high-frequency words
- Identify adjectives
- Speak to communicate information
- Listen to understand the purpose of the speaker

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 3: Mama’s Birthday Present: Lesson 3
Objectives:
- Read and sort long a: _ay, _ay words and singular and plural possessives
- Spell words with long a: _ai, _ay
- Learn selection words
- Draw conclusions
- Reread and review to monitor and fix up
- Recognize and use sentences in writing
- Use adjectives in writing

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 4: Mama’s Birthday Present: Lesson 4

© 2016 Connections Education LLC. All rights reserved.
Objectives:
• Recognize high-frequency words
• Review words with comparative endings -er, -est and dge /j/ words
• Spell words with long a: ai, ay
• Recognize text-structure: nonfiction
• Read aloud fluently with expression and intonation
• Identify adjectives
• Write a book review

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 5: Mama's Birthday Present: Lesson 5

Objectives:
• Spell words with long a: ai, ay
• Decode long a: ai, ay words and possessives: singular and plural
• Read high-frequency words
• Draw conclusions
• Retell a story

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 6: The Dot: Lesson 1

Objectives:
• Substitute phonemes
• Associate the sound /e/ with ea
• Spell words with long e: ea
• Build background and oral vocabulary
• Identify the theme of a story
• Identify adjectives for colors and shapes

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 7: The Dot: Lesson 2

Objectives:
• Segment and count syllables
• Spell words with long e: ea
• Practice fluency with oral rereading
• Recognize high-frequency words
• Identify adjectives for color and shape
• Speak to solve a problem
• Listen to understand a problem

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 8: The Dot: Lesson 3

Objectives:
• Build, read, and sort long e: ea words and words with inflected endings (spelling change: y to i)
• Spell words with long e: ea
• Learn selection words
• Recognize theme
• Create and use graphic organizers
• Recognize and use organization in writing
• Use adjectives for colors and shapes in writing

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 9: The Dot: Lesson 4

Objectives:
• Recognize high-frequency words
• Review long a: ai, ay and possessives
• Spell words with long e: ea
• Recognize text structure: nonfiction

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.
• Read aloud fluently with accuracy and appropriate rate
• Identify adjectives for colors and shapes
• Write steps

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 10: The Dot: Lesson 5

Objectives:
• Spell words with long e: ea
• Decode long e: ea and inflected endings (spelling change y to i)
• Read high-frequency words
• Recognize the theme of a story
• Retell a story

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 11: Mister Bones: Dinosaur Hunter: Lesson 1

Objectives:
• Substitute initial phonemes
• Blend, read, and build regular long o: oa, ow words
• Spell words with long o: oa, ow
• Practice fluency with oral rereading
• Build background and oral vocabulary
• Identify author's purpose
• Identify adjectives for sizes

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 12: Mister Bones: Dinosaur Hunter: Lesson 2

Objectives:
• Segment phonemes
• Blend, read, and build words with three-letter consonant blends
• Spell words with long o: oa, ow
• Recognize high-frequency words
• Identify adjectives for sizes
• Speak to show feelings

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 13: Mister Bones: Dinosaur Hunter: Lesson 3

Objectives:
• Recognize and sort regular long o: oa, ow words and words with three-letter consonant blends
• Spell and use words with long o: oa, ow in a silly sentence
• Build background to understand a story
• Preview selection words
• Identify the author and author's purpose of a story
• Identify the appropriate meaning of a multiple-meaning word in a text using clues and resources
• Review and use adjectives to describe size

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 14: Mister Bones: Dinosaur Hunter: Lesson 4

Objectives:
• Recognize high-frequency words
• Review long e: ea and inflected endings (spelling change: y to i)
• Apply decoding strategies: blend, preview words
• Spell words with long o: oa, ow
• Recognize text structure: nonfiction
• Read aloud fluently, attending to punctuation
• Identify adjectives for sizes

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.
Lesson 15: Mister Bones: Dinosaur Hunter: Lesson 5

Objectives:
• Spell words with long o: oa, ow
• Decode long o: oa, ow words and three-letter consonant blends
• Read high-frequency words
• Recognize author's purpose
• Retell a story

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 16: The Lady in the Moon: Lesson 1

Objectives:
• Substitute initial phonemes
• Blend, read, and build words with long i spelled ie and igh
• Spell words with long i: ie, igh
• Practice fluency with oral rereading
• Build background and oral vocabulary
• Distinguish realism and fantasy
• Identify adjectives for what kind

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 17: The Lady in the Moon: Lesson 2

Objectives:
• Listen to, blend, and count phonemes
• Blend, read, and sort words beginning with kn /n/ and wr /r/
• Write sentences with spelling words with long i: ie, igh
• Recognize and use high-frequency words
• Recall information about a holiday or special event
• Recognize adjectives for what kind
• Demonstrate speaking skills by stating an opinion

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 18: The Lady in the Moon: Lesson 3

Objectives:
• Blend, read, and sort words with long i: ie, igh and words with kn /n/ and wr /r/
• Spell words with long i: ie, igh
• Build background
• Learn selection words
• Recognize realism and fantasy
• Monitor comprehension and fix up difficulties in understanding by reading on
• Use adjectives for what kind in writing

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 19: The Lady in the Moon: Lesson 4

Objectives:
• Recognize high-frequency words
• Review long o: oa, ow and three-letter consonant blends
• Spell words with long i: ie and igh
• Recognize text structure: nonfiction
• Read aloud fluently with accuracy, rate, and expression
• Identify adjectives for what kind

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 20: The Lady in the Moon: Lesson 5

Objectives:
• Spell words with long i: ie, igh
• Decode long i: ie, igh and words with silent letters kn /n/ and wr /r/
• Read high-frequency words

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.
- Distinguish realism from fantasy
- Retell a story

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

**Lesson 21: Peter's Chair: Lesson 1**

Objectives:
- Segment and count syllables
- Blend, read, and build compound words
- Spell compound words
- Practice fluency with oral rereading
- Build background and oral vocabulary
- Identify character, setting, and plot
- Identify adjectives for how many

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

**Lesson 22: Peter's Chair: Lesson 2**

Objectives:
- Substitute initial phonemes
- Blend, read, and build words with vowels ew, ue, ui
- Spell compound words
- Recognize high-frequency words
- Identify adjectives for how many
- Speak to share a topic of interest

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

**Lesson 23: Peter's Chair: Lesson 3**

Objectives:
- Blend, read, and sort compound words with vowels ew, ue, ui
- Spell compound words
- Build background
- Learn selection words
- Identify characters, setting, and plot
- Recognize story structure
- Use adjectives for how many in writing

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

**Lesson 24: Peter's Chair: Lesson 4**

Objectives:
- Recognize high-frequency words
- Review long i: ie, igh and kn /n/, wr /r/
- Spell compound words
- Recognize text structure: nonfiction
- Read aloud fluently, attending to punctuation
- Identify adjectives for how many

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

**Lesson 25: Peter's Chair: Lesson 5**

Objectives:
- Spell compound words
- Decode compound words and vowel patterns ew, ue, ui
- Read high-frequency words
- Recognize character, setting, and plot
- Retell a story

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

**Lesson 26: Henry and Mudge and Mrs. Hopper's House: Lesson 1**

Appendix A.2.a Language Arts Course Guides

Language Arts 1 B
Objectives:
- Segment and count syllables
- Blend, read, and build words with suffixes -ly and -ful
- Spell words with suffixes -ly, -ful
- Build background and oral vocabulary
- Recognize cause and effect
- Identify adjectives that compare

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 27: Henry and Mudge and Mrs. Hopper's House: Lesson 2

Objectives:
- Blend and segment phonemes
- Blend, read, and build words with vowels oo as in moon
- Spell words with suffixes -ly and -ful
- Practice fluency with oral rereading
- Recognize high-frequency words
- Identify adjectives that compare
- Speak to communicate information

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 28: Henry and Mudge and Mrs. Hopper's House: Lesson 3

Objectives:
- Blend, read, and sort words with suffixes -ly and -ful and words with vowels oo as in moon
- Spell words with suffixes -ly and -ful
- Build background
- Learn selection words
- Recognize cause and effect
- Read aloud fluently while expressing characterization
- Use adjectives that compare in writing

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 29: Henry and Mudge and Mrs. Hopper's House: Lesson 4

Objectives:
- Review compound words and vowel patterns ew, ue, ui
- Spell words with suffixes -ly and -ful
- Respond to poems read aloud
- Recognize rhyme in poetry
- Read aloud fluently while expressing characterization
- Identify adjectives that compare

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 30: Treasures Unit Test

Unit 3: Great Ideas

In this unit, your student will explore the theme of great ideas. Your student will read fiction and nonfiction selections that explore this theme as he continues to learn essential skills for decoding and understanding text. He will continue to practice blending and segmenting phonemes and words. Phonics and spelling instruction focuses on diphthongs, such as ow, ou, oo, oi, oy, aw, and au. Your student will also learn about suffixes. Reading comprehension skills include understanding character, setting, and plot; drawing conclusions; understanding sequence; comparing and contrasting; and finding the main idea. Reading instruction also addresses fluency skills, such as reading accurately and with expression and using appropriate phrasing. Your student will continue to learn essential vocabulary development skills, such as understanding synonyms, homonyms, and words with multiple meanings. Additionally, your student will learn about pronouns and sentence types, including commands and exclamations. Writing instruction continues to develop your student's confidence in writing paragraph-length compositions. Writing models, graphic organizers, and checklists for drafting and revising are provided as support.

Objectives:
• Apply knowledge of letter-sound patterns and word structure to read and spell words correctly
• Read fiction and nonfiction selections that explore the theme of great ideas
• Apply reading comprehension skills and strategies before, during, and after reading
• Understand the characteristics of pronouns, commands, and exclamations
• Follow the steps of the writing process to respond to writing prompts, developing paragraph-length compositions in a variety of genres

Lesson 1: Tippy-Toe Chick, Go!: Lesson 1
Objectives:
• Substitute initial phonemes
• Blend, read, and build words with ow
• Spell words with the diphthong ow
• Practice fluency with oral rereading
• Build background and oral vocabulary
• Identify character, setting, and plot
• Identify commands

Lesson 2: Tippy-Toe Chick, Go!: Lesson 2
Objectives:
• Substitute initial phonemes
• Blend, read, and build words that end in a consonant plus le
• Apply knowledge of letter-sounds and word parts to decode unknown words when reading
• Spell words with the diphthong ow
• Recognize high-frequency words
• Identify commands
• Speak to communicate information

Lesson 3: Tippy-Toe Chick, Go!: Lesson 3
Objectives:
• Read, sort, and build words with vowel diphthong ow and words that end in a consonant plus –le
• Spell words with the diphthong ow /ou/
• Identify actions and motivations of characters
• Identify words and phrases that suggest feelings
• Identify setting and plot of a story
• Describe the characters and setting of a story through illustrations
• Use parts of a story to understand a selection

Lesson 4: Tippy-Toe Chick, Go!: Lesson 4
Objectives:
• Recognize high-frequency words
• Review vowels in moon and suffixes -ly and -ful
• Spell words with the vowel sound in how
• Read and respond to a fable
• Read aloud fluently at a natural rate and with accuracy and expression
• Identify commands

Lesson 5: Tippy-Toe Chick, Go!: Lesson 5
Objectives:
• Spell words with the vowel sound in how
• Decode vowel diphthong ow /ou/ and syllables C + le
• Read high-frequency words
• Recognize character, setting and plot
• Retell a story

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.
Lesson 6: Mole and the Baby Bird: Lesson 1

Objectives:
- Blend and segment phonemes
- Blend, read, and build words with ou
- Spell words with diphthong ou
- Practice fluency with oral rereading
- Build background and oral vocabulary
- Identify sequence of events
- Identify exclamations

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 7: Mole and the Baby Bird: Lesson 2

Objectives:
- Identify the vowel sound in the first syllable of a word
- Blend, read, and sort words by vowel sounds with VCV syllable patterns
- Spell words with diphthong ou and use each in a sentence
- Recognize high-frequency words and use each in a sentence
- Discuss and identify exclamations
- Identify words and phrases that suggest feelings or emotions
- Retell a movie or a play verbally

Lesson 8: Mole and the Baby Bird: Lesson 3

Objectives:
- Read and sort words with the diphthong ou and two-syllable words with the VCV syllable pattern
- Use clues to spell words with the diphthong ou /ou/
- Discuss and use exclamations is writing
- Identify the sequence of events when reading a story
- Retell a story including important events in the order they happened
- Demonstrate fluency with appropriate speed, accuracy, and expression when reading aloud
- Write a paragraph using words that show order

Lesson 9: Mole and the Baby Bird: Lesson 4

Objectives:
- Recognize high-frequency words
- Review diphthong ow and words with syllables C + le
- Spell words with the vowel sound in out
- Recognize text structure: letters
- Read aloud fluently at a natural rate and with accuracy and expression
- Identify exclamations

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 10: Mole and the Baby Bird: Lesson 5

Objectives:
- Spell words with diphthong ou
- Decode vowel diphthong ou /ou/ and syllables VCV
- Read high-frequency words
- Recognize sequence of events
- Retell a story

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 11: Dot & Jabber and the Great Acorn Mystery: Lesson 1

Objectives:
- Substitute initial phonemes
- Blend, read, and build words with oo as in book
- Spell words with the vowel sounds in book and moon
- Practice fluency with paired rereading
- Build background and oral vocabulary

Appendix A.2.a Language Arts Course Guides

© 2016 Connections Education LLC. All rights reserved.
Lesson 12: Dot & Jabber and the Great Acorn Mystery: Lesson 2

Objectives:
• Add phonemes
• Blend, read, and sort words with inflected endings -s, -es, -ed, and -ing
• Spell words with the vowel sounds in book and moon
• Recognize high-frequency words
• Identify how sentences begin and end
• Speak to identify different kinds of media

Lesson 13: Dot & Jabber and the Great Acorn Mystery: Lesson 3

Objectives:
• Blend, read, and sort words with vowels oo as in book and words with inflected endings
• Spell words with the vowel sounds in book and moon
• Learn selection words
• Recognize comparisons and contrasts between two things
• Reread and review to monitor and fix up
• Read aloud fluently and express characterization
• Begin and end sentences correctly

Lesson 14: Dot & Jabber and the Great Acorn Mystery: Lesson 4

Objectives:
• Apply decoding strategies: blend, preview words
• Spell words with the vowel sound in book and moon
• Recognize text structure: nonfiction
• Read aloud fluently and express characterization
• Identify how sentences begin and end

Lesson 15: Dot & Jabber and the Great Acorn Mystery: Lesson 5

Objectives:
• Review vowels oo as in book and inflected endings
• Spell words with the vowel sounds in book and moon
• Decode vowels oo as in book and inflected endings -s, -es, -ed, -ing
• Read high-frequency words
• Read aloud with appropriate speed and accuracy
• Compare and contrast
• Retell a story

Lesson 16: Simple Machines: Lesson 1

Objectives:
• Substitute final phonemes
• Blend, read, and build words with oi and oy
• Spell words with diphthongs oi and oy
• Build background and oral vocabulary
• Identify main idea
• Identify pronouns

Lesson 17: Simple Machines: Lesson 2
Objectives:

- Segment and count syllables
- Blend, read, and sort words with suffixes -er and -or
- Spell words with diphthongs oi and oy
- Practice fluency with oral rereading
- Recognize high-frequency words
- Identify pronouns
- Substitute pronouns

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 18: Simple Machines: Lesson 3

Objectives:

- Blend, read, and sort words with vowel diphthongs oi and oy and suffixes -er and -or
- Spell words with the vowel sound in boy
- Learn selection words
- Recognize main ideas in a nonfiction selection
- Summarize a selection by retelling main ideas
- Read aloud fluently with appropriate phrasing
- Use pronouns in writing

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 19: Simple Machines: Lesson 4

Objectives:

- Use clues to identify high-frequency words
- Use decoding strategies to read and build words
- Write spelling words with diphthongs oi and oy
- Use text structure to understand nonfiction
- Make connections between texts
- Demonstrate fluency with appropriate phrasing when reading aloud
- Discuss and identify pronouns

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 20: Simple Machines: Lesson 5

Objectives:

- Spell words with the vowel sound in boy
- Decode vowel diphthongs oi, oy and suffixes -er, -or
- Read high-frequency words
- Recognize main idea
- Retell a story

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 21: Alexander Graham Bell: Lesson 1

Objectives:

- Segment and count phonemes
- Blend, read, and sort words with aw and au
- Spell words with vowels aw as in saw
- Practice fluency with repeated oral reading
- Build background and oral vocabulary
- Draw conclusions
- Identify I and me

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 22: Alexander Graham Bell: Lesson 2

Objectives:

- Read, build, blend, and segment words with short e spelled ea
- Spell words with aw as in saw and write each in a sentence
- Recognize and use high-frequency words
- Use illustrations and text to learn more about a story
- Discuss, identify, and correctly use the pronouns I and me

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.
Lesson 23: Alexander Graham Bell: Lesson 3

Objectives:
- Read and sort words with aw and au and words with short e: ea
- Write spelling words with the vowel sound in saw that rhyme
- List the steps of an activity
- Draw conclusions from text and illustrations
- Use text features to better understand a story
- Use the pronouns I and me in writing
- Use illustrations and text to learn more about a story

Lesson 24: Alexander Graham Bell: Lesson 4

Objectives:
- Review diphthongs oi, oy and suffixes -er and -or
- Spell words with the vowel sound in saw
- Recognize text structure: nonfiction
- Read aloud fluently at a natural rate and with accuracy and expression
- Identify I and me

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 25: Great Ideas Unit Test

Appendix A.2.a Language Arts Course Guides

Language Arts 1 B
LANGUAGE ARTS 2 A
Language Arts 2 A

The student will continue to develop into a fluent reader as he encounters increasingly complex texts. He will read daily, practicing new skills and understanding the phonics patterns. The student will apply new skills to read and understand fiction and nonfiction stories presented in Scott Foresman's Reading Street series. Stories are organized into themes such as “Exploration,” “Working Together,” and “Creative Ideas.” Examining literature through themes helps the student make connections between the texts and connect reading topics to his personal knowledge and interests. The student will also read short, decodable readers that are linked and printable from the student’s lesson page. Formal reading instruction includes all parts of the reading process, including phonics, vocabulary, comprehension, and fluency.

As the student learns to read, he also learns to write. Writing lessons target grammar skills and teach the writing process. Frequently, writing instruction is tied to the student’s reading assignments. Guided instruction and practice in Zaner-Bloser Handwriting reinforce manuscript printing and encourage greater speed and accuracy in writing. Daily spelling instruction and practice correlate with taught phonics skills. Language skills and handwriting come together as the student composes journal entries and writing pieces of increasing length and complexity. Students gain speaking and listening skills through questioning and the use of audio recording.

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Unit 1: Exploration

In this unit, your student will explore the theme of exploration in fiction and nonfiction reading selections, including a play. Your student will build on reading skills developed in first grade as he continues to learn new strategies for decoding and understanding text. Phonics and spelling instruction focuses on short vowels, words with long vowels in the CVCe pattern, consonant blends and digraphs, and inflected word endings. Comprehension skills include identifying the main idea and supporting details in a selection, understanding story elements such as character and setting, and distinguishing between realism and fantasy. Reading instruction also develops fluency skills, such as reading accurately and with expression, reading at an appropriate pace, and attending to punctuation while reading. Vocabulary instruction focuses on understanding figurative language, descriptive words, and synonyms. Additionally, your student will learn the basic parts of a sentence, subject and predicate, and learn about the four types of sentences—statements, questions, commands, and exclamations. He will apply this knowledge in regular writing assignments, including a plan for visiting a place and a report about his neighborhood. Writing models, graphic organizers, and checklists for drafting and revising are provided as support.

Objectives:
- Apply decoding and context strategies to read unknown words
- Build reading vocabulary
- Read about exploring while applying comprehension strategies

Lesson 1: Iris and Walter: Lesson 1

Objectives:
- Associate short vowel sounds with the CVC, CCVC, CVCC spelling patterns
- Associate the sound /e/ with the letters ea
- Spell words with short vowels
- Practice fluency in oral rereading
- Build background and oral vocabulary
- Identify character and setting
- Identify sentences

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 2: Iris and Walter: Lesson 2

Objectives:
- Sort and read words with short vowels
Lesson 3: Iris and Walter: Lesson 3

Objectives:
- Sort, blend, and read VC/CV and VCC/V words
- Spell words with short vowels
- Recognize high-frequency words
- Discuss similes
- Read aloud with appropriate pace and rate
- Write a plan
- Use sentences in writing

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 4: Iris and Walter: Lesson 4

Objectives:
- Spell words with short vowels
- Respond to poems read aloud
- Recognize rhyme in poetry
- Read aloud with appropriate pace and rate
- Identify sentences
- Write a plan
- Speak to share ideas

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 5: Iris and Walter: Lesson 5

Objectives:
- Read high-frequency words
- Spell words with short vowels
- Decode words with short vowels
- Read aloud with appropriate speed and accuracy
- Recognize story characteristics
- Retell a story

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 6: Exploring Space with an Astronaut: Lesson 1

Objectives:
- Associate the long vowel sounds with the CVCe spelling patterns
- Blend, read, and build long vowel words
- Spell words with long vowels
- Use complete sentences and proper inflection
- Identify main idea and details
- Identify subjects
- Use context with letter-sounds and word parts to confirm the identification of unknown words

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 7: Exploring Space with an Astronaut: Lesson 2

Objectives:
- Spell and create words with long vowels
- Identify main idea and details
- Use text structure to understand a reading selection
- Use clues when reading to define vocabulary words

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.
• Identify high-frequency words
• Recognize main idea and details
• Recognize the subject of a sentence

Lesson 8: Exploring Space with an Astronaut: Lesson 3

Objectives:
• Build, blend, and read short vowel words
• Review short vowel words with the CVC, CCVC, CVCC spelling patterns
• Spell long vowel words
• Write phrases with position words
• Read aloud with accuracy
• Use subjects correctly in writing
• Write a list

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 9: Exploring Space with an Astronaut: Lesson 4

Objectives:
• Build oral vocabulary
• Spell words with long vowels CVCe
• Recognize text structure: nonfiction
• Read aloud with accuracy
• Identify subjects
• Write a list
• Speak to share ideas

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 10: Exploring Space with an Astronaut: Lesson 5

Objectives:
• Read high-frequency words
• Spell words with long vowels
• Decode long-vowel (CVCe) and c/s/, g/j/, and s/z/ words
• Read aloud with appropriate speed and accuracy
• Identify main idea and details
• Retell a story

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 11: Henry and Mudge and the Starry Night: Lesson 1

Objectives:
• Associate consonant sounds with consonant blends
• Blend, read, and build words with consonant blends
• Spell words with consonant blends
• Practice fluency in oral reading
• Build background and oral vocabulary
• Identify character and setting
• Identify predicates

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 12: Henry and Mudge and the Starry Night: Lesson 2

Objectives:
• Build words with consonant blends
• Recognize and spell high frequency words with consonant blends
• Use clarifying questions to identify information
• Describe how characters respond to a major event
• Identify the predicate of a sentence

Lesson 13: Henry and Mudge and the Starry Night: Lesson 3

Objectives:
• Build, blend, and read long vowel CVCe words
• Spell long vowel words
• Write sentences with synonyms
• Recognize and use good word choice in writing
• Write a story
• Use predicates correctly in writing

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 14: Henry and Mudge and the Starry Night: Lesson 4
Objectives:
• Review short vowels CVC, CVCC, and short e: ea
• Review long vowels CVCe
• Spell words with consonant blends
• Recognize text structure: nonfiction
• Read aloud with accuracy and appropriate pace
• Identify predicates
• Write a story

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 15: Henry and Mudge and the Starry Night: Lesson 5
Objectives:
• Spell words with consonant blends
• Decode words with consonant blends
• Read high-frequency words
• Read aloud with appropriate speed and accuracy
• Identify characters and setting
• Retell a story

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 16: A Walk in the Desert: Lesson 1
Objectives:
• Use structural clues to decode inflected endings with spelling changes
• Blend, read, and build inflected endings -s, -ed, -ing
• Spell base words with endings -ed, -ing
• Build background and oral vocabulary
• Exhibit appropriate listening behavior
• Identify main idea and details
• Identify statements and questions

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 17: A Walk in the Desert: Lesson 2
Objectives:
• Spell and create base words with endings -s, -ed, -ing
• Preview words in a reading selection
• Use clues when reading to define vocabulary words
• Use background information to understand a reading selection
• Recognize main idea and details
• Recognize statements and questions

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 18: A Walk in the Desert: Lesson 3
Objectives:
• Build, blend, and read words with consonant blends
• Spell base words and endings -ed, -ing
• Discuss descriptive words
• Use descriptive words in sentences
• Read aloud fluently, while attending to punctuation
• Write a report
• Use statements and questions in writing

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.
Lesson 19: A Walk in the Desert: Lesson 4

Objectives:
• Spell base words with endings –ed, –ing
• Recognize text structure: nonfiction
• Read aloud fluently while attending to punctuation
• Identify statements and questions
• Speak to communicate information
• Write a report
• Listen to be a polite listener

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 20: A Walk in the Desert: Lesson 5

Objectives:
• Spell base words with endings –ed, –ing
• Decode words with inflected endings –s, –ed, and –ing
• Read high-frequency words
• Read aloud with appropriate speed and accuracy
• Identify main idea and details
• Retell a story

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 21: The Strongest One: Lesson 1

Objectives:
• Associate consonant digraph sounds with their spelling patterns
• Blend, read, and sort words with consonant digraphs
• Spell words with consonant digraphs
• Build background and oral vocabulary
• Ask questions
• Distinguish realism and fantasy
• Identify commands and exclamations

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 22: The Strongest One: Lesson 2

Objectives:
• Read, blend, and group words with consonant digraphs
• Spell and write words with consonant digraphs in a sentence
• Determine differences between realism and fantasy
• Identify which character is speaking in a selection
• Use different voices when reading aloud
• Identify commands and exclamations in writing
• Build background knowledge to understand selection

Lesson 23: The Strongest One: Lesson 3

Objectives:
• Build, blend, and read base words and endings
• Spell words with consonant digraphs
• Identify synonyms
• Read with expression and intonation
• Write news
• Recognize and use good sentences in writing
• Use commands and exclamations in writing

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 24: The Strongest One: Lesson 4

Objectives:
• Spell words with consonant digraphs
• Recognize text structure: nonfiction
• Read with expression and intonation
Lesson 25: Exploration Unit Test

Unit 2: Working Together

In this unit, your student will explore the theme of how people work together. She will continue to read realistic fiction selections, in addition to other genres such as folk tales and fairy tales, as she builds on her skills for decoding and understanding text. Phonics and spelling instruction focuses on words with r-controlled vowels, contractions, plurals, and words with the long a sound. Comprehension skills include understanding sequence, identifying the author’s purpose, drawing conclusions, and distinguishing between realism and fantasy. Reading instruction also addresses fluency skills, such as reading accurately and with appropriate phrasing and expression and reading to show characterization. Vocabulary instruction develops your student's understanding of specific word categories, such as words that show position, direction, time, and sequence. Additionally, your student will review the characteristics of nouns, including proper nouns, singular and plural nouns, and possessive nouns. She will apply this knowledge in a variety of writing assignments, including a set of directions and an invitation submitted as part of her writing portfolio. Writing models, graphic organizers, and checklists for drafting and revising are provided as support.

Objectives:

- Apply knowledge of letter-sound patterns and word structure to read and spell words correctly
- Read fiction and nonfiction selections and distinguish among different varieties of fiction and nonfiction
- Apply reading comprehension skills and strategies before, during, and after reading
- Understand the characteristics of different types of nouns
- Follow the steps of the writing process to write responses to writing prompts

Lesson 1: Tara and Tiree, Fearless Friends: Lesson 1

Objectives:

- Blend, read, and build ar, or, and ore words
- Spell words with r-controlled ar, or, and ore words
- Build background and oral vocabulary
- Identify sequence
- Identify nouns

Lesson 2: Tara and Tiree, Fearless Friends: Lesson 2

Objectives:

- Sort and spell r-controlled ar, or, and ore words
- Recognize sequence
- Make predictions when reading
- Identify high-frequency words
- Identify and write nouns in a sentence

Lesson 3: Tara and Tiree, Fearless Friends: Lesson 3

Objectives:

- Recognize consonant digraphs ch, tch, sh, th, wh words
- Identify high-frequency words
- Use prepositional words that demonstrate position and direction in sentences
- Demonstrate appropriate pace, fluency, and accuracy when reading
- Demonstrate understanding of organization/paragraphs when writing
- Write directions for something you do or make
- Use nouns in a sentence
Lesson 4: Tara and Tiree, Fearless Friends: Lesson 4

Objectives:
- Read and write words with /är/ and /ôr/
- Use text structure to understand: nonfiction
- Create a visual display to clarify ideas
- Demonstrate appropriate pace, fluency, and accuracy when reading
- Recognize nouns
- Demonstrate speaking and listening skills to understand a story
- Compare and contrast

Lesson 5: Tara and Tiree, Fearless Friends: Lesson 5

Objectives:
- Spell words with r-controlled ar, or, and ore
- Decode r-controlled ar, or, and ore words
- Read high-frequency words
- Recognize story sequence
- Retell a story

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 6: Ronald Morgan Goes to Bat: Lesson 1

Objectives:
- Blend, read, and build contractions
- Spell contractions
- Use context with letter-sounds and word parts to confirm the identification of unknown words
- Practice fluency in oral rereading
- Build background and oral vocabulary
- Distinguish between realism and fantasy
- Identify proper nouns

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 7: Ronald Morgan Goes to Bat: Lesson 2

Objectives:
- Create and spell contractions
- Recognize differences between realism and fantasy
- Make predictions using prior knowledge
- Use images to better understand text
- Collaborate when conducting research
- Identify high-frequency words
- Recognize proper nouns

Lesson 8: Ronald Morgan Goes to Bat: Lesson 3

Objectives:
- Blend, read, and build words with r-controlled vowels
- Spell words with contractions
- Use descriptive words in sentences
- Read aloud fluently with accuracy and appropriate pace
- Write a list
- Use proper nouns in writing
- Use common nouns

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 9: Ronald Morgan Goes to Bat: Lesson 4

Objectives:
- Read and write contractions
- Answer questions about poems read aloud
- Demonstrate fluency with expression and attend to punctuation when reading
- Describe how rhyming words in a poem add rhythm and meaning

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.
Lesson 10: Ronald Morgan Goes to Bat: Lesson 5

Objectives:
- Spell contractions
- Decode contractions n't, 's, 'll, 'm
- Read high-frequency words
- Distinguish realism from fantasy
- Retell a story

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 11: Turtle's Race with Beaver: Lesson 1

Objectives:
- Associate the sound /er/ with the er, ir, and ur spelling patterns
- Blend, read, and build er, ir, and ur words
- Spell words with r-controlled er, ir, and ur
- Build background and oral vocabulary
- Identify sequence
- Identify singular and plural nouns

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 12: Turtle's Race with Beaver: Lesson 2

Objectives:
- Sort r-controlled er, ir, and ur words
- Spell r-controlled er, ir, and ur words
- Summarize
- Build background
- Recognize high-frequency words
- Recognize sequence
- Identify singular and plural nouns

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 13: Turtle's Race with Beaver: Lesson 3

Objectives:
- Build, blend, and read contractions n't, 's, 'll, 'm
- Spell r-controlled er, ir, and ur words
- Use time and order words for sequence in sentences
- Read aloud fluently while expressing characterization
- Recognize and use organization/paragraphs in writing
- Write a plan
- Use singular and plural nouns in writing

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 14: Turtle's Race with Beaver: Lesson 4

Objectives:
- Read and write words with er, ir, ur
- Use text structure to understand nonfiction
- Compare and contrast key points of two texts
- Create an audio recording of a story
- Create a visual display to demonstrate new and prior knowledge
- Demonstrate speaking and listening skills to communicate and understand directions
- Write a plan for doing something special for a friend

Lesson 15: Turtle's Race with Beaver: Lesson 5

Objectives:
- Spell er, ir, ur words
• Decode r-controlled er, ir, ur
• Read high-frequency words
• Recognize story sequence
• Retell a story

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 16: The Bremen Town Musicians: Lesson 1

Objectives:
• Blend, read, and build plurals –s, –es, –ies
• Spell plurals with –s, –es, –ies
• Practice fluency in oral rereading
• Build background and oral vocabulary
• Identify author's purpose
• Identify plural nouns that change spelling

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 17: The Bremen Town Musicians: Lesson 2

Objectives:
• Read, identify, and spell words with plurals –s, –es, –ies
• Recognize author's purpose
• Identify details that support the author's purpose
• Analyze story structure including character, setting, and plot
• Recognize plural nouns that change spelling

Lesson 18: The Bremen Town Musicians: Lesson 3

Objectives:
• Blend, read, and sort r-controlled er, ir, ur words
• Spell r-controlled er, ir, ur words
• Use homophones in sentences
• Read aloud fluently with appropriate phrasing
• Recognize and use organization/paragraphs in writing
• Use plural nouns that change spelling in writing

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 19: The Bremen Town Musicians: Lesson 4

Objectives:
• Spell plural words ending in –s, –es, –ies
• Use text structure to understand nonfiction
• Demonstrate fluency with appropriate phrasing while reading aloud
• Compare and contrast two versions of the same story
• Recognize plural nouns that change spelling
• Create a poster about a show

Lesson 20: The Bremen Town Musicians: Lesson 5

Objectives:
• Spell plural words ending ins with –s, –es, –ies
• Read plural and high-frequency words
• Identify the author's purpose of a reading selection
• Compare and contrast two versions of the same story
• Retell a story with accuracy

Lesson 21: A Turkey for Thanksgiving: Lesson 1

Objectives:
• Read, create, and spell ai and ay words
• Identify unknown words using letter-sounds and word parts
• Increase background knowledge and oral vocabulary
• Draw conclusions when reading
• Recognize possessive nouns in a sentence
• Collaborate to brainstorm ideas
Lesson 22: A Turkey for Thanksgiving: Lesson 2

Objectives:
- Identify long a words
- Spell long a words with long a: a, ai, ay
- Draw conclusions when reading
- Use different voices for different characters when reading aloud
- Visualize to understand text
- Recognize possessive nouns in a sentence
- Recount an experience

Lesson 23: A Turkey for Thanksgiving: Lesson 3

Objectives:
- Read and create plural words with plurals –s, –es, –ies
- Describe how a character responds to an event
- Spell words with long a: ai, ay words
- Use similes in sentences when writing
- When reading silently, use fluency
- Use possessive nouns when writing
- Demonstrate knowledge of a language and its conventions

Lesson 24: A Turkey for Thanksgiving: Lesson 4

Objectives:
- Spell words with long a: a, ai, ay
- Recognize text structure: nonfiction
- Identify possessive nouns
- Speak to make introductions

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 25: Working Together Unit Test

Unit 3: Creative Ideas

In this unit, your student will explore the theme of how creative ideas can make a difference. He will read a variety of fiction and nonfiction selections, including realistic fiction, fantasy stories, and a biography. Your student will continue to practice essential skills for decoding and understanding text. Phonics and spelling instruction focuses on words with the long vowel sounds of e, o, and i, compound words, and words with the comparative endings –er and –est. Comprehension skills include understanding the author’s purpose, recognizing cause-and-effect relationships, drawing conclusions, and understanding story elements such as plot and theme. Reading instruction also addresses fluency skills, such as reading with appropriate phrasing and expression. Vocabulary development continues to address different categories of words, such as antonyms, synonyms, words from other languages, and shortened forms of words. Additionally, your student will review the characteristics of verbs, including singular and plural verbs, different verb tenses, and forms of the verb to be. He will apply this knowledge in fun and creative writing assignments, including a letter of advice and a poster submitted as part of his writing portfolio. Writing models, graphic organizers, and checklists for drafting and revising are provided as support.

Objectives:
- Apply knowledge of letter-sound patterns and word structure to read and spell words correctly
- Read fiction and nonfiction selections and distinguish among different varieties of fiction and nonfiction
- Apply reading comprehension skills and strategies before, during, and after reading
- Understand the characteristics of different types of verbs
- Follow the steps of the writing process to write responses to writing prompts

Lesson 1: Pearl and Wagner: Two Good Friends: Lesson 1

Objectives:
- Associate the sound /e/ with the e, ee, ea, and y spelling patterns
- Blend, read, and build e, ee, ea, and y words
- Spell words with long e: ee, ea, y
• Use context with letter-sounds and word parts to confirm the identification of unknown words
• Build background and oral vocabulary
• Identify author's purpose
• Identify verbs

Lesson 2: Pearl and Wagner: Two Good Friends: Lesson 2

Objectives:
• Sort long e: ee, ea, and y words
• Spell long e: e, ee, ea, and y words
• Recognize author's purpose
• Identify story structure
• Recognize high-frequency words
• Identify verbs

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 3: Pearl and Wagner: Two Good Friends: Lesson 3

Objectives:
• Read and create ai and ay words
• Spell long e words: ee, ea, y words
• Identify antonyms and write sentences using those words and write a sentence for each word
• Make connections
• Write a plan for making a robot
• Demonstrate understanding of verbs when writing
• Demonstrate knowledge of language and its conventions

Lesson 4: Pearl and Wagner: Two Good Friends: Lesson 4

Objectives:
• Spell words with long e: ee, ea, y
• Recognize text structure: nonfiction
• Read aloud fluently with expression/intonation
• Identify verbs
• Write a plan
• Use speaking and listening skills to solve a problem

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 5: Pearl and Wagner: Two Good Friends: Lesson 5

Objectives:
• Decode words with long e: e, ee, ea, y; syllables VCV
• Spell ee, ea, y words
• Read high-frequency words
• Recognize author's purpose
• Retell a story

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 6: Dear Juno: Lesson 1

Objectives:
• Associate the sound /o/ with the o, oa, and ow spelling patterns
• Apply knowledge of letter-sounds and word parts to decode unknown words when reading
• Spell words with long o: o, oa, ow
• Build background and oral vocabulary
• Draw conclusions
• Identify verbs with singular and plural nouns

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 7: Dear Juno: Lesson 2

Objectives:
Lesson 8: Dear Juno: Lesson 3

Objectives:
- Build, blend, and read ee, ea, and y words
- Spell long o: o, oa, ow words
- Discuss shortened forms of words
- Read aloud fluently with accuracy/appropriate pace
- Write a list
- Use verbs with singular and plural nouns

Lesson 9: Dear Juno: Lesson 4

Objectives:
- Spell words with long o: o, oa, ow
- Recognize text structure: nonfiction
- Read aloud fluently with accuracy and appropriate pace
- Identify verbs with singular and plural nouns
- Write a list
- Retell a story that was read

Lesson 10: Dear Juno: Lesson 5

Objectives:
- Spell o, oa, ow words
- Decode long o, syllables VCV
- Read high-frequency words
- Draw conclusions
- Retell a story

Lesson 11: Anansi Goes Fishing: Lesson 1

Objectives:
- Blend, read, and sort compound words
- Spell compound words
- Practice fluency in oral rereading
- Build background and oral vocabulary
- Recognize cause and effect
- Identify verbs for past, present, and future

Lesson 12: Anansi Goes Fishing: Lesson 2

Objectives:
- Sort compound words into first and second words
- Spell compound words correctly when writing dictation sentences
- Recognize high-frequency words when reading
- Identify cause and effect when reading
- Use images to better understand text
- Recognize verbs for the past, present, and future in sentences
- Preview words before reading them from a reading selection
Lesson 13: Anansi Goes Fishing: Lesson 3

Objectives:
• Review long o: o, oa, and ow
• Recognize high-frequency words
• Spell compound words
• Think of antonyms for words
• Recognize and use sentences in writing
• Write advice
• Use verbs for past, present, and future in writing

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 14: Anansi Goes Fishing: Lesson 4

Objectives:
• Spell compound words
• Respond to poems read aloud
• Recognize theme in poetry
• Read aloud fluently, expressing characterization
• Write advice
• Identify verbs for present, past, and future

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 15: Anansi Goes Fishing: Lesson 5

Objectives:
• Spell compound words
• Decode compound words
• Read high-frequency words
• Recognize cause and effect
• Retell a story

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 16: Rosa and Blanca: Lesson 1

Objectives:
• Associate the sound /i/ with the i, ie, igh, and y spelling patterns
• Blend, read, and sort i, ie, igh, and y words
• Spell words with long i: i, igh, y
• Build background and oral vocabulary
• Identify theme and plot
• Identify verbs for past, present, future

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 17: Rosa and Blanca: Lesson 2

Objectives:
• Identify and sort long i words: i, ie, y, and igh words
• Spell long i words: i, ie, y, and igh words
• Make predictions when reading
• Recognize high-frequency words in a reading selection
• Identify theme and plot of a story
• Identify more verbs for the past, present, and future in a sentence
• Express opinions and supporting reasons

Lesson 18: Rosa and Blanca: Lesson 3

Objectives:
• Sort, blend, and read compound words
• Spell long i: i, y, igh words
• Discuss meanings of words from other languages
• Read aloud fluently, attending to punctuation
• Recognize and use good word choice in writing
• Write an ad

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.
Lesson 19: Rosa and Blanca: Lesson 4

Objectives:
- Spell words with long i: i, igh, y
- Recognize plot in a fable
- Read aloud fluently with appropriate phrasing and grouping
- Identify verbs
- Write an ad
- Recite a poem, song, or story from memory

Lesson 20: Rosa and Blanca: Lesson 5

Objectives:
- Spell i, igh, y words
- Decode long i: i, ie, igh, y
- Read high-frequency words
- Recognize theme and plot
- Retell a story

Lesson 21: A Weed Is a Flower: Lesson 1

Objectives:
- Use structural cues to decode words with comparative endings –er, –est
- Spell words with comparative endings –er, –est
- Practice fluency in oral rereading
- Build background and oral vocabulary
- Recognize cause and effect
- Identify am, is, are, was, were

Lesson 22: A Weed Is a Flower: Lesson 2

Objectives:
- Read and sort words with comparative endings –er, –est
- Recognize cause and effect relationships
- Use the monitor and fix up strategy skim and scan
- Recognize high-frequency words
- Identify the verbs am, is, are, was, were

Lesson 23: A Weed Is a Flower: Lesson 3

Objectives:
- Read and create long i: i, ie, igh, y words
- Spell words ending in –er and –est
- Write a list of synonyms
- Demonstrate fluency with expression and intonation when reading out loud
- Demonstrate understanding of focus/ideas when writing
- Create a digital poster
- Write sentences that include the helping verbs am, is, are, was, and were

Lesson 24: A Weed Is a Flower: Lesson 4
Lesson 25: Creative Ideas Unit Test

Unit 4: Frog and Toad Are Friends

In this unit, students will read the book *Frog and Toad Are Friends* by Arnold Lobel. This beloved book tells the story of two best friends in five chapters. Students have the opportunity to learn new vocabulary words as well as review knowledge of contractions and words with r-controlled vowels. Students connect to the book on a personal level by writing about friendship, participating in each stage of the writing process. By the end of this unit, students will have added to their understanding of comprehension strategies such as sequence and identifying the beginning, middle, and end of a story.

Objectives:
- Identify, build, and use contractions
- Learn and use new vocabulary words
- Apply reading strategies to understand and relate to text
- Complete each part of the writing process to write a story about a friend
- Read fluently with accuracy

Lesson 1: Frog and Toad Are Friends: Lesson 1

Objectives:
- Build background and prior knowledge about friendships
- Review the sounds of r-controlled vowels
- Blend, read, and build words with r-controlled vowels
- Read, review, and spell contractions
- Learn new vocabulary words
- Recognize story sequence
- Brainstorm a list of activities to do with a friend

Lesson 2: Frog and Toad Are Friends: Lesson 2

Objectives:
- Share prior knowledge and ideas about friendship
- Sort words with r-controlled vowels
- Review contractions by naming the missing letter or letters in a contraction
- Identify nouns in vocabulary words
- Read aloud fluently with appropriate speed and accuracy
- Retell a story
- Organize ideas in preparation for writing

Lesson 3: Frog and Toad Are Friends: Lesson 3

Objectives:
- Classify and produce words with r-controlled vowels
- Blend, read, and build words with r-controlled vowels
- Review contractions and build new contractions with ’ll and n’t
- Alphabetize vocabulary words and use them in a sentence
- Read aloud with appropriate speed and accuracy
- Recall story details
- Write a story

Lesson 4: Frog and Toad Are Friends: Lesson 4

Objectives:
- Listen for words with r-controlled vowels
- Preview story to find words with r-controlled vowels
- Recognize and explain contractions
- Review vocabulary words
- Read aloud fluently with appropriate speed and accuracy
- Make personal connections to story characters
Lesson 5: Frog and Toad Are Friends: Lesson 5

Objectives:
- Discuss words with r-controlled vowels
- Decode words with r-controlled vowels
- Spell contractions
- Read and understand unit vocabulary words
- Compare and contrast stories
- Write and illustrate a final draft
LANGUAGE ARTS 2 B
Language Arts 2 B

The developing reader will blossom into an increasingly fluent reader throughout this course. The student will read and write daily, practice new skills, and uncover the patterns that are the foundations of words, sentences, and stories. The student will apply new skills to read and understand fiction and nonfiction stories presented in Scott Foresman’s *Reading Street* series. Stories are organized into themes such as “Traditions” and “Responsibility.” Examining literature through themes helps the student to make connections between texts and to connect reading topics to personal knowledge and interests. Reading instruction includes phonics, spelling, vocabulary, comprehension, and fluency. The student will also read short, decodable readers that are linked and printable from the student’s lesson page. In addition to formal reading instruction, the student will have the opportunity to complete engaging extension activities.

As the student becomes a better reader, he will also learn to write. The student’s vocabulary will grow through discussions of ideas and opinions with the Learning Coach. Listening and speaking will help the student learn grammar skills and correct sentence and story construction. Guided instruction and practice in Zaner-Bloser *Handwriting* will teach the student proper manuscript technique. Spelling instruction correlates to the phonics skills taught through the student’s stories. Language skills and handwriting come together as the student composes journal entries and writes pieces of increasing length and complexity. Students gain speaking and listening skills through questioning and the use of audio recording.

**Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.**

**Unit 1: Our Changing World**

In this unit, your student will explore the theme of change through reading selections as he continues to learn about different varieties of fiction and nonfiction. Your student will learn and practice essential skills for decoding and understanding text. Phonics and spelling instruction focuses on words that end with a consonant and *le* and words with the vowels *oo, u, ou, ow, oi, oy, oo, ue, ew,* and *ui.* Students will also review consonants, short vowels, and inflected endings for base words. Comprehension skills include comparing and contrasting, distinguishing between fact and opinion, and understanding story elements such as plot and theme. Reading instruction also addresses fluency skills, such as reading accurately and with appropriate phrasing and expression, and vocabulary development, such as using context clues. Additionally, your student will learn the characteristics of adjectives, including adjectives that compare; adjectives for number, size, and shape; and adjectives that tell *how, when,* and *where.* He will apply this knowledge in challenging and creative writing assignments, including a song and a news report. Writing models, graphic organizers, and checklists for drafting and revising are provided as support.

Objectives:
- Apply knowledge of letter-sound patterns and word structure to read and spell words correctly
- Read fiction and nonfiction selections and distinguish among different varieties of fiction and nonfiction
- Apply reading comprehension skills and strategies before, during, and after reading
- Understand the characteristics of different types of adjectives
- Follow the steps of the writing process to write responses to writing prompts

**Lesson 1: The Quilt Story: Lesson 1**

Objectives:
- Blend, read, and build words with syllables: consonant + *le*
- Spell words with consonant + *le*
- Practice fluency with oral rereading
- Compare and contrast
- Identify story structure
- Identify adjectives

**Lesson 2: The Quilt Story: Lesson 2**
Objectives:
• Sort words with two syllables: consonant + le
• Build background
• Use word structure to determine the meaning of unfamiliar words
• Compare and contrast
• Identify story structure
• Identify adjectives

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 3: The Quilt Story: Lesson 3

Objectives:
• Read and write –er and –est words
• Spell two-syllable words that contain consonant + le
• Use multiple-meaning when writing
• Demonstrate understanding of adjectives when writing
• Make connections between events
• Identify and use careful word choice in writing
• Write a riddle with clues about special things

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 4: The Quilt Story: Lesson 4

Objectives:
• Spell two-syllable words ending with consonant + le
• Recognize text structure: nonfiction
• Read with accuracy and appropriate pace/rate
• Identify adjectives
• Speak to identify information
• Write a riddle
• View a photo to gather information about a topic

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 5: The Quilt Story: Lesson 5

Objectives:
• Spell two-syllable words ending with consonant + le
• Decode syllables C + le
• Read lesson vocabulary words
• Compare and contrast
• Retell a story

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 6: Life Cycle of a Pumpkin: Lesson 1

Objectives:
• Associate the sound of /o/ with the oo and u spelling patterns
• Blend, read, and build oo and u words
• Spell words with vowels oo and u
• Identify fact and opinion
• Ask questions
• Identify adjectives for number, size, and shape

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 7: Life Cycle of a Pumpkin: Lesson 2

Objectives:
• Demonstrate understanding of words with vowels oo and u
• Spell words with vowels oo and u when dictating a sentence
• Use context clues to identify unfamiliar words
• Identify key details of a text
• Recognize fact and opinion when reading
• Ask questions when reading
• Identify adjectives for number, size, and shape when writing or reading

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.
Lesson 8: Life Cycle of a Pumpkin: Lesson 3

Objectives:
• Review syllables: Consonant + le
• Blend, read, and build two-syllable words
• Spell words with vowels oo, u
• Use antonyms in sentences
• Self-correct when reading
• Write a review
• Use adjectives for number, size, and shape in writing

Lesson 9: Life Cycle of a Pumpkin: Lesson 4

Objectives:
• Read and write words with /u/
• Answer questions about poems read aloud
• Identify rhythm and rhyme when reading poetry
• Write a food review
• Describe key ideas
• Create a visual display to clarify ideas
• Recognize adjectives for number, size, and shape in a text

Lesson 10: Life Cycle of a Pumpkin: Lesson 5

Objectives:
• Spell word with oo and u
• Decode vowels oo, u
• Read lesson vocabulary words
• Recognize statements of fact and opinion
• Retell a story

Lesson 11: Frogs: Lesson 1

Objectives:
• Associate the sound /ou/ with the ou and ow spelling patterns
• Blend, read, and sort ou and ow words
• Spell words with vowel diphthongs ou and ow /ou/
• Practice fluency with oral rereading
• Compare and contrast
• Use a graphic organizer
• Identify adjectives that compare

Lesson 12: Frogs: Lesson 2

Objectives:
• Build words with vowel diphthongs ou and ow /ou/
• Build background
• Learn lesson vocabulary
• Use word structure to determine the meaning of unfamiliar words
• Compare and contrast
• Identify adjectives that compare

Lesson 13: Frogs: Lesson 3

Objectives:
• Blend, read, and build oo and u words
• Spell words with vowel diphthongs ou, ow /ou/
• Discuss suffixes: words that end in –ful
• Use words with suffixes in sentences
• Recognize and use conventions in writing
• Write a song
• Use adjectives that compare in writing

(Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.)

Lesson 14: Frogs: Lesson 4

Objectives:
• Spell words with /ou/
• Recognize text structure: nonfiction
• Read aloud with appropriate phrasing
• Identify adjectives that compare
• Speak to communicate or explain the steps of a process
• Write a song
• Listen to learn how to complete a task

(Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.)

Lesson 15: Frogs: Lesson 5

Objectives:
• Spell words with ou and ow
• Decode diphthongs ou, ow /ou/
• Read lesson vocabulary words
• Compare and contrast
• Retell a story

(Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.)

Lesson 16: I Like Where I Am: Lesson 1

Objectives:
• Associate the sound /oi/ with the letters oi and oy
• Blend, read, and build oi and oy words
• Spell words with diphthongs oi and oy /oi/
• Practice fluency in oral rereading
• Recognize theme and plot
• Summarize
• Identify adverbs that tell when and where

(Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.)

Lesson 17: I Like Where I Am: Lesson 2

Objectives:
• Sort and use oy /oi/ words when writing
• Use and identify adverbs that tell when and where
• Build background knowledge to better understand a text
• Use different voices for different characters when reading aloud
• Demonstrate understanding of context clues to determine the meaning of multiple-meaning words
• Recognize theme and plot in a reading selection
• Identify repetition in a poem

(Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.)

Lesson 18: I Like Where I Am: Lesson 3

Objectives:
• Blend, read, and sort ou, ow /ou/ words
• Spell words with diphthongs oi, oy
• Use synonyms in sentences
• Read aloud fluently and express characterization
• Recognize and use conventions in writing
• Write a poem
• Use adverbs that tell when and where in writing

(Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.)
Lesson 19: I Like Where I Am: Lesson 4

Objectives:
• Read and spell words with /oi/
• Recognize e-mail and friendly letter text structure
• Compare and contrast key events in two texts
• Create a visual display to clarify ideas
• Write a poem based on change from your life
• Demonstrate oral communication

Lesson 20: I Like Where I Am: Lesson 5

Objectives:
• Spell words with oi and oy
• Decode diphthongs oi, oy
• Read lesson vocabulary words
• Recognize plot and theme
• Retell a story

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 21: Helen Keller and the Big Storm: Lesson 1

Objectives:
• Associate the sound /ü/ with the letters oo, ue, ew, and ui
• Blend, read, and build oo, ue, ew, and ui words
• Spell words with vowels oo, ue, ew, and ui
• Practice fluency with oral rereading
• Identify fact and opinion
• Ask questions
• Identify adverbs that tell how

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 22: Helen Keller and the Big Storm: Lesson 2

Objectives:
• Build words with vowels oo, ue, ew, and ui
• Build background
• Learn lesson vocabulary
• Use context clues to determine the meaning of multiple-meaning words
• Write statements of likes and dislikes
• Identify fact and opinion
• Identify adverbs that tell how

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 23: Helen Keller and the Big Storm: Lesson 3

Objectives:
• Blend, read, and build oi, oy /oi/ words
• Spell words with vowel patterns oo, ue, ew, ui
• Use homographs in sentences
• Read aloud fluently with expression and intonation
• Recognize and use focus/ideas in writing
• Write news
• Use adverbs that tell how in writing

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 24: Helen Keller and the Big Storm: Lesson 4

Objectives:
• Spell words with /ü/
• Recognize text structure: nonfiction
• Read aloud fluently with expression and intonation
• Identify adverbs that tell how
Lesson 25: Our Changing World Unit Test

Unit 2: Amelia Bedelia and the Cat

In this unit, your student will enjoy the antics of housekeeper Amelia Bedelia. The main character gets herself into all kinds of trouble as she takes figures of speech literally. Your student will learn about idioms and their hidden meanings. While reading portions of the book each day, your student will apply knowledge of letter-sounds and high-frequency words. She will also practice using homophones correctly. Finally, she will participate in each part of the writing process by writing a detailed paragraph about a pet.

Objectives:
• Decode words with the sound /ou/ in printed text
• Understand and use homophones correctly in sentences
• Describe idioms and their meanings
• Retell and relate to a story
• Write a paragraph with a main idea and supporting details

Lesson 1: Amelia Bedelia and the Cat: Lesson 1

Objectives:
• Build background and prior knowledge
• Review long vowel diphthong /ou/ spelled ou and ow
• Discuss and spell homophones
• Introduce and define idioms
• Read aloud fluently with appropriate accuracy and pace, infer meaning, make predictions
• Brainstorm a list of pets

Lesson 2: Amelia Bedelia and the Cat: Lesson 2

Objectives:
• Identify prior knowledge and recall story details
• Build words with the /ou/ sound in house
• Review definition of homophones and interpret homophones
• Read and interpret idioms
• Check predictions and recall story details
• Read with accuracy and expression
• Use a graphic organizer to describe a main idea and supporting details

Lesson 3: Amelia Bedelia and the Cat: Lesson 3

Objectives:
• Review vowel diphthong /ou/
• Understand homophone meanings and relate to everyday contexts
• Act out idioms from the story
• Identify idioms in the text and read with expression and appropriate speed
• Write the first draft of a paragraph with a main idea and supporting details

Lesson 4: Amelia Bedelia and the Cat: Lesson 4

Objectives:
• Connect the reader to the text and build background
• Make a board game with /ou/ words
• Use homophones correctly in a sentence
• Use visual cues to represent idioms
• Make predictions, interpret meanings of passages, and read fluently
• Review capitals, punctuation, and the naming and telling parts of a sentence to edit the first draft

Lesson 5: Amelia Bedelia and the Cat: Lesson 5

Objectives:
• Extend thinking about idioms
• Read sentences with /ou/ words
• Spell homophones in context
• Identify and interpret idioms
• Read with appropriate speed and fluency, interpret passages, and cite opinions
• Write final draft of paragraph with main idea and supporting details and design a cover

Unit 3: Responsibility

In this unit, your student will learn about what it means to be responsible as he reads a variety of selections, including narrative nonfiction as well as informational texts and realistic fiction. Your student will continue to build his skills in decoding and understanding text. Phonics and spelling instruction focuses on prefixes and suffixes, silent consonants, consonant blends ph and gh, and the vowel sounds of aw, au, augh, and al. Comprehension skills include identifying main idea and details, understanding sequence and author’s purpose, understanding story elements such as plot and theme, and distinguishing between realism and fantasy. Reading instruction also addresses fluency skills, such as reading accurately, reading with expression, and reading to show characterization. Additionally, students practice vocabulary development strategies such as identifying prefixes and suffixes and using context clues. Your student will learn the characteristics of pronouns and contractions. He will apply this knowledge in a variety of writing assignments, including a report and signs submitted as part of his writing portfolio. Writing models, graphic organizers, and checklists for drafting and revising are provided as support.

Objectives:
• Apply knowledge of letter-sound patterns and word structure to read and spell words correctly
• Read fiction and nonfiction selections and distinguish among different varieties of fiction and nonfiction
• Apply reading comprehension skills and strategies before, during, and after reading
• Understand the characteristics of pronouns and contractions
• Follow the steps of the writing process to write responses to writing prompts

Lesson 1: Firefighter!: Lesson 1

Objectives:
• Read and correct words with suffixes –ly, –ful, –er, –or
• Spell words ending with the with suffixes –ly, –ful, –er, –or
• Read a selection to demonstrate fluency with oral rereading
• Increase oral vocabulary
• Identify the main idea and supporting details of a story
• Demonstrate understanding of chronological order and sequence
• Write a research report

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 2: Firefighter!: Lesson 2

Objectives:
• Read and sort words with suffixes –ly, –ful, –er, –or
• Learn lesson vocabulary
• Use word structure (suffix –ly) to determine the meaning of unfamiliar words
• Recognize the main idea and supporting details
• Identify pronouns
• Use pronouns

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 3: Firefighter!: Lesson 3

Objectives:
• Read and group oo, ue, ew, ui words
• Spell words that end in –ly, –ful, –er, –or
• Use words ending in -ly in sentences
• Use self-correcting strategies when reading
• Recognize and use good word choice in writing

© 2016 Connections Education LLC. All rights reserved.
• Write a report about an important community job
• Demonstrate knowledge of language and its conventions

Lesson 4: Firefighter!: Lesson 4
Objectives:
• Spell words with suffixes –ly, –ful, –er, –or
• Recognize plot in a play
• Read silently with fluency and accuracy
• Write a report
• Identify pronouns

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 5: Firefighter!: Lesson 5
Objectives:
• Spell words with suffixes –ly, –ful, –er, –or
• Decode suffixes –ly, –ful, –er, –or
• Read lesson vocabulary
• Read aloud with appropriate speed and accuracy
• Recognize main idea and supporting details
• Retell a story

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 6: One Dark Night: Lesson 1
Objectives:
• Blend, read, and build words with prefixes un–, re–, pre–, dis–
• Spell words with prefixes un–, re–, pre–, dis–
• Recognize sequence
• Use graphic organizers
• Identify pronouns for one or more than one
• Use context with letter-sounds and word parts to confirm the identification of unknown words

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 7: One Dark Night: Lesson 2
Objectives:
• Sort and read words with prefixes un–, re–, pre–, dis–
• Build background
• Learn lesson vocabulary
• Use context clues to determine the meaning of unfamiliar words
• Recognize sequence
• Identify pronouns for one and more than one

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 8: One Dark Night: Lesson 3
Objectives:
• Build, blend, and read –ly, –ful, –er, –or words
• Recognize lesson vocabulary
• Spell words with prefixes un–, re–, pre–, dis–
• Classify/categorize words from the story
• Read aloud fluently with accuracy and appropriate pace(rate)
• Write reasons
• Use pronouns for one and more than one in writing

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 9: One Dark Night: Lesson 4
Objectives:
• Spell words beginning with prefixes un–, re–, pre–, dis–
• Answer questions about poems read aloud
• Identify characters in a poem
• Demonstrate a clear and accurate phone message
• Describe key ideas
• Use pronouns for one and more than one when writing
• Write reasons for something a person should do

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 10: One Dark Night: Lesson 5

Objectives:
• Spell words with prefixes un–, re–, pre–, dis–
• Decode words with prefixes un–, re–, pre–, dis–
• Read lesson vocabulary
• Recognize story sequence
• Retell a story

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 11: Bad Dog, Dodger!: Lesson 1

Objectives:
• Blend, read, and build kn, wr, gn, and mb words
• Spell words with silent consonants kn, wr, gn, and mb
• Use context with letter-sounds and word parts to confirm the identification of unknown words
• Recognize plot and theme
• Use prior knowledge
• Write rules
• Identify pronouns I and me

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 12: Bad Dog, Dodger!: Lesson 2

Objectives:
• Read and create words with ph and gh
• Spell words with ph, gh when dictating sentences
• Build background knowledge to understand text
• Learn lesson vocabulary to prepare for reading activities
• Determine the meaning of unfamiliar words by using the word ending -est
• Identify author's purpose of a reading selection
• Identify reasons that support the author's purpose

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 13: Bad Dog, Dodger!: Lesson 3

Objectives:
• Build, blend, and read un–, re–, pre–, dis– words
• Recognize lesson vocabulary
• Spell words with silent consonants kn, wr, gn, and mb
• Classify/categorize words related to a topic from the story
• Read aloud fluently with expression and intonation
• Write rules
• Use I and me in writing

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 14: Bad Dog, Dodger!: Lesson 4

Objectives:
• Spell words with silent consonants kn, wr, gn, and mb
• Recognize text structure: nonfiction
• Read aloud fluently with expression and intonation
• Identify I and me

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.
Lesson 15: Bad Dog, Dodger!: Lesson 5

Objectives:
• Spell words with kn, wr, gn, and mb
• Decode silent consonants kn, wr, gn, mb
• Read lesson vocabulary
• Recognize story sequence
• Retell a story

Lesson 16: Horace and Morris but mostly Dolores: Lesson 1

Objectives:
• Associate the sound /f/ with the ph, gh spelling patterns
• Blend, read, and build ph and gh words
• Spell words with ph, gh
• Recognize author's purpose
• Ask questions
• Write advice
• Identify different kinds of pronouns

Lesson 17: Horace and Morris but mostly Dolores: Lesson 2

Objectives:
• Read and create words with ph and gh
• Spell words with ph and gh when dictating sentences
• Build background knowledge to understand text
• Determine the meaning of unfamiliar words by using the word ending –est
• Identify author's purpose of a reading selection
• Identify reasons that support the author's purpose
• Recognize different kinds of pronouns when writing

Lesson 18: Horace and Morris but mostly Dolores: Lesson 3

Objectives:
• Read and create kn, wr, gn, and mb words
• Recognize lesson vocabulary in a sentence
• Spell words with digraphs ph, gh when writing an adventure story
• Use words that end in –est to represent most
• Demonstrate fluency, expressing characterization when reading aloud
• Identify the author’s purpose of a text
• Write advice to a character in a story

Lesson 19: Horace and Morris but mostly Dolores: Lesson 4

Objectives:
• Spell words with ph, gh
• Recognize text structure: nonfiction
• Read while expressing characterization
• Write advice
• Identify different kinds of pronouns

Lesson 20: Horace and Morris but mostly Dolores: Lesson 5

Objectives:
• Spell words with ph and gh
• Decode ph, gh /f/
• Read lesson vocabulary
• Recognize author's purpose
• Retell a story

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 21: The Signmaker's Assistant: Lesson 1

Objectives:
• Blend, read, and build aw, au, augh, and al words
• Spell words with aw, au, augh, al
• Practice fluency with oral rereading
• Recognize realism and fantasy
• Use monitoring and fix up
• Write a sign
• Identify contractions

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 22: The Signmaker's Assistant: Lesson 2

Objectives:
• Sort words with vowels aw, au, augh, and al
• Spell words with aw, au, augh, al
• Build background
• Learn lesson vocabulary
• Use the smaller words in a compound word to determine its meaning
• Recognize realism and fantasy
• Identify contractions

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 23: The Signmaker's Assistant: Lesson 3

Objectives:
• Build, blend, and read ph, gh words
• Recognize lesson vocabulary
• Spell words with vowels aw, au, augh, al
• Create compound words
• Recognize and use varied sentences in writing
• Write a sign
• Use contractions in writing

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 24: The Signmaker's Assistant: Lesson 4

Objectives:
• Spell words with vowels aw, au, augh, and al
• Recognize text structure: nonfiction
• Read aloud fluently with appropriate phrasing
• Identify contractions
• Write a sign
• Explain how advertising sells products

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 25: Responsibility Unit Test

Unit 4: Traditions

In this unit, your student will explore the theme of tradition through a variety of reading selections. She will continue to practice and refine her skills for decoding and understanding text. Phonics and spelling instruction focuses on contractions, inflected endings, prefixes, and suffixes. Comprehension skills include comparing and contrasting, distinguishing between fact and opinion, drawing conclusions, identifying causal relationships, and understanding story elements such as character, setting, and plot. Reading instruction continues to develop fluency skills, such as reading accurately and with appropriate phrasing. Vocabulary instruction provides strategies for understanding homophones, homonyms, compound
words, and words from other languages. Additionally, your student will learn how to follow standard writing conventions, such as correct use of commas and quotation marks as well as proper capitalization. She will apply this knowledge as she works on writing assignments, including an expository paragraph and a story submitted as part of her writing portfolio. Writing models, graphic organizers, and checklists for drafting and revising are provided as support.

Objectives:
- Apply knowledge of letter-sound patterns and word structure to read and spell words correctly
- Read fiction and nonfiction selections, focusing on realistic fiction and narrative nonfiction
- Apply reading comprehension skills and strategies before, during, and after reading
- Understand and apply standard writing conventions for punctuation and capitalization
- Follow the steps of the writing process to write responses to a variety of prompts

Lesson 1: Just Like Josh Gibson: Lesson 1

Objectives:
- Build oral vocabulary
- Blend, read, and build contractions
- Spell contractions
- Practice fluency with oral rereading
- Compare and contrast
- Visualize a person in a story
- Identify when to use capital letters

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 2: Just Like Josh Gibson: Lesson 2

Objectives:
- Build contractions
- Spell contractions
- Build background
- Learn lesson vocabulary
- Use context clues to understand multiple-meaning words
- Identify capital letters

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 3: Just Like Josh Gibson: Lesson 3

Objectives:
- Blend, read, and sort aw, au, augh, al words
- Recognize lesson vocabulary
- Spell words with contractions
- Read aloud fluently with accuracy and appropriate pace
- Use homophones in sentences
- Use capital letters in writing

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 4: Just Like Josh Gibson: Lesson 4

Objectives:
- Build oral vocabulary
- Spell contractions
- Recognize text structure: expository nonfiction
- Read aloud fluently with accuracy and appropriate pace
- Identify capital letters
- Write facts
- Speak to communicate information

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 5: Just Like Josh Gibson: Lesson 5

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.
Objectives:
• Spell contractions
• Decode contractions 're, 've, 'd
• Compare and contrast
• Retell a story
• Read lesson vocabulary words

Lesson 6: Red, White, and Blue: Lesson 1

Objectives:
• Blend, read, and build base words with endings –s, –es, –ed, –ing, –er, –est
• Spell base words with endings –ed, –ing
• Identify facts and opinions
• Monitor and fix-up when reading
• Write answers to questions
• Identify quotation marks
• Build oral vocabulary

Lesson 7: Red, White, and Blue: Lesson 2

Objectives:
• Write and create base words with endings –s, –es, –ed, –ing, –er, –est
• Spell base words ending with –ed, –ing when dictating sentences
• Preview lesson vocabulary
• Identify a compound word using smaller word parts
• Locate information to write a narrative
• Identify quotation marks to determine who is speaking in a sentence

Lesson 8: Red, White, and Blue: Lesson 3

Objectives:
• Build, blend, and read contractions
• Spell base words with endings -ed, -ing
• Use compound words in sentences
• Recognize and use conventions in writing
• Use quotation marks in writing
• Write answers to questions

Lesson 9: Red, White, and Blue: Lesson 4

Objectives:
• Read and write words with inflected endings
• Answer questions and identify rhyme when reading and listening to poetry
• Demonstrate fluency and accuracy when reading
• Read aloud then describe key words
• Identify quotation marks to determine who is speaking in a sentence
• Write a paragraph about the American flag
• Demonstrate understanding of nonverbal cues to communicate information when speaking

Lesson 10: Red, White, and Blue: Lesson 5

Objectives:
• Spell words with inflected endings
• Decode inflected endings
• Read lesson vocabulary words
• Recognize statements of fact and opinion
• Retell a story
Lesson 11: A Birthday Basket for Tia: Lesson 1

Objectives:
• Blend, read, and sort words with syllables –tion, –ture
• Spell words with –tion, –ture
• Practice fluency in oral rereading
• Draw conclusions
• Summarize a story
• Write a report
• Use commas

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 12: A Birthday Basket for Tia: Lesson 2

Objectives:
• Group words according to the word endings: –tion, –ture
• Spell words ending with –tion, –ture
• Build background to understand text
• Preview lesson vocabulary
• Define homonyms using context clues
• Identify details for a narrative
• Recognize commas when writing

Lesson 13: A Birthday Basket for Tia: Lesson 3

Objectives:
• Review, read, and create words ending with -ed and -ing
• Spell words with endings –tion, –ture when provided the missing syllable
• Use non-English words and phrases in sentences
• Demonstrate fluency with appropriate phrasing when reading aloud
• Write a narrative about a special event
• Demonstrate knowledge of organization/paragraphs in writing
• Demonstrate knowledge of commas in writing

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 14: A Birthday Basket for Tia: Lesson 4

Objectives:
• Spell words with syllables –tion, –ture
• Recognize text structure: nonfiction
• Read aloud fluently with appropriate phrasing
• Identify commas
• Speak to communicate information

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 15: A Birthday Basket for Tia: Lesson 5

Objectives:
• Spell words with syllables -tion, -ture
• Decode syllables -tion, -ture
• Read lesson vocabulary words
• Draw conclusions
• Retell a story

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 16: Cowboys: Lesson 1

Objectives:
• Blend, read, and build words with suffixes –less and –ness
• Spell words with suffixes –less, –ness
• Identify cause and effect
• Use graphic organizers
• Write an ad
• Combine simple sentences

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.
Lesson 17: Cowboys: Lesson 2

Objectives:
- Read, group, and review words with suffixes –ness, –less
- Build background knowledge to understand text
- Describe how a character responds to an event
- Preview lesson vocabulary
- Participate in shared research
- Define unfamiliar words by using knowledge of word parts
- Identify commas when writing

Lesson 18: Cowboys: Lesson 3

Objectives:
- Review syllables –tion, –ture
- Spell words ending in –ness, –less
- Demonstrate understanding of time words when writing
- Demonstrate understanding of fluency with accuracy and appropriate pace when reading aloud
- Recognize and use different types of sentences
- Demonstrate understanding of commas in writing
- Create a job ad

Lesson 19: Cowboys: Lesson 4

Objectives:
- Review base words and endings
- Spell words with suffixes –ness, –less
- Recognize text structure: nonfiction
- Read aloud fluently with accuracy and appropriate pace
- Review commas in compound sentences
- Speak to communicate information

Lesson 20: Cowboys: Lesson 5

Objectives:
- Spell words with suffixes –ness, –less
- Decode suffixes –ness, –less
- Recognize cause and effect
- Retell a story
- Read lesson vocabulary words

Lesson 21: Jingle Dancer: Lesson 1

Objectives:
- Build oral vocabulary
- Blend, read, and build words with prefixes mis–, mid–
- Spell words with prefixes mis–, mid–
- Practice fluency in oral rereading
- Identify characters, setting, plot
- Use prior knowledge
- Identify indenting of paragraphs

Lesson 22: Jingle Dancer: Lesson 2

Objectives:
- Read and sort words with prefixes mis–, mid–
- Spell words with prefixes mis–, mid–
Lesson 23: Jingle Dancer: Lesson 3

Objectives:
- Blend, read, and sort words with prefixes mis–, mid–
- Spell words with prefixes mis–, mid–
- Recognize lesson vocabulary
- Use homonyms in sentences
- Read aloud fluently with appropriate phrasing
- Recognize and use organization/paragraphs in writing
- Write a story

Lesson 24: Jingle Dancer: Lesson 4

Objectives:
- Review syllables –tion, –ture
- Spell words with prefixes mis–, mid–
- Recognize text structure: nonfiction
- Read aloud fluently with appropriate phrasing
- Write a story
- Identify a paragraph
- Speak to communicate a clear purpose

Lesson 25: Traditions Unit Test

Objectives:
- Spell words with prefixes mis–, mid–
- Decode prefixes mis–, mid–
- Read lesson vocabulary words
- Recognize character, setting, and plot
- Retell a story
LANGUAGE ARTS 3 A
**Language Arts 3 A**

Throughout the course, the student will also develop writing skills. This course reinforces the basics of writing. The student will learn to structure and write complete sentences and then create paragraphs and longer compositions. After learning the five stages of the writing process—prewriting, drafting, revising, editing, and publishing—the student will master this process through weekly writing assignments. The student will also write for different purposes and use a variety of writing forms, including letters, narrative and expository compositions, research reports, poems, and summaries. Additionally, writing instruction introduces students to the essential traits of good writing: focus and idea development, organization, voice, effective word choice and sentences, and the use of standard writing conventions. Over time, the student will build a portfolio of writing assignments.

Instruction in grammar and language usage is reinforced in the meaningful context of writing lessons. The student will continue to master the basic skills of writing with instruction in spelling, grammar, language usage, and handwriting. *Reading Street* offers weekly spelling lists based on the patterns and relationships of letters within words. Daily practice activities reinforce the spelling strategies and give the student opportunities to use spelling words in context. Cursive handwriting is introduced and instructed with the Zaner-Bloser *Handwriting* workbook. The student will review manuscript writing before learning the basic strokes of cursive handwriting.

**Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.**

**Unit 1: Dollars and Sense**

In this unit, your student will explore the theme of money’s importance in people’s lives while learning essential reading and writing skills. The reading selections encompass several genres, including historical fiction, fables, realistic fiction, and articles. Your student will learn and practice reading comprehension skills, such as previewing a text, connecting reading to prior knowledge, understanding sequence and story structure, visualizing, and checking for comprehension. Reading instruction also addresses fluency skills, such as reading with expression, and vocabulary development strategies, such as using context clues and referring to a dictionary. Additionally, your student will learn the steps of the writing process and apply them in weekly writing assignments, which culminate in a narrative paragraph submitted as the first assignment for his writing portfolio. Writing models, graphic organizers, and checklists for drafting and revising are provided as support. Finally, your student will receive weekly spelling instruction, which focuses on understanding vowel and consonant patterns, as well as grammar instruction in using complete sentences and understanding different sentence types.

Objectives:
- Read fiction and nonfiction selections in a variety of genres
- Apply reading comprehension skills and strategies before, during, and after reading
- Learn and follow the steps of the writing process to create paragraph-length compositions in a variety of writing modes
- Understand the parts of a sentence and use different sentence types correctly in writing
- Apply knowledge of letter patterns and word structure to spell words correctly

**Lesson 1: Boom Town Lesson 1**

Objectives:
- Distinguish a realistic story from fantasy
- Use prior knowledge to help judge the distinction between realism and fantasy
- Define and identify sentences
- Distinguish between sentences and fragments
- Identify qualities of a character description
- Spell VCCV words, which usually have short vowels

**Lesson 2: Boom Town: Lesson 2**

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.
Objectives:
- Use context clues to determine the meaning of words that are homonyms
- Use prior knowledge to help judge the distinction between realism and fantasy
- Define and identify sentences
- Identify qualities of a character description
- Spell VCCV words, which usually have short vowels

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 3: Boom Town: Lesson 3

Objectives:
- Identify elements of realism and fantasy
- Activate and use prior knowledge
- Write a character description with a strong voice
- Spell VCCV words, which usually have short vowels

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 4: Boom Town: Lesson 4

Objectives:
- Examine features of expository nonfiction
- Compare and contrast across texts
- Define and identify sentences
- Focus on word choice
- Use a rubric
- Spell VCCV words, which usually have short vowels

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 5: Boom Town: Lesson 5

Objectives:
- Use prior knowledge to help judge the distinction between realism and fantasy
- Distinguish between sentences and fragments
- Spell VCCV words, which usually have short vowels

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 6: What About Me?: Lesson 1

Objectives:
- Determine the sequence of events in a story
- Summarize important events in the order in which they occur
- Define and identify the subject of a sentence
- Define and identify the predicate of a sentence
- Identify the characteristics of a song
- Spell plurals by adding -s or -es to most words

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 7: What About Me?: Lesson 2

Objectives:
- Use word structure to determine the meaning of compound words
- Identify sequence of events to improve comprehension
- Summarize to tell about and remember important events
- Define and identify the subject of a sentence
- Define and identify the predicate of a sentence
- Use subjects and predicates correctly in writing
- Spell plurals by adding -s or -es to most words

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.
Lesson 8: What About Me?: Lesson 3

Objectives:
- Summarize to tell about and remember important events
- Define and identify the predicate of a sentence
- Use subjects and predicates correctly in writing
- Write a song that includes repetition and rhyme
- Spell plurals by adding -s or -es to most words

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 9: What About Me?: Lesson 4

Objectives:
- Examine features of proverbs
- Compare and contrast across texts
- Define and identify the subject of a sentence
- Define and identify the predicate of a sentence
- Use subjects and predicates correctly in writing
- Focus on voice
- Spell plurals by adding -s or -es to most words

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 10: What About Me?: Lesson 5

Objectives:
- Identify sequence
- Identify the subject of a sentence
- Identify the predicate of a sentence
- Use subjects and predicates correctly in writing
- Spell plurals by adding -s or -es to most words

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 11: Alexander: Lesson 1

Objectives:
- Determine the sequence of events in a story
- Visualize characters and events to keep track of sequence
- Define and identify sentences that are statements
- Define and identify sentences that are questions
- Identify characteristics of a math story
- Spell words ending in -ed, -ing, -er, or -est

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 12: Alexander: Lesson 2

Objectives:
- Use a glossary or a dictionary to determine word meaning
- Identify sequence of events to improve comprehension
- Visualize during reading to form pictures of characters and events and to keep track of the sequence of events
- Define and identify sentences that are statements
- Define and identify sentences that are questions
- Spell words ending in -ed, -ing, -er, or -est

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 13: Alexander: Lesson 3

Objectives:
- Identify sequence of events to improve comprehension
- Visualize during reading to form pictures of characters and events and to keep track of the sequence of events
- Use statements and questions correctly in writing
- Write a math story that includes time-order words
Lesson 14: Alexander: Lesson 4

Objectives:
- Examine features of a textbook
- Compare and contrast across texts
- Become familiar with statement and question identification assessment on high-stakes tests

Lesson 15: Alexander: Lesson 5

Objectives:
- Identify sequence
- Define and identify sentences that are statements
- Define and identify sentences that are questions
- Spell words ending in -ed, -ing, -er, or -est

Lesson 16: If You Made a Million: Lesson 1

Objectives:
- Distinguish a realistic story from fantasy
- Define and identify sentences that are commands
- Define and identify sentences that are exclamations
- Identify the characteristics of an e-mail
- Spell words with long vowel digraphs

Lesson 17: If You Made a Million: Lesson 2

Objectives:
- Use context clues to determine the meaning of multiple-meaning words
- Define and identify sentences that are commands
- Define and identify sentences that are exclamations
- Spell words with long vowel digraphs

Lesson 18: If You Made a Million: Lesson 3

Objectives:
- Distinguish a realistic story from fantasy
- Use commands and exclamations correctly in writing
- Write an e-mail that includes commands and exclamations
- Spell words with long vowel digraphs

Lesson 19: If You Made a Million: Lesson 4

Objectives:
- Examine features of a picture encyclopedia
- Compare and contrast across texts
- Become familiar with command and exclamation identification assessment on high-stakes tests
- Spell words with long vowel digraphs

Lesson 20: If You Made a Million: Lesson 5

Objectives:
• Distinguish realism from fantasy
• Define and identify sentences that are commands
• Define and identify sentences that are exclamations
• Spell words with long vowel digraphs

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 21: My Rows and Piles of Coins: Lesson 1

Objectives:
• Identify characters and setting of a story
• Define and identify compound sentences
• Identify key words in a prompt
• Focus on word choice
• Spell words with the vowel sounds in out and toy

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 22: My Rows and Piles of Coins: Lesson 2

Objectives:
• Use word structure and prefixes to determine word meaning
• Identify the literary elements of setting and character
• Describe text structure
• Identify and interpret similes
• Identify compound sentences
• Spell words with the vowel sounds in out and toy

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 23: My Rows and Piles of Coins: Lesson 3

Objectives:
• Describe text structure
• Use compound sentences correctly in writing
• Identify and interpret similes
• Write a narrative paragraph for a test
• Identify key words in a prompt
• Spell words with the vowel sounds in out and toy

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 24: My Rows and Piles of Coins: Lesson 4

Objectives:
• Examine the features of a website
• Compare and contrast across texts
• Become familiar with compound sentence identification assessment on high-stakes tests
• Focus on word choice
• Use a rubric

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 25: Unit Review

Objectives:
• Critically analyze unit theme
• Connect content across selections
• Combine content and skills in meaningful activities that build literacy
• Respond to unit selections through a variety of modalities

Lesson 26: Dollars and Sense Unit Test

Unit 2: Smart Solutions

In this unit, your student will explore the theme of how people solve problems effectively, while building on the reading and writing skills introduced in Unit 1. In addition to the
selections presented in Reading Street, your student will read a short nonfiction book, *Ben Franklin and the Magic Squares*. This unit provides thorough instruction in reading comprehension skills, such as understanding characters, determining the main idea of fiction and nonfiction selections, asking questions while reading, and drawing conclusions. The fluency and vocabulary development strategies taught in Unit 1 are reinforced throughout the unit. Your student will further develop her writing skills by composing in a variety of forms, including a story summary and a problem-solution paragraph submitted as part of her portfolio. Spelling instruction addresses new word patterns and endings, including compound words and words beginning with three-letter blends. Grammar instruction develops your student’s understanding of nouns by addressing topics such as common and proper nouns, singular and plural nouns, and possessive nouns.

Objectives:
- Read fiction and nonfiction selections in a variety of genres
- Apply reading comprehension skills and strategies before, during, and after reading
- Follow the steps of the writing process to create paragraph-length compositions in a variety of writing modes, including the expository mode
- Understand the characteristics of nouns and use nouns correctly in writing
- Apply knowledge of letter patterns and word structure to spell words correctly

**Lesson 1: Penguin Chick: Lesson 1**

Objectives:
- Identify main idea and details
- Use graphic organizers to show main ideas and details
- Identify common and proper nouns
- Identify the characteristics of a summary
- Identify the syllable pattern V/CV, VC/V

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

**Lesson 2: Penguin Chick: Lesson 2**

Objectives:
- Find synonyms in context clues to determine the meaning of unknown words
- Use common and proper nouns in writing
- Understand characteristics of a summary
- Use word parts to decode words with syllable patterns V/CV, VC/V

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

**Lesson 3: Penguin Chick: Lesson 3**

Objectives:
- Identify main idea and supporting details to improve comprehension
- Write a summary of the selection that includes all the necessary information
- Focus on organization/paragraphs

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

**Lesson 4: Penguin Chick: Lesson 4**

Objectives:
- Examine features of a photo essay
- Write a summary of the selection that includes all of the necessary information
- Use common and proper nouns in writing
- Focus on organization/paragraphs

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

**Lesson 5: Penguin Chick: Lesson 5**

Objectives:
- Read with accuracy
- Identify main idea and details

© 2016 Connections Education LLC. All rights reserved.
Lesson 6: A Day’s Work: Lesson 1

Objectives:
• Build vocabulary by finding words related to the lesson concept
• Listen and visualize
• Visualize to understand character
• Identify the characteristics of rules
• Singular and plural nouns
• Spell words that end in -le

Lesson 7: A Day’s Work: Lesson 2

Objectives:
• Use context clues to determine the meaning of unfamiliar words
• Distinguish between singular and plural nouns
• Write a list of rules without wordiness
• Find the -le pattern in new words

Lesson 8: A Day’s Work: Lesson 3

Objectives:
• Read the lesson vocabulary and apply context clues
• Apply knowledge of characterization and visualization
• Assess your knowledge of the story with a retelling
• Apply singular and plural nouns in spelling
• Spell words that end in -le

Lesson 9: A Day’s Work: Lesson 4

Objectives:
• Compare and contrast across texts
• Examine features of an e-mail
• Focus on sentences

Lesson 10: A Day’s Work: Lesson 5

Objectives:
• Apply characterization to your writing
• Spell words ending in -le

Lesson 11: Ben Franklin and the Magic Squares: Lesson 1

Objectives:
• Listen for main ideas and details
• Build vocabulary by finding words related to the lesson concept
• Recognize main idea and supporting details
• Use monitor and fix up reading comprehension to identify main ideas and details
• Identify the characteristics of a problem-solution paragraph
• Define and identify irregular plural nouns
• Spell compound words
Lesson 12: Ben Franklin and the Magic Squares: Lesson 2

Objectives:
- Use reference sources, such as dictionaries, to find the meaning of unfamiliar words
- Review the syllable pattern C + le
- Spell irregular plural nouns correctly
- Spell compound words

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 13: Ben Franklin and the Magic Squares: Lesson 3

Objectives:
- Compose a problem-solution paragraph that is clearly written
- Recognize the main idea and details
- Spell compound words

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 14: Ben Franklin and the Magic Squares: Lesson 4

Objectives:
- Compose a problem-solution paragraph that is clearly written
- Focus on organization/paragraphs
- Spell compound words

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 15: Ben Franklin and the Magic Squares: Lesson 5

Objectives:
- Identify main idea and supporting details to improve comprehension
- Define and identify irregular plural nouns
- Spell compound words

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 16: Tops and Bottoms: Lesson 1

Objectives:
- Listen for author's purpose
- Activate prior knowledge
- Make predictions about the author's purpose
- Identify the characteristics of a feature story
- Define and identify singular possessive nouns

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 17: Tops and Bottoms: Lesson 2

Objectives:
- Use context clues and antonyms to determine word meaning
- Associate consonant blends, including three-letter blends, with the letters that spell them
- Identify author's purpose to improve comprehension
- Use author's purpose to predict
- Compose a feature story with a clear purpose
- Spell singular possessive nouns correctly

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 18: Tops and Bottoms: Lesson 3

Objectives:
- Identify author's purpose to improve comprehension
- Use author's purpose to predict
- Compose a feature story with a clear purpose
- Use singular possessive nouns in writing

Appendix A.2.a Language Arts Course Guides

© 2016 Connections Education LLC. All rights reserved.
Lesson 19: Tops and Bottoms: Lesson 4

Objectives:
- Review compound words
- Apply decoding strategies: blend longer words
- Examine features of a fable
- Compare and contrast across texts
- Compose a feature story with a clear purpose
- Focus on voice
- Use singular possessive nouns in writing

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 20: Tops and Bottoms: Lesson 5

Objectives:
- Identify author’s purpose to improve comprehension
- Recognize idioms
- Use context clues and antonyms to determine word meaning
- Spell words with spl, thr, squ, and str

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 21: William’s House: Lesson 1

Objectives:
- Listen and draw conclusions
- Understand how to draw conclusions
- Ask questions to draw conclusions
- Define and identify plural possessive nouns
- Write an explanatory paragraph for a test

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 22: William’s House: Lesson 2

Objectives:
- Associate consonant digraphs with the letters that spell them
- Use context clues to determine the meaning of unfamiliar words
- Draw conclusions to improve comprehension
- Ask questions to draw conclusions

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 23: William’s House: Lesson 3

Objectives:
- Use context clues to determine the meaning of unfamiliar words
- Ask questions to draw conclusions
- Draw conclusions to improve comprehension
- Use plural possessive nouns correctly in writing

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 24: William’s House: Lesson 4

Objectives:
- Review consonant blends
- Blend and read words that contain consonant digraphs and consonant blends
- Apply decoding strategies: blend longer words
- Examine features of expository nonfiction
- Become familiar with possessive noun identification assessment on high-stakes tests

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.
Lesson 25: Unit Review

Objectives:
- Critically analyze unit theme
- Connect content across selections
- Combine content and skills in meaningful activities that build literacy
- Respond to unit selections through a variety of modalities

Lesson 26: Smart Solutions Unit Test

Unit 3: People and Nature

In this unit, your student will explore the theme of people’s relationship to the natural world. He will read a variety of selections, including a short fiction book, Miss Rumphius, fables, a play, and nonfiction articles. Reading instruction will help your student to recognize common text structures, such as texts that compare and contrast or that show causes and effects. Your student will also become a more critical reader by learning how to understand an author’s purpose and how to make generalizations based on his reading. Throughout the unit, your student will continue to practice fluency skills and vocabulary development strategies. He will gain additional confidence as a writer as he learns to compose longer works, including a descriptive journal entry and a news story submitted as part of the writing portfolio. Spelling instruction addresses contractions, prefixes and suffixes, and silent letters. Grammar instruction focuses on verbs, including action and linking verbs, helping verbs, verb tenses, and subject-verb agreement.

Objectives:
- Read fiction and nonfiction selections in a variety of genres
- Apply reading comprehension skills and strategies before, during, and after reading
- Follow the steps of the writing process to create multiple-paragraph compositions in a variety of writing modes
- Understand the characteristics of verbs and use verbs correctly in writing
- Apply knowledge of letter patterns and word structure to spell words correctly

Lesson 1: Miss Rumphius: Lesson 1

Objectives:
- Listen for cause and effect
- Identify causes and effects
- Use story structure to understand cause and effect
- Identify the characteristics of a journal entry
- Define and identify action verbs
- Define and identify linking verbs

Lesson 2: Miss Rumphius: Lesson 2

Objectives:
- Use word structure to determine the meaning of words with suffixes
- Identify cause and effect to improve comprehension
- Use text structure to recognize cause and effect
- Write a journal entry with sensory details
- Spell words with contractions correctly

Lesson 3: Miss Rumphius: Lesson 3

Objectives:
- Write a journal entry with sensory details
- Use action and linking verbs in writing
- Spell words with contractions correctly
Lesson 4: Miss Rumphius: Lesson 4

Objectives:
- Write a journal entry with sensory details
- Review consonant digraphs sh, th, wh, ph, ch, tch, ch/sh, ng
- Focus on word choice

Lesson 5: Miss Rumphius: Lesson 5

Objectives:
- Identify cause and effect to improve comprehension
- Use text structure to recognize cause and effect
- Use action and linking verbs in writing
- Spell words with contractions
- Blend and read words that contain contractions and consonant digraphs

Lesson 6: Pushing Up the Sky: Lesson 1

Objectives:
- Listen for author's purpose
- Summarize to identify author's purpose
- Activate prior knowledge
- Analyze multisyllabic words
- Identify the characteristics of a skit
- Define and identify main verbs
- Define and identify helping verbs

Lesson 7: Pushing Up the Sky: Lesson 2

Objectives:
- Use word parts to decode words with prefixes un-, re-, mis-, dis-
- Use a glossary to determine the meaning of unfamiliar words
- Identify author's purpose
- Use your own words to summarize
- Define and identify main verbs
- Define and identify helping verbs

Lesson 8: Pushing Up the Sky: Lesson 3

Objectives:
- Determine author's purpose
- Summarize to identify author's purpose
- Use your own words to summarize
- Use a glossary to determine the meaning of unfamiliar words
- Write a skit with strong verbs
- Use main and helping verbs in writing

Lesson 9: Pushing Up the Sky: Lesson 4

Objectives:
- Examine features of a myth
- Determine author's purpose
- Focus on conventions
- Use main and helping verbs in writing
Lesson 10: Pushing Up the Sky: Lesson 5

Objectives:
- Determine author's purpose
- Summarize to identify author's purpose
- Spell words with prefixes un-, re-, mis-, dis-

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 11: Night Letters: Lesson 1

Objectives:
- Listen to draw conclusions
- Draw conclusions
- Ask questions to draw conclusions
- Identify the characteristics of a friendly letter
- Define subject-verb agreement

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 12: Night Letters: Lesson 2

Objectives:
- Use word structure to determine the meaning of compound words
- Draw conclusions about the content
- Ask questions to comprehend the selection and arrive at conclusions
- Effectively and efficiently find, evaluate, and communicate information related to an inquiry question using electronic sources
- Write a friendly letter by putting ideas in order

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 13: Night Letters: Lesson 3

Objectives:
- Draw conclusions about the content
- Ask questions to comprehend the selection and arrive at conclusions
- Write a friendly letter by putting ideas in order
- Focus on conventions
- Make verbs agree with subjects in writing

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 14: Night Letters: Lesson 4

Objectives:
- Read across texts
- Examine features of poetry
- Write a friendly letter by putting ideas in order
- Focus on conventions
- Make verbs agree with subjects in writing
- Spell words with the consonant sounds /j/ and /k/

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 15: Night Letters: Lesson 5

Objectives:
- Draw conclusions about the content
- Examine features of poetry
- Spell words with consonant sounds /j/ and /k/
- Make verbs agree with subjects in writing

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 16: A Symphony of Whales: Lesson 1

Objectives:
- Listen for generalizations
Lesson 17: A Symphony of Whales: Lesson 2

Objectives:
- Use context clues to determine the meaning of unfamiliar words
- Make generalizations based on what is read
- Use generalizations to find an answer
- Use present, past, and future tenses in writing
- Identify the characteristics of a news story

Lesson 18: A Symphony of Whales: Lesson 3

Objectives:
- Make generalizations based on what is read
- Use generalizations to find an answer
- Write a news story that answers the questions who, what, where, when, why, and how
- Use present, past, and future tenses in writing

Lesson 19: A Symphony of Whales: Lesson 4

Objectives:
- Examine features of expository nonfiction
- Compare and contrast across texts
- Write a news story that answers the questions who, what, where, when, why, and how
- Focus on sentences
- Use past, present, and future tenses in writing

Lesson 20: A Symphony of Whales: Lesson 5

Objectives:
- Identify and make generalizations
- Review context clues
- Identify setting

Lesson 21: Volcanoes: Nature's Incredible Fireworks: Lesson 1

Objectives:
- Listen for similarities and differences
- Use compare and contrast
- Monitor and fix up to compare and contrast
- Define and identify irregular verbs
- Build vocabulary by finding words related to the lesson concept

Lesson 22: Volcanoes: Nature's Incredible Fireworks: Lesson 2

Objectives:
- Use a dictionary to determine the meaning of unfamiliar words
- Recognize and make comparisons
- Write a compare/contrast paragraph for a test
- Monitor understanding on an ongoing basis
- Define and identify irregular verbs
Lesson 23: Volcanoes: Nature's Incredible Fireworks: Lesson 3

Objectives:
- Recognize and make comparisons
- Monitor and understand on an ongoing basis
- Identify key words in a prompt
- Use irregular verbs in writing
- Effectively and efficiently find, evaluate, and communicate information related to an inquiry question using electronic sources

Lesson 24: Volcanoes: Nature's Incredible Fireworks: Lesson 4

Objectives:
- Review suffixes -ly, -ful, -ness, and -less
- Examine features of search engines
- Compare and contrast across texts
- Focus on word choice
- Spell words with wr, kn, mb, gn

Lesson 25: Unit Review

Objectives:
- Critically analyze unit theme
- Connect content across selections
- Combine content and skills in meaningful activities that build literacy
- Respond to unit selections through a variety of modalities

Lesson 26: People and Nature Unit Test
LANGUAGE ARTS 3 B
**Language Arts 3 B**

In this course, the student will develop an appetite for longer and more complex stories, become a more critical and insightful reader, and learn to examine the author’s purpose and point of view. The student will read daily, practicing comprehension and applying fluency skills in both fiction and nonfiction texts as she reads. Skills and strategies for reading comprehension and vocabulary development are introduced in the context of brief reading selections presented in Scott Foresman’s *Reading Street*. The student then has the opportunity to practice these skills while reading longer selections in a variety of fiction and nonfiction genres. The selections are organized according to theme. These themes invite the student to view reading as a tool for information gathering, and the themes help the student make connections between the texts. In addition to formal reading instruction, the student will establish a daily reading routine. Students also read and respond to a novel, Beverly Cleary’s *The Mouse and the Motorcycle*, as part of the final unit in Language Arts 3 B.

Throughout the course, the student will also develop writing skills. This course reinforces the basics of writing. The student will learn to structure and write complete sentences and then create paragraphs and longer compositions. After learning the five stages of the writing process—prewriting, drafting, revising, editing, and publishing—the student will master this process through weekly writing assignments. The student will also write for different purposes and use a variety of writing forms, including letters, narrative and expository compositions, research reports, poems, and summaries. Additionally, writing instruction introduces students to the essential traits of good writing: focus and idea development, organization, voice, effective word choice and sentences, and the use of standard writing conventions. Over time, the student will build a portfolio of writing assignments.

Instruction in grammar and language usage is reinforced in the meaningful context of writing lessons. The student will continue to master the basic skills of writing with instruction in spelling, grammar, language usage, and handwriting. *Reading Street* offers weekly spelling lists based on the patterns and relationships of letters within words. Daily practice activities reinforce the spelling strategies and give the student opportunities to use spelling words in context. Cursive handwriting is introduced and instructed with the Zaner-Bloser *Handwriting* workbook. The student will review manuscript writing before learning the basic strokes of cursive handwriting.

**Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.**

**Unit 1: One of a Kind**

In this unit, your student will explore the theme of uniqueness. He will read a variety of selections, including biographies, fantasy stories, folktales, and expository articles. Reading instruction will further develop your student’s understanding of story elements—such as plot and theme—and common text structures, such as texts that compare and contrast, or that show causes and effects. Your student will practice critical reading by learning how to make generalizations, and distinguish between facts and opinions in a text. Throughout the unit, your student will continue to practice fluency skills and vocabulary development strategies. His confidence as a writer will grow as he learns to write in different genres, including poetry and memoirs. He will write a sample of each to be submitted as part of the writing portfolio. Spelling instruction addresses irregular plurals, prefixes and suffixes, and vowel and consonant patterns. Grammar instruction focuses on pronouns, contractions, and prepositions.

**Objectives:**
- Read fiction and nonfiction selections in a variety of genres
- Apply reading comprehension skills and strategies before, during, and after reading
- Follow the steps of the writing process to create compositions in a variety of writing modes, including prose and poetry
- Understand the characteristics of pronouns, contractions, and prepositions and use them correctly in writing
- Apply knowledge of letter patterns and word structure to spell words correctly

**Lesson 1: Wings: Lesson 1 🌈**

**Objectives:**
- Listen for cause and effect relationships
Lesson 2: Wings: Lesson 2

Objectives:
- Use word structure to determine the meaning of words with the -ing ending
- Identify cause and effect
- Use cause and effect to answer questions
- Use singular and plural pronouns in writing
- Identify characteristics of a poem
- Correctly spell plurals formed in irregular ways

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 3: Wings: Lesson 3

Objectives:
- Use word structure to determine the meaning of words with the -ing ending
- Identify cause and effect
- Use cause and effect to answer questions
- Use singular and plural pronouns in writing
- Write a poem with vivid words
- Correctly spell plurals formed in irregular ways

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 4: Wings: Lesson 4

Objectives:
- Examine features of a fairy tale
- Compare and contrast across texts
- Use singular and plural pronouns in writing
- Write a poem with vivid words
- Focus on organization/paragraphs
- Correctly spell plurals formed in irregular ways

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 5: Wings: Lesson 5

Objectives:
- Use word structure to determine the meaning of words with the -ing ending
- Identify cause and effect
- Use cause and effect to answer questions
- Use singular and plural pronouns in writing
- Correctly spell plurals formed in irregular ways

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 6: Hottest, Coldest, Highest, Deepest: Lesson 1

Objectives:
- Listen for comparisons and contrasts between animals and animal records
- Understand compare and contrast
- Ask questions to understand and to make comparisons and contrasts
- Define and identify subject and object pronouns
- Identify the characteristics of a description
- Identify and spell the different forms of the vowel sound /er/

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.
Lesson 7: Hottest, Coldest, Highest, Deepest: Lesson 2

Objectives:
- Use word structure to determine the meaning of compound words
- Compare and contrast to aid comprehension
- Use text features to locate information in a selection
- Ask questions that compare and contrast information
- Use subject and object pronouns in writing
- Write a description of a setting using an engaging style

Lesson 8: Hottest, Coldest, Highest, Deepest: Lesson 3

Objectives:
- Use word structure to determine the meaning of compound words
- Compare and contrast to aid comprehension
- Ask questions that compare and contrast information
- Use subject and object pronouns in writing
- Write a description of a setting using an engaging style
- Identify and spell the different forms of the vowel sound /er/

Lesson 9: Hottest, Coldest, Highest, Deepest: Lesson 4

Objectives:
- Examine features of a picture encyclopedia
- Compare and contrast across texts
- Use subject and object pronouns in writing
- Write a description of a setting using an engaging style
- Focus on word choice
- Identify and spell the different forms of the vowel sound /er/

Lesson 10: Hottest, Coldest, Highest, Deepest: Lesson 5

Objectives:
- Use word structure to determine the meaning of compound words
- Compare and contrast to aid comprehension
- Effectively and efficiently find, evaluate, and communicate information related to an inquiry question using electronic sources
- Use subject and object pronouns in writing
- Identify and spell the different forms of the vowel sound /er/

Lesson 11: Rocks in His Head: Lesson 1

Objectives:
- Listen for generalizations
- Identify and make generalizations
- Use prior knowledge to make generalizations
- Identify the characteristics of a memoir
- Define and identify possessive pronouns

Lesson 12: Rocks in His Head: Lesson 2

Objectives:
- Use context clues to determine word meaning for multiple-meaning words
- Identify and make generalizations
- Activate and use prior knowledge to make generalizations
Lesson 13: Rocks in His Head: Lesson 3

Objectives:
- Use context clues to determine word meaning for multiple-meaning words
- Identify and make generalizations
- Activate and use prior knowledge to make generalizations
- Use possessive pronouns in writing
- Write a memoir with features that get your reader's attention
- Identify and spell words using prefixes that do not change the base word's spelling

Lesson 14: Rocks in His Head: Lesson 4

Objectives:
- Examine features of poetry
- Compare and contrast across texts
- Write a memoir with features that get your reader's attention
- Focus on sentences
- Use possessive pronouns in writing
- Identify and spell words using prefixes that do not change the base word's spelling

Lesson 15: Rocks in His Head: Lesson 5

Objectives:
- Identify and make generalizations
- Activate and use prior knowledge to make generalizations
- Use possessive pronouns in writing
- Identify and spell words using prefixes that do not change the base word's spelling

Lesson 16: America's Champion Swimmer: Gertrude Ederle: 1

Objectives:
- Listen for facts and opinions
- Recognize facts and opinions
- Monitor and fix up comprehension to differentiate between facts and opinions
- Identify the characteristics of describing a goal
- Define and identify contractions
- Identify and spell words that use suffixes that often refer to people

Lesson 17: America's Champion Swimmer: Gertrude Ederle: 2

Objectives:
- Use context clues to determine the meaning of multiple-meaning words
- Identify fact and opinion to improve comprehension
- Use fact and opinion to monitor and fix up
- Use contractions in writing
- Identify and spell words that use suffixes that often refer to people
Lesson 18: America's Champion Swimmer: Gertrude Ederle: 3

Objectives:
- Use context clues to determine the meaning of multiple-meaning words
- Identify fact and opinion to improve comprehension
- Use fact and opinion to monitor and fix up
- Use contractions in writing
- Conduct research to answer questions about a career
- Describe a goal using effective supporting details
- Identify and spell words that use suffixes that often refer to people

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 19: America's Champion Swimmer: Gertrude Ederle: 4

Objectives:
- Examine features of online directories
- Compare and contrast across texts
- Describe a goal using effective supporting details
- Focus on voice
- Use contractions in writing
- Identify and spell words that use suffixes that often refer to people

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 20: America's Champion Swimmer: Gertrude Ederle: 5

Objectives:
- Use context clues to determine the meaning of multiple-meaning words
- Identify fact and opinion to improve comprehension
- Use contractions in writing
- Identify and spell words that use suffixes that often refer to people

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 21: Fly, Eagle, Fly!: Lesson 1

Objectives:
- Listen for plot and theme
- Identify plot and theme
- Use graphic organizers to understand plot and theme
- Define and identify prepositions
- Spell and identify where to divide words with the VCCCV syllable pattern

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 22: Fly, Eagle, Fly!: Lesson 2

Objectives:
- Use word structure to determine the meaning of words with suffixes
- Identify plot and theme to improve comprehension
- Use graphic organizers to understand plot and theme
- Use prepositions in writing
- Spell and identify where to divide words with the VCCCV syllable pattern

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 23: Fly, Eagle, Fly!: Lesson 3

Objectives:
- Use word structure to determine the meaning of words with suffixes
- Identify plot and theme to improve comprehension
- Use graphic organizers to understand plot and theme
- Use prepositions in writing
- Formulate an inquiry question
- Spell and identify where to divide words with the VCCCV syllable pattern

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.
Lesson 24: Fly, Eagle, Fly!: Lesson 4

Objectives:
- Examine features of a fantasy
- Compare and contrast across texts
- Use prepositions in writing
- Focus on word choice
- Spell and identify where to divide words with the VCCCV syllable pattern

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 25: One of a Kind: Unit Review

Objectives:
- Critically analyze unit theme
- Connect content across selections
- Combine content and skills in meaningful activities that build literacy
- Respond to unit selections through a variety of modalities

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 26: One of a Kind Unit Test

Unit 2: Cultures

In this unit, your student will explore the theme of cultures. She will read a variety of selections, including realistic and narrative fiction. Reading instruction will further develop your student’s understanding of story elements—such as sequence—and common text structures, such as texts that compare and contrast. Your student will practice critical reading by learning how to draw conclusions, determine the author’s purpose, and distinguish between facts and opinions in a text. Throughout the unit, your student will continue to practice fluency skills and vocabulary development strategies. Her confidence as a writer will grow as she learns to write in different genres, including an editorial and a story review. She will write an opinion essay to submit as part of the writing portfolio. Spelling instruction addresses syllables, homophones, the vowel sound in ball, and suffixes. Grammar instruction focuses on adjectives, adverbs, and conjunctions.

Objectives:
- Read fiction selections to expand knowledge of other cultures
- Apply reading comprehension strategies before, during, and after reading
- Follow the steps in the writing process to create compositions including an advertisement and opinion piece
- Understand the characteristics of adjectives, articles, adverbs, and conjunctions
- Apply knowledge of letter patterns and word structure to spell words correctly

Lesson 1: Suki’s Kimono: Lesson 1

Objectives:
- Listen to compare and contrast details
- Understand how to compare and contrast
- Make predictions to aid comprehension of comparisons and contrasts
- Identify the characteristics of an editorial
- Define and identify adjectives
- Define and identify articles
- Spell words with the CVVC or CVV patterns

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 2: Suki’s Kimono: Lesson 2

Objectives:
- Use context clues to determine the meaning of words that have synonyms
- Compare and contrast information to improve comprehension
- Use information gained by comparing and contrasting to predict
- Use adjectives and articles in writing
- Spell words with the CVVC or CVV patterns

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.
Lesson 3: Suki’s Kimono: Lesson 3

Objectives:
- Use context clues to determine the meaning of words that have synonyms
- Compare and contrast information to improve comprehension
- Use information gained by comparing and contrasting to predict
- Write an editorial using strong adjectives
- Use adjectives and articles in writing
- Spell words with the CVVC or CVV patterns

Lesson 4: Suki’s Kimono: Lesson 4

Objectives:
- Examine features of expository nonfiction
- Compare and contrast across texts
- Write an editorial using strong adjectives
- Focus on focus/ideas
- Use adjectives and articles in writing
- Spell words with the CVVC or CVV patterns

Lesson 5: Suki’s Kimono: Lesson 5

Objectives:
- Use context clues to determine the meaning of words that have synonyms
- Compare and contrast information to improve comprehension
- Use adjectives and articles in writing
- Spell words with the CVVC or CVV patterns

Lesson 6: How My Family Lives in America: Lesson 1

Objectives:
- Listen for both facts and opinions
- Distinguish between fact and opinion
- Understand text structure
- Define and identify the comparative and superlative forms of adjectives
- Identify the characteristics of writing your opinion
- Identify and spell words that sound alike but have different spellings and meanings

Lesson 7: How My Family Lives in America: Lesson 2

Objectives:
- Use antonyms as context clues to determine word meaning
- Identify facts and opinions to improve comprehension
- Recognize how facts and opinions are used within the text structure
- Use comparative and superlative adjective forms in writing
- Identify and spell words that sound alike but have different spellings and meanings

Lesson 8: How My Family Lives in America: Lesson 3

Objectives:
- Use antonyms as context clues to determine word meaning
- Identify facts and opinions to improve comprehension
• Recognize how facts and opinions are used within the text structure
• Use comparative and superlative adjective forms in writing
• Write an opinion using persuasive words
• Identify and spell words that sound alike but have different spellings and meanings

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 9: How My Family Lives in America: Lesson 4

Objectives:
• Examine features of a textbook
• Compare and contrast across texts
• Write an opinion using persuasive words
• Focus on sentences
• Use comparative and superlative adjective forms in writing
• Identify and spell words that sound alike but have different spellings and meanings

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Objectives:
• Use antonyms as context clues to determine word meaning
• Identify facts and opinions to improve comprehension
• Recognize how facts and opinions are used within the text structure
• Use comparative and superlative adjective forms in writing
• Effectively and efficiently find, evaluate, and communicate information related to an inquiry question using electronic sources
• Identify and spell words that sound alike but have different spellings and meanings

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 11: Good-Bye, 382 Shin Dang Dong: Lesson 1

Objectives:
• Listen for sequence of events
• Understand sequence in a story
• Read on to understand sequence in a story
• Identify the characteristics of an ad
• Define and identify adverbs
• Spell with the vowel sound in ball

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 12: Good-Bye, 382 Shin Dang Dong: Lesson 2

Objectives:
• Use word structure to determine the meaning of compound words
• Identify sequence of events to improve comprehension
• Recognize how following sequence of story events helps you monitor your comprehension and identify when to take steps to improve it
• Use adverbs in writing
• Spell with the vowel sound in ball

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 13: Good-Bye, 382 Shin Dang Dong: Lesson 3

Objectives:
• Use word structure to determine the meaning of compound words
• Identify sequence of events to improve comprehension
• Recognize how following sequence of story events helps you monitor your comprehension and identify when to take steps to improve it
• Use adverbs in writing
• Write an ad using reasons to persuade
Lesson 14: Good-Bye, 382 Shin Dang Dong: Lesson 4

Objectives:
- Examine features of a song
- Compare and contrast across texts
- Write an ad using reasons to persuade
- Use adverbs in writing
- Focus on word choice
- Spell with the vowel sound in ball

Lesson 15: Good-Bye, 382 Shin Dang Dong: Lesson 5

Objectives:
- Identify sequence of events to improve comprehension
- Use word structure to determine the meaning of compound words
- Use adverbs in writing
- Spell with the vowel sound in ball

Lesson 16: Jalapeño Bagels: Lesson 1

Objectives:
- Listen to draw conclusions and make inferences
- Draw conclusions about facts and details in a selection
- Summarize main ideas to draw conclusions
- Identify the characteristics of answering a question
- Define and identify adverbs that compare
- Identify and spell more of the different forms of the vowel sound in ball

Lesson 17: Jalapeño Bagels: Lesson 2

Objectives:
- Use context clues to define unfamiliar words
- Use information from the text to draw conclusions
- Use the conclusions you have drawn from the text to summarize it
- Answer a question, putting reasons in order
- Use adverbs that compare in writing
- Identify and spell more of the different forms of the vowel sound in ball

Lesson 18: Jalapeño Bagels: Lesson 3

Objectives:
- Use context clues to define unfamiliar words
- Use information from the text to draw conclusions
- Use the conclusions you have drawn from a text to summarize it
- Use adverbs that compare in writing
- Answer a question, putting reasons in order
- Effectively and efficiently find, evaluate, and communicate information related to an inquiry question using electronic sources
- Identify and spell more of the different forms of the vowel sound in ball

Lesson 19: Jalapeño Bagels: Lesson 4

Objectives:
- Examine features of expository nonfiction
Lesson 20: Jalapeño Bagels: Lesson 5

Objectives:
• Use context clues to define unfamiliar words
• Use adverbs that compare in writing
• Answer a question, putting reasons in order
• Identify and spell more of the different forms of the vowel sound in ball

Lesson 21: Me and Uncle Romie: Lesson 1

Objectives:
• Listen for clues about author’s purpose
• Understand author’s purpose
• Activate prior knowledge about a topic to understand author’s purpose
• Identify the characteristics of a story review

Lesson 22: Me and Uncle Romie: Lesson 2

Objectives:
• Use context clues to determine word meaning of homonyms
• Identify the author’s purpose in writing the story
• Understand how the author uses the reader’s prior knowledge about something to accomplish his or her purpose for writing the story
• Define and identify conjunctions
• Use conjunctions in writing
• Identify the characteristics of a story review
• Spell words with suffixes -y, -ish, -hood, -ment

Lesson 23: Me and Uncle Romie: Lesson 3

Objectives:
• Identify the author’s purpose in writing the story
• Understand how the author uses the reader’s prior knowledge about something to accomplish his or her purpose for writing the story
• Use conjunctions in writing
• Write a story review, keeping the audience in mind
• Spell words with suffixes -y, -ish, -hood, -ment

Lesson 24: Me and Uncle Romie: Lesson 4

Objectives:
• Examine features of online reference sources
• Compare and contrast across texts
• Focus on conventions
• Use a rubric
• Become familiar with conjunction assessment on high-stakes tests
• Review spelling words with suffixes -y, -ish, -hood, -ment

Lesson 25: Cultures: Unit Review
Objectives:
• Critically analyze unit theme
• Connect content across selections
• Combine content and skills in meaningful activities that build literacy
• Respond to unit selections through a variety of modalities

Objectives derived from Pearson Education, Inc. © Pearson Education, Inc., publishing as Pearson Prentice Hall. All rights reserved.

Lesson 26: Cultures Unit Test

Unit 3: Freedom

In this unit, your student will explore the theme of freedom. He will read a variety of fiction and nonfiction selections, including narrative nonfiction, a photo essay, a fantasy story, and a novel. Reading instruction in the first half of this unit will further develop your student’s understanding of story elements, such as plot and theme, and common text structures, such as texts organized with a main idea and details. Your student will also become a more critical reader by learning how to distinguish between facts and opinions in a text.

In the second half of this unit, your student will read the novel The Mouse and the Motorcycle by Beverly Cleary. The Mouse and the Motorcycle tells the story of a young mouse named Ralph who lives in a hotel. One day, upon noticing that a boy left his toy motorcycle behind, Ralph decides to take a ride—a decision that leads to many adventures. This exciting story provides your student with the opportunity to apply previously learned reading skills to longer works while also enhancing his understanding of story elements. As your student reads The Mouse and the Motorcycle, he will identify literary elements, analyze characters, and use comprehension strategies to make connections and draw conclusions.

Throughout the unit, your student will continue to practice fluency skills and vocabulary development strategies. He will refine his writing skills as he writes in different genres, including an informative and a descriptive paragraph submitted as part of the writing portfolio. Spelling instruction addresses vowel sounds, suffixes, and multisyllabic words. Grammar instruction addresses capitalization, commas, and ways to combine sentences.

Objectives:
• Read fiction and nonfiction selections in a variety of genres
• Apply reading comprehension skills and strategies before, during, and after reading
• Follow the steps of the writing process to create compositions in a variety of writing modes, including taking notes and writing good paragraphs
• Understand the characteristics of capital letters, commas, and sentences
• Apply knowledge of letter patterns and word structure to spell words correctly

Lesson 1: The Story of the Statue of Liberty: Lesson 1

Objectives:
• Listen for the main idea and important details
• Determine main idea and identify details
• Use text structure to identify main idea
• Define and identify capital letters
• Identify the characteristics of taking notes
• Spell words with the vowel sounds in tooth and cook

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 2: The Story of the Statue of Liberty: Lesson 2

Objectives:
• Use word structure to determine the meaning of words with prefixes
• Identify main idea and supporting details to improve comprehension
• Use text structure to help determine main idea
• Define and identify capital letters
• Use capital letters in writing
• Spell words with the vowel sounds in tooth and cook

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 3: The Story of the Statue of Liberty: Lesson 3

Objectives:
• Identify main idea and supporting details to improve comprehension
• Use text structure to help determine main idea
• Use capital letters in writing
• Identify the characteristics of taking notes
• Take notes on factual material and paraphrase the facts in the notes
• Effectively and efficiently find, evaluate, and communicate information related to an inquiry question using electronic sources
• Spell words with vowel sounds in tooth and cook

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 4: The Story of the Statue of Liberty: Lesson 4

Objectives:
• Examine features of a textbook
• Compare and contrast across texts
• Use capital letters in writing
• Focus on focus/ideas
• Spell words with the vowel sounds in tooth and cook

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 5: The Story of the Statue of Liberty: Lesson 5

Objectives:
• Review main ideas and supporting details
• Use capital letters in writing
• Spell words with the vowel sounds in tooth and cook

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 6: Talking Walls: Art for the People: Lesson 1

Objectives:
• Listen for statements of fact and opinion
• Distinguish between statements of fact and opinion
• Use facts to answer questions
• Define combining sentences
• Identify and spell words with the syllable patterns -tion, -sion, and -ture

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 7: Talking Walls: Art for the People: Lesson 2

Objectives:
• Use a glossary to define unfamiliar words
• Distinguish between fact and opinion to improve comprehension
• Answer questions to distinguish between fact and opinion
• Use sentence combining in writing
• Write an informational paragraph with a topic sentence
• Identify and spell words with the syllable patterns -tion, -sion, and -ture

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 8: Talking Walls: Art for the People: Lesson 3

Objectives:
• Use a glossary to define unfamiliar words
• Distinguish between fact and opinion to improve comprehension
• Answer questions to distinguish between fact and opinion
• Write an informational paragraph with a topic sentence
• Use sentence combining in writing
• Identify and spell words with the syllable patterns -tion, -sion, and -ture

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 9: Talking Walls: Art for the People: Lesson 4

Objectives:
Objectives:
- Examine features of a poem
- Compare and contrast across texts
- Write an informational paragraph with a topic sentence
- Focus on organization/paragraphs
- Use sentence combining in writing
- Identify and spell words with the syllable patterns -tion, -sion, and -ture

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 10: Talking Walls: Art for the People: Lesson 5

Objectives:
- Distinguish between fact and opinion to improve comprehension
- Answer questions to distinguish between fact and opinion
- Use sentence combining in writing
- Identify and spell words with the syllable patterns -tion, -sion, and -ture

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 11: Two Bad Ants: Lesson 1

Objectives:
- Listen for the story's plot and theme
- Identify a story's plot and theme
- Visualize plot events to improve comprehension
- Identify the characteristics of writing about a picture
- Define and identify commas
- Spell multisyllabic words

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 12: Two Bad Ants: Lesson 2

Objectives:
- Use word structure to determine the meaning of words with prefixes and suffixes
- Identify plot sequence to improve comprehension
- Use the visualizing strategy to understand plot sequence
- Use commas in writing
- Write about a picture by elaborating on its features
- Spell multisyllabic words

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 13: Two Bad Ants: Lesson 3

Objectives:
- Use word structure to determine the meaning of words with prefixes and suffixes
- Identify plot sequence to improve comprehension
- Use the visualizing strategy to understand plot sequence
- Write about a picture by elaborating on its features
- Use commas in writing
- Spell multisyllabic words

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 14: Two Bad Ants: Lesson 4

Objectives:
- Evaluate online sources
- Compare and contrast across texts
- Write about a picture by elaborating on its features
- Focus on word choice
- Spell multisyllabic words

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.
Lesson 15: Two Bad Ants: Lesson 5

Objectives:
- Identify plot sequence to improve comprehension
- Use commas in writing
- Spell multisyllabic words

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 16: Setting Background: The Mouse and the Motorcycle

Objectives:
- Understand the events of the story
- Discuss how the main character, Ralph Mouse, takes on human characteristics
- Read text that has elements of fantasy

Lesson 17: The Mouse and the Motorcycle: Chapters 1–2

Objectives:
- Review the elements of fiction
- Develop and apply effective comprehension strategies
- Read and analyze the text, then respond to questions
- Draw conclusions
- Define new vocabulary and identify words in context
- Compose a narrative based on real-life experiences

Lesson 18: The Mouse and the Motorcycle: Chapters 3–4

Objectives:
- Preview and make predictions
- Read the text, then respond to questions
- Compare your predictions with the actual events
- Define new vocabulary and identify words in context

Lesson 19: The Mouse and the Motorcycle: Chapters 5–6

Objectives:
- Read and analyze the text, then respond to questions
- Define new vocabulary and identify words in context
- Identify the sequence of events for the two chapters

Lesson 20: The Mouse and the Motorcycle: Chapters 7–8

Objectives:
- Read and analyze the text, then respond to questions
- Define new vocabulary and identify words in context
- Learn about cause-and-effect relationships in stories

Lesson 21: The Mouse and the Motorcycle: Chapters 9–10

Objectives:
- Read and analyze the text, then respond to questions
- Define new vocabulary and identify words in context
- Enrich reading through visualization
- Compare and contrast characters

Lesson 22: The Mouse and the Motorcycle: Chapter 11

Objectives:
- Read and analyze the text, then respond to questions
- Define new vocabulary and identify words in context
- Analyze how the author uses dialogue to convey meaning to the reader

Lesson 23: The Mouse and the Motorcycle: Chapters 12–13
Determine how the actions of the main characters lead to solving the problem in the story

Lesson 24: The Mouse and the Motorcycle: Review

Objectives:
- Study vocabulary and review previous lesson goals

Lesson 25: The Mouse and the Motorcycle: Test
LANGUAGE ARTS 4 A
Language Arts 4 A

In this course, the student will read stories that provide him with the opportunity to use his imagination to travel to exotic places and meet interesting people. The student will become a more critical and insightful reader, and learn to examine the author’s purpose and point of view. The student will read daily, practicing comprehension and fluency skills as he reads. Skills and strategies for reading comprehension and vocabulary development are presented in the context of brief reading selections presented in Scott Foresman’s *Reading Street*. The student then has the opportunity to practice these skills while reading longer selections in a variety of fiction and nonfiction genres. The selections are organized according to themes, including diverse regions in the United States, work and play, and patterns in nature. These themes invite the student to view reading as a tool for information gathering, and the themes help the student make connections across science and social studies. In addition to formal reading instruction, the student will establish a daily reading routine and practice speaking and listening skills.

Throughout the course, the student will continue to develop his writing and grammar skills. This course reinforces the basics of writing, including the five-stage writing process: prewriting, drafting, revising, editing, and publishing. The student will master this process through weekly writing assignments. The student will also write for different purposes and use a variety of writing forms, including creative, factual, descriptive, artistic, and persuasive compositions. Additionally, writing instruction develops the student's understanding of the essential traits of good writing: focus and idea development, organization, voice, effective word choice and sentences, and the use of standard writing conventions. Over time, the student will build a portfolio of written work.

Instruction in grammar and language usage is reinforced in the meaningful context of writing lessons. The student will continue to master the basic skills of writing with instruction in spelling, grammar, and language usage. *Reading Street* offers weekly spelling lists based on the patterns and relationship of letters within words. Daily practice activities reinforce the spelling strategies and give the student opportunities to use spelling words in context.

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Unit 1: This Land is Your Land

In this unit, your student will explore the theme of diversity in the United States while learning essential reading and writing skills. The reading selections encompass several genres, including historical fiction, a modern fairy tale, realistic fiction, and articles. Your student will learn and practice reading comprehension skills, such as previewing a text, connecting reading to prior knowledge, finding the author's purpose and main idea, understanding sequence and story structure. Reading instruction also addresses fluency skills, such as reading with correct phrasing and volume, and vocabulary development strategies, such as understanding word structure, using context clues, and referring to a dictionary. Additionally, your student will learn the steps of the writing process and apply them in weekly writing assignments, which culminate in a narrative that is submitted as the first assignment for his writing portfolio. Writing models, graphic organizers, and checklists for drafting and revising are provided as support. Finally, your student will receive weekly spelling instruction, which focuses on understanding long and short vowel patterns, as well as grammar instruction in using complete sentences and understanding different sentence types.

Objectives:
- Read fiction and nonfiction selections in a variety of genres
- Apply reading comprehension skills and strategies before, during, and after reading
- Learn and follow the steps of the writing process to create compositions in a variety of writing modes
- Understand and use different sentence types correctly in writing
- Apply knowledge of letter patterns and word structure to spell words correctly

Lesson 1: Because of Winn-Dixie: Lesson 1

Objectives:
- Listen for a sequence of events
- Determine a sequence of events
Lesson 2: Because of Winn-Dixie: Lesson 2

Objectives:
- Use word structure to determine word meaning
- Recognize sequence to improve comprehension
- Use sequence to summarize
- Identify qualities of a memoir
- Define and identify declarative sentences
- Define and identify interrogative sentences
- Spell short vowel words with the VCCV pattern

Lesson 3: Because of Winn-Dixie: Lesson 3

Objectives:
- Use word structure to determine word meaning
- Recognize sequence to improve comprehension
- Use sequence to summarize
- Identify and understand idioms
- Write a memoir with a distinctive voice or tone
- Use declarative and interrogative sentences correctly in writing
- Spell short vowel words with the VCCV pattern

Lesson 4: Because of Winn-Dixie: Lesson 4

Objectives:
- Examine features of expository nonfiction
- Compare and contrast across texts
- Write a memoir with a distinctive voice or tone
- Focus on word choice
- Spell short vowel words with the VCCV pattern

Lesson 5: Because of Winn-Dixie: Lesson 5

Objectives:
- Define and identify declarative sentences
- Define and identify interrogative sentences
- Use declarative and interrogative sentences correctly in writing
- Practice a test-taking strategy

Lesson 6: Lewis and Clark and Me: Lesson 1

Objectives:
- Listen for the author’s purpose
- Determine the author’s purpose
- Use strategies to answer questions about the author’s purpose
- Define and identify imperative and exclamatory sentences
- Identify qualities of a journal entry
- Spell words with long a and i

Lesson 7: Lewis and Clark and Me: Lesson 2
Objectives:
- Evaluate author's purpose to improve comprehension
- Answer questions to identify and analyze author's purpose
- Use word structure to determine word meaning
- Define and identify imperative and exclamatory sentences
- Distinguish between exclamatory sentences and interjections
- Spell words with long a and i

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 8: Lewis and Clark and Me: Lesson 3

Objectives:
- Evaluate author's purpose to improve comprehension
- Answer questions to identify and analyze author's purpose
- Use imperative and exclamatory sentences correctly in writing
- Write a journal entry with effective transitions
- Spell words with long a and i

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 9: Lewis and Clark and Me: Lesson 4

Objectives:
- Examine features of narrative nonfiction
- Compare and contrast across texts
- Write a journal entry with effective transitions
- Focus on sentences
- Use imperative and exclamatory sentences effectively in writing
- Spell words with long a and i

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 10: Lewis and Clark and Me: Lesson 5

Objectives:
- Determine the author's purpose for writing
- Evaluate author's purpose to improve comprehension
- Define and identify imperative and exclamatory sentences
- Use imperative and exclamatory sentences correctly in writing
- Spell words with long a and i

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 11: Grandfather's Journey: Lesson 1

Objectives:
- Listen for sequence
- Define and identify subjects and predicates
- Distinguish between complete and simple subjects and predicates
- Identify qualities of a postcard
- Spell words with long e and o

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 12: Grandfather's Journey: Lesson 2

Objectives:
- Use a dictionary or glossary to determine word meaning
- Identify sequence of events to improve comprehension
- Spell words with long e and long o
- Define and identify subjects and predicates
- Distinguish between complete and simple subjects and predicates

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 13: Grandfather's Journey: Lesson 3
Objectives:
- Identify sequence of events to improve comprehension
- Write a postcard with events in sequence
- Use subjects and predicates correctly in writing
- Spell words with long e and long o

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 14: Grandfather's Journey: Lesson 4

Objectives:
- Examine the features of online reference sources
- Compare and contrast across texts
- Write a postcard with events in sequence
- Focus on voice
- Use subjects and predicates correctly in writing
- Spell words with long e and long o

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 15: Grandfather's Journey: Lesson 5

Objectives:
- Define and identify subjects and predicates
- Distinguish between complete and simple subjects and predicates
- Spell words with long e and o

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 16: The Horned Toad Prince: Lesson 1

Objectives:
- Identify qualities of an e-mail invitation
- Build vocabulary by finding words related to the lesson concept
- Listen for author's purpose
- Define and identify compound sentences
- Spell words that end with the long e

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 17: The Horned Toad Prince: Lesson 2

Objectives:
- Determine writer's purpose
- Identify author's purpose to improve comprehension
- Identify qualities of an e-mail invitation
- Distinguish between simple sentences and compound sentences

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 18: The Horned Toad Prince: Lesson 3

Objectives:
- Identify author's purpose to improve comprehension
- Use story structure to determine author's purpose
- Write an e-mail invitation with a clear purpose
- Use compound sentences correctly in writing
- Spell words that end with the long e

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 19: The Horned Toad Prince: Lesson 4

Objectives:
- Examine features of expository nonfiction
- Write an e-mail invitation with a clear purpose
- Focus on focus/ideas
- Use compound sentences correctly in writing
Lesson 20: The Horned Toad Prince: Lesson 5

Objectives:
- Use context clues to determine word meaning
- Identify author's purpose to improve comprehension
- Use story structure to determine author's purpose
- Distinguish between simple sentences and compound sentences
- Spell words with the long e

Lesson 21: Letters Home from Yosemite: Lesson 1

Objectives:
- Listen for main ideas and details
- Determine main idea and supporting details
- Use a graphic organizer to determine main ideas and supporting details
- Define and identify clauses and complex sentences
- Distinguish between dependent clauses and independent clauses
- Spell words with long u sounds

Lesson 22: Letters Home from Yosemite: Lesson 2

Objectives:
- Identify main idea and supporting details to improve comprehension
- Use a graphic organizer to record main idea and supporting details
- Use word structure to determine meaning
- Define and identify clauses and complex sentences
- Distinguish between dependent clauses and independent clauses
- Spell words with long u sounds

Lesson 23: Letters Home from Yosemite: Lesson 3

Objectives:
- Identify main idea and supporting details to improve comprehension
- Use word structure to determine meaning
- Write a narrative for a test
- Use clauses and complex sentences correctly in writing
- Spell words with long u sounds

Lesson 24: Letters Home from Yosemite: Lesson 4

Objectives:
- Examine features of a song
- Write a narrative for a test
- Focus on conventions
- Use clauses and complex sentences correctly in writing
- Spell words with long u sounds

Lesson 25: Unit Review

Objectives:
- Critically analyze unit theme
- Connect content across selections
- Combine content and skills in meaningful activities that build literacy
- Respond to unit selections through a variety of modalities
Lesson 26: This Land is Your Land Unit Test

Unit 2: Work and Play

In this unit, your student will explore the theme of work and play, while building on the reading and writing skills introduced in Unit 1. This unit provides thorough instruction in reading comprehension skills, such as understanding causes and effects, drawing conclusions, distinguishing between facts and opinions, asking questions while reading, and monitoring one’s own understanding. The fluency and vocabulary development strategies taught in Unit 1 are reinforced throughout the unit. Your student will further develop her writing skills by composing in a variety of forms, including a news story and a job description submitted as part of her portfolio. Spelling instruction addresses new word patterns and endings, including regular and irregular plurals, and words with r-controlled vowels. Grammar instruction develops your student's understanding of nouns by addressing topics such as common and proper nouns, singular and plural nouns, and possessive nouns.

Objectives:
- Read fiction and nonfiction selections in a variety of genres
- Apply reading comprehension skills and strategies before, during, and after reading
- Learn and follow the steps of the writing process to create compositions in a variety of writing modes, including the expository mode
- Understand the characteristics of nouns and use nouns correctly in writing
- Apply knowledge of letter patterns and word structure to spell words correctly

Lesson 1: What Jo Did: Lesson 1

Objectives:
- Identify cause and effect relationships to improve comprehension
- Use prior knowledge to understand cause and effect relationships
- Spell plural words by adding -s or -es
- Build vocabulary by finding words related to the lesson concept

Lesson 2: What Jo Did: Lesson 2

Objectives:
- Identify cause and effect relationships to improve comprehension
- Use prior knowledge to determine cause-effect relationships
- Identify qualities of a poem
- Define and identify common and proper nouns

Lesson 3: What Jo Did: Lesson 3

Objectives:
- Identify cause and effect relationships to improve comprehension
- Define and identify common and proper nouns
- Build vocabulary by finding words related to the lesson concept
- Identify qualities of a poem
- Write a poem using figurative language

Lesson 4: What Jo Did: Lesson 4

Objectives:
- Identify cause-and-effect relationships to improve comprehension
- Define and identify common and proper nouns
- Write a poem using figurative language
- Focus on word choice
- Use common and proper nouns correctly in writing
Lesson 5: What Jo Did: Lesson 5

Objectives:
• Use prior knowledge to understand cause-and-effect relationships
• Spell plural words by adding -s or -es
• Compare and contrast across texts

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 6: Coyote School News: Lesson 1

Objectives:
• Listen to draw conclusions
• Use prior knowledge to draw conclusions
• Use a dictionary or glossary to determine word meaning
• Identify qualities of a news story

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 7: Coyote School News: Lesson 2

Objectives:
• Draw conclusions from facts and details
• Use prior knowledge to draw conclusions
• Use a dictionary or glossary to determine word meaning

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 8: Coyote School News: Lesson 3

Objectives:
• Draw conclusions to improve comprehension
• Use prior knowledge to draw conclusions
• Use a dictionary or glossary to determine word meaning
• Write a news story, including necessary information
• Use regular plural nouns correctly in writing

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 9: Coyote School News: Lesson 4

Objectives:
• Use prior knowledge to draw conclusions
• Draw conclusions to improve comprehension
• Write a news story including necessary information
• Identify qualities of a news story
• Focus on focus/ideas
• Use regular plural nouns correctly in writing

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 10: Coyote School News: Lesson 5

Objectives:
• Draw conclusions to improve comprehension
• Use prior knowledge to draw conclusions
• Use regular plural nouns correctly in writing
• Spell irregular plurals

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 11: Grace and the Time Machine: Lesson 1

Objectives:
• Listen to draw conclusions
• Draw conclusions about what happens in a story
• Answer questions about conclusions with facts and details
• Identify qualities of a play scene
• Define and identify irregular plural nouns

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.
Lesson 12: Grace and the Time Machine: Lesson 2

Objectives:
- Draw conclusions using details from the text and experience
- Answer questions with support from text and experience
- Use word structure to determine word meaning
- Define and identify irregular plural nouns
- Spell words with ar and or

Lesson 13: Grace and the Time Machine: Lesson 3

Objectives:
- Draw conclusions using details from the text and experience
- Answer questions with support from text and experience
- Write a play scene including visual details
- Use irregular plural nouns correctly in writing
- Spell words with ar and or

Lesson 14: Grace and the Time Machine: Lesson 4

Objectives:
- Examine features of expository nonfiction
- Write a play scene including visual details
- Focus on organization/paragraphs
- Use irregular plural nouns correctly in writing
- Spell words with ar and or

Lesson 15: Grace and the Time Machine: Lesson 5

Objectives:
- Draw conclusions about what happens in a story
- Draw conclusions using details from the text and experience
- Answer questions with support from text and experience
- Spell words with ar and or

Lesson 16: Marven and the Great North Woods: Lesson 1

Objectives:
- Listen for statements of fact and opinion
- Identify statements of fact and opinion
- Use a fix-up strategy to monitor comprehension of facts and opinions
- Identify qualities of a job description
- Define and identify singular possessive nouns
- Spell words with consonant pairs ng, nk, ph, and wh

Lesson 17: Marven and the Great North Woods: Lesson 2

Objectives:
- Identify statements of fact and opinion
- Use a fix-up strategy to monitor comprehension of facts and opinions
- Use a dictionary or glossary to determine word meaning
- Define and identify singular possessive nouns
- Spell words with consonant pairs ng, nk, ph, and wh
Lesson 18: Marven and the Great North Woods: Lesson 3

Objectives:
- Distinguish between statements of fact and opinion to improve comprehension
- Monitor reading and use fix-up strategies to distinguish between statements of fact and opinion
- Use a dictionary or glossary to determine word meaning
- Write a job description including time-order words
- Use singular possessive nouns correctly in writing
- Spell words with consonant pairs ng, nk, ph, and wh

Lesson 19: Marven and the Great North Woods: Lesson 4

Objectives:
- Use singular possessive nouns correctly in writing
- Focus on focus/ideas
- Examine the features of e-mail

Lesson 20: Marven and the Great North Woods: Lesson 5

Objectives:
- Distinguish between statements of fact and opinion to improve comprehension
- Monitor reading and use fix-up strategies to distinguish between statements of fact and opinion
- Spell words with consonant pairs ng, nk, ph, and wh
- Use singular possessive nouns correctly in writing

Lesson 21: So You Want to be President: Lesson 1

Objectives:
- Listen for main ideas and supporting details
- Determine main idea and supporting details
- Use main ideas and supporting details to summarize
- Define and identify plural possessive nouns
- Learn how to form plural possessive nouns
- Spell words with ear, ir, our, and ur

Lesson 22: So You Want to be President: Lesson 2

Objectives:
- Use a dictionary or glossary to determine word meaning
- Identify main idea and supporting details to improve comprehension
- Summarize using main ideas and supporting details
- Define and identify plural possessive nouns
- Learn how to form plural possessive nouns
- Spell words with ear, ir, our, and ur

Lesson 23: So You Want to be President: Lesson 3

Objectives:
- Use a dictionary or glossary to determine word meaning
- Identify main idea and supporting details to improve comprehension
- Summarize using main ideas and supporting details
Lesson 24: So You Want to be President: Lesson 4

Objectives:
• Identify main idea and supporting details to improve comprehension
• Summarize using main ideas and supporting details
• Write an explanation for a test
• Focus on organization/paragraphs
• Use plural possessive nouns correctly in writing
• Spell words with ear, ir, our, and ur

Lesson 25: Unit Review

Objectives:
• Critically analyze unit theme
• Connect content across selections
• Combine content and skills in meaningful activities that build literacy
• Respond to unit selections through a variety of modalities

Lesson 26: Work and Play Unit Test

Unit 3: Patterns in Nature

In this unit, your student will explore the theme of patterns in nature. He will read a variety of selections, including a short fiction book, Into the Sea, a fantasy story and a myth, and nonfiction articles. Reading instruction will help your student understand causes and effects, make generalizations, and use graphic sources of information. Throughout the unit, your student will continue to practice fluency skills, as well as vocabulary development strategies such as using context clues and understanding word structure. Your student will gain additional confidence as a writer as he learns to compose longer works, including a friendly letter and a problem-and-solution essay submitted as part of his writing portfolio. Spelling instruction addresses a variety of topics, including homophones, compound words, and possessives. Grammar instruction focuses on verbs, including action and linking verbs, helping verbs, verb tenses, and subject-verb agreement.

Objectives:
• Read fiction and nonfiction selections in a variety of genres
• Apply reading comprehension skills and strategies before, during, and after reading
• Follow the steps of the writing process to create compositions in a variety of writing modes
• Understand the characteristics of verbs and use verbs correctly in writing
• Apply knowledge of letter patterns and word structure to spell words correctly

Lesson 1: Into The Sea: Lesson 1

Objectives:
• Build vocabulary by finding words related to the lesson concept
• Listen for cause-effect relationships
• Define and identify action and linking verbs
• Ask questions to help determine cause and effect

Lesson 2: Into the Sea: Lesson 2

Objectives:
• Identify cause and effect to improve comprehension
Lesson 3: Into the Sea: Lesson 3

Objectives:
- Define and identify action and linking verbs
- Use context clues to determine word meaning

Lesson 4: Into the Sea: Lesson 4

Objectives:
- Focus on voice
- Use action and linking verbs correctly in writing
- Identify qualities of a description
- Write a description that includes powerful verbs

Lesson 5: Into the Sea: Lesson 5

Objectives:
- Spell words that end with -ed and -ing
- Determine cause and effect

Lesson 6: Adelina's Whales: Lesson 1

Objectives:
- Build vocabulary by finding words related to the lesson concept
- Listen for statements of fact and opinion
- Identify and evaluate statements of fact and opinion

Lesson 7: Adelina's Whales: Lesson 2

Objectives:
- Use graphic organizers to identify statements of fact and opinion
- Use context clues to determine word meaning
- Define and identify main and helping verbs
- Spell and use homophones correctly

Lesson 8: Adelina's Whales: Lesson 3

Objectives:
- Use main and helping verbs correctly in writing
- Identify qualities of a friendly letter
- Write a friendly letter including specific details
- Focus on sentences

Lesson 9: Adelina's Whales: Lesson 4

Objectives:
- Focus on sentences
- Compare and contrast across texts
Lesson 10: Adelina's Whales: Lesson 5

Objectives:
- Spell and use homophones correctly
- Use context clues to determine word meaning

Lesson 11: How Night Came from the Sea: Lesson 1

Objectives:
- Listen for generalizations
- Recognize and form valid generalizations
- Visualize to understand and evaluate generalizations
- Define and identify subject-verb agreement
- Spell words with the vowel sound in shout

Lesson 12: How Night Came from the Sea: Lesson 2

Objectives:
- Use context clues to determine word meaning
- Recognize and make generalizations to improve comprehension
- Visualize to understand generalizations
- Spell words with the vowel sound in shout

Lesson 13: How Night Came from the Sea: Lesson 3

Objectives:
- Recognize and make generalizations to improve comprehension
- Visualize to understand generalizations
- Write a comparison including similes and metaphors
- Spell words with the vowel sound in shout

Lesson 14: How Night Came from the Sea: Lesson 4

Objectives:
- Examine features of pourquoi tales
- Write a comparison including similes and metaphors
- Focus on word choice

Lesson 15: How Night Came from the Sea: Lesson 5

Objectives:
- Recognize and form valid generalizations
- Spell words with the vowel sound in shout

Lesson 16: Eye of the Storm: Lesson 1

Objectives:
- Listen for cause-effect relationships
- Use graphic sources to help understand text
- Make predictions based on information from graphic sources
- Spell compound words
- Define and identify past, present, and future tenses
Lesson 17: Eye of the Storm: Lesson 2

Objectives:
- Use word structure to determine word meaning
- Use graphic sources to understand information
- Predict content and outcomes using graphic sources
- Recognize similes
- Spell compound words

Lesson 18: Eye of the Storm: Lesson 3

Objectives:
- Use graphic sources to understand information
- Predict content and outcomes using graphic sources
- Write about a problem and solution with careful attention to organization
- Spell compound words

Lesson 19: Eye of the Storm: Lesson 4

Objectives:
- Examine the features of a Web site
- Focus on organization/paragraphs
- Spell compound words

Lesson 20: Eye of the Storm: Lesson 5

Objectives:
- Listen for cause-effect relationships
- Spell compound words

Lesson 21: The Great Kapok Tree: Lesson 1

Objectives:
- Listen for generalizations and for details that can be used to make generalizations
- Identify and make generalizations
- Use story structure to generalize
- Define and identify irregular verbs
- Use irregular verbs correctly in writing
- Spell possessives

Lesson 22: The Great Kapok Tree: Lesson 2

Objectives:
- Use word structure to determine word meaning
- Identify and make generalizations to improve comprehension
- Use story structure to generalize
- Spell possessives

Lesson 23: The Great Kapok Tree: Lesson 3

Objectives:
- Identify and make generalizations to improve comprehension
- Use story structure to generalize
Lesson 24: The Great Kapok Tree: Lesson 4

Objectives:
- Examine features of expository nonfiction
- Compare and contrast across texts
- Focus on conventions
- Identify key words in a prompt
- Spell possessives

Lesson 25: Unit Review

Objectives:
- Critically analyze unit theme
- Connect content across selections
- Combine content and skills in meaningful activities that build literacy
- Respond to unit selections through a variety of modalities

Lesson 26: Patterns in Nature Unit Test
LANGUAGE ARTS 4 B
**Language Arts 4 B**

In this course, the student will read stories that provide him with the opportunity to use his imagination to travel to exotic places and meet interesting people. The student will become a more critical and insightful reader, and learn to examine the author's purpose and point of view. The student will read daily, practicing comprehension and fluency skills as he reads. Skills and strategies for reading comprehension and vocabulary development are presented in the context of brief reading selections presented in Scott Foresman's *Reading Street*. The student then has the opportunity to practice these skills while reading longer selections in a variety of fiction and nonfiction genres. The selections are organized according to themes, including diverse regions in the United States, work and play, patterns in nature, mystery and fantasy, adventure, and achieving goals. These themes invite the student to view reading as a tool for information gathering, and the themes help the student make connections across science and social studies. In addition to formal reading instruction, the student will establish a daily reading routine and practice speaking and listening skills.

Throughout the course, the student will continue to develop his writing and grammar skills. This course reinforces the basics of writing, including the five-stage writing process: prewriting, drafting, revising, editing, and publishing. The student will master this process through weekly writing assignments. The student will also write for different purposes and use a variety of writing forms, including creative, factual, descriptive, artistic, and persuasive compositions. Additionally, writing instruction develops the student's understanding of the essential traits of good writing: focus and idea development, organization, voice, effective word choice and sentences, and the use of standard writing conventions. Over time, the student will build a portfolio of written work.

Instruction in grammar and language usage is reinforced in the meaningful context of writing lessons. The student will continue to master the basic skills of writing with instruction in spelling, grammar, and language usage. *Reading Street* offers weekly spelling lists based on the patterns and relationship of letters within words. Daily practice activities reinforce the spelling strategies and give the student opportunities to use spelling words in context.

**Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.**

**Unit 1: Puzzles and Mysteries**

In this unit, your student will explore the theme of puzzles and mysteries, while building on the reading and writing skills introduced in Language Arts 4 A. Your student will read a variety of fiction and nonfiction selections, including a play, a biography, realistic fiction, and a novel. Reading instruction in the first half of this unit develops comprehension skills such as understanding characters and setting, using graphic sources, asking questions while reading, and monitoring one's own understanding.

In the second half of this unit, your student will read award-winning author E. L. Konigsburg's novel *From the Mixed-up Files of Mrs. Basil E. Frankweiler*. The novel tells the story of a bright but unhappy sixth grader, Claudia Kincaid, who is bored with her life in suburban Connecticut. When Claudia runs away to the Metropolitan Museum of Art in New York City, she is confronted with an intriguing mystery to solve. This exciting story provides your student with the opportunity to apply previously learned reading skills to longer works while also enhancing her understanding of story elements. As your student follows Claudia's adventures, she will identify literary elements, analyze characters, and use comprehension strategies to make connections and draw conclusions.

Throughout the unit, fluency and vocabulary development strategies are reinforced. Fluency is monitored and evaluated. Your student will further develop her writing skills by composing in a variety of forms, including a travel brochure and a business letter submitted as part of her portfolio. Spelling instruction addresses final sounds, consonant sounds, and words with prefixes. Grammar instruction develops your student's understanding of pronouns and antecedents, possessive pronouns, contractions, and negatives.

**Objectives:**
- Read fiction and nonfiction selections in a variety of genres
- Apply reading comprehension skills and strategies before, during, and after reading
- Learn and follow the steps of the writing process to create compositions in a variety of writing modes, including the expository mode
• Understand the characteristics of pronouns and use pronouns correctly in writing
• Apply knowledge of letter patterns and word structure to spell words correctly

Lesson 1: The King in the Kitchen: Lesson 1

Objectives:
• Listen to determine setting and draw conclusions about characters
• Identify characters and setting in a story
• Use monitoring and fix-up strategies to clarify understanding of text
• Define and identify pronouns and antecedents
• Identify the characteristics of a business letter
• Spell words with final er, ar

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 2: The King in the Kitchen: Lesson 2

Objectives:
• Use a dictionary or glossary to determine word meaning
• Understand characters and setting to improve comprehension
• Monitor comprehension and use fix-up strategies to understand characters and setting
• Use pronouns that agree with their antecedents
• Use pronouns and antecedents correctly in writing
• Spell words with final er, ar

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 3: The King in the Kitchen: Lesson 3

Objectives:
• Analyze characters and setting in a story
• Monitor comprehension while reading
• Correctly use pronouns and antecedents
• Write a narrative based on a play
• Compose a business letter with elaborated ideas
• Correctly spell words with final er, ar

Lesson 4: The King in the Kitchen: Lesson 4

Objectives:
• Examine features of poetry
• Compare and contrast across texts
• Use pronouns that agree with their antecedents
• Use pronouns and antecedents correctly in writing
• Write a business letter, elaborating on the ideas expressed
• Focus on voice
• Spell words with final er, ar

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 5: The King in the Kitchen: Lesson 5

Objectives:
• Understand characters and setting to improve comprehension
• Use pronouns and antecedents correctly in writing
• Use pronouns that agree with their antecedents
• Spell words with final er, ar

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 6: Seeker of Knowledge: Lesson 1

Objectives:
• Listen for causes and effects
• Interpret graphic sources
• Ask questions to enhance understanding of graphic sources
• Identify the characteristics of a feature story
Lesson 7: Seeker of Knowledge: Lesson 2

Objectives:
- Use word structure to determine word meaning
- Use graphic sources to better understand text
- Ask questions to improve comprehension of graphic sources
- Learn which possessive pronouns are used before nouns and which are used alone
- Use possessive pronouns correctly in writing
- Spell words with consonant sounds /j/, /ks/, and /kw/

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 8: Seeker of Knowledge: Lesson 3

Objectives:
- Use graphic sources to better understand text
- Ask questions to improve comprehension of graphic sources
- Use possessive pronouns correctly in writing
- Write a feature story with emphasis on showing, not telling
- Spell words with consonant sounds /j/, /ks/, and /kw/

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 9: Seeker of Knowledge: Lesson 4

Objectives:
- Examine the features of search engines
- Compare and contrast across texts
- Use possessive pronouns correctly in writing
- Write a feature story with emphasis on showing, not telling
- Focus on conventions
- Spell words with consonant sounds /j/, /ks/, and /kw/

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 10: Seeker of Knowledge: Lesson 5

Objectives:
- Ask questions to improve comprehension of graphic sources
- Effectively and efficiently find, evaluate, and communicate information related to an inquiry question using electronic sources
- Use possessive pronouns correctly in writing
- Spell words with consonant sounds /j/, /ks/, and /kw/

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 11: Encyclopedia Brown: Lesson 1

Objectives:
- Listen to identify parts of a story’s plot
- Identify elements of plot
- Use prior knowledge to understand plot
- Define and identify contractions and negatives
- Spell words with the prefixes un-, dis-, and in-

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 12: Encyclopedia Brown: Lesson 2

Objectives:
Lesson 13: Encyclopedia Brown: Lesson 3

Objectives:
- Use context clues to determine word meaning
- Identify elements of plot to improve comprehension
- Use prior knowledge to understand elements of plot
- Learn how to form contractions and negatives
- Use contractions and negatives correctly in writing
- Identify key words in a prompt
- Spell words with the prefixes un-, dis-, and in-

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 14: Encyclopedia Brown: Lesson 4

Objectives:
- Examine features of newspaper articles
- Compare and contrast across texts
- Use contractions and negatives correctly in writing
- Focus on organization/paragraphs
- Spell words with the prefixes un-, dis-, and in-

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 15: Encyclopedia Brown: Lesson 5

Objectives:
- Identify elements of plot
- Use prior knowledge to understand plot
- Define and identify contractions and negatives
- Spell words with the prefixes un-, dis-, and in-

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 16: From the Mixed-up Files, Chapter 1

Objectives:
- Understand the background of the novel
- Learn about the author’s life
- Read text representing a different time period
- Make connections to aid comprehension

Lesson 17: From the Mixed-up Files, Chapters 2–3

Objectives:
- Summarize a text selection
- Read and analyze the text, then respond to questions
- Define new vocabulary and identify words in context

Lesson 18: From the Mixed-up Files, Chapter 4

Objectives:
- Identify and explain literary elements
- Use a graphic organizer to aid comprehension
- Analyze relationships between characters
- Read and analyze the text, then respond to questions
- Define new vocabulary and identify words in context
Lesson 19: From the Mixed-up Files, Chapter 5

Objectives:
- Read and analyze the text, then respond to questions
- Define new vocabulary and identify words in context

Lesson 20: From the Mixed-up Files, Chapters 6–7

Objectives:
- Read and analyze the text, then respond to questions
- Define new vocabulary and identify words in context

Lesson 21: From the Mixed-up Files, Chapter 8

Objectives:
- Read and analyze the text, then respond to questions
- Define new vocabulary and identify words in context

Lesson 22: From the Mixed-up Files, Chapter 9

Objectives:
- Read and analyze the text, then respond to questions
- Define new vocabulary and identify words in context
- Write a narrative from a selected character's point of view

Lesson 23: From the Mixed-up Files, Chapter 10

Objectives:
- Read and analyze the text, then respond to questions
- Define new vocabulary and identify words in context
- Write a narrative from a selected character's point of view

Lesson 24: From the Mixed-up Files, Review

Objectives:
- Study vocabulary and review the novel

Lesson 25: From the Mixed-up Files, Test

Unit 2: Adventures by Land, Air, and Water

This unit focuses on the theme of adventure while continuing to build on the reading and writing skills introduced in earlier units. Your student will revisit core reading comprehension skills such as understanding the author's purpose, visualizing, identifying the main idea of a selection, and drawing conclusions. Additionally, this unit provides instruction in understanding story structure and text structures. Fluency and vocabulary development strategies taught in previous units are reinforced throughout the unit. Writing instruction in this unit will develop your student's ability to write persuasively as she composes in various forms, including a story review and an opinion essay submitted as part of her writing portfolio. Spelling instruction addresses new word study concepts, including Greek and Latin word parts. Grammar instruction develops your student's understanding of modifiers, including adjectives and adverbs, comparative and superlative forms, and prepositional phrases.

Objectives:
- Read fiction and nonfiction selections in a variety of genres
- Apply reading comprehension skills and strategies before, during, and after reading
- Follow the steps of the writing process to create compositions in a variety of writing modes
- Understand the characteristics of modifiers, including comparative and superlative modifiers, and use them correctly in writing
- Apply knowledge of letter patterns and word structure, including Greek and Latin word parts, to spell words correctly

Lesson 1: Sailing Home: Lesson 1

Objectives:
- Listen for author's purpose
- Identify author's purpose
Lesson 2: Sailing Home: Lesson 2

Objectives:
- Use context clues to determine word meaning
- Understand author's purpose to improve comprehension
- Use author's purpose to help predict
- Use adjectives and articles correctly in writing
- Write a book or story review supporting the opinions expressed
- Spell multisyllabic words

Lesson 3: Sailing Home: Lesson 3

Objectives:
- Understand author's purpose to improve comprehension
- Use author's purpose to help predict
- Use context clues to determine word meaning
- Use adjectives and articles correctly in writing
- Write a book or story review supporting the opinions expressed
- Spell multisyllabic words

Lesson 4: Sailing Home: Lesson 4

Objectives:
- Examine features of narrative nonfiction
- Compare and contrast across texts
- Use adjectives and articles correctly in writing
- Write a book or story review supporting the opinions expressed
- Focus on focus/ideas
- Spell multisyllabic words

Lesson 5: Sailing Home: Lesson 5

Objectives:
- Understand author's purpose to improve comprehension
- Use author's purpose to help predict
- Use adjectives and articles correctly in writing
- Spell multisyllabic words

Lesson 6: Lost City: The Discovery of Machu Picchu: Lesson 1

Objectives:
- Listen for comparisons and contrasts
- Compare and contrast information in a text
- Visualize to understand comparisons and contrasts
- Identify the characteristics of an editorial
- Define and identify comparative and superlative adjectives
- Spell words with syllable patterns V/CV and VC/V

Lesson 7: Lost City: The Discovery of Machu Picchu: Lesson 2
Objectives:
• Compare and contrast to improve comprehension
• Visualize selection details to help compare and contrast
• Use word structure to determine word meaning
• Learn how to form comparative and superlative adjectives
• Use comparative and superlative adjectives correctly in writing
• Identify the characteristics of an editorial
• Spell words with syllable patterns V/CV and VC/V

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 8: Lost City: The Discovery of Machu Picchu: Lesson 3
Objectives:
• Compare and contrast to improve comprehension
• Visualize selection details to help compare and contrast
• Use word structure to determine word meaning
• Write an editorial using exact words
• Use comparative and superlative adjectives in writing
• Spell words with syllable patterns V/CV and VC/V

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 9: Lost City: The Discovery of Machu Picchu: Lesson 4
Objectives:
• Examine features of a personal essay
• Compare and contrast across texts
• Use comparative and superlative adjectives in writing
• Write an editorial using exact words
• Focus on word choice
• Spell words with syllable patterns V/CV and VC/V

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 10: Lost City: The Discovery of Machu Picchu: Lesson 5
Objectives:
• Compare and contrast to improve comprehension
• Visualize selection details to help compare and contrast
• Use word structure to determine word meaning
• Use comparative and superlative adjectives correctly in writing
• Spell words with syllable patterns V/CV and VC/V

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 11: Amelia and Eleanor Go for a Ride: Lesson 1
Objectives:
• Listen for sequence
• Identify the sequence of events
• Use sequence to determine story structure
• Identify the characteristics of an interview
• Define and identify adverbs
• Spell words with Greek word parts

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 12: Amelia and Eleanor Go for a Ride: Lesson 2
Objectives:
• Use context clues to determine word meaning
• Identify the sequence of events to improve comprehension
• Use sequence to identify story structure
• Identify the characteristics of an interview
• Use adverbs correctly in writing
• Spell words with Greek word parts

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.
Lesson 13: Amelia and Eleanor Go for a Ride: Lesson 3

Objectives:
• Identify the sequence of events to improve comprehension
• Use sequence to identify story structure
• Use context clues to determine word meaning
• Use adverbs correctly in writing
• Effectively and efficiently find, evaluate, and communicate information related to an inquiry question using electronic sources
• Write an interview with questions focused on one topic
• Spell words with Greek word parts

Lesson 14: Amelia and Eleanor Go for a Ride: Lesson 4

Objectives:
• Evaluate online sources
• Compare and contrast across texts
• Use adverbs correctly in writing
• Write an interview with questions focused on one topic
• Focus on focus/ideas
• Spell words with Greek word parts

Lesson 15: Amelia and Eleanor Go for a Ride: Lesson 5

Objectives:
• Identify the sequence of events to improve comprehension
• Use sequence to identify story structure
• Use context clues to determine word meaning
• Use adverbs correctly in writing
• Spell words with Greek word parts

Lesson 16: Antarctic Journal: Lesson 1

Objectives:
• Listen for literary elements (theme, setting)
• Determine main idea and supporting details
• Use text structure to identify main ideas and supporting details
• Define and identify comparative and superlative adverbs
• Learn how to form comparative and superlative adverbs
• Identify characteristics of a letter of acceptance
• Spell words with Latin roots

Lesson 17: Antarctic Journal: Lesson 2

Objectives:
• Use word structure to determine word meaning
• Identify main ideas and supporting details to improve comprehension
• Use text structure to help identify main ideas
• Use comparative and superlative adverbs
• Identify characteristics of a letter of acceptance
• Spell words with Latin roots

Lesson 18: Antarctic Journal: Lesson 3

Objectives:
• Identify main idea and supporting details to improve comprehension
Lesson 19: Antarctic Journal: Lesson 4

Objectives:
- Examine features of narrative nonfiction
- Compare and contrast across texts
- Use comparative and superlative adverbs correctly in writing
- Write a letter of acceptance using language suitable for the audience
- Focus on voice
- Spell words with Latin roots

Lesson 20: Antarctic Journal: Lesson 5

Objectives:
- Identify main ideas and supporting details to improve comprehension
- Use text structure to help identify main ideas
- Use comparative and superlative adverbs in writing
- Spell words with Latin roots

Lesson 21: Moonwalk: Lesson 1

Objectives:
- Listen to draw conclusions
- Use facts and details to draw conclusions
- Use monitoring and fix-up strategies to clarify understanding of text and draw logical conclusions
- Define and identify prepositions and prepositional phrases
- Identify the characteristics of writing an opinion
- Spell related words

Lesson 22: Moonwalk: Lesson 2

Objectives:
- Use context clues to determine word meaning
- Draw conclusions to improve comprehension
- Monitor understanding and use fix-up strategies to draw logical conclusions
- Use prepositions and prepositional phrases correctly in writing
- Identify the characteristics of writing an opinion
- Spell related words

Lesson 23: Moonwalk: Lesson 3

Objectives:
- Draw conclusions to improve reading comprehension
- Monitor understanding and use fix-up strategies to draw logical conclusions
- Use prepositions and prepositional phrases correctly in writing
- Write your opinion using persuasive words
- Spell related words
Lesson 24: Moonwalk: Lesson 4

Objectives:
• Use prepositions and prepositional phrases correctly in writing
• Write your opinion using persuasive words
• Focus on word choice

Lesson 25: Unit Review

Objectives:
• Critically analyze unit theme
• Connect content across selections
• Combine content and skills in meaningful activities that build literacy
• Respond to unit selections through a variety of modalities

Lesson 26: Adventures by Land, Air, and Water Unit Test

Unit 3: Reaching for Goals

In this unit, your student will read various selections that focus on the theme of reaching a goal, including a trade book, *Mieko and the Fifth Treasure*. He will also continue to build on the reading skills introduced in earlier units, such as understanding cause-effect relationships, distinguishing between fact and opinion, generalizing, using graphic sources of information, and understanding character development and theme. This unit focuses primarily on nonfiction selections, particularly biographies. Fluency and vocabulary development strategies taught in previous units are reinforced throughout the unit. Writing instruction in this unit will develop your student's ability to understand and create informational texts. In addition to learning how to take notes and create an outline, your student will write a character sketch and an informational article submitted as part of his writing portfolio. Spelling instruction focuses on prefixes and suffixes as well as words that include silent consonants and the schwa sound. Grammar instruction develops your student’s understanding of writing conventions, including conventions for capitalization, comma usage, quotation marks, and titles.

Objectives:
• Read fiction and nonfiction selections in a variety of genres
• Apply reading comprehension skills and strategies before, during, and after reading
• Follow the steps of the writing process to create compositions in a variety of writing modes
• Understand writing conventions, including conventions for punctuation and capitalization, and apply this knowledge when writing
• Apply knowledge of letter patterns and word structure to spell words correctly

Lesson 1: My Brother Martin: Lesson 1

Objectives:
• Listen for cause-effect relationships
• Identify cause-effect relationships
• Answer questions to help determine causes and effects
• Define and identify conjunctions
• Identify the characteristics of a biography
• Spell words with schwa

Lesson 2: My Brother Martin: Lesson 2

Objectives:
• Use word structure to determine word meaning
• Identify cause-effect relationships to improve comprehension
• Answer questions to help determine causes and effects
• Use conjunctions correctly in writing
Lesson 3: My Brother Martin: Lesson 3
Objectives:
- Identify cause-effect relationships to improve comprehension
- Answer questions to help determine causes and effects
- Use conjunctions correctly in writing
- Effectively and efficiently find, evaluate, and communicate information related to an inquiry question using electronic sources
- Write a biography using a variety of sentences
- Spell words with schwa

Lesson 4: My Brother Martin: Lesson 4
Objectives:
- Examine features of poetry
- Compare and contrast across texts
- Use conjunctions correctly in writing
- Write a biography using a variety of sentences
- Focus on sentences
- Spell words with schwa

Lesson 5: My Brother Martin: Lesson 5
Objectives:
- Identify cause and effect relationships to improve comprehension
- Answer questions to help determine causes and effects
- Use conjunctions correctly in writing
- Spell words with schwa

Lesson 6: Jim Thorpe's Bright Path: Lesson 1
Objectives:
- Listen for plot elements
- Distinguish between statements of fact and opinion
- Use statements of fact and opinion to determine text structure
- Define and identify capitalization
- Identify the characteristics of notes
- Spell words with the prefixes mis-, non-, and re-

Lesson 7: Jim Thorpe's Bright Path: Lesson 2
Objectives:
- Use a dictionary or glossary to determine word meaning
- Identify statements of fact and opinion to improve comprehension
- Use text structure to identify statements of fact and opinion
- Use capitalization correctly in writing
- Take notes on factual material
- Spell words with the prefixes mis-, non-, and re-

Lesson 8: Jim Thorpe's Bright Path: Lesson 3
Objectives:
- Identify statements of fact and opinion to improve comprehension
Lesson 9: Jim Thorpe's Bright Path: Lesson 4

Objectives:

- Examine features of expository nonfiction
- Compare and contrast across texts
- Use capitalization correctly in writing
- Focus on focus/ideas
- Spell words with the prefixes mis-, non-, and re-

Lesson 10: Jim Thorpe's Bright Path: Lesson 5

Objectives:

- Use capitalization correctly in writing
- Take notes on factual material
- Spell words with the prefixes mis-, non-, and re-

Lesson 11: Mieko and the Fifth Treasure: Lesson 1

Objectives:

- Listen for clues about characters and theme
- Identify characters and theme
- Summarize characters' goals to understand theme
- Define and identify commas
- Identify the characteristics of a character sketch
- Spell words with the suffixes -less, -ment, and -ness

Lesson 12: Mieko and the Fifth Treasure: Lesson 2

Objectives:

- Use context clues to determine word meaning
- Understand character and theme to improve comprehension
- Use commas correctly in writing
- Write a character sketch with a good conclusion
- Spell words with the suffixes -less, -ment, and -ness

Lesson 13: Mieko and the Fifth Treasure: Lesson 3

Objectives:

- Understand character and theme to improve comprehension
- Summarize to understand character and theme
- Use commas correctly in writing
- Write a character sketch with a good conclusion
- Spell words with the suffixes -less, -ment, and -ness

Lesson 14: Mieko and the Fifth Treasure: Lesson 4

Objectives:
• Compare and contrast across texts
• Use commas correctly in writing
• Write a character sketch with a good conclusion
• Focus on conventions
• Spell words with the suffixes -less, -ment, and -ness

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 15: Mieko and the Fifth Treasure: Lesson 5

Objectives:
• Understand character and theme to improve comprehension
• Use commas correctly in writing
• Spell words with the suffixes -less, -ment, and -ness

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 16: To Fly: The Story of the Wright Brothers: Lesson 1

Objectives:
• Listen to identify and evaluate generalizations
• Recognize and evaluate generalizations
• Ask questions to identify and make generalizations
• Define and identify quotations and quotation marks
• Identify the characteristics of an outline
• Spell words with the suffixes -ful, -ly, and -ion

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 17: To Fly: The Story of the Wright Brothers: Lesson 2

Objectives:
• Use context clues to determine word meaning
• Identify, evaluate, and make generalizations to improve comprehension
• Ask questions to identify, evaluate, and make generalizations
• Use quotations and quotation marks correctly in writing
• Identify the characteristics of an outline
• Spell words with the suffixes -ful, -ly, and -ion

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 18: To Fly: The Story of the Wright Brothers: Lesson 3

Objectives:
• Identify, evaluate, and make generalizations to improve comprehension
• Ask questions to identify, evaluate, and make generalizations
• Use quotations and quotation marks correctly in writing
• Write an outline that includes important details
• Spell words with the suffixes -ful, -ly, and -ion

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 19: To Fly: The Story of the Wright Brothers: Lesson 4

Objectives:
• Examine the features of online directories
• Compare and contrast across texts
• Use quotations and quotation marks in writing
• Write an outline that includes important details
• Spell words with the suffixes -ful, -ly, and -ion

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 20: To Fly: The Story of the Wright Brothers: Lesson 5

Objectives:
• Identify, evaluate, and make generalizations to improve comprehension
• Ask questions to identify, evaluate, and make generalizations
• Use quotations and quotation marks correctly in writing
• Spell words with the suffixes -ful, -ly, and -ion

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 21: The Man Who Went to the Far Side of the Moon: 1

Objectives:
• Listen for cause-effect relationships
• Understand graphic sources
• Use graphic sources to monitor comprehension
• Use titles correctly in writing
• Understand the use of capitalization in titles
• Identify the characteristics of an informational article
• Spell words with silent consonants

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 22: The Man Who Went to the Far Side of the Moon: 2

Objectives:
• Use context clues to determine word meaning
• Interpret graphic sources to improve comprehension
• Use graphic sources to monitor comprehension and as a fix-up strategy
• Use titles correctly in writing
• Identify the characteristics of an informational article
• Spell words with silent consonants

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 23: The Man Who Went to the Far Side of the Moon: 3

Objectives:
• Interpret graphic sources to improve comprehension
• Use graphic sources to monitor comprehension and as a fix-up strategy
• Use titles correctly in writing
• Understand the use of capitalization in titles
• Write an informational article with an effective topic sentence
• Spell words with silent consonants

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 24: The Man Who Went to the Far Side of the Moon: 4

Objectives:
• Understand the use of capitalization in titles
• Write an informational article with an effective topic sentence
• Focus on sentences
• Spell words with silent consonants

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 25: Unit Review

Objectives:
• Critically analyze unit theme
• Connect content across selections
• Combine content and skills in meaningful activities that build literacy
• Respond to unit selections through a variety of modalities

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 26: Reaching for Goals Unit Test
LANGUAGE ARTS 5 A
Language Arts 5 A

In this course, the student will read longer and more complex stories. The student will become a more critical and insightful reader, and continue to examine the author’s purpose and point of view. The student will use his critical thinking and reading comprehension skills to analyze fiction and nonfiction stories presented in Scott Foresman’s Reading Street. The stories are organized according to themes, including challenges, doing the right thing, and artists and inventions. These themes invite the student to view reading as a tool for information gathering, and the themes help the student make connections across science and social studies. In addition to formal reading instruction, the student will establish a daily reading routine and will practice speaking and listening skills.

This course focuses on structure, format, and grammar. The basic writing content concentrates on writing quality sentences, organizing paragraphs, summary writing, and adding detail to writing. The student will continue to use effective planning tools such as graphic organizers, word planners, and outlines to create well-organized compositions.

The student will write creative, factual, descriptive, artistic, and persuasive compositions that tie together all the skills learned in the course. The student will continue to master spelling, grammar, and language skills. Reading Street offers spelling lists based on the patterns and relationship of letters within words. Daily practice activities reinforce the spelling strategies and give the student opportunities to use spelling words in context.

Your student will have access to DimensionU™, which includes online literary games that support your student’s understanding of lesson concepts. You will find the link to DimensionU™ on your student’s home page. Follow the directions to download the necessary software first. Once installed, DimensionU™ allows your student to access DimensionL™ to practice literary skills in a gaming environment.

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Unit 1: Meeting Challenges

In this unit, your student will explore the theme of meeting challenges while learning essential reading and writing skills. The reading selections encompass several genres, including humorous fiction and tall tales, historical fiction, biography, and expository nonfiction. Additionally, your student will explore the unit theme by reading Childtimes, a family memoir spanning three generations. Your student will learn and practice reading comprehension skills, such as understanding plot, characterization, setting, and theme; understanding sequence; and understanding causes and effects. Reading instruction also addresses fluency skills, such as reading with correct phrasing and tone, and vocabulary development strategies, such as understanding word structure, using context clues, and referring to a dictionary. Additionally, your student will learn the steps of the writing process and apply them in weekly writing assignments, which culminate in a personal narrative submitted as the first assessment for his writing portfolio. Writing models, graphic organizers, and checklists for drafting and revising are provided as support. Finally, your student will receive weekly spelling instruction, which focuses on understanding letter patterns and word structure, as well as grammar instruction in using complete sentences and understanding different sentence types.

Objectives:
• Read fiction and nonfiction selections in a variety of genres
• Apply reading comprehension skills and strategies before, during, and after reading
• Learn and follow the steps of the writing process to create compositions in a variety of writing modes
• Understand and use different sentence types correctly in writing
• Apply knowledge of letter patterns and word structure to spell words correctly

Lesson 1: Frindle: Lesson 1

Objectives:
• Listen for details about character and plot
• Identify the main character and plot of the story
• Identify qualities of a character sketch
• Define and identify four kinds of sentences
• Use end punctuation correctly
• Spell short vowel words with the VCCV and VCV syllable patterns

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 2: Frindle: Lesson 2

Objectives:
• Identify the main character and plot of the story
• Use prior knowledge to understand story characters and events
• Activate and use prior knowledge to improve comprehension
• Use prior knowledge to help recognize character and plot
• Use word structure to determine word meaning
• Identify qualities of a character sketch

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 3: Frindle: Lesson 3

Objectives:
• Identify the main character and plot of the story
• Use prior knowledge to understand story characters and events
• Activate and use prior knowledge to improve comprehension
• Use prior knowledge to help recognize character and plot
• Write a character sketch with a strong voice
• Use four kinds of sentences in writing
• Spell short vowel words with the VCCV and VCV syllable patterns

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 4: Frindle: Lesson 4

Objectives:
• Examine features of fantasy
• Compare and contrast across texts
• Write a character sketch with a strong voice
• Focus on voice
• Use end punctuation correctly
• Use four kinds of sentences in writing
• Spell short vowel words with the VCCV and VCV syllable patterns

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 5: Frindle: Lesson 5

Objectives:
• Identify the main character and plot of the story
• Use prior knowledge to understand story characters and events
• Activate and use prior knowledge to improve comprehension
• Use prior knowledge to help recognize character and plot
• Use end punctuation correctly
• Use four kinds of sentences in writing
• Spell short vowel words with the VCCV and VCV syllable patterns

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 6: Thunder Rose: Lesson 1

Objectives:
• Listen for causes and effects
• Identify causes and effects
• Monitor comprehension to understand causes and effects
• Define and identify subjects and predicates
• Identify qualities of a tall tale
• Spell long vowel words with the VCV syllable pattern

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 7: Thunder Rose: Lesson 2

Objectives:
• Listen for causes and effects
• Identify causes and effects
• Monitor comprehension to understand causes and effects
• Define and identify subjects and predicates
• Identify qualities of a tall tale
• Spell long vowel words with the VCV syllable pattern

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.
Objectives:
- Identify causes and effects
- Monitor comprehension to understand causes and effects
- Use context clues to determine the meaning of homonyms
- Identify qualities of a tall tale
- Identify and correct fragments and run-ons
- Use subjects and predicates correctly in writing
- Spell long vowel words with the VCV syllable pattern

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 8: Thunder Rose: Lesson 3
Objectives:
- Identify causes and effects to improve comprehension
- Monitor comprehension to understand cause-and-effect relationships
- Use context clues to determine the meaning of homonyms.
- Write a tall tale using humor and exaggeration to create mood
- Use subjects and predicates correctly in writing
- Spell long vowel words with the VCV syllable pattern

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 9: Thunder Rose: Lesson 4
Objectives:
- Identify causes and effects to improve comprehension
- Monitor comprehension to understand cause and effect relationships.
- Write a tall tale using humor and exaggeration to create a mood
- Focus on word choice
- Use subjects and predicates correctly in writing
- Spell long vowel words with the VCV syllable pattern

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 10: Thunder Rose: Lesson 5
Objectives:
- Identify causes and effects to improve comprehension
- Monitor comprehension to understand cause-and-effect relationships
- Use subjects and predicates correctly in writing
- Spell long vowel words with the VCV syllable pattern

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 11: Island of the Blue Dolphins: Lesson 1
Objectives:
- Listen for clues about setting and theme
- Identify theme and setting
- Use visualizing to better understand the theme and setting
- Define and identify independent and dependent clauses
- Identify qualities of a friendly or thank-you letter
- Spell words with long vowel digraphs ai, ee, ea, oa, and ow

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 12: Island of the Blue Dolphins: Lesson 2
Objectives:
- Identify setting and theme to improve comprehension
- Use setting to visualize parts of the story
- Use a dictionary or glossary to determine word meaning
- Identify qualities of a friendly or thank you letter
- Define and identify independent and dependent clauses
- Build sentences by combining an independent and a dependent clause
- Spell words with long vowel digraphs ai, ee, ea, oa, and ow

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.
Lesson 13: Island of the Blue Dolphins: Lesson 3

Objectives:
- Identify setting and theme to improve comprehension
- Use setting to visualize parts of the story
- Use a dictionary or glossary to determine word meaning
- Write a letter using transitions to connect ideas smoothly
- Build sentences by combining an independent and a dependent clause
- Use independent and dependent clauses in writing
- Spell words with long vowel digraphs ai, ee, ea, oa, and ow

Lesson 14: Island of the Blue Dolphins: Lesson 4

Objectives:
- Identify setting and theme to improve comprehension
- Write a letter using transitions to connect ideas smoothly
- Focus on organization/paragraphs
- Build sentences by combining an independent and a dependent clause
- Use independent and dependent clauses in writing
- Spell words with long vowel digraphs ai, ee, ea, oa, and ow

Lesson 15: Island of the Blue Dolphins: Lesson 5

Objectives:
- Identify setting and theme to improve comprehension
- Use setting to visualize parts of the story
- Use independent and dependent clauses in writing
- Spell words with long vowel digraphs ai, ee, ea, oa, and ow

Lesson 16: Satchel Paige: Lesson 1

Objectives:
- Listen to draw conclusions about a character or an event
- Use clue words to determine sequence
- Ask questions to remember sequence
- Identify qualities of a feature article about a famous person
- Define and identify compound and complex sentences
- Spell words that end with –ed and –ing

Lesson 17: Satchel Paige: Lesson 2

Objectives:
- Track the sequence of events to improve comprehension
- Ask questions to understand the sequence of events
- Use context clues to determine word meaning
- Identify qualities of a feature article about a famous person
- Punctuate compound and complex sentences correctly
- Effectively and efficiently find, evaluate, and communicate information related to an inquiry question using electronic sources
- Spell words that end with –ed and –ing

Lesson 18: Satchel Paige: Lesson 3

Objectives:
- Track the sequence of events to improve comprehension
- Ask questions to understand the sequence of events
Lesson 19: Satchel Paige: Lesson 4

Objectives:
- Track the sequence of events to improve comprehension
- Write a feature article with a recognizable tone
- Focus on word choice
- Punctuate compound and complex sentences correctly
- Use compound and complex sentences correctly in writing
- Spell words that end with -ed and -ing

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 20: Satchel Paige: Lesson 5

Objectives:
- Track the sequence of events to improve comprehension
- Ask questions to understand the sequence of events
- Punctuate compound and complex sentences correctly
- Use compound and complex sentences correctly in writing
- Spell words that end with -ed and -ing

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 21: Shutting Out the Sky: Lesson 1

Objectives:
- Listen for causes and effects
- Identify causes and effects
- Use causes and effects to summarize
- Define and identify common and proper nouns
- Spell contractions

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 22: Shutting Out the Sky: Lesson 2

Objectives:
- Use context clues to determine correct meaning of multiple meaning words
- Identify causes and effects to improve comprehension
- Summarize to identify causes and effects
- Use common and proper nouns correctly in writing
- Spell contractions

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 23: Shutting Out the Sky: Lesson 3

Objectives:
- Use context clues to determine correct meaning of multiple-meaning words
- Identify causes and effects to improve comprehension
- Summarize to identify causes and effects
- Write a narrative for a test
- Use common and proper nouns correctly in writing
- Spell contractions

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.
Lesson 24: Shutting Out the Sky: Lesson 4

Objectives:
• Examine the features of e-mail
• Write a narrative for a test
• Focus on word choice
• Use common and proper nouns correctly in writing
• Spell contractions

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 25: Meeting Challenges: Unit Review

Objectives:
• Prepare for the unit test

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 26: Meeting Challenges: Unit Test

Objectives:
• Critically analyze unit theme
• Connect content across selections
• Combine content and skills in meaningful activities that build literacy
• Respond to unit selections through a variety of modalities

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Unit 2: Doing the Right Thing

In this unit, your student will explore the theme of doing what is right, while building on the reading and writing skills introduced in Unit 1. This unit provides thorough instruction in reading comprehension skills, such as comparing and contrasting, understanding the author’s purpose, understanding causes and effects, and distinguishing between facts and opinions. The fluency and vocabulary development strategies taught in Unit 1 are reinforced throughout the unit. Your student will further develop her writing skills by composing in a variety of forms, including a summary and a news story submitted as part of her portfolio. Spelling instruction addresses word patterns and endings, including irregular plurals and words with r-controlled vowels. Grammar instruction develops your student’s understanding of nouns and verbs by addressing topics such as regular and irregular plural nouns, action and linking verbs, and subject-verb agreement.

Objectives:
• Read fiction and nonfiction selections in a variety of genres
• Apply reading comprehension skills and strategies before, during, and after reading
• Learn and follow the steps of the writing process to create compositions in a variety of writing modes
• Understand the characteristics of nouns and verbs and use them correctly in writing
• Apply knowledge of letter patterns and word structure to spell words correctly

Lesson 1: Inside Out: Lesson 1

Objectives:
• Listen to compare and contrast
• Compare and contrast
• Answer questions to compare and contrast
• Define and identify regular and irregular plural nouns
• Identify qualities of a summary
• Spell words with consonant digraphs th, sh, ch, ph

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 2: Inside Out: Lesson 2

Objectives:
• Compare and contrast
• Answer questions to compare and contrast
• Understand how to eliminate wordiness from writing
• Use regular and irregular plural nouns in writing

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.
Lesson 3: Inside Out: Lesson 3

Objectives:
- Compare and contrast to improve comprehension
- Answer questions to compare and contrast
- Use word structure to determine word meaning
- Understand how to eliminate wordiness from writing
- Use regular and irregular plural nouns in writing
- Spell words with consonant digraphs th, sh, ch, ph

Lesson 4: Inside Out: Lesson 4

Objectives:
- Examine features of e-mails
- Compare and contrast across texts
- Understand how to eliminate wordiness from writing
- Focus on focus/ideas
- Use regular and irregular plural nouns in writing
- Spell words with consonant digraphs th, sh, ch, ph

Lesson 5: Inside Out: Lesson 5

Objectives:
- Compare and contrast to improve comprehension
- Answer questions to compare and contrast
- Use regular and irregular plural nouns in writing
- Spell words with consonant digraphs th, sh, ch, ph

Lesson 6: Passage to Freedom: Lesson 1

Objectives:
- Listen for clues to author’s purpose
- Determine author’s purpose
- Monitor author’s purpose to help comprehension
- Identify qualities of a story review or critique
- Define and identify possessive nouns
- Spell irregular plural words

Lesson 7: Passage to Freedom: Lesson 2

Objectives:
- Identify author’s purpose
- Determine author’s purpose to help monitor comprehension
- Use dictionaries and glossaries to determine meaning of unfamiliar words
- Understand how to support ideas in a review
- Use possessive nouns in writing
- Spell irregular plural words

Lesson 8: Passage to Freedom: Lesson 3

Objectives:
- Identify author’s purpose
- Determine author’s purpose to help monitor comprehension
- Use dictionaries and glossaries to determine meaning of unfamiliar words
• Understand how to support ideas in a review
• Use possessive nouns in writing
• Spell irregular plural words

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 9: Passage to Freedom: Lesson 4

Objectives:
• Examine features of an autobiography
• Compare and contrast across texts
• Understand how to support ideas in a review
• Focus on focus/ideas
• Use possessive nouns in writing
• Spell irregular plural words

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 10: Passage to Freedom: Lesson 5

Objectives:
• Identify author’s purpose
• Determine author’s purpose to help monitor comprehension
• Use possessive nouns in writing
• Spell irregular plural words

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 11: The Ch'i-lin Purse: Lesson 1

Objectives:
• Listen to compare and contrast
• Compare and contrast
• Use comparisons and contrasts to predict what will happen next
• Define and identify action and linking verbs
• Identify qualities of a news story
• Spell words with r-controlled vowels

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 12: The Ch'i-lin Purse: Lesson 2

Objectives:
• Compare and contrast
• Use comparisons and contrasts to predict what will happen next
• Use word structure to identify Greek and Latin roots in unknown words
• Answer 5 Ws and How for a news story
• Effectively and efficiently find, evaluate, and communicate information related to an inquiry question using electronic sources
• Use action and linking verbs in writing
• Spell words with r-controlled vowels

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 13: The Ch'i-lin Purse: Lesson 3

Objectives:
• Compare and contrast
• Use comparisons and contrasts to predict what will happen next
• Use word structure to identify Greek and Latin roots in unknown words
• Answer 5 Ws and How for a news story
• Effectively and efficiently find, evaluate, and communicate information related to an inquiry question using electronic sources
• Use action and linking verbs in writing
• Spell words with r-controlled vowels

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.
Lesson 14: The Ch'i-lin Purse: Lesson 4

Objectives:
• Examine features of a fable
• Answer 5 Ws and How for a news story
• Focus on organization/paragraphs
• Use action and linking verbs in writing
• Spell words with r-controlled vowels

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 15: The Ch'i-lin Purse: Lesson 5

Objectives:
• Compare and contrast people, events, and cultures
• Use compare and contrast to predict what will happen next in a story
• Use action and linking verbs in writing
• Spell words with r-controlled vowels

Objectives derived from Pearson Education, Inc. © Pearson Education, Inc., publishing as Pearson Prentice Hall. All rights reserved.

Lesson 16: Jane Goodall’s 10 Ways to Help Save Wildlife: 1

Objectives:
• Listen for statements of fact and opinion
• Identify statements of fact and opinion
• Ask questions to differentiate statements of fact and opinion
• Define and identify main and helping verbs
• Identify characteristics of well-written rules
• Spell words with final syllables -en, -an, -el, -le, -il

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 17: Jane Goodall’s 10 Ways to Help Save Wildlife: 2

Objectives:
• Use context clues to determine word meaning
• Recognize statements of fact and opinion to improve comprehension
• Ask questions to distinguish between fact and opinion and verify facts
• Identify characteristics of well-written rules
• Use main and helping verbs in writing
• Spell words with final syllables –en, -an, -el, -le, -il

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 18: Jane Goodall’s 10 Ways to Help Save Wildlife: 3

Objectives:
• Recognize statements of fact and opinion to improve comprehension
• Ask questions to distinguish between fact and opinion and verify facts
• State and follow a purpose for writing
• Use main and helping verbs in writing
• Spell words with final syllables –en, -an, -el, -le, -il

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 19: Jane Goodall’s 10 Ways to Help Save Wildlife: 4

Objectives:
• Examine features of expository nonfiction
• Compare and contrast across texts
• State and follow a purpose for writing
• Focus on word choice
• Use main and helping verbs in writing
• Spell words with final syllables –en, -an, -el, -le, -il

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.
Lesson 20: Jane Goodall’s 10 Ways to Help Save Wildlife: 5

Objectives:
- Recognize statements of fact and opinion to improve comprehension
- Ask questions to distinguish between fact and opinion and verify facts
- Use main and helping verbs in writing
- Effectively and efficiently find, evaluate, and communicate information related to an inquiry question using electronic sources
- Spell words with final syllables –en, -an, -el, -le, -il

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 21: The Midnight Ride of Paul Revere: Lesson 1

Objectives:
- Listen to understand sequence
- Determine the sequence of events
- Use graphic organizers to follow sequence
- Define and identify subject-verb agreement
- Spell words that end with er, ar, and or

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 22: The Midnight Ride of Paul Revere: Lesson 2

Objectives:
- Use word structure to determine the meaning of unfamiliar verbs
- Sequence events to improve comprehension
- Use graphic organizers to understand the sequence of events
- Use subjects and verbs that agree in writing
- Effectively and efficiently find, evaluate, and communicate information related to an inquiry question using electronic sources
- Spell words that end with er, ar, and or

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 23: The Midnight Ride of Paul Revere: Lesson 3

Objectives:
- Use word structure to determine the meaning of unfamiliar verbs
- Sequence events to improve comprehension
- Use graphic organizers to understand the sequence of events
- Effectively and efficiently find, evaluate, and communicate information related to an inquiry question using electronic sources
- Write an interview for a test
- Use subjects and verbs that agree in writing
- Spell words that end with er, ar, and or

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 24: The Midnight Ride of Paul Revere: Lesson 4

Objectives:
- Examine the features of a Web page
- Sequence events to improve comprehension
- Write an interview for a test
- Focus on organization
- Use subjects and verbs that agree in writing
- Spell words that end with er, ar, and or

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 25: Unit Review

Objectives:
- Critically analyze unit theme
- Connect content across selections
- Combine content and skills in meaningful activities that build literacy

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.
Lesson 26: Doing the Right Thing: Unit Test

Unit 3: Inventors and Artists

In this unit, your student will explore the theme of how inventors and artists have made an impact on the world. He will read a variety of selections, focusing primarily on biography and other expository nonfiction selections. Reading instruction will help your student to understand main ideas and details, identify facts and opinions, and use graphic sources of information. Throughout the unit, your student will continue to practice fluency skills, as well as vocabulary development strategies such as understanding word roots, context clues, and word structure. He will gain additional confidence as a writer as he learns to compose longer works, including a skit and a comparison/contrast essay submitted as part of the writing portfolio. Spelling instruction addresses a variety of topics. Grammar instruction focuses on verb forms and prepositions.

Objectives:
- Read fiction and nonfiction selections in a variety of genres
- Apply reading comprehension skills and strategies before, during, and after reading
- Follow the steps of the writing process to create compositions in a variety of writing modes
- Understand the characteristics of verbs and prepositional phrases and use them correctly in writing
- Apply knowledge of letter patterns and word structure to spell words correctly

Lesson 1: Wings for the King: Lesson 1

Objectives:
- Listen for clues about author’s purpose
- Recognize author’s purpose
- Use story structure to understand author’s purpose
- Define and identify past, present, and future tenses
- Identify characteristics of a well-written skit
- Spell words with schwa

Lesson 2: Wings for the King: Lesson 2

Objectives:
- Use context clues to determine the correct meaning of multiple-meaning words
- Understand story structure in a play
- Identify author’s purpose to clarify the story structure
- Use powerful verbs in writing
- Use past, present, and future tenses in writing
- Spell words with schwa

Lesson 3: Wings for the King: Lesson 3

Objectives:
- Use context clues to determine the correct meaning of multiple-meaning words
- Understand story structure in a play
- Identify author’s purpose to clarify the story structure
- Use powerful verbs in writing
- Use past, present, and future tenses in writing
- Spell words with schwa

Lesson 4: Wings for the King: Lesson 4

Objectives:
- Use context clues to determine the correct meaning of multiple-meaning words
- Understand story structure in a play
- Identify author’s purpose to clarify the story structure
- Use powerful verbs in writing
- Use past, present, and future tenses in writing
- Spell words with schwa
Objectives:
- Examine features of narrative nonfiction
- Compare and contrast across texts
- Use powerful verbs in writing
- Use past, present, and future tenses in writing
- Focus on conventions
- Spell words with schwa

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 5: Wings for the King: Lesson 5

Objectives:
- Understand story structure in a play
- Identify author’s purpose to clarify the story structure
- Use past, present, and future tenses in writing
- Spell words with schwa
- Use context clues to determine the correct meaning of multiple-meaning words

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 6: Leonardo’s Horse: Lesson 1

Objectives:
- Listen for the main idea
- Determine main idea and identify details
- Use main ideas and details to summarize
- Identify characteristics of a well-written question/answer essay
- Write a question/answer essay that sticks to a topic
- Spell compound words

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 7: Leonardo’s Horse: Lesson 2

Objectives:
- Identify main idea and supporting details to improve comprehension
- Summarize to identify main idea
- Use word structure to determine word meaning
- Identify characteristics of a well-written question/answer essay
- Use principal parts of regular verbs in writing
- Spell compound words

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 8: Leonardo’s Horse: Lesson 3

Objectives:
- Identify main idea and supporting details to improve comprehension
- Summarize to identify main idea
- Use word structure to determine word meaning
- Stick to the topic in writing
- Use principal parts of regular verbs in writing
- Spell compound words

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 9: Leonardo’s Horse: Lesson 4

Objectives:
- Examine features of narrative nonfiction
- Compare and contrast across texts
- Stick to the topic in writing
- Focus on focus/ideas
- Use principal parts of regular verbs in writing
- Spell compound words

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.
Lesson 10: Leonardo's Horse: Lesson 5

Objectives:
- Identify main idea and supporting details to improve comprehension
- Summarize to identify main idea
- Use principal parts of regular verbs in writing
- Spell compound words

Lesson 11: The Dinosaurs of Waterhouse Hawkins: Lesson 1

Objectives:
- Listen for statements of fact and opinion
- Identify statements of fact and opinion
- Identify characteristics of a well-written feature story
- Define and identify principal parts of irregular verbs
- Spell words with consonant sounds /j/, /ks/, and /s/

Lesson 12: The Dinosaurs of Waterhouse Hawkins: Lesson 2

Objectives:
- Identify statements of fact and opinion to improve comprehension
- Use statements of fact and opinion to make predictions as you read
- Use context clues to determine the meaning of homonyms
- Show understanding of paragraph structure
- Use principal parts of irregular verbs in writing
- Spell words with consonant sounds /j/, /ks/, and /s/

Lesson 13: The Dinosaurs of Waterhouse Hawkins: Lesson 3

Objectives:
- Identify statements of fact and opinion to improve comprehension
- Use statements of fact and opinion to make predictions as you read
- Use context clues to determine the meaning of homonyms
- Show understanding of paragraph structure
- Use principal parts of irregular verbs in writing
- Spell words with consonant sounds /j/, /ks/, and /s/

Lesson 14: The Dinosaurs of Waterhouse Hawkins: Lesson 4

Objectives:
- Examine features of interviews
- Compare and contrast across texts
- Show understanding of paragraph structure
- Focus on organization/paragraphs
- Use principal parts of irregular verbs in writing
- Spell words with consonant sounds /j/, /ks/, and /s/

Lesson 15: The Dinosaurs of Waterhouse Hawkins: Lesson 5

Objectives:
- Identify statements of fact and opinion to improve comprehension
- Use statements of fact and opinion to make predictions as you read
- Use principal parts of irregular verbs in writing
- Spell words with consonant sounds /j/, /ks/, and /s/

Appendix A.2.a Language Arts Course Guides

Language Arts 5 A
Lesson 16: Mahalia Jackson: Lesson 1

Objectives:
• Listen for main idea
• Determine main idea and identify details
• Use graphic organizers to figure out main idea and details
• Define and identify principal parts of troublesome verbs
• Identify characteristics of a description
• Spell words with two consonants that stand for one sound

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 17: Mahalia Jackson: Lesson 2

Objectives:
• Use antonyms as context clues to determine word meaning
• Identify main ideas and supporting details to improve comprehension
• Use graphic organizers to help determine main ideas
• Use specific words to enhance a description
• Spell words with two consonants that stand for one sound

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 18: Mahalia Jackson: Lesson 3

Objectives:
• Use antonyms as context clues to determine word meaning
• Identify main ideas and supporting details to improve comprehension
• Use graphic organizers to help determine main ideas
• Use specific words to enhance a description
• Use principal parts of troublesome verbs in writing
• Spell words with two consonants that stand for one sound

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 19: Mahalia Jackson: Lesson 4

Objectives:
• Examine features of poetry
• Compare and contrast across texts
• Use specific words to enhance a description
• Focus on word choice
• Use principal parts of troublesome verbs in writing
• Spell words with two consonants that stand for one sound

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 20: Mahalia Jackson: Lesson 5

Objectives:
• Identify main ideas and supporting details to improve comprehension
• Use principal parts of troublesome verbs in writing
• Spell words with two consonants that stand for one sound

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 21: Special Effects in Film and Television: Lesson 1

Objectives:
• Listen for details and facts
• Interpret graphic sources
• Use prior knowledge to understand graphic sources and increase comprehension
• Define and identify prepositions and prepositional phrases
• Spell words with prefixes un-, de-, and dis-

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.
Lesson 22: Special Effects in Film and Television: Lesson 2

Objectives:
- Use word structure to determine the meaning of words with prefixes
- Use graphic sources to improve comprehension
- Use prior knowledge to understand graphic sources
- Use prepositions and prepositional phrases in writing
- Spell words with prefixes un-, de-, and dis-
- Define and identify prepositions and prepositional phrases

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 23: Special Effects in Film and Television: Lesson 3

Objectives:
- Use word structure to determine the meaning of words with prefixes
- Use graphic sources to improve comprehension
- Use prior knowledge to understand graphic sources
- Write expository essay for a test
- Use prepositions and prepositional phrases in writing
- Spell words with prefixes un-, de-, and dis-

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 24: Special Effects in Film and Television: Lesson 4

Objectives:
- Examine the features of search engines
- Write expository essay for a test
- Focus on sentences
- Use prepositions and prepositional phrases in writing
- Spell words with prefixes un-, de-, and dis-

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 25: Inventors and Artists: Unit Review

Objectives:
- Critically analyze unit theme
- Connect content across selections
- Combine content and skills in meaningful activities that build literacy
- Respond to unit selections through a variety of modalities

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 26: Inventors and Artists Unit Test
LANGUAGE ARTS 5 B
Language Arts 5 B

In this course, the student will read longer and more complex stories. The student will become a more critical and insightful reader, and continue to examine the author’s purpose and point of view. The student will use his critical thinking and reading comprehension skills to analyze fiction and nonfiction stories presented in Scott Foresman’s Reading Street. The stories are organized according to themes, including adaptations, adventurers, and the unexpected. These themes invite the student to view reading as a tool for information gathering, and the themes help the student make connections across science and social studies. In addition to formal reading instruction, the student will establish a daily reading routine and will practice speaking and listening skills.

This course focuses on structure, format, and grammar. The basic writing content concentrates on writing quality sentences, organizing paragraphs, summary writing, and adding detail to writing. The student will continue to use effective planning tools such as graphic organizers, word planners, and outlines to create well-organized compositions.

The student will write creative, factual, descriptive, artistic, and persuasive compositions that tie together all the skills learned in the course. The student will continue to master spelling, grammar, and language skills. Reading Street offers spelling lists based on the patterns and relationship of letters within words. Daily practice activities reinforce the spelling strategies and give the student opportunities to use spelling words in context.

Your student will have access to DimensionU™, which includes online literary games that support your student’s understanding of lesson concepts. You will find the link to DimensionU™ on your student’s home page. Follow the directions to download the necessary software first. Once installed, DimensionU™ allows your student to access DimensionL™ to practice literary skills in a gaming environment.

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Unit 1: Adapting

In this unit, your student will explore the theme of how people and animals adapt to new and challenging situations. She will read a variety of selections including prose, drama, and nonfiction selections. Reading instruction will help your student draw conclusions, generalize, and use graphic sources of information. Throughout the unit, your student will continue to practice fluency skills, as well as vocabulary development strategies such as understanding word roots, context clues, and word structure. She will gain additional confidence as a writer as she learns to compose longer works, including an e-mail, journal entry, narrative story, play, and descriptive piece. Spelling instruction addresses a variety of topics. Grammar instruction focuses on pronouns and antecedents.

Objectives:
• Read fiction and nonfiction selections in a variety of genres
• Apply reading comprehension skills and strategies before, during, and after reading
• Follow the steps of the writing process to create compositions in a variety of writing modes
• Understand the characteristics of pronouns and use them correctly in writing
• Apply knowledge of letter patterns and word structure to spell words correctly

Lesson 1: Weslandia: Lesson 1

Objectives:
• Listen to draw conclusions
• Draw conclusions
• Draw conclusions to answer questions
• Define and identify subject and object pronouns
• Identify the characteristics of an e-mail
• Spell words from different cultures

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 2: Weslandia: Lesson 2

Objectives:
• Use word structure and word endings to determine meaning
Lesson 3: Weslandia: Lesson 3

Objectives:
- Draw conclusions to improve comprehension
- Answer questions to help draw conclusions
- Use word structure and word endings to determine meaning
- Use subject and object pronouns in writing
- Write an e-mail that refers to a text
- Spell words from different cultures

Lesson 4: Weslandia: Lesson 4

Objectives:
- Examine features of poetry
- Compare and contrast across texts
- Write an e-mail that refers to a text
- Use subject and object pronouns in writing
- Focus on conventions
- Spell words from different cultures

Lesson 5: Weslandia: Lesson 5

Objectives:
- Use word structure and word endings to determine meaning
- Draw conclusions to improve comprehension
- Answer questions to help draw conclusions
- Use subject and object pronouns in writing
- Write an e-mail that refers to a text
- Spell words from different cultures

Lesson 6: Stretching Ourselves: Lesson 1

Objectives:
- Listen for generalizations
- Identify and make generalizations
- Use generalizations to predict
- Define and identify pronouns and antecedents
- Identify the characteristics of a journal entry
- Spell words with prefixes over-, under-, sub-, super-, out-

Lesson 7: Stretching Ourselves: Lesson 2

Objectives:
- Recognize and make generalizations to improve comprehension
- Use generalizations to predict
- Write a journal entry that elaborates on a topic
- Use context clues to determine word meaning
- Use pronouns that agree with their antecedents
- Use pronouns and antecedents in writing
- Spell words with prefixes over-, under-, sub-, super-, out-
Lesson 8: Stretching Ourselves: Lesson 3

Objectives:
- Use context clues to determine word meaning
- Recognize and make generalizations to improve comprehension
- Use generalizations to predict
- Use pronouns that agree with their antecedents
- Use pronouns and antecedents in writing
- Write a journal entry that elaborates on a topic
- Spell words with prefixes over-, under-, sub-, super-, out-

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 9: Stretching Ourselves: Lesson 4

Objectives:
- Examine features of expository nonfiction
- Compare and contrast across texts
- Use pronouns that agree with their antecedents
- Use pronouns and antecedents in writing
- Write a journal entry that elaborates on a topic
- Focus on focus/ideas
- Spell words with prefixes over-, under-, sub-, super-, out-

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 10: Stretching Ourselves: Lesson 5

Objectives:
- Use context clues to determine word meaning
- Recognize and make generalizations to improve comprehension
- Use generalizations to predict
- Use pronouns that agree with the antecedents
- Use pronouns and antecedents in writing
- Spell words with prefixes over-, under-, sub-, super-, out-

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 11: Exploding Ants: Lesson 1

Objectives:
- Listen to identify author's purpose
- Use graphic sources to aid comprehension
- Monitor comprehension by using graphic sources
- Define and identify possessive pronouns
- Identify the characteristics of a story
- Spell homophones

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 12: Exploding Ants: Lesson 2

Objectives:
- Use context clues and synonyms to determine word meaning
- Use graphic sources to improve understanding of text
- Monitor comprehension by using graphic sources
- Use possessive pronouns in writing
- Write a story about an animal, using words, style, and tone to create a mood
- Define and identify possessive pronouns
- Spell homophones

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 13: Exploding Ants: Lesson 3

Objectives:
- Use context clues and synonyms to determine word meaning
Lesson 14: Exploding Ants: Lesson 4

Objectives:
• Examine features of experiments
• Compare and contrast across texts
• Write a story about an animal, using words, style, and tone to create a mood
• Use possessive pronouns in writing
• Focus on word choice
• Spell homophones

Lesson 15: Exploding Ants: Lesson 5

Objectives:
• Use context clues and synonyms to determine word meaning
• Use graphic sources to improve understanding of text
• Monitor comprehension by using graphic sources
• Use possessive pronouns in writing
• Spell homophones

Lesson 16: The Stormi Giovanni Club: Lesson 1

Objectives:
• Listen for generalizations
• Identify and make generalizations
• Generalize to understand story structure
• Define and identify indefinite and reflexive pronouns
• Identify the characteristics of a letter of advice
• Identify and spell suffixes -ible and -able

Lesson 17: The Stormi Giovanni Club: Lesson 2

Objectives:
• Use context clues to determine word meaning
• Generalize about text to improve comprehension
• Use story structure to help support generalizations
• Use definite and reflexive pronouns in writing
• Write advice to a student at a new school
• Identify and spell suffixes -ible and -able

Lesson 18: The Stormi Giovanni Club: Lesson 3

Objectives:
• Generalize about text to improve comprehension
• Use story structure to help support generalizations
• Write advice to a student at a new school
• Use context clues to determine word meaning
• Use indefinite and reflexive pronouns in writing
• Identify and spell suffixes -ible and -able
Lesson 19: The Stormi Giovanni Club: Lesson 4

Objectives:
- Examine features of newspaper articles
- Compare and contrast across texts
- Use indefinite and reflexive pronouns in writing
- Write advice to a student at a new school
- Focus on voice
- Identify and spell suffixes -ible and -able

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 20: The Stormi Giovanni Club: Lesson 5

Objectives:
- Use context clues to determine word meaning
- Generalize about text to improve comprehension
- Use story structure to help support generalizations
- Use indefinite and reflexive pronouns in writing
- Identify and spell suffixes -ible and -able

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 21: The Gymnast: Lesson 1

Objectives:
- Listen to draw conclusions
- Draw conclusions using information in the text and prior knowledge
- Visualize to draw conclusions
- Define and identify pronouns who and whom as subjects and objects
- Write a description for a test
- Spell words with negative prefixes

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 22: The Gymnast: Lesson 2

Objectives:
- Use word structure and suffixes to determine word meaning
- Draw conclusions using information in the text and prior knowledge
- Visualize to draw conclusions about a selection
- Practice using sensory details in writing
- Use who and whom correctly in writing
- Identify key words in a prompt
- Spell words with negative prefixes

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 23: The Gymnast: Lesson 3

Objectives:
- Use word structure and suffixes to determine word meaning
- Draw conclusions using information in the text and prior knowledge
- Visualize to draw conclusions about a selection
- Use who and whom correctly in writing
- Identify key words in a prompt
- Spell words with negative prefixes

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 24: The Gymnast: Lesson 4

Objectives:
- Use who and whom correctly in writing
- Identify key words in a prompt
- Focus on word choice
- Spell words with negative prefixes
Lesson 25: Unit Review

Objectives:
- Critically analyze unit theme
- Connect content across selections
- Combine content and skills in meaningful activities that build literacy
- Respond to unit selections through a variety of modalities

Lesson 26: Adapting Unit Test

Unit 2: Adventurers

In this unit, your student will explore the theme of how people seek and experience adventures. She will read a variety of selections including humorous and science fiction, narrative and expository nonfiction, as well as an interview. Reading instruction will help your student use graphic sources, recognize character, plot, and author's purpose as well as cause and effect. Throughout the unit, your student will continue to practice fluency skills, as well as vocabulary development strategies, such as using a dictionary or glossary, context clues, and word structure. She will gain additional confidence as a writer as she learns to compose longer works, including an editorial, biographical sketch, and advertisement. Spelling instruction addresses a variety of topics. Grammar instruction includes contractions, negatives, adverbs, and adjectives.

Objectives:
- Read fiction and nonfiction selections in a variety of genres
- Apply reading comprehension skills and strategies before, during, and after reading
- Follow the steps of the writing process to create compositions in a variety of writing modes
- Understand the characteristics of contractions, adjectives, articles, and adverbs and use them correctly in writing
- Apply knowledge of letter patterns and word structure to spell words correctly

Lesson 1: The Three-Century Woman: Lesson 1

Objectives:
- Listen for clues about character and plot
- Identify character and plot
- Activate and use prior knowledge to enhance understanding of character and plot
- Identify the characteristics of an editorial
- Define and identify contractions and negatives
- Use contractions and negatives in writing
- Spell multisyllabic words

Lesson 2: The Three-Century Woman: Lesson 2

Objectives:
- Identify characters and plot to improve comprehension
- Activate and use prior knowledge to enhance understanding of characters and plot
- Identify the characteristics of an editorial
- Write an editorial providing support for your argument
- Define and identify contractions and negatives
- Use contractions and negatives in writing
- Spell multisyllabic words

Lesson 3: The Three-Century Woman: Lesson 3

Objectives:
- Identify characters and plot to improve comprehension
• Activate and use prior knowledge to enhance understanding of characters and plot
• Identify the characteristics of an editorial
• Write an editorial providing support for your argument
• Define and identify contractions and negatives
• Use contractions and negatives in writing
• Spell multisyllabic words

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 4: The Three-Century Woman: Lesson 4

Objectives:
• Examine features of a short story
• Compare and contrast across texts
• Write an editorial providing support for your argument
• Use contractions and negatives in writing
• Focus on focus/ideas
• Spell multisyllabic words

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 5: The Three-Century Woman: Lesson 5

Objectives:
• Activate and use prior knowledge to enhance understanding of characters and plot
• Identify characters and plot to improve comprehension
• Use contractions and negatives correctly in writing
• Spell multisyllabic words

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 6: The Unsinkable Wreck of the R.M.S. Titanic: 1

Objectives:
• Listen for details and facts
• Use graphic sources to improve comprehension
• Ask questions based on graphic sources
• Identify the characteristics of a problem-solution essay
• Define and identify adjectives and articles
• Use adjectives and articles in writing
• Spell words with unusual spellings

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 7: The Unsinkable Wreck of the R.M.S. Titanic: 2

Objectives:
• Use a dictionary or glossary to find meanings of unfamiliar words
• Use graphic sources to improve comprehension
• Define and identify adjectives and articles
• Use adjectives and articles in writing
• Spell words with unusual spellings

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 8: The Unsinkable Wreck of the R.M.S. Titanic: 3

Objectives:
• Use graphic sources to improve comprehension
• Ask questions based on graphic sources
• Use adjectives and articles in writing
• Write a problem-solution essay using persuasive words
• Spell words with unusual spellings

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.
Lesson 9: The Unsinkable Wreck of the R.M.S. Titanic: 4

Objectives:

• Examine features of adventure fiction
• Compare and contrast across texts
• Use adjectives and articles correctly in writing
• Focus on word choice
• Spell words with unusual spellings

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 10: The Unsinkable Wreck of the R.M.S. Titanic: 5

Objectives:

• Use graphic sources to improve comprehension
• Ask questions based on graphic sources
• Use adjectives and articles in writing
• Spell words with unusual spellings

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 11: Talk with an Astronaut: Lesson 1

Objectives:

• Build vocabulary by finding words related to the lesson concept
• Listen for clues to author's purpose
• Identify the characteristics of a biographical sketch
• Write a biographical sketch that includes quotations
• Focus on sentences
• Spell words with Greek word parts

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 12: Talk with an Astronaut: Lesson 2

Objectives:

• Identify author's purpose
• Monitor comprehension to determine author's purpose
• Identify the characteristics of a biographical sketch
• Write a biographical sketch that includes quotations
• Define and identify the adjectives this, that, these, and those
• Use this, that, these, and those in writing
• Spell words with Greek word parts

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 13: Talk with an Astronaut: Lesson 3

Objectives:

• Identify author's purpose
• Monitor comprehension to determine author's purpose
• Identify the characteristics of a biographical sketch
• Write a biographical sketch that includes quotations
• Define and identify the adjectives this, that, these, and those
• Use this, that, these, and those in writing
• Spell words with Greek word parts

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 14: Talk with an Astronaut: Lesson 4

Objectives:

• Examine the features of online directories
• Compare and contrast across texts
• Write a biographical sketch that includes quotations
• Focus on sentences
• Use this, that, these, and those in writing
• Spell words with Greek word parts

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.
Lesson 15: Talk with an Astronaut: Lesson 5

Objectives:
- Identify author's purpose
- Use this, that, these, and those in writing
- Spell words with Greek word parts

Lesson 16: Journey to the Center of the Earth: Lesson 1

Objectives:
- Listen for causes and effects
- Identify cause and effect relationships
- Use cause and effect relationships to summarize
- Identify the characteristics of a persuasive letter
- Define and identify comparative and superlative adjectives
- Spell words with Latin roots

Lesson 17: Journey to the Center of the Earth: Lesson 2

Objectives:
- Use context clues to determine word meaning
- Identify causes and effects to improve comprehension
- Use cause and effect relationships to summarize
- Identify the characteristics of a persuasive letter
- Define and identify comparative and superlative adjectives
- Use comparative and superlative adjectives correctly in writing
- Spell words with Latin roots

Lesson 18: Journey to the Center of the Earth: Lesson 3

Objectives:
- Identify causes and effects to improve comprehension
- Use cause and effect relationships to summarize
- Write a persuasive letter tailored to a specific audience
- Use comparative and superlative adjectives correctly in writing
- Spell words with Latin roots

Lesson 19: Journey to the Center of the Earth: Lesson 4

Objectives:
- Examine features of a textbook
- Compare and contrast across texts
- Write a persuasive letter tailored to a specific audience
- Use comparative and superlative adjectives correctly in writing
- Focus on voice
- Spell words with Latin roots

Lesson 20: Journey to the Center of the Earth: Lesson 5
Lesson 21: Ghost Towns of the American West: Lesson 1

Objectives:
- Listen for generalizations
- Recognize generalizations
- Use graphic organizers to test the validity of generalizations
- Define and identify adverbs
- Identify elements of style that improve writing
- Identify and spell related words

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 22: Ghost Towns of the American West: Lesson 2

Objectives:
- Use word structure to understand prefixes
- Recognize generalizations to improve comprehension
- Use graphic organizers to make generalizations
- Define and identify adverbs
- Use adverbs correctly in writing
- Identify and spell related words

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 23: Ghost Towns of the American West: Lesson 3

Objectives:
- Recognize generalizations to improve comprehension
- Use graphic organizers to make generalizations
- Use adverbs correctly in writing
- Write an ad that persuades
- Identify elements of style that improve writing
- Identify and spell related words

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 24: Ghost Towns of the American West: Lesson 4

Objectives:
- Examine features of narrative nonfiction
- Compare and contrast across texts
- Use adverbs correctly in writing
- Identify elements of style that improve writing
- Identify and spell related words

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 25: Unit Review

Objectives:
- Critically analyze unit theme
- Connect content across selections
- Combine content and skills in meaningful activities that build literacy
- Respond to unit selections through a variety of modalities

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 26: Adventurers Unit Test

Unit 3: The Unexpected

In this unit, your student will read various selections that explore the theme of what we can learn from encounters with the unexpected. The unit includes a wide range of reading selections, from expository nonfiction to myth, and concludes with Louise Fitzhugh's classic novel *Harriet the Spy*. Reading instruction in the first half of this unit builds on the reading skills introduced in earlier units, such as comparing and contrasting, distinguishing between fact and opinion, and understanding sequence. Fluency and vocabulary development
strategies taught in previous units are reinforced throughout the unit.

In the second half of this unit, your student will read Louise Fitzhugh's novel *Harriet the Spy*. The novel tells the story of a young girl named Harriet M. Welsch, who considers herself a spy and takes her "job" very seriously. Harriet is a sharp observer of her friends, family members, and neighbors, and spends much of her time taking detailed notes about their habits and personality quirks. When Harriet's classmates find and read her notebook, she faces harsh consequences and must struggle to repair the friendships that she holds dear. As your student follows Harriet's intriguing story, he will identify literary elements, analyze characters, and use comprehension strategies to make connections and draw conclusions.

Writing instruction in this unit will develop your student's ability to understand and create informational texts. In addition to learning how to take notes and create an outline, your student will write a humorous poem and an informational article submitted as part of his writing portfolio. Spelling instruction focuses on compound words, words with *ei* and *ie*, and easily confused words. Grammar instruction develops your student’s understanding of writing conventions for punctuation, including commas and quotation marks.

Objectives:
- Read fiction and nonfiction selections in a variety of genres
- Apply reading comprehension skills and strategies before, during, and after reading
- Follow the steps of the writing process to create compositions in a variety of writing modes
- Understand the characteristics of commas, quotation marks, and other punctuation marks
- Apply knowledge of letter patterns and word structure to spell words correctly

**Lesson 1: King Midas and the Golden Touch: Lesson 1**

Objectives:
- Build vocabulary by finding words related to the lesson concept
- Listen to compare and contrast
- Compare and contrast while reading
- Answer questions about comparisons and contrasts
- Define and identify uses for commas
- Identify the characteristics of a humorous poem
- Spell words with *ei* and *ie*

*Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.*

**Lesson 2: King Midas and the Golden Touch: Lesson 2**

Objectives:
- Compare and contrast to improve comprehension
- Use comparisons and contrasts to answer questions
- Define and identify uses for commas
- Use commas in writing
- Spell words with *ei* and *ie*

*Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.*

**Lesson 3: King Midas and the Golden Touch: Lesson 3**

Objectives:
- Compare and contrast to improve comprehension
- Use comparisons and contrasts to answer questions
- Identify the characteristics of a humorous poem
- Write a humorous poem
- Spell words with *ei* and *ie*

*Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.*

**Lesson 4: King Midas and the Golden Touch: Lesson 4**

Objectives:
- Examine features of poetry
- Compare and contrast across texts
- Focus on voice
Lesson 5: King Midas and the Golden Touch: Lesson 5

Objectives:
- Compare and contrast to improve comprehension
- Use comparisons and contrasts to answer questions
- Use commas in writing
- Spell words with ei and ie

Lesson 6: The Hindenburg: Lesson 1

Objectives:
- Build vocabulary by finding words related to the lesson concept
- Listen for facts and opinions
- Identify statements of fact and opinion
- Ask questions to test whether a statement of opinion is valid
- Define and identify uses for quotations and quotation marks
- Identify the characteristics of an outline
- Spell compound words

Lesson 7: The Hindenburg: Lesson 2

Objectives:
- Distinguish between fact and opinion to improve comprehension
- Ask questions to identify statements of fact and opinion
- Use context clues to determine word meaning
- Define and identify uses for quotations and quotation marks
- Use quotations and quotation marks in writing
- Spell compound words

Lesson 8: The Hindenburg: Lesson 3

Objectives:
- Distinguish between fact and opinion to improve comprehension
- Ask questions to identify statements of fact and opinion
- Identify the characteristics of an outline
- Write an outline of a nonfiction text
- Spell compound words

Lesson 9: The Hindenburg: Lesson 4

Objectives:
- Evaluate online sources
- Compare and contrast across texts
- Use quotations and quotation marks in writing
- Focus on organization
- Spell compound words

Lesson 10: The Hindenburg: Lesson 5

Objectives:
- Use context clues to determine word meaning
- Distinguish between fact and opinion to improve comprehension
- Use quotations and quotation marks in writing
- Spell compound words
Lesson 11: Sweet Music in Harlem: Lesson 1

Objectives:
• Build vocabulary by finding words related to the lesson concept
• Listen for sequence
• Identify the characteristics of an informational article
• Define and identify uses for punctuation
• Spell easily confused words

Lesson 12: Sweet Music in Harlem: Lesson 2

Objectives:
• Use context clues to determine the meaning of homographs
• Recognize sequence to improve comprehension
• Use prior knowledge to recognize sequence
• Define and identify uses for punctuation
• Use punctuation in writing
• Spell easily confused words

Lesson 13: Sweet Music in Harlem: Lesson 3

Objectives:
• Recognize sequence to improve comprehension
• Use prior knowledge to recognize sequence
• Identify the characteristics of an informational article
• Write an informational article with effective topic sentences
• Focus on sentences
• Spell easily confused words

Lesson 14: Sweet Music in Harlem: Lesson 4

Objectives:
• Examine features of an author note
• Compare and contrast across texts
• Write an informational article with effective topic sentences
• Focus on sentences
• Use punctuation in writing
• Spell easily confused words

Lesson 15: Sweet Music in Harlem: Lesson 5

Objectives:
• Recognize sequence to improve comprehension
• Use prior knowledge to recognize sequence
• Spell easily confused words

Lesson 16: Setting Background for Harriet the Spy

Objectives:
• Understand the setting of the novel
• Discuss characteristics of a spy
• Read text representing a different time period

Lesson 17: Harriet the Spy: Chapters 1–2

Objectives:
Lesson 18: Harriet the Spy: Chapters 3–4

Objectives:
- Read and analyze the text, then respond to questions
- Analyze characterization
- Analyze relationships between and among characters, setting, and events
- Define vocabulary and identify words in context

Lesson 19: Harriet the Spy: Chapters 5–6

Objectives:
- Read and analyze the text, then respond to questions
- Define vocabulary and identify words in context
- Use details from the text to illustrate the setting
- Identify and explain point of view

Lesson 20: Harriet the Spy: Chapters 7–8

Objectives:
- Read and analyze the text, then respond to questions
- Define vocabulary and identify words in context
- Learn about how an author creates “mood” in a story
- Compose a review of an independent reading selection

Lesson 21: Harriet the Spy: Chapters 9–10

Objectives:
- Read and analyze the text, then respond to questions
- Define vocabulary and identify words in context
- Enrich reading through visualization
- Identify point of view
- Revise and share a review of an independent reading selection

Lesson 22: Harriet the Spy: Chapters 11–13

Objectives:
- Read and analyze the text, then respond to questions
- Define vocabulary and identify words in context
- Describe how Harriet changes in this part of the story

Lesson 23: Harriet the Spy: Chapters 14–16

Objectives:
- Identify and evaluate theme of the novel
- Read and analyze the text, then respond to questions
- Recall all of the elements of the plot
- Define vocabulary and identify words in context

Lesson 24: Harriet the Spy: Review

Objectives:
- Study vocabulary and review the novel

Lesson 25: Harriet the Spy: Test

Lesson 26: Unit Review

Lesson 27: The Unexpected Unit Test
LANGUAGE ARTS 6 A
Language Arts 6 A

In sixth grade, through the study of authors such as Elizabeth Partridge, Gary Soto, and Langston Hughes, the student will ponder such questions as “Is conflict always bad?”; “How do we decide who we are?”; and “How much do our communities shape us?” Short- and long-term research engages the student’s curiosity and critical-thinking skills. The student is encouraged to support these ideas with evidence as the student practices narrative, informative, and persuasive writing.

The student will sharpen and strengthen skills in reading, writing, listening, and speaking. The student is exposed to a wide variety of writing styles to create a sense of curiosity and excitement. The student will improve comprehension of increasingly complex literature and informational texts using a multi-draft reading approach as the student discusses, analyzes, and critiques. The student will learn to make connections between readings, other titles, and the world. The student will also expand an academic vocabulary and build confidence through independent reading. The student will write expository and creative compositions and employ test-taking strategies that are effective for different types of learners.

Unit 1: MS LA Course Overview

In this unit, you will receive a basic overview of the course. You will learn about the course structure built around the Literature series textbook, and preview the different icons and assessments included throughout the course. You will also explore and learn more about interactive reviews, novel units, and Independent Reading roles.

Lesson 1: Getting Started in Middle School Language Arts

Objectives:
• Discuss different types of conflict with your partner
• Predict meaning of academic vocabulary words
• Define and accurately use academic vocabulary related to conflict
• Preview titles for independent reading

Unit 2: Characters and Conflict

In this unit, you will explore the Big Question: Is conflict always bad? You will read stories multiple times to deepen your understanding of literature and to better understand the author’s craft. You will read literary texts to explore characterization, analyze plot elements, and identify theme and tone. You will read nonfiction texts to understand author’s purpose and explore conflict. Finally, you will distinguish between nouns and pronouns and learn ways to use context clues to help you understand unknown words.

Objectives:
• Make predictions and inferences; analyze plot and characterization; and compare plot devices
• Distinguish between common, proper, and possessive nouns and between personal and possessive pronouns
• Predict, define, and accurately use academic vocabulary words related to conflict
• Read, analyze, and connect an independent reading text to other literature and your personal experiences

Lesson 1: Introducing the Big Question (two-day lesson)

Objectives:
• Discuss different types of conflict with your partner
• Predict meaning of academic vocabulary words
• Define and accurately use academic vocabulary related to conflict
• Preview titles for independent reading

Lesson 2: Close Reading Workshop: Short Story (two-day lesson)

Objectives:
• Support short story analysis with textual evidence
• Identify a theme of a short story
• Apply reading strategies to identify key ideas and details, analyze craft and structure, and make connections while reading
• Analyze how elements of a short story interact

Lesson 3: Elements of a Short Story (two-day lesson)

Objectives:
• Support short story analysis with textual evidence
• Analyze the plot of a story
• Identify the structure of a story and its parts

**Lesson 4: First Read: Stray (two-day lesson)**

Objectives:
• Predict and define the meaning of academic vocabulary words
• Apply reading strategies to identify key ideas and details, analyze craft and structure, and make connections while reading
• Use prior knowledge and details from the text to make and verify predictions

**Lesson 5: Second Read: Stray (two-day lesson)**

Objectives:
• Analyze the plot of a story
• Apply reading strategies to identify key ideas and details, analyze craft and structure, and make connections while reading
• Define and accurately use academic vocabulary words

**Lesson 6: Third Read: Stray (two-day lesson)**

Objectives:
• Analyze the plot of the story
• Apply reading strategies to identify key ideas and details, analyze craft and structure, and make connections while reading
• Define and accurately use academic vocabulary words
• Read and comprehend a variety of texts
• Support story analysis with textual evidence
• Distinguish among common, proper, and possessive nouns

**Lesson 7: WriteToLearn: Cause-and-Effect Essay (two-day lesson)**

Objectives:
• Compose a cause-and-effect essay with relevant facts and examples
• Apply suggested revisions and edits to future written compositions

**Lesson 8: Beginning the Writing Process (two-day lesson)**

Objectives:
• Demonstrate understanding of a cause-and-effect essay in order to begin the prewriting and planning stage of the writing process
• Gather information for a cause-and-effect essay during the prewriting and planning stage of the writing process

**Lesson 9: First Read: The Tail (two-day lesson)**

Objectives:
• Predict and define the meaning of academic vocabulary words
• Apply reading strategies to identify key ideas and details, analyze craft and structure, and make connections while reading
• Identify and explain what is not directly stated in the text by drawing inferences

**Lesson 10: Second Read: The Tail (two-day lesson)**

Objectives:
• Analyze details about characters that show traits
• Define and accurately use academic vocabulary words
• Use context clues to determine the meaning of words

**Lesson 11: Third Read: The Tail (two-day lesson)**

Objectives:
• Distinguish between personal and possessive pronouns
• Define and accurately use academic vocabulary
• Analyze details about characters that show traits
• Identify and explain what is not directly stated in the text by drawing inferences
• Support story analysis with textual evidence
Lesson 12: Writing the Rough Draft (two-day lesson)

Objectives:
- Analyze idioms and their figurative meanings
- Write an informative essay supported by relevant evidence
- Apply suggested revisions and edits to future written compositions
- Identify and correctly use transitions to link sentences in writing

Lesson 13: Read: Lob’s Girl (two-day lesson)

Objectives:
- Support story analysis with textual evidence
- Apply reading strategies to identify key ideas and details, analyze craft and structure, and make connections while reading
- Predict and define the meaning of academic vocabulary words

Lesson 14: Read: Jeremiah’s Song (two-day lesson)

Objectives:
- Apply reading strategies to identify key ideas and details, analyze craft and structure, and make connections while reading
- Analyze how elements of a short story interact
- Support story analysis with textual evidence
- Use context clues to determine the meaning of words
- Predict and define the meaning of academic vocabulary words

Lesson 15: Comparing Foreshadowing and Flashback (two-day lesson)

Objectives:
- Analyze author’s use of foreshadowing and/or flashback

Lesson 16: Writing the Final Draft: Cause-and-Effect Essay (two-day lesson)

Objectives:
- Write a cause-and-effect essay
- Utilize relevant facts and examples to support ideas
- Apply transition words to clarify the relationships among ideas and concepts
- Identify and use correct conventions of English grammar and usage when writing
- Identify and correctly apply using complements to combine sentences to writing
- Apply knowledge of language and its conventions when writing
- Apply revisions and edits to a rough draft

Lesson 17: Text Set (two-day lesson)

Objectives:
- Apply knowledge of language and its conventions when writing, speaking, reading, or listening
- Predict meaning of academic vocabulary words
- Define and accurately use academic vocabulary related to conflict and competition
- Read and analyze literary and informational texts, citing textual evidence to support analysis
- Use details from the text to support claim
- Conduct research using credible sources in order to take notes and use the appropriate format for citing sources
- Compose a discussion board post, drawing evidence from literary and informational texts to support analysis and reflection

Lesson 18: Unit Review (two-day lesson)

Objectives:
Lesson 19: Unit Test

Objectives:
- Make predictions and inferences; analyze plot and characterization; and compare plot devices
- Distinguish between common, proper, and possessive nouns; and personal and possessive pronouns
- Prewrite, draft, revise, and edit a cause-and-effect essay
- Predict, define, and accurately use academic vocabulary words related to conflict
- Read, analyze, and connect an independent reading text to other literature and your personal experiences

Unit 3: Life Stories

In this unit, you will explore the Big Question: What is important to know? You will read non-fiction selections multiple times to deepen your understanding of features of non-fiction text and better understand the author’s craft. You will read non-fiction texts to explore main idea, mood, author’s purpose, and point of view. Finally, you will distinguish among regular and irregular verbs and perfect tenses of verbs and learn new vocabulary words.

Objectives:
- Analyze main idea; make predictions; identify narrator and point of view; analyze word choices that contribute to mood; analyze nonfiction texts
- Identify and use principal parts of verbs for regular and irregular verbs in context, use verbs in the perfect tense; maintain subject-verb agreement
- Prewrite, draft, revise, and edit a comparison-and-contrast essay
- Predict, define, and accurately use academic vocabulary words related to learning
- Read, analyze, and connect an independent reading text to other literature and your personal experiences

Lesson 1: What Is Important to Know?

Objectives:
- Discuss things that are important to learn
- Predict meaning of academic vocabulary words
- Define and accurately use academic vocabulary related to learning
- Preview titles for Independent Reading

Lesson 2: Close Reading Workshop: Types of Nonfiction (two-day lesson)

Objectives:
- Support nonfiction analysis with textual evidence
- Apply reading strategies to identify key ideas and details, analyze craft and structure, and make connections while reading
- Evaluate the organization of key ideas in a selection, using details from the text for support
- Analyze the author’s purpose in a text
- Compose a focused research question and conduct short-term research to answer it

Lesson 3: Elements of Nonfiction (two-day lesson)

Objectives:
- Identify and define elements of nonfiction
- Analyze word choice within nonfiction selections
• Apply reading strategies to identify key ideas and details, analyze craft and structure, and make connections while reading
• Determine how elements of a nonfiction selection offer clues to an author’s purpose or point of view

**Lesson 4: First Read: The Drive-In Movies (two-day lesson)**

Objectives:
• Predict and define the meaning of academic vocabulary words
• Determine a central idea of a nonfiction text
• Apply reading strategies to identify key ideas and details, analyze craft and structure, and make connections while reading
• Use prior knowledge and details from the text to make and verify predictions

**Lesson 5: Second Read: The Drive-In Movies (two-day lesson)**

Objectives:
• Define and accurately use academic vocabulary related to nonfiction
• Determine and analyze the narrator’s point of view
• Apply reading strategies to identify key ideas and details, analyze craft and structure, and make connections while reading

**Lesson 6: Third Read: The Drive-In Movies (two-day lesson)**

Objectives:
• Define and accurately use academic vocabulary related to nonfiction
• Determine and analyze the narrator’s point of view
• Determine a central idea in a nonfiction text
• Support story analysis with textual evidence
• Apply reading strategies to identify key ideas and details, analyze craft and structure, and make connections while reading
• Read and comprehend a variety of texts
• Identify and use principal parts of verbs in a sentence

**Lesson 7: WriteToLearn: Comparison-and-Contrast Essay (two-day lesson)**

Objectives:
• Write comparison-and-contrast essay supported by relevant evidence
• Apply suggested revisions and edits to future written compositions

**Lesson 8: Beginning the Writing Process (two-day lesson)**

Objectives:
• Write and a comparison-and-contrast essay supported by relevant evidence
• Apply suggested revisions and edits to future written compositions

**Lesson 9: First Read: The Pigman & Me (two-day lesson)**

Objectives:
• Predict and define the meaning of academic vocabulary words
• Determine the central idea of a text
• Apply reading strategies to identify key ideas and details, analyze craft and structure, and make connections while reading

**Lesson 10: Second Read: The Pigman & Me (two-day lesson)**

Objectives:
• Define and accurately use academic vocabulary
• Analyze how an author’s word choice affects the way a reader responds to a text

**Lesson 11: Third Read: The Pigman & Me (two-day lesson)**

Objectives:
• Define and accurately use academic vocabulary
• Determine the central idea of a text
• Support story analysis with textual evidence
• Read and comprehend a variety of texts
• Identify and use the perfect tense of verbs in a sentence

**Lesson 12: Writing the Rough Draft (two-day lesson)**

Objectives:
• Use word origins and reference sources to determine the precise meaning of words.
• Write a comparison-and-contrast essay supported by relevant evidence
• Apply suggested revisions and edits to future written compositions
• Identify and correctly apply verb tenses to writing

**Lesson 13: Read: The Seven Wonders of the World (two-day lesson)**

Objectives:
• Predict and define the meaning of academic vocabulary words
• Apply reading strategies to identify key ideas and details, analyze craft and structure, and make connections while reading
• Use text aids and features to find information
• Support analysis with textual evidence

**Lesson 14: Read: Art, Architecture, and Learning in Egypt (two-day lesson)**

Objectives:
• Use context clues to determine the meaning of words
• Predict and define the meaning of academic vocabulary words
• Apply reading strategies to identify key ideas and details, analyze craft and structure, and make connections while reading
• Use text aids and features to find information
• Read and comprehend a variety of texts

**Lesson 15: Analyzing Expository Texts (two-day lesson)**

Objectives:
• Predict and define the meaning of academic vocabulary words
• Apply reading strategies to identify key ideas and details, analyze craft and structure, and make connections while reading
• Use text aids and features to find information
• Read and comprehend a variety of texts

**Lesson 16: Writing the Final Draft (two-day lesson)**

Objectives:
• Write and informative essay supported by relevant evidence
• Apply suggested revisions and edits to future written compositions
• Utilize technology to write a final draft
• Identify and correctly use irregular and troublesome verbs
• Maintain subject-verb agreement in writing
• Apply knowledge of language and its conventions when writing, speaking, reading, or listening

**Lesson 17: Text Set (two-day lesson)**

Objectives:
• Apply knowledge of language and its conventions when writing, speaking, reading, or listening
• Define meaning of academic vocabulary words
• Define and accurately use academic vocabulary related to conflict and competition
• Read and comprehend a variety of texts
• Read and analyze literary and informational texts, citing textual evidence to support analysis
• Use details from the text to support claim
• Conduct research using credible sources in order to take notes and use the appropriate format for citing sources
Lesson 18: Unit Review (two-day lesson)

Objectives:
- Analyze main idea; make predictions; identify narrator and point of view; analyze word choices that contribute to mood; analyze nonfiction texts
- Identify and use principal parts of verbs for regular and irregular verbs in context, use verbs in the perfect tense; maintain subject-verb agreement
- Prewrite, draft, revise, and edit an argumentative text
- Predict, define, and accurately use academic vocabulary words related to learning

Lesson 19: Life Stories

Objectives:
- Analyze main idea; make predictions; identify narrator and point of view; analyze word choices that contribute to mood; analyze nonfiction texts
- Use perfect tense of verbs, regular and irregular verbs; maintain subject-verb agreement
- Prewrite, draft, revise, and edit a comparison-and-contrast essay
- Predict, define, and accurately use academic vocabulary words related to learning
- Read, analyze, and connect an independent reading text to other literature and your personal experiences

Unit 4: The Cay

The Cay is narrated by Phillip Enright, a young American expatriate who has moved to the island of Curaçao with his parents. His family relocated to the island following the outbreak of World War II, when Phillip’s father was recruited to work for an oil company and support the war effort. However, when the Germans invade Curaçao, Phillip and his mother try unsuccessfully to return to the United States. Their ship is torpedoed, and Phillip finds himself on a raft with a stranger with whom he has nothing in common. When the two arrive on a deserted island, Phillip and his fellow castaway must learn to work together because their survival depends on it. In this unit, you will identify literary elements, analyze characters, and use comprehension strategies to make connections and draw conclusions.

The Cay is the recommended novel for Language Arts 6. Scott O’Dell’s novel Island of the Blue Dolphins may be read instead of The Cay with prior teacher approval. Lessons and activities for Island of the Blue Dolphins will appear on the lower half of the page. Do not proceed with Island of the Blue Dolphins unless you have received approval from your teacher.

In Island of the Blue Dolphins, twelve-year-old Karana and the people of her native tribe live on a small island in the Pacific Ocean. Their lives are changed forever after strangers come to the island to hunt sea otter. She and her brother are left behind when the islanders head east in search of a better life. Now Karana must figure out how to survive despite loneliness, harsh living conditions, and the vicious wild dogs that are a constant threat. Karana’s courage, perseverance, and intelligence help her discover new things about herself and the place she has always called home.

Objectives:
- Make revise, and confirm predictions based upon prior knowledge
- Respond to literal, inferential, and critical thinking questions before, during, and after reading the text
- Analyze connections between the characters, setting, plot, and theme
- Determine how authors use historical events as a basis to create fictional narratives
- Make inferences and draw conclusions

Lesson 1: Setting Background for The Cay

Objectives:
- Define new vocabulary and identify words in context
• Conduct research to learn background information about the setting of
the story and biographical information about the author
• Synthesize ideas across texts to form a prediction about the novel

Lesson 2: The Cay, Chapters 1–2

Objectives:
• Support text analysis with text evidence
• Describe the role of setting in the novel
• Examine the relationships between and among the characters
• Define new vocabulary and identify words in context

Lesson 3: The Cay, Chapters 3–4

Objectives:
• Support analysis of reading with textual evidence
• Analyze dialogue and interactions between and among characters to
determine their point of view
• Draw conclusions and make inferences using evidence from the text
• Define new vocabulary and identify words in context

Lesson 4: The Cay, Chapters 5–7

Objectives:
• Support analysis of reading with textual evidence
• Analyze how a scene or chapter contributes to the development of the
plot
• Analyze dialogue and interactions between and among characters to
determine differing perspectives
• Draw conclusions and make inferences using evidence from the text
• Define new vocabulary and identify words in context
• Reflect on reading role in writing

Lesson 5: The Cay, Chapters 8–10

Objectives:
• Support analysis of reading with textual evidence
• Examine the development of the plot and its effect on the characters
• Draw conclusions and make inferences using evidence from the text
• Define new vocabulary and identify words in context

Lesson 6: The Cay, Chapters 11–13 (two-day lesson)

Objectives:
• Support analysis of reading with textual evidence
• Determine the theme of a story and examine how it is conveyed through
details in the text
• Draw conclusions and make inferences using evidence from the text
• Define new vocabulary and identify words in context

Lesson 7: The Cay, Chapters 14–16

Objectives:
• Support analysis of reading with textual evidence
• Analyze text clues that serve to foreshadow plot events
• Draw conclusions and make inferences using evidence from the text
• Define new vocabulary and identify words in context

Lesson 8: The Cay, Chapters 17–19

Objectives:
• Support analysis of reading with textual evidence
• Examine the development of the plot and its effect on the characters
• Draw conclusions and make inferences using evidence from the text
• Define new vocabulary and identify words in context
• Reflect on reading role in writing.
LANGUAGE ARTS 6 B
Language Arts 6 B

In sixth grade, through the study of authors such as Elizabeth Partridge, Gary Soto, and Langston Hughes, the student will ponder such questions as "Is conflict always bad?"; "How do we decide who we are?"; and "How much do our communities shape us?" Short- and long-term research engages the student’s curiosity and critical-thinking skills. The student is encouraged to support these ideas with evidence as the student practices narrative, informative, and persuasive writing.

The student will sharpen and strengthen skills in reading, writing, listening, and speaking. The student is exposed to a wide variety of writing styles to create a sense of curiosity and excitement. The student will improve comprehension of increasingly complex literature and informational texts using a multi-draft reading approach as the student discusses, analyzes, and critiques. The student will learn to make connections between readings, other titles, and the world. The student will also expand an academic vocabulary and build confidence through independent reading. The student will write expository and creative compositions and employ test-taking strategies that are effective for different types of learners.

Unit 1: MS LA Course Overview

In this unit, you will receive a basic overview of the course. You will learn about the course structure built around the Literature series textbook, and preview the different icons and assessments included throughout the course. You will also explore and learn more about interactive reviews, novel units, and Independent Reading roles.

Lesson 1: Getting Started in Middle School Language Arts

Unit 2: Rhythm and Rhyme

In this unit, you will explore the Big Question: Do we need words to communicate well? You will read poems multiple times to deepen your understanding of literature and to better understand the author’s craft. You will read poetry to explore the structure of poems, figurative language, sound devices, and imagery. You will practice paraphrasing and drawing conclusions. Finally, you will use adjectives, adverbs, and conjunctions, and use coordinating conjunctions.

Objectives:
- Use context clues; analyze rhythm and rhyme, paraphrase; analyze forms of poetry; analyze imagery
- Identify adjectives and adverbs; use conjunctions and interjections; use coordinating conjunctions
- Predict, define, and accurately use academic vocabulary words related to communication
- Prewrite, draft, revise, and edit an argumentative essay
- Read, analyze, and connect an independent reading text to other literature and your personal experiences

Lesson 1: Introducing the Big Question

Objectives:
- Discuss ways to communicate with a partner
- Predict meaning of academic vocabulary words
- Define and accurately use academic vocabulary related to communicating
- Preview titles for independent reading

Lesson 2: Close Reading Workshop: Poetry (two-day lesson)

Objectives:
- Support poetry analysis with textual evidence
- Identify the central idea of a poem
- Analyze word choice
- Apply reading strategies to identify key ideas and details, analyze craft and structure, and make connections while reading
- Compose a focused research question and conduct short-term research to answer it

© 2016 Connections Education LLC. All rights reserved.
Lesson 3: Elements of Poetry (two-day lesson)

Objectives:
- Analyze impact of connotation, denotation, rhythm, and rhyme
- Define and identify elements of poetry

Lesson 4: First Read: Poetry Collection 1 (two-day lesson)

Objectives:
- Use context clues to determine the meaning of words
- Predict and define the meaning of academic vocabulary words
- Apply reading strategies to identify key ideas and details, analyze craft and structure, and make connections while reading.
- Analyze word choice

Lesson 5: Second Read: Poetry Collection 1 (two-day lesson)

Objectives:
- Identify rhythm and rhyme in poems, and analyze their impact on meaning and tone
- Apply reading strategies to identify key ideas and details, analyze craft and structure, and make connections while reading
- Define and accurately use academic vocabulary

Lesson 6: Third Read: Poetry Collection 1 (two-day lesson)

Objectives:
- Analyze word choice
- Apply reading strategies to identify key ideas and details, analyze craft and structure, and make connections while reading
- Cite textual evidence to support analysis
- Define and accurately use academic vocabulary words
- Identify and use adjectives and adverbs
- Read and comprehend a variety of texts

Lesson 7: WriteToLearn: Persuasive Essay (two-day lesson)

Objectives:
- Write a persuasive essay supported by relevant evidence
- Apply suggested revisions and edits to future written compositions

Lesson 8: Beginning the Writing Process (two-day lesson)

Objectives:
- Demonstrate understanding of an argumentative essay in order to begin the prewriting and planning stage of the writing process
- Apply suggested revisions and edits to future written compositions
- Use the appropriate format for citing sources

Lesson 9: First Read: Poetry Collection 3 (two-day lesson)

Objectives:
- Apply reading strategies to identify key ideas and details, analyze craft and structure, and make connections while reading
- Paraphrase central ideas of poems
- Predict and define the meaning of academic vocabulary words

Lesson 10: Second Read: Poetry Collection 3 (two-day lesson)

Objectives:
- Apply reading strategies to identify key ideas and details, analyze craft and structure, and make connections while reading
- Analyze poetic forms
- Define and accurately use academic vocabulary words

Lesson 11: Third Read: Poetry Collection 3 (two-day lesson)

Objectives:
• Apply reading strategies to identify key ideas and details, analyze craft and structure, and make connections while reading
• Cite textual evidence to support analysis
• Define and accurately use academic vocabulary words
• Identify and use conjunctions and interjections
• Read and comprehend a variety of texts

Lesson 12: Writing the Rough Draft (two-day lesson)

Objectives:
• Use context and prior knowledge to determine the meaning of multiple-meaning words
• Use a dictionary to define multiple-meaning words
• Compose a draft of an argumentative essay supported by relevant evidence
• Apply suggested revisions and edits to future written compositions

Lesson 13: Read: Who Knows if the Moon’s (two-day lesson)

Objectives:
• Predict and define the meaning of academic vocabulary words
• Apply reading strategies to identify key ideas and details, analyze craft and structure, and make connections while reading
• Support poetry analysis with textual evidence

Lesson 14: Read: Dust of Snow (two-day lesson)

Objectives:
• Predict and define the meaning of academic vocabulary words
• Apply reading strategies to identify key ideas and details, analyze craft and structure, and make connections while reading
• Support poetry analysis with textual evidence

Lesson 15: Comparing Imagery

Objectives:
• Analyze and compare the use of imagery
• Apply reading strategies to identify key ideas and details, analyze craft and structure, and make connections while reading
• Support poetry analysis with textual evidence

Lesson 16: Writing the Final Draft (two-day lesson)

Objectives:
• Construct the final draft of an argumentative essay
• Apply suggested revisions and edits to future written compositions
• Identify and use coordinating conjunctions
• Analyze word choice to maintain formal style, using accurate, reasonable wording

Lesson 17: Text Set (three-day lesson)

Objectives:
• Predict the meaning of academic vocabulary words
• Define and accurately use academic vocabulary related to communication
• Read and analyze literary and informational texts, citing textual evidence to support analysis
• Conduct research using credible sources in order to take notes, and use the appropriate format for citing sources
• Compose a discussion board post, drawing evidence from literary and informational texts to support analysis and reflection
• Discuss issues of communication and determination, referencing texts in this unit and personal experience

Lesson 18: Unit Review (two-day lesson)

Objectives:
Lesson 19: Rhythm and Rhyme Unit Test

Objectives:
- Use context clues; analyze rhythm and rhyme; paraphrase; analyze forms of poetry; analyze imagery
- Identify adjectives and adverbs; use conjunctions and interjections; use coordinating conjunctions
- Predict, define, and accurately use academic vocabulary words related to communication
- Prewrite, draft, revise, and edit an argumentative essay
- Read, analyze, and connect an independent reading text to other literature and your personal experiences

Unit 3: Adventures and Imagination

In this unit, you will explore the Big Question: How do we decide who we are? You will read dramas multiple times to deepen your understanding of literature and to better understand the author’s craft and purpose. You will read to explore the features of dramas, dialogue and stage directions. You will practice paraphrasing and summarizing. Finally, you will identify participles and gerunds, use prepositional phrases and appositives, and practice combining sentences using phrases.

Objectives:
- Summarize, compare and contrast to analyze author’s purpose
- Identify and use prepositions and prepositional phrases, identify and use appositives and appositive phrases, revise writing using participles
- Predict, define, and accurately use academic vocabulary words related to learning
- Prewrite, draft, revise, and edit a research presentation
- Read, analyze, and connect an independent reading text to other literature and your personal experiences

Lesson 1: Introducing the Big Question

Objectives:
- Discuss things that are important to learn
- Predict meaning of academic vocabulary words
- Define and accurately use academic vocabulary related to learning
- Preview titles for independent reading

Lesson 2: Close Reading Workshop: Drama (two-day lesson)

Objectives:
- Support analysis of drama with textual evidence
- Apply reading strategies to identify key ideas and details, analyze craft and structure, and make connections while reading
- Analyze how elements of a drama interact
- Compose a focused research question and conduct short-term research to answer it

Lesson 3: Elements of Drama

Objectives:
- Apply reading strategies to identify key ideas and details, analyze craft and structure, and make connections while reading
- Identify and define elements of a drama
- Analyze how elements of a drama interact

Lesson 4: First Read: The Phantom Tollbooth, Act I (three-day lesson)
Objectives:
• Predict and define the meaning of academic vocabulary words
• Analyze the plot of a drama
• Apply reading strategies to identify key ideas and details, analyze craft and structure, and make connections while reading
• Summarize key ideas of a drama

Lesson 5: Second Read: The Phantom Tollbooth, Act I (two-day lesson)

Objectives:
• Define and accurately use academic vocabulary words
• Apply reading strategies to identify key ideas and details, analyze craft and structure, and make connections while reading
• Analyze the use of dialogue in drama to develop characters and plot

Lesson 6: Third Read: The Phantom Tollbooth, Act I (two-day lesson)

Objectives:
• Identify and use prepositions and appositives
• Define and accurately use academic vocabulary words.
• Apply reading strategies to identify key ideas and details, analyze craft and structure, and make connections while reading
• Analyze the use of dialogue in drama to develop characters and plot
• Support analysis of a drama with textual evidence
• Read and comprehend a variety of texts.

Lesson 7: Planning a Presentation (two-day lesson)

Objectives:
• Conduct short-term research to enhance understanding of drama
• Conduct research using credible sources in order to take notes, and use the appropriate format for citing sources
• Apply suggested revisions and edits to future written compositions
• Demonstrate understanding of a research presentation in order to begin the prewriting and planning stages

Lesson 8: First Read: The Phantom Tollbooth, Act II (two-day lesson)

Objectives:
• Predict and define the meaning of academic vocabulary words
• Apply reading strategies to identify key ideas and details, analyze craft and structure, and make connections while reading
• Compare and contrast key ideas of a drama

Lesson 9: Second Read: The Phantom Tollbooth, Act II (two-day lesson)

Objectives:
• Define and accurately use academic vocabulary words
• Apply reading strategies to identify key ideas and details, analyze craft and structure, and make connections while reading
• Analyze stage directions in a drama
• Analyze how elements of a drama selection interact

Lesson 10: Third Read: The Phantom Tollbooth, Act II (two-day lesson)

Objectives:
• Define and accurately use academic vocabulary words
• Apply reading strategies to identify key ideas and details, analyze craft and structure, and make connections while reading
• Support analysis of a drama with textual evidence
• Read and comprehend a variety of texts
• Identify and use participles and gerunds

Lesson 11: Creating a Presentation (two-day lesson)

Objectives:
• Identify the connotations and denotations of words
• Write a research presentation supported by relevant evidence
• Apply suggested revisions and edits to future written compositions
• Compose the rough draft of a research presentation
• Utilize different design and visual elements in order to construct an engaging presentation

Lesson 12: Read: You’re a Good Man, Charlie Brown (two-day lesson)

Objectives:
• Predict and define the meaning of academic vocabulary words
• Apply reading strategies to identify key ideas and details, analyze craft and structure, and make connections while reading

Lesson 13: Read: Happiness is a Charming Charlie Brown (two-day lesson)

Objectives:
• Predict and define the meaning of academic vocabulary words
• Apply reading strategies to identify key ideas and details, analyze craft and structure, and make connections while reading

Lesson 14: Comparing Author’s Purpose Across Genres

Objectives:
• Support story analysis with textual evidence
• Compare different genres of text
• Analyze author’s purpose

Lesson 15: Publishing the Presentation (two-day lesson)

Objectives:
• Apply revisions and edits to a rough draft
• Compose the final draft of a research presentation
• Utilize different design and visual elements in order to construct an engaging presentation
• Revise choppy writing using participles

Lesson 16: Text Set (three-day lesson)

Objectives:
• Discuss issues about developing insight, referencing texts in this unit and personal experience
• Define and accurately use academic vocabulary related to conflict and competition
• Read and analyze literary and informational texts, citing textual evidence to support analysis
• Use details from the text to support a claim
• Conduct research using credible sources in order to take notes and use the appropriate format for citing sources
• Compose a discussion board post, drawing evidence from literary and informational texts to support analysis and reflection

Lesson 17: Unit Review

Objectives:
• Summarize, compare and contrast to analyze author’s purpose
• Identify and use prepositions and prepositional phrases, identify and use appositives and appositive phrases, revise writing using participles
• Predict, define, and accurately use academic vocabulary words related to learning
• Prewrite, draft, revise, and edit a research presentation

Lesson 18: Adventures and Imagination Unit Test

Objectives:
• Identify and use prepositions and prepositional phrases, identify and use appositives and appositive phrases, revise writing using participles
• Predict, define, and accurately use academic vocabulary words related to identity
Unit 4: Walk Two Moons

In *Walk Two Moons*, 13-year-old Salamanca “Sal” Hiddle narrates the story as she and her grandparents embark on a road trip from Euclid, Ohio, to Lewiston, Idaho. Sal, hurt and confused, struggles to accept the fact that her mother has left her and her father. The family heads to Lewiston, Idaho, where Sal hopes to be able to convince her mother to return home. While on the road, they stop to visit historic landmarks and experience the beautiful landscape of the Midwest. To pass the time in the car, Sal tells her grandparents a peculiar story about her best friend, Phoebe Winterbottom. It is this story within a story that helps Sal better understand her mother’s decision and begin to heal. This road trip changes their lives and impacts their family forever. In this unit, you will identify literary elements, analyze characters, and use comprehension strategies to make connections and draw conclusions.

*Walk Two Moons* is the recommended novel for Language Arts 8. *Esperanza Rising* may be read instead of *Walk Two Moons* with prior teacher approval. Lessons and activities for *Esperanza Rising* will appear on the lower half of the page. Do not proceed with *Esperanza Rising* unless you have received approval from your teacher.

In *Esperanza Rising*, twelve-year-old Esperanza Ortega and her family live on a sprawling ranch in Mexico. As the only child of a wealthy couple, she is showered with love and given the best of everything. After a series of tragic events, Esperanza immigrates to the United States and joins the large population of migrants heading to California to find work during the Great Depression. After settling in a farm camp in the San Joaquin Valley, tragedy strikes again, forcing Esperanza to develop the strength and perseverance needed to hold on to the new life to which she is beginning to adjust.

Objectives:
- Respond to literal, inferential, and critical thinking questions before, during, and after reading the text
- Make inferences and draw conclusions
- Analyze connections between the characters, setting, plot, and theme
- Examine the author’s craft and use of literary archetypes in a novel
- Define new vocabulary and identify words in context

Lesson 1: Setting Background for Walk Two Moons

Objectives:
- Define new vocabulary and identify words in context
- Conduct research to learn background information about the novel and biographical information about the author

Lesson 2: Walk Two Moons, Chapters 1–4

Objectives:
- Support text analysis with text evidence
- Describe the role of setting in the novel and its effect on the characters
- Examine flashback as a structural element of the plot
- Define new vocabulary and identify words in context

Lesson 3: Walk Two Moons, Chapters 5–8

Objectives:
- Support analysis of reading with textual evidence
- Examine how an author develops characters in a text
- Analyze how authors establish mood and tone and create humor in a text
- Define new vocabulary and identify words in context

Lesson 4: Walk Two Moons, Chapters 9–11

Objectives:
- Draw conclusions and make inferences using evidence from the text
• Analyze the author’s use of descriptive and figurative language to create an effect on the reader
• Define new vocabulary and identify words in context

Lesson 5: Walk Two Moons, Chapters 12–14

Objectives:
• Support analysis of reading with textual evidence
• Analyze text clues that serve to foreshadow plot events
• Draw conclusions and make inferences using evidence from the text
• Define new vocabulary and identify words in context

Lesson 6: Walk Two Moons, Chapters 15–18

Objectives:
• Support analysis of reading with textual evidence
• Examine how an author develops characters and conveys theme in a text
• Draw conclusions and make inferences using evidence from the text
• Define new vocabulary and identify words in context
• Reflect on reading role in writing

Lesson 7: Walk Two Moons, Chapters 19–22

Objectives:
• Draw conclusions and make inferences using evidence from the text
• Examine how an author develops conflict and advances the plot in a text
• Define new vocabulary and identify words in context

Lesson 8: Walk Two Moons, Chapters 23–25

Objectives:
• Draw conclusions and make inferences using evidence from the text
• Examine the development of the plot and its effect on the characters
• Define new vocabulary and identify words in context

Lesson 9: Walk Two Moons, Chapters 26–29

Objectives:
• Draw conclusions and make inferences using evidence from the text
• Examine how authors develop characters using archetypal patterns
• Define new vocabulary and identify words in context

Lesson 10: Walk Two Moons, Chapters 30–32

Objectives:
• Draw conclusions and make inferences using evidence from the text
• Examine how an author develops theme through the use of symbols in a text
• Define new vocabulary and identify words in context

Lesson 11: Walk Two Moons, Chapters 33–37

Objectives:
• Draw conclusions and make inferences using evidence from the text
• Examine how the connections between and among characters in a text serves to develop theme
• Define new vocabulary and identify words in context

Lesson 12: Walk Two Moons, Chapters 38–41

Objectives:
• Draw conclusions and make inferences using evidence from the text
• Examine how an author uses irony to develop the plot
• Define new vocabulary and identify words in context

Lesson 13: Walk Two Moons, Chapters 42–44

Objectives:
• Draw conclusions and make inferences using evidence from the text
• Examine how an author resolves conflict in a text
• Define new vocabulary and identify words in context
• Reflect on reading role in writing
LANGUAGE ARTS 7 A
Language Arts 7 A

In seventh grade, by studying authors such as Amy Tan, Emily Dickinson, and Laurence Yep, the student ponders such questions as “Does every conflict have a winner?”; “What is the best way to communicate?”; and “Do others see us more clearly than we see ourselves?” Short- and long-term research engages the student’s curiosity and critical-thinking skills. The student is encouraged to integrate knowledge and ideas into coursework as the student practices narrative, informative, and persuasive writing.

The student will sharpen and strengthen skills in reading, writing, listening, and speaking. The student is exposed to a wide variety of writing styles to create a sense of curiosity and excitement. The student will improve comprehension of increasingly complex literature and informational texts using a multi-draft reading approach as the student discusses, analyzes, and critiques. The student will learn to make connections between readings, other titles, and the world. The student will also expand an academic vocabulary and build confidence through independent reading. The student will write expository and creative compositions and employ test-taking strategies that are effective for different types of learners.

Unit 1: MS LA Course Overview

In this unit, you will receive a basic overview of the course. You will learn about the course structure built around the Literature series textbook, and preview the different icons and assessments included throughout the course. You will also explore and learn more about interactive reviews, novel units, and Independent Reading roles.

Lesson 1: Getting Started in Middle School Language Arts

Unit 2: Different Perspectives

In this unit, you will explore the Big Question: Does every conflict have a winner? You will read stories multiple times to deepen your understanding of literature and to understand the author’s craft better. You will read literary texts to explore characterization, analyze plot elements, and identify theme and point of view. You will read nonfiction texts to understand author’s purpose and explore conflict. Finally, you will distinguish between nouns, adjectives, and adverbs, and learn ways to use context clues to help you understand unknown words.

Objectives:
- Make predictions and inferences; analyze point of view, conflict and resolution; and compare characters
- Distinguish between personal and possessive pronouns, adjectives, and adverbs
- Prewrite, draft, revise, and edit an autobiographical narrative
- Predict, define, and accurately use academic vocabulary words related to conflict
- Read, analyze, and connect an independent reading text to other literature and your personal experiences

Lesson 1: Introducing the Big Question

Objectives:
- Discuss different types of conflict with your partner
- Predict meaning of academic vocabulary words
- Define and accurately use academic vocabulary related to conflict
- Preview titles for independent reading

Lesson 2: Close Reading Workshop: Short Story (two-day lesson)

Objectives:
- Support short-story analysis with textual evidence
- Apply reading strategies to identify key ideas and details, analyze craft and structure, and make connections while reading
- Analyze how elements of a short story interact
- Analyze how an author develops the points of view of characters in a short story, including the narrator
- Compose a focused research question and conduct short-term research to answer it

Lesson 3: Elements of a Short Story (two-day lesson)
Objectives:
• Identify and define elements of a short story
• Support short-story analysis with textual evidence

Lesson 4: First Read: Two Kinds from The Joy Luck Club (two-day lesson)

Objectives:
• Predict and define the meaning of academic vocabulary words
• Apply reading strategies to identify key ideas and details, analyze craft and structure, and make connections while reading
• Use prior knowledge and details from the text to make and verify predictions
• Analyze how elements of a short story interact

Lesson 5: Second Read: Two Kinds from The Joy Luck Club (two-day lesson)

Objectives:
• Define and accurately use academic vocabulary related to conflict and competition
• Use context clues to determine the meaning of words
• Apply reading strategies to identify key ideas and details, analyze craft and structure, and make connections while reading
• Analyze the thoughts and actions of characters to understand character development
• Analyze how an author develops the points of view of characters in a short story, including the narrator

Lesson 6: Third Read: Two Kinds from The Joy Luck Club (two-day lesson)

Objectives:
• Define and accurately use academic vocabulary related to conflict and competition
• Apply reading strategies to identify key ideas and details, analyze craft and structure, and make connections while reading
• Support story analysis with textual evidence
• Determine the theme of a short story
• Read and comprehend a variety of texts
• Identify and use personal and possessive pronouns in a sentence

Lesson 7: WriteToLearn: Autobiographical Narrative (two-day lesson)

Objectives:
• Compose an autobiographical narrative with descriptive details and well-sequenced events
• Apply suggested revisions and edits to future written compositions

Lesson 8: Beginning the Writing Process (two-day lesson)

Objectives:
• Demonstrate understanding of an autobiographical narrative in order to begin the prewriting and planning stage of the writing process

Lesson 9: First Read: The Third Wish (two-day lesson)

Objectives:
• Predict and define the meaning of academic vocabulary words
• Apply reading strategies to identify key ideas and details, analyze craft and structure, and make connections while reading
• Analyze how elements of a short story interact
• Identify and explain what is not directly stated in the text by drawing inferences

Lesson 10: Second Read: The Third Wish (two-day lesson)

Objectives:
• Define and accurately use academic vocabulary related to conflict and competition
• Use context clues to determine the meaning of words
• Apply reading strategies to identify key ideas and details, analyze craft and structure, and make connections while reading
• Analyze internal and/or external conflicts that motivate characters and affect the plot
• Support short story analysis with textual evidence

Lesson 11: Third Read: The Third Wish (two-day lesson) 
Objectives:
• Define and accurately use academic vocabulary related to conflict and competition
• Apply reading strategies to identify key ideas and details, analyze craft and structure, and make connections while reading
• Analyze how elements of a short story interact
• Support story analysis with textual evidence
• Read and comprehend a variety of texts
• Identify and use coordinate adjectives and adverbs in a sentence

Lesson 12: Writing the Rough Draft (two-day lesson)
Objectives:
• Use a dictionary and thesaurus to determine the meaning, pronunciation, and the part of speech of a word
• Determine the meaning of a word in context and verify its meaning using a dictionary
• Use a thesaurus to determine synonyms for words
• Choose specific and precise nouns, adjectives, verbs, and adverbs to convey a lively picture
• Develop voice in writing using different sentence structures, varying word choice, and tone
• Construct the rough draft of an autobiographical narrative

Lesson 13: Read: The Night the Bed Fell (two-day lesson)
Objectives:
• Predict and define the meaning of academic vocabulary words
• Apply reading strategies to identify key ideas and details, analyze craft and structure, and make connections while reading
• Analyze how individuals and events interact in nonfiction text
• Support story analysis with textual evidence

Lesson 14: Read: Stolen Day (two-day lesson)
Objectives:
• Predict and define the meaning of academic vocabulary words
• Apply reading strategies to identify key ideas and details, analyze craft and structure, and make connections while reading
• Analyze how elements of a short story interact
• Support story analysis with textual evidence

Lesson 15: Comparing Characters (two-day lesson)
Objectives:
• Apply reading strategies to identify key ideas and details, analyze craft and structure, and make connections while reading
• Analyze internal and/or external conflicts that motivate characters and affect the plot
• Analyze the thoughts and actions of characters to understand character development

Lesson 16: Writing the Final Draft (two-day lesson)
Objectives:
• Choose precise and specific words to convey meaning
• Apply transition words to clarify sequence of events
• Improve the pacing of the autobiographical narrative to develop characters, events, or experiences
• Choose specific and precise nouns, adjectives, verbs, and adverbs to convey a lively picture
• Identify and use correct pronouns and antecedents in a sentence
• Apply revisions and edits to a rough draft

Lesson 17: Text Set (three-day lesson)

Objectives:
• Predict meaning of academic vocabulary words
• Define and accurately use academic vocabulary related to conflict and competition
• Read and analyze literary and informational texts, citing textual evidence to support analysis
• Conduct research using credible sources in order to take notes, and use the appropriate format for citing sources
• Compose a discussion board post, drawing evidence from literary and informational texts to support analysis and reflection
• Discuss issues of competition and conflict based on texts in this unit and personal experience

Lesson 18: Unit Review (two-day lesson)

Objectives:
• Make predictions and inferences; analyze point of view, and conflict and resolution; and compare characters
• Distinguish between personal and possessive pronouns and adjectives and adverbs
• Prewrite, draft, revise, and edit an autobiographical narrative
• Predict, define, and accurately use academic vocabulary words related to conflict
• Read, analyze, and connect an independent reading text to other literature and your personal experiences

Lesson 19: Different Perspectives Unit Test

Objectives:
• Make predictions and inferences; analyze point of view, conflict and resolution; and compare characters
• Distinguish between personal and possessive pronouns and adjectives and adverbs
• Prewrite, draft, revise, and edit an autobiographical narrative
• Predict, define, and accurately use academic vocabulary words related to conflict
• Read, analyze, and connect an independent reading text to other literature and your personal experiences

Unit 3: Exploring Ideas

In this unit, you will explore the Big Question: What should we learn? You will read nonfiction selections multiple times to deepen your understanding of how authors communicate main ideas and purposes for writing. You will read literary nonfiction to classify fact and fiction and analyze how main ideas are supported by details. You will write an argumentative essay and will distinguish between different types and tenses of verbs to use them correctly in sentences.

Objectives:
• Analyze main idea and support; classify fact and opinion; analyze nonfiction texts
• Use action and linking verbs; use conjunctions and interjections; use correct verb tense; use Greek or Latin roots and affixes as clues to word meaning
• Prewrite, draft, revise, and edit an argumentative text
• Predict, define, and accurately use academic vocabulary words related to learning
• Read, analyze, and connect an independent reading selection to other literature and your personal experiences

Lesson 1: Introducing the Big Question
Objectives:
• Discuss with your partner things that are important to learn
• Predict meaning of academic vocabulary words
• Define and accurately use academic vocabulary related to learning
• Preview titles for independent reading selection

Lesson 2: Close Reading Workshop: Nonfiction (two-day lesson)

Objectives:
• Support nonfiction analysis with textual evidence
• Apply reading strategies to identify key ideas and details, analyze craft and structure, and make connections while reading
• Analyze the author’s purpose and point of view in a text
• Evaluate the organization of key ideas in a selection, using details from the text for support
• Compose a focused research question and conduct short-term research to answer it

Lesson 3: Elements of Nonfiction (two-day lesson)

Objectives:
• Identify and define elements of nonfiction
• Analyze word choice within nonfiction selections
• Compare and contrast nonfiction structures
• Determine how elements of a nonfiction selection offer clues to an author’s purpose or point of view

Lesson 4: First Read: Life Without Gravity (two-day lesson)

Objectives:
• Predict and define the meaning of academic vocabulary words
• Apply reading strategies to identify key ideas and details, analyze craft and structure, and make connections while reading
• Analyze how a main idea is supported by details

Lesson 5: Second Read: Life Without Gravity (two-day lesson)

Objectives:
• Define and accurately use academic vocabulary related to nonfiction
• Apply reading strategies to identify key ideas and details, analyze craft and structure, and make connections while reading
• Analyze how elements of a nonfiction selection interact

Lesson 6: Third Read: Life Without Gravity (two-day lesson)

Objectives:
• Define and accurately use academic vocabulary related to nonfiction
• Apply reading strategies to identify key ideas and details, analyze craft and structure, and make connections while reading
• Analyze how elements of a nonfiction selection interact
• Support analysis of a nonfiction selection with textual evidence
• Identify and use action and linking verbs in a sentence
• Read and comprehend a variety of texts

Lesson 7: WriteToLearn: Persuasive Essay (two-day lesson)

Objectives:
• Compose a persuasive essay with claims supported by relevant evidence
• Apply suggested revisions and edits to future written compositions

Lesson 8: Beginning the Writing Process (two-day lesson)

Objectives:
• Demonstrate understanding of an argumentative essay in order to begin the prewriting and planning stage of the writing process

Lesson 9: First Read: All Together Now (two-day lesson)
Lesson 10: Second Read: All Together Now (two-day lesson)

Objectives:
- Predict and define the meaning of academic vocabulary words
- Apply reading strategies to identify key ideas and details, analyze craft and structure, and make connections while reading
- Distinguish fact and opinion in a nonfiction text

Lesson 11: Third Read: All Together Now (two-day lesson)

Objectives:
- Define and accurately use academic vocabulary related to learning
- Apply reading strategies to identify key ideas and details, analyze craft and structure, and make connections while reading
- Analyze the use of persuasive appeals in a nonfiction text
- Evaluate the central argument of a persuasive essay
- Support analysis of a nonfiction selection with textual evidence
- Read and comprehend a variety of texts
- Identify and use conjunctions and interjections in a sentence

Lesson 12: Writing the Rough Draft (two-day lesson)

Objectives:
- Use prefixes and suffixes to determine the meanings of words
- Identify the origins of prefixes, suffixes, and roots to interpret the meaning of an unknown word
- Choose precise and specific words to convey meaning
- Construct the rough draft of an argumentative essay
- Identify and correctly apply verb tenses to writing

Lesson 13: Read: from Barrio Boy (two-day lesson)

Objectives:
- Predict and define the meaning of academic vocabulary words
- Apply reading strategies to identify key ideas and details, analyze craft and structure, and make connections while reading
- Analyze how individuals and events interact in a nonfiction text
- Support story analysis with textual evidence

Lesson 14: Read: A Day's Wait (two-day lesson)

Objectives:
- Predict and define the meaning of academic vocabulary words
- Apply reading strategies to identify key ideas and details, analyze craft and structure, and make connections while reading
- Analyze how elements of a short story interact
- Support story analysis with textual evidence

Lesson 15: Comparing Fiction and Nonfiction (two-day lesson)

Objectives:
- Apply reading strategies to identify key ideas and details, analyze craft and structure, and make connections while reading
- Compare and contrast narrative fiction and nonfiction

Lesson 16: Writing the Final Draft (two-day lesson)

Objectives:
- Apply revisions and edits to a rough draft
- Construct the final draft of an argumentative text
- Revise writing to combine sentences using conjunctions

Lesson 17: Text Set (two-day lesson)

Objectives:
Lesson 18: Unit Review (two-day lesson)

Objectives:
- Analyze main idea and support; classify fact and opinion; analyze nonfiction texts
- Use action and linking verbs; use conjunctions and interjections; use correct verb tense; use Greek or Latin roots and affixes as clues to word meaning
- Prewrite, draft, revise, and edit an argumentative text
- Predict, define, and accurately use academic vocabulary words related to learning
- Read, analyze, and connect an independent reading selection to other literature and your personal experiences

Lesson 19: Exploring Ideas Unit Test

Objectives:
- Analyze main idea and support; classify fact and opinion; analyze nonfiction texts
- Use action and linking verbs; use conjunctions and interjections; use correct verb tense; use Greek or Latin roots and affixes as clues to word meaning
- Prewrite, draft, revise, and edit an argumentative text
- Predict, define, and accurately use academic vocabulary words related to learning
- Read, analyze, and connect an independent reading selection to other literature and your personal experiences

Unit 4: The Watsons Go to Birmingham—1963

This novel tells the story of the "Weird Watson" family and the humorous events that occur to them in Flint, Michigan, in 1963. After one too many "adventures" involving their oldest son, Byron, the parents decide to take a family trip to Birmingham, Alabama, to visit the children's grandmother and hopefully encourage Byron to change his ways. On their way to Alabama, and while there, the Watson children learn that life is different for African Americans in the South. In this unit, you will identify literary elements, analyze themes, and develop an understanding of the historical context of the novel.

The Watsons go to Birmingham—1963 is the recommended novel for Language Arts 7A. The Liberation of Gabriel King may be read instead of The Watsons go to Birmingham—1963 with prior teacher approval. Lessons and activities for The Liberation of Gabriel King will appear on the lower half of the lesson pages.

The Liberation of Gabriel King is a historical novel about a young boy living in the United States in 1976. Gabriel King worries about a lot of things, and his best friend, Frita, sets out to help him overcome his fears. Her plan doesn't always go the way she hoped, however, and she and Gabriel will both learn important lessons as they try to figure out what it means to be courageous. In this lesson, you will identify literary elements and analyze themes.

Objectives:
- Make, revise, and confirm predictions based upon prior knowledge
- Respond to literal, inferential, and critical thinking questions before, during, and after reading the text
- Analyze connections between the characters, setting, plot, theme and other story elements
- Determine how authors use historical events as a basis to create fictional narratives
Lesson 1: Setting Background for Watsons

Objectives:
- Define new vocabulary and identify words in context
- Determine the social and political climate in the United States in the early sixties to understand the historical context of the novel
- Synthesize ideas across texts to form a prediction about the novel
- Conduct research to learn background information about the setting of the story and biographical information about the author

Lesson 2: Watsons, Chapter 1–2

Objectives:
- Support text analysis with text evidence
- Describe the role of setting in the novel
- Examine the relationships between and among the characters
- Define new vocabulary and identify words in context

Lesson 3: Watsons, Chapters 3–4

Objectives:
- Support analysis of reading with textual evidence
- Analyze how an author develops the theme of a text
- Draw conclusions and make inferences using evidence from the text
- Define new vocabulary and identify words in context

Lesson 4: Watsons, Chapters 5–6

Objectives:
- Support analysis of reading with textual evidence
- Identify and examine cause-and-effect relationships among plot elements
- Analyze the author’s use of simile and metaphor
- Define new vocabulary and identify words in context

Lesson 5: Watsons, Chapter 7

Objectives:
- Support analysis of reading with textual evidence
- Identify and examine character interactions and plot events that create conflict in a narrative
- Read, discuss, analyze, and demonstrate comprehension of grade-level texts
- Reflect on reading role in writing
- Define new vocabulary and identify words in context

Lesson 6: Watsons, Chapter 8

Objectives:
- Support analysis of reading with textual evidence
- Analyze dialogue and interactions between and among characters
- Define new vocabulary and identify words in context

Lesson 7: Watsons, Chapters 9–10

Objectives:
- Support analysis of reading with textual evidence
- Analyze how an author develops the points of view of different characters in a text
- Define new vocabulary and identify words in context

Lesson 8: Watsons, Chapters 11–12

Objectives:
- Support text analysis with text evidence
- Describe the role of setting in the novel and its effect on the characters
- Define new vocabulary and identify words in context
Lesson 9: Watsons, Chapters 13–14

Objectives:
- Support text analysis with text evidence
- Analyze the development of plot elements that lead to the climax of the novel
- Define new vocabulary and identify words in context

Lesson 10: Watsons, Chapter 15 and Epilogue

Objectives:
- Support text analysis with text evidence
- Evaluate the historical context of the novel to determine the accuracy of a fictional portrayal of a time, place, or character
- Read, discuss, analyze, and demonstrate comprehension of grade level text
- Reflect on reading role in writing
- Define new vocabulary and identify words in context
LANGUAGE ARTS 7 B
Language Arts 7 B

In seventh grade, by studying authors such as Amy Tan, Emily Dickinson, and Laurence Yep, the student ponders such questions as “Does every conflict have a winner?”; “What is the best way to communicate?”; and “Do others see us more clearly than we see ourselves?” Short- and long-term research engages the student’s curiosity and critical-thinking skills. The student is encouraged to integrate knowledge and ideas into coursework as the student practices narrative, informative, and persuasive writing.

The student will sharpen and strengthen skills in reading, writing, listening, and speaking. The student is exposed to a wide variety of writing styles to create a sense of curiosity and excitement. The student will improve comprehension of increasingly complex literature and informational texts using a multi-draft reading approach as the student discusses, analyzes, and critiques. The student will learn to make connections between readings, other titles, and the world. The student will also expand an academic vocabulary and build confidence through independent reading. The student will write expository and creative compositions and employ test-taking strategies that are effective for different types of learners.

Unit 1: MS LA Course Overview

In this unit, you will receive a basic overview of the course. You will learn about the course structure built around the Literature series textbook, and preview the different icons and assessments included throughout the course. You will also explore and learn more about interactive reviews, novel units, and Independent Reading roles.

Lesson 1: Getting Started in Middle School Language Arts

Unit 2: Sounds and Ideas

In this unit, you will explore the Big Question: What is the best way to communicate? You will read poems multiple times to deepen your understanding of literature and to understand the author’s craft better. You will read poetry to explore structure of poems, figurative language, sound devices, and imagery. You will practice paraphrasing and drawing conclusions. Finally, you will use appropriate endmarks in sentences, identify various sentence structures, and use coordinating and subordinating conjunctions.

Objectives:
• Draw conclusions, paraphrase, analyze forms of poetry, analyze imagery, and analyze sound devices
• Identify sentence functions and use appropriate endmarks, identify independent and dependent clauses, use coordinating and subordinating conjunctions
• Predict, define, and accurately use academic vocabulary words related to communication
• Prewrite, draft, revise, and edit a comparison-and-contrast essay
• Read, analyze, and connect an independent reading text to other literature and your personal experiences

Lesson 1: Introducing the Big Question (two-day lesson)

Objectives:
• Discuss with a partner the best ways to communicate
• Predict meaning of academic vocabulary words
• Define and accurately use academic vocabulary related to communication
• Preview titles for Independent Reading

Lesson 2: Close Reading Workshop: Poetry (three-day lesson)

Objectives:
• Support poetry analysis with textual evidence
• Apply reading strategies to identify key ideas and details, analyze craft and structure, and make connections while reading
• Analyze how words’ connotations contribute to a poem’s meaning
• Conduct short-term research to enhance understanding of poetry

Lesson 3: Elements of Poetry (two-day lesson)
Objectives:
• Identify and define sound devices and figurative language
• Identify and define elements of poetry

Lesson 4: First Read: Poetry Collection 1

Objectives:
• Predict and define the meaning of academic vocabulary words
• Apply reading strategies to identify key ideas and details, analyze craft and structure, and make connections while reading
• Use details from a poem to draw conclusions about ideas that are not directly stated

Lesson 5: Second Read: Poetry Collection 1

Objectives:
• Define and accurately use academic vocabulary
• Apply reading strategies to identify key ideas and details, analyze craft and structure, and make connections while reading
• Analyze forms of poetry

Lesson 6: Third Read: Poetry Collection 1 (two-day lesson)

Objectives:
• Define and accurately use academic vocabulary
• Apply reading strategies to identify key ideas and details, analyze craft and structure, and make connections while reading
• Support analysis of a poem with textual evidence
• Identify sentence functions and use appropriate endmarks
• Read and comprehend a variety of texts

Lesson 7: WriteToLearn: Comparison-and-Contrast Essay (two-day lesson)

Objectives:
• Compose a comparison-and-contrast essay to demonstrate similarities and differences between two subjects
• Apply suggested revisions and edits to future written compositions

Lesson 8: Beginning the Writing Process (two-day lesson)

Objectives:
• Conduct short-term research to determine the similarities and differences between two or more subjects
• Conduct research using credible sources in order to take notes and use the appropriate format for citing sources
• Demonstrate understanding of a comparison-and-contrast essay in order to begin the prewriting and planning stage of the writing process

Lesson 9: First Read: Poetry Collection 3

Objectives:
• Predict and define the meaning of academic vocabulary words
• Apply reading strategies to identify key ideas and details, analyze craft and structure, and make connections while reading
• Determine and paraphrase the meaning of poetry or poetic language

Lesson 10: Second Read: Poetry Collection 3

Objectives:
• Predict and define the meaning of academic vocabulary words
• Apply reading strategies to identify key ideas and details, analyze craft and structure, and make connections while reading
• Analyze the use of sound devices in a poem

Lesson 11: Third Read: Poetry Collection 3 (two-day lesson)

Objectives:
• Define and accurately use academic vocabulary related to communication
• Apply reading strategies to identify key ideas and details, analyze craft and structure, and make connections while reading
• Support analysis of a poem with textual evidence
• Analyze the use of sound devices in a poem
• Read and comprehend a variety of texts
• Identify independent and dependent clauses in sentences

Lesson 12: Writing the Rough Draft (two-day lesson)

Objectives:
• Use knowledge of context and function to define multiple-meaning words
• Use a dictionary to define multiple-meaning words
• Compose the rough draft of a comparison-and-contrast essay

Lesson 13: Read: Miracles

Objectives:
• Predict and define the meaning of academic vocabulary words
• Apply reading strategies to identify key ideas and details, analyze craft and structure, and make connections while reading
• Support poetry analysis with textual evidence

Lesson 14: Read: in Just—

Objectives:
• Apply reading strategies to identify key ideas and details, analyze craft and structure, and make connections while reading
• Identify and define elements of poetry
• Support poetry analysis with textual evidence

Lesson 15: Comparing Imagery (two-day lesson)

Objectives:
• Analyze how imagery contributes to mood and meaning in a poem
• Compare and contrast the use of imagery in two poems
• Support poetry analysis with textual evidence

Lesson 16: Writing the Final Draft (two-day lesson)

Objectives:
• Revise writing for clarity using coordinating and subordinating conjunctions
• Revise writing to avoid dangling and misplaced modifiers
• Apply revisions and edits to a rough draft
• Use the appropriate format for citing sources
• Construct the final draft of a comparison-and-contrast essay

Lesson 17: Text Set (three-day lesson)

Objectives:
• Predict meaning of academic vocabulary words
• Define and accurately use academic vocabulary related to communication
• Read and analyze literary and informational texts, citing textual evidence to support analysis
• Conduct research using credible sources in order to take notes, and use the appropriate format for citing sources
• Compose a discussion board post, drawing evidence from literary and informational texts to support analysis and reflection
• Discuss issues of communication and heroics, referencing texts in this unit and personal experience

Lesson 18: Unit Review (two-day lesson)

Objectives:
Lesson 19: Sounds and Ideas Unit Test

Objectives:
- Draw conclusions, paraphrase, analyze forms of poetry, analyze imagery, and analyze sound devices
- Identify sentence functions and use appropriate endmarks, identify independent and dependent clauses, use coordinating and subordinating conjunctions
- Predict, define, and accurately use academic vocabulary words related to communication
- Prewrite, draft, revise, and edit a comparison-and-contrast essay
- Read, analyze, and connect an independent reading text to other literature and your personal experiences

Unit 3: Dramatic Transformations

In this unit, you will explore the Big Question: Do others see us more clearly than we see ourselves? You will read selections from a drama multiple times to deepen your understanding of literature and to better understand the playwright’s craft. You will read drama to explore structure of dramas, dialogue, and stage directions. You will practice setting a purpose for reading and adjusting reading rate to suit your purpose. Finally, you will identify and use prepositions, appositives, and participles.

Objectives:
- Set a purpose for reading, adjust reading rate to suit purpose, analyzing dialogue, analyzing stage directions, analyzing drama, comparing and contrasting points of view
- Identify and use prepositions and prepositional phrases, identify and use appositives and appositive phrases, revise writing using participles
- Predict, define, and accurately use academic vocabulary words related to self-perception
- Prewrite, draft, revise, and edit a research presentation
- Read, analyze, and connect an independent reading text to other literature and your personal experiences

Lesson 1: Introducing the Big Question

Objectives:
- Discuss with a partner whether others see us more clearly than we see ourselves
- Predict meaning of academic vocabulary words
- Define and accurately use academic vocabulary related to self-perception
- Preview titles for Independent Reading

Lesson 2: Close Reading Workshop: Drama (three-day lesson)

Objectives:
- Support analysis of drama with textual evidence
- Apply reading strategies to identify key ideas and details, analyze craft and structure, and make connections while reading
- Conduct short-term research to enhance understanding of drama

Lesson 3: Elements of Drama (two-day lesson)

Objectives:
- Identify and define elements of drama

Lesson 4: First Read: A Christmas Carol, Act I (three-day lesson)
Objectives:
- Predict and define the meaning of academic vocabulary words
- Apply reading strategies to identify key ideas and details, analyze craft and structure, and make connections while reading
- Set a purpose for reading
- Analyze how elements of a drama interact

Lesson 5: Second Read: A Christmas Carol, Act I (three-day lesson)

Objectives:
- Define and accurately use academic vocabulary words
- Apply reading strategies to identify key ideas and details, analyze craft and structure, and make connections while reading
- Analyze dialogue to understand characters, conflict, and plot
- Analyze how elements of a drama interact

Lesson 6: Third Read: A Christmas Carol, Act I (three-day lesson)

Objectives:
- Define and accurately use academic vocabulary words
- Apply reading strategies to identify key ideas and details, analyze craft and structure, and make connections while reading
- Analyze how elements of a drama interact
- Support analysis of a drama with textual evidence
- Read and comprehend a variety of texts
- Identify and correctly use prepositions and prepositional phrases

Lesson 7: Planning the Presentation (two-day lesson)

Objectives:
- Conduct short-term research to enhance understanding of drama
- Conduct research using credible sources in order to take notes and use the appropriate format for citing sources
- Demonstrate understanding of a research presentation in order to begin the prewriting and planning stages

Lesson 8: First Read: A Christmas Carol, Act II (three-day lesson)

Objectives:
- Predict and define the meaning of academic vocabulary words
- Apply reading strategies to identify key ideas and details, analyze craft and structure, and make connections while reading
- Set a purpose for reading
- Analyze how elements of a drama interact

Lesson 9: Second Read: A Christmas Carol, Act II (three-day lesson)

Objectives:
- Define and accurately use academic vocabulary words
- Apply reading strategies to identify key ideas and details, analyze craft and structure, and make connections while reading
- Analyze stage directions to deepen understanding of a drama
- Analyze how elements of a drama interact

Lesson 10: Third Read: A Christmas Carol, Act II (three-day lesson)

Objectives:
- Define and accurately use academic vocabulary words
- Apply reading strategies to identify key ideas and details, analyze craft and structure, and make connections while reading
- Analyze how elements of a drama interact
- Read and comprehend a variety of texts
- Identify and correctly use appositives and appositive phrases
- Support analysis of a drama with textual evidence

Lesson 11: Creating the Presentation (two-day lesson)

Objectives:
• Distinguish among the connotations of words with similar denotations
• Develop a thesis statement that expresses the main idea of a research presentation
• Compose the rough draft of a research presentation
• Utilize different design and visual elements in order to construct an engaging presentation

Lesson 12: Read: Zoos: Joys or Jails? (two-day lesson)

Objectives:
• Predict and define the meaning of academic vocabulary words
• Apply reading strategies to identify key ideas and details, analyze craft and structure, and make connections while reading
• Analyze point of view in a nonfiction selection
• Support analysis with textual evidence

Lesson 13: Read: Kid Territory: Why Do We Need Zoos? (two-day lesson)

Objectives:
• Predict and define the meaning of academic vocabulary words
• Apply reading strategies to identify key ideas and details, analyze craft and structure, and make connections while reading
• Analyze point of view in a nonfiction selection
• Support analysis with textual evidence

Lesson 14: Comparing Argumentative Texts (two-day lesson)

Objectives:
• Apply reading strategies to identify key ideas and details, analyze craft and structure, and make connections while reading
• Compare and contrast point of view in nonfiction selections about the same topic
• Support analysis with textual evidence

Lesson 15: Publishing the Presentation (two-day lesson)

Objectives:
• Apply revisions and edits to a rough draft presentation
• Construct the final draft of a research presentation
• Utilize different design and visual elements in order to construct an engaging presentation
• Revise choppy writing use participles

Lesson 16: Text Set (three-day lesson)

Objectives:
• Predict meaning of academic vocabulary words
• Define and accurately use academic vocabulary related to leadership and perception
• Read and analyze literary and informational texts, citing textual evidence to support analysis
• Conduct research using credible sources in order to take notes, and use the appropriate format for citing sources
• Compose a discussion board post, drawing evidence from literary and informational texts to support analysis and reflection
• Discuss issues of leadership and perception referencing texts in this unit and personal experiences

Lesson 17: Unit Review (two-day lesson)

Objectives:
• Set a purpose for reading, adjust reading rate to suit purpose, analyzing dialogue, analyzing stage directions, analyzing drama, comparing and contrasting points of view
• Identify and use prepositions and prepositional phrases, identify and use appositives and appositive phrases, revise writing using participles
Lesson 18: Dramatic Transformations Unit Test: Closed Book

Objectives:
- Set a purpose for reading, adjust reading rate to suit purpose, analyzing dialogue, analyzing stage directions, analyzing drama, comparing and contrasting points of view
- Identify and use prepositions and prepositional phrases, identify and use appositives and appositive phrases, revise writing using participles
- Predict, define, and accurately use academic vocabulary words related to self-perception
- Prewrite, draft, revise, and edit a research presentation
- Read, analyze, and connect an independent reading text to other literature and your personal experiences

Unit 4: Dragonwings

This Newbery Award-winning novel takes place in the San Francisco Bay Area at the turn of the century. It is the story of a Chinese boy, Moon Shadow, who moves to Chinatown to be with his father, Windrider, who is working on a flying machine at the same time the Wright Brothers are. An historical novel, it depicts not only the lives of and discrimination against San Francisco's Chinese immigrants in the early 1900s, but also the 1906 San Francisco earthquake. You will identify literary elements and write a newspaper article describing a major event in the novel.

Dragonwings is the recommended novel for Language Arts 7B. Where the Mountain Meets the Moon may be read instead of Dragonwings with prior teacher approval. Lessons and activities for Where the Mountain Meets the Moon will appear on the lower half of the lesson pages.

Where the Mountain Meets the Moon is a fantasy novel about a girl named Minli and her quest to help her family. The story also follows Minli’s parents as they try to make a good life and a good home for Minli. The events of the novel take place in China long ago, in a world where magic is real. Fantastic creatures and impossible events form the background for a story about family, fortune, and friendship.

Objectives:
- Make revise, and confirm predictions based upon prior knowledge
- Respond to literal, inferential, and critical thinking questions before, during, and after reading the text
- Analyze connections between the characters, setting, plot, and theme
- Determine how authors use historical events as a basis to create fictional narratives
- Make inferences and draw conclusions

Lesson 1: Setting Background for Dragonwings

Objectives:
- Define new vocabulary and identify words in context
- Determine the social and political climate in California during the early 1900s to understand the historical context of the novel
- Synthesize ideas across texts to form a prediction about the novel
- Support text analysis with text evidence
- Draw conclusions about how an author’s writing is influenced by personal experiences

Lesson 2: Dragonwings, Chapter 2

Objectives:
- Support text analysis with text evidence
- Compare and contrast the settings in the novel
- Examine distinguishing traits of the characters
- Define new vocabulary and identify words in context
Lesson 3: Dragonwings, Chapter 3–4

Objectives:
- Support analysis of reading with textual evidence
- Analyze the development of a character’s point of view
- Draw conclusions and make inferences using evidence from the text
- Define new vocabulary and identify words in context

Lesson 4: Dragonwings, Chapter 5–6

Objectives:
- Support analysis of reading with textual evidence
- Identify and examine cause-and-effect relationships that create conflict within the plot
- Analyze the author’s use of italicized writing in text
- Define new vocabulary and identify words in context
- Reflect on reading role in writing

Lesson 5: Dragonwings, Chapter 7

Objectives:
- Support analysis of reading with textual evidence
- Analyze how an author develops the theme of a text
- Read, discuss, analyze, and demonstrate comprehension of grade level texts
- Define new vocabulary and identify words in context

Lesson 6: Dragonwings, Chapter 8–9

Objectives:
- Compare and contrast a fictional portrayal of a time, place, or character to a historical account of the same time period
- Support analysis of reading with textual evidence
- Define new vocabulary and identify words in context

Lesson 7: Dragonwings, Chapter 10–11

Objectives:
- Support analysis of reading with textual evidence
- Examine how the setting affects characters
- Analyze the mood created by the setting
- Define new vocabulary and identify words in context

Lesson 8: Dragonwings, Chapter 12

Objectives:
- Support text analysis with text evidence
- Analyze how an author develops the theme of a text
- Examine how conflicts are resolved in a text
- Define new vocabulary and identify words in context
- Reflect on reading role in writing
LANGUAGE ARTS 8 A
Language Arts 8 A

In eighth grade, through the study of authors such as Nikki Giovanni, Elie Wiesel, and Mark Twain, the student will ponder such questions as “Can all conflicts be resolved?”; “Is it our differences or our similarities that matter most?”; and “Are yesterday’s heroes important today?” The student will exercise curiosity and critical-thinking skills through short- and long-term research. The student will refine and reinforce skills by practicing narrative, informative, and persuasive writing.

The student will sharpen and strengthen skills in reading, writing, listening, and speaking. The student is exposed to a wide variety of writing styles to create a sense of curiosity and excitement. The student will improve comprehension of increasingly complex literature and informational texts using a multi-draft reading approach as the student discusses, analyzes, and critiques. The student will learn to make connections between readings, other titles, and the world. The student will also expand an academic vocabulary and build confidence through independent reading. The student will write expository and creative compositions and employ test-taking strategies that are effective for different types of learners.

Unit 1: MS LA Course Overview

In this unit, you will receive a basic overview of the course. You will learn about the course structure built around the Literature series textbook, and preview the different icons and assessments included throughout the course. You will also explore and learn more about interactive reviews, novel units, and Independent Reading roles.

Lesson 1: Getting Started in Middle School Language Arts

Unit 2: Turning Points

In this unit, you will explore the Big Question: Can all conflicts be resolved? You will read stories multiple times to deepen your understanding of literature and to better understand the author’s craft. You will read literary texts to explore characterization and analyze plot elements and theme. Through your reading, you will explore the nature of conflict, especially related to characters. Finally, you will distinguish among different types of nouns and verbs and learn ways to use context clues to help you understand unknown words.

Objectives:
• Make predictions and inferences; analyze plot, conflict, resolution, and theme; and compare characters of different eras
• Distinguish among common, proper, and possessive nouns; distinguish among principal parts of verbs
• Predict, define, and accurately use academic vocabulary words related to conflict
• Read, analyze, and connect an independent reading text to other literature and personal experience
• Prewrite, draft, revise, and edit an autobiographical essay

Lesson 1: Introducing the Big Question

Objectives:
• Discuss different types of conflict with a partner
• Predict meaning of academic vocabulary words
• Define and accurately use academic vocabulary related to conflict
• Preview titles for independent reading

Lesson 2: Close Reading Workshop: Short Story (two-day lesson)

Objectives:
• Support short story analysis with textual evidence
• Practice multi-draft reading of a short story
• Analyze how elements of a short story interact
• Compose a focused research question and conduct short-term research to answer it

Lesson 3: Elements of a Short Story (two-day lesson)

Objectives:
• Support short story analysis with textual evidence
• Identify and define elements of a short story

**Lesson 4: First Read: Raymond’s Run (two-day lesson)**

Objectives:
• Predict and define the meaning of academic vocabulary words
• Apply reading strategies to identify key ideas and details, analyze craft and structure, and make connections while reading
• Use prior knowledge and details from the text to make and verify predictions
• Analyze how elements of a short story interact

**Lesson 5: Second Read: Raymond’s Run (two-day lesson)**

Objectives:
• Define and accurately use academic vocabulary
• Use context clues to determine the meaning of words
• Apply reading strategies to identify key ideas and details, analyze craft and structure, and make connections while reading

**Lesson 6: Third Read: Raymond’s Run (two-day lesson)**

Objectives:
• Define and accurately use academic vocabulary
• Support story analysis with textual evidence
• Apply reading strategies to identify key ideas and details, analyze craft and structure, and make connections while reading
• Analyze how characters change due to conflict in a story
• Identify and use common, proper, and possessive nouns in a sentence
• Assess the interest level of an independent reading selection

**Lesson 7: WriteToLearn: Autobiographical Narrative (two-day lesson)**

Objectives:
• Compose an autobiographical narrative with descriptive details and well-sequenced events
• Apply suggested revisions and edits to future written compositions

**Lesson 8: Beginning the Writing Process (two-day lesson)**

Objectives:
• Demonstrate understanding of an autobiographical essay in order to begin the prewriting and planning stage of the writing process

**Lesson 9: First Read: The Story-Teller (two-day lesson)**

Objectives:
• Predict and define the meaning of academic vocabulary words
• Use details from the text to support inferences
• Apply reading strategies to identify key ideas and details, analyze craft and structure, and make connections while reading
• Analyze how elements of a short story interact

**Lesson 10: Second Read: The Story-Teller (two-day lesson)**

Objectives:
• Define and accurately use academic vocabulary
• Use context clues to determine the meaning of words
• Analyze elements of a story to determine the theme
• Analyze events in a story to determine the plot structure
• Apply reading strategies to identify key ideas and details, analyze craft and structure, and make connections while reading
• Analyze how dialogue and narration shape the plot and characters in a short story
• Draw conclusions about character traits based on characters' words and actions

**Lesson 11: Third Read: The Story-Teller (two-day lesson)**
Objectives:
• Define and accurately use academic vocabulary
• Support story analysis with textual evidence
• Apply reading strategies to identify key ideas and details, analyze craft and structure, and make connections while reading
• Identify and use principal parts of verbs in a sentence
• Compare and contrast an independent reading selection with other reading selections

Lesson 12: Writing the Rough Draft (two-day lesson)

Objectives:
• Use a dictionary and thesaurus to determine the meaning, pronunciation, synonyms, and the part of speech of a word
• Determine the meaning of a word in context and verify its meaning using a dictionary
• Develop readers’ interest through pacing and vivid descriptive details
• Construct the rough draft of an autobiographical essay
• Improve coherence and interest by combining sentences using conjunctions

Lesson 13: Read: The Finish of Patsy Barnes (two-day lesson)

Objectives:
• Define and accurately use academic vocabulary
• Apply reading strategies to identify key ideas and details, analyze craft and structure, and make connections while reading
• Analyze how elements of a short story interact
• Support story analysis with textual evidence

Lesson 14: Read: The Drummer Boy of Shiloh (two-day lesson)

Objectives:
• Define and accurately use academic vocabulary
• Apply reading strategies to identify key ideas and details, analyze craft and structure, and make connections while reading
• Analyze how elements of a short story interact
• Support story analysis with textual evidence

Lesson 15: Comparing Characters

Objectives:
• Apply reading strategies to identify key ideas and details, analyze craft and structure, and make connections while reading
• Analyze internal and/or external conflicts that motivate characters and affect the plot
• Analyze the thoughts and actions of characters to understand character development

Lesson 16: Writing the Final Draft (two-day lesson)

Objectives:
• Apply revisions and edits to a rough draft
• Apply transitions to make relationships and shifts in the essay clearer
• Choose specific and precise nouns to convey a lively picture
• Identify and use correct pronoun-antecedent agreement in a sentence

Lesson 17: Text Set (three-day lesson)

Objectives:
• Predict meaning of academic vocabulary words
• Define and accurately use academic vocabulary related to conflict between people and machines
• Read and analyze literary and informational texts, citing textual evidence to support analysis
• Conduct research using credible sources in order to take notes and use the appropriate format for citing sources
Lesson 18: Unit Review (two-day lesson)

Objectives:
- Make predictions and inferences; analyze plot, conflict, resolution, and theme; and compare characters of different eras
- Distinguish among common, proper, and possessive nouns; distinguish among principal parts of verbs
- Predict, define, and accurately use academic vocabulary words related to conflict
- Prewrite, draft, revise, and edit an autobiographical essay
- Read, analyze, and connect an independent reading text to other literature and your personal experience

Lesson 19: Unit Test

Objectives:
- Make predictions and inferences; analyze plot, conflict, resolution, and theme; and compare characters of different eras
- Distinguish among common, proper, and possessive nouns; distinguish among principal parts of verbs
- Predict, define, and accurately use academic vocabulary words related to conflict
- Prewrite, draft, revise, and edit an autobiographical essay
- Read, analyze, and connect an independent reading text to other literature and your personal experience

Unit 3: Facts and Visions

In this unit, you will explore the Big Question: How much information is enough? You will read stories multiple times to deepen your understanding of literature and to understand the author’s craft better. You will read literary text to explore the concept of and develop the thinking skill of compare and contrast. You will read nonfiction texts to understand author’s purpose, delineate and evaluate arguments and claims, and determine validity of claims. You will begin the writing process, writing a compare/contrast essay from prewrite through to final draft. Finally, you will explore and use verbs in the active and passive voice and in the conditional and subjunctive mood to achieve particular effects, and learn ways to use context clues to help you understand unknown words.

Objectives:
- Make inferences; analyze main idea; analyze biography; distinguish fact and opinion; analyze persuasive techniques; compare and contrast organization of literary nonfiction and determine author’s point of view and purpose
- Distinguish among perfect tenses of verbs; distinguish among verb moods
- Predict, define, and accurately use academic vocabulary words related to information
- Read, analyze, and connect an independent reading text to other literature and your personal experiences
- Prewrite, draft, revise, and edit a comparison-and-contrast essay

Lesson 1: Introducing the Big Question

Objectives:
- Discuss different types of information with your partner
- Predict meaning of academic vocabulary words
- Define and accurately use academic vocabulary related to information
- Preview titles for independent reading

Lesson 2: Close Reading Workshop: Types of Nonfiction (two-day lesson)

Objectives:
- Support nonfiction text analysis with textual evidence
- Apply reading strategies to identify key ideas and details, analyze craft and structure, and make connections while reading

Appendix A.2.a Language Arts Course Guides
Language Arts 8 A

© 2016 Connections Education LLC. All rights reserved.
• Analyze the author’s purpose in a text

Lesson 3: Elements of Literary Nonfiction (two-day lesson)

Objectives:
• Analyze word choice within nonfiction selections
• Analyze tone within nonfiction selections
• Identify and define elements of nonfiction
• Compare and contrast nonfiction structures
• Analyze types of support used to develop a central idea
• Analyze the author’s purpose or point of view in a text

Lesson 4: First Read: Always to Remember (two-day lesson)

Objectives:
• Predict and define the meaning of academic vocabulary words
• Determine the main idea of a literary nonfiction selection
• Apply reading strategies to identify key ideas and details, analyze craft and structure, and make connections while reading
• Analyze how elements of a literary nonfiction selection interact

Lesson 5: Second Read: Always to Remember (two-day lesson)

Objectives:
• Define and accurately use academic vocabulary related to information
• Identify and analyze the characteristics of autobiography and biography
• Apply reading strategies to identify key ideas and details, analyze craft and structure, and make connections while reading
• Analyze how elements of a literary nonfiction selection interact

Lesson 6: Third Read: Always to Remember (two-day lesson)

Objectives:
• Define and accurately use academic vocabulary related to nonfiction
• Support nonfiction analysis with textual evidence
• Apply reading strategies to identify key ideas and details, analyze craft and structure, and make connections while reading
• Analyze how elements of a literary nonfiction selection interact
• Identify and use perfect tenses of verbs in a sentence
• Support claims about independent reading selection with relevant evidence from the text

Lesson 7: WriteToLearn: Comparison-and-Contrast Essay (two-day lesson)

Objectives:
• Compose a comparison-and-contrast essay to demonstrate similarities and differences between two subjects
• Apply suggested revisions and edits to future written compositions

Lesson 8: Beginning the Writing Process (two-day lesson)

Objectives:
• Demonstrate understanding of a comparison-and-contrast essay in order to begin the prewriting and planning stage of the writing process

Lesson 9: First Read: The Trouble With Television (two-day lesson)

Objectives:
• Predict and define the meaning of academic vocabulary words
• Apply reading strategies to identify key ideas and details, analyze craft and structure, and make connections while reading
• Distinguish fact and opinion in a nonfiction text
• Evaluate evidence used to support a persuasive argument

Lesson 10: Second Read: The Trouble With Television (two-day lesson)

Objectives:
• Define and accurately use academic vocabulary
• Apply reading strategies to identify key ideas and details, analyze craft and structure, and make connections while reading
• Analyze persuasive techniques to determine author’s purpose in a nonfiction selection

Lesson 11: Third Read: The Trouble With Television (two-day lesson)

Objectives:
• Define and accurately use academic vocabulary
• Apply reading strategies to identify key ideas and details, analyze craft and structure, and make connections while reading
• Support nonfiction analysis with textual evidence
• Identify and use the subjunctive and indicative verb moods in a sentence
• Compare and contrast an independent reading selection with other reading selections

Lesson 12: Writing the Rough Draft (two-day lesson)

Objectives:
• Use information related to word origin to determine the meaning, pronunciation, and the part of a speech of a word
• Use organization techniques and parallel structure to develop the topic of an essay
• Construct the rough draft of a comparison-and-contrast essay
• Write an effective comparison-and-contrast essay conclusion

Lesson 13: Read: Forest Fire

Objectives:
• Define and accurately use academic vocabulary
• Apply reading strategies to identify key ideas and details, analyze craft and structure, and make connections while reading
• Analyze how elements of a nonfiction selection interact
• Analyze and determine the author’s point of view or purpose
• Support nonfiction analysis with textual evidence

Lesson 14: Read: Seasonal Selections (two-day lesson)

Objectives:
• Define and accurately use academic vocabulary
• Apply reading strategies to identify key ideas and details, analyze craft and structure, and make connections while reading
• Analyze how elements of a nonfiction selection interact
• Analyze and determine the author’s point of view or purpose
• Support nonfiction analysis with textual evidence

Lesson 15: Comparing Types of Organization

Objectives:
• Apply reading strategies to identify key ideas and details, analyze craft and structure, and make connections while reading
• Identify, compare, and contrast the organization of nonfiction selections
• Support nonfiction analysis with textual evidence

Lesson 16: Writing the Final Draft (two-day lesson)

Objectives:
• Apply revisions and edits to a rough draft
• Revise writing to maintain a formal style
• Fix incorrect shifts in verb mood in a sentence

Lesson 17: Text Set (three-day lesson)

Objectives:
• Predict meaning of academic vocabulary words
• Define and accurately use academic vocabulary related to the sense of belonging
Lesson 18: Unit Review (two-day lesson)

Objectives:
- Make inferences; analyze main idea; analyze biography; distinguish fact and opinion; analyze persuasive techniques; compare and contrast organization of literary nonfiction and determine author’s point of view and purpose
- Distinguish among perfect tenses of verbs; distinguish among verb moods
- Predict, define, and accurately use academic vocabulary words related to information
- Read, analyze, and connect an independent reading text to other literature and your personal experiences
- Prewrite, draft, revise, and edit a comparison-and-contrast essay

Lesson 19: Unit Test

Objectives:
- Make inferences; analyze main idea; analyze biography; distinguish fact and opinion; analyze persuasive techniques; compare and contrast organization of literary nonfiction and determine author’s point of view and purpose
- Distinguish among perfect tenses of verbs; distinguish among verb moods
- Predict, define, and accurately use academic vocabulary words related to information
- Read, analyze, and connect an independent reading text to other literature and your personal experiences
- Prewrite, draft, revise, and edit a comparison-and-contrast essay

Unit 4: Johnny Tremain

Johnny Tremain is a Newbery Award–winning historical novel about a young boy in colonial Boston. Johnny is a talented but arrogant silversmith’s apprentice whose life is turned upside down when he injures his hand. In time, he becomes a messenger boy on horseback for the Sons of Liberty and meets several famous Founding Fathers. He later becomes a spy for the Sons of Liberty, takes part in the Boston Tea Party, and struggles with loss at the Battles of Lexington and Concord. Throughout the unit, you will identify literary elements such as setting, characters, plot, and theme, and explore how the author’s life and background influenced her writing.

My Brother Sam Is Dead is a Newbery Honor-winning historical novel about a young boy in colonial America. Timothy Meeker is the younger son of a tavern-keeper in the small village of Redding, Connecticut. On the eve of the Revolutionary War, his brother, Sam, joins the rebel Continental Army. As the war goes on, Tim and his family face many challenges, and Tim struggles to decide which side he supports. Throughout the unit, you will identify literary elements and analyze theme.

Johnny Tremain is the recommended novel for Language Arts 8 A. My Brother Sam Is Dead may be read instead of Johnny Tremain with prior teacher approval. Lessons and activities for My Brother Sam Is Dead will appear on the lower half of the lesson pages.

Objectives:
- Summarize the key events in a historical novel
• Analyze connections between the characters, setting, plot, theme, and other story elements
• Analyze and compare actions of heroic characters
• Determine how cultural context affects character, setting, and plot
• Analyze how the background and experiences of authors influence their writing

Lesson 1: Setting Background for Johnny Tremain

Objectives:
• Define new vocabulary and identify words in context
• Determine the political climate in colonial America to understand the historical and cultural context of the novel
• Conduct research to learn background information about the setting of the story
• Conduct research to learn biographical information about the author

Lesson 2: Johnny Tremain, Chapter I

Objectives:
• Define new vocabulary and identify words in context
• Support inferences with evidence from the text
• Determine the setting of the novel and how it relates to the central idea of the text
• Examine the relationships between and among the characters

Lesson 3: Johnny Tremain, Chapter II

Objectives:
• Define new vocabulary and identify words in context
• Support inferences with evidence from the text
• Identify key events in the plot
• Analyze characters

Lesson 4: Johnny Tremain, Chapter III

Objectives:
• Define new vocabulary and identify words in context
• Support inferences with evidence from the text
• Compare characters and character traits

Lesson 5: Johnny Tremain: Chapter IV

Objectives:
• Define new vocabulary and identify words in context
• Support inferences with evidence from the text
• Analyze characters
• Analyze how an author develops the points of view of different characters in a text

Lesson 6: Johnny Tremain: Chapter V

Objectives:
• Define new vocabulary and identify words in context
• Support inferences with evidence from the text
• Identify and examine character interactions and plot events that create conflict in a narrative
• Read, discuss, analyze, and demonstrate comprehension of grade-level texts
• Reflect on reading role in writing

Lesson 7: Johnny Tremain: Chapter VI

Objectives:
• Define new vocabulary and identify words in context
• Support inferences with evidence from the text
• Summarize key events in the plot
• Determine the political climate in colonial America to understand the historical and cultural context of the novel
• Identify and examine character interactions and plot events that create conflict in a narrative
• Analyze dialogue and interactions between and among characters

**Lesson 8: Johnny Tremain: Chapter VII**

Objectives:
• Define new vocabulary and identify words in context
• Support analysis of reading with textual evidence
• Summarize key ideas and events in the text

**Lesson 9: Johnny Tremain: Chapter VIII**

Objectives:
• Define new vocabulary and identify words in context
• Support analysis of reading with textual evidence
• Analyze how an author develops the theme of a text
• Analyze significant events and their effects in a text

**Lesson 10: Johnny Tremain: Chapter IX**

Objectives:
• Define new vocabulary and identify words in context
• Support analysis of reading with textual evidence
• Summarize key ideas and events in the text
• Identify the actions and characteristics of heroic characters

**Lesson 11: Johnny Tremain: Chapter X**

Objectives:
• Define new vocabulary and identify words in context
• Support analysis of reading with textual evidence
• Analyze the development of plot elements that lead to the climax of a novel
• Identify the actions and characteristics of heroic characters

**Lesson 12: Johnny Tremain: Chapter XI**

Objectives:
• Define new vocabulary and identify words in context
• Support analysis of reading with textual evidence
• Determine the political climate in colonial America to understand the historical and cultural context of the novel
• Analyze characters
• Analyze the significance of characters’ words and dialogue

**Lesson 13: Johnny Tremain: Chapter XII**

Objectives:
• Define new vocabulary and identify words in context
• Support analysis of reading with textual evidence
• Summarize key events in the plot
• Analyze significant events and their effects in a text
LANGUAGE ARTS 8 B
Language Arts 8 B

In eighth grade, through the study of authors such as Nikki Giovanni, Elie Wiesel, and Mark Twain, the student will ponder such questions as “Can all conflicts be resolved?”; “Is it our differences or our similarities that matter most?”; and “Are yesterday’s heroes important today?” The student will exercise curiosity and critical-thinking skills through short- and long-term research. The student will refine and reinforce skills by practicing narrative, informative, and persuasive writing.

The student will sharpen and strengthen skills in reading, writing, listening, and speaking. The student is exposed to a wide variety of writing styles to create a sense of curiosity and excitement. The student will improve comprehension of increasingly complex literature and informational texts using a multi-draft reading approach as the student discusses, analyzes, and critiques. The student will learn to make connections between readings, other titles, and the world. The student will also expand an academic vocabulary and build confidence through independent reading. The student will write expository and creative compositions and employ test-taking strategies that are effective for different types of learners.

Unit 1: MS LA Course Overview

In this unit, you will receive a basic overview of the course. You will learn about the course structure built around the Literature series textbook, and preview the different icons and assessments included throughout the course. You will also explore and learn more about interactive reviews, novel units, and Independent Reading roles.

Lesson 1: Getting Started in Middle School Language Arts

Unit 2: Voices in Verse

In this unit, you will explore the Big Question: What is the secret to reaching someone with words? You will read poems multiple times to deepen your understanding of literature and to better understand the poet’s craft. You will read poetry to explore the structure of poems, and analyze figurative language and imagery. You will practice using context clues to determine the meaning of unfamiliar words and practice paraphrasing. Finally, you will identify and use subject complements and correct pronoun cases.

Objectives:

• Use context clues; paraphrase; analyze elements of poetry; analyze figurative language, sound devices, and connotation; analyze imagery; analyze description
• Identify subject complements; identify pronoun case
• Predict, define, and accurately use academic vocabulary words related to poetry and communication
• Read, analyze, and connect an independent reading text to other literature and your personal experiences
• Prewrite, draft, revise, and edit a critical review; revise writing for subject-verb agreement

Lesson 1: Introducing the Big Question

Objectives:

• Discuss with your partner the secret to reaching someone with words
• Predict the meaning of academic vocabulary words
• Define and accurately use academic vocabulary related to communication
• Preview titles for independent reading

Lesson 2: Close Reading Workshop: Poetry (three-day lesson)

Objectives:

• Support poetry analysis with textual evidence
• Apply reading strategies to identify key ideas and details, analyze craft and structure, and make connections while reading
• Conduct short-term research to enhance understanding of poetry

Lesson 3: Elements of Poetry

Objectives:
• Identify and define elements of poetry
• Analyze how elements of poetry are used in different poetic forms
• Identify and analyze examples of poetic language

Lesson 4: First Read: Poetry Collection 2

Objectives:
• Predict and define the meaning of academic vocabulary words
• Use context clues to help determine the meaning of unfamiliar words
• Apply reading strategies to identify key ideas and details, analyze craft and structure, and make connections while reading

Lesson 5: Second Read: Poetry Collection 2

Objectives:
• Define and accurately use academic vocabulary related to poetry
• Identify and analyze the use of figurative language in a poem
• Apply reading strategies to identify key ideas and details, analyze craft and structure, and make connections while reading
• Analyze how the elements of a poem contribute to its meaning

Lesson 6: Third Read: Poetry Collection 2 (two-day lesson)

Objectives:
• Define and accurately use academic vocabulary related to poetry
• Apply reading strategies to identify key ideas and details, analyze craft and structure, and make connections while reading
• Analyze how the elements of a poem contribute to its meaning
• Support analysis of a poem with textual evidence
• Read and comprehend a variety of texts
• Identify subject complements

Lesson 7: WriteToLearn: Response to Literature (two-day lesson)

Objectives:
• Compose a critical review to demonstrate literary analysis of poetry
• Apply suggested revisions and edits to future written compositions

Lesson 8: Beginning the Writing Process (two-day lesson)

Objectives:
• Conduct short-term research to complement literary analysis
• Conduct research using credible sources in order to take notes and cite sources appropriately
• Demonstrate understanding of a critical review in order to begin the prewriting and planning stage of the writing process

Lesson 9: First Read: Poetry Collection 4

Objectives:
• Predict and define the meaning of academic vocabulary words
• Apply reading strategies to identify key ideas and details, analyze craft and structure, and make connections while reading
• Determine and paraphrase the meaning of poetry or poetic language

Lesson 10: Second Read: Poetry Collection 4

Objectives:
• Define and accurately use academic vocabulary related to poetry
• Apply reading strategies to identify key ideas and details, analyze craft and structure, and make connections while reading
• Analyze how the elements of a poem contribute to its meaning
• Analyze the use of word choice, imagery, and tone in poetry

Lesson 11: Third Read: Poetry Collection 4 (two-day lesson)

Objectives:
• Define and accurately use academic vocabulary related to poetry
• Apply reading strategies to identify key ideas and details, analyze craft and structure, and make connections while reading
• Analyze how the elements of a poem contribute to its meaning
• Support analysis of a poem with textual evidence
• Compare and contrast the independent reading selection with previous reading
• Identify correct pronoun case

Lesson 12: Writing the Rough Draft (two-day lesson)

Objectives:
• Use context to define multiple-meaning words
• Use a dictionary to define multiple-meaning words
• Compose the rough draft of a critical review

Lesson 13: Read: The Road Not Taken

Objectives:
• Predict and define the meaning of academic vocabulary words
• Apply reading strategies to identify key ideas and details, analyze craft and structure, and make connections while reading
• Support poetry analysis with textual evidence

Lesson 14: Read: O Captain! My Captain!

Objectives:
• Predict and define the meaning of academic vocabulary words
• Apply reading strategies to identify key ideas and details, analyze craft and structure, and make connections while reading
• Support poetry analysis with textual evidence

Lesson 15: Comparing Types of Description (two-day lesson)

Objectives:
• Analyze how descriptive writing contributes to literal and symbolic meaning in a poem
• Compare and contrast the use of descriptive writing in two poems
• Support poetry analysis with textual evidence

Lesson 16: Writing the Final Draft (two-day lesson)

Objectives:
• Apply revisions and edits to a rough draft
• Construct the final draft of a critical review
• Revise writing for subject-verb agreement

Lesson 17: Text Set (three-day lesson)

Objectives:
• Predict and define the meaning of academic vocabulary words
• Read and analyze literary and informational texts, citing textual evidence to support analysis
• Conduct research using credible sources in order to take notes and cite sources appropriately
• Compose a discussion board post, drawing evidence from literary and informational texts to support analysis and reflection
• Discuss issues of connecting generations, referencing texts in this unit and personal experience

Lesson 18: Unit Review (two-day lesson)

Objectives:
• Use context clues; paraphrase; analyze elements of poetry; analyze figurative language, sound devices, and connotation; analyze imagery; analyze description
• Identify subject complements, identify pronoun case
• Predict, define, and accurately use academic vocabulary words related to poetry and communication
Lesson 19: Voices in Verse Unit Test

Objectives:
- Use context clues; paraphrase; analyze elements of poetry; analyze figurative language, sound devices, and connotation; analyze imagery; analyze description
- Identify subject complements, identify pronoun case
- Predict, define, and accurately use academic vocabulary words related to poetry and communication
- Read, analyze, and connect an independent reading text to other literature and your personal experiences
- Prewrite, draft, revise, and edit a critical review; revise writing for subject-verb agreement

Unit 3: Dialogue and Discovery

In this unit, you will explore the Big Question: Is it our differences or our similarities that matter most? You will read selections from a drama multiple times to deepen your understanding of literature and to understand the playwright’s craft better. You will read drama to explore structure of dramas, dialogue, and characters’ motivations. You will practice identifying cause and effect, drawing conclusions, and comparing adaptations to originals. Finally, you will identify and use prepositions, participles, and infinitives in related phrases.

Objectives:
- Identify cause and effect; draw conclusions; analyze elements of drama, analyze action and conflict, character’s motivation, and setting; compare adaptations to originals
- Identify and use prepositions and prepositional phrases, identify and use participial and infinitive phrases
- Predict, define, and accurately use academic vocabulary words related to classification and drama
- Prewrite, draft, revise, and edit a research presentation; revise writing using participles
- Read, analyze, and connect an independent reading text to other literature and your personal experiences

Lesson 1: Introducing the Big Question

Objectives:
- Discuss with a partner whether our differences or similarities matter most
- Predict meaning of academic vocabulary words
- Define and accurately use academic vocabulary related to classification
- Preview titles for independent reading

Lesson 2: Close Reading Workshop: Drama (two-day lesson)

Objectives:
- Support analysis of drama with textual evidence
- Apply reading strategies to identify key ideas and details, analyze craft and structure, and make connections while reading
- Conduct short-term research to enhance understanding of drama

Lesson 3: Elements of Drama (two-day lesson)

Objectives:
- Identify and define elements of drama
- Analyze how dramatic elements contribute to the meaning of a drama

Lesson 4: First Read: The Diary of Anne Frank, Act I (three-day lesson)
Lesson 5: Second Read: The Diary of Anne Frank, Act I (three-day lesson)

Objectives:
- Define and accurately use academic vocabulary related to classification
- Apply reading strategies to identify key ideas and details, analyze craft and structure, and make connections while reading
- Analyze how dramatic elements contribute to the meaning of a drama
- Analyze dialogue to understand characters, tone, and plot

Lesson 6: Third Read: The Diary of Anne Frank, Act I (three-day lesson)

Objectives:
- Predict, define, and accurately use academic vocabulary words related to classification and drama
- Support analysis of a drama with textual evidence
- Apply reading strategies to identify key ideas and details, analyze craft and structure, and make connections while reading
- Analyze how dramatic elements contribute to the meaning of a drama
- Identify and correctly use prepositions and prepositional phrases

Lesson 7: Planning the Presentation (two-day lesson)

Objectives:
- Conduct short-term research to enhance understanding of drama
- Conduct research using credible sources; taking notes and using the appropriate format for citing sources
- Demonstrate understanding of a research presentation in order to begin the prewriting and planning stages

Lesson 8: First Read: The Diary of Anne Frank, Act II (three-day lesson)

Objectives:
- Predict and define the meaning of academic vocabulary words
- Apply reading strategies to identify key ideas and details, analyze craft and structure, and make connections while reading
- Analyze cause and effect
- Analyze how dramatic elements contribute to the meaning of a drama

Lesson 9: Second Read: The Diary of Anne Frank, Act II (three-day lesson)

Objectives:
- Predict and define the meaning of academic vocabulary words
- Apply reading strategies to identify key ideas and details, analyze craft and structure, and make connections while reading
- Analyze how dramatic elements contribute to the meaning of a drama
- Infer characters’ motivations from clues in dialogue and action

Lesson 10: Third Read: The Diary of Anne Frank, Act II (three-day lesson)

Objectives:
- Predict and define the meaning of academic vocabulary words
- Support analysis of a drama with textual evidence
- Apply reading strategies to identify key ideas and details, analyze craft and structure, and make connections while reading
- Analyze how dramatic elements contribute to the meaning of a drama
- Identify and use prepositions and prepositional phrases
- Identify and use participial and infinitive phrases

Lesson 11: Creating the Presentation (two-day lesson)
Objectives:
• Identify borrowed and foreign words to decode word meanings
• Develop a thesis statement that expresses the main idea of a research presentation
• Compose the rough draft of a research presentation
• Prewrite, draft, revise, and edit a research presentation; revise writing using participles

Lesson 12: Read: The Governess (two-day lesson)

Objectives:
• Predict and define the meaning of academic vocabulary words
• Use details from a drama to draw conclusions about ideas that are not directly stated
• Analyze setting and character to deepen understanding of a drama

Lesson 13: Read: The Ninny (two-day lesson)

Objectives:
• Support literary analysis with textual evidence
• Apply reading strategies to identify key ideas and details, analyze craft and structure, and make connections while reading
• Compare and contrast an original short story to the play adapted from it

Lesson 14: Comparing Adaptations to Originals (two-day lesson)

Objectives:
• Support literary analysis with textual evidence
• Compare and contrast an original short story to the play adapted from it

Lesson 15: Publishing the Presentation (two-day lesson)

Objectives:
• Apply revisions and edits to a rough draft
• Construct the final draft of research presentation
• Prewrite, draft, revise, and edit a research presentation; revise writing using participles
• Revise writing to combine sentences using gerunds and participles

Lesson 16: Text Set (three-day lesson)

Objectives:
• Predict and define the meaning of academic vocabulary words
• Read and analyze literary and informational texts, citing textual evidence to support analysis
• Conduct research using credible sources in order to take notes and cite sources appropriately
• Compose a discussion board post, drawing evidence from literary and informational texts to support analysis and reflection
• Discuss issues of differences and similarities referencing texts in this unit and personal experience

Lesson 17: Unit Review (two-day lesson)

Objectives:
• Identify cause and effect; draw conclusions; analyze elements of drama, analyze action and conflict, character’s motivation, and setting; compare adaptations to originals
• Identify and use prepositions and prepositional phrases, identify and use participial and infinitive phrases
• Predict, define, and accurately use academic vocabulary words related to classification and drama
• Prewrite, draft, revise, and edit a research presentation; revise writing using participles
• Read, analyze, and connect an independent reading text to other literature and your personal experiences

Lesson 18: Dialogue and Discovery Unit Test
Objectives:
- Identify cause and effect; draw conclusions; analyze elements of drama, analyze action and conflict, character’s motivation, and setting; compare adaptations to originals
- Predict, define, and accurately use academic vocabulary words related to classification and drama
- Prewrite, draft, revise, and edit a research presentation; revise writing using participles
- Read, analyze, and connect an independent reading text to other literature and your personal experiences

Unit 4: The Giver

Eleven-year-old Jonas lives in a seemingly ideal world. There is no war or pain, and there are no choices. Every person is assigned a role in the community. When Jonas turns 12, he is chosen to receive special training from the Giver himself—a man who alone holds the key to the true pain and pleasure of life: memories. Now it is time for Jonas to receive the truth. What will Jonas do once he experiences the power of deep emotions? This gripping and provocative Newbery Award-winning novel keeps readers turning the pages and exploring the special qualities that make each of us human. As you read, you will identify literary elements such as setting, characters, plot, and theme.

Ella Minnow Pea and her family live on the fictional island of Nollop. This tiny independent country has just one claim to fame: it is the birthplace of Nevin Nollop, the creator of the popular pangram "The quick brown fox jumps over the lazy dog." Like most of her fellow citizens, Ella loves the English language and is devastated to learn that the High Council has banned the use of certain letters of the alphabet in writing or speech. In a race against the clock, Ella must help create a new pangram consisting of only 32 letters. If she is successful, the islanders will regain the right to communicate freely, and Ella will be reunited with her loved ones. As you read *Ella Minnow Pea*, you will define vocabulary words in context and analyze literary elements.

*The Giver* is the recommended novel for Language Arts 8. *Ella Minnow Pea* may be read instead of *The Giver* with prior teacher approval. Lessons and activities for *Ella Minnow Pea* will appear on the lower half of the page. Do not proceed with *Ella Minnow Pea* unless you have received approval from your teacher.

Objectives:
- Summarize the key ideas and events in a science fiction novel
- Analyze connections between the characters, setting, plot, theme, and other story elements
- Analyze and compare actions of heroic characters
- Determine how cultural context affects character, setting, and plot
- Analyze how the background and experiences of authors influence their writing

Lesson 1: Setting Background for The Giver

Objectives:
- Define new vocabulary and identify words in context
- Conduct research to learn biographical information about the author
- Understand the cultural context of the novel

Lesson 2: The Giver, Chapters 1–2

Objectives:
- Define new vocabulary and identify words in context
- Support analysis of reading with textual evidence
- Draw inferences to determine the setting of the novel and how it relates to the text

Lesson 3: The Giver, Chapters 3–5

Objectives:
- Define new vocabulary and identify words in context
- Support analysis of reading with textual evidence
- Analyze characters and character traits

Lesson 4: The Giver, Chapters 6–7
Objectives:
- Define new vocabulary and identify words in context
- Support analysis of reading with textual evidence
- Identify key events in the plot

Lesson 5: The Giver, Chapters 8–10

Objectives:
- Define new vocabulary and identify words in context
- Draw inferences in order to analyze events in the text
- Identify and examine character interactions and plot events that create conflict in a narrative
- Read, discuss, analyze, and demonstrate comprehension of grade-level texts
- Reflect on reading role in writing

Lesson 6: The Giver, Chapters 11–12

Objectives:
- Define new vocabulary and identify words in context
- Draw inferences in order to analyze events in the text
- Identify key events in the plot
- Summarize events and key ideas in the text

Lesson 7: The Giver, Chapters 13–14

Objectives:
- Define new vocabulary and identify words in context
- Draw inferences in order to analyze events in the text
- Identify events and key ideas in the plot
- Analyze how an author develops the theme of a text

Lesson 8: The Giver, Chapters 15–17

Objectives:
- Define new vocabulary and identify words in context
- Identify key ideas and analyze events to determine the development of plot and conflict
- Analyze how an author develops the theme of a text
- Summarize events and key ideas in the text
- Analyze dialogue and interactions between characters to determine character traits and relationships
- Read, discuss, analyze, and demonstrate comprehension of grade-level texts
- Reflect on reading role in writing

Lesson 9: The Giver, Chapters 18–19

Objectives:
- Define new vocabulary and identify words in context
- Support analysis of reading with textual evidence
- Identify key ideas and analyze events to determine the development of plot and conflict
- Identify the actions and characteristics of heroic characters

Lesson 10: The Giver, Chapters 20–21

Objectives:
- Define new vocabulary and identify words in context
- Support analysis of reading with textual evidence
- Identify key ideas and analyze events to determine the development of plot and conflict
- Analyze characters and character traits

Lesson 11: The Giver, Chapters 22–23

Objectives:
- Define new vocabulary and identify words in context
• Support analysis of reading with textual evidence
• Analyze the development of plot elements, characters and character traits and theme in a novel
• Understand the cultural context of the novel
• Identify the actions and characteristics of heroic characters
• Read, discuss, analyze, and demonstrate comprehension of grade-level texts
• Reflect on reading role in writing
ENGLISH 9 A
English 9 A

This is the first of two courses that comprise English 9. In this course, the student will take an in-depth look at a variety of literature selections. In reading and responding to these diverse selections, the student will gain a thorough understanding of fiction and nonfiction genres, including short stories, essays, poetry, and drama. The student will also read Jack London’s *The Call of the Wild*. This selection enables the student to explore universal themes and make connections between the characters’ experiences and his own. Harper Lee's *To Kill a Mockingbird* may be read instead of *The Call of the Wild*. Writing instruction focuses on analytical and expository writing but also provides opportunities for the student to write creatively.

Unit 1: Growing Up

In this unit, you will analyze fiction, nonfiction, and poetry selections focused on the theme of growing up. As you read, you will apply active reading strategies, such as making inferences and forming personal connections with the text. You will also learn to understand and analyze elements of prose and poetry, such as point of view, character, setting, symbolism, and metaphor. Throughout the unit, you will also learn strategies for learning new vocabulary, such as understanding word roots, prefixes, and suffixes. Grammar instruction will focus on reviewing the eight parts of speech. Finally, you will develop your writing skills as you create a personal narrative.

Objectives:
- Understand and analyze fiction and nonfiction narratives and poetry
- Apply a variety of active reading strategies
- Learn and apply strategies for developing vocabulary
- Learn elements of grammar, usage, and style, focusing on the parts of speech
- Use the writing process to compose a personal narrative

Lesson 1: Growing Up: Unit Introduction

Objectives:
- Become familiar with the structure of the English 9 course
- Identify major genres, structural components, and literary devices in different types of literature
- Review the stages of the writing process
- Review strategies for learning new vocabulary
- Review the parts of speech

Lesson 2: The Bass, the River, and Sheila Mant: Wetherell

Objectives:
- Understand the characteristics of the first-person point of view
- Evaluate the effect of using first-person narration
- Understand and apply active reading strategies
- Use prewriting strategies to begin generating ideas for a narrative
- Understand and apply strategies for understanding new vocabulary
- Use nouns and pronouns correctly in writing

Lesson 3: I Know Why the Caged Bird Sings: Angelou (two-day lesson)

Objectives:
- Understand the importance of setting in a narrative
- Understand and apply active reading strategies
- Use prewriting strategies to develop ideas for a narrative
- Learn common suffixes as a strategy for understanding new vocabulary
- Use nouns and pronouns correctly in writing

Lesson 4: Poems of Passage: Booth, Collins, Lorde

Objectives:
- Understand the role of the speaker in poetry
- Understand and apply active reading strategies
- Use prewriting strategies to organize ideas for a narrative
- Learn Greek word roots as a strategy for understanding new vocabulary
- Understand characteristics of action verbs
Lesson 5: My Forbidden Face: Latifa (two-day lesson)

Objectives:
- Understand the use of metaphor in prose
- Understand and apply active reading strategies
- Use drafting strategies to begin writing a narrative
- Learn suffixes as a strategy for understanding new vocabulary
- Understand characteristics of linking verbs

Lesson 6: Writing Workshop: Family Narrative (two-day lesson)

Objectives:
- Use drafting strategies to compose a personal narrative
- Use vocabulary words correctly in writing
- Use specific nouns and verbs in writing

Lesson 7: My Brother's Keeper: Bennett (two-day lesson)

Objectives:
- Make connections between texts
- Use suffixes to understand new vocabulary
- Understand the characteristics of prepositions and conjunctions
- Understand techniques an author uses to develop characters in a story

Lesson 8: Language Focus: Word Choice and Voice

Objectives:
- Understand the relationship between word choice and voice in writing
- Begin revising a narrative to improve voice
- Use parts of speech correctly in writing

Lesson 9: Growing Up: Unit Review

Objectives:
- Review major genres, structural components, and literary devices in different types of literature
- Review the elements of narrative
- Review strategies for learning new vocabulary
- Review the parts of speech

Lesson 10: Growing Up: Unit Test

Lesson 11: Writing Workshop: Family Narrative (two-day lesson)

Objectives:
- Use revising and editing strategies to compose the final draft of a personal narrative
- Use vocabulary words correctly in writing
- Use the parts of speech correctly in writing

Unit 2: The Forces of Nature

In this unit, you will analyze fiction, nonfiction, and poetry selections about the natural world, with a focus on nonfiction selections. As you read, you will apply active reading strategies such as analyzing details and using text features and graphics to understand informational texts. You will also learn to understand and analyze elements of prose and poetry such as irony, figurative language, and text structure. Throughout the unit, you will also learn strategies for learning new vocabulary, with a focus on using context clues and understanding multiple-meaning words. Grammar instruction will focus on understanding the components of a sentence and using different sentence types. Finally, you will develop your writing skills as you create a descriptive essay.

Objectives:
- Understand and analyze fiction, nonfiction, and poetry
- Apply a variety of active reading strategies for understanding nonfiction
- Learn and apply strategies for developing vocabulary
- Learn elements of grammar, usage, and style, focusing on the sentence base
- Use the writing process to compose a descriptive essay
Lesson 1: The Forces of Nature: Unit Introduction
Objectives:
• Review strategies for active reading
• Begin generating ideas for a description
• Review strategies for learning new vocabulary
• Review the components of a sentence

Lesson 2: Of Wolves and Men: Lopez
Objectives:
• Identify important details in a nonfiction selection
• Use details to understand the narrator's point of view
• Understand the characteristics of subjects and predicates
• Generate ideas for a description

Lesson 3: An Inconvenient Truth: Gore (two-day lesson)
Objectives:
• Use text features to improve understanding of a nonfiction text
• Analyze the use of graphics in a nonfiction informational text
• Use context clues to understand new vocabulary
• Understand and identify complements in a sentence

Lesson 4: Writing Workshop: Description (two-day lesson)
Objectives:
• Use drafting strategies to compose a description
• Use vocabulary words correctly in writing
• Apply understanding of sentence variety in writing

Lesson 5: Tsunami 2004 (two-day lesson)
Objectives:
• Use text features to understand nonfiction articles
• Compare how the same subject is treated in a news article and a feature article
• Use context clues to understand new vocabulary
• Understand and identify complements in a sentence

Lesson 6: Language Focus: Sentence Fluency and Voice
Objectives:
• Understand the relationship between sentence variety and voice in writing
• Begin revising a description to improve sentence fluency
• Use varied sentence types in writing

Lesson 7: The Forces of Nature: Unit Review
Objectives:
• Review characteristics of expository nonfiction
• Review strategies for understanding informational texts
• Review strategies for learning new vocabulary
• Review the parts of a sentence and different sentence types

Lesson 8: The Forces of Nature: Unit Test

Lesson 9: Writing Workshop: Description (two-day lesson)
Objectives:
• Use revising and editing strategies to compose the final draft of a description
• Use vocabulary words correctly in writing
• Use varied sentence types in writing

Unit 3: The Call of the Wild
Jack London’s *The Call of the Wild* follows the journey of Buck, a magnificent St. Bernard/Scotch shepherd dog, as he is kidnapped from comfortable surroundings and thrown into the harsh frontier life of the 1897 gold rush in the arctic North. You will read of how he not only adapts to new conditions but also awakens to ancient instincts as he triumphs despite and amidst the new challenges of his changing environment. In this unit, you will identify and analyze literary elements, discover new vocabulary terms, and use comprehension strategies to make connections and draw conclusions.

*The Call of the Wild* is the recommended novel for English 9. Harper Lee’s novel *To Kill a Mockingbird* may be read instead of *The Call of the Wild* with prior teacher approval. Lessons and activities for *To Kill a Mockingbird* will appear on the lower half of the page, as seen below. Do not proceed with *To Kill a Mockingbird* unless you have received approval from your teacher.

**Objectives:**
- Develop and apply effective comprehension strategies
- Read and analyze the text, then respond to questions
- Analyze relationships between and among characters, setting, and events
- Define new vocabulary and identify words in context

**Lesson 1: The Call of the Wild: Unit Introduction**

Objectives:
- Examine the historical background of the novel
- Connect the author’s life to the novel’s setting and plot
- Identify geographical landmarks specific to the novel

**Lesson 2: Chapter 1: Into the Primitive**

Objectives:
- Identify point of view and types of narration
- Develop and apply effective comprehension strategies
- Define new vocabulary and identify words in context

**Lesson 3: Chapter 2: The Law of Club and Fang**

Objectives:
- Define and analyze different types of conflict
- Identify dialect and its purpose
- Analyze relationships between and among characters, setting, and plot
- Define new vocabulary and identify words in context

**Lesson 4: Chapter 3: The Dominant Primordial Beast**

Objectives:
- Analyze how conflicts in the novel develop the plot
- Define new vocabulary and identify words in context

**Lesson 5: Chapter 4: Who Has Won to Mastership**

Objectives:
- Define theme
- Analyze themes in the novel
- Read and analyze the text, then respond to questions
- Define new vocabulary and identify words in context

**Lesson 6: Chapter 5: The Toil of Trace and Trail (two-day lesson)**

Objectives:
- Define and analyze setting
- Read and analyze the text, then respond to questions
- Define new vocabulary and identify words in context
- Enrich reading by visualizing

**Lesson 7: Chapter 6: For the Love of a Man**

Objectives:
- Read and analyze the text, then respond to questions
- Define new vocabulary and identify words in context
• Describe how an author develops a character

Lesson 8: Chapter 7: The Sounding of the Call (two-day lesson)

Objectives:
• Identify and evaluate themes in the novel
• Read and analyze the text, then respond to questions
• Define new vocabulary and identify words in context

Lesson 9: The Call of the Wild: Unit Review

Objectives:
• Study vocabulary and review previous lesson goals
• Prepare for unit test

Lesson 10: The Call of the Wild: Unit Test

Objectives:
• Assess reading comprehension and literary analysis through a unit test

Unit 4: Other Worlds

In this unit, you will read and analyze works of science fiction that depict imaginary worlds. Additionally, you will read essays that explore how science fiction and video games have influenced our culture. As you read, you will continue to apply active reading strategies, such as analyzing details and summarizing, to help prepare you to critique these texts. You will analyze how the elements of short stories are used in the science-fiction genre and compare stories within this genre before writing a critical response to a short story. Throughout the unit, you will also learn strategies for understanding scientific and technical vocabulary in context. Grammar instruction will focus on using punctuation correctly and following standard conventions for using italics and quotation marks.

Objectives:
• Understand and analyze science fiction selections and related literature from other genres
• Apply a variety of active reading strategies
• Learn and apply strategies for developing vocabulary
• Learn elements of grammar, usage, and style, focusing on punctuation
• Use the writing process to compose a critical response to literature

Lesson 1: Other Worlds: Unit Introduction

Objectives:
• Understand characteristics of science fiction
• Identify strategies for evaluating a text
• Review strategies for learning new vocabulary
• Understand how to use end punctuation marks correctly

Lesson 2: A Sound of Thunder: Bradbury (two-day lesson)

Objectives:
• Analyze an author’s use of different techniques of characterization
• Practice strategies for evaluating a text
• Learn strategies for understanding scientific and technical vocabulary
• Understand how to use commas to separate items in a series

Lesson 3: Nethergrave: Skurzynski (two-day lesson)

Objectives:
• Analyze a character's motivation in a science fiction story
• Practice strategies for evaluating a text
• Learn strategies for understanding scientific and technical vocabulary
• Compare texts within the same genre
• Understand how to use commas correctly

Lesson 4: Writing Workshop: Critical Response (two-day lesson)

Objectives:
Lesson 5: Comparing Texts: Brown and Brautigan

Objectives:
• Compare the ways in which works from different genres address similar themes
• Understand how chronological order is used to organize events in a biography
• Learn strategies for understanding scientific and technical vocabulary
• Understand how to use commas to set off nonessential information

Lesson 6: Language Focus: Writing Conventions

Objectives:
• Understand the importance of following standard conventions in academic writing
• Develop a personal editing checklist to improve adherence to standard writing conventions
• Use end punctuation, commas, italics, and quotation marks correctly in writing

Lesson 7: Other Worlds: Unit Review

Objectives:
• Review characteristics of science fiction
• Review strategies for comparing and evaluating texts
• Review strategies for learning new vocabulary
• Review conventions for end punctuation, commas, italics, and quotation marks

Lesson 8: Other Worlds: Unit Test

Lesson 9: Writing Workshop: Critical Response (two-day lesson)

Objectives:
• Use revising and editing strategies to compose the final draft of a critical response essay
• Use vocabulary words correctly in writing
• Use end punctuation, commas, italics, and quotation marks correctly in writing

Unit 5: Crossing Borders

In this unit, you will read and analyze works of fiction and nonfiction that explore the theme of crossing borders. These borders may be physical—for instance, the geographical borders between two countries—or psychological. You will apply active reading strategies such as making predictions, understanding text structures, and understanding the author’s purpose. You will analyze writers’ use of figurative language, dialect, and tone, as well as their techniques for developing conflict. As part of your exploration of the theme of crossing borders, you will write an informational essay about a cultural tradition. Throughout the unit, you will also practice the strategies for understanding vocabulary that you have learned throughout the semester. Grammar instruction will focus on phrases and clauses.

Objectives:
• Understand and analyze fiction and nonfiction selections with common themes
• Apply a variety of active reading strategies
• Learn and apply strategies for developing vocabulary
• Learn elements of grammar, usage, and style, focusing on phrases and clauses
• Use the writing process to compose an informational essay

Lesson 1: Crossing Borders: Unit Introduction
Lesson 2: Delfino II: Diez in the Desert (two-day lesson)

Objectives:
- Analyze how an author develops mood in an essay
- Understand the use of imagery, details, and dialogue to create mood
- Understand the difference between independent and subordinate clauses

Lesson 3: Writing Workshop: Informational Essay

Objectives:
- Use drafting strategies to compose an informational essay
- Use vocabulary words correctly in writing
- Use phrases and clauses correctly in writing

Lesson 4: Hip-Hop Planet: McBride

Objectives:
- Understand how a writer's purpose and audience determine the content of an essay
- Analyze how a writer uses similes for effect in an informational essay
- Understand the four types of sentence structure

Lesson 5: Language Focus: Transitions and Organization

Objectives:
- Understand the importance of organizing ideas clearly in writing
- Use transitional phrases to improve organization in an essay
- Use phrases and clauses correctly in writing
- Understand how to correct common sentence errors: fragments and run-on sentences

Lesson 6: Crossing Borders: Unit Review

Objectives:
- Review unit theme
- Review strategies for comparing themes across texts
- Review strategies for learning new vocabulary
- Review phrases and clauses

Lesson 7: Crossing Borders: Unit Test

Lesson 8: Writing Workshop: Informational Essay (two-day lesson)

Objectives:
- Use revising and editing strategies to compose the final draft of an informational essay
- Use vocabulary words correctly in writing
- Use phrases and clauses correctly in writing
- Use transitional phrases to improve organization in an informational essay

Unit 6: Semester Exam

Lesson 1: Semester Review

Lesson 2: Semester Exam
ENGLISH 9 B
English 9 B

This is the second of two courses that comprise English 9. In this course, the student continues to explore a variety of literature selections from world literature, including well-known works. The student will learn strategies for reading epic poetry and study the characteristics of suspense stories. Also, the student will analyze the elements of drama as he reads William Shakespeare’s *Romeo and Juliet*. George Orwell’s *Animal Farm* may be read instead of *Romeo and Juliet*.

Writing instruction focuses on analytical and expository writing including in-depth instruction in the process of writing a research paper. This project teaches the student to critically analyze primary and secondary sources and to effectively support his ideas with information gathered from outside sources.

Unit 1: Echoes from the Past

In this unit, you will analyze fiction, nonfiction, and poetry selections focused on ancient myths and literature. As you read, you will apply active reading strategies, such as making inferences and forming personal connections with the text. You will also learn to understand and analyze elements of epic poetry such as myth, figurative language, character, and tone. Throughout the unit, you will also learn strategies for learning new vocabulary, such as understanding multiple-meaning words and using a dictionary. Grammar instruction will focus on reviewing the use of pronouns. Finally, you will develop your writing skills as you create a summary for one of the selections in this unit.

Objectives:
- Understand and analyze characteristics of the epic poetic genre
- Apply a variety of active reading strategies
- Review strategies for learning new vocabulary
- Learn elements of grammar, usage, and style, focusing on pronouns
- Write a summary

Lesson 1: Echoes from the Past: Unit Introduction

Objectives:
- Understand characteristics of the epic poetry genre
- Understand the elements of an effective summary
- Review strategies for learning new vocabulary
- Review characteristics of pronouns

Lesson 2: The Odyssey, Part I (three-day lesson)

Objectives:
- Analyze the use of similes in an epic poem
- Apply reading strategies for understanding an epic poem
- Review strategies for learning new vocabulary
- Understand the three cases of personal pronouns and when to use each case

Lesson 3: The Odyssey, Part II (three-day lesson)

Objectives:
- Analyze the use of epic similes in an epic poem
- Apply reading strategies for understanding an epic poem
- Review strategies for learning new vocabulary
- Avoid common pronoun usage errors

Lesson 4: The Odyssey, Part III (three-day lesson)

Objectives:
- Analyze the elements of poetry in an epic poem
- Apply reading strategies for understanding an epic poem
- Review strategies for learning new vocabulary
- Understand conventions for pronoun-antecedent agreement

Lesson 5: Orpheus and Eurydice (two-day lesson)
Objectives:
• Understand the characteristics of myths
• Understand the use of figurative language, such as hyperbole and metaphor, in prose
• Review strategies for learning new vocabulary
• Review rules for correct pronoun usage

Lesson 6: Language Focus: Expressing Ideas Concisely
Objectives:
• Understand techniques for improving conciseness in writing
• Use pronouns correctly in writing

Lesson 7: Writing Workshop: Summary (two-day lesson)
Objectives:
• Use drafting, revising, and editing strategies to compose a summary
• Use vocabulary words correctly in writing
• Use pronouns correctly in writing

Lesson 8: Echoes from the Past: Unit Review
Objectives:
• Review characteristics of epic poetry
• Review poetic devices
• Review the conventions of correct pronoun usage

Lesson 9: Echoes from the Past: Unit Test

Unit 2: Romeo and Juliet
William Shakespeare’s classic tragedy Romeo and Juliet tells the story of two youths desperately in love with each other despite the feud that exists between their two families. They are secretly married, but on the same day as their marriage, Romeo is banished for killing Juliet’s kinsman. While he is gone, Juliet fakes her death by taking a poisonous potion in order to avoid an arranged marriage. Romeo does not learn in time that she is not really dead, and kills himself as a result. Upon waking, Juliet discovers Romeo and joins him in death. Through Shakespeare’s timeless story, you will identify and analyze literary and dramatic elements, discover new vocabulary terms, and use comprehension strategies to make connections and draw conclusions.

Romeo and Juliet is the recommended text for English 9. George Orwell’s novel Animal Farm may be read instead of Romeo and Juliet with prior teacher approval. Lessons and activities for Animal Farm will appear on the lower half of the lesson pages.

Teachers may access Animal Farm assessments in the Virtual Library.

Objectives:
• Identify and analyze dramatic elements
• Develop and apply effective comprehension strategies
• Read and analyze the text, then respond to questions
• Analyze relationships between and among characters, setting, and events
• Define new vocabulary and identify words in context

Lesson 1: Romeo and Juliet: Unit Introduction
Objectives:
• Learn about the author’s life
• Learn about the historical background of the author’s life
• Identify the elements of drama
• Identify literary characteristics specific to the play

Lesson 2: Romeo and Juliet: Act I
• Define new vocabulary and identify words in context

Lesson 3: Romeo and Juliet: Act I, continued (two-day lesson)

Objectives:
• Read and analyze the text, then respond to questions
• Analyze dialogue
• Analyze the types of dramatic speech
• Analyze relationships between and among characters, setting, and events
• Define new vocabulary and identify words in context

Lesson 4: Romeo and Juliet: Act II (two-day lesson)

Objectives:
• Identify the role of conflict in plot
• Define the elements of plot
• Analyze the structure of a five-act play
• Read and analyze the text, then respond to questions
• Define new vocabulary and identify words in context

Lesson 5: Romeo and Juliet: Act II, continued (two-day lesson)

Objectives:
• Define theme
• Analyze themes in the novel
• Analyze tragedy
• Read and analyze the text, then respond to questions
• Define new vocabulary and identify words in context

Lesson 6: Romeo and Juliet: Act III

Objectives:
• Define and analyze setting
• Identify the elements of blank verse
• Read and analyze the text, then respond to questions
• Define new vocabulary and identify words in context

Lesson 7: Romeo and Juliet: Act III, continued (two-day lesson)

Objectives:
• Describe how an author develops a character
• Read and analyze the text, then respond to questions
• Define new vocabulary and identify words in context

Lesson 8: Romeo and Juliet: Act IV

Objectives:
• Analyze comic relief as a dramatic element
• Recognize the three types of irony
• Read and analyze the text, then respond to questions
• Define new vocabulary and identify words in context

Lesson 9: Romeo and Juliet: Act IV, continued (two-day lesson)

Objectives:
• Identify and evaluate figurative language in the play
• Read and analyze the text, then respond to questions
• Define new vocabulary and identify words in context

Lesson 10: Romeo and Juliet: Act V

Objectives:
• Analyze stage directions
• Recognize the features of the Globe Theatre
• Read and analyze the text, then respond to questions
• Define new vocabulary and identify words in context

Lesson 11: Romeo and Juliet: Act V, continued
Objectives:
• Identify and evaluate themes in the play
• Read and analyze the text, then respond to questions
• Define new vocabulary and identify words in context

Lesson 12: Writing Workshop: Persuasive Essay (two-day lesson)

Objectives:
• Analyze the components of a persuasive essay
• Write a persuasive essay
• Revise and edit for content, grammar, spelling, and formatting

Lesson 13: Romeo and Juliet: Unit Review

Objectives:
• Study vocabulary and review previous lesson goals

Lesson 14: Romeo and Juliet: Unit Test

Unit 3: The Research Paper

In this unit, you will develop important reading and analytical writing skills as you research and write about a topic of your choice. The lessons in the unit are planned to guide you through the challenging but rewarding process of writing a research paper. You will complete this project in three main phases:

• forming research questions and gathering information
• organizing and analyzing your research findings
• combining your own ideas with information from your research to create an effective, well-supported research paper

This unit differs from other units in the English 9 course in that it includes fewer reading assignments from your textbooks. Most of the reading you complete will be conducted as part of your research. Please note that it is especially important that you complete and turn in writing assignments consistently throughout this unit, since each new assignment builds on the work completed previously. Completing assignments on time and in order will help ensure that you have adequate time to develop and refine your ideas and to incorporate feedback from your teacher.

Objectives:
• Formulate original research questions and conduct research using a variety of primary and secondary sources
• Apply reading strategies, including skimming and scanning, to conduct a critical evaluation of sources and to understand the use of text features in identifying research resources
• Use effective note-taking and outlining strategies to summarize, paraphrase, synthesize, and organize information
• Write a research paper, based on an original thesis statement, that is appropriate to its purpose, and develop a multimedia presentation based on that research paper
• Revise and edit a research paper for focus, organization, correctness, voice, and idea development, and use feedback to edit and revise the research paper

Lesson 1: Unit Introduction: The Research Paper

Objectives:
• Generate a topic for an original research paper
• Conduct preliminary research to identify potential areas of focus

Lesson 2: Prewriting: Forming Research Questions

Objectives:
• Conduct preliminary research to identify potential areas of focus
• Develop a list of major questions to guide research
• Identify the differences between primary and secondary sources and examples of each source type
• Understand writing conventions for capitalization

Lesson 3: Prewriting: Developing a Research Proposal
Objectives:
- Draft a 1-page research proposal explaining topic, major research questions, and potential areas of focus
- Identify the differences between primary and secondary sources and examples of each source type
- Understand writing conventions for capitalization

Lesson 4: Prewriting: Gathering Information

Objectives:
- Identify the differences between primary and secondary sources and examples of each source type
- Understand writing conventions for capitalization

Lesson 5: Prewriting: Evaluating Information

Objectives:
- Critically evaluate print and electronic informational resources
- Understand writing conventions for using apostrophes

Lesson 6: Prewriting: Taking Notes (two-day lesson)

Objectives:
- Practice effective note-taking strategies, including summarizing and paraphrasing
- Use research questions to guide note-taking
- Understand writing conventions for using semicolons

Lesson 7: Prewriting: Synthesizing Information (two-day lesson)

Objectives:
- Synthesize ideas and details from multiple informational texts
- Use information from a variety of sources to begin formulating answers to the research questions
- Understand writing conventions for using semicolons

Lesson 8: Prewriting: Organizing Ideas

Objectives:
- Craft a concise and effective thesis that states the controlling idea of the research paper
- Develop an outline that identifies main ideas and supporting details
- Understand writing conventions for using hyphens, dashes, and parentheses

Lesson 9: Drafting: Getting Started

Objectives:
- Write a clear and engaging introduction with an effective thesis statement
- Use an outline to develop body paragraphs
- Review conventions for capitalization and punctuation

Lesson 10: Drafting: Integrating Ideas (two-day lesson)

Objectives:
- Write body paragraphs with a clear organizational structure
- Integrate original ideas with information from outside sources effectively
- Understand and apply conventions for in-text citations using MLA style

Lesson 11: Drafting: Wrapping It Up

Objectives:
- Write a memorable conclusion that effectively summarizes the main ideas of the research paper
- Review a peer’s research paper and evaluate how well it fulfills the writing purpose
- Understand and apply conventions for in-text citations using MLA style
Lesson 12: Revising: Identifying Trouble Spots

Objectives:
• Review key traits of effective writing (focus, organization, idea development, voice)
• Identify possible areas for revision based on key writing traits
• Begin revising the research paper to improve it in any of the following areas: focus, organization, voice, idea development

Lesson 13: Revising: Working With Feedback

Objectives:
• Use feedback to revise and edit a research paper

Lesson 14: Editing: Citing Works Using MLA Format

Objectives:
• Follow appropriate conventions for documenting information from primary and secondary sources
• Create a Works Cited page using MLA format

Lesson 15: Editing: Polishing, Proofreading, and Publishing

Objectives:
• Edit, publish, and reflect on the final draft of a research paper

Unit 4: The Dark Side

In this unit, you will analyze fiction, nonfiction, and poetry selections belonging to the suspense and horror genres. As you read, you will apply active reading strategies, such as making predictions and asking questions to better understand the text. You will also learn to understand and analyze elements of suspense and horror narratives such as foreshadowing, stock characters and archetypes, and the role of unreliable narrators. You will also examine literary elements such as poetic devices and tone. Throughout the unit, you will also learn strategies for learning new vocabulary, such as understanding denotation and connotation and the use of archaic language. Grammar instruction will focus on reviewing the rules of subject-verb agreement and the use of adjectives and adverbs.

Objectives:
• Understand and analyze characteristics of the suspense and horror genres
• Apply a variety of active reading strategies
• Review strategies for learning new vocabulary
• Learn elements of grammar, usage, and style, focusing on subject-verb agreement, adjectives, and adverbs

Lesson 1: The Dark Side: Unit Introduction

Objectives:
• Understand characteristics of the literary genres of suspense and horror
• Review strategies for learning new vocabulary
• Review rules for subject-verb agreement

Lesson 2: The Most Dangerous Game: Connell (two-day lesson)

Objectives:
• Understand an author’s use of foreshadowing to create suspense in a story
• Understand the connotative and denotative meanings of new vocabulary
• Understand and apply writing conventions for subject-verb agreement

Lesson 3: The Cask of Amontillado: Poe (two-day lesson)

Objectives:
• Understand the characteristics of an unreliable narrator
• Analyze how an author uses an unreliable narrator for effect in a short story
• Understand the connotative and denotative meanings of new vocabulary
• Understand and apply writing conventions for subject/verb agreement
Lesson 4: Poems of Darkness: Poe (two-day lesson)

Objectives:
- Understand the use of poetic devices such as assonance, consonance, and repetition
- Analyze how an author uses poetic devices for effect
- Understand the connotative and denotative meanings of new vocabulary
- Understand and apply writing conventions for modifiers that compare

Lesson 5: The Lottery: Jackson (two-day lesson)

Objectives:
- Understand the characteristics of archetypes and stock characters
- Analyze the use of archetypes and stock characters in a short story
- Understand the connotative and denotative meanings of new vocabulary
- Understand and apply writing conventions for modifiers that compare

Lesson 6: The Dark Side: Unit Review

Objectives:
- Review characteristics of the literary genres of suspense and horror
- Review literary devices used for effect in fiction and poetry
- Review writing conventions for subject-verb agreement and modifiers that compare

Lesson 7: The Dark Side: Unit Test

Unit 5: Semester Exam

In this unit, you will have the opportunity to prepare for and take the final exam for the concepts you learned throughout the semester. Since this is a comprehensive exam, it may be helpful to organize your notes in the order of the course outline before you begin to review. Using the test-taking strategies that you have previously learned can help you be successful with both objective and essay questions.

Lesson 1: Semester Review

Objectives:
- Decide which strategies you will use to prepare for your exam
- Organize your time and study materials
- Review your notes, keywords and vocabulary terms, and all important concepts that may be covered on this exam

Lesson 2: Semester Exam
ENGLISH 10 A
**English 10 A**

This is the first of two courses that comprise English 10. In this course, the student will explore the timeless themes of world literature, including works from the Americas, Europe, and Africa. In reading these diverse selections, the student will gain a thorough understanding of fiction genres, including classics, contemporary fiction, poetry, and drama. The student will also read Mark Twain’s *Adventures of Huckleberry Finn*. John Steinbeck’s novella *Of Mice and Men* may be read instead of *Adventures of Huckleberry Finn*. In reading these American literature selections and creating a multimedia presentation, the student will understand longer works of literature in their historical and literary context. Writing instruction guides the student through the process of composing expository and analytical essays. It also provides opportunities for the student to write creatively; the student will compose a short story and poem.

Throughout the course, the student expands his vocabulary in context. The mastery of both critical vocabulary and grammar skills helps the student become a more thoughtful and effective reader and writer.

**Unit 1: The Literature of the Americas**

In this unit, you will not only read a selection of literary works from the Western hemisphere, but you will also analyze literary concepts such as theme, tone, mood, and dramatic irony. You will explore fictional stories, drama, and poetry as well as nonfiction essays and famous United States historical documents. During your study of grammar, you will review the eight parts of speech and apply your knowledge of those as you compose summaries, multi-paragraph essays and an informal letter. You will use a wide variety of study skills to master the concepts covered in this unit.

Objectives:
- Create writing samples that demonstrate understanding of various literary works
- Apply different study skills to master variety of skills and activities
- Analyze fiction and nonfiction literary works
- Review and apply knowledge of different parts of speech

**Lesson 1: Course Introduction**

Objectives:
- Recognize the connection between archetypes and themes in literature
- Differentiate between paraphrasing and summarizing
- Identify the main idea in a nonfiction literary work
- Identify various parts of speech
- Use academic vocabulary to identify literary concepts

**Lesson 2: Aztec Creation Story**

Objectives:
- Analyze characters in a myth
- Name the elements of a creation story
- Identify and use nouns correctly

**Lesson 3: Emancipation**

Objectives:
- Analyze historically significant documents
- Determine the author’s/speaker’s purpose for writing/speaking
- Compare themes in literature
- Identify and use pronouns correctly

**Lesson 4: At The Tourist Center in Boston**

Objectives:
- Examine how diction affects tone
- Identify tone in a poetic work
- Identify and use verbs correctly

**Lesson 5: Day of the Butterfly**

Objectives:
Lesson 6: No Dogs Bark

Objectives:
• Analyze symbolism in a short story
• Compare themes across texts
• Examine images that contribute to mood
• Identify and use adverbs

Lesson 7: Crossroads: A Sad Vaudeville (two-day lesson)

Objectives:
• Analyze characters in a dramatic work
• Identify and explain dramatic irony in a play
• Identify prepositions, conjunctions, and interjections in writing

Lesson 8: The Literature of the Americas Unit Review

Objectives:
• Review concepts and skills from previous lessons to prepare for a test

Lesson 9: The Literature of the Americas Unit Test

Objectives:
• Demonstrate mastery of skills and comprehension of material taught

Unit 2: The Literature of the Americas II

In Unit 1, you read selections from several writers in the Americas. You learned about literary techniques such as tone, theme, imagery, and stage direction. In Unit 2, you will continue reading short stories and poems written by authors from the Americas.

Selections in this unit include writings by authors from St. Lucia, Trinidad and Tobago, Jamaica, Puerto Rico, Brazil, Argentina, and Chile. The stories cover topics such as reconciliation, death, acceptance, anger, and relationships. There is a wealth of insight and emotion in the writings. As you read, you will learn new literary elements such as paradox, personification, and situational irony. You will also become familiar with additional techniques such as magical realism and repetition, which enable literature to engage an audience from beginning to end.

In this unit, you will write a compare and contrast essay on a topic of your choice. You will select a topic, create a rough draft, revise, and edit your essay over the course of the unit. Additionally, you will review and apply your knowledge on the components of sentences and common sentence errors.

Objectives:
• Create a compare and contrast essay
• Apply different study skills to master variety of skills and activities
• Analyze fiction and non-fiction
• Identify parts of a sentence and common sentence errors

Lesson 1: Love after Love

Objectives:
• Identify a paradox and analyze its meaning in a literary work
• Identify common sentence errors
• Identify components of a sentence

Lesson 2: When Greek Meets Greek

Objectives:
• Identify how dialogue reveals information about a character
• Define idioms, colloquialisms, slang, and jargon
• Identify and use simple and complete subjects correctly

Lesson 3: Girls Can We Educate We Dads? and In Trying Times

Objectives:
Lesson 4: The Youngest Doll

Objectives:
• Identify the elements of magic realism in a literary work
• Determine the central idea of a literary work
• Compare cultural experiences reflected in works of literature from outside the United States
• Identify and use compound subjects and verbs correctly

Lesson 5: Writing Workshop: Compare-and-Contrast Essay (two-day lesson)

Objectives:
• Write a compare and contrast essay

Lesson 6: The Third Bank of the River

Objectives:
• Analyze how an author develops complex characters in a literary work
• Examine and interpret the use of symbolism in a literary work
• Make generalizations from a literary work
• Identify and revise sentence fragments

Lesson 7: The Book of Sand

Objectives:
• Identify the elements that contribute to a literary work's mood
• Revise an essay for varied sentence length
• Identify and use direct and indirect objects correctly

Lesson 8: The Censors

Objectives:
• Analyze irony in a literary work
• Examine how characters' actions serve to advance the plot
• Identify and use predicate nominatives and predicate adjectives correctly

Lesson 9: Tonight I Can Write and Serenity

Objectives:
• Identify personification in a literary work
• Analyze tone in a literary work
• Use inference to determine poetic meaning
• Correctly identify sentence patterns

Lesson 10: And of Clay Are We Created

Objectives:
• Analyze tone in a literary work
• Examine how an author develops a character

Lesson 11: The Literature of the Americas II Review (two-day lesson)

Objectives:
• Implement review strategies to prepare for a test

Lesson 12: The Literature of the Americas II Test

Objectives:
• Demonstrate mastery of skills and comprehension of material learned

Lesson 13: Writing Workshop: Compare and Contrast Essay (two-day lesson)
Unit 3: Adventures of Huckleberry Finn

Mark Twain's *Adventures of Huckleberry Finn* is the story of a free-thinking kid, Huck Finn, and a slave named Jim, both of whom choose to flee their oppressive lives. The two set out on a trip down the Mississippi River that is filled with adventures and experiences that are unique to the particular class of characters and setting of the mid-nineteenth century. The novel’s title is sometimes extended to include *Tom Sawyer’s Comrade* to indicate to readers that this is a companion novel to *The Adventures of Tom Sawyer*, told as a first-person narrative from Huck’s point of view. Prior knowledge of *Tom Sawyer* is not required. In this unit, you will identify literary elements, analyze characters, use comprehension strategies to make connections and draw conclusions, and define unfamiliar vocabulary words. You will also create a multimedia presentation for Unit 3’s portfolio assessment.

*Of Mice and Men* may be read instead of the *Adventures of Huckleberry Finn* with prior teacher approval. Lessons and activities for *Of Mice and Men* will appear on the lower half of the page. Do not proceed with *Of Mice and Men* unless you have received approval from your teacher.

*Of Mice and Men* is the story of two men, George Milton and Lennie Small, living a hardscrabble existence as migrant workers during the Great Depression. Smart and practical, George has spent years looking after Lennie. Lennie is hardworking and kind, but feeble-minded. Each man is the only "family" the other one has. As George and Lennie move from place to place and job to job, they hope to save enough money to buy a place of their own. Soon their dream seems within reach, but forces beyond their control threaten to ruin their hopes forever. In this unit, you will identify literary elements, analyze characters, use comprehension strategies to make connections and draw conclusions, and define unfamiliar vocabulary words. You will also create a multimedia presentation for Unit 3's portfolio assessment.

Objectives:
- Develop and apply effective comprehension strategies
- Analyze relationships among characters, setting, and events
- Define new vocabulary and identify words in context

**Lesson 1: Adventures of Huckleberry Finn: Lesson 1**

Objectives:
- Describe Samuel Clemens's background and how it affected his writing
- Define vocabulary words
- Identify point of view in the novel

**Lesson 2: Adventures of Huckleberry Finn: Lesson 2**

Objectives:
- Apply the definitions of Regionalism, Realism, and Naturalism to the novel
- Define vocabulary words
- Analyze the use of dialect in the novel

**Lesson 3: Adventures of Huckleberry Finn: Lesson 3**

Objectives:
- Analyze illustrations of Jim from the novel
- Define vocabulary words
- Generate ideas for multimedia project

**Lesson 4: Adventures of Huckleberry Finn: Lesson 4 (two-day lesson)**

Objectives:
- Describe the requirements of the multimedia project
- Compose a rough draft of the multimedia project
Objectives:
- Define satire
- Identify use of satirical techniques in the novel
- Define vocabulary words
- Analyze illustrations of Jim from the novel

Lesson 6: Adventures of Huckleberry Finn: Lesson 6

Objectives:
- Evaluate the significance of Huck’s moral crisis
- Define vocabulary words
- Identify the use of metaphors in the novel

Lesson 7: Adventures of Huckleberry Finn: Lesson 7

Objectives:
- Analyze the attitudes on race prevalent when the novel was published
- Define vocabulary words
- Debate whether challenges to the novel are valid

Lesson 8: Adventures of Huckleberry Finn: Lesson 8 (two-day lesson)

Objectives:
- Identify themes in the novel
- Analyze social commentary in the novel
- Define vocabulary words
- Compose the final draft of the multimedia project

Unit 4: Europe

Europe has endured many conflicts that have influenced its literature—world wars, the Holocaust, and the collapse of the Soviet Union are examples. Writers are among the first targets of totalitarian regimes. Aleksandr Solzhenitsyn, who was twice sent to Siberia, is one of many European authors who were exiled, imprisoned, or silenced. However, he refused to stop criticizing Russia’s Communist regime, believing that “literature that is not the breath of contemporary society, that dares not transmit the pains and fears of that society, that does not warn in time against threatening moral and social dangers—such literature does not deserve the name of literature; it is only a façade. Such literature loses the confidence of its own people, and its published works are used as wastepaper instead of being read.”

In this unit, you will read, analyze, and interpret selections that express some of the hopes, disappointments, and fears of the writers and of the citizens of the European states, including W.H. Auden and Graham Greene. You will continue to develop your writing skills as you compose an expository essay.

Selections include writings such as the following:
- “from Ten Songs”, a poem by W. H. Auden, which looks at his perceptions of what was happening in Germany during the time of Hitler
- “The Destructors,” a story by Graham Greene, which offers an English man’s perspective on the effects of World War II

As you read, you will learn new literary terms, such as rhyme scheme and allusion. You will be introduced to different character types, such as round characters, flat characters, and stock characters. You will also write an expository essay—and another type of writing that you can add to your growing portfolio. Additionally, you will review and apply your knowledge of a variety of grammatical phrases, such as prepositional, appositive, participial, gerund, and infinitive.

Objectives:
- Compose an expository essay
- Apply different study skills to master variety of skills and activities
- Analyze fiction and non-fiction
- Identify grammatical phrases

Lesson 1: The Divine Comedy

Objectives:
• Identify the rhyme scheme in a poem
• Analyze the effect of rhyme scheme on a poem's meaning
• Use inference to determine poetic meaning
• Identify and use phrases correctly

**Lesson 2: First Confession**

Objectives:
• Identify and examine the types of literary characters in a work of fiction
• Determine how language choices help to evoke a sense of time and place
• Analyze the use of humor in a work of fiction
• Identify and use prepositional phrases correctly

**Lesson 3: Poems on Life and Death**

Objectives:
• Identify the differences between the sonnet and villanelle poetic forms
• Analyze voice in a poetic work
• Organize an expository essay
• Identify and use appositives and appositive phrases correctly

**Lesson 4: Writing Workshop (two-day lesson)**

Objectives:
• Write a rough draft of an expository essay

**Lesson 5: The Love Song of J. Alfred Prufrock**

Objectives:
• Identify and interpret allusions in a poetic work
• Analyze sensory details and images in poetry
• Review an essay for unity and coherence
• Identify and use verbals and verbal phrases correctly

**Lesson 6: The Destructors Part 1**

Objectives:
• Demonstrate understanding of characters and plot events in a narrative
• Analyze how an author's language choices evoke a sense of time and place
• Identify and use gerund and gerund phrases correctly

**Lesson 7: The Destructors Part 2**

Objectives:
• Analyze the elements that contribute to an author's style
• Analyze the interaction between and among characters in a narrative
• Use context clues to determine the meaning of words
• Identify and use infinitives and infinitive phrases correctly

**Lesson 8: The Guitar and Poor Fish**

Objectives:
• Identify and analyze the themes of a literary work
• Use inference to analyze meaning in a narrative
• Identify and explain external and internal conflict in a narrative
• Identify misplaced modifiers, dangling modifiers, and phrase fragments

**Lesson 9: Unit Review**

Objectives:
• Implement review strategies to prepare for a test

**Lesson 10: Europe 1 Unit Test**

Objectives:
• Demonstrate mastery of skills and comprehension of material studied

**Lesson 11: Writing Workshop Expository Essay (two-day lesson)**
Unit 5: Europe II

In this unit, you will continue to read selections that express some of the hopes, disappointments, and fears of the writers and of the citizens of the European states. Selections you will read include a fable, short stories, one short story adapted from a play, and poetry from European writers.

As you read, you will learn literary devices used to create compelling stories or poems such as: allegory, author’s purpose, character development, dialogue, and hyperbole. You will also practice using various clauses and different kinds of sentence structures to enhance your writing. Additionally, you will create a personal narrative about a subject of your choice and have the opportunity to draft a couple of different business communications in the form of a letter of complaint and a letter of application.

Objectives:
- Compose a personal narrative
- Compose various business communications
- Apply different study skills to master a variety of concepts
- Analyze fiction and non-fiction
- Identify clauses and kinds of sentence structures

Lesson 1: The Black Sheep; The Balek Scales

Objectives:
- Analyze point of view in a short story
- Analyze an author’s use of satire in a short story
- Identify and explain the elements of allegory
- Examine the literary elements that contribute to theme
- Use context to determine the meaning of unknown words

Lesson 2: The Last Judgment: Capek

Objectives:
- Analyze the use of dialogue in character development
- Demonstrate comprehension of narrative text
- Identify subordinate clauses correctly

Lesson 3: A Contribution to Statistics; And Yet the Books

Objectives:
- Interpret an author’s purpose and message
- Identify relevant details that contribute to an author’s purpose and message
- Identify adverbial clauses and subordinating conjunctions correctly

Lesson 4: Writing Workshop: Personal Narrative (two-day lesson)

Objectives:
- Write a rough draft of your personal narrative

Lesson 5: The Rhinoceros: Part 1

Objectives:
- Demonstrate comprehension of a narrative text
- Analyze an author’s use of a motif in narrative text
- Identify adjectival clauses and the function of a relative pronoun

Lesson 6: The Rhinoceros: Part 2

Objectives:
- Examine how historical background contributes to a literary work
- Identify examples of Theater of the Absurd
- Identify misplaced modifiers and noun clauses

Lesson 7: Alone; The Nobel Prize; First Frost

© 2011 Connections Education LLC. All rights reserved.
Objectives:
- Identify and analyze imagery that supports a theme
- Identify various kinds of sentence structures
- Demonstrate understanding of the structural elements of poetic texts

Lesson 8: Forbidden Fruit

Objectives:
- Analyze an author’s use of hyperbole in a narrative text
- Identify and examine ideas that support the development of the theme in a narrative text
- Identify clause fragments and run-on sentences

Lesson 9: Europe II Review

Objectives:
- Implement review strategies to prepare for the unit test

Lesson 10: Europe II Unit Test

Objectives:
- Demonstrate mastery of skills and comprehension of material studied

Lesson 11: Writing Workshop Personal Narrative (two-day lesson)

Objectives:
- Edit an essay to produce a final draft
- Publish a final draft

Unit 6: Africa

The African continent includes more than 50 countries and more than 800 languages. The writers you will study in this unit, who come from various regions of Africa, faced the challenge of telling their stories in languages that honor their heritage while reaching a wide audience. Most authors write in French and English, the languages spoken by European colonizers. But one, Kenyan author Ngugi wa Thiong’o, writes primarily in his native language, Gikuyu.

You will read stories that reflect the authors’ analyses of life before and after colonization. They deal with subjects such as the griot storytelling tradition, the clash of European and African cultures, and the pervasive effects of apartheid. Selections you will read include an epic poem, a first-person narrative, and several short stories.

As you read, you will learn about literary devices that writers use to create interesting stories and poems. These devices include personification, plot, tone, characterization, humor, theme, and setting. You will also practice using various verb forms and learn how to strengthen your writing through the use of vivid verbs. Additionally, you will learn elements of poetry such as sound devices, rhythm, meter, and figurative language; you will also explore various forms that poems can take. Finally, you will use the information you learned about poetry to create a poem.

Objectives:
- Compose a poem
- Apply different study skills to master a variety of skills and activities
- Analyze fiction and nonfiction
- Identify and use verb forms correctly

Lesson 1: Sunjata Part 1 (two-day lesson)

Objectives:
- Identify characteristics of an epic poem
- Analyze the elements of a narrative in an epic poem
- Demonstrate understanding of events in an epic poem

Lesson 2: Sunjata Part 2 and Africa

Objectives:
- Demonstrate understanding of plot events in an epic poem
- Analyze the elements of an epic poem
- Identify and analyze examples of personification in a poem

© 2011 Connections Education LLC. All rights reserved.
© Perfection Learning. All rights reserved.
Lesson 3: Black Girl Part 1

Objectives:
- Analyze the effect of setting on narrative elements
- Analyze the effect of an author's manipulation of time in a narrative text
- Identify and use the principal parts of verbs correctly

Lesson 4: Black Girl Part 2

Objectives:
- Demonstrate understanding of the interaction of narrative elements in a literary work
- Identify and use problem verbs correctly

Lesson 5: Three Pieces: Senghor, Soyinka, Achebe

Objectives:
- Analyze diction and the use of figurative language in text
- Draw conclusions using textual support
- Identify and use various verb tenses correctly

Lesson 6: Writing Workshop: Poem (two-day lesson)

Objectives:
- Compose a draft of a poem

Lesson 7: In the Shadow of War

Objectives:
- Identify and analyze the plot of a short story
- Analyze how the plot and characters of a short story reflect an author's perspective
- Identify and use progressive and emphatic verb forms correctly

Lesson 8: Loyalties and A Meeting in the Dark Part 1

Objectives:
- Identify and analyze different types of humor in narrative text
- Use context clues to determine the meaning of unknown words/phrases
- Identify and correct unnecessary shifts in verb tense

Lesson 9: A Meeting in the Dark Part 2

Objectives:
- Identify and analyze how the characters and plot serve to advance the theme of a work of fiction
- Identify active and passive voice correctly

Lesson 10: The Pig

Objectives:
- Analyze diction that contributes to tone in a literary work
- Identify and use verb forms correctly

Lesson 11: No Witchcraft for Sale

Objectives:
- Determine the most important ideas to include in a summary of a narrative text
- Use context to determine understanding of unknown words or phrases

Lesson 12: The Moment Before the Gun Went Off

Objectives:
- Analyze the use of irony in a short story
- Apply knowledge of strong verbs
- Use context to determine the meaning of unknown words and phrases
Lesson 13: The Prisoner Who Wore Glasses

Objectives:
- Analyze character development in a narrative text

Lesson 14: The Literature of Africa Unit Review (two-day lesson)

Objectives:
- Implement review strategies to prepare for a test

Lesson 15: The Literature of Africa Unit Test

Objectives:
- Demonstrate mastery of skills and comprehension of material studied

Lesson 16: Writing Workshop: Poem (two-day lesson)

Objectives:
- Compose a final version of a poem

Unit 7: Semester Review and Exam

In this unit, you will have the opportunity to prepare for and take the final exam on the concepts you learned throughout the semester. Since this is a comprehensive exam, it may be helpful to organize your notes in the order of the course outline before you begin to review. Using the test-taking strategies that you have previously learned can help you be successful with both objective and essay questions.

Lesson 1: English 10 A Semester Review (two-day lesson)

Objectives:
- Review major concepts and strategies from the English 10 A course in preparation for the semester exam

Lesson 2: English 10 A Semester Exam
ENGLISH 10 B
English 10 B

This is the second of two courses that comprise English 10. In this course, the student will continue to explore the timeless themes of world literature, including works from Europe, the Middle East, Asia, and the Pacific Rim. In reading these diverse selections, the student will gain a thorough understanding of fiction genres, including classics, contemporary fiction, poetry, and drama. The student will also read Oscar Wilde’s play *The Importance of Being Earnest*. George Bernard Shaw’s play *Pygmalion* may be read instead of *The Importance of Being Earnest*. In reading these British plays and composing a dramatic scene, the student will understand drama in its historical and literary context.

Writing instruction guides the student through the process of composing a descriptive portrait, a research paper, and a persuasive speech. Throughout the course, the student expands his vocabulary in context. The mastery of both critical vocabulary and grammar skills helps the student become a more thoughtful and effective reader and writer.

**Unit 1: Nonfiction: Persuasion**

In this unit, you will explore persuasive techniques used in nonfiction writing and create your own nonfiction persuasive speech. You’ll work on using persuasive techniques to develop arguments and learn how to speak in a public forum. Your grammar focus will be capitalization, end marks, and commas.

Objectives:
- Use the writing process to prepare and give a persuasive speech
- Use end marks and commas correctly
- Analyze persuasive techniques
- Compare a subject in two mediums
- Analyze word choice and theme in nonfiction works

**Lesson 1: Prewriting: Persuasive Writing**

Objectives:
- Distinguish between fact and opinion
- Analyze the elements of persuasive writing
- Demonstrate knowledge of capitalization

**Lesson 2: Preparation: Choose a Topic and Develop a Thesis**

Objectives:
- Identify the elements of an effective thesis statement
- Demonstrate understanding of counterarguments in persuasive writing
- Demonstrate knowledge of capitalization

**Lesson 3: Preparation: Develop Arguments**

Objectives:
- Identify and differentiate between the persuasive appeals: ethos, pathos, and logos
- Develop arguments in a persuasive speech using persuasive appeals

**Lesson 4: Writing Workshop: Persuasive Speech: Outline (two-day lesson)**

Objectives:
- Compose the draft of a persuasive speech based on reasoned arguments

**Lesson 5: Revising Your Speech (two-day lesson)**

Objectives:
- Revise a persuasive speech by checking for logical fallacies
- Compare and contrast two speeches to determine a speaker's purpose

**Lesson 6: Public Speaking**

Objectives:
- Identify organizational strategies to prepare ideas when presenting a speech
Lesson 7: Presentation

Objectives:
- Demonstrate understanding of the technical aspects of preparing for and presenting a speech
- Analyze diction and persuasive techniques in a variety of informational texts
- Demonstrate knowledge of comma usage in introductory elements

Lesson 8: Critical Listening Skills

Objectives:
- Determine critical listening skills for a variety of purposes and/or situations
- Identify the appropriate skills necessary for participating in a group discussion
- Identify and practice the correct usage of commas that enclose

Lesson 9: Nonfiction: Persuasion Unit Review

Objectives:
- Apply study skills to prepare for a test

Lesson 10: Nonfiction: Persuasion Unit Test

Lesson 11: Writing Workshop: Persuasive Speech Final (two-day lesson)

Objectives:
- Analyze elements of a speech using specified criteria in a rubric
- Evaluate and incorporate feedback to edit a speech
- Prepare an audio recording of a persuasive speech

Unit 2: Middle East and South Asia I

The literature of the Middle East and South Asia—including Algeria, Armenia, Egypt, India, Iraq, Israel, Palestine, Syria, and Turkey—provides rich insight into a culture marked by diverse traditions, religions, and languages, as well as a long history of conflicts. Today the region grapples with both ancient and modern ways of life as people balance preserving tradition with adopting new attitudes and customs influenced by Western culture.

In this unit, you will read literature that investigates the values, perspectives, and everyday experiences of people in the Middle East and South Asia. You will explore traditional and contemporary cultural attitudes about family roles, marriage, gender, and religious devotion, as well as the conflicts that arise as people navigate old and new ways of doing things. As you read and analyze the short stories and poems in this unit, you will consider the cultural contexts of the texts and identify and analyze symbolism, humor, and sensory details. After learning about descriptive writing, you will write a descriptive portrait. Throughout the unit, you will continue to develop and practice strategies for understanding vocabulary. Grammar will focus on using pronouns correctly.

Objectives:
- Apply knowledge of description
- Practice vocabulary-building strategies
- Analyze literary elements
- Use pronouns correctly
- Read literature from the Middle East and South Asia

Lesson 1: Introduction to Indian Literature

Objectives:
- Clarify knowledge about India, its geography, culture and people, and Indian literature

Lesson 2: India: The Ramayana
Objectives:
- Analyze elements of descriptive writing
- Analyze how an author develops a character
- Identify and use the nominative case of personal pronouns

Lesson 3: Algeria: "My Father Writes to My Mother"

Objectives:
- Analyze the influence of setting on narrative elements
- Identify and use the objective case of personal pronouns

Lesson 4: Egypt: "Another Evening at the Club"

Objectives:
- Interpret imagery and symbolism in a literary work
- Identify and use the possessive case correctly
- Correctly apply the word "who" in various situations

Lesson 5: Writing Workshop: Descriptive Portrait (two-day lesson)

Objectives:
- Apply knowledge of descriptive writing

Lesson 6: Egypt: "The Happy Man"

Objectives:
- Analyze how an author uses dark humor to convey thematic ideas
- Identify and correctly use pronouns in elliptical clauses and appositives

Lesson 7: Israeli and Palestinian Literature

Objectives:
- Analyze the use of cultural symbols in a poem
- Interpret the meaning of a poem
- Identify and practice the correct use of pronouns and antecedents

Lesson 8: "The Swimming Contest"

Objectives:
- Use context clues to discover word meanings
- Explain the use of foreshadowing in a literary work
- Identify unclear, missing, or confusing antecedents

Lesson 9: Syria: "The Women’s Baths"

Objectives:
- Use word parts to interpret new vocabulary
- Identify and analyze sensory details in a literary work
- Apply knowledge of pronoun use

Lesson 10: Middle East and South Asia I Unit Review

Objectives:
- Implement review strategies to prepare for a test

Lesson 11: Middle East and South Asia I Unit Test

Lesson 12: Writing Workshop (two-day lesson)

Objectives:
- Edit and publish a descriptive portrait

Unit 3: Middle East and South Asia II

In this unit, you’ll continue your study of the literature of the Middle East and South Asia and continue to make comparisons between cultures while you come to appreciate the similarities among all people. You’ll also receive a quick primer on online communications and Internet safety. Grammar instruction will focus on subject and verb agreement in a number of different cases. Finally, you’ll work on a research proposal to submit to your portfolio.
Objectives:
- Construct a research proposal
- Practice vocabulary-building strategies
- Identify and use subject-verb agreement correctly
- Analyze literary elements
- Read literature from the Middle East and South Asia

Lesson 1: "Wanted: A Town Without a Crazy": Izgu

Objectives:
- Identify and explain the purpose of exaggeration in a literary work
- Identify and practice the correct use of subject and verb agreement

Lesson 2: Literature of Armenia and Iraq (two-day lesson)

Objectives:
- Develop and prepare a research proposal investigating a cultural aspect related to a country of literary study
- Participate effectively in an online discussion by posting and responding to questions related to the research proposal

Lesson 3: "Five Hours to Simla" (two-day lesson)

Objectives:
- Examine techniques used to create mood in a literary work
- Identify and practice the correct use of subject and verb agreement

Lesson 4: "The Cabuliwallah" (two-day lesson)

Objectives:
- Locate, evaluate, and document sources related to a topic of research
- Draft and submit a research proposal, including a topic, questions, and multiple sources

Lesson 5: Narayan and Ondaatje

Objectives:
- Identify details that support the main idea in a literary work
- Analyze and infer meaning within and across texts
- Use context clues to determine the meaning of unknown words or phrases
- Demonstrate understanding of subject and verb agreement

Lesson 6: Online Communications (two-day lesson)

Objectives:
- Identify the rules for safe and appropriate online communications
- Recognize and demonstrate understanding of plagiarism
- Identify and practice the correct use of subject and verb agreement

Lesson 7: Middle East and South Asia II Unit Review

Objectives:
- Prepare for a test

Lesson 8: Middle East and South Asia II Unit Test

Objectives:
- Demonstrate mastery of skills and comprehension of material learned

Lesson 9: Writing Workshop: Research Proposal: Final Draft (two-day lesson)

Objectives:
- Write annotations to each source
- Edit a research proposal for a final draft copy

Unit 4: East Asia and the Pacific Rim
In this unit, you will study literature from East Asia and the Pacific Rim, which includes such countries as Japan, China, Korea, Vietnam, Australia, and New Zealand. As you read, you will learn that the main theme of the literature from this region of the world is the region’s relationship with the West. During this unit, you will compose a literary analysis that explores an author’s purpose in a piece of literature of your choice. Finally, you’ll study the use of italics, quotation marks, hyphens, and semicolons for your grammar review.

Objectives:
- Use the writing process to write a literary analysis
- Support a literary analysis with textual evidence
- Analyze literary elements
- Use quotations, italics, semi-colons, colons, dashes, brackets, and ellipses correctly

Lesson 1: The Three Kingdoms: Guanzhong

Objectives:
- Identify literary works for close analysis
- Review the structure of literary analysis in order to prepare for a book discussion
- Participate effectively in an online collaborative discussion

Lesson 2: From Emperor to Citizen: P’u Yi

Objectives:
- Analyze diction to determine the author’s tone in literary non-fiction
- Draw inferences based on information and ideas provided in the text
- Correctly use italics and quotation marks
- Use context clues to determine the meaning of unknown words

Lesson 3: The Tall Woman and Her Short Husband: Jicai

Objectives:
- Analyze the interaction between characters in a literary work
- Demonstrate understanding of characters and plot events in a narrative
- Use quotation marks correctly

Lesson 4: Saboteur: Jin

Objectives:
- Identify and analyze examples of foreshadowing in literary text
- Demonstrate understanding of plot events in a narrative
- Use quotation marks correctly

Lesson 5: Cranes: Sun-won

Objectives:
- Examine an author’s use of flashbacks and foreshadowing in a literary work
- Demonstrate understanding of plot events in a narrative
- Demonstrate knowledge of other punctuation marks
- Use context clues to determine the meaning of unknown words

Lesson 6: Thoughts of Hanoi: Thi Vinh

Objectives:
- Analyze the importance of setting in a literary work and its contribution to mood
- Evaluate an author’s perspective and tone as communicated through literary text
- Demonstrate correct use of apostrophes

Lesson 7: Writing Workshop: Literary Analysis Rough Draft (two-day lesson)

Objectives:
- Compose an essay of literary analysis

Lesson 8: Tokyo: Hayashi
Unit 5: The Importance of Being Earnest

In this unit, you will read and analyze the *The Importance of Being Earnest*, a play in which the characters hold the pursuit of pleasure above all other goals. As you read, you will relate the play to the Victorian culture in which the playwright, Oscar Wilde, lived, as well as to the comedies of the Restoration era. You will also analyze characterization, symbolism, and irony in the play.

*The Importance of Being Earnest* is the recommended play for English 10. George Bernard Shaw's play *Pygmalion* may be read instead of *The Importance of Being Earnest* with prior teacher approval. Lessons and activities for *Pygmalion* will appear on the lower half of the page. Do not proceed with *Pygmalion* unless you have received approval from your teacher.

In *Pygmalion*, George Bernard Shaw scrutinizes various layers of English society in a romantic comedy. The play's title alludes to a transformation that the Shaw's characters undergo. Eliza Doolittle, a poor but scrappy flower girl, and Henry Higgins, a professor, wrestle with issues of identity, independence, class, character, and self-respect to create a play that remains relevant almost a century later.

Objectives:
- Read and analyze the play
- Analyze the influence of Victorian culture on the play
- Apply the characteristics of Restoration comedy to the play
- Analyze symbolism and irony in the play

Lesson 1: The Playwright Oscar Wilde

Objectives:
- Identify strategies for reading dramatic dialogue

Lesson 2: Act I, First Half

Objectives:
- Synthesize research on Victorian England
- Define vocabulary words
- Apply the characteristics of Victorian culture to the play

Lesson 3: Act I, Second Half

Objectives:
- Synthesize research on Victorian art and literature
- Define vocabulary words
- Apply the characteristics of Restoration comedy to the play

Lesson 4: Act II, First Half

Objectives:
- Analyze dialogue between characters in the play
- Define vocabulary words
- Describe the conflict in the play

Lesson 5: Act II, Second Half

Objectives:
- Analyze symbolism and irony in the play
- Define vocabulary words

Lesson 6: Act III

Objectives:
- Evaluate Jack’s use of the word absurd to assess what is happening around him
- Define vocabulary words
- Analyze the last line and title of the play

Lesson 7: The Importance of Being Earnest Unit Review

Objectives:
- Prepare for unit test

Lesson 8: The Importance of Being Earnest Unit Test

Unit 6: Semester Exam

In this unit, you will prepare for and take the semester exam. Since this is a comprehensive exam, it will cover the following areas: Middle East and South Asia, East Asia and the Pacific Rim, and the writing processes for research and persuasive writing. Applying the test-taking strategies that you have previously learned can help you be successful with the multiple choice, matching, short answer, and essay questions on the semester exam.

Objectives:
- Prepare for the semester exam
- Assess understanding of literature, grammar, and writing concepts explored in Semester B

Lesson 1: English 10B Semester Review (two-day lesson)

Objectives:
- Prepare for semester exam
- Assess understanding of literature, grammar, and writing concepts explored in Semester B

Lesson 2: English 10B Semester Exam

Unit 7: The Research Paper

In Unit 3, you prepared a research proposal that focused on some cultural aspect of one of the countries (Turkey, Armenia, Iraq, India, or Sri Lanka) that was the focus of that unit.
You limited your topic and researched and evaluated sources. In Unit 4, you will learn the process of creating a research paper based on that proposal. You will cover the steps from prewriting to editing as you work to create a final draft. In addition, you will learn about properly using adverbs and adjectives and begin a review of common usage issues.

Objectives:
- Write a research paper
- Find and research reliable sources to write a research paper
- Follow a style guide to publish a paper
- Use adjectives and adverbs correctly
- Apply rules for correct usage

Lesson 1: Prewriting: Researching and Taking Notes (two-day lesson)

Objectives:
- Identify and evaluate online and print sources to support research
- Summarize research in note form

Lesson 2: Prewriting: Synthesizing Information and Thesis

Objectives:
- Synthesize information for a research paper
- Construct a thesis for a research paper
- Use adjectives and adverbs correctly

Lesson 3: Prewriting: Organizing and Outlining (two-day lesson)

Objectives:
- Organize information for a research paper
- Compose an outline for a research paper
- Use adjectives and adverbs correctly

Lesson 4: Drafting: Refining the Thesis and Introduction (two-day lesson)

Objectives:
- Compose an introduction for a research paper
- Analyze informational text to identify areas for development and refinement of claims and ideas
- Refine the thesis of a research paper
- Use adjectives and adverbs correctly

Lesson 5: Drafting: Body & Conclusion (two-day lesson)

Objectives:
- Compose a draft of the body and conclusion of a research paper

Lesson 6: Revising Strategies: Focus

Objectives:
- Identify the trouble spots within the rough draft of a research paper in order to revise it for focus
- Assess knowledge of usage
- Participate effectively in an online discussion to provide and receive feedback about the rough draft of a research paper

Lesson 7: Revising Strategies: Organization, Support, Voice

Objectives:
- Revise a research paper
- Determine the appropriate transitions to improve writing
- Demonstrate knowledge of usage

Lesson 8: Revising: Following a Style Guide

Objectives:
- Identify and explain the purpose of different style guides
- Use the correct format to cite sources accurately
- Demonstrate knowledge of usage
Lesson 9: Revising: Works Cited Page (two-day lesson)

Objectives:
• Cite research sources using MLA format
• Demonstrate understanding of editorial choices that conform to MLA format

Lesson 10: Editing: Incorporating Feedback

Objectives:
• Incorporate feedback into editing
• Use capitalization rules correctly

Lesson 11: Editing: Polishing and Publishing (two-day lesson)

Objectives:
• Edit writing for grammar, conventions, and final publication
ENGLISH 11 A
English 11 A

This is the first of two courses that comprise English 11. In this course, the student will focus on the literary movements that comprise American literature, and trace the chronology of national literature from the early American and colonial period through the periods of Realism and Regionalism. In reading these diverse selections, the student will gain a thorough understanding of fiction, including short stories, poetry and drama; as well as nonfiction genres, including the oral tradition, seminal historical documents, and speeches. The student will also read Jerome Lawrence and Robert E. Lee’s play The Night Thoreau Spent in Jail. Arthur Miller’s play The Crucible may be read instead of The Night Thoreau Spent in Jail. In reading these American plays and composing a dramatic scene, the student will understand drama in its historical and literary context.

Writing instruction guides the student through the process of composing a descriptive essay and modeling the style of an American author. Throughout the course, the student expands his vocabulary in context. The mastery of both critical vocabulary and grammar skills helps the student become a more thoughtful and effective reader and writer.

Unit 1: Early American and Colonial Literature

In Unit 1, Early American and Colonial Literature, you will examine the concept of a national literature and read different genres that comprise the national literary heritage of the United States. You will read and explore the ideas and writing of the New World’s earliest inhabitants, visitors, and settlers. You will also analyze strategies for persuasive writing as well as the denotative and connotative meanings of vocabulary words in context. Additionally, this unit will give you practice in composing timed writings.

Objectives:
- Read, and analyze, and interpret primary sources from the early American and Colonial period
- Determine the denotative and connotative meanings of vocabulary words in context
- Analyze techniques and strategies for persuasive writing

Lesson 1: American Literature: Our Nation’s Voice (two-day lesson)

Objectives:
- Describe how a national literature develops
- Assess three methods of note taking
- Define vocabulary words using context clues
- Describe the literature of early and colonial America

Lesson 2: Earliest Voices: William Bradford (two-day lesson)

Objectives:
- Describe the concerns and ideas of early American people and writers
- Compare early American English to contemporary American English
- Read, analyze, and interpret excerpts from Of Plymouth Plantation
- Identify evidence of the Puritan legacy in American literature

Lesson 3: Contemporary Voice: Fred Veilleux (two-day lesson)

Objectives:
- Describe persuasive techniques
- Define vocabulary words in order to understand a persuasive argument
- Analyze persuasive arguments in an essay

Lesson 4: Earliest Voices: Anne Bradstreet, Phillis Wheatley (two-day lesson)

Objectives:
- Define poetic elements
- Analyze the poetry of early American women poets
- Determine the best definitions of words with multiple meanings in context

Lesson 5: Earliest Voice: Jonathan Edwards (two-day lesson)

Objectives:
Lesson 6: Earliest Voices: Olaudah Equiano (two-day lesson)

Objectives:
• Differentiate between denotation and connotation
• Define the connotative meaning of vocabulary words
• Read, analyze, and interpret a slave narrative
• Read, analyze, and interpret an autobiographical account of the slave trade

Lesson 7: Earliest Voices: Thomas Paine (two-day lesson)

Objectives:
• Describe how Thomas Paine helped to fuel the American Revolution
• Read and analyze excerpts from Thomas Paine’s Common Sense
• Define the denotative and connotative meanings of vocabulary words
• Read, analyze, and interpret excerpts from Thomas Paine’s Common Sense
• Analyze the audience of a persuasive essay

Lesson 8: Earliest Voices: The Founding Fathers (two-day lesson)

Objectives:
• Analyze the Declaration of Independence
• Compare denotative and connotative meanings of words
• Assess knowledge of early American literature

Lesson 9: Author’s Purpose (two-day lesson)

Objectives:
• Define purposes for writing
• Review authors and compositions from the early American and Colonial period to identify purpose

Lesson 10: Timed Writing Assessments (two-day lesson)

Objectives:
• Identify and assess strategies for timed writing
• Outline a model essay test answer
• Compose a timed writing response

Lesson 11: Early American and Colonial Literature Review (two-day lesson)

Objectives:
• Review unit essential questions
• Practice test-taking strategies
• Create a multimedia presentation

Lesson 12: Early American and Colonial Literature Test

Unit 2: American Romanticism

In Unit 2, American Romanticism (1820s–1850s), you will read and analyze the short stories of Nathaniel Hawthorne and Edgar Allan Poe as well as the poetry of Walt Whitman. You will also study the subgenre of Transcendentalism. Henry David Thoreau’s “Walden” will model the descriptive writing you will compose for your first portfolio assessment.

Objectives:
• Read, analyze, and interpret American Romantic short stories and poetry
• Assess the denotative and connotative meanings of vocabulary words in context
• Compose a descriptive essay
• Review types of nouns in order to identify and evaluate appositive phrases

Lesson 1: American Romanticism (two-day lesson)
Objectives:
• Define genre and subgenre
• Identify the characteristics of American Romanticism
• Name American Romantic authors
• Correctly capitalize words in sentences

Lesson 2: Nathaniel Hawthorne (two-day lesson)
Objectives:
• Read and analyze an American Romantic short story
• Evaluate the role setting plays in literature
• Paraphrase a variety of texts
• Define and determine the connotations of vocabulary words

Lesson 3: Contemporary Literary Criticism (two-day lesson)
Objectives:
• Read and analyze literary criticism
• Interpret symbolism and imagery in "Young Goodman Brown"
• Review eight parts of speech and types of nouns

Lesson 4: Edgar Allan Poe (two-day lesson)
Objectives:
• Read and analyze Poe's letters and short stories
• Describe how setting contributes to Poe's intended effect
• Evaluate Poe's writing using his own criteria
• Define and determine the connotations of vocabulary words

Lesson 5: Ralph Waldo Emerson (two-day lesson)

Lesson 6: Henry David Thoreau (two-day lesson)
Objectives:
• Examine Transcendentalist views of God and nature
• Analyze Henry David Thoreau's descriptive writing style
• Identify pronouns and their antecedents
• Select a topic and audience for a descriptive essay
• Assess knowledge of American Romanticism

Lesson 7: Descriptive Essay: Rough Draft (two-day lesson)
Objectives:
• Practice strategies for developing a description
• Compose and submit a descriptive essay rough draft
• Match appositives to the nouns they modify
• Evaluate denotative and connotative meanings in descriptive writing

Lesson 8: Walt Whitman (two-day lesson)
Objectives:
• Analyze images and poetry of Walt Whitman
• Compare and contrast Romantic and Early American and Colonial poetry
• Analyze literary criticism of Walt Whitman’s poetry

Lesson 9: American Romanticism Review (two-day lesson)
Objectives:
• Prepare for the unit test
• Apply strategies for answering reading comprehension questions

Lesson 10: American Romanticism Test

Lesson 11: Descriptive Essay: Final Draft (two-day lesson)
Objectives:
• Review comments on descriptive writing rough draft
• Revise, edit, and submit descriptive essay
• Identify commonly confused homophones
Unit 3: The Night Thoreau Spent in Jail

In Unit 3, you will read and analyze an American drama. The Night Thoreau Spent in Jail is a play in two acts written in 1970 by Jerome Lawrence and Robert E. Lee. The play is comprised of shifting scenes from the real and imagined life of American writer and philosopher Henry David Thoreau (1817–1862). Arrested on July 23, 1846 for failure to pay his taxes, Henry David Thoreau spent one night in jail. The play dramatizes that night, intercutting scenes in which Henry interacts with his cellmate with flashbacks to events from the years leading up to the date of his arrest.

For the second portfolio assessment, you will compose a dramatic scene. The Night Thoreau Spent in Jail is the recommended play for English 11. Arthur Miller’s play The Crucible may be read instead of The Night Thoreau Spent in Jail with prior teacher approval. Lessons and activities for The Crucible will appear on the lower half of the lesson pages. Do not proceed with The Crucible unless you have received prior approval from your teacher.

Objectives:
• Read, analyze, and interpret an American drama
• Define vocabulary words in context
• Visualize stage directions
• Compose a dramatic scene

Lesson 1: Obedience Versus Nonconformity (two-day lesson)
Objectives:
• Explain Henry David Thoreau’s willingness to be jailed
• Define vocabulary words
• Assess Henry’s approach to and philosophy of teaching
• Analyze the setting and structure of the play

Lesson 2: Transcendentalism: Progress or Threat? (two-day lesson)
Objectives:
• Describe how the play illustrates the philosophy of transcendentalism
• Identify the central conflict of the play
• Define vocabulary words
• Evaluate the use of stage directions in the play

Lesson 3: Opposing the War (two-day lesson)
Objectives:
• Evaluate arguments for and against the Mexican American War to determine whether it was justified
• Define vocabulary words
• Generate ideas for a dramatic scene

Lesson 4: Crafting a Scene (two-day lesson)
Objectives:
• Describe elements of drama, including plot, characters, communication, and dramatic conventions
• Compose the rough draft of a scene

Lesson 5: A Solitary Man (two-day lesson)
Objectives:
• Analyze the use of figures of speech in the play
• Define vocabulary words
• Evaluate how Henry’s commitment to transcendentalism affects his human connections

Lesson 6: Doing the Impossible (two-day lesson)
Objectives:
• Compare and contrast protest in the play with protest during the Vietnam War
• Define vocabulary words
Lesson 7: One of the Crowd (two-day lesson)

Objectives:
- Analyze Henry’s non-conformist attitude in relation to theme
- Define vocabulary words
- Describe the significance of the “unseen Congressman”
- Analyze the play’s arguments about transcendentalism

Lesson 8: The Play’s the Thing (two-day lesson)

Objectives:
- Evaluate the use of dialogue in the dramatic scene
- Propose staging for the play that serves its themes
- Incorporate meaningful stage directions into the dramatic scene
- Revise the dramatic scene

Unit 4: Realism and Regionalism

In Unit 4, Realism and Regionalism (1860–1914), you will read, analyze, and interpret the short stories of American Realist and Regionalist authors, as well as the poetry of Emily Dickinson. As you examine this literature, you will consider dialect, flashback, characterization, figurative language, and other devices used by Realist authors. During this unit, you will gain practice correctly using apostrophes and possessive pronouns. For your third portfolio assessment, you will select an American short story from Unit 2 or 4 and compose an alternate ending in the style of the original author.

Objectives:
- Read, analyze, and interpret American Realist and Regionalist short stories and poetry
- Correctly use apostrophes
- Compose an alternate ending in the style of the original author

Lesson 1: Realism (two-day lesson)

Objectives:
- Identify characteristics of realism
- Describe the historical context of Realism
- Correctly use apostrophes to show possession

Lesson 2: Emily Dickinson (two-day lesson)

Objectives:
- Describe the life of Emily Dickinson
- Read, analyze, and interpret Emily Dickinson’s poetry
- Identify proper use of the apostrophe
- Correctly use possessive pronouns

Lesson 3: Sarah Orne Jewett (two-day lesson)

Objectives:
- Define dialect and types of language associated with the use of dialect
- Describe the life and influences of Sarah Orne Jewett
- Read, analyze, and interpret the short story "A White Heron"
- Define vocabulary words to enhance understanding of a short story
- Correctly use apostrophes to convey ownership

Lesson 4: Mark Twain (two-day lesson)

Objectives:
- Define Regionalism
- Read, analyze, and interpret the short story, "The Celebrated Jumping Frog of Calaveras County"
- Define vocabulary words to enhance understanding of a short story
- Correctly use apostrophes to create contractions

Lesson 5: Ambrose Bierce (two-day lesson)

Objectives:
Lesson 6: Kate Chopin (two-day lesson)

Objectives:
- Identify the important elements of a short story
- Generate ideas for an alternate ending to a short story
- Identify characteristics of Kate Chopin’s writing
- Define vocabulary words to enhance understanding of a short story
- Read, analyze, and interpret the short story, “A Pair of Silk Stockings”

Lesson 7: Alternate Ending: Rough Draft (two-day lesson)

Objectives:
- Identify stylistic devices of a Romantic or Realist author
- Compose an alternate ending to a Romantic or Realist story

Lesson 8: Charles Waddell Chesnutt (two-day lesson)

Objectives:
- Read, analyze, and interpret the short story, “The Wife of His Youth”
- Assess the impact complex characters have on a story
- Define vocabulary words to enhance understanding of a short story

Lesson 9: Contemporary Connection: Cedric Yamanaka (two-day lesson)

Objectives:
- Read, analyze, and interpret the short story, “The Lemon Tree Billiards House”
- Define hyperbole, simile, and metaphor

Lesson 10: Realism and Regionalism Review (two-day lesson)

Objectives:
- Prepare for unit test
- Apply strategies for answering standard written English test items

Lesson 11: Realism and Regionalism Unit Test

Lesson 12: Alternate Ending: Final Draft (two-day lesson)

Objectives:
- Compose an alternate ending to a Romantic or Realist story
- Assess the alternate ending using teacher feedback and an evaluation checklist

Unit 5: Semester Review and Exam

In this unit, you will prepare for and take the semester exam. Since this is a comprehensive exam, it will cover the following units: Early American and Colonial Literature, American Romanticism, The Night Thoreau Spent in Jail, Realism and Regionalism. Applying the test-taking strategies that you have previously learned can help you be successful with the multiple choice, matching, short answer, and essay questions on the semester exam.

Objectives:
- Prepare for the semester exam
- Assess your understanding of literature, vocabulary, grammar, and writing in Semester A

Lesson 1: Semester Review (two-day lesson)

Objectives:
- Prepare for semester exam
- Assess understanding of literature, vocabulary, grammar, and writing in Semester A
Lesson 2: Semester Exam
ENGLISH 11 B
English 11 B

This is the second of two courses that comprise English 11. In this course, the student will focus on the literary movements that comprise American literature, and trace the chronology of national literature from the Modernist through the Contemporary period. In reading and responding to these diverse literature selections, the student will gain a thorough understanding of a myriad of fiction and nonfiction genres, including short stories, essays, poetry, drama, memoirs, and biographies. The student will also read F. Scott Fitzgerald’s novel *The Great Gatsby*. Ernest Hemingway’s novella *The Old Man and the Sea* may be read instead of *The Great Gatsby*. In reading these American literature selections, the student will understand longer works of literature in their historical and literary context.

Writing instruction guides the student through the process of composing a literary analysis and a research paper. Throughout the course, the student expands his vocabulary in context. The mastery of both critical vocabulary and grammar skills helps the student become a more thoughtful and effective reader and writer.

Unit 1: Voices of Modernism (1920s–1940s)

In this unit, you will study the modernism movement, which occurred from the 1920s to the 1940s. You will read and analyze the short stories of authors such as John Steinbeck and F. Scott Fitzgerald and the poetry of authors such as Robert Frost. You will also practice identifying and using different types of verb forms and clauses, as well as independent and subordinate clauses. For your portfolio assessment, you will apply your research and writing capabilities to compose a literary analysis showcasing your analytical and synthesizing skills.

Objectives:
- Identify influences of and elements in modernist writing
- Read, analyze, and interpret modernist short stories and poetry
- Compose a literary analysis based on a modernist literary work
- Identify types of verb forms and phrases as well as independent and subordinate clauses

Lesson 1: Introduction to Modernism (two-day lesson)

Objectives:
- Define modernism
- Describe the events and circumstances that influenced modernism
- Describe the unique writing styles of modernist writers
- Identify participles and participial phrases and the words they modify

Lesson 2: Hemingway (two-day lesson)

Objectives:
- Identify the mood and tone of Hemingway’s writing
- Describe the major influences on Hemingway’s writing
- Read, analyze, and interpret the short story “In Another Country”
- Analyze setting and imagery in “In Another Country”
- Correctly punctuate participial phrases

Lesson 3: Steinbeck

Objectives:
- Define symbolism
- Describe how John Steinbeck was influenced by the California town of Pacific Grove
- Define vocabulary words to enhance understanding of John Steinbeck’s writing
- Read, analyze, and interpret the short story, “The Chrysanthemums”
- Correctly identify gerunds and gerund phrases

Lesson 4: Harlem Renaissance

Objectives:
- Practice using effective strategies for reading poetry
- Describe the rise of the Harlem Renaissance
• Read, analyze, and interpret poems of the Harlem Renaissance
• Correctly identify infinitives and infinitive phrases

**Lesson 5: Ellison**

Objectives:
- Define diction and pathos
- Describe the cultural contributions of African American literary and visual artists
- Read, analyze, and interpret the short story, “The Black Ball”
- Compare and contrast pathos, ethos, and logos
- Revise sentences to correct misplaced and dangling modifiers

**Lesson 6: Hughes**

Objectives:
- Compare and contrast internal and external motivation
- Analyze the distinctive voices in the poetry of Langston Hughes
- Analyze character motivation in “Why, You Reckon?”

**Lesson 7: Frost**

Objectives:
- Identify characteristics of Robert Frost’s poetry
- Define aphorism and metaphor to better understand Frost’s poems
- Read, analyze, and interpret the poem, “Mending Wall”
- Differentiate between independent and subordinate clauses

**Lesson 8: Writing Workshop: Literary Analysis Rough Draft (two-day lesson)**

Objectives:
- Identify prewriting strategies and techniques for literary analysis
- Define vocabulary words associated with literary analysis
- Compose an outline based on a working thesis
- Compose the first and second drafts of a literary analysis
- Identify adverbial clauses and the words they modify

**Lesson 9: Fitzgerald (two-day lesson)**

Objectives:
- Define allegory and in medias res
- Create and analyze a time line of F. Scott Fitzgerald’s life
- Define vocabulary words to enhance understanding of the short story, “Babylon Revisited”
- Read, analyze, and interpret the short story, “Babylon Revisited”
- Complete elliptical clauses to understand their meaning

**Lesson 10: Porter**

Objectives:
- Compare and contrast internal and external conflict
- Define different types of literary characters
- Read, analyze, and interpret the short story, “He”
- Correctly punctuate adverbial clauses

**Lesson 11: Voices of Modernism (1920s–1940s) Unit Review**

Objectives:
- Develop strategies for deriving the meanings of unfamiliar words
- Prepare for the unit test

**Lesson 12: Voices of Modernism (1920s–1940s) Unit Test**

**Lesson 13: Writing Workshop: Literary Analysis Final Draft (two-day lesson)**

Objectives:
- Revise and proofread to develop the final draft of the literary analysis
Unit 2: The Research Paper

In Unit 5, you will have the opportunity to become an authority on a subject by creating your own research report. Working through the writing process, you will select a topic, evaluate sources and conduct research, cite sources properly, draft a report, and revise and edit the report before publishing it and submitting it for your portfolio. You will also read and analyze several nonfiction essays by writers of diverse backgrounds. In addition, you will continue to learn about verb forms and tenses.

Objectives:
- Compose a research report
- Read, analyze, and interpret nonfiction essays
- Review verb tenses and forms

Lesson 1: Introduction to Research Writing

Objectives:
- Describe how to begin a research report
- Read and analyze a model research report
- Edit sentences to correct errors associated with standard usage

Lesson 2: Choosing a Subject

Objectives:
- Choose a subject for the research report
- Develop research questions
- Properly cite sources in MLA format

Lesson 3: Introduction to Research

Objectives:
- Gather information and evaluate sources for the research report

Lesson 4: Gathering Information (two-day lesson)

Objectives:
- Compare and contrast print and Internet research sources
- Describe how to successfully use the Internet for research

Lesson 5: Using Quotations (two-day lesson)

Objectives:
- Organize notes effectively
- Avoid plagiarism by creating source cards

Lesson 6: Synthesizing and Organizing (two-day lesson)

Objectives:
- Synthesize information from different sources
- Compose a working thesis for the research report

Lesson 7: Documenting

Objectives:
- Document all sources used in research report
- Create a works cited page

Lesson 8: Outlining (two-day lesson)

Objectives:
- Organize supporting details
- Develop an outline

Lesson 9: Drafting (two-day lesson)

Objectives:
- Identify the characteristics of a successful introduction
- Understand and implement strategies for achieving coherence
- Compose a first draft of a research report
Lesson 10: Nonfiction Writing I

Objectives:
• Understand nonfiction text structures
• Correctly identify progressive and emphatic verb forms
• Read, analyze, and interpret the essays, "Familiar Strangers" and "Melting Pot"

Lesson 11: Nonfiction Writing II

Objectives:
• Read, analyze, and interpret a selection from “Life on the Color Lines”
• Analyze problems with verb tenses according to the meanings of sentences

Lesson 12: Evaluating Research

Objectives:
• Develop strategies for addressing “trouble spots” in the research report
• Evaluate the research report using a checklist

Lesson 13: Revising, Editing, and Publishing (two-day lesson)

Objectives:
• Revise the a research report using an evaluation checklist for revising
• Edit a report for grammar, usage, mechanics, and spelling
• Publish the final draft of a research report

Unit 3: The Great Gatsby

In this unit, you will examine the narrative structure of The Great Gatsby, a novel that depicts life among the rich during the Roaring Twenties in New York. As you read, you will analyze point of view as well as how such literary devices as symbols and allusions enhance the meaning of the novel. For your portfolio project, you will write a self-improvement plan for the narrator of the novel. The Great Gatsby is the recommended novel for English 11. Ernest Hemingway’s novella The Old Man and the Sea may be read instead of The Great Gatsby with prior teacher approval. Lessons and activities for The Old Man and the Sea will appear on the lower half of the page. Do not proceed with The Old Man and the Sea unless you have received approval from your teacher.

Objectives:
• Read, analyze, and interpret a novel by an American author
• Define vocabulary words in context
• Compose a self-improvement plan

Lesson 1: The Great Gatsby: The Jazz Age

Objectives:
• Describe the attitudes, fashion, and lifestyle of the 1920s
• Compare and contrast youth culture in the 1920s with that in the present
• Define vocabulary words in order to further understanding of the novel
• Define direct and indirect characterization
• Describe the central characters of The Great Gatsby

Lesson 2: The Great Gatsby: F. Scott Fitzgerald

Objectives:
• Describe the life of F. Scott Fitzgerald and the inspiration behind The Great Gatsby
• Define vocabulary words in order to further understanding of the novel
• Connect the novel with F. Scott Fitzgerald’s life

Lesson 3: The Great Gatsby: Tone and Point of View

Objectives:
• Define tone
• Compare and contrast different types of point of view
• Analyze point of view in The Great Gatsby
Lesson 4: The Great Gatsby: Social Groups and Class

Objectives:
- Analyze social groups and class as they apply to The Great Gatsby
- Define vocabulary words in order to further understanding of the novel

Lesson 5: The Great Gatsby: Significance of Time

Objectives:
- Analyze the significance of time in The Great Gatsby
- Define vocabulary words in order to further understanding of the novel
- Predict the fate of Gatsby and Daisy

Lesson 6: The Great Gatsby: The Dilemmas of Nick Carraway (two-day lesson)

Objectives:
- Analyze guidance for good living from Benjamin Franklin and Henry David Thoreau
- Assess Nick Carraway’s dilemmas
- Describe the requirements of the self-improvement plan portfolio assignment
- Compose the rough draft of a self-improvement plan for Nick Carraway

Lesson 7: The Great Gatsby: The American Dream

Objectives:
- Apply the concepts of materialism and the American dream to The Great Gatsby
- Define vocabulary words in order to further understanding of the novel
- Analyze the degree to which the characters in The Great Gatsby are able to achieve the American dream

Lesson 8: The Great Gatsby: Symbols and Allusions

Objectives:
- Define symbol and allusion
- Analyze the use of allusions in The Great Gatsby
- Define vocabulary words in order to further understanding of the novel
- Review for the quiz

Lesson 9: The Great Gatsby: A Timeless Tragedy

Objectives:
- Describe why The Great Gatsby has stood the test of time
- Use vocabulary words to write a personal reaction to the novel
- Evaluate how Nick changes over the course of the novel
- Demonstrate knowledge of the novel on a quiz

Lesson 10: The Great Gatsby: Loss of Innocence (two-day lesson)

Objectives:
- Describe Nick’s loss of innocence and what he has learned
- Practice linking modifiers for clarity
- Compose the final draft of a self-improvement plan for Nick Carraway

Unit 4: Post War Voices Emerge (1950s–1960s)

In Unit 2, you will enter the tumultuous times of post-World War II, during which time many people fought for change and rights were being demanded. This time in history saw the emergence of literature that voiced people’s discontent with the mundane life of traditionalism and a desire for a break in conventional living. In this unit, you will read and analyze the short stories of Kurt Vonnegut and John Updike as well as Martin Luther King Jr.’s “I Have a Dream” speech and poetry by writers of the Beat Generation. You will also identify elements of adjectival clauses. Your portfolio assessment for this unit will be a comparison-and-contrast essay in which you analyze the work of two authors.
Objectives:
- Read, analyze, and interpret postmodern poetry and prose
- Compose a comparison and contrast essay
- Review the elements of adjectival clauses

Lesson 1: Genres and Literary Movements (two-day lesson)

Objectives:
- Review basic genres of literature
- Define the prefixes sub- and ob- in order to understand the terms subjective and objective
- Identify characteristics of postmodern literature

Lesson 2: Vonnegut (two-day lesson)

Objectives:
- Define satire
- Identify adjectival clauses and the words they modify
- Read, analyze, and interpret the short story, "Harrison Bergeron"

Lesson 3: Updike (two-day lesson)

Objectives:
- Define conflict
- Define point of view
- Read, analyze, and interpret the short story, "A&P"
- Identify relative pronouns in adjectival clauses

Lesson 4: Compare and Contrast (two-day lesson)

Objectives:
- Describe the requirements for the compare-and-contrast essay portfolio assignment
- Understand how to develop, organize, and write a compare-and-contrast text
- Read, analyze, and interpret the selection, "A Double Impulse"
- Correctly punctuate adjectival clauses

Lesson 5: Speeches (two-day lesson)

Objectives:
- Identify elements of persuasion
- Read, analyze, and interpret the speech, "I Have a Dream"
- Identify and correct misplaced modifiers

Lesson 6: The Rough Draft (four-day lesson)

Objectives:
- Use quotations correctly and effectively
- Document quotations correctly
- Compose a rough draft of the compare-and-contrast essay

Lesson 7: Beat Generation

Objectives:
- Identify characteristics of the poetry of the Beat Generations
- Read, analyze, and interpret poetry of the Beat Generation
- Compare and contrast the poetry of the Romantics with that of the Beat Generation

Lesson 8: Unit Review

Objectives:
- Identify elements of a successful and effective group discussion
- Prepare for the unit test

Lesson 9: Postwar and Postmodern Unit Exam

Lesson 10: The Final Draft (two-day lesson)
Objectives:
- Incorporate unique voice into a compare-and-contrast essay
- Revise and finalize the compare-and-contrast essay

Unit 5: Contemporary Postmodernism
In this unit, you will study a variety of voices from contemporary postmodernism movement. The fight against racial and ethnic injustices took center stage during this literary movement that took place from the 1960s to the 1980s. You will read poetry and prose from authors of several different backgrounds whose writings contributed to the mosaic of the American culture. In this unit, you will also practice identifying the principal parts of verbs and using the six verb tenses as well as different voices and moods of verbs. For your portfolio assignment, you will compose a memoir.

Objectives:
- Read, analyze, and interpret contemporary postmodern poetry, nonfiction writing, and memoirs
- Compose a memoir using contemporary postmodern writing techniques
- Use verb tense, mood, and voice correctly to enhance writing

Lesson 1: Contemporary Literature
Objectives:
- Identify the characteristics of the movement called contemporary postmodernism
- Identify the principal parts of irregular verbs
- Describe the categories of poetry associated with contemporary postmodernism

Lesson 2: Charming Billy (two-day lesson)
Objectives:
- Describe ways in which the Vietnam War affected society
- Identify the six verb tenses
- Define vocabulary words to increase understanding of a short story
- Read, analyze, and interpret the short story, "Where Have You Gone, Charming Billy?"

Lesson 3: Mortals
Objectives:
- Read, analyze, and interpret the short story, "Mortals"
- Define vocabulary words to increase understanding of a short story
- Correctly express time using verb tenses

Lesson 4: Multicultural Meter: Many New Voices in the Mix
Objectives:
- Read, analyze, and interpret several examples of poetry by American contemporary poets
- Define the poetic elements of meter, rhythm, and rhyme
- Distinguish between active and passive voice

Lesson 5: Personal Narrative: Rough Draft (two-day lesson)
Objectives:
- Analyze a model personal narrative
- Compose the first draft of a memoir

Lesson 6: Memoirs (two-day lesson)
Objectives:
- Read, analyze, and interpret the memoir, "About Russell"
- Identify characteristics of reflective writing
- Correctly use the indicative, imperative, and subjunctive moods of verbs
- Define vocabulary words to better understand a memoir

Lesson 7: American Beauty
Appendix A.2.a Language Arts Course Guides

© 2011 Connections Education LLC. All rights reserved.
© Perfection Learning. All rights reserved.
Objectives:
• Read, analyze, and interpret the memoirs, "I Want to Be Miss America" and "The Struggle to Be an All-American Girl"
• Describe how stereotypes affect social interactions
• Define vocabulary to better understand memoirs
• Use the correct verb forms in sentences

Lesson 8: Contemporary Postmodernism Unit Review
Objectives:
• Recognize errors in grammar, usage, and mechanics
• Prepare for the unit test

Lesson 9: Contemporary Postmodernism Unit Test

Lesson 10: Personal Narrative: Final Draft (two-day lesson)
Objectives:
• Revise a memoir using an evaluation checklist
• Finalize and publish a memoir

Unit 6: Semester Review and Exam
In this unit, you will prepare for and take the semester exam. Since this is a comprehensive exam, it will cover the following units: Modernism, Postmodernism, The Great Gatsby, and Contemporary Postmodernism.

Applying the test-taking strategies that you have previously learned can help you be successful with the multiple choice, matching, true/false, and essay questions on the semester exam. Evaluating how you did on the first semester exam—identifying areas of weakness and strength—can also help you be successful on this semester’s exam.

Objectives:
• Prepare for the semester exam
• Assess understanding of literature, vocabulary, grammar, and writing in Semester B

Lesson 1: English 11 B Semester Review (two-day lesson)
Objectives:
• Prepare for semester exam
• Assess understanding of literature, vocabulary, grammar, and writing in Semester B

Lesson 2: English 11 B Semester Exam
ENGLISH 12 A
English 12 A

This is the first of two courses that comprise English 12. In this course, the student will take an in-depth look at early British literature from 449 to 1798 and will examine literary forms including the epic, poetry, drama, and the essay. The student will also read longer selections of literature that are representative of the historical setting, including Shakespeare's Macbeth. The student will read to gain an understanding and appreciation of the historical context from which the literature arose. Vocabulary development and mastery of critical grammar and communication skills prepare the student for writing creative narratives, and expository and persuasive essays.

Unit 1: The Anglo-Saxon Period: 449–1066

In this unit, you will read the earliest works of English literature. More than a millennium old, many of these works were passed down orally for centuries before they were written down. Anglo-Saxon literature includes lyric poems that express emotion, as well as the earliest epic poem of the English language, Beowulf, which presents the adventures of a hero who is larger than life. Additionally, you will read poems from The Exeter Book, a collection of Anglo-Saxon poetry preserved in manuscript form and dating back to the middle of the tenth century. Finally, you will use the writing process to compose a description based on a scene from Beowulf.

Objectives:
- Read and analyze selections from the Anglo-Saxon period
- Identify and analyze elements of epic poetry and lyric poetry in Anglo-Saxon literature
- Compare and contrast elements of Anglo-Saxon literature
- Write a description following the writing process
- Review the parts of speech

Lesson 1: Unit Introduction

Objectives:
- Preview the structure of the English 12 course
- Read, analyze, and interpret selections from the Anglo-Saxon period
- Compare and contrast elements of Anglo-Saxon literature
- Analyze a descriptive writing model
- Review the eight parts of speech

Lesson 2: Grendel, The Coming of Beowulf, The Battle (two-day lesson)

Objectives:
- Read, analyze, and interpret elements of epic poetry
- Compare and contrast elements of character
- Define suffixes to interpret word meanings
- Apply prewriting strategies for descriptive writing
- Identify intransitive and transitive verbs, verb phrases, and linking verbs

Lesson 3: Grendel’s Mother, The Battle with Grendel’s Mother (two-day lesson)

Objectives:
- Read, analyze, and interpret elements of the elegy, including poetic devices
- Identify alliteration, rhythm, and repetition
- Compare and contrast epic and elegy
- Apply prewriting strategies to develop description
- Identify adjectives and their function in a sentence

Lesson 4: The Battle with the Dragon, The Death of Beowulf (two-day lesson)

Objectives:
- Define and analyze protagonist and antagonist in fictional writing
- Define prefixes to interpret word meanings
- Complete prewriting strategies and identify a scene for description
- Identify adverbs and their function in a sentence
Lesson 5: Writing Workshop: Description (First Draft) (two-day lesson)

Objectives:
- Draft a descriptive essay incorporating sensory details
- Identify prepositions and their function in a sentence

Lesson 6: Lyric Poetry: The Exeter Book (two-day lesson)

Objectives:
- Read, analyze, and interpret elegy, elegiac verse, and descriptive details
- Identify mood and the poet's attitude
- Define denotation and connotation to interpret word meanings
- Identify conjunctions and interjections and their function in a sentence

Lesson 7: Language Focus: Style and Voice 449 - 1066

Objectives:
- Choose vivid words in writing
- Assess understanding of the unit vocabulary and parts of speech

Lesson 8: Unit Review

Objectives:
- Review the historical, social, and cultural context of the Anglo-Saxon time period
- Review characteristics of the epic and elegy
- Review parts of the speech and their functions in a sentence

Lesson 9: Unit Test

Lesson 10: Writing Workshop: Description (Final Draft) (two-day lesson)

Objectives:
- Edit, proofread, and publish a description

Unit 2: The Middle Ages: 1066–1485

In this unit, you will read literary works composed during the medieval era. These include Chaucer's narrative poem The Canterbury Tales, which presents various figures of medieval English society and the tales they tell while traveling on a long journey, and Sir Gawain and the Green Knight, a narrative poem based on the legends of King Arthur and his court. As you read, you will learn to analyze such literary elements as character, the narrator's voice and perspective, and tone. You will also learn about and examine the historical, social, and cultural climate of the Middle Ages by identifying causes and effects. Finally, you will use the writing process to write an allegory, an extended metaphor in the form of a short story.

Objectives:
- Read, analyze, and interpret selections from the medieval period
- Identify and analyze elements of medieval poetry, including narrative poems and epic tales
- Identify causes and effects while analyzing the historical, social, and cultural context of the Middle Ages
- Write an allegory following the writing process
- Review phrases and the sentence base

Lesson 1: The Middle Ages: Unit Introduction

Objectives:
- Read, analyze, and interpret selections from the Medieval period
- Identify elements of medieval poetry, including narrative poems and epic tales
- Identify causes and effects in the historical and cultural context of the Middle Ages
- Review the sentence base

Lesson 2: The Canterbury Tales: "The Prologue" (two-day lesson)
Objectives:
- Analyze elements of characterization
- Identify cause-and-effect relationships
- Compare and contrast varieties of English
- Identify Latin roots
- Identify subjects and predicates

Lesson 3: The Canterbury Tales: "The Prologue" (two-day lesson)

Objectives:
- Identify and analyze tone
- Identify cause-and-effect relationships
- Identify and analyze denotation and connotation
- Identify and correct sentence fragments

Lesson 4: The Canterbury Tales: "The Prologue" (two-day lesson)

Objectives:
- Identify and analyze irony
- Identify cause-and-effect relationships
- Use figurative language to improve style and voice
- Recognize complements

Lesson 5: The Canterbury Tales: "The Pardoner’s Tale" (two-day lesson)

Objectives:
- Identify and understand characteristics of a frame story
- Analyze character
- Use a dictionary

Lesson 6: The Canterbury Tales: "The Wife of Bath’s Tale" (two-day lesson)

Objectives:
- Identify and analyze narrator, voice, and perspective
- Compare and contrast characters
- Interpret word meanings through context clues
- Create an outline for creative writing
- Identify prepositional phrases and their function in a sentence

Lesson 7: Writing Workshop: Allegory (First Draft) (two-day lesson)

Objectives:
- Draft a modern allegory containing literary devices and a moral message
- Identify verbals and verbal phrases

Lesson 8: Medieval Romance: Sir Gawain and the Green Knight (two-day lesson)

Objectives:
- Read, analyze, and interpret romances
- Identify and analyze poetic devices such as alliteration
- Define suffixes to interpret word meanings
- Recognize and correct misplaced and dangling modifiers and sentence fragments

Lesson 9: Writing/Language Focus: Style and Voice

Objectives:
- Revise for sentence variety
- Combine sentences by coordinating and subordinating
- Apply knowledge of phrases to creative writing assessment

Lesson 10: The Middle Ages: 1066–1485: Unit Review

Objectives:
- Review the historical, social, and cultural context of the Middle Ages
Lesson 11: The Middle Ages: 1066–1485: Unit Test

Lesson 12: Writing Workshop: Allegory (Final Draft) (two-day lesson)

Objectives:
- Edit, proofread, and publish an allegory

Unit 3: Macbeth

In this unit, you will read Shakespeare’s tragic tale of the rise and fall of Macbeth, a fierce and loyal Scottish warrior is tempted by the prophecies of several witches and by his own ambitions to become king. Macbeth and his wife alternately collaborate and contend over the proper approach to achieve their ambitions. Macbeth, the tragic hero, discovers too late the dangers of unchecked ambition. As you read, you will analyze and interpret the dramatic structure of Macbeth, define words in context, and compose a persuasive essay.

Macbeth is the recommended play for English 12. Shakespeare's comedy Twelfth Night may be read instead of Macbeth with prior teacher approval. Lessons and activities for Twelfth Night will appear on the lower half of the lesson pages. Do not proceed with Twelfth Night unless you have received approval from your teacher.

Students reading either Macbeth or Twelfth Night will need to obtain a video of the performance. You will be asked to watch scenes from the play throughout this unit.

Objectives:
- Read, analyze, and interpret a Shakespearean tragedy
- Define vocabulary words in context
- Follow the writing process to compose a persuasive essay

Lesson 1: History and Heroes; Witches and Warriors

Objectives:
- Explore how Shakespeare incorporated some historical characters and altered others and why
- Discover James I’s fascination with witches and regicide
- Define tragedy, tragic hero, and tragic flaw

Lesson 2: Act I, Scenes I–II

Objectives:
- Read and analyze the text thoroughly
- Define new vocabulary and use in illustrative sentences
- Examine how setting influences a scene’s mood
- Define paradox and its influence on theme and character
- Examine the differences between direct and indirect characterization

Lesson 3: Act I, Scenes III–V (two-day lesson)

Objectives:
- Read and analyze the text thoughtfully
- Define new vocabulary and use in illustrative sentences
- Make predictions
- Define the three types of irony
- Identify examples of dramatic irony
- Define, distinguish, and identify soliloquies and asides

Lesson 4: Act I, Scenes VI–VII

Objectives:
- Read and analyze the text thoroughly
- Define new vocabulary and use in illustrative sentences
- Examine how analogies are used to persuade
- Re-examine the elements of the tragic hero as it applies to all of Act I
- Define exposition and inciting incident and apply to Act I
Lesson 5: Act II, Scenes I–II
Objectives:
• Read and analyze the text thoroughly
• Define new vocabulary and use in illustrative sentences
• Define and identify imagery
• Define foreshadowing and make connections to clues in Act I

Lesson 6: Act II, Scenes III–IV (two-day lesson)
Objectives:
• Read and analyze the text thoroughly
• Define new vocabulary and use in illustrative sentences
• Define and identify comic relief
• Define a pun and explore its use in the porter’s speech
• Explore the notion of the Great Chain of Being and its application to these two scenes
• Select a topic and develop a rough draft of a persuasive essay on the play

Lesson 7: Act III, Scenes I–III
Objectives:
• Read and analyze the text thoroughly
• Define new vocabulary and use in illustrative sentences
• Make predictions
• Assess the dramatic structure, determining which past events constitute the rising action
• Analyze sleep as an extended metaphor

Lesson 8: Act III, Scenes IV–VI
Objectives:
• Read and analyze the text thoroughly
• Define new vocabulary and use in illustrative sentences
• Make predictions
• Assess the dramatic structure and identify the play’s climax
• Review the device of indirect characterization and apply it to Lady Macbeth in the banquet scene
• Analyze the role of conflict—both internal and external—to drive the play’s action

Lesson 9: Act IV, Scenes I–III
Objectives:
• Read and analyze the text thoroughly
• Define new vocabulary and use in illustrative sentences
• Make predictions about the witches’ prophecies
• Define and identify rhyming couplets and create your own
• Define blank verse, and explore the reasons Shakespeare used it so frequently
• Define and identify alliteration

Lesson 10: Act V, Scenes I–VIII
Objectives:
• Read and analyze the text thoroughly
• Define new vocabulary and use in illustrative sentences
• Examine the remaining dramatic structure and identify the falling action and resolution
• Define and apply connotation to the “tomorrow and tomorrow and tomorrow” soliloquy
• Re-examine dramatic irony in light of the fulfillment of the prophecies

Lesson 11: The Art of Persuasion (two-day lesson)
Objectives:
• Revise and edit the final draft of a persuasive essay
Unit 4: The Renaissance: 1485–1660

In this unit, you will read literary works composed during the English Renaissance. These include a variety of poetic genres, including sonnets and lyric, pastoral, metaphysical, and epic poetry. As you read, you will learn to analyze such poetic elements as speaker, figurative language, and tone. You will also learn about and examine the historical, social, and cultural climate of the Renaissance by making generalizations about that period. Finally, you will use the writing process to write an expository essay on a subject of your choice.

Objectives:
- Read and analyze selections from the Renaissance period
- Identify and analyze elements of sonnets and lyric, pastoral, metaphysical, and epic poetry
- Make generalizations about the historical, social, and cultural context of the Renaissance
- Analyze such poetic elements as speaker, figurative language, and tone
- Review clauses

Lesson 1: The Renaissance: 1485–1660: Unit Introduction

Objectives:
- Read and analyze selections from the Renaissance period
- Identify elements of lyric poetry, pastoral, and sonnet in Renaissance literature
- Read a time line
- Make generalization about the historical, social, and literary context of the Renaissance
- Review clauses

Lesson 2: Sonnets: Wyatt and Spenser (two-day lesson)

Objectives:
- Analyze sonnets
- Identify Petrarchan conceits
- Research etymology
- Recognize independent and subordinate clauses

Lesson 3: Pastoral Poetry: Marlowe and Raleigh

Objectives:
- Analyze elements of lyric poetry and pastorals
- Recognize adverbial clauses

Lesson 4: Sonnets: Shakespeare (two-day lesson)

Objectives:
- Analyze Shakespearean sonnets
- Identify and analyze simile and metaphor
- Recognize adjectival clauses
- Recognize noun clauses

Lesson 5: Writing Workshop: Expository Writing (First Draft) (two-day lesson)

Objectives:
- Draft an expository essay incorporating a strong thesis statement and coherent ideas
- Apply appropriate transitions to writing

Lesson 6: Metaphysical Poetry: Donne (two-day lesson)

Objectives:
Lesson 7: Epigrams and Songs: Jonson (two-day lesson)

Objectives:
• Identify characteristics of an epigram
• Identify and analyze tone
• Make inferences about author
• Identify clause fragments

Lesson 8: John Milton: Paradise Lost (two-day lesson)

Objectives:
• Identify and analyze elements of the epic
• Identify and analyze allusion
• Define archaic language to interpret word meaning
• Identify run-on sentences

Lesson 9: Writing/Language Focus: Style and Voice

Objectives:
• Identify and correct rambling sentences
• Avoid wordiness in writing

Lesson 10: The Renaissance: 1485–1660: Unit Review

Objectives:
• Review the historical, social, and cultural context of the Renaissance
• Review characteristics of poetic forms
• Review figures of speech
• Review clauses

Lesson 11: The Renaissance: 1485–1660: Unit Test

Lesson 12: Writing Workshop: Expository Writing (Final Draft) (two-day lesson)

Objectives:
• Edit, proofread, and publish an expository essay
• Review clauses

Unit 5: The Restoration and the Enlightenment: 1660–1798

In this unit, you will read literary works composed during the Restoration and the Enlightenment periods. These include a variety of fiction, nonfiction, and poetic genres including diaries, mock epics, satires, and elegies. As you read, you will learn to analyze elements such as point of view, irony, and imagery. You will also learn about and examine the historical, social, and cultural climate of the Restoration and the Enlightenment by classifying information, or arranging ideas into fitting categories. Finally, you will use the writing process to write a poem using a specified form.

Objectives:
• Read and analyze selections from the Restoration and the Enlightenment period
• Identify and analyze elements of diary, mock epic, satire, and elegy
• Classify information about the historical, social, and cultural context of the Restoration and the Enlightenment
• Complete a poetry creating writing assessment, following a specific process
• Review verbs

Lesson 1: Lesson 1: Unit Introduction

Objectives:
• Read and analyze selections from the Restoration and the Enlightenment period
• Identify elements of diary, essay, satire, biography, and poetry

© 2011 Connections Education LLC. All rights reserved.
© Perfection Learning. All rights reserved.
Lesson 2: Lesson 2: Diaries: Pepys (two-day lesson)

Objectives:
- Identify characteristics of diary
- Identify and analyze first-person point of view
- Identify the principal parts of verbs

Lesson 3: Lesson 3: Satire in Poetry: Pope

Objectives:
- Identify and analyze element of parody
- Analyze mock epics
- Identify and analyze heroic couplet
- Recognize verb tense

Lesson 4: Lesson 4: The Satirical Essay: Swift (two-day lesson)

Objectives:
- Identify and analyze irony and satire
- Identify and analyze roots
- Identify active and passive voice

Lesson 5: Lesson 5: Elegy: Gray

Objectives:
- Identify and analyze element of the elegy
- Analyze imagery
- Review active and passive verbs
- Review mood of verbs

Lesson 6: Lesson 6: Writing Workshop: Creative Writing (two-day lesson)

Objectives:
- Organize details for writing a poem
- Draft a poem using a specific form
- Use appropriate tone in writing
- Identify active and passive voice

Lesson 7: Lesson 7: Unit Review

Objectives:
- Review the historical, social, and cultural context of the Restoration and the Enlightenment
- Review characteristics of diary, mock epic, satirical essay, and elegy
- Review verbs

Lesson 8: Lesson 8: Unit Test

Lesson 9: Lesson 9: Writing Workshop: Creative Writing (two-day lesson)

Objectives:
- Revise, proofread, and publish a creative writing assignment
- review verbs

Unit 6: Semester Exam

In this unit, you will have the opportunity to prepare for and take the final exam on the concepts you learned throughout the semester. Since this is a comprehensive exam, it may be helpful to organize your notes in the order of the course outline before you begin to review. Using the test-taking strategies that you have previously learned can help you be successful with both objective and essay questions.
Lesson 1: Semester Review (two-day lesson)

Objectives:
- Review major works of British literature from the Anglo-Saxon period through the eighteenth century
- Review effective comprehension strategies for reading these selections
- Review literary elements
- Review elements of grammar, usage, and style

Lesson 2: Semester Exam

© 2011 Connections Education LLC. All rights reserved. © Perfection Learning. All rights reserved.
ENGLISH 12 B
English 12 B

This is the second of two courses that comprise English 12. In this course, the student continues to explore a variety of literature selections from British literature, including well-known works. The student will learn strategies for reading lyric poetry and study the characteristics of reflective essays. The student will analyze poetry, short stories, and essays from the Romantic Period, Victorian Age, and Modern Era and will determine how the historical context affected the thematic material and writing style from each era.

Writing instruction focuses on literary analysis, including in-depth instruction in the process of writing a research paper. This project teaches the student to critically analyze primary and secondary sources and to effectively support his ideas with information gathered from outside sources.

Unit 1: The Romantic Period (1798–1832)

This unit explores elements of dialect poetry and lyrical poetry during the Romantic period, and the Romantic sensibility expressed in the poems of the time.

Objectives:
- Learn about the historical and literary context of the Romantic period
- Review poetic elements and figures of speech
- Review pronouns

Lesson 1: Unit Introduction

Objectives:
- Read and analyze selections from the romantic period
- Identify and analyze poetic elements
- Read a time line
- Read about historical and cultural context
- Review pronouns in the nominative case

Lesson 2: Dialect: Robert Burns (two-day lesson)

Objectives:
- Identify and analyze speaker and theme
- Review pronouns in the objective case
- Analyze dialect poetry

Lesson 3: Romantic Poetry: Blake (two-day lesson)

Objectives:
- Identify and analyze symbols and tone
- Identify Greek etymology
- Review pronouns in the possessive case

Lesson 4: Lyric Poetry: Wordsworth (two-day lesson)

Objectives:
- Identify and analyze elements of lyric poetry and sonnet
- Draw conclusions about the romantic period
- Determine the meaning of multiple-meaning words
- Review relative pronouns

Lesson 5: Lyric Poetry: Coleridge (two-day lesson)

Objectives:
- Identify and analyze sound devices in poetry
- Analyze elements of narrative poetry
- Identify connotation and denotation
- Review pronouns in comparison

Lesson 6: Byron (two-day lesson)

Objectives:
- Identify and analyze meter
- Identify elements of poetic structure
Lesson 7: Shelley (two-day lesson)

Objectives:
- Identify and analyze apostrophes, personification, and terza rima
- Identify and understand symbols
- Review pronouns and their antecedents

Lesson 8: Keats (two-day lesson)

Objectives:
- Analyze odes
- Identify and analyze simile and metaphor
- Review pronouns and their antecedents

Lesson 9: The Romantic Period (1798–1832) Unit Review

Objectives:
- Review dialectal poetry and forms of lyrical poetry such as odes
- Review elements of poetry
- Review figurative language
- Review pronouns

Lesson 10: The Romantic Period (1798–1832) Unit Test

Unit 2: Frankenstein

*Frankenstein* is the story of a young man, Victor Frankenstein, who becomes obsessed with studying anatomy and determined to understand how life is created. Passionate about science and dedicated to his dream, he creates a living being; however, his success dramatically affects his life and the lives of his family and friends. The details of Victor’s life are shared through letters from Robert Walton, an English explorer on an expedition to the North Pole, to his sister Margaret Seville in England. Robert learns Victor’s tragic tale when he rescues Victor, who is traveling by himself in the Arctic.

In this unit, you will identify literary elements, analyze characters, use comprehension strategies to make connections and draw conclusions, and define unfamiliar vocabulary words.

*Frankenstein* is the recommended novel for English 12. Jane Austen’s novel *Pride and Prejudice* may be read instead of *Frankenstein* with prior teacher approval. Lessons and activities for *Pride and Prejudice* will appear on the lower half of the lesson pages.

Published in 1813, *Pride and Prejudice* is the story of a middle-class English family, the Bennets. Mr. and Mrs. Bennet have five daughters in their teens and early twenties, and the family’s security depends on the girls’ prospects for marriage. Austen’s novel focuses primarily on the second-eldest of the sisters, the passionate and outspoken Elizabeth, and her relationship with Fitzwilliam Darcy, a wealthy bachelor. In relating the romantic adventures of Elizabeth and her sisters, Austen provides a detailed account of love and marriage at the end of the eighteenth century.

In this unit, you will identify literary elements, analyze characters, use comprehension strategies to make connections and draw conclusions, and define unfamiliar vocabulary words.

Objectives:
- Develop and apply effective comprehension strategies
- Analyze relationships between and among the characters, setting, and events
- Define new vocabulary and identify words in context

Lesson 1: Frankenstein

Objectives:
- Recognize differences between popular depictions of Frankenstein’s monster and the monster’s portrayal in Mary Shelley’s original novel
Lesson 2: Frankenstein

Objectives:
- Draw connections between self and text
- Develop and apply effective comprehension strategies
- Read and analyze the text, then respond to questions
- Define new vocabulary and identify words in context
- Describe the Romantic Era

Lesson 3: Frankenstein

Objectives:
- Read and analyze the text, then respond to questions
- Define new vocabulary and identify words in context
- Understand relationships between the novel Frankenstein and Greek mythology

Lesson 4: Frankenstein

Objectives:
- Read and analyze the text, then respond to questions
- Define new vocabulary and identify words in context
- Review literary elements, including setting and point of view, and analyze their role in the novel Frankenstein

Lesson 5: Frankenstein

Objectives:
- Read and analyze the text, then respond to questions
- Define new vocabulary and identify words in context
- Understand the relationship between the novel Frankenstein and the epic poem Paradise Lost

Lesson 6: Frankenstein

Objectives:
- Read and analyze the text, then respond to questions
- Define new vocabulary and identify words in context
- Review the four types of conflict and identify conflicts in the novel Frankenstein

Lesson 7: Frankenstein

Objectives:
- Read and analyze the text, then respond to questions
- Define new vocabulary and identify words in context
- Analyze techniques by which the author creates suspense in the novel, such as foreshadowing

Lesson 8: Frankenstein

Objectives:
- Read and analyze the text, then respond to questions
- Define new vocabulary and identify words in context
- Analyze the effect of the setting in the final chapters of the novel

Lesson 9: Frankenstein Unit Review

Objectives:
- Study vocabulary and review previous lesson goals

Lesson 10: Frankenstein Unit Test
The Unit guides student through the process of developing a research paper. Students are asked to create a multimedia presentation based on their paper and learn to interpret and implement feedback from peers and teacher.

Objectives:
- Develop a research paper following the writing process
- Develop a multimedia presentation
- Interpret and implement feedback
- Review capitalization rules

Lesson 1: Writing a Research Paper

Objectives:
- Comprehend the basic elements of a research paper
- Generate a topic for a research paper
- Conduct preliminary research to identify potential areas of focus
- Review capitalization of first words and the pronoun I

Lesson 2: Gathering Information (two-day lesson)

Objectives:
- Learn strategies to select and evaluate print and online resources
- Create outline for multimedia presentation
- Review capitalization of nouns

Lesson 3: Taking Notes (three-day lesson)

Objectives:
- Practice effective note-taking strategies
- Understand the use of note cards
- Review capitalization of nouns

Lesson 4: Organizing a Paper (two-day lesson)

Objectives:
- Synthesize ideas and details from multiple informational texts
- Draft a working thesis statement
- Create an outline for a research paper
- Review capitalization of nouns

Lesson 5: Drafting the Introduction and Refining the Thesis (two-day lesson)

Objectives:
- Draft the introduction
- Refine the thesis
- Review capitalization of proper adjectives

Lesson 6: Drafting the Body and Conclusion (two-day lesson)

Objectives:
- Draft the body paragraphs and conclusion

Lesson 7: Revising for Clarity, Coherence, and Unity

Objectives:
- Revise draft for clarity, coherence, and unity
- Understand and implement comments and feedback
- Review capitalization of titles

Lesson 8: Revising at the Sentence Level

Objectives:
- Revise draft at the sentence level
- Understand and implement comments and feedback

Lesson 9: Citations and Works Cited Page (two-day lesson)

Objectives:
- Cite sources correctly
Lesson 10: Editing, Proofreading, and Publishing (two-day lesson)

Objectives:
• Edit, publish, and reflect on the final draft of a research paper

Unit 4: The Victorian Age (1832–1901)

The unit explores elements, genres, and structure of Victorian poetry.

Objectives:
• Learn about the historical and literary context of the Victorian Age
• Review poetic elements and figures of speech
• Review subject-verb agreement

Lesson 1: Unit Introduction

Objectives:
• Read and analyze selections from the Victorian period
• Identify elements of poetry
• Read a time line
• Read about historical and cultural context

Lesson 2: Tennyson (two-day lesson)

Objectives:
• Identify and analyze mood
• Review agreement of subjects and verbs

Lesson 3: Robert and Elizabeth Browning (two-day lesson)

Objectives:
• Identify and analyze elements of dramatic monologue
• Analyze a sonnet
• Identify an unreliable narrator
• Review the agreement of subjects and verbs

Lesson 4: Hopkins

Objectives:
• Identify instances of sprung rhythm
• Analyze poetry
• Review the agreement of subjects and verbs

Lesson 5: Arnold

Objectives:
• Identify and analyze theme
• Identify and analyze tone
• Review the agreement of subjects and verbs

Lesson 6: Hardy (two-day lesson)

Objectives:
• Identify and analyze imagery and irony
• Review the agreement of subjects and verbs

Lesson 7: The Victorian Age (1832–1901) Unit Review

Objectives:
• Review poetic elements and devices in Victorian literature
• Review the agreement of subjects and verbs

Lesson 8: The Victorian Age (1832–1901) Unit Test

Unit 5: The Modern Era (1901–Present)

This unit explores the historical, social, and cultural context of the twentieth century, connecting it to the literary works of the time. You will read and analyze a variety of
selections, including short stories, poems, and essays. You will also develop a literary analysis based on an aspect of the modern era.

Objectives:
- Learn about the historical and literary context of the Modern Era
- Learn about Modernism and Post-Modernism
- Review poetic elements and figures of speech
- Review narrative elements
- Develop a literary analysis

Lesson 1: Unit Introduction: A New Era

Objectives:
- Read and analyze selections from the modern era
- Identify elements of poetry, short stories, and essays in modern literature
- Evaluate the modern era of British literature
- Read a timeline
- Read about historical and cultural context

Lesson 2: William Butler Yeats

Objectives:
- Identify and analyze symbols and imagery
- Define suffixes to interpret word meanings
- Practice response to literature
- Review commas

Lesson 3: James Joyce (two-day lesson)

Objectives:
- Identify and analyze epiphany
- Identify and analyze setting
- Apply prewriting strategies to develop a literary analysis
- Define suffixes to interpret word meanings
- Review commas

Lesson 4: Virginia Woolf

Objectives:
- Analyze an essay
- Identify and comprehend allusion
- Define synonyms to interpret word meanings
- Review commas

Lesson 5: T. S. Eliot (two-day lesson)

Objectives:
- Identify and interpret free verse
- Identify and analyze mood
- Define antonyms to interpret word meanings
- Review apostrophes

Lesson 6: Writing Workshop: Literary Analysis Rough Draft (three-day lesson)

Objectives:
- Draft a literary analysis incorporating direct quotations
- Improve stylistic and rhetorical techniques in writing
- Implement feedback
- Review apostrophes

Lesson 7: Dylan Thomas (two-day lesson)

Objectives:
- Identify and interpret half rhyme and internal rhyme
- Identify characteristics of a villanelle
- Define suffixes to interpret word meanings
- Review semicolons
Lesson 8: Graham Greene (two-day lesson)

Objectives:
- Identify and interpret humor and pathos
- Evaluate aspects of modernism
- Review plurals
- Review colons

Lesson 9: Owen, Brooke, Sassoon

Objectives:
- Identify and analyze tone
- Identify repetition and parallelism
- Use context clues to interpret word meanings
- Review italics

Lesson 10: George Orwell (two-day lesson)

Objectives:
- Analyze elements of a reflective essay
- Identify and analyze irony and understatement
- Define denotation and connotation to interpret word meanings
- Review quotation marks

Lesson 11: Stevie Smith

Objectives:
- Analyze voice and diction in poetry
- Review ellipses

Lesson 12: Doris Lessing (two-day lesson)

Objectives:
- Analyze setting and character development
- Identify instances of kinesthetic imagery
- Review hyphens

Lesson 13: Anita Desai

Objectives:
- Analyze character motivation
- Identify and analyze irony
- Review dashes, parentheses, and brackets

Lesson 14: Writing/Language Focus: Unity and Coherence

Objectives:
- Revise literary analysis for coherence, unity, and emphasis
- Use parallelism to strengthen meaning

Lesson 15: The Modern Era (1901–Present) Unit Review

Objectives:
- Review elements of modern poetry, essays, and short stories
- Review punctuation

Lesson 16: The Modern Era (1901–Present) Unit Test

Lesson 17: Writing Workshop: Literary Analysis Final Draft (two-day lesson)

Objectives:
- Edit, proofread, and publish a literary analysis
- Edit for sentence fragments in formal writing

Unit 6: Semester Review and Exam

In this unit, you will prepare for and take the semester exam. Since this is a comprehensive exam, it will cover each unit from the semester. Applying the test-taking strategies that you...
have previously learned can help you be successful with the multiple choice, matching, short answer, and essay questions on the semester exam.

Objectives:
- Prepare for the semester exam
- Assess your understanding of literature, vocabulary, grammar, and writing in Semester B

**Lesson 1: Semester Review (two-day lesson)**

Objectives:
- Prepare for semester exam
- Assess understanding of literature, vocabulary, grammar, and writing in Semester B

**Lesson 2: Semester Exam**
APPENDIX A
CURRICULUM

A.2 COURSE GUIDES

b. MATH
This document is part of Appendix A: Curriculum.

It includes course guides for each Math class for students in Kindergarten through Grade 12.

- Math K A
- Math K B
- Math 1 A
- Math 1 B
- Math 2 A
- Math 2 B
- Math 3 A
- Math 3 B
- Math 4 A
- Math 4 B
- Math 5 A
- Math 5 B
- Math 6 A
- Math 6 B
- Math 7 A
- Math 7 B
- Essential Math 3 A
- Essential Math 3 B
- Essential Math 4 A
- Essential Math 4 B
- Essential Math 5 A
- Essential Math 5 B
- Essential Math 6 A
- Essential Math 6 B
- Algebra Readiness A
- Algebra Readiness B
- Essential Algebra Readiness A
- Essential Algebra Readiness B
- Algebra 1 A
- Algebra 1 A, Part 1
- Algebra 1 A, Part 2
- Algebra 1 B
- Algebra 1 B, Part 1
- Algebra 1 B, Part 2
- Algebra 2 A
- Algebra 2 A, Part 1
- Algebra 2 A, Part 2
- Algebra 2 B
- Algebra 2 B, Part 1
- Algebra 2 B, Part 2
- Pre-Calculus A
- Pre-Calculus B
- Consumer Math A
- Consumer Math B
- Geometry A
- Geometry B

Course guides provide detailed information on the curriculum including course descriptions, unit summaries, lesson objectives, activities, and assessment types. Course guides include information on:

- Planned instruction (provided in the unit summary of each unit within individual Course Guides)
- Course objectives (provided in the unit and lesson objectives within individual Course Guides)
- Activities (provided in the unit summary and lesson objectives of each unit within individual Course Guides)
MATH K A
Math K A

In this course, mathematical thinking and problem solving are introduced. Students explore topics and apply mathematical practices outlined in the Common Core State Standards and other state standards. They learn how to identify numbers, write numbers zero to 20, and count to 100 by ones and tens. They also describe, sort, and compare objects and learn basic shapes. Stories and activities introduce addition and subtraction. A combination of interactive and hands-on exercises teaches students about money, time, fractions, and measurement.

Unit 1: Let's Learn Math!

In this unit, your student will learn about the activities she will do in math class. The first lesson, intended for Learning Coaches, provides advice for using the Lesson Guide to support your student, and details the resources found in the course. It also offers helpful tips for building your student's math skills. The second lesson is intended for students and their Learning Coaches. This lesson will introduce your student to the concept of math, and describe the structure of math lessons.

Lesson 1: Learning Coach: Support Your Student in Math

Lesson 2: Welcome to Math!

Unit 2: One to Five

Your student will learn to count 1–5. He will learn that the number of objects remains the same even if the order changes. He will be taught to write and read the numbers 1–5. The lessons will introduce the idea that each item is only counted once. Your student will be given strategies to encourage counting with one-to-one correlation. Using what he has learned, he will make a book about his state that he will submit as a portfolio assessment.

Objectives:
• Represent and count the quantities 1 to 5
• Identify the total number of objects in a set regardless of arrangement
• Recognize and write the numerals 1 to 5
• Solve problems by using objects
• Evaluate surroundings to create a number book

Lesson 1: Counting 1, 2, and 3

Objectives:
• Use objects to represent and count the quantities 1, 2, and 3

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 2: Counting 1, 2, and 3 in Different Arrangements

Objectives:
• Identify whether a particular set includes 1, 2, or 3 objects, regardless of how the objects are arranged

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 3: Reading and Writing 1, 2, and 3

Objectives:
• Recognize and write the numerals that describe the quantities 1, 2, and 3

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 4: Mid-Unit Review

Objectives:
• Represent and count the quantities 1 to 3
• Identify the total number of objects in a set
• Identify the total number of objects in a set regardless of arrangement
• Recognize and write the numerals 1 to 3
Lesson 5: Counting 4 and 5

Objectives:
• Use objects to represent and count the quantities 4 and 5

Lesson 6: Counting 4 and 5 in Different Arrangements

Objectives:
• Identify whether a particular set includes 4 or 5 objects

Lesson 7: Reading and Writing 4 and 5

Objectives:
• Recognize and write numerals that describe the quantities 4 and 5

Lesson 8: Problem Solving: Use Objects

Objectives:
• Solve problems by using objects

Lesson 9: Math Project – Social Studies (two-day lesson)

Objectives:
• Observe surroundings to create a number book

Lesson 10: One to Five Unit Test

Unit 3: Comparing and Ordering 0 to 5

In this unit, your student will learn to compare numbers 0–5. She will use comparison words such as *more*, *fewer*, *same*, and *as many* to explain the relationships between numbers. By recognizing differences of 1 and 2 fewer and more, your student will continue to develop strength in counting and comparing. The student will be introduced to reading and writing the number 0. She will understand that zero means none. She will also have the chance to describe and evaluate equal groups. Your student will explore ordinal numbers first through fifth. She will have the opportunity to use ordinal numbers to describe positions of objects in a group.

Objectives:
• Recognize and compare groups of objects to identify which group has more, fewer, the same number as, as many, more, or fewer
• Use zero to represent a set of objects when there are none and recognize and write the numeral 0
• Sequence numbers 0 to 5
• Identify ordinal positions
• Solve problems by using objects to act out the problem

Lesson 1: More, Fewer, and Same As

Objectives:
• Use one-to-one correspondence to compare objects and decide whether one group has more, fewer, or the same number as the other group

Lesson 2: 1 and 2 More

Objectives:
• Recognize and identify a group of objects that has 1 more or 2 more than another group
Lesson 3: 1 and 2 Fewer

Objectives:
- Recognize and identify a group of objects that has 1 fewer or 2 fewer from another group

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 4: The Number 0

Objectives:
- Understand that zero means none

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 5: Reading and Writing 0

Objectives:
- Recognize and write the numeral that describes the quantity of 0

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 6: As Many, More, and Fewer

Objectives:
- Use one-to-one correspondence to compare two groups and determine whether one group has more, fewer, or as many as the other group

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 7: Mid-Unit Review

Objectives:
- Recognize and compare groups of objects to identify which group has more, fewer, or the same number
- Use zero to represent a set of objects when there are none
- Recognize and write the numeral 0
- Recognize and compare two groups of objects to determine if the number of objects is as many, more, or fewer

Lesson 8: Ordering Numbers 0 to 5

Objectives:
- Use objects to order numbers 0 to 5 in sequence

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 9: Ordinal Numbers Through Fifth

Objectives:
- Use words first through fifth to identify ordinal positions

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 10: Problem Solving: Use Objects

Objectives:
- Use objects to show the number in each group, order the number of objects in each group, and identify the group that has the most or fewer number objects

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 11: Comparing and Ordering 0 to 5 Unit Test

Unit 4: Six to Ten

Your student will be introduced to the numbers 6 to 10. He will use these numbers to count, evaluate, and manipulate. Writing the numbers 6 to 10 will be taught and evaluated in this
unit with particular attention to the orientation of the numbers. Your student will be introduced to patterning. He will pattern using number of objects.

Objectives:
- Represent and count the quantities 1 to 10
- Identify the total number of objects in a set regardless of arrangement
- Recognize and write the numerals 6 to 10
- Solve problems by predicting and identifying patterns
- Evaluate surroundings to create a number book

Lesson 1: Counting 6 and 7

Objectives:
- Use objects to represent and count the quantities of 6 and 7

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 2: Reading and Writing 6 and 7

Objectives:
- Recognize and write the numerals that describe the quantities 6 and 7

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 3: Counting 8 and 9

Objectives:
- Use objects to represent and count the quantities of 8 and 9

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 4: Reading and Writing 8 and 9

Objectives:
- Recognize and write numerals that describe the quantities 8 and 9

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 5: Mid-Unit Review

Objectives:
- Represent and count the quantities 1 to 9
- Identify the total number of objects in a set regardless of arrangement
- Recognize and write the numerals 6 to 9

Lesson 6: Counting 10

Objectives:
- Use objects to represent and count the quantity 10

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 7: Reading and Writing 10

Objectives:
- Recognize and write the numeral that describes the quantity of 10

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 8: Problem Solving: Looking for a Pattern

Objectives:
- Solve problems by identifying growing patterns and predicting what comes next

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 9: Math Project – Social Studies (two-day lesson)

Objectives:
Lesson 10: Six to Ten Unit Test

Unit 5: Comparing and Ordering Numbers 0 to 10

Your student will learn to compare numbers. She will learn when evaluating two numbers the greater number is more and the smaller number is less. The student will understand that it is helpful to use 5 or 10 as a benchmark. She will compare numbers that are 1 and 2 more as well as 1 and 2 less. All of these skills will be used to help order the numbers through 10. She will continue to order while being exposed to using a number line.

Objectives:
- Analyze two different sets of objects to determine which set is greater and which set is less
- Apply 1 to 1 correspondence to determine quantity of a set of objects
- Analyze a number 0 to 12 and identify if it is greater or less than 5 or 10
- Identify a number that is 1 or 2 more or 1 or 2 less than another number
- Analyze numbers from 1 to 10 and put them in the correct order

Lesson 1: Comparing Numbers through 10

Objectives:
- Compare two numbers using sets of objects and one-to-one correspondence to determine which number is greater and which is less

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 2: Comparing Numbers to 5

Objectives:
- Given a number from 0–5, tell if the number is greater or less than 5

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 3: Comparing Numbers to 10

Objectives:
- Given a number or set from 0–12, decide if the number is greater or less than 10

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 4: 1 More

Objectives:
- Use counting to identify a number that is 1 more than another number

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 5: 1 Fewer

Objectives:
- Use counting to identify a number that is 1 fewer than another number

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 6: Mid-Unit Review

Objectives:
- Analyze two different sets of objects to determine which set is greater and which set is less
- Apply 1 to 1 correspondence to determine quantity of a set of objects
- Analyze a number 0 to 12 and identify if a number between 0 and 12 is greater or less than 5
- Identify if a number between 0 and 12 is greater or less than 10
- Identify numbers that are 1 more or 1 fewer than other numbers

Lesson 7: 2 More

Appendix A.2.b Mathematics Course Guides
Math K A
© 2016 Connections Education LLC. All rights reserved.
Objectives:
• Use counting to identify a number that is 2 more than another number  
  Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 8: 2 Fewer 📊
Objectives:
• Use counting to identify a number that is 2 fewer than another number  
  Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 9: Ordering Numbers through 10 (two-day lesson) 📊
Objectives:
• Order numbers from 0 through 10 in sequence  
  Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 10: Ordering Numbers on a Number Line 📊
Objectives:
• Use a number line to count numbers 0 to 10 in order  
  Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 11: Problem Solving: Use Objects 📊
Objectives:
• Solve problems by using counters to show 1 more and 2 more  
  Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 12: Comparing and Ordering Numbers 0 to 10 Unit Test 📊

Unit 6: Numbers to 20
Your student will learn to count, read, and write numbers from 11–20. Your student will learn to use logical reasoning to solve word problems.

Objectives:
• Recognize and represent with manipulatives the quantities 11 to 20  
  • Recognize and write the numerals 11 to 20  
  • Solve problems in an ascending or descending sequence of numbers by using logical reasoning

Lesson 1: Counting, Reading, and Writing 11 and 12 📊
Objectives:
• Recognize and write the numerals that describe the quantities 11 and 12  
  Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 2: Counting, Reading, and Writing 13, 14, and 15 📊
Objectives:
• Recognize and write the numerals that describe the quantities 13 to 15  
  Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 3: Mid-Unit Review
Objectives:
• Recognize and represent with manipulatives the quantities 11 to 15  
  • Recognize and write the numerals 11 to 15

Lesson 4: Counting, Reading, and Writing 16 and 17 📊
Objectives:
• Recognize and write the numerals that describe the quantities 16 and 17

© 2016 Connections Education LLC. All rights reserved.
Lesson 5: Counting, Reading, and Writing 18, 19, and 20

Objectives:
- Recognize and write the numerals that describe the quantities 18, 19, and 20

Lesson 6: Problem Solving: Use Logical Reasoning

Objectives:
- Solve problems by applying logical reasoning to identify missing numbers in a number sequence

Lesson 7: Numbers to 20 Unit Test

Unit 7: Numbers to 100

In this unit, your student will explore numbers up to 100. She will learn how to count to 100 and write numbers to 100. She will use ten-frames, a hundred chart, and counters to help visualize numbers up to 100 in terms of groups of 10. To reinforce the concept of 100, your student will use on-screen manipulatives as well as physical manipulatives. In addition, she will use and reference the hundreds chart.

Objectives:
- Recognize, count, write, and represent with manipulatives quantities to 100
- Analyze groups of objects to estimate quantities
- Count and write numbers to 100 using a hundred chart
- Use a hundred chart to count by 2s and 10s
- Solve problems by identifying a pattern

Lesson 1: Counting to 30

Objectives:
- Count to 30 objects

Lesson 2: About How Many?

Objectives:
- Use benchmarks to estimate quantities of groups

Lesson 3: Counting to 100

Objectives:
- Count and write numbers to 100 on the hundred chart

Lesson 4: Mid-Unit Review

Objectives:
- Recognize, count, write, and represent with manipulatives the quantities to 100
- Analyze groups of objects to estimate quantities
- Evaluate groups of 10 to encourage counting up to 100

Lesson 5: Counting Groups of Ten

Objectives:
- Count groups of 10, up to 10 tens, and write how many
Lesson 6: Patterns on a Hundred Chart

Objectives:
• Use a hundred chart to recognize patterns when counting by 2s and 10s

Lesson 7: Problem Solving: Look for a Pattern

Objectives:
• Solve problems by looking for a pattern

Lesson 8: Numbers to 100 Unit Test

Unit 8: Understanding Addition

In this unit, your student will be exposed to addition in a developmentally appropriate manner using storytelling and manipulatives. He will understand that when two groups join, the individual groups no longer exist. Instead, there is a newly formed group that now represents the total. He will be introduced to the addition sign, the equal sign, and the horizontal format of addition. Your student will be asked to tell an addition story by representing the statement with a picture.

Objectives:
• Evaluate joining stories using manipulatives and images to help solve the problem
• Write numbers and apply the concept of altogether to the joining stories
• Recognize and use the plus sign when reading and recording joining stories
• Evaluate and solve addition sentences that represent joining stories
• Evaluate data by drawing pictures to solve the addition problem

Lesson 1: Stories About Joining

Objectives:
• Act out numbers stories that involve joining two groups

Lesson 2: More Joining

Objectives:
• Interpret illustrations that show joining groups and write the corresponding numbers

Lesson 3: Joining Groups

Objectives:
• Determine how many there are altogether when two groups are joined

Lesson 4: Using the Plus Sign

Objectives:
• Use the plus sign (+) to represent joining groups when recording addition

Lesson 5: Mid-Unit Review

Objectives:
• Evaluate joining stories using manipulatives to help solve the problem
• Evaluate and interpret images that depict joining stories
Write numbers that correspond to the joining stories
Apply the concept of altogether to joining stories
Recognize and use the plus sign when reading and recording joining stories

Lesson 6: Finding Sums

Objectives:
• Identify and use the equal sign (=); add and write the sum

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 7: Addition Sentences

Objectives:
• Write and solve addition sentences to represent joining situations

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 8: Problem Solving: Draw a Picture (two-day lesson)

Objectives:
• Solve problems by drawing pictures about joining two groups

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 9: Understanding Addition Unit Test

Unit 9: Understanding Subtraction

The student will be exposed to subtraction in a developmentally appropriate manner using storytelling and manipulatives. She will understand that when you take away something from the larger group, a new, smaller group is formed, which is the number left. She will be introduced to the subtraction sign and the formal horizontal format of subtraction. The student will be asked to tell a subtraction story by pictorially representing the statement.

Objectives:
• Evaluate separating stories using manipulatives and images to help solve the problem
• Write and solve subtraction sentences that represent separating stories
• Recognize and use the minus sign when reading and recording separating stories
• Identify an equal sign and use it to reflect the difference of the separating of two groups
• Evaluate data by drawing pictures to solve the addition or subtraction problems

Lesson 1: Stories About Separating

Objectives:
• Act out number stories that involve separating two groups

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 2: Stories About Take Away

Objectives:
• Determine how many are left when some objects in a group are taken away

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 3: Stories About Comparing

Objectives:
• Compare two groups to find how many more or fewer

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 4: Using the Minus Sign

Objectives:
• Use the minus sign (−) to represent "take away" situations when recording subtraction

Lesson 5: Mid-Unit Review
Objectives:
• Interpret stories about separating to determine the number left
• Evaluate separating stories using manipulatives to help solve the problem
• Compare two groups of objects and determine which one is more and which one is fewer and by how much
• Recognize and use the minus sign when reading and recording separating stories

Lesson 6: Finding Differences
Objectives:
• Use the equal sign (=), subtract, and write the difference

Lesson 7: Subtraction Sentences
Objectives:
• Write and solve subtraction sentences to represent take-away situations

Lesson 8: Problem Solving: Use Objects (two-day lesson)
Objectives:
• Solve problems by choosing addition or subtraction

Lesson 9: Understanding Subtraction Unit Test
MATH K B
Math K B

In this course, mathematical thinking and problem solving are introduced. Students explore topics and apply mathematical practices outlined in the Common Core State Standards and other state standards. They learn how to identify numbers, write numbers zero to 20, and count to 100 by ones and tens. They also describe, sort, and compare objects and learn basic shapes. Stories and activities introduce addition and subtraction. A combination of interactive and hands-on exercises teaches students about money, time, fractions, and measurement.

Unit 1: Composing and Decomposing Numbers to 10

In this unit, your student will demonstrate his understanding of the rules of a number sentence by composing and decomposing numbers to 10. He will do this by showing that there is more than one way to show a number. Manipulatives and activities will be used to make the idea of number conservation concrete. The vocabulary words, whole and part, will be mastered during this unit. To put these words into practice, your student will demonstrate how to join parts in various ways to make a whole when showing addition. Finally, he will be able to explain the purpose of a graph and use information gathered in a graph to solidify his understanding of number conservation.

Objectives:
- Compose and decompose numbers 0 to 10
- Use objects to show numbers 4 to 10 in two parts
- Write number sentences that add up to numbers 4 to 10
- Construct a graph

Lesson 1: Making 4 and 5

Objectives:
- Use objects to show 4 and 5 in two parts

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 2: Writing Number Sentences for 4 and 5

Objectives:
- Write number sentences to describe the decomposition of 4 or 5 into two parts

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 3: Making 6 and 7

Objectives:
- Use objects to show 6 and 7 in two parts

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 4: Writing Number Sentences for 6 and 7

Objectives:
- Write number sentences to describe the decomposition of 6 or 7 into two parts

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 5: Mid-Unit Review

Objectives:
- Compose and decompose numbers 0 to 7
- Use objects to show numbers 4 to 7 in two parts
- Write number sentences that add up to numbers 4 to 7

Lesson 6: Making 8 and 9

Objectives:
- Use objects to show 8 and 9 in two parts
Lesson 7: Writing Number Sentences for 8 and 9

Objectives:
• Write number sentences that add up to 8 and 9

Lesson 8: Making 10

Objectives:
• Use objects to show 10 in two parts

Lesson 9: Writing Number Sentences for 10

Objectives:
• Write number sentences that show how two numbers can add to 10

Lesson 10: Problem Solving: Make a Graph

Objectives:
• Construct graphs using real objects or pictures to answer questions

Lesson 11: Composing and Decomposing Numbers to 10 Unit Test

Objectives:
• Compose and decompose numbers 0–10
• Use objects to show numbers 4–10 in two parts
• Write number sentences that add up to numbers 4–10
• Construct a graph

Unit 2: Composing Numbers 11 to 19

In this unit, your student will compose numbers from 10–19. She will be able to utilize her understanding of number conservation to create addition sentences where 11–19 can be represented by 10 and another addend. Furthermore, by exploring place value, your student will begin to build more concrete number sense for numbers in the teens. Finally, she will explore number patterns using the first two rows of the hundreds chart.

Objectives:
• Compose numbers 11–19
• Identify a number sentence whose parts match those in a picture
• Compose number sentences that correlate with pictures on a ten-frame
• Construct number sentences using 10 and some more

Lesson 1: Making 11, 12, and 13

Objectives:
• Represent 11, 12, and 13 as the composition of 10 plus 1, 2, or 3

Lesson 2: Making 14, 15, and 16

Objectives:
• Represent 14, 15, and 16 as the composition of 10 plus 4, 5, and 6

Lesson 3: Mid-Unit Review

Objectives:
• Represent numbers 11 to 16 as the composition of 10 plus a number
Lesson 4: Making 17, 18, and 19

Objectives:
• Represent 17, 18, and 19 as the composition of 10 plus 7, 8, and 9

Lesson 5: Look for a Pattern

Objectives:
• Use drawings and number sentences to identify patterns on the first two rows of the hundreds chart

Lesson 6: Review of Making 11-19

Objectives:
• Compose numbers between 11 and 19

Lesson 7: Composing Numbers 11–19 Unit Test

Unit 3: Decomposing Numbers 11 to 19

In this unit, your student will continue to show number conservation by creating numbers from 10–19 in a variety of ways. He will begin by making sets of numbers between 10 and 19 on a double ten-frame. Gradually your student will grow his number sense by decomposing numbers between 10 and 19. As your student becomes more familiar with the double ten-frame, he will be able to see a teen number as a set of 10 and another addend. To reinforce the concept of number decomposition, your student will use counters, number cards, and connecting cubes. Finally, patterns in the decomposition of teen numbers will be explored to solidify his understanding further.

Objectives:
• Use objects to create sets up to 19
• Write equations that represent the decomposition of 11 to 19 as a ten and some ones
• Solve problems by identifying repeating elements
• Identify patterns in the hundreds chart

Lesson 1: Creating Sets to 19

Objectives:
• Use objects to create sets to 19

Lesson 2: Parts of 11, 12, and 13

Objectives:
• Represent the decomposition of 11, 12, and 13 as ten ones and additional ones

Lesson 3: Parts of 14, 15, and 16

Objectives:
• Represent the decomposition of 14, 15, and 16 as one ten and four, five, or six ones

Lesson 4: Mid-Unit Review

Objectives:
• Create sets of objects to 19
• Represent the decomposition of 11 to 16 as ten ones and additional ones

Lesson 5: Parts of 17, 18, and 19
Lesson 6: Problem Solving: Look for a Pattern (two-day lesson)

Objectives:
- Identify patterns found in decomposing the teen numbers, including the constant of one ten and the variable number of ones
- Make drawings and write number sentences for numbers 11 to 19

Unit 4: Measurement

In this unit, your student will explore the measurements of length. Exploration will begin by having your student identify the measurable qualities of different objects. She will then explore length by using the words: shorter, shortest, longer, longest, and as long as. Your student will begin by comparing the length of two objects and move on to comparing three or more objects. She will continue the same process when exploring the measurement of height and correctly use the vocabulary words: taller, as tall as, and tallest. Overall, your student will make connections to her environment and understand that objects can be compared in a variety of ways using measurement. Finally, she will utilize the guess and check method to solve problems.

Objectives:
- Compare objects by length and height
- Problem solve by trying, checking, and revising
- Describe attributes of objects

Lesson 1: Describing Objects by More than One Attribute

Objectives:
- Recognize and describe the measurable attributes of objects

Lesson 2: Comparing by Length

Objectives:
- Directly compare objects by length

Lesson 3: More Comparing Objects by Length

Objectives:
- Compare and order objects by length

Lesson 4: Problem Solving: Try, Check, and Revise

Objectives:
- Solve problems by comparing lengths and revising their answers

Lesson 5: Mid-Unit Review

Objectives:
- Describe an object by its attributes
- Compare objects by their length

Lesson 6: Comparing by Height
Objectives:

- Compare objects by height

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 7: More Comparing Objects by Height

Objectives:

- Compare and order objects by height

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 8: Comparing Capacities

Objectives:

- Compare containers by their capacity

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 9: Comparing by Weight

Objectives:

- Compare objects by weight

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 10: Social Studies Project (two-day lesson)

Objectives:

- Evaluate the weight of objects

Lesson 11: Measurement Unit Test

Unit 5: Sort, Classify, Count, and Categorize Data

In this unit, your student will classify two- and three-dimensional objects according to their attributes. Your student will begin by comparing objects according to characteristics that are the same and different. He will first demonstrate how to sort objects according to one distinct characteristic, such as color, and then sort the same set of objects according to a different attribute, such as size. Next, your student will explore sorting by categorizing a set of objects by color and size. In order to solidify his learning, he will perform an activity using the sorting rule. Finally, your student will use real graphs and picture graphs to record data that he sorts.

Objectives:

- Sort objects based on their attributes
- Sort a variety of objects, including two- and three-dimensional geometric figures, according to their attributes
- Describe how objects are sorted; interpret graphs of real objects and pictures
- Construct a picture graph

Lesson 1: Same and Different

Objectives:

- Identify same and different by the attributes of color, shape, size, and kind

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 2: Sorting by One Attribute

Objectives:

- Sort objects by one attribute such as color, shape, size, or kind

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 3: Sorting the Same Set in Different Ways

Objectives:

- Sort the same set in different ways
Lesson 4: Mid-Unit Review
Objectives:
• Sort objects based on their attributes

Lesson 5: Sorting by More than One Attribute
Objectives:
• Use more than one attribute to sort a set of objects

Lesson 6: Problem Solving: Use Logical Reasoning
Objectives:
• Solve problems by thinking logically

Lesson 7: Real Graphs
Objectives:
• Make and read a real graph

Lesson 8: Picture Graphs (two-day lesson)
Objectives:
• Make and read a picture graph

Lesson 9: Sort, Classify, Count, and Categorize Data Test

Unit 6: Identifying and Describing Shapes
In this unit, your student will begin to build a foundation of geometric concepts and spatial relations. Your student will learn about the specific attributes of the rectangle, square, circle, triangle, and hexagon. She will be able to identify these shapes in her environment, as well as in written activities.
Objectives:
• Correctly name shapes regardless of their orientation or overall size

Lesson 1: Rectangles
Objectives:
• Identify and describe rectangles

Lesson 2: Squares
Objectives:
• Identify and describe squares

Lesson 3: Circles
Objectives:
• Identify and describe circles

Lesson 4: Triangles
Objectives:
- Identify and describe triangles

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 5: Hexagons 🍧

Objectives:
- Identify and describe hexagons

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 6: Mid-Unit Review

Objectives:
- Correctly name shapes regardless of their orientation or overall size

Lesson 7: Solid Figures 🎉

Objectives:
- Identify cubes, cones, cylinders, and spheres and relate them to real-life objects

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 8: Flat Surfaces of Solid Figures

Objectives:
- Identify three-dimensional figures and describe the shape of flat surfaces

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 9: Problem Solving: Use Objects 🍭

Objectives:
- Solve problems by using objects

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 10: Math Project: Art (three-day lesson) 🎨

Objectives:
- Examine the attributes of real-world objects
- Identify and describe rectangles, squares, circles, triangles, and hexagons
- Use rectangles, squares, circles, triangles, and hexagons to create a model of a real-world object
- Describe measurable attributes of objects, such as length or height
- Sort a set of objects based on their attributes

Lesson 11: Identifying and Describing Shapes Unit Test 🎉

Unit 7: Position and Location of Shapes

In this unit, your student will explore the topical characteristics of shapes and continue to build his spatial sense which will aid him in identifying specific shapes. He will be able to identify objects according to the specific attributes of inside, outside, above, below, on, in front of, behind, next to, beside, left, and right. Finally, your student will use tactile manipulatives to physically show spatial understanding.

Objectives:
- Describe one object in relation to another

Lesson 1: Inside and Outside 🍭

Objectives:
- Describe an object as inside or outside a given place

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.
Lesson 2: Above, Below, and On

Objectives:
- Describe an object as above, below, or on another object

Lesson 3: Mid-Unit Review

Objectives:
- Describe one object in relation to another

Lesson 4: In Front of and Behind

Objectives:
- Describe an object as in front of or behind, next to or beside a given object

Lesson 5: Left and Right

Objectives:
- Describe an object as left or right of a given object

Lesson 6: Position and Location of Shapes Unit Test

Unit 8: Geometry

In this unit, your student will continue to explore three-dimensional or solid figures. She will further investigate the attributes of three-dimensional figures in order to solidify each shape's name and characteristics. Both real-world examples and thoughtful questions will reinforce these essential concepts. Congruency will be introduced and your student will be able to identify objects that are the same size and shape. More abstract concepts will also be explored. Your student will be able to create new shapes by combining other shapes. To reinforce her understanding of spatial relations, your student will act as a detective and identify two- and three-dimensional shapes when given clues.

Objectives:
- Analyze and compare two- and three-dimensional shapes
- Model shapes in the world using components or drawings
- Compose simple shapes to form larger shapes
- Examine the attributes of real-world objects

Lesson 1: Same Size, Same Shape

Objectives:
- Identify and draw figures that are the same size and the same shape

Lesson 2: Making Shapes from Other Shapes

Objectives:
- Recognize that shapes can be combined to make other shapes

Lesson 3: Comparing Solid Figures

Objectives:
- Identify solid figures that roll, stack, and/or slide on a flat surface

Lesson 4: Mid-Unit Review

Objectives:
• Identify similarity in objects and use similar shapes to make other shapes
• Describe how a solid figure can move across a flat surface

Lesson 5: Building with Solid Figures
Objectives:
• Make shapes by combining two solid figures

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 6: Problem Solving: Use Logical Reasoning
Objectives:
• Use logical reasoning to solve problems

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 7: Real-World Objects (two-day lesson)
Objectives:
• Examine the attributes of real-world objects

Lesson 8: Geometry Unit Test
Math 1 A

In Math 1 A, the student will learn mathematical concepts that are organized according to the following categories: number and operations, algebra, and geometry. Within each category, concepts are developed through the mathematical processes of problem-solving, reasoning, communication, connections, and representations. Building both conceptual knowledge and procedural fluency supports the student's development of mathematical thinking and reasoning in solving various problems of authentic contexts. The Scott Foresman and Addison Wesley series textbook, *enVisionMATH*, is the primary resource for this course.

The student will study number concepts, including reading and writing whole numbers from 0 through 12, and investigate the concepts of addition and subtraction through patterns and relationships. Numbers and patterns will also be connected to geometry as the student explores attributes of solids and shapes. Finally, the student will extend his understanding of number concepts to include numbers though 100.

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

The answer key document for *enVisionMATH Lessons* is located in the Virtual Library in the Answer Keys section and is not included as a resource in the Course Guide. You can access the Answer Keys in the Virtual Library: Home > Curriculum and Instruction > Answer Keys.

Unit 1: Let’s Learn Math!

In this unit, your student will learn about the activities she will do in math class. The first lesson, intended for Learning Coaches, provides advice for using the Lesson Guide to support your student, and details the resources found in the course. It also offers helpful tips for building your student’s math skills. The second lesson is intended for students and their Learning Coaches. This lesson will introduce your student to the concept of math, and describe the structure of math lessons.

Objectives:
- Understand how to find and use the Coaching Guide
- Locate and describe lesson resources
- Identify ways to promote mathematical thinking in your daily life
- Describe the different parts of a lesson
- Describe the different types of assessments

Lesson 1: Learning Coach: Support Your Student in Math

Lesson 2: Welcome to Math 1!

Objectives:
- Locate and describe lesson resources
- Describe the different parts of a lesson
- Describe the different types of assessments

Unit 2: Numbers to 12

In this unit, your student will practice reading and writing numbers from 0 to 12. Your student will associate concrete objects with numerals in order to tell how many objects are in a set, and he will recognize dot patterns as the representation of a number. This unit serves as a base for the further development of your student’s ability to denote addition and subtraction number relationships. Your student will build upon numbers in the five- and 10-frame counting systems. This unit’s problem-solving strategy is “use objects.”

Objectives:
- Read and write numbers to 12
- Recognize patterned arrangements of numbers without counting
- Recognize two-part spatial patterns of numbers
- Use objects to act out the actions in problems

Lesson 1: 0 to 5

Objectives:
• Read and write numbers to 5

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 2: 6 to 10

Objectives:
• Read and write numbers from 6 through 10

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 3: 10, 11, and 12

Objectives:
• Read and write numbers to 12

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 4: Spatial Patterns for Numbers to 9

Objectives:
• Recognize patterned arrangements of numbers without counting

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 5: Spatial Patterns for Numbers to 10

Objectives:
• Recognize two-part spatial patterns of numbers

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 6: Use Objects

Objectives:
• Use objects to act out the actions in problems

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 7: Unit Review

Lesson 8: Unit Test

Unit 3: Comparing and Ordering Numbers

This unit reinforces numerical relationships through comparing and ordering numbers. Your student will determine the order of numbers from concrete examples using the terms least, between, and greatest. Employing the help of visual models, your student will place numbers in the correct order and determine their respective values on a number line. This unit’s problem-solving strategy is “act it out.”

Objectives:
• Compare and order numbers through 12
• Order numbers to 12 using a number line
• Use objects to act out ordering numbers to solve story problems

Lesson 1: Comparing Two Numbers

Objectives:
• Compare two numbers 1 through 12

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 2: Ordering Three Numbers

Objectives:
• Compare and order three numbers through 12

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.
Lesson 3: Ordering Numbers to 12 with a Number Line

Objectives:
- Order numbers to 12 using a number line

Lesson 4: Act It Out

Objectives:
- Use objects to act out ordering numbers to solve story problems

Lesson 5: Unit Review

Lesson 6: Unit Test

Unit 4: Understanding Addition

In this unit, your student will use number relationships to develop an understanding of basic addition principles. Your student will explore strategies for adding two numbers, including joining stories and part-part-whole situations. Your student will also become familiar with addition terminology associated with writing addition number sentences. This unit's problem-solving strategy is "use objects."

Objectives:
- Recognize parts of a number as a strategy for addition
- Write addition number sentences to solve part-part-whole and joining stories
- Explore the commutative property of addition
- Use objects to solve story problems

Lesson 1: Making 6 and 7

Objectives:
- Recognize parts of a number as a strategy for addition

Lesson 2: Making 8

Objectives:
- Recognize parts of the number 8

Lesson 3: Making 9

Objectives:
- Recognize parts of the number 9

Lesson 4: Addition Expressions and Number Sentences

Objectives:
- Write addition expressions and number sentences to find the whole, given two parts

Lesson 5: Stories About Joining

Objectives:
- Write addition sentences to solve stories about joining

Lesson 6: Adding in Any Order
Objectives:
• Learn to add in any order

Lesson 7: Use Objects (two-day lesson)

Objectives:
• Use objects to solve story problems

Lesson 8: Unit Review

Lesson 9: Unit Test

Unit 5: Understanding Subtraction

This unit is dedicated to your student’s understanding of the ideas behind subtraction. Your student will find the missing parts of the numbers 7, 8, and 9, and then will transfer this skill into identifying the need to subtract in separation and comparison stories. Connecting subtraction and addition facts will help your student uncover the relationship between these two operations and enrich her knowledge of number sentences involving each of the operations. This unit’s problem-solving strategy is “use objects.”

Objectives:
• Solve problems by finding the missing part
• Write and solve subtraction number sentences
• Use subtraction to answer stories about separating and comparing
• Write related addition and subtraction facts
• Use counters to act out and solve subtraction story problems

Lesson 1: Finding Missing Parts of 6 and 7

Objectives:
• Solve problems by finding the missing part

Lesson 2: Finding Missing Parts of 8

Objectives:
• Find a missing part of 8 when one part is known

Lesson 3: Finding Missing Parts of 9

Objectives:
• Use subtraction to find the missing part of 9 when one part is known

Lesson 4: Subtraction Expressions and Number Sentences

Objectives:
• Write and solve subtraction number sentences.

Lesson 5: Stories About Separating

Objectives:
• Tell and act out stories about separating to find how many are left

Lesson 6: Stories About Comparing

Objectives:
Lesson 7: Connecting Addition and Subtraction

Objectives:
• Write related addition and subtraction facts

Lesson 8: Connecting Models and Symbols

Objectives:
• Write and identify different subtraction sentences that are true for the same model

Lesson 9: Use Objects

Objectives:
• Use counters to act out and solve subtraction story problems

Lesson 10: Unit Review

Lesson 11: Unit Test

Unit 6: Five and Ten Relationships

This unit develops your student’s understanding of numbers in a base-ten numeration system by using five and 10 as points of reference. Within a 10-frame structure, your student will represent numbers through 10 and identify the “missing part” in part-part-whole relationships. The ability to recognize numbers using this organizational pattern builds a foundation that will help your student move from counting to mental math as a strategy to performing addition and subtraction operations. This unit’s problem-solving strategy is “make a table.”

Objectives:
• Recognize numbers shown on a ten-frame
• Represent 10 in two parts
• Use counters and a part-part-whole model to find missing parts of 10
• Make tables to solve problems

Lesson 1: Representing Numbers on a Ten-Frame

Objectives:
• Use counters and a ten-frame to model numbers up to 10

Lesson 2: Recognizing Numbers on a Ten-Frame

Objectives:
• Learn to recognize numbers on a ten-frame, noting the relationship of those numbers to 5 and 10

Lesson 3: Parts of 10

Objectives:
• Show 10 as two parts

Lesson 4: Finding Missing Parts of 10

© 2016 Connections Education LLC. All rights reserved.
Lesson 5: Make a Table

Objectives:
- Make tables to solve problems

Lesson 6: Unit Review

Lesson 7: Unit Test

Unit 7: Addition Facts to 12

In this unit, your student will continue to explore addition relationships between numbers through 12 with ten-frames and breaking a sum into its parts. Your student will be introduced to near doubles and doubles facts, a strategy for remembering sums, so that your student will associate mathematical logic with real-world situations and commit addition facts to memory. This unit’s problem-solving strategy is “draw a picture and write a number sentence.”

Objectives:
- Add by counting on and with doubles and near doubles facts
- Use ten-frames to model addition facts with 5 and 10
- Draw pictures to solve addition story problems

Lesson 1: Adding with 0, 1, 2

Objectives:
- Count on to add, starting with the greater number

Lesson 2: Doubles

Objectives:
- Recognize doubles as a strategy for remembering sums

Lesson 3: Near Doubles

Objectives:
- Use doubles facts to learn near doubles facts

Lesson 4: Facts with 5 on a Ten-Frame

Objectives:
- Use a ten-frame to write addition facts with 5

Lesson 5: Making 10 on a Ten-Frame

Objectives:
- Use two ten-frames to model addition facts

Lesson 6: Draw a Picture and Write a Number Sentence

Objectives:
- Draw pictures to solve addition story problems
Lesson 7: Unit Review

Lesson 8: Unit Test

Unit 8: Subtraction Facts to 12

This unit reinforces the inverse relationship between addition and subtraction. Your student will become more comfortable recalling basic subtraction facts. Using prior knowledge of addition and double facts, your student will develop different approaches to solving subtraction sentences. He will learn to mentally compute the differences between two numbers through recognition rather than counting. This unit’s problem-solving strategy is “draw a picture and write a number sentence.”

Objectives:
- Master concepts of 0 less than, 1 less than, and 2 less than when subtracting 0, 1, and 2
- Connect addition facts with corresponding subtraction facts
- Draw a picture and write a number sentence to solve subtraction story problems

Lesson 1: Subtracting with 0, 1, 2

Objectives:
- Master concepts of 0 less than, 1 less than, and 2 less than when subtracting 0, 1, or 2

Lesson 2: Thinking Addition

Objectives:
- Use doubles addition facts to master related subtraction facts

Lesson 3: Thinking Addition to 8 to Subtract

Objectives:
- Understand how addition facts to 8 relate to subtraction facts to 8

Lesson 4: Thinking Addition to 12 to Subtract

Objectives:
- Write related addition and subtraction facts to 12

Lesson 5: Draw a Picture and Write a Number Sentence

Objectives:
- Draw a picture and write a number sentence to solve subtraction story problems

Lesson 6: Unit Review

Lesson 7: Unit Test

Unit 9: Geometry

Your student will examine the similarities and differences between plane shapes and solid figures. Through relating plane and solid shapes to real-world representations, your student will develop a clearer understanding of geometry and its presence in the world. This unit introduces and explores combining and breaking apart shapes to make new shapes and
identifying the attributes of geometric solids. This unit’s problem-solving strategy is “make an organized list.”

Objectives:
- Sort and identify plane shapes and compare them to everyday objects
- Combine and break apart shapes to make new geometric shapes
- Make organized lists to solve problems
- Identify the attributes of geometric solids

**Lesson 1: Identifying Plane Shapes**

Objectives:
- Identify and name standard plane shapes and recognize them in the environment

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

**Lesson 2: Properties of Plane Shapes**

Objectives:
- Sort plane shapes and identify their properties

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

**Lesson 3: Building with Shapes**

Objectives:
- Combine plane shapes to make different pictures

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

**Lesson 4: Making New Shapes from Shapes**

Objectives:
- Combine two-dimensional geometric shapes to make new two-dimensional geometric shapes

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

**Lesson 5: Breaking Apart Shapes to Make Shapes**

Objectives:
- Break apart large shapes to make smaller shapes

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

**Lesson 6: Congruence**

Objectives:
- Identify plane shapes that are the same size and the same shape

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

**Lesson 7: Symmetry**

Objectives:
- Understand that a shape shows symmetry if it can be folded into two matching parts

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

**Lesson 8: Make an Organized List (two-day lesson)**

Objectives:
- Make organized lists to solve problems

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

**Lesson 9: Identifying Solid Figures**

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.
Lesson 10: Building with Solid Figures

Objectives:
- Combine solid figures to make new solid figures

Lesson 11: Flat Surfaces and Corners

Objectives:
- Count the number of flat surfaces and vertices on geometric solids

Lesson 12: Sorting Solid Figures

Objectives:
- Identify geometric solids (sphere, cone, cylinder, rectangular prism, and cube), and sort by various attributes

Lesson 13: Unit Review

Lesson 14: Unit Test

Unit 10: Counting and Number Patterns to 100

This unit is dedicated to reinforcing the recognition of patterns within our numerical system. Your student will develop strategies to identify repetition and visually represent number patterns through 100. The introduction of skip counting will allow your student to build upon groups of 10 and discern the significance of place-value. This unit’s problem-solving strategy is “look for a pattern.”

Objectives:
- Use counters to demonstrate relationships among numbers 11 through 20
- Find number patterns and visual patterns on a hundred chart by skip counting with 2s, 5s, and 10s
- Use counters to determine whether a number is odd or even

Lesson 1: Making Numbers 11 to 20

Objectives:
- Read, count, and write numbers 11 to 20

Lesson 2: Using Numbers 11 to 20

Objectives:
- Show numbers 11 to 20 as 1 or 2 more or fewer than another number

Lesson 3: Counting by 10s to 100

Objectives:
- Count groups of 10, up to 10 tens, and write how many

Lesson 4: Counting Patterns on a Hundred Chart

Objectives:
• Find and extend skip-counting patterns on a hundred chart

**Lesson 5: Using Skip Counting**

Objectives:

- Skip count to find the total number of items arranged in sets of 10s, 5s, and 2s

**Lesson 6: Odd and Even Numbers**

Objectives:

- Identify numbers as odd or even

**Lesson 7: Patterns in Tables**

Objectives:

- Solve problems by finding patterns in a table of related number pairs

**Lesson 8: Unit Review**

**Lesson 9: Unit Test**
MATH 1 B
Math 1 B

In Math 1 B, the student will continue to expand his understanding of mathematical concepts, which are organized according to the following categories: number and operations, algebra, measurement, and data analysis. Within each category, concepts are developed through the mathematical processes of problem-solving, reasoning, communication, connections, and representations. Building both conceptual knowledge and procedural fluency supports the student’s development of mathematical thinking and reasoning in solving various problems of authentic contexts. The Scott Foresman and Addison Wesley series textbook, *enVisionMATH*, is the primary resource for this course.

The student will continue to study number concepts, such as comparing and ordering whole numbers through 100, as well as continue to add and subtract whole numbers through 18. Next, the student will extend his understanding of number concepts by counting money and will engage in hands-on learning of measurement by finding length, capacity, weight, mass, time, and temperature using the appropriate tools and units. The student will connect numbers to statistics as he learns to gather data, display data in graphs, and interpret the information. The student will expand his knowledge of fractions by learning that they are equal parts of an object. Finally, the student will extend his understanding of operations to include the addition and subtraction of two-digit whole numbers.

**Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.**

The answer key document for *enVisionMATH Lessons* is located in the Virtual Library in the Answer Keys section and is not included as a resource in the Course Guide. You can access the Answer Keys in the Virtual Library: Home > Curriculum and Instruction > Answer Keys.

**Unit 1: Tens and Ones**

In this unit, your student continues to explore the concept of grouping by tens. He will notice the efficiency of a base-ten numerical system, as well as express a set of objects as multiple groups of ten and leftovers. Your student will connect visual representations with both written and spoken numbers. This unit’s problem-solving strategy is “make an organized list.”

Objectives:
- Count, read, and write two-digit numbers as groups of ten and leftovers
- Model a two-digit number and write its expanded form
- Break apart tens and ones to represent the same number in different ways
- Make an organized list to track solutions to a problem

**Lesson 1: Counting with Groups of 10 and Leftovers**

Objectives:
- Read and write two-digit numbers as groups of 10 and some left over

**Lesson 2: Numbers Made with Tens**

Objectives:
- Count groups of 10, up to 10 tens, and write how many

**Lesson 3: Tens and Ones/Expanded Form**

Objectives:
- Use groups of tens and ones to show and write a given two-digit number
- Model a two-digit number and write its expanded form

**Lesson 4: Ways to Make Numbers**

Objectives:
Lesson 5: Make an Organized List

Objectives:
- Solve problems by making a list to show different ways to make a number

Lesson 6: Unit Review

Lesson 7: Tens and Ones Unit Test

Unit 2: Comparing and Ordering Numbers to 100

By emphasizing comparisons, this unit enhances your student’s knowledge of numerical order. The introduction of mathematical symbols, less than, greater than, and equal to, coupled with visual examples helps your student comprehend the quantitative significance of numbers. Estimating place on a number line reinforces ideas of the order and relative size of multiple numbers in relationship to each other.

Objectives:
- Use a hundred chart to show more than and less than relationships
- Compare two-digit numbers using models and identify missing numbers using parts of a hundred chart
- Estimate positions of numbers on a number line
- Identify numbers that come before or after a given number and order numbers from least to greatest

Lesson 1: 1 More, 1 Less/Making Numbers on a Hundred Chart

Objectives:
- Write the numbers that are 1 more or 1 less and 10 more or 10 less than a two-digit number
- Use a hundred chart to show the relationships of 1 more than, 1 less than, 10 more than, and 10 less than a given number

Lesson 2: Comparing Numbers with <, >, =

Objectives:
- Compare two-digit numbers using models

Lesson 3: Ordering Numbers with a Hundred Chart

Objectives:
- Find missing numbers on a hundred chart

Lesson 4: Number Line Estimation

Objectives:
- Estimate the positions of numbers on a number line marked only in multiples of 10

Lesson 5: Before, After, and Between

Objectives:
- Use the words before, after, and between to order numbers up to 99
Lesson 6: Ordering Three Numbers

Objectives:
• Order numbers from least to greatest, given 3 two-digit numbers

Lesson 7: Unit Review

Lesson 8: Comparing and Ordering Numbers to 100 Unit Test

Unit 3: Counting Money

Your student identifies, compares, and skip-counts to classify and organize money in this unit. Assigning a value to each different coin allows for comparison; and through manipulating the coins to express varying amounts, the unit provides an opportunity to associate our monetary number system with real-life experiences. In addition to learning multiple ways to express a given amount, your student judges which coins are necessary to make certain purchases. This unit’s problem-solving strategy is “try, check, and revise.”

Objectives:
• Identify the value of pennies, nickels, and dimes
• Identify quarters, half dollars, and dollars and groups of coins that have the same value
• Use skip counting to find the value of collections of coins
• Solve problems by using the try, check, and revise strategy

Lesson 1: Values of Penny and Nickel

Objectives:
• Identify the value of combinations of nickels and pennies

Lesson 2: Values of Penny, Nickel, and Dime

Objectives:
• Identify the value of combinations of dimes, nickels, and pennies

Lesson 3: Value of Quarter

Objectives:
• Identify a quarter and find groups of coins that have the same value as a quarter

Lesson 4: Values of Half Dollar and Dollar

Objectives:
• Learn to identify half dollars and dollars and learn their values

Lesson 5: Counting Sets of Coins

Objectives:
• Count collections of coins that include half dollars, quarters, dimes, nickels, and pennies

Lesson 6: Try, Check, and Revise
Lesson 7: Unit Review

Lesson 8: Counting Money Unit Test

Unit 4: Measurement

This unit expands your student’s knowledge of measurement concepts. Your student uses estimated measurement and exact measurement to compare and order the lengths of everyday objects. Standard units for length, feet and inches, and the metric unit, centimeter, are introduced. The idea of magnitude is reinforced as your student is asked to choose appropriate units for measuring objects of varying sizes. Your student will also estimate and compare the temperature of different objects. This unit’s problem-solving strategy is “use reasoning.”

Objectives:
• Compare and order objects by length
• Use nonstandard units to estimate, measure and compare the lengths of objects
• Estimate, measure, and compare the lengths of objects using nonstandard and standard units
• Estimate and compare the temperature of different objects
• Use reasoning to measure objects

Lesson 1: Comparing and Ordering by Length

Objectives:
• Compare and order lengths of objects

Lesson 2: Indirect Measurement

Objectives:
• Indirectly compare objects by length

Lesson 3: Units to Estimate and Measure Length

Objectives:
• Estimate, measure, and compare lengths of objects by using a nonstandard unit
• Use nonstandard units to measure the length of different objects

Lesson 4: More Measuring Length

Objectives:
• Use connecting cubes as nonstandard units to measure and compare the lengths and heights of objects

Lesson 5: Use Reasoning

Lesson 6: Feet and Inches

Objectives:
• Estimate and measure the lengths of objects in inches and feet using a ruler

Lesson 7: Centimeters
Objectives:
- Estimate and measure the length of objects in centimeters using a ruler

Lesson 8: Comparing and Ordering by Temperature

Objectives:
- Estimate and compare the temperature of different objects

Lesson 9: Unit Review

Lesson 10: Measurement Unit Test

Unit 5: Time

In this unit, your student explores the measurement of time. This includes telling time to the hour and to the half hour. He also learns how to represent time on both digital and analog clocks. While our system for measuring time is more arbitrarily based than our base-ten numeration system, it is important that your student understands the fundamental units of time and the comparative significance of each. This unit’s problem-solving strategy is “use data from a table.”

Objectives:
- Tell and write time to the hour and half hour using digital and analog clocks
- Read and use a table
- Read and use a calendar
- Create a schedule showing times and activities

Lesson 1: Understand Hour & Minute Hands/Time to the Hour

Objectives:
- Identify the hour and minute hands on a clock and tell time to the hour
- Tell and write time to the hour using digital and analog clocks

Lesson 2: Telling and Writing Time to the Half Hour

Objectives:
- Show and tell time to the half hour

Lesson 3: Using the Calendar

Objectives:
- Read and use a calendar

Lesson 4: Use Data from a Table

Objectives:
- Read and use a schedule

Lesson 5: Unit Review

Lesson 6: Time Unit Test

Unit 6: Addition Facts to 18

This unit encompasses all possible addend combinations for which the sum is 18. Building upon your student’s prior knowledge of doubles facts, this unit uses doubles-plus-1 and doubles-plus-2 strategies to solve addition sentences. Your student also makes use of her
base-ten knowledge to add by making groups of ten in order to add 9 and 8. The unit sets a foundation for the later development of arithmetic principles by introducing the idea that a set of numbers can be added in any order. This unit’s problem-solving strategy is “two-question problems.”

Objectives:
- Recognize the doubles number relationships and use it as a strategy for remembering addition facts
- Solve two-question problems by using the answer to the first question to answer the second question
- Use counters and ten-frames to make 10 as a strategy for adding 9 and 8
- Use the associative and commutative properties to add three numbers

Lesson 1: Doubles

Objectives:
- Recognize the doubles relationship and use it as a strategy for remembering addition facts

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 2: Doubles Plus 1

Objectives:
- Master addition facts where the addends are 1 apart

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 3: Doubles Plus 2

Objectives:
- Master addition facts where the addends are 2 apart

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 4: Two-Question Problems

Objectives:
- Solve two-question problems by using the answer to the first question to answer the second question

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 5: Making 10 to Add 9

Objectives:
- Master addition facts where one addend is 9

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 6: Making 10 to Add 8

Objectives:
- Master addition facts where one addend is 8

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 7: Adding Three Numbers

Objectives:
- Use the Associative and Commutative Properties to add three numbers

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 8: Word Problems with Three Addends

Objectives:
- Solve word problems that call for addition of three whole numbers whose sum is less than or equal to 20
Lesson 9: Unit Review

Lesson 10: Addition Facts to 18 Unit Test

Unit 7: Subtraction Facts to 18

Your student revisits work with subtraction facts in this unit. Throughout the unit, he continues to explore the inverse relationship between addition and subtraction by using visual part-part-whole representations of equations. Your student also identifies corresponding addition and subtraction facts as fact families, which helps in the mastery of both operations. This unit’s problem-solving strategy is “draw a picture and write a number sentence.”

Objectives:
- Use counters and part-part-whole models to show and write related addition and subtraction facts
- Use a related addition fact to find the missing part in a subtraction problem
- Draw pictures and write number sentences to solve addition and subtraction story problems

Lesson 1: Using Related Facts

Objectives:
- Find subtraction facts to 18 and learn the relationship between addition and subtraction

Lesson 2: Fact Families

Objectives:
- Use a part-part-whole model to find the subtraction facts and addition facts in a fact family

Lesson 3: Using Addition to Subtract/Subtraction Facts

Objectives:
- Use a related addition fact to find the missing part in a subtraction problem
- Use related addition facts to solve subtraction problems

Lesson 4: Draw a Picture and Write a Number Sentence

Objectives:
- Draw pictures and write number sentences to solve addition and subtraction story problems

Lesson 5: Unit Review

Lesson 6: Subtraction Facts to 18 Unit Test

Unit 8: Data and Graphs

In this unit, your student learns the most effective ways to collect, categorize, and display data. Differentiating between real-object graphs, picture graphs, and bar graphs depends on the amount and type of data being collected. Graphs provide a useful way to organize and present information in real-life situations. Additionally, this unit investigates the likelihood of events as expressed through probability. This unit’s problem-solving strategy is “make a graph.”

Objectives:
• Use information from bar graphs and picture graphs to answer questions and draw conclusions
• Describe the location of an object shown on a grid
• Collect a set of data and organize it in a real graph
• Use data in a table to complete a graph
• Describe the probability that an event will occur

Lesson 1: Using Data from Real Graphs
Objectives:
• Use a real-object graph to answer questions and draw conclusions

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 2: Using Data from Picture Graphs
Objectives:
• Use a picture graph to answer questions and draw conclusions

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 3: Using Data from Bar Graphs
Objectives:
• Use a bar graph to answer questions and draw conclusions

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 4: Location on a Grid
Objectives:
• Describe the location of an object shown on a grid

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 5: Collecting Data/Making Real Graphs
Objectives:
• Record data using tally marks
• Collect a set of data and organize it in a real graph

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 6: Making Picture Graphs
Objectives:
• Organize and analyze data using a picture graph

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 7: Make a Graph
Objectives:
• Use data in a table to complete a bar graph

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 8: Certain or Impossible
Objectives:
• Describe the likelihood of an event as certain or impossible

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 9: Likely or Unlikely
Objectives:
• Describe the likelihood of an event as likely or unlikely

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.
Lesson 10: Unit Review

Lesson 11: Data and Graphs Unit Test

Unit 9: Fractional Parts
In this unit, your student expands his knowledge of fractions as parts of a whole. Your student identifies and describes equal parts of an object, and learns to equate them to real-life situations. The concepts your student masters in this unit serve as a foundation for furthering knowledge of fractional parts. This unit’s problem-solving strategy is “draw a picture.”

Objectives:
- Describe equal parts of a shape
- Identify and show specified parts of a set
- Draw pictures to solve problems related to parts of a group

Lesson 1: Making Equal Parts

Objectives:
- Determine whether a shape is divided into equal or unequal parts

Lesson 2: Describing Equal Parts of Whole Objects

Objectives:
- Describe equal parts of a shape

Lesson 3: Making Halves and Fourths

Objectives:
- Identify halves and fourths of circles and rectangles

Lesson 4: Making Parts of a Set

Objectives:
- Show parts of a set

Lesson 5: Describing Parts of Sets

Objectives:
- Describe parts of a set

Lesson 6: Draw a Picture

Objectives:
- Draw pictures to solve problems related to parts of a group

Lesson 7: Unit Review

Lesson 8: Fractional Parts Unit Test

Unit 10: Adding and Subtracting with Tens and Ones
This unit provides your student with the opportunity to continue working with tens and ones while adding and subtracting. With help from visual representations and the reinforcement of addition and subtraction strategies, your student will develop a greater understanding of place value with multi-digit numbers. This unit encourages your student to experiment with different approaches to a problem, which include counting cubes as a tens and ones model,
using a hundred chart, and implementing a mental math addition or subtraction strategy. This unit’s problem-solving strategy is “extra information.”

Objectives:
- Add multiples of 10 to two-digit numbers
- Add one-digit numbers to two-digit numbers with and without regrouping
- Subtract multiples of 10 from two-digit numbers
- Subtract one-digit numbers from two-digit numbers with and without regrouping
- Solve problems by identifying unnecessary information and writing number sentences

Lesson 1: Adding Groups of 10

Objectives:
- Add two multiples of 10 for sums to 100

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 2: Adding Tens on a Hundred Chart/Two-Digit Numbers

Objectives:
- Use a hundred chart to add multiples of 10 to two-digit numbers
- Add a multiple of 10 to a two-digit number

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 3: Using Mental Math to Add Tens

Objectives:
- Add two-digit numbers and multiples of ten mentally.

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 4: Adding to a Two-Digit Number

Objectives:
- Add one-digit numbers to two-digit numbers with and without regrouping and record the sum in horizontal form

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 5: Subtracting Groups of 10

Objectives:
- Subtract 10 from multiples of 10 in the range 10-90.

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 6: Subtracting on a Hundred Chart/Two-Digit Numbers

Objectives:
- Use a hundred chart to subtract multiples of 10 from two-digit numbers
- Subtract a multiple of 10 from a two-digit number

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 7: Using Mental Math to Subtract Tens

Objectives:
- Subtract multiples of 10 from two-digit numbers using mental math.

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 8: Subtracting from a Two-Digit Number

Objectives:
- Subtract one-digit numbers from two-digit numbers with and without regrouping and record the difference in horizontal form

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.
Lesson 9: Extra Information

Objectives:
- Solve problems by identifying unnecessary information and writing number sentences

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 10: Unit Review

Lesson 11: Adding and Subtracting with Tens & Ones Unit Test
MATH 2 A
Math 2 A

In Math 2 A, the student will learn mathematical concepts that are organized under the categories of number and operations and algebra. Within each category, concepts are developed through the mathematical processes of problem-solving, reasoning, communication, connections, and representations. Building both conceptual knowledge and procedural fluency supports the student’s development of mathematical thinking and reasoning in solving various problems of authentic contexts. The Scott Foresman and Addison Wesley series textbook, enVisionMATH, is the primary resource for this course.

The student will study number concepts, including investigating place value with whole numbers up to 100. The student will solidify his understanding of the concepts of addition and subtraction as inverse properties through the use of patterns and relationships, various mental mathematics strategies, and concepts involving money.

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

The answer key document for enVisionMATH Lessons is located in the Virtual Library in the Answer Keys section and is not included as a resource in the Course Guide. You can access the Answer Keys in the Virtual Library: Home > Curriculum and Instruction > Answer Keys.

Unit 1: Let’s Learn Math!

In this unit, your student will learn about the activities she will do in math class. The first lesson, intended for Learning Coaches, provides advice for using the Lesson Guide to support your student, and details the resources found in the course. It also offers helpful tips for building your student's math skills. The second lesson is intended for students and their Learning Coaches. This lesson will introduce your student to the concept of math, and describe the structure of math lessons.

Objectives:
- Understand how to find and use the Coaching Guide
- Locate and describe lesson resources
- Identify ways to promote mathematical thinking in your daily life
- Describe the different parts of a lesson
- Describe the different types of assessments

Lesson 1: Learning Coach: Support Your Student in Math

Lesson 2: Welcome to Math 2!

Objectives:
- Locate and describe lesson resources
- Describe the different parts of a lesson
- Describe the different types of assessments

Unit 2: Addition Strategies

Addition facts, strategies, and properties are reinforced in this unit. Your student will practice using different techniques to commit facts to memory. This makes mental math increasingly easier as your student will be able to quickly answer addition sentences. Your student will develop associations between fact families, such as understanding that addends can be combined in any order, as well as find the sum of multiple numbers.

Objectives:
- Write addition sentences involving 0, 1, or 2
- Write addition facts in which both addends are the same or one apart
- Use the commutative property to find sums
- Find sums by making 10 when adding 9 and 8

Lesson 1: Adding 0, 1, 2

Objectives:
- Master addition facts involving 0, 1, and 2

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.
Lesson 2: Doubles

Objectives:
- Master addition facts in which both addends are the same

Lesson 3: Near Doubles

Objectives:
- Master addition facts where the addends are 1 apart

Lesson 4: Adding in Any Order

Objectives:
- Use the commutative property to find sums

Lesson 5: Adding Three Numbers

Objectives:
- Find the sum of three addends using any order

Lesson 6: Making 10 to Add 9

Objectives:
- Find sums by making 10 when adding 9

Lesson 7: Making 10 to Add 8

Objectives:
- Find sums by making 10 when adding 8

Lesson 8: Unit Review

Objectives:
- Review unit concepts

Lesson 9: Unit Test

Unit 3: Subtraction Strategies

Your student will expand his knowledge of addition facts in order to create, understand, and solve subtraction sentences. Building on the inverse relationship of addition and subtraction, your student will use strategies to help him memorize basic subtraction facts and identify fact families involving both operations. The visual representation of a problem will help your student comprehend the missing part in a subtraction sentence. This unit’s problem-solving strategy is “two-question problems.”

Objectives:
- Subtract 0, 1, and 2 from a number
- Find differences by using doubles and related addition facts
- Subtract by finding missing addends
- Solve two-question problems by using the answer to the first question to answer the second question

Lesson 1: Subtracting 0, 1, 2
• Subtract 0, 1, and 2 from a number by applying the concepts of 0 less than, 1 less than, and 2 less than a number

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

**Lesson 2: Thinking Addition to Subtract Doubles**

Objectives:
• Use addition doubles facts to subtract

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

**Lesson 3: Thinking Addition to 10 to Subtract**

Objectives:
• Find differences by using related addition facts to 10

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

**Lesson 4: Thinking Addition to 18 to Subtract**

Objectives:
• Find differences by using related addition facts to 18

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

**Lesson 5: Finding the Missing Part**

Objectives:
• Subtract by finding missing addends

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

**Lesson 6: Two-Question Problems**

Objectives:
• Solve two-question problems by using the answer to the first question to answer the second question

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

**Lesson 7: Unit Review**

Objectives:
• Review unit concepts

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

**Lesson 8: Unit Test**

**Unit 4: Place Value: Numbers to 100**

This unit is focused on your student’s mastery of place value as it relates to numbers through 100. Your student will identify the significance of tens and ones, locate numbers on a hundred chart, and use position words to describe the order of individual numbers within a set. The patterns within place value are reinforced throughout this unit. Your student will learn and practice the oral names of numbers, how each name is written, and the varying composition of tens and ones. This unit’s problem-solving strategy is “use data from a chart.”

Objectives:
• Represent two-digit numbers as groups of tens and ones
• Read and write number words for numbers 0–99
• Use models and symbols to compare and order two-digit numbers
• Extend patterns on a hundred chart and identify even and odd numbers
• Use data from a chart to solve problems

**Lesson 1: Models for Tens/Models for Tens and Ones**

Objectives:
Lesson 2: Reading and Writing Numbers

Objectives:
• Read and write number words for numbers 0–99

Lesson 3: Using Models to Compare/Using Symbols to Compare

Objectives:
• Compare two-digit numbers using models
• Compare two-digit numbers using symbols

Lesson 4: Before, After, and Between/Order Numbers

Objectives:
• Identify and write numbers that are one before, one after, or between given numbers
• Order 3 two-digit numbers from least to greatest or from greatest to least

Lesson 5: Number Patterns on a Hundred Chart

Objectives:
• Identify and extend number patterns on a hundred chart

Lesson 6: Even and Odd Numbers/Use Data from a Chart

Objectives:
• Identify even and odd numbers
• Use data from a chart to solve problems

Lesson 7: Unit Review

Objectives:
• Review unit concepts

Lesson 8: Unit Test

Unit 5: Counting Money

In this unit, your student will use money as a real-life application of mathematical concepts, which he practiced in previous units. By assigning worth and classifying coins by their distinctive attributes, your student will organize and skip-count to determine the value of a given set. Counting an assortment of coins beginning with the greatest individual value and continuing with other coins as they decrease in value establishes benchmarks for determining the overall worth of the collection. Your student will be introduced to the concept of equivalence as he learns how to find different ways to make up a set monetary value. This unit also helps with the conversion of counting strategies to mental math. The unit’s problem-solving strategy is “make an organized list.”

Objectives:
• Identify individual values and count collections of coins that include half-dollars, quarters, dimes, nickels, and pennies
• Show the same amount of money using the same amount of coins
• Count and write money amounts greater than one dollar
• Make an organized list to find different combinations of coins

Lesson 1: Dime, Nickel, and Penny

Objectives:
• Identify the value of a group of dimes, nickels, and pennies through 99 cents

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 2: Quarter and Half-Dollar

Objectives:
• Count a collection of coins that includes half-dollars, quarters, dimes, nickels, and pennies

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 3: Counting Collections of Coins

Objectives:
• Count collections of coins that include half-dollars, quarters, dimes, nickels, and pennies

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 4: Ways to Show the Same Amount

Objectives:
• Show the same amount of money using different sets of coins

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 5: One Dollar

Objectives:
• Count money amounts greater than one dollar and write the amount with a dollar sign and a decimal point

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 6: Make an Organized List (two-day lesson)

Objectives:
• Make an organized list to find different combinations of coins

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 7: Unit Review

Objectives:
• Review unit concepts

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 8: Unit Test

Unit 6: Mental Addition

The purpose of this unit is to practice and improve your student’s ability to solve addition problems using mental math. There are many strategies for using mental math to find the sum of an addition sentence, and individual preference plays a large role in the development of each student’s choice. Grounded by a solid knowledge of basic fact relationships, your student’s familiarity with addends is crucial to the development of mental math approaches to addition problems. The unit’s problem-solving strategy is “look for a pattern.”

Objectives:
• Use mental math to add tens and ones to a two-digit number
Lesson 1: Adding Tens

Objectives:
- Mentally add multiples of 10 to a two-digit number

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 2: Adding Ones

Objectives:
- Mentally add a two-digit number to a one-digit number

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 3: Adding Tens and Ones

Objectives:
- Add a two-digit number to a two-digit number using mental math

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 4: Adding on a Hundred Chart

Objectives:
- Use a hundred chart to add 2 two-digit numbers

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 5: Adding Multiples of 10

Objectives:
- Add using multiples of 10

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 6: Look for a Pattern (two-day lesson)

Objectives:
- Use number patterns to solve problems

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 7: Unit Review

Objectives:
- Review unit concepts

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 8: Unit Test

Unit 7: Mental Subtraction

The purpose of this unit is to practice and improve your student's ability to solve subtraction problems with mental math. Subtraction is largely based on your student's ability to recognize and recall related addition facts. The depth of your student's addition knowledge and his ability to associate facts between the two operations serves as a foundation for more complicated mathematical operations. This unit's problem-solving strategy is "missing or extra information."

Objectives:
- Mentally subtract multiples of 10 from two-digit numbers
- Find missing parts of 100 by counting up from a given number
- Subtract a two-digit number from a two-digit number with mental math and with models
- Determine whether problems can be solved with missing information or extra information
Lesson 1: Subtracting Tens

Objectives:
• Subtract multiples of 10 from two-digit numbers using mental math

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 2: Finding Parts of 100

Objectives:
• Find the missing part of 100 by counting up from the given part

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 3: Subtracting Multiples of 10

Objectives:
• Subtract using multiples of 10

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 4: Subtracting on a Hundred Chart

Objectives:
• Find the difference between two-digit numbers less than 100

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 5: Adding On to Subtract

Objectives:
• Subtract a two-digit number from a two-digit number mentally or with models

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 6: Missing or Extra Information

Objectives:
• Identify whether there is extra information or missing information in a problem
• Determine whether it is possible to solve a problem if it has missing information or extra information

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 7: Unit Review

Objectives:
• Review unit concepts

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 8: Unit Test

Unit 8: Adding Two-Digit Numbers

In this unit, your student will add multiple numbers with sums less than 100. Your student will use her knowledge of place value and basic addition facts to break apart complicated problems in order to add. Your student will learn when to regroup ten ones as one ten and when to add two-digit numbers. She will also use a number line to model two-digit addition. The unit’s problem-solving strategy is “draw a picture and write a number sentence.”

Objectives:
• Use models to add a one-digit number to a two-digit number and decide if regrouping is necessary
• Use place-value models and the standard algorithm to add 2 two-digit numbers with and without regrouping
• Use paper and pencil to add 3 two-digit numbers
• Draw pictures and write number sentences to solve addition problems

© 2016 Connections Education LLC. All rights reserved.
Lesson 1: Regrouping 10 Ones for 1 Ten
Objectives:
• Use models to add a one-digit number to a two-digit number
  Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 2: Models to Add Two- and One-Digit Numbers
Objectives:
• Use concrete models to add a one-digit number to a two-digit number and decide if regrouping is needed
  Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 3: Adding Two- and One-Digit Numbers
Objectives:
• Add a one-digit number to a two-digit number, regroup if necessary, and record the process in a vertical addition frame
  Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 4: Models to Add Two-Digit Numbers
Objectives:
• Use place-value models and the standard algorithm to add 2 two-digit numbers
  Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 5: Adding Two-Digit Numbers
Objectives:
• Use the standard algorithm symbolically to add two-digit numbers with and without regrouping
  Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 6: Adding on a Number Line
Objectives:
• Use number lines to model two-digit addition
  Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 7: Adding Three Numbers
Objectives:
• Use paper and pencil to add 3 two-digit numbers
  Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 8: Draw a Picture and Write a Number Sentence
Objectives:
• Draw pictures and write number sentences to solve addition problems
  Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 9: Unit Review
Objectives:
• Review unit concepts
  Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 10: Unit Test

Unit 9: Subtracting Two-Digit Numbers

Appendix A.2.b Mathematics Course Guides
As your student makes the transition from subtracting one-digit numbers to subtracting two-digit numbers, some strategies such as counting up may become difficult to use. In this unit your student will work with models to better understand subtraction of two-digit numbers and implement more effective subtraction strategies. Using cubes as representations of tens and ones will allow your student to visualize the need to break apart groups of 10 when subtracting. He will also use a number line to model two-digit subtraction. Your student will learn that another example of the inverse relationship between the two operations is that addition may be used to check answers for subtraction problems. This unit’s problem-solving strategy is “two-question problems.”

Objectives:
- Use models and the standard algorithm to subtract a one-digit number from a two-digit number with or without regrouping
- Use models and the standard algorithm to subtract two-digit numbers
- Relate addition to subtraction by using one operation to check the other
- Select the correct operation to solve each part of a two-question problem

Lesson 1: Regrouping 1 Ten for 10 Ones

Objectives:
- Regroup 1 ten as 10 ones when subtracting

Lesson 2: Models to Subtract Two- and One-Digit Numbers

Objectives:
- Use models to subtract a one-digit number from a two-digit number with or without regrouping

Lesson 3: Subtracting Two- and One-Digit Numbers

Objectives:
- Subtract a one-digit number from a two-digit number with and without regrouping using the standard algorithm

Lesson 4: Models to Subtract Two-Digit Numbers

Objectives:
- Use models to subtract two-digit numbers, with and without regrouping

Lesson 5: Subtracting Two-Digit Numbers

Objectives:
- Use the standard subtraction algorithm to subtract a two-digit number from another two-digit number

Lesson 6: Subtracting on a Number Line

Objectives:
- Use number lines to model two-digit subtraction

Lesson 7: Using Addition to Check Subtraction

Objectives:
- Relate addition to subtraction by using one operation to check the other
Lesson 8: Two-Question Problems

Objectives:
- Solve two-question problems
- Select the operation to solve each question in a two-question problem

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 9: Unit Review

Objectives:
- Review unit concepts

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 10: Unit Test

Unit 10: Using Addition and Subtraction

In this unit, your student will apply addition and subtraction knowledge by making use of different strategies to solve problems. Your student will realize that the same method may not be the best choice to solve every problem. Your student will learn that estimation is used as an aid in finding sums and differences and is used to check answers that are either computed mentally or with paper and pencil. Your student will equate mathematical operations to real-life situations using two-digit coin amounts and word problems to add and subtract. This unit's problem-solving strategy is "try, check, and revise."

Objectives:
- Complete addition and subtraction problems using two-digit coin amounts
- Estimate the sums and differences of two-digit numbers
- Use different methods to solve addition and subtraction problems
- Solve problems involving adding and subtracting money by using the try, check, and revise strategy

Lesson 1: Adding Money

Objectives:
- Complete and record addition problems using two-digit coin amounts

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 2: Ways to Add

Objectives:
- Use different methods to solve addition problems

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 3: Subtracting Money

Objectives:
- Subtract using two-digit coin amounts

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 4: Ways to Subtract

Objectives:
- Use different methods to solve two-digit subtraction problems

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 5: Try, Check, and Revise

Objectives:
- Solve problems involving adding and subtracting money by using the try, check, and revise strategy

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.
Lesson 6: Unit Review

Objectives:
- Review unit concepts

Objective derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 7: Unit Test
MATH 2 B
In Math 2 B, the student will continue to expand upon his understanding of mathematical concepts, which are organized according to the following categories: number and operations, geometry, measurement, data analysis, and probability. Within each category, concepts are developed through the mathematical processes of problem-solving, reasoning, communication, connections, and representations. Building both conceptual knowledge and procedural fluency supports the student’s development of mathematical thinking and reasoning in solving various problems of authentic contexts. The Scott Foresman and Addison Wesley series textbook, *enVisionMATH*, is the primary resource for this course.

The student will begin the semester by applying his understanding of numbers and patterns to geometric concepts in two and three dimensions. Next, the student will build upon his prior knowledge of fractions as equal parts of a whole before the student explores whole numbers and parts of numbers. The student will measure length, area, time, and temperature using the appropriate tools and units. The student will also connect numbers to statistics as he learns to gather data, display data in graphs, and interpret the information. By the end of the course, the student will extend his understanding of whole numbers to include numbers up to 1,000 and learn to add and subtract three-digit numbers. The student will also begin to approach the concepts of multiplication and division of whole numbers.

**Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.**

The answer key document for *enVisionMATH Lessons* is located in the Virtual Library in the Answer Keys section and is not included as a resource in the Course Guide. You can access the Answer Keys in the Virtual Library: Home > Curriculum and Instruction > Answer Keys.

**Unit 1: Geometry**

This unit develops your student’s ability to recognize and manipulate shapes. Your student will exercise his spatial sense through visualizing, analyzing, and interpreting properties of shapes. The visual aspect of each lesson is crucial in the development of your student’s geometric knowledge, and it is also important for your student to learn to identify similar shapes in his everyday life.

Objectives:
- Identify attributes of plane shapes and solid figures
- Cut shapes apart to make new shapes
- Divide a rectangle into equal squares
- Use clues to solve riddles about plane shapes and solid figures

**Lesson 1: Flat Surfaces, Vertices, and Edges**

Objectives:
- Identify solid figures by their faces or flat surfaces, edges, and vertices

**Lesson 2: Relating Plane Shapes to Solid Figures**

Objectives:
- Identify the plane shapes that form the flat surfaces of solid figures

**Lesson 3: Polygons and Angles**

Objectives:
- Identify and draw polygons (triangles, quadrilaterals, pentagons, and hexagons) and list their attributes

**Lesson 4: Making New Shapes**

Objectives:
Lesson 5: Cutting Shapes Apart

Objectives:
• Cut shapes apart to make new shapes

Lesson 6: Dividing Rectangles into Equal Squares

Objectives:
• Divide rectangles into equal squares and count how many squares are needed to completely partition the rectangle

Lesson 7: Using Reasoning

Objectives:
• Use clues to solve riddles about plane shapes and solid figures

Lesson 8: Unit Review

Objectives:
• Review unit concepts

Lesson 9: Unit Test

Unit 2: Fractions

In this unit, your student will explore fractions as parts of a whole. She will identify and write fractions to show a part of a set. Visual representations will help to identify fractional parts, and your student will learn the significance of the numerator and the denominator as each corresponds to a part-whole relationship. Your student will gain experience identifying and showing various parts of whole numbers by working with numerators of one, called unit fractions, and numerators greater than one, called non-unit fractions. This unit's problem-solving strategy is "use objects."

Objectives:
• Identify and show unit and non-unit fractions of a region
• Estimate the fraction for a given part of a region
• Identify and show fractions of a set
• Use objects to model and solve problems involving fractions of a group

Lesson 1: Wholes and Equal Parts/Unit Fractions

Objectives:
• Determine whether a shape has been divided into equal or unequal parts. If the parts are equal, the student will count the number of parts
• Identify and show a unit fraction of a region

Lesson 2: Non-Unit Fractions and Regions

Objectives:
• Identify and show any fraction of a region
Lesson 3: Estimating Fractional Parts of a Whole

Objectives:
- Estimate the fraction for a given part of a region

Lesson 4: Fractions of a Set

Objectives:
- Identify and show fractions of a set

Lesson 5: Use Objects

Objectives:
- Use objects to solve problems finding fractions of a group

Lesson 6: Unit Review

Objectives:
- Review unit concepts

Lesson 7: Unit Test

Unit 3: Measurement: Length and Area

In this unit, your student will use measurement to determine length and area. Measuring with both nonstandard and standard units will further develop visual perception and aid your student in choosing correct units to find length and area. The strategies covered in this unit will encourage your student to use reasoning skills when he is asked to find estimated or exact values for items. Your student will also solve problems involving addition and subtraction in measurement. This unit’s problem-solving strategy is “use objects.”

Objectives:
- Estimate and measure the lengths and heights of objects using nonstandard and standard units
- Count units around shapes to find perimeter
- Use a square pattern block to find the area of a figure
- Use objects to find the distance around shapes

Lesson 1: Exploring Length/Using Nonstandard Units

Objectives:
- Measure the lengths of objects using nonstandard units
- Estimate and measure the lengths and heights of objects using nonstandard units

Lesson 2: Inches

Objectives:
- Estimate and measure items using inches

Lesson 3: Inches, Feet, and Yards

Objectives:
- Estimate and measure items that are about an inch, foot, and yard
Lesson 4: Centimeters

Objectives:

- Estimate and measure items using centimeters

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 5: Centimeters and Meters

Objectives:

- Estimate and measure the lengths and heights of objects in centimeters and meters

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 6: Measuring Length

Objectives:

- Estimate and measure the lengths and heights of objects using different nonstandard units

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 7: Adding and Subtracting in Measurement

Objectives:

- Use addition and subtraction to solve measurement problems

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 8: Comparing Lengths

Objectives:

- Measure to compare lengths and express the length difference in a standard unit

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 9: Exploring Perimeter

Objectives:

- Count units around shapes to find perimeter

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 10: Exploring Area

Objectives:

- Find the area of closed figures using same-sized objects to cover the space inside the figure

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 11: Unit Review

Objectives:

- Review unit concepts

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 12: Unit Test

Unit 4: Time and Temperature

In this unit, your student will measure time and temperature. These two skills involve reading a numbered scale. Your student will learn about the fundamental increments for telling time, as well as the Fahrenheit and Celsius degree scales. Your student will use his knowledge of measuring time and temperature to develop a concept of schedules and climatic change. Along with telling exact times and temperatures, your student will practice...
estimating time and temperature, and he will analyze the results as they impact real-life
surroundings. This unit’s problem-solving strategy is “multiple-step problems.”

Objectives:
- Read and express time with analog and digital clocks
- Develop a sense of comparative time durations
- Complete, read, and use a calendar
- Read and write temperatures shown on Fahrenheit and Celsius thermometers
- Find and use the answers to hidden questions to solve story problems

**Lesson 1: Telling Time to Five Minutes**

Objectives:
- Learn to associate numerals an an analog clock face with increments of
  five minutes

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its
affiliates. All rights reserved.

**Lesson 2: Telling Time Before and After the Hour**

Objectives:
- Read and express time in terms of quarter and half past an hour and
  before an hour

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its
affiliates. All rights reserved.

**Lesson 3: Estimating Time**

Objectives:
- Develop a sense of comparative time durations and the kinds of
  estimations that can be made with them

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its
affiliates. All rights reserved.

**Lesson 4: Using a Calendar**

Objectives:
- Complete, read, and use a calendar

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its
affiliates. All rights reserved.

**Lesson 5: Fahrenheit and Celsius**

Objectives:
- Show, read, and write temperatures shown on Fahrenheit and Celsius
  thermometers

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its
affiliates. All rights reserved.

**Lesson 6: Multiple-Step Problems**

Objectives:
- Find and use the answers to hidden questions to solve story problems

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its
affiliates. All rights reserved.

**Lesson 7: Unit Review**

Objectives:
- Review unit concepts

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its
affiliates. All rights reserved.

**Lesson 8: Unit Test**

Unit 5: Graphs and Probability

Graphs are useful to collect, organize, and display information in order to solve problems.
This unit presents line plots, pictographs, bar graphs, and coordinate graphs as ways to
represent sets of data. Your student will be guided through the interpretive process and will
learn that providing a key and a title for each graph is a crucial part of communicating the graph’s meaning to others. The relative likelihood of events is also introduced in this unit. Your student will use given information to predict the occurrence of a certain event. This unit’s problem-solving strategy is “use a graph.”

Objectives:
- Represent sets of data with pictographs and bar graphs
- Locate and name points on a coordinate grid
- Use data to describe the probability of events
- Use line plots, picture graphs and bar graphs to solve problems

**Lesson 1: Organizing Data**

Objectives:
- Represent a set of data in a tally chart and in a bar graph

**Lesson 2: Graphing Lengths**

Objectives:
- Use a ruler to measure lengths and graph the results on a line plot

**Lesson 3: Pictographs/Bar Graphs**

Objectives:
- Make and use a pictograph to solve problems
- Use data in a tally chart to make a bar graph and answer questions about the data represented in the bar graph

**Lesson 4: Coordinate Graphs**

Objectives:
- Locate and name points on a coordinate grid

**Lesson 5: Likely and Unlikely**

Objectives:
- Use data to describe events as more likely or less likely

**Lesson 6: Certain, Probable, and Impossible**

Objectives:
- Record and analyze data to determine if an event is certain, probable, or impossible

**Lesson 7: Use a Graph**

Objectives:
- Use picture graphs and bar graphs to solve problems

**Lesson 8: Unit Review**

Objectives:
- Review unit concepts
Lesson 9: Unit Test

Unit 6: Numbers and Patterns to 1,000

In this unit, your student will focus on numbers and patterns through 1,000. Your student will represent numbers in a multitude of ways including number words, standard form, and expanded form. Your student will practice identifying patterns as well as comparing and ordering numbers by distinguishing the place value of ones, tens, and hundreds. Identification of counting sequences will help your student conceptualize the relative amount and order of certain numbers. This unit’s problem-solving strategy is “look for a pattern.”

Objectives:
- Count by hundreds and use place-value models to show numbers up to 1,000
- Identify and record three-digit numbers in expanded form, standard form, and number word form
- Identify patterns of numbers increasing by ones, tens, and hundreds
- Compare and order numbers up to 1,000
- Solve problems by finding number patterns

Lesson 1: Building 1,000/Counting Hundreds, Tens, and Ones

Objectives:
- Count by hundreds to 1,000
- Use place-value models to show numbers up to 1,000

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 2: Reading and Writing Numbers to 1,000

Objectives:
- Identify and record three-digit numbers in expanded form, standard form, and number word form

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 3: Changing Numbers by Hundreds and Tens

Objectives:
- Add and subtract multiples of 10 or 100 to and from a three-digit number without regrouping

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 4: Patterns with Numbers on Hundreds Charts

Objectives:
- Find, identify, and apply number patterns to numbers on a hundred chart

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 5: Skip Counting by 5, 10, 100 to 1,000

Objectives:
- Skip count on a number line and use patterns to identify the numbers that come next

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 6: Comparing Numbers

Objectives:
- Compare three-digit numbers using the symbols <, =, >

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 7: Before, After, and Between/Ordering Numbers

Objectives:
• Identify and write numbers that are one before, one after, or between given three-digit numbers
• Order 3 three-digit numbers from least to greatest and greatest to least

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 8: Look for a Pattern

Objectives:
• Solve problems by finding number patterns

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 9: Unit Review

Objectives:
• Review unit concepts

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 10: Unit Test

Unit 7: Three-Digit Addition and Subtraction
In this unit, your student will work with addition and subtraction of three-digit numbers. By writing addends in expanded form and using the Commutative Property of Addition and the Associative Property of Addition, addition with three-digit numbers will become more concrete and easier for your student to understand. Also, subtraction with three-digit numbers will become easier for your student to comprehend when she learns regrouping strategies and other models. The unit emphasizes mental math and estimation as ways to check answers to problems for either operation. This unit’s problem-solving strategy is “make a graph.”

Objectives:
• Use models to add three-digit numbers with and without regrouping
• Find missing parts of a number using mental math strategies
• Find the nearest hundreds of 2 three-digit numbers to estimate their difference
• Use models and a standard algorithm to subtract three-digit numbers
• Make a bar graph using data from a table

Lesson 1: Exploring Adding Three-Digit Numbers

Objectives:
• Explore different strategies for adding three-digit numbers

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 2: Mental Math/Estimating Sums

Objectives:
• Add three-digit numbers mentally without regrouping
• Choose a method to see if the sum of 2 three-digit numbers is enough to equal or exceed a given number

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 3: Models for Adding with Three-Digit Numbers

Objectives:
• Use place-value blocks to add 2 three-digit numbers with regrouping

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 4: Adding Three-Digit Numbers

Objectives:
• Use paper and pencil to add 2 three-digit numbers with regrouping

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.
Lesson 5: Exploring Subtracting Three-Digit Numbers

Objectives:
- Explore different strategies for subtracting three-digit numbers

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 6: Mental Math: Ways to Find Missing Parts

Objectives:
- Given a quantity and one of its parts, the student will find the missing part by counting on or counting back

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 7: Estimating Differences

Objectives:
- Use estimation to select two numbers that have a given difference

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 8: Subtracting Three-Digit Numbers

Objectives:
- Subtract three-digit numbers using a standard algorithm

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 9: Models for Subtracting with Three-Digit Numbers

Objectives:
- Use models to subtract three-digit numbers with regrouping

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 10: Make a Graph

Objectives:
- Make a bar graph using data from a table

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 11: Unit Review

Objectives:
- Review unit concepts

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 12: Unit Test

Unit 8: Multiplication Concepts

In this unit, your student will be introduced to multiplication. Your student will connect basic concepts of addition with different ways to think about situations requiring multiplication. Your student will think of multiplication problems as repeated additions or as an array of items arranged in rows and columns. Your student will learn the multiplication sign and other associated terms for multiplication, and he will explore how multiplication, like addition, is commutative. Your student will also learn how to recognize instances when multiplying numbers within word problems is required, and will implement strategies for finding solutions. This unit’s problem-solving strategy is “draw a picture and write a number sentence.”

Objectives:
- Use repeated addition and arrays to model multiplication stories
- Use multiplication number sentences to write and solve story problems
- Write multiplication problems in both horizontal and vertical forms
- Use arrays to investigate multiplying in any order
- Draw pictures and write number sentences to solve multiplication problems

Appendix A.2.b Mathematics Course Guides
Lesson 1: Repeated Addition and Multiplication

Objectives:
- Model multiplication by repeated addition of concrete objects

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 2: Building Arrays

Objectives:
- Build arrays to model multiplication situations

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 3: Writing Multiplication Stories

Objectives:
- Use multiplication number sentences to write and solve story problems

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 4: Vertical Form/Multiplying in Any Order

Objectives:
- Write multiplication problems in both horizontal and vertical forms
- Use arrays to investigate multiplying in any order

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 5: Draw a Picture and Write a Number Sentence

Objectives:
- Draw pictures and write number sentences to solve multiplication problems

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 6: Unit Review

Objectives:
- Review unit concepts

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 7: Unit Test

Unit 9: Division Concepts and Facts

Relating division to real-life situations will help your student understand division models. This unit introduces two different types of division stories, including sharing division and repeated subtraction division. Each type of division story allows your student to explore division by utilizing a method to interpret conditions and arrive at a solution for a given situation. Your student will also learn to represent division symbolically and demonstrate the inverse relationship of multiplication and division. This unit’s problem-solving strategy is “make a table and look for a pattern.”

Objectives:
- Solve division problems by sharing objects equally among groups
- Solve division problems with repeated subtraction
- Use division number sentences to solve story problems
- Use multiplication to solve related division problems
- Use tables to solve problems involving number patterns

Lesson 1: Division as Sharing

Objectives:
- Solve division problems by sharing objects equally among groups

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.
Lesson 2: Division as Repeated Subtraction

Objectives:
• Solve division problems by using repeated subtraction

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 3: Writing Division Stories

Objectives:
• Use division number sentences to solve story problems

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 4: Relating Multiplication and Division

Objectives:
• Use multiplication to solve related division problems

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 5: Make a Table and Look for a Pattern

Objectives:
• Use tables to solve problems involving number patterns

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 6: Unit Review

Objectives:
• Review unit concepts

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 7: Unit Test
MATH 3 A
Math 3 A

In Math 3 A, the student will learn mathematical concepts that are organized according to the following categories: number and operations, algebra, and geometry. Within each category, concepts are developed through the mathematical processes of problem-solving, reasoning, communication, connections, and representations. Building both conceptual knowledge and procedural fluency supports the student’s development of mathematical thinking and reasoning in solving various problems of authentic contexts. The Scott Foresman and Addison Wesley series textbook, *envisionMATH*, is the primary resource for this course.

The student will study number concepts, such as basic facts operations. The student will learn to perform multi-digit numerical operations using models and manipulatives to increase understanding of the operations. Then the student will investigate the concept of numbers through patterns and relationships. Numbers will also be connected to geometry as the student explores attributes of solids and shapes.

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

The answer key document for *enVisionMATH Lessons* is located in the Virtual Library in the Answer Keys section and is not included as a resource in the Course Guide. You can access the Answer Keys in the Virtual Library: Home > Curriculum and Instruction > Answer Keys. The answer key document for the Daily Spiral Review Answer Keys is located in the BackPack. You can access the Answer Keys in the BackPack under Web Links.

Unit 1: Let's Learn Math!

In this unit, your student will learn about the activities she will do in Math 3. The first lesson, intended for Learning Coaches, provides advice for using the Lesson Guide to support your student, and details the resources found in the course. It also offers helpful tips for building your student’s math skills. The second lesson is intended for students and their Learning Coaches. This lesson will introduce your student to the concept of math, and describe the structure of math lessons.

Objectives:
- Learn how to find and use the Coaching Guide
- Locate and describe lesson resources
- Learn ways to promote mathematical thinking in your daily life
- Describe the different parts of a lesson
- Describe the different types of assessments

Lesson 1: Learning Coach: Support Your Student in Math

Objectives:
- Learn how to find and use the Coaching Guide
- Locate and describe lesson resources
- Learn ways to promote mathematical thinking in your daily life

Lesson 2: Welcome to Math 3!

Objectives:
- Locate and describe lesson resources
- Describe the different parts of a lesson
- Describe the different types of assessments

Unit 2: Adding Whole Numbers

In this unit, your student will use her knowledge and skills of basic addition facts to add whole numbers of greater value. As your student learns to estimate and compute sums of numbers less than 1,000, she will use her background knowledge of place value to model the process of regrouping in the ones and tens place values. Several properties of addition are introduced to further develop your student’s addition strategies. This unit will provide your student with meaningful computational practice through word problems that are presented in authentic contexts. The problem-solving strategy that will be introduced to your student is “draw a picture.”
Objectives:
• Use addition properties
• Learn to round and estimate using mental math
• Add 2- and 3-digit numbers
• Add 3 or more numbers
• Use the draw a picture problem solving strategy

Lesson 1: Addition Meaning and Properties
Objectives:
• Use concrete materials and concepts of addition to model the
  Commutative, Associative, and Identity Properties of Addition

Lesson 2: Add on a Hundred Chart/Use Mental Math to Add
Objectives:
• Use a hundred chart to add two-digit numbers and develop mental math
  strategies
• Solve problems by adding with mental math

Lesson 3: Rounding
Objectives:
• Round three-digit whole numbers to the nearest ten or hundred, by
  comparing to the number halfway between or by using place value

Lesson 4: Estimating Sums
Objectives:
• Solve problems by estimating sums

Lesson 5: Adding 2-Digit Numbers
Objectives:
• Add 2-digit numbers using paper-and-pencil methods and use addition to
  solve problems

Lesson 6: Mid-unit Review
Objectives:
• Review concepts presented thus far in the unit

Lesson 7: Models for Adding 3-Digit Numbers
Objectives:
• Add 3-digit numbers using place-value blocks or pictures and record the
  results using the standard addition algorithm

Lesson 8: Adding 3-Digit Numbers
Objectives:
• Add 3-digit numbers using paper-and-pencil methods and use addition to
  solve problems

Lesson 9: Adding 3 or More Numbers/Draw a Picture
Objectives:
• Add 3 or more 2- and/or 3-digit numbers using paper-and-pencil methods and use addition to solve problems
• Draw a picture to solve a problem

Lesson 10: Adding Whole Numbers Review

Lesson 11: Adding Whole Numbers Test

Unit 3: Subtraction

In this unit, your student’s knowledge and skills in basic facts will support her as she learns to compute differences of whole numbers that are less than 1,000. Your student will use manipulatives and her knowledge of place value to model the process of regrouping in the ones, tens, and hundreds place values. The use of manipulatives is one method for your student to visualize the process of subtraction with regrouping. Your student will also learn the algorithmic process of subtraction with regrouping. Finally, your student will practice her computational skills through word problems that are presented in authentic contexts. The problem-solving strategy that will be introduced to your student is “draw a picture and write a number sentence.”

Objectives:
• Use models to subtract 2- and 3-digit numbers
• Subtract 2- and 3-digit numbers
• Subtract across zero
• Learn to write a number sentence

Lesson 1: Subtraction Meanings

Objectives:
• Recognize situations when subtraction is used to solve a problem and write number sentences

Lesson 2: Subtracting on a Hundred Chart

Objectives:
• Use a hundred chart to subtract 2-digit numbers and develop mental math strategies

Lesson 3: Using Mental Math to Subtract

Objectives:
• Solve problems by subtracting with mental math

Lesson 4: Estimating Differences/Reasonableness

Objectives:
• Solve problems by estimating differences
• Solve word problems and check answers for reasonableness

Lesson 5: Mid-unit Review

Objectives:
• Review concepts presented thus far in the unit

Lesson 6: Making Sense of Addition and Subtraction Equations
• Decide if both sides of an equation are equal and determine the value of an unknown number in an equation

Lesson 7: Models for Subtracting 2-Digit Numbers

Objectives:
• Subtract 2-digit numbers using place-value blocks or pictures and record the results using the standard subtraction algorithm

Lesson 8: Subtracting 2-Digit Numbers

Objectives:
• Subtract 2-digit numbers using paper-and-pencil methods and use subtraction to solve problems

Lesson 9: Models for Subtracting 3-Digit Numbers

Objectives:
• Subtract 3-digit numbers using place-value blocks or pictures and record the results using the standard subtraction algorithm

Lesson 10: Subtracting 3-Digit Numbers

Objectives:
• Subtract 3-digit numbers using paper-and-pencil methods and use subtraction to solve problems

Lesson 11: Subtracting Across Zero/Writing a Number Sentence

Objectives:
• Subtract 3-digit numbers using paper-and-pencil methods and use subtraction to solve problems
• Solve problems by choosing an operation based on a picture she has drawn describing the problem

Lesson 12: Subtraction Review

Lesson 13: Subtraction Test

Unit 4: Multiplication Meanings and Facts

In this unit, your student will revisit the concepts of equal groups and skip counting as he equates multiplication to repeated addition. Before your student practices the basic multiplication facts for mastery, it is important that he master the strategies for knowing how to multiply. Thus, your student will make arrays and use counters to model how multiplication works. In addition, your student will learn to write personal multiplication stories in order to demonstrate a multiplication fact. After your student is introduced to the concept and process of multiplication, he will learn some of the basic multiplication facts. Specifically, the strategies of using patterns and applying properties of multiplication will be used to multiply with the numbers 0, 1, 2, 5, 9, and 10. The problem solving strategies in this unit are “writing to explain” and “two-question problems.”

Objectives:
• Use multiplication as repeated addition
• Identify arrays and multiply
• Write multiplication stories
• Use 2, 5, 9, and 10 as factors
• Multiply with 0 and 1

Lesson 1: Multiplication as Repeated Addition / Arrays

Objectives:
• Write multiplication number sentences for given equal group situations, using the x symbol
• Write multiplication sentences for arrays, use arrays to find products, and use the Commutative Property of Multiplication

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 2: Using Multiplication to Compare

Objectives:
• Use models and write multiplication sentences to compare amounts

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 3: Writing Multiplication Stories/Writing to Explain

Objectives:
• Write math stories for given multiplication facts
• Use objects, words, pictures, numbers, and technology to provide a written explanation reflecting their understanding

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 4: 2 and 5 as Factors

Objectives:
• Use patterns to multiply with 2 and 5 as factors

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 5: 10 as a Factor

Objectives:
• Use patterns to multiply with 10 as a factor

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 6: Mid-Unit Review

Objectives:
• Review concepts presented thus far in the unit

Lesson 7: Multiplying by Multiples of 10

Objectives:
• Use multiplication facts and number patterns to multiply by multiples of 10

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 8: 9 as a Factor

Objectives:
• Use patterns to multiply with 9 as a factor

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 9: Multiplying with 0 and 1

Objectives:
• Use patterns and properties to multiply with 0 and 1 as factors

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 10: Two-Question Problems
Objectives:
• Solve for one problem and use the solution to complete a second problem

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 11: Multiplication Meanings and Facts Review

Lesson 12: Multiplication Meanings and Facts Test

Unit 5: Multiplication Fact Strategies: Use Known Facts

This unit provides your student with multiple strategies to learn her basic multiplication facts. The Distributive Property is introduced to teach simplifying multiplication problems. Your student will learn to use the “break apart” and “known-facts” strategies for multiplication facts in which the numbers 3, 4, 6, 7, 8, 11, and 12 are factors. Your student will be introduced to the Associative Property of Multiplication and will use the property to multiply numbers with three factors. By the end of this unit, your student will know the basic multiplication facts up to 12. Your student should continue to practice these basic multiplication facts throughout the year to ensure mastery of them. The problem-solving strategy in this unit is "multiple-step problems."

Objectives:
• Use 3, 4, 6, 7, 8, 11, and 12 as factors
• Multiply with 3 factors
• Solve multiple-step problems

Lesson 1: The Distributive Property

Objectives:
• Use the Distributive Property to simplify multiplication problems by breaking apart large arrays that represent multiplication facts into smaller arrays that represent other multiplication facts

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 2: 3 as a Factor / 4 as a Factor

Objectives:
• Use known facts to find products with 3 as a factor
• Use known facts and doubles to find products with 4 as a factor

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 3: 6 and 7 as Factors

Objectives:
• Use known facts to find products with 6 and 7 as factors

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 4: 8 as a Factor

Objectives:
• Use known facts and double to find products with 8 as a factor

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 5: 11 and 12 as Factors

Objectives:
• Use patterns to multiply with 11 and 12 as factors

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 6: Multiplying with 3 Factors

Objectives:
• Multiply three numbers and use the Associative Property of Multiplication
Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

**Lesson 7: Multiple-Step Problems**

Objectives:
- Solve multiple-step problems

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

**Lesson 8: Multiplication Fact Strategies Review**

**Lesson 9: Multiplication Fact Strategies Test**

**Unit 6: Division**

In this unit, your student will explore two interpretations of division: division as sharing and division as repeated subtraction. Your student will make arrays, use counters, and draw pictures to model division. Your student will encounter remainders in some of the division problems presented in this unit. The use of arrays and counters will enable him to visualize remainders. Your student will learn how to analyze a word problem in order to interpret how the remainder will be displayed in the problem. Finally, your student will learn to write and solve his own division stories. The problem-solving strategies in this unit are “choose an appropriate equation” and “use objects and draw a picture.”

Objectives:
- Identify division as sharing
- Understand remainders
- Use division as repeated subtraction
- Write division stories
- Use objects and draw a picture

**Lesson 1: Division as Sharing**

Objectives:
- Use models to solve division problems involving sharing and record solutions using division number sentences

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

**Lesson 2: Finding Missing Numbers in a Multiplication Table**

Objectives:
- Use multiplication tables to find answers to division problems

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

**Lesson 3: Understanding Remainders**

Objectives:
- Learn that when dividing, there may be some left over called a remainder

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

**Lesson 4: Division as Repeated Subtraction**

Objectives:
- Use models to solve division problems involving repeated subtraction and record solutions using division number sentences

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

**Lesson 5: Problem Solving: Choose an Appropriate Equation**

Objectives:
- Solve word problems by writing equations that represent the problem situations

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.
Lesson 6: Writing Division Stories

Objectives:
- Write and solve number stories involving division

Lesson 7: Use Objects and Draw a Picture

Objectives:
- Solve problems by acting it out and using a drawing

Lesson 8: Relating Multiplication and Division

Objectives:
- Give a multiplication fact, state a related division fact and vice versa

Lesson 9: Fact Families with 2, 3, 4, and 5

Objectives:
- Give quotients for division facts with divisors of 2, 3, 4, or 5

Lesson 10: Fact Families with 6 and 7

Objectives:
- Give quotients for division facts with divisors of 6 and 7

Lesson 11: Fact Families with 8 and 9

Objectives:
- Give quotients for division facts with divisors of 8 and 9

Lesson 12: Making Sense of Multiplication/Division Equations

Objectives:
- Use multiplication and division facts to decide whether both sides of an equation are equal or to determine the value of an unknown in an equation

Lesson 13: Dividing with 0 and 1

Objectives:
- Use patterns and fact families to find answers to division facts with 0 and 1

Lesson 14: Division Review

Lesson 15: Division Test

Unit 7: Patterns and Relationships

In this unit, your student will learn to identify, describe, extend, and write a rule for a variety of nonnumeric and numeric patterns that repeat in predictable ways. He will also learn that patterns between pairs of numbers exist when they are related by multiplication, addition, or subtraction. Your student will encounter such related numbers in two-column or two-row tables. Given the value of one of the numbers, your student will learn to find the
value of the other number by writing a rule for the relationship and thereby extending the
table. In addition, your student will use his knowledge of numbers and operation symbols to
translate words from a given mathematical scenario into a numerical expression.

Objectives:
• Solve repeating patterns
• Determine number sequences
• Extend tables
• Write rules for situations and translate words to expressions

Lesson 1: Repeating Patterns / Number Sequences

Objectives:
• Identify and extend repeating geometric or repeating number patterns
• Identify and extend whole-number patterns involving addition and subtraction

Lesson 2: Extending Tables

Objectives:
• Extend tables of ordered pairs for situations involving multiplication, addition, or subtraction

Lesson 3: Writing Rules for Situations

Objectives:
• Find the rule and extend the table, given a table of number pairs

Lesson 4: Translating Words to Expressions

Objectives:
• Translate words or situations to expressions

Lesson 5: Geometric Patterns

Objectives:
• Extend patterns of cubes or tiles

Lesson 6: Patterns and Relationships Review

Lesson 7: Patterns and Relationships Test

Unit 8: Solids and Shapes

In this unit, your student will learn to identify, describe, and classify two-dimensional
objects, referred to as shapes or polygons, and three-dimensional objects, or solid figures,
based on the similarities and differences between their attributes. Your student will also
learn about points and lines, the building blocks used to describe polygons and solid figures.
She will recognize that while a point has no size, a set of points that extend in opposite
directions form a straight line and two lines joined at a point result in an angle. Relationships
between these building blocks result in the formation of several types of lines and angles.
These lines and angles help constitute polygons and solid figures in unique ways. This unit is
rich in mathematical terminology. Relating the vocabulary to as many real-life examples will
help your student gain familiarity with the terms. The problem-solving strategy for this unit is "make and test generalizations."

Objectives:
• Identify solid figures
• Relate solids and shapes
• Identify polygons, triangles, and quadrilaterals
• Combine, separate, and make new shapes
• Make and test generalizations

Lesson 1: Solid Figures / Relating Solids and Shapes
Objectives:
• Identify solid figures by name and describe their attributes
• Identify shapes related to given solids

Lesson 2: Angles
Objectives:
• Identify and classify angles in relation to right angles

Lesson 3: Polygons
Objectives:
• Identify and classify polygons

Lesson 4: Triangles
Objectives:
• Identify and classify triangles

Lesson 5: Quadrilaterals
Objectives:
• Identify and classify quadrilaterals

Lesson 6: Combining and Separating Shapes
Objectives:
• Create new shapes by combining shapes or by separating shapes

Lesson 7: Making New Shapes
Objectives:
• Make a new shape by cutting apart a shape and rearranging the pieces

Lesson 8: Solids and Shapes Review
Lesson 9: Solids and Shapes Test
MATH 3 B
Math 3 B

In Math 3 B, the student will continue to expand upon his understanding of mathematical concepts, which are organized according to the following categories: number and operations, algebra, geometry, measurement, and data analysis. Within each category, concepts are developed through the mathematical processes of problem-solving, reasoning, communication, connections, and representations. Building both conceptual knowledge and procedural fluency supports the student’s development of mathematical thinking and reasoning in solving various problems of authentic contexts. The Scott Foresman and Addison Wesley series textbook, *enVisionMATH*, is the primary resource for this course.

The student will extend his number concepts to include values represented as fractions. Next the student will engage in hands-on learning of measurement by finding length, capacity, weight, mass, time, and temperature using the appropriate tools and units. Next, your student will solve problems involving perimeter and area. The student will connect numbers to statistics as he learns to gather data, display the data in graphs, and interpret the information.

Your student will have access to DimensionU™, which includes online math games that support your student’s understanding of lesson concepts. You will find the link to DimensionU™ on your student’s home page. Follow the directions to download the necessary software first. Once installed, DimensionU™ allows your student to access DimensionM™ to practice grades 3–7 and pre-algebra math skills in a gaming environment.

**Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.**

The answer key document for *enVisionMATH Lessons* is located in the Virtual Library in the Answer Keys section and is not included as a resource in the Course Guide. You can access the Answer Keys in the Virtual Library: Home > Curriculum and Instruction > Answer Keys. The answer key document for the Daily Spiral Review Answer Keys is located in the BackPack. You can access the Answer Keys in the BackPack under Web Links.

**Unit 1: Understanding Fractions**

In this unit, your student will use manipulatives to represent fractions of a region and fractions of a set. The use of manipulatives will help your student develop proficiency in understanding how to identify, compare, and order fractions. Your student will also use models, pictures, and fraction strips to find equivalent fractions. Future math courses will use the basic fraction skills presented in this unit and apply them throughout all branches of mathematics, including measurement, geometry, probability, and statistics. Relating fractions to as many real-life examples will help your student gain familiarity with the concepts presented in this unit. The problem-solving strategy in this unit is “make a table and look for a pattern.”

Objectives:
- Write fractions to describe regions and sets that are divided into equal parts
- Use benchmark fractions to estimate
- Determine equivalent fractions and compare fractions using models
- Identify fractions on a number line

**Lesson 1: Dividing Regions into Equal Parts**

Objectives:
- Identify regions that have been divided into equal-sized parts and divide regions into equal-sized parts

**Lesson 2: Fractions and Regions**

Objectives:
- Associate the model, symbol, and words used to describe a fractional part of a whole region

**Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.**
Lesson 3: Fractions and Sets

Objectives:
- Associate the model, symbol, and words used to describe a fractional part of a set

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 4: Benchmark Fractions

Objectives:
- Use benchmark fractions to estimate fractional parts

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 5: Comparing Fractions Using Benchmarks

Objectives:
- Use benchmark numbers to compare fractions with the same numerator or the same denominator

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 6: Finding Equivalent Fractions

Objectives:
- Use models to find equivalent fractions

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 7: Mid-unit Review

Objectives:
- Review concepts presented thus far in the unit

Lesson 8: Using Models to Compare Fractions

Objectives:
- Use models to compare fractions

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 9: Using Models to Compare Fractions: Same Numerator

Objectives:
- Use models and reasoning to compare fractions with the same numerator

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 10: Comparing Fractions on the Number Line

Objectives:
- Use number lines to compare fractions with like denominators or like numerators

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 11: Fractions on the Number Line

Objectives:
- Find and write fractions and mixed numbers on a number line
- Compare and order fractions and mixed numbers

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 12: Equivalent Fractions and the Number Line

Objectives:
- Use number lines to identify equivalent fractions
Lesson 13: Whole Numbers and Fractions

Objectives:
• Use fraction strips and number lines to find fraction names for whole numbers

Lesson 14: Make a Table and Look for a Pattern

Objectives:
• Make a table and look for a pattern to solve a problem

Lesson 15: Understanding Fractions Review (two-day lesson)

Lesson 16: Understanding Fractions Test

Unit 2: Customary and Metric Measurement

In this unit, your student will learn to estimate, measure, and select appropriate tools and units for length, capacity, mass, and weight in the customary and metric systems. At the beginning of this unit, your student will measure length with nonstandard units. This process illustrates to your student the need for standard units of measurement. Your student will continue her study of measurement by changing customary and metric units of length. Throughout this topic, each unit of measurement is compared to a real-life object. The particular object serves as a benchmark that your student can use to estimate the length, capacity, and length of an object before she measures it. Finally, your student will determine whether her estimate seems reasonable. The problem-solving strategies in this unit are “draw a picture” and “make a table and look for a pattern.”

Objectives:
• Measure length to the nearest inch and to the nearest fraction of an inch
• Estimate and measure length using inches, feet, yards, and miles
• Use customary units to estimate and measure capacity
• Use customary units to estimate and measure weight
• Draw a picture; make a table and look for a pattern

Lesson 1: Understanding Measurement

Objectives:
• Understand the measurement process and the need for standard units
• Learn to measure length with nonstandard units and to the nearest inch

Lesson 2: Fractions of an Inch

Objectives:
• Measure length to the nearest 1/2 and 1/4 inch

Lesson 3: Using Inches, Feet, Yards, and Miles

Objectives:
• Choose an appropriate unit, estimate, and measure in feet, yards, and miles
• Convert units among inches, feet, and yards

Lesson 4: Customary Units of Capacity

Objectives:
Lesson 5: Units of Weight

Objectives:
- Choose an appropriate unit and tool, estimate, and measure in cups, pints, quarts, and gallons
- Identify objects which hold about a cup, a pint, a quart, or a gallon

Lesson 6: Mid-unit Review

Objectives:
- Review concepts presented thus far in the unit

Lesson 7: Using Centimeters and Decimeters

Objectives:
- Estimate and measure lengths in centimeters

Lesson 8: Using Meters and Kilometers

Objectives:
- Choose an appropriate unit, estimate, and measure in meters and kilometers
- Convert units among kilometers, meters, centimeters, and millimeters

Lesson 9: Metric Units of Capacity

Objectives:
- Choose an appropriate unit and tool, estimate, and measure in milliliters and liters
- Identify objects that hold about a liter or a milliliter

Lesson 10: Units of Mass

Objectives:
- Choose an appropriate unit and tool, estimate, and measure in grams and kilograms
- Identify objects with a mass of about a gram or kilogram

Lesson 11: Problem Solving: Draw a Picture

Objectives:
- Draw a picture to solve a problem involving units of capacity and mass

Lesson 12: Make a Table and Look for a Pattern

Objectives:
- Make a table and look for a pattern to solve a problem
Lesson 13: Customary and Metric Measurement Review (two-day lesson)

Lesson 14: Customary and Metric Measurement Test

Unit 3: Perimeter and Area

In this unit, your student will learn that the distance around a plane shape is its perimeter. He will explore several strategies for calculating perimeter. Your student will investigate how to make a shape with a given perimeter and how different shapes can have the same perimeter. Then your student will explore the concept of area, which is the space inside a plane shape. Your student will solve problems involving area, and represent the answer using square units. He will learn the process of estimating and finding the area of regular and irregular shapes. The problem-solving strategies in this unit are “try, check, and revise” and “solve a simpler problem.”

Objectives:
- Measure perimeter of common shapes and find different shapes with the same perimeter
- Try, check, and revise
- Understand, estimate, and measure area
- Solve a simpler problem

Lesson 1: Understanding Perimeter

Objectives:
- Use standard units to find the perimeter of a shape

Lesson 2: Perimeter of Common Shapes

Objectives:
- Use standard units to find the perimeter of a shape

Lesson 3: Different Shapes with the Same Perimeter

Objectives:
- Match shapes to a given perimeter and learn that different shapes can have the same perimeter

Lesson 4: Try, Check, and Revise

Objectives:
- Solve a problem through the process of try, check, and revise

Lesson 5: Understanding Area/Estimating and Measuring Area

Objectives:
- Use concrete and pictorial models of square units to determine the area of two-dimensional surfaces

Lesson 6: Area of Squares and Rectangles

Objectives:
- Find the area of rectangles by counting units or by using a formula

Lesson 7: Area and the Distributive Property

Appendix A.2.b Mathematics Course Guides

© 2016 Connections Education LLC. All rights reserved.
Objectives:
• Use the areas of rectangles to model the Distributive Property

Lesson 8: Area of Irregular Shapes
Objectives:
• Find the area of irregular shapes

Lesson 9: Equal Areas and Fractions
Objectives:
• Use equal areas of parts of figures to model unit fractions

Lesson 10: Solve a Simpler Problem
Objectives:
• Solve complex problems asking for the area of irregular shapes

Lesson 11: Perimeter and Area Review (two-day lesson)
Lesson 12: Perimeter and Area Test

Unit 4: Time and Temperature
In this unit, your student will solve many real-life problems involving time and temperature. Your student will learn how to tell time to the half hour, quarter hour, and to the minute on both analog and digital clocks. Your student’s knowledge of counting by fives and by ones will help your student measure time on an analog clock, while her understanding of fractions will support her comprehension of the terms “half hour” and “quarter hour.” Your student will also convert units of time and determine elapsed time. For problems involving temperature, your student will read thermometers and learn the benchmarks for freezing and boiling water in degrees Fahrenheit and degrees Celsius. These benchmarks will help your student connect appropriate temperatures for given real-world activities. The problem-solving strategy in this unit is “work backward.”

Objectives:
• Tell time to the half hour, quarter hour, and minute
• Convert units of time
• Determine elapsed time
• Measure temperatures
• Work backward

Lesson 1: Time to the Half Hour and Quarter Hour
Objectives:
• Tell time to the nearest half hour and quarter hour using analog and digital clocks, and identify times as a.m. or p.m.

Lesson 2: Time to the Minute
Objectives:
• Tell time to the nearest minute using analog and digital clocks

Lesson 3: Units of Time
Objectives:
• Perform simple conversions for units of time
Lesson 4: Elapsed Time

Objectives:
• Find elapsed time in intervals of minutes

Lesson 5: Temperature

Objectives:
• Read temperatures on Fahrenheit thermometers, and determine appropriate temperatures for given activities

Lesson 6: Work Backward

Objectives:
• Use the strategy work backward to solve problems

Lesson 7: Time and Temperature Review (two-day lesson)

Lesson 8: Time and Temperature Test

Unit 5: Multiplying Greater Numbers

This unit extends your student’s multiplication skills beyond basic facts. Your student will explore several new strategies to estimate and multiply 2- and 3-digit numbers by a 1-digit number. Some strategies include the use of patterns, rounding rules, breaking large numbers apart, and following an expanded algorithm. Manipulatives, such as place-value blocks, or counters will continue to serve as physical hands-on learning tools for your student. The problem-solving strategy in this unit is “draw a picture and write a number sentence.”

Objectives:
• Use mental math and estimation to multiply
• Use break apart and an expanded algorithm to multiply
• Multiply 2- and 3-digit numbers by 1-digit numbers
• Draw a picture and write a number sentence

Lesson 1: Using Mental Math to Multiply/Estimate Products

Objectives:
• Use mental math to multiply by multiples of 10, 100, and 1,000
• Estimate products of 1-digit and 2-digit numbers by using rounding

Lesson 2: Breaking Apart to Multiply

Objectives:
• Use an array and breaking apart to multiply 1-digit times 2-digit numbers

Lesson 3: Using an Expanded Algorithm

Objectives:
• Use breaking apart and the expanded algorithm to multiply a 1-digit times a 2-digit number

Lesson 4: Mid-unit Review
Objectives:
- Review concepts presented thus far in the unit

Lesson 5: Multiplying 2- and 3-Digit by 1-Digit Numbers

Objectives:
- Multiply a 1-digit times a 2-digit number with regrouping

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 6: Draw a Picture and Write a Number Sentence

Objectives:
- Solve word problems by drawing a picture and writing a number sentence

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 7: Multiplying Greater Numbers Review (two-day lesson)

Lesson 8: Multiplying Greater Numbers Test

Unit 6: Dividing with 1-Digit Numbers

In this unit, your student will extend her division skills beyond basic facts to solve problems involving multi-digit dividends. Your student will explore multiple strategies to support her comprehension and skill development in this area. Your student will use mental math strategies and make estimates before finding actual quotients in order to ensure reasonable solutions. In addition, your student will explore the division algorithm and use it to divide numbers with a remainder. Manipulatives, such as place-value blocks, arrays, or counters will continue to serve as physical hands-on learning tools for your student. This unit's problem-solving strategy is "multiple-step problems."

Objectives:
- Use mental math and estimation to divide
- Connect models and symbols
- Divide 2-digit numbers
- Divide with remainders
- Solve multiple-step problems

Lesson 1: Mental Math/Estimating Quotients

Objectives:
- Use known multiplication patterns to divide multiples of 10, 100, and 1,000 by a 1-digit number
- Use compatible numbers to estimate quotients

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 2: Connecting Models and Symbols

Objectives:
- Use place-value blocks and an algorithm to divide 2-digit numbers by 1-digit numbers

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 3: Dividing 2-Digit Numbers

Objectives:
- Divide 2-digit numbers by 1-digit numbers using paper and pencil

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 4: Dividing with Remainders

Objectives:
- Use arrays and the division algorithm to divide numbers with a remainder
Lesson 5: Multiple-Step Problems

Objectives:
- Use previously learned skills to solve multiple-step problems

Lesson 6: Dividing with 1-Digit Numbers Review (two-day lesson)

Lesson 7: Dividing with 1-Digit Numbers Test

Unit 7: Data and Graphs

In this unit, your student will collect, organize, display, analyze, and interpret real-world data. Your student will collect data in an organized way by using a tally chart. Once the data has been gathered, your student will display the data in pictographs and bar graphs in order to read and interpret the information. Your student will also construct line plots. While pictographs and bar graphs compare data, your student will learn that line plots can be used to organize and represent a data set. The problem-solving strategy in this unit is “use tables and graphs to draw conclusions.”

Objectives:
- Organize data
- Read and make pictographs and bar graphs
- Use a line plot to represent data
- Use tables and graphs to draw conclusions

Lesson 1: Organizing Data

Objectives:
- Use tally charts to record and organize survey data

Lesson 2: Reading Pictographs and Bar Graphs

Objectives:
- Read and interpret data from a pictograph and a bar graph

Lesson 3: Making Pictographs

Objectives:
- Make a pictograph from a table or tally chart

Lesson 4: Making Bar Graphs

Objectives:
- Make a bar graph to represent the data in a table or tally chart

Lesson 5: Mid-unit Review

Objectives:
- Review concepts presented thus far in the unit

Lesson 6: Line Plots and Probability

Objectives:
- Use a line plot to organize the results of a probability experiment and to predict future events
Lesson 7: Length and Line Plots

Objectives:
- Use line plots to organize and represent measurement data

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 8: Use Tables and Graphs to Draw Conclusions

Objectives:
- Solve problems by using tables and graphs to draw conclusions

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 9: Data and Graphs Review (two-day lesson)

Lesson 10: Data and Graphs Test
MATH 4 A
Math 4 A

In Math 4 A, the student will learn mathematical concepts that are organized according to the following categories: number and operations, algebra, and geometry. Within each category, concepts are developed through the mathematical processes of problem-solving, reasoning, communication, connections, and representations. Building both conceptual knowledge and procedural fluency supports the student’s development of mathematical thinking and reasoning in solving various problems of authentic contexts. The Scott Foresman and Addison Wesley series textbook, enVisionMATH, is the primary resource for this course.

The topics that are presented in this semester build upon the concepts that the student previously learned. The student will use his understanding of number concepts to extend the place value of whole numbers into the millions. Basic facts will be used to compute with greater numbers.

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

The answer key document for enVisionMATH Lessons is located in the Virtual Library in the Answer Keys section and is not included as a resource in the Course Guide. The Virtual Library also contains the most up-to-date Answer Keys for other practices in this course. You can access the Answer Keys in the Virtual Library: Home > Curriculum and Instruction > Answer Keys. Some Answer Keys will be located under the Categories heading and others will be located under the Resources heading. The answer key document for the Daily Spiral Review Answer Keys is located in the BackPack. You can access the Answer Keys in the BackPack under Web Links.

Unit 1: Let's Get Ready to Learn Math!

In this unit, your student will learn about the activities he will do in Math 4. The first lesson, intended for Learning Coaches, provides advice for using the Lesson Guide to support your student, and details the resources found in the course. It also offers helpful tips for building your student’s math skills. The second lesson is intended for students and their Learning Coaches. This lesson will introduce your student to the concept of math, and describe the structure of math lessons.

Objectives:
- Learn how to find and use the Coaching Guide
- Locate and describe lesson resources
- Learn ways to promote mathematical thinking in your daily life
- Learn ways to become a confident math learner
- Describe the different parts of a lesson and the different types of assessments

Lesson 1: Learning Coach: Support Your Student in Math

Objectives:
- Learn how to find and use the Coaching Guide
- Locate and describe lesson resources
- Learn ways to promote mathematical thinking in your daily life

Lesson 2: Welcome to Math 4!

Objectives:
- Learn ways to become a confident math learner
- Locate and describe lesson resources
- Describe the different parts of a lesson
- Describe the different types of assessments

Unit 2: Numeration

This unit reinforces a solid comprehension of the base ten numeration system. Previously, your student used his understanding of place value to read and write numbers in the hundreds and thousands. As your student delves deeper into place value throughout this course, he will extend his ability to read, order, compare, round, and represent larger numbers in a variety of ways. Manipulatives will play a key role in developing your student’s understanding of numbers in the thousands and millions place values. Proficiency of the
concepts presented in this unit will provide your student with the foundation to grasp more complex math concepts. Finally, your student will read, write, and compare decimal values as he counts money and makes change to solve problems using real-world scenarios. This unit’s problem-solving strategy is “make an organized list.”

Objectives:
- Work with numbers in thousands and millions
- Compare and order whole numbers
- Use money to understand decimals
- Count money and make change
- Make an organized list

**Lesson 1: Thousands**

Objectives:
- Represent numbers with place-value blocks and number lines
- Write numbers in standard form, expanded form, and word form

**Lesson 2: Millions**

Objectives:
- Represent numbers in the millions using a place-value chart
- Write numbers in expanded form, using periods to help write numbers in word form

**Lesson 3: Place Value Relationships**

Objectives:
- Learn how digits within a multi-digit whole number relate to each other by their place value

**Lesson 4: Comparing and Ordering Whole Numbers**

Objectives:
- Apply knowledge of place value to compare and order numbers

**Lesson 5: Rounding Whole Numbers**

Objectives:
- Show how to use place value to round whole numbers

**Lesson 6: Using Money to Understand Decimals**

Objectives:
- Use place-value charts to read, write, and compare decimals in tenths and hundredths using money

**Lesson 7: Counting Money and Making Change**

Objectives:
- Convert a collection of coins and bills into a total amount and make change

**Lesson 8: Solving Problems Involving Money**

Objectives:
• Solve real-world problems that involve money and giving change by counting

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 9: Numeration Review

Lesson 10: Numeration Unit Test

Unit 3: Adding and Subtracting Whole Numbers

In this unit, your student will apply her knowledge and skills of basic addition and subtraction facts to solve addition and subtraction problems involving whole numbers of greater value. As your student learns to estimate and compute sums of numbers less than 100,000, she will use her background knowledge of place value to model the process of adding and subtracting numbers in the thousands period, with and without regrouping. Several properties of addition and the breaking-apart strategy are introduced to further develop your student’s addition strategies. This unit will provide your student with meaningful computational practice through word problems that are presented in authentic contexts. The problem-solving strategies that will be introduced to your student are “missing or extra information” and “draw a picture and write an equation.”

Objectives:
• Use mental math and estimation strategies
• Add and subtract whole numbers
• Subtract across zeros
• Problem solving strategies

Lesson 1: Mentally Add & Subtract/Estimate Sum & Difference

Objectives:
• Apply a variety of methods to add and subtract whole numbers mentally
• Round whole numbers to estimate sums and differences

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 2: Missing or Extra Information

Objectives:
• Identify what information in a problem is not needed or not present

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 3: Adding Whole Numbers

Objectives:
• Add numbers to hundred thousands with and without regrouping

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 4: Subtracting Whole Numbers

Objectives:
• Subtract numbers to thousands with and without regrouping

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 5: Subtracting Across Zeros

Objectives:
• Subtract numbers with zeros to thousands

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 6: Draw a Picture and Write an Equation

Objectives:
• Use a picture or diagram to translate an everyday situation into a number sentence or equation
Unit 4: Multiplication Meanings and Facts

In this unit, your student will revisit the concepts of equal groups and skip counting as he equates multiplication to repeated addition. Your student will use arrays and counters to model how multiplication works. In addition, your student will use patterns and apply properties of multiplication to multiply with the numbers 0, 1, 2, 5, 9, 10, 11, and 12. By mastering these basic multiplication facts, your student will develop his ability to solve multi-digit multiplication problems and division problems. The problem solving strategy in this unit is “draw a picture and write an equation.”

Objectives:
- Understand meanings of multiplication
- Learn patterns for multiplication facts
- Use multiplication properties
- Learn 2, 4, 6, 7, 8, 10, 11, and 12 as factors
- Draw a picture and write an equation

Lesson 1: Meanings of Multiplication

Objectives:
- Recognize multiplication as repeated addition of equal groups, used in arrays and comparisons

Lesson 2: Patterns for Facts

Objectives:
- Use patterns to find products with factors of 2, 5, and 9

Lesson 3: Multiplication Properties

Objectives:
- Use multiplication properties to simplify computations

Lesson 4: 3 and 4 as Factors

Objectives:
- Use the Distributive Property to simplify multiplication problems by rewriting one of the factors as a sum of two numbers

Lesson 5: 6, 7, and 8 as Factors

Objectives:
- Use the Distributive Property and other regrouping properties to simplify multiplication involving 6s, 7s, and 8s by rewriting one of the factors

Lesson 6: 10, 11, and 12 as Factors

Objectives:
- Use patterns as aids to master facts and multiples of 10, 11, and 12

Lesson 7: Draw a Picture and Write an Equation
Objectives:
- Draw pictures to problem solve multiplication situations and use the pictures to write number sentences

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 8: Multiplication Meanings and Facts Review

Lesson 9: Multiplication Meanings and Facts Unit Test

Unit 5: Multiplying by 1-Digit Numbers

In this unit, your student’s knowledge of basic facts and number patterns will support her as she learns to multiply single-digit numbers by multiples of 10 and 100. Your student will use strategies, such as compatible numbers and rounding, to estimate products. This unit will also engage your student in 3-digit by 1-digit and 4-digit by 1-digit multiplication problems. The standard algorithm, expanded algorithm, and break apart strategies are some strategies that your student will employ to solve these multiplication problems. This unit’s problem-solving strategy is “draw a picture and write an equation.”

Objectives:
- Multiply by multiples of 10 and 100
- Use mental math, estimation, and reasonableness to solve problems
- Use an expanded algorithm
- Multiply 1-digit numbers by 2-digit and 3-digit numbers
- Draw a picture and write an equation

Lesson 1: Multiplying by Multiples of 10 and 100

Objectives:
- Use basic multiplication facts and number patterns to multiply by multiples of 10 and 100

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 2: Use Mental Math to Multiply/Round to Estimate

Objectives:
- Use compatible numbers with adjustment, breaking apart, and other strategies to multiply numbers mentally
- Use compatible numbers and rounding to estimate solutions to multiplication problems

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 3: Reasonableness

Objectives:
- Check for reasonableness by making sure calculations answer the questions asked and by using estimation to make sure the calculation was performed correctly

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 4: Using an Expanded Algorithm

Objectives:
- Record multiplication using an expanded algorithm

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 5: Connecting the Expanded and Standard Algorithms

Objectives:
- Multiply 2-digit numbers by 1-digit numbers using paper-and-pencil methods

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.
Lesson 6: Multiplying 2-Digit by 1-Digit Numbers

Objectives:
- Multiply 2-digit numbers by 1-digit numbers using paper-and-pencil methods

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 7: Multiplying 3- and 4-Digit by 1-Digit Numbers

Objectives:
- Use the standard algorithm to multiply 3- and 4-digit numbers by 1-digit numbers

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 8: Draw a Picture and Write an Equation

Objectives:
- Solve problems using the problem-solving strategies Draw a Picture and Write an Equation

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 9: Multiplying by 1-Digit Numbers Review

Lesson 10: Multiplying by 1-Digit Numbers Unit Test

Unit 6: Multiplying by 2-Digit Numbers

In this unit, your student will multiply with multiples of 10 and 100, round factors, and use compatible numbers to estimate products. Your student will use several strategies, including arrays, tables, the traditional algorithm, and the expanded algorithm, to solve 2-digit by 2-digit multiplication problems. Your student will practice his mental math skills by multiplying greater numbers. This unit’s problem-solving strategy is “two-question problems.”

Objectives:
- Mentally multiply and estimate products
- Use arrays and an expanded algorithm
- Multiply 2-digit numbers by multiples of 10 and other 2-digit numbers

Lesson 1: Mentally Multiply 2-Digit Numbers/Estimate Product

Objectives:
- Discover and understand patterns used to multiply by 10 and 100
- Use these patterns to solve problems involving multiples of 10 and 100
- Use rounding and compatible numbers to estimate solutions to multiplication problems

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 2: Arrays and an Expanded Algorithm

Objectives:
- Use arrays and expanded algorithms to multiply two-digit numbers by two-digit numbers to find the product

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 3: Multiplying 2-Digit Numbers by Multiples of Ten

Objectives:
- Use grids and patterns to multiply 2-digit numbers and multiples of 10

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 4: Multiplying 2-Digit by 2-Digit Numbers
Objectives:
• Use partial products to multiply two-digit numbers by two-digit numbers and find the products

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 5: Special Cases/Two-Question Problems

Objectives:
• Learn to multiply greater numbers
• Solve two-question problems

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 6: Multiplying by 2-Digit Numbers Review

Lesson 7: Multiplying by 2-Digit Numbers Unit Test

Unit 7: Division Meanings and Facts

In this unit, your student will explore two interpretations of division: division as sharing and division as repeated subtraction. Your student will use arrays, counters, number lines, and pictures to model division. She will investigate special division rules that involve dividing by the numbers 0 and 1. Finally, your student will practice her skills to relate a multiplication fact to a division fact. She will learn that, like addition and subtraction, multiplication and division have an inverse relationship; this means that their operations undo each other. Subsequently, your student will be able to produce related multiplication and division facts, or fact families. A strong knowledge of basic multiplication facts will lend the use of fact families as an efficient strategy for solving division facts. The problem-solving strategy in this unit is “draw a picture and write an equation.”

Objectives:
• Use meanings of division
• Relate multiplication and division
• Use special quotients
• Use multiplication facts to find division facts
• Draw a picture and write an equation

Lesson 1: Meanings of Division

Objectives:
• Use and draw models to solve division problems

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 2: Relating Multiplication and Division

Objectives:
• Use arrays to write and complete multiplication and division fact families

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 3: Special Quotients

Objectives:
• Use multiplication facts with 0 and 1 to learn about special division rules with 0 and 1

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 4: Using Multiplication Facts to Find Division Facts

Objectives:
• Identify multiplication facts related to division facts in order to solve division problems

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 5: Draw a Picture and Write an Equation

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.
Objectives:
- Draw pictures and write related number sentences to solve problems

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 6: Division Meanings and Facts Review

Lesson 7: Division Meanings and Facts Unit Test

Lesson Guide (Coaching Guide):
Assessment
Have your student complete the test. Then later, review the results. Discuss and correct any questions answered incorrectly before proceeding to the next lesson.

Unit 8: Dividing by 1-Digit Divisors

In this unit, your student will estimate quotients and divide 3- and 4-digit dividends by single-digit divisors. Your student will encounter remainders in some of the division problems presented in this unit. He will use arrays and counters to visualize remainders. Your student will also analyze word problems to determine how to interpret and use remainders. Your student’s knowledge of place-value, related multiplication and division facts, and estimation will allow him to understand and use a standard algorithm when dividing with larger numbers. The standard algorithm will help your student to split the calculation into simpler steps. Finally, your student will learn how to factor a whole number. He will find that prime numbers have only two factors, while composite numbers have more than two factors. This unit’s problem-solving strategy is “multiple-step problems.”

Objectives:
- Use mental math and estimation to divide
- Divide with remainders
- Determine prime and composite numbers
- Divide 2- and 3-digit numbers by 1-digit numbers
- Use factors

Lesson 1: Using Mental Math to Divide/Estimating Quotients

Objectives:
- Use basic facts and patterns of zeros to solve division problems with 3-digit dividends and 1-digit divisors
- Use compatible numbers and rounding to estimate quotients

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 2: Estimating Quotients for Greater Dividends

Objectives:
- Estimate quotients of multi-digit division problems using multiplication facts and place-value concepts

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 3: Use Objects to Divide/Repeated Subtraction

Objectives:
- Use repeated subtraction to model division
- Record division as repeated subtraction

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 4: Dividing with Remainders

Objectives:
- Divide whole numbers by 1-digit divisors resulting in quotients with remainders

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 5: Connecting Models and Symbols

© 2016 Connections Education LLC. All rights reserved.
Objectives:
- Use place value to understand the algorithm of long division

**Lesson 6: Dividing 2-Digit by 1-Digit Numbers**

Objectives:
- Use the standard algorithm to divide a two-digit number by a one-digit number

**Lesson 7: Dividing 3-Digit by 1-Digit Numbers**

Objectives:
- Use the standard algorithm to divide 3-digit numbers by 1-digit numbers

**Lesson 8: Mid-Unit Review**

Objectives:
- Review concepts presented thus far in the unit

**Lesson 9: Deciding Where to Start Dividing**

Objectives:
- Use the standard algorithm to divide 3-digit numbers by 1-digit numbers and properly decide where to begin dividing

**Lesson 10: Dividing 4-Digit by 1-Digit Numbers**

Objectives:
- Estimate and find quotients for 4-digit dividends and 1-digit divisors

**Lesson 11: Factors**

Objectives:
- Learn how to factor whole numbers

**Lesson 12: Prime and Composite Numbers**

Objectives:
- Learn to identify prime and composite numbers

**Lesson 13: Multiple-Step Problems**

Objectives:
- Identify the hidden question in a multi-step problem
  - Use the answer to that hidden question to solve the original problem

**Lesson 14: Dividing by 1-Digit Divisors Review**

**Lesson 15: Dividing by 1-Digit Divisors Unit Test**

**Unit 9: Lines, Angles, and Shapes**

In this unit, your student will learn about points, lines, and planes, which are the building blocks to other geometric figures. Your student will study how the relationships between
these building blocks result in the formation of several types of lines, angles, and polygons. Using a protractor, your student will measure and draw angles of varying degrees. Polygons are named by the number of sides and angles they possess, and your student will learn to identify and describe different polygons based on such attributes. While taking a closer look at triangles, your student will find that triangles are classified based on the length of their sides and by the size of their angles. Your student will also investigate the classification system of quadrilaterals. Finally, your student will determine whether an object has line symmetry. This unit’s problem-solving strategy is “make and test generalizations.”

Objectives:
- Identify points, lines, planes, line segments, angles, and rays
- Measure angles
- Identify polygons
- Identify triangles and quadrilaterals
- Make and test generalizations

Lesson 1: Points, Lines, and Planes

Objectives:
- Identify and describe points, lines, and planes

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 2: Line Segments, Rays, and Angles

Objectives:
- Learn geometric terms to describe parts of lines and types of angles

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 3: Understanding Angles and Unit Angles

Objectives:
- Use unit angles and fractions of a circle to find angle measures

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 4: Measuring with Unit Angles

Objectives:
- Use a smaller angle to measure a larger angle by repeating the unit

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 5: Measuring Angles

Objectives:
- Measure and draw angles

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 6: Adding and Subtracting Angle Measures

Objectives:
- Find unknown angle measures by adding and subtracting

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 7: Polygons

Objectives:
- Learn to identify polygons

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 8: Triangles

Objectives:
- Learn to identify and classify triangles
Lesson 9: Quadrilaterals/Make and Test Generalizations

Objectives:
- Learn to identify quadrilaterals
- Solve problems by making and testing generalizations

Lesson 10: Line Symmetry

Objectives:
- Determine if a plane figure has line symmetry and, if so, how many lines of symmetry it has

Lesson 11: Lines, Angles, and Shapes Review

Lesson 12: Lines, Angles, and Shapes Unit Test
MATH 4 B
**Math 4 B**

In Math 4 B, the student will continue to expand his knowledge of mathematical concepts, which are organized according to the following categories: number and operations, algebra, geometry, measurement, data analysis, and probability. Within each category, concepts are developed through the mathematical processes of problem-solving, reasoning, communication, connections, and representations. Building both conceptual knowledge and procedural fluency supports the student’s development of mathematical thinking and reasoning in solving various problems of authentic contexts. The Scott Foresman and Addison Wesley series textbook, *envisionMATH*, is the primary resource for this course.

The topics that are presented in this semester build upon the concepts that the student previously learned. Numbers will be connected to geometry as the student identifies and draws attributes of two- and three-dimensional shapes. The student will engage in hands-on learning of measurement by finding length, area, perimeter, volume, capacity, weight, mass, time, and temperature, using the appropriate tools and units. Customary and metric systems of measurement will be studied, and the student will convert within the same measurement system to solve problems. The student will also connect numbers to statistics as he learns to gather data, display the data in graphs, and interpret the information using median, range, and mode. Finally, the student will explore probability by listing possible outcomes of a given event, conducting experiments, and representing the probability of the event as a fraction.

On your home page you will find a link to DimensionU™, which includes online math games to support your understanding of lesson concepts. Follow the directions to download the necessary software first. Once installed, DimensionU™ allows you to access DimensionM™ to practice your math skills in a gaming environment.

**Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.**

The answer key document for *enVisionMATH Lessons* is located in the Virtual Library in the Answer Keys section and is not included as a resource in the Course Guide. You can access the Answer Keys in the Virtual Library: Home > Curriculum and Instruction > Answer Keys. The answer key document for the Daily Spiral Review Answer Keys is located in the BackPack. You can access the Answer Keys in the BackPack under Web Links.

**Unit 1: Understanding Fractions**

In this unit, your student will use fraction circles, fraction strips, and other models to represent, compare, order, and estimate fractions. Your student will identify fractional parts of a whole region, whole object, and whole set. Throughout this unit, your student will explore equivalent fractions, express fractions in simplest form, and write mixed numbers and improper fractions interchangeably. Your student will use the skills that he learns in this unit in future math courses as well as in everyday tasks. Relating fractions to as many real-life examples as possible will help your student gain familiarity with the concepts presented in this unit. The problem-solving strategy in this unit is “look for a pattern.”

Objectives:
- Identify regions and sets
- Determine equivalent fractions
- Write fractions in simplest terms
- Compare and order fractions
- Convert improper fractions and mixed numbers

**Lesson 1: Regions and Sets**

Objectives:
- Identify and draw fractional parts of a region and a set, and divide sets to show fractional parts

**Lesson 2: Estimating Fractional Amounts**

Objectives:
- Estimate fractional parts of regions and sets
Lesson 3: Equivalent Fractions

Objectives:
- Use models and objects to show equivalent fractions

Lesson 4: Number Lines and Equivalent Fractions

Objectives:
- Use a number line to identify and write equivalent fractions

Lesson 5: Fractions in Simplest Form

Objectives:
- Express equivalent fractions in simplest form

Lesson 6: Improper Fractions and Mixed Numbers

Objectives:
- Identify and write mixed numbers as improper fractions and improper fractions as numbers

Lesson 7: Comparing Fractions

Objectives:
- Use benchmark fractions to compare fractions with unlike denominators

Lesson 8: Ordering Fractions (two-day lesson)

Objectives:
- Use common denominators and equivalent fractions to order fractions with unlike denominators

Lesson 9: Look for a Pattern

Objectives:
- Recognize patterns and be able to continue the pattern

Lesson 10: Understanding Fractions Review

Lesson 11: Understanding Fractions Unit Test

Unit 2: Adding and Subtracting Fractions

In this unit, your student will explore the meaning of fractions by decomposing and composing simple fractions. Then your student will work with models to gain an understanding of addition and subtraction of fractions and mixed numbers. This work will only involve fractions with like denominators. Your student will explore the meaning of multiplication of fractions by working with unit fractions and models of fractions. Relating fractions to as many real-life examples as possible will help your student gain familiarity with the concepts presented in this unit.

Objectives:
Lesson 1: Decomposing and Composing Fractions

Objectives:
- Decompose fractions and represent them as compositions of fractions in a variety of ways

Lesson 2: Add and Subtract Fractions with Like Denominators

Objectives:
- Add and subtract fractions with like denominators using models and paper and pencil

Lesson 3: Modeling Addition and Subtraction of Mixed Numbers

Objectives:
- Use models to add and subtract mixed numbers

Lesson 4: Adding Mixed Numbers

Objectives:
- Use models and computation to add mixed numbers

Lesson 5: Subtracting Mixed Numbers

Objectives:
- Use models and computation to subtract mixed numbers

Lesson 6: Fractions as Multiples of Unit Fractions

Objectives:
- Use models and computation to add mixed numbers

Lesson 7: Multiplying a Fraction by a Whole Number

Objectives:
- Multiply a fraction by a whole number using models
- Multiply a whole number and a fraction to solve problems

Lesson 8: Adding and Subtracting Fractions Review

Objectives:
- Review for the unit test

Lesson 9: Adding and Subtracting Fractions Unit Test

Unit 3: Understanding Decimals

In this unit, your student will read and write decimals to the hundredths place in expanded, standard, and word form. Models of hundredths and place-value charts will help your
student to understand the value that is represented by a decimal, which will allow him to compare and order decimals. Your student will learn to write decimals and fractions interchangeably and graph them on a number line. Additionally, your student will learn to write decimals and mixed numbers interchangeably and graph them on a number line. The problem-solving strategy in this unit is "draw a picture."

Objectives:
- Determine decimal place value
- Compare and order decimals
- Convert fractions and decimals
- Identify fractions and decimals on a number line
- Draw a picture

Lesson 1: Decimal Place Value

Objectives:
- Use models and place-value charts to represent decimals to hundredths
- Read and write decimals in expanded, standard, and word form

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 2: Comparing and Ordering Decimals

Objectives:
- Use models and place-value charts to compare decimals to hundredths
- Use greater-than and less-than symbols to order decimal numbers

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 3: Fractions and Decimals

Objectives:
- Understand how to write fractions as decimals and decimals as fractions

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 4: Mid-Unit Review

Lesson 5: Fractions and Decimals on the Number Line (two-day lesson)

Objectives:
- Learn to locate and name fractions and decimals on a number line

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 6: Equivalent Fractions and Decimals

Objectives:
- Use equivalent fractions to write fractions as decimals

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 7: Mixed Numbers and Decimals on the Number Line

Objectives:
- Understand how to graph decimals and mixed numbers on the number line

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 8: Draw a Picture

Objectives:
- Solve problems using the strategy Draw a Picture

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 9: Understanding Decimals Review
Lesson 10: Understanding Decimals Unit Test

Unit 4: Operations with Decimals

In this unit, your student will use models of tenths and hundredths and her knowledge of addition and subtraction basic facts to estimate and compute decimal sums and differences involving decimals through hundredths. Your student will also learn to multiply and divide a decimal by a whole number. Using standard algorithms for multiplication and division, your student will find that computing products and quotients of decimals is very similar to that of whole numbers. Your student will find that the main difference is in placing the decimal when computing products and quotients with decimal numbers. The problem-solving strategy is “try, check, and revise.”

Objectives:
- Round and estimate decimal sums and differences
- Add and subtract decimals
- Multiply a decimal and a whole number
- Divide a decimal by a whole number
- Use the try, check, and revise strategy

Lesson 1: Round Decimals/Estimate Decimal Sum and Difference

Objectives:
- Round two-place decimal numbers to one place or the nearest whole number
- Round decimal numbers to estimate sums and differences

Lesson 2: Modeling Addition and Subtraction of Decimals

Objectives:
- Add and subtract decimals in tenths and hundredths using models

Lesson 3: Adding and Subtracting Decimals

Objectives:
- Estimate and compute the sum or difference of whole numbers and positive decimals to two places

Lesson 4: Mid-Unit Review

Lesson 5: Multiplying a Whole Number and a Decimal (two-day lesson)

Objectives:
- Multiply a decimal number by a whole number

Lesson 6: Dividing a Decimal by a Whole Number

Objectives:
- Divide a decimal number by a whole number

Lesson 7: Try, Check, and Revise

Objectives:
- Try a solution, check the solution, and, if not correct, revise the solution, following the same method until the correct solution is determined via checking
Unit 5: Area and Perimeter

In this unit, your student will explore strategies for finding area and perimeter. Using centimeter grid paper, your student will determine the area of regular and irregular figures by counting the number of square units that cover the interior of the figure. Your student will also use formulas to find the area of squares, rectangles, parallelograms, and triangles and to find the perimeter of polygons. Additionally, your student will explore concepts that relate area and perimeter, such as whether or not rectangles can have the same perimeter but different areas or if it is possible for rectangles to have the same area but different perimeters. This unit’s problem-solving strategy is “solve a simpler problem and make a table.”

Objectives:
- Determine area
- Find the area of squares, rectangles, parallelograms, and triangles
- Solve for perimeter of a figure
- Solve for perimeters and areas of different figures
- Solve a simpler problem and make a table

Lesson 1: Understanding Area

Objectives:
- Measure the area of a figure by counting the number of square units that cover a region

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 2: Area of Squares and Rectangles

Objectives:
- Find the area of rectangles by counting square units or by using a formula

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 3: Area of Irregular Shapes

Objectives:
- Find the area of irregular shapes

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 4: Area of Parallelograms

Objectives:
- Use the formula for the area of a rectangle in order to find a formula for the area of a parallelogram

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 5: Area of Triangles

Objectives:
- Use the relationship between triangles and parallelograms to find the area of triangles

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 6: Mid-Unit Review

Lesson 7: Perimeter

Objectives:
- Find the perimeter of a polygon by adding the lengths of the sides or by using the formula
Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

**Lesson 8: Solving Perimeter and Area Problems**

Objectives:
- Use formulas for the perimeter and area of rectangles to solve real-world problems

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

**Lesson 9: Same P. and Different A./Same A. and Different P. (two-day lesson)**

Objectives:
- Compare different rectangles with the same perimeter to discover the change in area
- Compare different rectangles with the same area to discover the change in perimeter

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

**Lesson 10: Solve a Simpler Problem**

Objectives:
- Break a problem into smaller, more manageable pieces and find a pattern to fit

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

**Lesson 11: Area and Perimeter Review**

**Lesson 12: Area and Perimeter Unit Test**

**Unit 6: Measurement, Time, and Temperature**

In this unit, your student will learn to select appropriate tools and units to estimate and measure length, capacity, and weight in the customary system; and length, capacity, and mass in the metric system. Using a table of units, multiplication, and division, your student will convert units of measure within the same system. Next your student will study elapsed time. Your student will also learn to measure temperature and calculate changes in temperature in both degrees Fahrenheit and degrees Celsius. The use of real measuring tools, such as thermometers, scales, and clocks, as well as real items, such as cups and daily schedules, will add meaning to your student’s study of measurement.

Objectives:
- Use customary units of length, capacity, and weight
- Convert customary units
- Use metric units of length, capacity, and mass
- Convert metric units
- Determine time, elapsed time, and temperature

**Lesson 1: Using Customary Units of Length**

Objectives:
- Estimate and measure length by choosing the most appropriate unit of length

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

**Lesson 2: Customary Units of Capacity**

Objectives:
- Estimate fluently with customary capacity units (cups, pints, quarts, and gallons)
- Compare the relative sizes of capacity measurements

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.
Lesson 3: Units of Weight

Objectives:
• Estimate fluently and measure with units of weight

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 4: Changing Customary Units

Objectives:
• Convert between customary units

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 5: Using Metric Units of Length

Objectives:
• Estimate and measure length to the nearest centimeter, and choose the most appropriate metric unit for measuring length

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 6: Mid-Unit Review

Lesson 7: Metric Units of Capacity

Objectives:
• Estimate fluently with milliliters and liters
• Measure capacity using these metric units

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 8: Units of Mass

Objectives:
• Estimate and measure with units of mass—grams and kilograms

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 9: Changing Metric Units

Objectives:
• Convert between metric units

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 10: Units of Time/Elapsed Time (two-day lesson)

Objectives:
• Compare several different units of time and freely convert from one unit of time to another
• Find the difference in time using a beginning and an end time
• Use elapsed time to find a beginning and an end time

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 11: Measurement, Time, and Temperature Review

Lesson 12: Measurement, Time, and Temperature Unit Test

Unit 7: Data and Graphs

In this unit, your student will encounter real-world problems that require collecting, organizing, displaying, analyzing, and interpreting data. Your student will learn how to collect data in an organized way by using a tally chart. She will learn how to use different displays for different types of data, including bar graphs and line plots. The problem-solving strategy in this unit is “make a graph.”

Objectives:
• Use data from surveys
Lesson 1: Data from Surveys

Objectives:
- Design and use a survey with a sample size that allows accurate predictions to be made about a larger population

Lesson 2: Interpreting Graphs

Objectives:
- Use bar graphs to display data

Lesson 3: Line Plots

Objectives:
- Learn and understand how to draw line plots, interpret points, and recognize outliers

Lesson 4: Solving Problems Involving Line Plots (two-day lesson)

Objectives:
- Construct line plots using given data and use the line plot to answer questions about the data set

Lesson 5: Make a Graph

Objectives:
- Make and use graphs to display data and solve problems

Lesson 6: Data and Graphs Review

Lesson 7: Data and Graphs Unit Test

Unit 8: Equations

In this unit, your student will study equations. He will determine if two equations are equal or not equal to each other. The equations presented in this unit also include variables. Your student will solve for the variable in addition, subtraction, multiplication, and division equations by using the inverse operation to undo the operation of the equation.

Objectives:
- Determine whether two expressions are equal
- Add and subtract to solve equations
- Multiply and divide to solve equations

Lesson 1: Equal or Not Equal

Objectives:
- Learn and understand the properties of equality

Lesson 2: Solving Addition and Subtraction Equations

Objectives:
- Learn and understand how to use addition and subtraction to solve equations
Lesson 3: Solving Multiplication and Division Equations

Objectives:

- Learn and understand how to use multiplication and division to solve equations

Lesson 4: Equations Review

Lesson 5: Equations Unit Test
MATH 5 A
Math 5 A

In Math 5 A, the student will learn mathematical concepts that are organized according to the following categories: number and operations, algebra, and geometry. Within each category, concepts are developed through the mathematical processes of problem-solving, reasoning, communication, connections, and representations. Building both conceptual knowledge and procedural fluency supports the student’s development of mathematical thinking and reasoning in solving various problems of authentic contexts. The Scott Foresman and Addison Wesley series textbook, *enVisionMATH*, is the primary resource for this course.

The topics that are presented in this semester build upon the concepts that the student previously learned. The student will extend his understanding of place value to numbers through the millions and billions. He will also extend his ability to represent numbers by learning how to use exponential notation. Fractions and decimals will be studied to determine their relationship. The student will further refine his skills in all four operations and will apply his computational skills to problems involving greater whole numbers and decimals through the thousandths place. Then the student will investigate the concept of numbers through patterns, expressions, and relationships. Through such exercises, the student will gain increased exposure to variables. Numbers will also be connected to geometry as the student measures angles and compares types of polygons.

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

The answer key document for *enVisionMATH Lessons* is located in the Virtual Library in the Answer Keys section and is not included as a resource in the Course Guide. You can access the Answer Keys in the Virtual Library: Home > Curriculum and Instruction > Answer Keys. The answer key document for the Daily Spiral Review Answer Keys is located in the BackPack. You can access the Answer Keys in the BackPack under Web Links.

Unit 1: Let’s Get Ready to Learn Math!

In this unit, your student will learn about the activities he will do in Math 5. The first lesson, intended for Learning Coaches, provides advice for using the Lesson Guide to support your student, and details the resources found in the course. It also offers helpful tips for building your student’s math skills. The second lesson is intended for students and their Learning Coaches. This lesson will introduce your student to the concept of math, and describe the structure of math lessons.

Objectives:
- Learn how to find and use the Coaching Guide
- Locate and describe lesson resources
- Learn ways to promote mathematical thinking in your daily life
- Create a goal and steps to accomplish that goal
- Describe the different parts of a lesson and different types of assessments

Lesson 1: Learning Coach: Supporting Your Student in Math

Objectives:
- Learn how to find and use the Coaching Guide
- Locate and describe lesson resources
- Learn ways to promote mathematical thinking in your daily life

Lesson 2: Welcome to Math 5!

Objectives:
- Create a goal and steps to accomplish that goal
- Locate and describe lesson resources
- Describe the different parts of a lesson
- Describe the different types of assessments

Unit 2: Numeration, Addition, and Subtraction

This unit reinforces a solid comprehension of the base ten numeration system. As your student delves deeper into place value throughout this course, he will extend his ability to read, order, compare, round, and represent numbers to the billions and the thousandths...
place values. Proficiency of the concepts presented in this unit will provide your student with the foundation to grasp more complex math concepts.

Also in this unit, your student will apply his knowledge of basic addition and subtraction facts to solve addition and subtraction problems involving whole numbers and decimals. As your student learns to estimate and compute whole number and decimal sums, he will use his background knowledge of place value to model the process of adding and subtracting with and without regrouping. Several properties of addition and the compatible numbers strategy are used to further develop your student’s addition skills. This unit will provide your student with meaningful computational practice through word problems that are presented in authentic contexts. This unit’s problem-solving strategies are “look for a pattern,” “draw a picture and write an equation,” and “multiple-step problems.”

Objectives:
- Understand place value and decimal place value
- Compare and order whole numbers
- Compare and order decimals
- Solve multiple-step problems; Use mental math, rounding, and estimating
- Add and subtract decimals

Lesson 1: Place Value / Comparing and Ordering Whole Numbers

Objectives:
- Write the standard, expanded, and word forms of whole numbers in the billions and identify the value of digits in whole numbers
- Compare and order whole numbers

Lesson 2: Decimal Place Value

Objectives:
- Write decimals in standard form, word form, and expanded form through millionths

Lesson 3: Comparing and Ordering Decimals

Objectives:
- Compare and order decimals through thousandths

Lesson 4: Look for a Pattern

Objectives:
- Look for patterns with decimal-number sets in order to solve problems

Lesson 5: Mental Math/Rounding Whole Numbers and Decimals

Objectives:
- Compute sums and differences mentally using the Commutative and Associative Properties of Addition, compatible numbers, and compensation
- Round whole numbers through millions and decimals through thousandths

Lesson 6: Mid-Unit Review

Objectives:
- Review concepts presented thus far in the unit

Lesson 7: Estimating Sums and Differences
Objectives:
• Use rounding and compatible numbers to estimate sums and differences of whole numbers and decimals

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 8: Draw a Picture and Write an Equation

Objectives:
• Use pictures and write equations to help them solve problems

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 9: Modeling Addition and Subtraction of Decimals

Objectives:
• Add and subtract decimals in tenths and hundredths using models

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 10: Adding Decimals

Objectives:
• Compute sums of decimals involving tenths, hundredths, and thousandths

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 11: Subtracting Decimals

Objectives:
• Compute differences of decimals involving tenths, hundredths, and thousandths

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 12: Multi-Step Problems

Objectives:
• Use multiple steps to solve a variety of problems

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 13: Numeration, Addition, and Subtraction Review (two-day lesson)

Lesson 14: Numeration, Addition, and Subtraction Unit Test

Unit 3: Multiplying Whole Numbers

In this unit, your student will use place-value patterns and four properties of multiplication to multiply whole numbers of greater value. Your student will learn to simplify multiplication, especially when multiplying with multiples of 10, 100, and 1,000. Your student’s prior mastery of basic multiplication facts will allow her to focus on new concepts, such as partial products and the traditional algorithm, to solve multi–digit multiplication problems. The problem solving strategy in this unit is “draw a picture and write an equation.”

Objectives:
• Use multiplication properties
• Use mental math and estimation to find products
• Multiply 2-digit numbers by 2-digit numbers
• Multiply greater numbers
• Use exponents

Lesson 1: Multiplication Properties

Objectives:
• Identify and apply the Commutative, Associative, Identity, and Zero Properties of Multiplication
Lesson 2: Using Mental Math to Multiply/Estimating Products

Objectives:
• Mentally compute products of whole numbers using place-value patterns and the properties of multiplication
• Use rounding or compatible numbers to estimate products of whole numbers

Lesson 3: Multiplying by 1-Digit Numbers

Objectives:
• Use partial products or the traditional algorithm to multiply multi-digit numbers by a one-digit number

Lesson 4: Multiplying 2-Digit by 2-Digit Numbers

Objectives:
• Multiply two-digit numbers by two-digit numbers

Lesson 5: Multiplying Greater Numbers

Objectives:
• Multiply two-digit numbers by factors with more than two digits

Lesson 6: Exponents

Objectives:
• Use exponential notation

Lesson 7: Multiplying Whole Numbers Review (two-day lesson)

Lesson 8: Multiplying Whole Numbers Unit Test

Unit 4: Dividing by 1-Digit Divisors

In this unit, your student will estimate and divide up to four-digit dividends by single-digit divisors. Your student will learn to simplify division, especially when dividing with a dividend that is a multiple of 10 and 100. Since relating multiplication to division serves as an efficient strategy for solving division problems, your student should be fluent with his multiplication facts. In doing so, your student will be able to concentrate on learning new skills, such as dividing within the context of money, dividing with zeros in the quotient, and dividing to find factors of whole numbers. Your student will also study the concepts of prime and composite numbers. The problem-solving strategies in this unit are "reasonableness" and "draw a picture and write an equation."

Objectives:
• Divide by multiples of 10 and estimate quotients
• Divide by 1-digit divisors
• Understanding factors
• Determine prime and composite numbers

Lesson 1: Divide Multiples of 10 and 100/Estimate Quotients

Objectives:
• Find the quotient of a division problem whose dividend is a multiple of 10, where division involves a basic fact
Lesson 2: Reasonableness/Connecting Models and Symbols

Objectives:
• Check problems for reasonableness by using various methods, including estimation and checking their final answer
• Find quotients using the model of sharing money

Lesson 3: Dividing by 1-Digit Divisors/Zeros in the Quotient

Objectives:
• Divide three-digit whole numbers by one-digit divisors
• Divide with zeros in the quotient

Lesson 4: Understanding Factors

Objectives:
• Use divisibility rules to determine if a number is divisible by another and to find factor pairs of a given number

Lesson 5: Prime and Composite Numbers

Objectives:
• Identify numbers as prime or composite and find the prime factorization of a number

Lesson 6: Draw a Picture and Write an Equation

Objectives:
• Use pictures and equations to help them represent remainders in a problem

Lesson 7: Dividing by 1-Digit Divisors Review (two-day lesson)

Lesson 8: Dividing by 1-Digit Divisors Unit Test

Unit 5: Dividing by 2-Digit Divisors

In this unit, your student will estimate quotients and divide up to five-digit dividends with two-digit divisors. The solutions to these division problems include one-digit and two-digit quotients, as well as quotients with a remainder. Basic multiplication facts will help your student find the quotient to division problems whose dividends and divisors are multiples of 10. This unit’s problem-solving strategies are “multiple-step problems” and “missing or extra information.”

Objectives:
• Use patterns to divide
• Estimate quotients with 2-digit divisors
• Multiple-Step problems
• Divide by multiples of 10
• Use 1- and 2-digit quotients

Lesson 1: Using Patterns to Divide

Objectives:
Lesson 2: Estimating Quotients with 2-Digit Divisors

Objectives:
• Use estimation to find approximate solutions to quotients with two-digit divisors using compatible numbers

Lesson 3: Connecting Models and Symbols

Objectives:
• Use arrays and area models to model division

Lesson 4: Multiple-Step Problems

Objectives:
• Find the hidden question or questions to solve multiple-step problems

Lesson 5: Dividing by Multiples of 10

Objectives:
• Find quotients with a two-digit divisor that is a multiple of ten

Lesson 6: Mid-Unit Review

Objectives:
• Review concepts presented thus far in the unit

Lesson 7: 1-Digit Quotients

Objectives:
• Find one-digit quotients where the divisor is a two-digit number

Lesson 8: 2-Digit Quotients

Objectives:
• Divide a three-digit number by a two-digit number to find a two-digit quotient

Lesson 9: Estimating and Dividing/Missing, Extra Information

Objectives:
• Solve problems involving division of numbers with 4 or 5 digits by 2-digit divisors with an estimate, or by using a calculator when the exact answer is needed
• Determine which information is missing and identify extraneous information in problems

Lesson 10: Dividing by 2-Digit Divisors Review (two-day lesson)

Lesson 11: Dividing by 2-Digit Divisors Unit Test
Unit 6: Variables and Expressions

In this unit, your student will estimate quotients and divide up to five-digit dividends with two-digit divisors. The solutions to these division problems include one-digit and two-digit quotients, as well as quotients with a remainder. Basic multiplication facts will help your student find the quotient to division problems whose dividends and divisors are multiples of 10. This unit’s problem-solving strategies are “multiple-step problems” and “missing or extra information.”

Objectives:
- Solve variables and expressions
- Use patterns and expressions to solve problems
- Use the Distributive Property
- Apply the Order of Operations

Lesson 1: Variables and Expressions

Objectives:
- Translate words into algebraic expressions

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 2: Patterns and Expressions

Objectives:
- Use patterns to show relationships and solve algebraic expressions

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 3: More Patterns and Expressions

Objectives:
- Write and evaluate expressions involving multiplication, addition, and subtraction

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 4: Patterns: Extending Tables

Objectives:
- Extend patterns in a table using given rules
- Identify the relationship between corresponding terms in the sequences

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 5: Distributive Property

Objectives:
- Use the Distributive Property to simplify expressions and solve equations

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 6: Order of Operations

Objectives:
- Use given values for variables to evaluate numerical or algebraic expressions with three or more numbers and two or more operations

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 7: Addition and Subtraction Expressions

Objectives:
- Model addition and subtraction patterns shown in tables and write rules for the patterns

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 8: Multiplication and Division Expressions

Appendix A.2.b Mathematics Course Guides
Objectives:
• Model multiplication and division patterns shown in tables and write rules for the patterns

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 9: Act It Out and Use Reasoning
Objectives:
• Solve problems by showing how to act out the problem
• Use information given in the problem to draw conclusions

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 10: Variables and Expressions Review (two-day lesson)

Lesson 11: Variables and Expressions Unit Test

Unit 7: Multiplying and Dividing Decimals
In this unit, your student will use mental math strategies to estimate products and quotients of problems involving decimals. Your student will apply the standard algorithm to multiply a decimal by a whole number and to multiply a decimal by another decimal. The steps for dividing decimals using the standard algorithm will also be taught to divide a decimal by a whole number and to divide a decimal by another decimal. This unit’s problem-solving strategy is “multiple-step problems.”

Objectives:
• Multiply and divide decimals by 10, 100, and 1,000
• Estimate the product of a decimal and a whole number
• Multiply and divide a decimal by a whole number
• Solve multiple-step problems

Lesson 1: Multiplying Decimals by 10, 100, or 1,000
Objectives:
• Mentally multiply decimals by 10, 100, and 1,000

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 2: Multiplying a Decimal by a Whole Number
Objectives:
• Use a standard algorithm to multiply a whole number and a decimal

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 3: Estimate Decimal & Whole Products/Mult. Decimals
Objectives:
• Use rounding and compatible numbers to estimate products of whole numbers and decimals
• Identify estimates as overestimates or underestimates
• Use the standard algorithm to multiply decimals by decimals

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 4: Model and Perform Decimal Multiplication
Objectives:
• Use number sense and place value to multiply decimals
• Find products of whole numbers and decimals to ten thousandths

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 5: Dividing Decimals by 10, 100, or 1,000
Objectives:
• Mentally divide decimals by 10, 100, or 1,000

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.
Lesson 6: Mid-Unit Review

Objectives:
• Review concepts presented thus far in the unit

Lesson 7: Number Sense: Decimal Division

Objectives:
• Use reasoning to correctly place the decimal point in a quotient

Lesson 8: Dividing a Decimal by a Whole Number

Objectives:
• Use the standard algorithm to divide a decimal by a whole number

Lesson 9: Estimate, Divide Decimal by Whole/Divide Decimals

Objectives:
• Use compatible numbers to estimate quotients of decimals and whole numbers
• Use the standard algorithm to divide decimals by decimals

Lesson 10: Multiple-Step Problems

Objectives:
• Use multiple steps to solve a variety of problems

Lesson 11: Multiplying and Dividing Decimals Review (two-day lesson)

Lesson 12: Multiplying and Dividing Decimals Unit Test

Unit 8: Shapes

In this unit, your student will learn about points, lines, and planes, the building blocks used to describe other geometric figures. Your student will recognize the appropriate labels that are needed in drawings of lines and rays. Also, your student will examine how to say specific lines and rays and how to write them with proper notation. Using a protractor, your student will measure and draw angles of varying degrees. Polygons are named by the number of sides and angles they possess, and your student will learn to identify and describe different polygons based on such attributes. While taking a closer look at triangles, your student will find that triangles fall into classifications according to the length of their sides or by the size of their angles. Your student will also investigate the classification system of quadrilaterals.

Objectives:
• Apply basic geometric ideas
• Measure and classify angles
• Identify polygons, triangles, and quadrilaterals
• Make and test generalizations

Lesson 1: Basic Geometric Ideas

Objectives:
• Use geometric terms to describe locations and parts of space

Lesson 2: Measuring and Classifying Angles
Objectives:
- Measure, draw, and classify angles

Lesson 3: Polygons

Objectives:
- Identify and classify polygons

Lesson 4: Triangles

Objectives:
- Identify and classify triangles

Lesson 5: Quadrilaterals

Objectives:
- Identify and classify quadrilaterals

Lesson 6: Special Quadrilaterals/Classifying Quadrilaterals

Objectives:
- Learn about the properties of special quadrilaterals
- Sort a variety of quadrilaterals to develop the hierarchy or "family tree" for quadrilaterals

Lesson 7: Problem Solving: Make and Test Generalizations

Objectives:
- Make and test generalizations of patterns in different examples

Lesson 8: Shapes Review (two-day lesson)

Lesson 9: Shapes Unit Test
MATH 5 B
Math 5 B

In Math 5 B, the student will continue to expand upon mathematical concepts that are organized according to the following categories: number and operations, algebra, geometry, measurement, data analysis, and probability. Within each category, concepts are developed through the mathematical processes of problem-solving, reasoning, communication, connections, and representations. Building both conceptual knowledge and procedural fluency supports the student’s development of mathematical thinking and reasoning in solving various problems of authentic contexts. The Scott Foresman and Addison Wesley series textbook, *enVisionMATH*, is the primary resource for this course.

The topics that are presented in this semester build upon the concepts that the student previously learned. The student will further refine his skills in all four operations and will apply his computational skills to problems involving fractions and mixed numbers. The student will study 2- and 3-dimensional figures and calculate perimeter, area, and volume of regular and irregular figures. The student will engage in hands-on learning of measurement by finding length, area, perimeter, circumference, capacity, volume, weight, and mass using the appropriate tools and units. Algebraic expressions and equations are represented in various forms, and the student will translate between algebraic representations, such as from a function table to an equation. The student will be introduced to integers to develop skills in comparing, ordering, and graphing negative values. The student will connect numbers to statistics as he learns how to gather data and display the data in various types of graphs. Finally, the student will explore probability by listing possible outcomes of a given event, conducting experiments, and representing the theoretical and experimental probabilities of the event as a fraction.

Your student will have access to DimensionU™, which includes online math games that support your student’s understanding of lesson concepts. You will find the link to DimensionU™ on your student’s home page. Follow the directions to download the necessary software first. Once installed, DimensionU™ allows your student to access DimensionM™ to practice grades 3–7 and pre-algebra math skills in a gaming environment.

The answer key document for *enVisionMATH Lessons* is located in the Virtual Library in the Answer Keys section and is not included as a resource in the Course Guide. You can access the Answer Keys in the Virtual Library: Home > Curriculum and Instruction > Answer Keys. The answer key document for the Daily Spiral Review Answer Keys is located in the BackPack. You can access the Answer Keys in the BackPack under Web Links.

**Unit 1: Fractions and Decimals**

In this unit, your student will identify fractional parts of a whole region and whole set. Your student will learn how division relates to fractions through the process of dividing a whole into equal parts. This unit will explain how to show equivalent fractions, express fractions in simplest form, and write mixed numbers and improper fractions interchangeably. Your student will also learn how to write tenths, hundredths, and thousandths as decimals and fractions interchangeably. Determining greatest common factor and comparing and ordering on a number line are other concepts and skills included in this unit. The problem-solving strategy in this unit is “writing to explain.”

Objectives:

- **Apply meanings of fractions**
- **Divide fractions**
- **Convert mixed numbers and improper fractions**
- **Compare and order fractions and mixed numbers**
- **Simplify fractions to simplest terms and determine equivalent fractions**

**Lesson 1: Meanings of Fractions / Fractions and Division**

Objectives:

- Identify and show fractional parts of regions and sets
- Use division to segment objects into equal parts that are fractions of a whole
- Represent fractions as points on the number line
Lesson 2: Mixed Numbers and Improper Fractions

Objectives:
• Express fractions greater than 1 as mixed numbers or improper fractions

Lesson 3: Equivalent Fractions/Compare and Order Fractions

Objectives:
• Identify fractions that are equivalent
• Find fractions equivalent to a given fraction using computational procedures
• Determine which of two fractions or mixed numbers is greater or less in order to compare and order fractions and mixed numbers

Lesson 4: Common Factors and Greatest Common Factor

Objectives:
• Determine common factors and the greatest common factor of numbers

Lesson 5: Fractions in Simplest Form

Objectives:
• Identify fractions that are in simplest form and find the simplest form of a fraction

Lesson 6: Mid-Unit Review

Objectives:
• Review concepts presented thus far in the unit

Lesson 7: Tenths and Hundredths

Objectives:
• Represent decimals (tenths and hundredths) as fractions
• Represent fractions with denominators of 10 and 100 as decimals

Lesson 8: Thousandths

Objectives:
• Represent decimals (thousandths) as fractions and fractions with denominators of 1,000 as decimals

Lesson 9: Fractions and Decimals on the Number Line

Objectives:
• Label a point on a number line using a fraction and a decimal
• Write a fraction and a decimal for a point on a number line

Lesson 10: Problem Solving: Writing to Explain

Objectives:
• Explain how to estimate fractional amounts of objects
Unit 2: Adding and Subtracting Fractions and Mixed Numbers

In this unit, your student will use fraction models and computation skills to add and subtract fractions and mixed numbers with like and unlike denominators. Your student will study the process of finding the least common multiple of two numbers in order to change unlike denominators into like denominators for addition and subtraction purposes. The problem-solving strategy in this unit is “try, check, and revise.”

Objectives:
• Add and subtract fractions with like denominators
• Find common multiples and least common multiples
• Add and subtract fractions with unlike denominators
• Add and subtract mixed numbers
• Use the try, check, and revise strategy

Lesson 1: Estimating, Adding, and Subtracting Fractions

Objectives:
• Use a number line to estimate sums and differences of fractions
• Use models and computational procedures to add and subtract fractions with like denominators

Lesson 2: Common Multiples and Least Common Multiple

Objectives:
• Determine common multiples and least common multiples of numbers

Lesson 3: Adding Fractions with Unlike Denominators

Objectives:
• Use models and computational procedures to add fractions with unlike denominators

Lesson 4: Subtracting Fractions with Unlike Denominators

Objectives:
• Use models and computational procedures to subtract fractions with unlike denominators

Lesson 5: Mid-Unit Review

Objectives:
• Review concepts presented thus far in the unit

Lesson 6: Modeling Addition and Subtraction of Mixed Numbers

Objectives:
• Use models to add and subtract mixed numbers
• Use models and computational procedures to add mixed numbers

Lesson 7: Subtracting Mixed Numbers

Objectives:
Lesson 8: More Adding and Subtracting Mixed Numbers

Objectives:
- Solve more complex problems involving the addition and subtraction of mixed numbers

Lesson 9: Try, Check, and Revise

Objectives:
- Use three steps—try, check, and revise—in order to solve problems

Lesson 10: Adding & Subtracting Fractions/Mixed Number Review (two-day lesson)

Lesson 11: Adding & Subtracting Fractions/Mixed Numbers Test

Unit 3: Multiplying Fractions and Mixed Numbers

In this unit, your student will learn to multiply a fraction by a whole number and by another fraction. Multiplication of mixed numbers is another concept that is presented in this unit. Several methods, such as using repeated addition, drawing a picture, and computing products, are used to develop the concepts of multiplying with fractions and multiplying with mixed numbers. The problem-solving strategy in this unit is “draw a picture and write a number sentence.”

Objectives:
- Multiply fractions and whole numbers
- Multiply two fractions
- Multiply mixed numbers
- Relate division to multiplication of fractions

Lesson 1: Multiplying Fractions and Whole Numbers

Objectives:
- Multiply a fraction by a whole number

Lesson 2: Estimating Products/ Multiplying Two Fractions

Objectives:
- Use compatible numbers and rounding to estimate with fractions
- Give the product of two fractions

Lesson 3: Area of a Rectangle

Objectives:
- Find the area of rectangles

Lesson 4: Multiplying Mixed Numbers

Objectives:
- Multiply mixed numbers

Lesson 5: Multiplication as Scaling
Objectives:
• Compare the size of the product to the size of one factor without multiplying to begin to consider multiplication as scaling

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 6: Relating Division to Multiplication of Fractions

Objectives:
• Divide whole numbers by fractions

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 7: Dividing Unit Fractions by Non-Zero Whole Numbers

Objectives:
• Discover the inverse relationship between multiplication and division that will help students to divide unit fractions by whole numbers

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 8: Draw a Picture and Write an Equation

Objectives:
• Use diagrams and write equations to solve problems

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 9: Multiplying Fractions and Mixed Numbers Review (two-day lesson)

Lesson 10: Multiplying Fractions and Mixed Numbers Test

Unit 4: Perimeter and Area
In this unit, your student will learn to select appropriate tools and units to measure length in the customary and metric systems. Your student will measure with greater precision by finding length to the nearest inch, half inch, quarter inch, and eighth inch in the customary system and to the nearest centimeter and millimeter in the metric system. Using formulas, your student will find the perimeter of polygons, area of squares, rectangles, and triangles, and circumference of circles. Additionally, your student will use a formula to find the area of a parallelogram and to determine the side-lengths of a parallelogram, given the area and the length of one side. This unit’s problem-solving strategy is “draw a picture and make an organized list.”

Objectives:
• Use customary units of length
• Use metric units of length
• Find perimeter of polygons
• Find the area of squares, rectangles, parallelograms, and triangles
• Determine the circumference of circles

Lesson 1: Using Customary Units of Length

Objectives:
• Choose the most appropriate units of length and measure to the nearest inch, half inch, quarter inch, or eighth inch

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 2: Using Metric Units of Length

Objectives:
• Choose the most appropriate metric unit of length and measure to the nearest centimeter and millimeter

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 3: Perimeter
Objectives:
• Find the perimeter of polygons
  Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 4: Area of Squares and Rectangles
Objectives:
• Find the areas of squares and rectangles by using formulas
  Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 5: Mid-Unit Review
Objectives:
• Review concepts presented thus far in the unit

Lesson 6: Area of Parallelograms
Objectives:
• Find the area of a parallelogram by using a formula
• Find the length of the sides of a parallelogram when the area and one side length are given
  Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 7: Area of Triangles
Objectives:
• Find the area of a triangle by using a formula
• Find a missing length when the area and other dimensions are known
  Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 8: Circles and Circumference
Objectives:
• Learn the parts of a circle and calculate circumference
  Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 9: Draw a Picture and Make an Organized List
Objectives:
• Make an organized list and draw a picture in order to solve problems
  Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 10: Perimeter and Area Review (two-day lesson)

Lesson 11: Perimeter and Area Test

Unit 5: Solids
This unit allows your student to examine solids in greater detail. To begin, your student will name the attributes of solid figures by their faces, edges, and vertices. Your student will identify two-dimensional shapes that constitute solid figures, as he examines nets that form solid figures upon folding. Also, your student will explore the views of solids from the various perspectives of looking from the top, front, and side. Determining volume in cubic units is a concept that is studied in this unit. The problem-solving strategy in this unit is “use objects and solve a simpler problem.”

Objectives:
• Identify solids
• Relate shapes and solids
• Find volume of solids
• Work with irregular shapes and solids
• Use objects and solve a simpler problem
Lesson 1: Solids

Objectives:
- Identify solid figures according to faces, edges, and vertices

Lesson 2: Relating Shapes and Solids

Objectives:
- Identify a two-dimensional representation (net) of a solid

Lesson 3: Views of Solids

Objectives:
- Identify different views of a solid

Lesson 4: Mid-Unit Review

Objectives:
- Review concepts presented thus far in the unit

Lesson 5: Volume

Objectives:
- Count cubic units and use formulas to find the volume of rectangular prisms

Lesson 6: Irregular Shapes and Solids

Objectives:
- Find the areas and volumes of irregular shapes and solids

Lesson 7: Use Objects and Solve a Simpler Problem

Objectives:
- Use objects to act out and break apart problems into simpler ones in order to reach a solution

Lesson 8: Solids Review (two-day lesson)

Lesson 9: Solids Test

Unit 6: Measurement Units

In this unit, your student will learn to select appropriate tools and units to measure capacity and weight in the customary system and volume and mass in the metric system. Using multiplication and division, your student will convert units of measure within the same system. Next your student will study elapsed time, start time, and end time, and use models and computations to solve problems involving minutes, hours, days, and weeks. Your student will also study temperature changes in both degrees Fahrenheit and degrees Celsius. The use of real measuring tools, such as thermometers, scales, and clocks, as well as real items, such as cups and daily schedules, will add meaning to your student’s study of measurement. This unit’s problem-solving strategy is “make a table.”

Objectives:
- Use customary and metric units of capacity
- Use units of weight and mass
- Convert customary and metric units
• Determine time and elapsed time
• Find temperature changes

**Lesson 1: Customary Units of Capacity**

Objectives:
• Use a variety of customary units to measure liquid volume

**Lesson 2: Metric Units of Capacity**

Objectives:
• Use metric units to measure liquid volume

**Lesson 3: Units of Weight and Mass**

Objectives:
• Use units of mass and weight to determine the amount of matter an object has and how heavy or light an object is

**Lesson 4: Mid-Unit Review**

Objectives:
• Review concepts presented thus far in the unit

**Lesson 5: Converting Customary Units**

Objectives:
• Convert customary units of measure using multiplication and division

**Lesson 6: Converting Metric Units**

Objectives:
• Convert metric units of measure using multiplication and division

**Lesson 7: Measurement Units Review (two-day lesson)**

**Lesson 8: Measurement Units Test**

**Unit 7: Solving and Writing Equations**

This unit provides your student further practice with variables. The variables in this unit are used in equations that involve addition, subtraction, multiplication, or division. Your student will learn to isolate the variable in an equation in order to solve for the unknown number. Finally, your student will identify and write an equation for the pattern or relationship that exists between pairs of numbers that are recorded within a table. This unit’s problem-solving strategy is “draw a picture and write an equation.”

Objectives:
• Solve addition, subtraction, multiplication, and division equations
• Determine patterns and equations
• Use a picture to write an equation

**Lesson 1: Solving Addition and Subtraction Equations**

Objectives:
• Solve one-step equations involving addition or subtraction

**Lesson 2: Solving Multiplication and Division Equations**
Objectives:
• Solve one-step equations involving multiplication or division

Lesson 3: Patterns and Equations
Objectives:
• Complete a table of values for an equation or write an equation to describe the relationship between pairs of numbers in a table

Lesson 4: Draw a Picture and Write an Equation
Objectives:
• Draw diagrams or pictures and write equations to solve problems

Lesson 5: Solving and Writing Equations Review (two-day lesson)

Lesson 6: Solving and Writing Equations Test

Unit 8: Equations and Graphs
In this unit, your student will study integers. A number line will give your student a visual of the sequence of positive and negative numbers and develop hers understanding of integer values. Your student will use number lines on a coordinate plane to graph ordered pairs of integers. The study of integers will also include determining the distance between two integers and generating a list of ordered pairs, given the values of one variable in a given equation. The student will also learn to collect data from surveys and to display and interpret data in various types of graphs.

Objectives:
• Understand integers
• Work with ordered pairs
• Find distances on number lines and the coordinate plane
• Graph patterns and equations
• Make and interpret various types of graphs

Lesson 1: Understanding Integers
Objectives:
• Read and write integers and represent them on a number line

Lesson 2: Ordered Pairs
Objectives:
• Identify and graph points on a coordinate plane

Lesson 3: Distances on Number Lines and the Coordinate Plane
Objectives:
• Use number lines and the coordinate plane to find distances involving positive and negative numbers

Lesson 4: Graphing Patterns and Equations
Objectives:
• Make a table of x- and y-values for an equation
• Use the ordered pairs to graph the equation
• Create and interpret coordinate graphs

© 2016 Connections Education LLC. All rights reserved.
Lesson 5: More Patterns and Graphing

Objectives:
• Use coordinate graphs to explore the relationship between two rules

Lesson 6: Data from Surveys/Making Line Plots

Objectives:
• Collect data and record data in frequency tables and line plots
• Make a line plot from data in a frequency table
• Interpret the results

Lesson 7: Measurement Data

Objectives:
• Use the information in a line plot to solve problems involving the data

Lesson 8: Bar Graphs and Picture Graphs

Objectives:
• Make and interpret bar graphs, double-bar graphs, and picture graphs

Lesson 9: Equations and Graphs Review (two-day lesson)

Lesson 10: Equations and Graphs Test
MATH 6 A
Math 6 A
In this course, the student will use the four operations with decimals, fractions, and integers. The student will study patterns and variables as a precursor to solving equations and inequalities. The study of number theory will help the student understand divisibility, prime numbers, factors, and multiples. The student will learn about ratios, proportions, and percents and apply them in scale drawings.

Throughout the course, the student will engage in many problem-solving strategies, make real-world connections, and participate in mathematical discussions with peers.

Unit 1: Focus on Success in Math 6
In this unit, you will focus on ways to think about and approach mathematics. You will learn how to set personal goals, establish study strategies that reduce anxiety, and review ways to be an active learner. In addition, this unit introduces the various resources that are available to you in your Math 6 course.

Objectives:
• Assess personal readiness for studying and learning
• Recognize the importance of personal ownership of learning
• Reflect on personal strengths and weaknesses in order to improve mathematical performance
• Use resources to set goals

Lesson 1: Looking Ahead
Objectives:
• Describe the characteristics of quality goals
• Set goals for success in mathematics
• Reflect on strengths, weaknesses, and how to apply them
• Recognize the importance of personal effort to learning

Lesson 2: Gearing Up
Objectives:
• Identify the various resources that you can use in the course
• Modify goals to include using resources effectively

Unit 2: Whole Numbers and Decimals
In this unit, you will learn how to identify the place value of whole numbers and decimals, which you will then apply to comparing and ordering these types of numbers. You will apply estimation strategies as well as the properties of addition and multiplication as tools for solving problems. Also, you will learn how to use the order of operations to simplify numerical expressions. You will find the answers of addition, subtraction, multiplication, and division problems using whole numbers and decimals. Finally, you will learn and apply the four-step problem-solving strategy.

Objectives:
• Identify the place values of a given whole number or decimal, and use the value of the number or decimal to compare and order the numbers
• Apply the properties of addition and multiplication to solve problems
• Apply the order of operations to evaluate numerical expressions
• Perform operations with multi-digit whole numbers and decimals

Lesson 1: Identifying the Value of Whole Numbers
Objectives:
• Identify the place value of a digit in the given number
• Compare the value of two whole numbers

Lesson 2: Whole Number Estimation
Objectives:
• Apply strategies for estimation to find sums, differences, products, or quotients
Lesson 3: Computing with Whole Numbers

Objectives:
• Calculate to find the sum, difference, product, or quotient of two whole numbers

Lesson 4: Properties of Addition and Multiplication

Objectives:
• Apply the Commutative Property, Associative Property, or Identity Property of Addition or Multiplication to solve computation problems

Lesson 5: Order of Operations in Numerical Expressions

Objectives:
• Apply the order of operations to solve numerical expressions

Lesson 6: Whole Numbers and Operations Mid-Unit Review

Objectives:
• Utilize estimation strategies, properties of operations, and the order of operations to solve computation problems with whole numbers

Lesson 7: Identifying the Value of Decimals

Objectives:
• Identify the value of a specified digit in a decimal
• Apply the rules of rounding to decimals

Student Lesson Activity:

Complete the following activities.
2. Complete the even-numbered problems from 12–42 on pp. 24–25 in Mathematics: Course 1 to practice writing decimals in the different forms and rounding decimals.
3. Complete problems 46–50 on p. 25 in Mathematics: Course 1 to practice the skills you have learned previously in this course.

Lesson 8: Comparing and Ordering Decimals

Objectives:
• Compare the value of decimals
• Identify the order of decimals based on their numerical value

Lesson 9: Decimal Addition and Subtraction

Objectives:
• Identify sums and differences by adding and subtracting decimals

Lesson 10: Decimal Multiplication

Objectives:
• Identify the product when a decimal is multiplied by a whole number or another decimal

Lesson 11: Multiplying and Dividing Decimals by Powers of Ten

Objectives:
• Identify the product or quotient when multiplying or dividing a decimal by a power of ten

Lesson 12: Decimal Division

Objectives:
• Identify the quotient when dividing a decimal by a whole number or another decimal

Lesson 13: Problem Solving: The Four-Step Plan
Objectives:
• Apply the four-step plan to solve word problems

Lesson 14: Whole Numbers and Decimals Review
Objectives:
• Identify how to use place value and computation skills in solving a real-world problem
• Find the answers to computation problems involving whole numbers and decimals

Lesson 15: Whole Numbers and Decimals Unit Test

Unit 3: Data and Graphs
In this unit, you will learn how to calculate the mean, median, mode, and range for a given set of data. You will also practice reading and creating a variety of visual representations of data, such as frequency charts, line plots, line graphs, bar graphs, box-and-whisker plots, double bar graphs, histograms, and stem-and-leaf plots. In addition, you will identify how graphs and statistics can be misleading. Finally, you will learn what makes a statistical question. This unit’s portfolio assignment is to develop a double-bar graph.

Objectives:
• Calculate to find the mean, median, mode, and range when given a specified set of data
• Create a double-bar graph
• Interpret data from a visual representation, such as a bar graph, histogram, or box-and-whisker plot
• Explain how graphs and statistics can be misleading

Lesson 1: Mean and Outliers
Objectives:
• Compute the mean when given a set of numbers

Lesson 2: Median and Mode
Objectives:
• Identify the median and mode of a given set of numbers
• Explain which measure of central tendency is best in a given situation

Lesson 3: Tables and Plots (two-day lesson)
Objectives:
• Identify the range, middle value, upper value, and lower value of a set of numbers
• Read a frequency table, line plot, or a box-and-whisker plot to find the mean, median, mode, or range

Lesson 4: Bar Graphs and Line Graphs (two-day lesson)
Objectives:
• Create a double bar graph when given a set of data
• Create and read a single line graph

Lesson 5: Histograms
Objectives:
• Identify the value of a bar in a given histogram

Lesson 6: Shape and Variability of Data
Objectives:
• Find the mean and range of a given data set
• Identify the degree of variability in a chart, graph, or plot

Lesson 7: Stem-and-Leaf Plots
Objectives:
• Order data to create a stem-and-leaf plot
Lesson 8: Misleading Graphs and Statistics

Objectives:
- Analyze graphs for misleading information

Lesson 9: Statistical Questions

Objectives:
- Differentiate between a statistical question and a question that is not statistical

Lesson 10: Data and Graphs Review

Objectives:
- Explain preferred methods for representing data and identify real-world scenarios that could be represented in this manner

Lesson 11: Data and Graphs Unit Test

Unit 4: Patterns and Variables

In this unit, you will be learning about patterns, expressions, and equations. First, you will be discovering numerical patterns and identifying the rule for the pattern, followed by using exponents to simplify certain numerical expressions. Then, you will be using variables to represent unknown numbers in expressions and equations. Next, you will learn what an equation is and the different strategies to solve it. Then, you will learn another property, the Distributive Property, which provides another strategy for solving more complex computation problems. Finally, you will continue to develop your problem-solving skills by submitting a portfolio assignment in which you will be writing an equation and solving it after reading a word problem.

Objectives:
- Identify numerical patterns and their rules
- Simplify a numerical expression through the use of exponents
- Evaluate expressions using the given values
- Apply the Distributive Property to solve computation problems
- Generate an equation and use it to solve a problem

Lesson 1: Patterns, Rules, and Numerical Expressions

Objectives:
- Identify numerical patterns
- Define the rule for a sequence

Lesson 2: What Is an Exponent?

Objectives:
- Identify the exponent for a given expression
- Apply the order of operations to solve expressions with exponents

Lesson 3: Scientific Notation

Objectives:
- Identify the standard and scientific forms for a numerical value

Lesson 4: Algebraic Expressions

Objectives:
- Differentiate between a numerical and algebraic expression
- Evaluate algebraic expressions for the given quantity

Lesson 5: From Words to Algebraic Expressions

Objectives:
- Translate words into algebraic expressions

Lesson 6: What Are Equations?
Objectives:
• Calculate the answer to a one-step question by utilizing mental math strategies

Lesson 7: Equations with Addition
Objectives:
• Demonstrate the Subtraction Property of Equality when solving equations with addition

Lesson 8: Equations with Subtraction
Objectives:
• Demonstrate the Addition Property of Equality when solving equations with subtraction

Lesson 9: Equations with Multiplication and Division
Objectives:
• Demonstrate the Division Property of Equality when solving an equation with multiplication
• Demonstrate the Multiplication Property of Equality when solving an equation with division

Lesson 10: Distributive Property
Objectives:
• Apply the distributive property in order to generate equivalent expressions

Lesson 11: Problem Solving and Equations (two-day lesson)
Objectives:
• Develop and solve an equation to solve a word problem

Lesson 12: Patterns and Variables Review
Objectives:
• Identify numerical patterns and their rules
• Simplify a numerical expression through the use of exponents
• Evaluate expressions using the given values
• Apply the Distributive Property to solve computation problems
• Generate an equation and use it to solve problems

Lesson 13: Patterns and Variables Unit Test

Unit 5: Number Theory and Fractions
In this unit, you will be applying your multiplication and division skills to identify factors, prime factorization, and multiples of numbers. Also, you will apply the Distributive Property to create equivalent numerical and algebraic expressions. In the area of fractions, you will apply your skills of finding factors and multiples to find equivalent fractions, simplify fractions, and identify the least common denominator. You will also practice converting between various forms, such as mixed numbers into improper fractions and fractions into decimals.

Objectives:
• Identify factors of numbers and apply them to identify the prime factorization of numbers
• Use factors and multiples to find the least common denominator
• Generate equivalent fractions and expressions
• Convert between forms of numbers, such as mixed numbers into fractions and fractions into decimals
• Compare and order fractions and decimals

Lesson 1: Divisibility and Mental Math
Objectives:
• Identify whether a number is divisible by a second number
• Identify whether a number is even or odd

**Lesson 2: Prime Time (two-day lesson)**

Objectives:
• Distinguish between prime and composite numbers
• Identify the factors of a composite number

**Lesson 3: Greatest Common Factor**

Objectives:
• Identify the greatest common factor of two or more numbers

**Lesson 4: Writing Expressions that Are Equivalent (two-day lesson)**

Objectives:
• Generate equivalent numerical and algebraic expressions using the Distributive Property

**Lesson 5: Equivalent Fractions**

Objectives:
• Identify fractions that are equivalent to the original fraction

**Lesson 6: Fractions Greater Than 1**

Objectives:
• Convert mixed numbers into improper fractions and improper fractions into mixed numbers

**Lesson 7: Multiples**

Objectives:
• Identify the least common multiple of at least two numbers

**Lesson 8: Comparing and Ordering Fractions (two-day lesson)**

Objectives:
• Compare the value of the given fractions and mixed numbers
• Identify the numerical order of a given set of fractions and/or mixed numbers

**Lesson 9: Fractions and Decimals (two-day lesson)**

Objectives:
• Convert decimals into fractions and fractions into decimals
• Identify the order of a set of fractions and decimals from least to greatest and greatest to least

**Lesson 10: Number Theory and Fractions Review**

Objectives:
• Identify factors of numbers and apply them to identify the prime factorization of numbers
• Use factors and multiples to find the least common denominator
• Generate equivalent fractions and expressions
• Convert between forms of numbers, such as mixed numbers into fractions and fractions into decimals
• Compare and order fractions and decimals

**Lesson 11: Number Theory and Fractions Unit Test**

**Unit 6: Adding and Subtracting Fractions**

In this unit, you will be rounding and estimating sums and differences of fractions and mixed numbers. Then you will calculate the actual sums and differences of fractions with like and unlike denominators. Next, you will apply your skills in solving addition and subtraction problems with mixed numbers, sometimes needing to rename the mixed number. Also, you
will be solving addition and subtraction equations with fractions and mixed numbers. Finally, you will solve problems that use elapsed time, and apply these skills by completing a portfolio assignment with real-world scenarios.

Objectives:
- Estimate sums and differences of fractions and whole numbers
- Calculate the sums and differences of fractions and mixed numbers
- Identify the solution to an equation with fractions
- Calculate the elapsed time in a given scenario

**Lesson 1: Estimating Fractions/Mixed Numbers**

Objectives:
- Demonstrate rounding fractions and mixed numbers to the nearest one-half
- Calculate the estimated sum or difference of fractions and mixed numbers

**Lesson 2: Add and Subtract Fractions with Like Denominators**

Objectives:
- Find the sum or difference when two or more fractions with like denominators are added or subtracted.

**Lesson 3: Addition of Fractions with Unlike Denominators**

Objectives:
- Calculate the sum of two or more fractions with unlike denominators added together

**Lesson 4: Subtraction of Fractions with Unlike Denominators**

Objectives:
- Calculate the difference of two fractions with unlike denominators

**Lesson 5: Adding and Subtracting Fractions Mid-Unit Review**

Objectives:
- Add and subtract fractions with like and unlike denominators

**Lesson 6: Addition with Mixed Numbers**

Objectives:
- Calculate the sum when adding with mixed numbers.

**Lesson 7: Subtraction with Mixed Numbers (two-day lesson)**

Objectives:
- Calculate the difference when subtracting with mixed numbers

**Lesson 8: Solving Equations with Fractions (two-day lesson)**

Objectives:
- Calculate the answer to an equation with fractions

**Lesson 9: Elapsed Time (two-day lesson)**

Objectives:
- Calculate the time that has elapsed between the start and end times

**Lesson 10: Adding and Subtracting Fractions Review**

Objectives:
- Explain the method for solving problems with addition and subtraction of fractions and mixed numbers.

**Lesson 11: Adding and Subtracting Fractions Unit Test**

Unit 7: Multiplying and Dividing Fractions
In this unit, you will apply your multiplication and division skills to fractions and mixed numbers. First, you will learn how to multiply whole numbers, fractions, and mixed numbers. Next, you will learn how to identify the reciprocal of a number and use that when dividing fractions and mixed numbers. Then you will use your problem-solving skills to solve equations with fractions. Finally, you will learn about the customary system of measurement and how to convert from one unit to another.

Objectives:
- Calculate the product of whole numbers, fractions, and mixed numbers
- Identify the reciprocal of a fraction
- Calculate the quotient of fractions and mixed numbers
- Identify customary units of measurement
- Convert between units of measurement in the customary system

Lesson 1: Multiplying a Whole Number and a Fraction

Objectives:
- Calculate the product of a whole number and a fraction

Lesson 2: Multiplying Two or More Fractions

Objectives:
- Calculate the product of two or more fractions

Lesson 3: Multiplication with Mixed Numbers

Objectives:
- Calculate the product of mixed numbers

Lesson 4: Multiplication of Fractions Review

Objectives:
- Calculate the product of fractions, whole numbers, and mixed numbers

Lesson 5: Division with Fractions (two-day lesson)

Objectives:
- Identify the reciprocal of a given fraction
- Calculate the quotient of two fractions

Lesson 6: Division with Mixed Numbers

Objectives:
- Calculate the quotient of mixed numbers

Lesson 7: Solving Equations with Fractions

Objectives:
- Calculate the answer to an equation with fractions through multiplication

Lesson 8: What Is the Customary System?

Objectives:
- Identify the best customary unit for a given object

Lesson 9: Changing Units in the Customary System (two-day lesson)

Objectives:
- Convert measurements written in customary units into other customary units

Lesson 10: Multiplying and Dividing Fractions Review

Objectives:
- Calculate the product of whole numbers, fractions, and mixed numbers
- Identify the reciprocal
- Calculate the quotient of fractions and mixed numbers
- Identify customary units of measurement
- Calculate how to convert between units of measurement in the customary system

Lesson 11: Multiplying and Dividing Fractions Test
MATH 6 B
Math 6 B

In this course, the student will explore the foundations of geometry, such as classifying polygons, and use measurement skills to find the perimeter, area, and volume of geometric figures. Then the student will study basic probability and explore permutations. By the end of the course, the student will work with integers using all four operations, solve equations and inequalities, and solve problems using the Pythagorean Theorem.

Unit 1: Ratios, Proportions, and Percents

In this unit, you will identify and write ratios to show the comparison between two amounts. Then you will use what you learned about ratios to generate equivalent ratios, find unit rates, and solve proportions. Next, you will learn how to write a percent when given a fraction or decimal. Finally, you will apply what you learned about percents to find the percent of a number, interpret circle graphs, and calculate various percentages found in everyday living.

Objectives:
- Identify the ratio of two amounts in simplest form
- Create and solve proportions to identify the missing amount
- Solve problems involving ratios, unit rates, and proportions
- Calculate the percent of a number
- Solve problems involving percents; use circle graphs to solve problems

Lesson 1: Ratios and Equivalent Ratios (two-day lesson)

Objectives:
- Identify the ratio for a given situation
- Identify at least one equivalent ratio for the given ratio

Lesson 2: Understanding and Using Unit Rates (two-day lesson)

Objectives:
- Calculate the unit rate given two amounts
- Find and use unit rates and unit costs

Lesson 3: Proportions

Objectives:
- Determine whether or not two ratios form a proportion
- Identify the missing value in a proportion

Lesson 4: Scale Drawings

Objectives:
- Calculate the distance of an actual item or the model using a scale

Lesson 5: Putting It All Together: Ratios, Rates, Proportions

Objectives:
- Calculate ratios, unit rates, equivalent rates, and the missing value in proportions

Lesson 6: Writing Percents, Fractions, and Decimals (two-day lesson)

Objectives:
- Identify the decimal, fractional form, and percent form for a given value
- Ordering percents, fractions, and decimals
Lesson 7: What Is the Percent of that Number? (two-day lesson)

Objectives:
- Calculate a percentage of a given number
- Identify the whole number when given the part and percentage

Lesson 8: Circle Graphs

Objectives:
- Use a circle graph to solve problems

Lesson 9: Using Percents in Everyday Life

Objectives:
- Calculate sales tax, amount to tip, discounts, and sale price

Lesson 10: Ratios, Proportions, and Percents Review

Objectives:
- Use your knowledge of ratios, rates, proportions, and percents to solve problems
- Review Key Words and assessments from the unit

Lesson 11: Ratios, Proportions, and Percents Unit Test

Unit 2: Tools of Geometry

In this unit, you will classify lines, angles, and polygons by their size, shape, or orientation. You will calculate the missing angle measure when given the remaining angle measurements, particularly in a triangle or quadrilateral. You will distinguish between shapes that are congruent and shapes that are similar. Next, you will learn about line symmetry. Then, you will learn about transformations, which include translations, reflections, and rotations.

Objectives:
- Classify types of lines, angles, triangles, polygons, and quadrilaterals when given a figure
- Distinguish between congruent and similar figures
- Identify lines of symmetry
- Identify transformations

Lesson 1: Points, Segments, Rays, Lines, and Planes

Objectives:
- Identify the specified point, segment, ray, line, or plane when given a figure

Lesson 2: Types of Angles

Objectives:
- Classify the type of angle and/or the name of the angle when given a figure

Lesson 3: Special Angles (two-day lesson)

Objectives:
- Identify and classify special angle pairs in a figure
• Calculate the measure of an angle in a special angle pair

Lesson 4: Types of Triangles (two-day lesson)

Objectives:
• Classify a triangle based on its angle measures or by its sides

Lesson 5: Points, Lines, Angles, and Triangles Review

Objectives:
• Classify lines, angles, and triangles when given a figure

Lesson 6: Classifying Quadrilaterals and Other Polygons (two-day lesson)

Objectives:
• Classify a polygon based on the number and length of its sides
• Determine missing angle measures in a quadrilateral

Lesson 7: Figures that are Congruent or Similar

Objectives:
• Classify figures as being congruent, similar, or neither

Lesson 8: Line Symmetry

Objectives:
• Identify lines of symmetry

Lesson 9: Translations, Reflections, and Rotations

Objectives:
• Classify transformations as translations, reflections, or rotations

Lesson 10: Tools of Geometry Review (two-day lesson)

Objectives:
• Classify lines, angles, and figures
• Identify congruent and similar figures
• Identify lines of symmetry
• Classify transformations

Lesson 11: Tools of Geometry Unit Test

Unit 3: Geometry and Measurement

In this unit, you will learn the different units of measurement in the metric system and convert among units. Then, you will find the perimeter and area of polygons. Next, you will find the perimeter and area of circles. Later in the unit, you will learn about three-dimensional figures and how to find the surface area and volume of rectangular prisms. As your portfolio assessment, you will be required to locate 5 circles and 5 rectangular prisms in your home, and use their dimensions to calculate circumference, area, and volume.

Objectives:
• Identify metric units and convert a value from one unit to another within the same category
• Calculate the perimeter and area of polygons
• Calculate the circumference and area of a circle
• Calculate the surface area and volume of prisms

Lesson 1: Metric Units

Objectives:
• Identify the best metric unit of measure for a given situation

Lesson 2: Conversions in the Metric System

Objectives:
• Calculate a measurement in a metric unit, given the measurement in another metric unit in the same category
Lesson 3: Perimeters and Areas of Rectangles and Squares

Objectives:
- Calculate the perimeter and area of rectangles and squares

Lesson 4: Areas of Parallelograms, Trapezoids, and Triangles (two-day lesson)

Objectives:
- Calculate the area of parallelograms, trapezoids, and triangles

Lesson 5: Finding the Area of Composite Figures

Objectives:
- Find the area of a composite figure

Lesson 6: Mid-Unit Review (two-day lesson)

Objectives:
- Identify the best metric unit of measure for a given situation
- Calculate the perimeter or area of a figure given the formula

Lesson 7: Circumference of a Circle

Objectives:
- Calculate the circumference of a circle

Lesson 8: Area of a Circle

Objectives:
- Calculate the area of a circle when given the length of the radius or diameter.

Lesson 9: Three-Dimensional Figures

Objectives:
- Name three-dimensional figures

Lesson 10: Prisms and Surface Area

Objectives:
- Find the surface area of prisms

Objectives derived from Pearson Education, Inc. © Pearson Education, Inc., publishing as Pearson Prentice Hall. All rights reserved.

Lesson 11: Rectangular Prisms and Volume (two-day lesson)

Objectives:
- Calculate the volume of a rectangular prism

Lesson 12: Geometry and Measurement Review (two-day lesson)

Objectives:
- Calculate the perimeter, area, surface area, and/or volume of a given figure
- Name two-dimensional and three-dimensional figures
- Identify metric units and convert from one unit to another

Lesson 13: Geometry and Measurement Unit Test

Unit 4: Integers

In this unit, you will be working with integers. You will learn what an integer is and how to find the absolute value of integers. Then you will compare integers as well as order them from least to greatest. Next, you will work on your computation skills by adding, subtracting, multiplying, and dividing integers. Then you will solve equations with integers. Finally, you will learn real-world applications for integers and complete a portfolio assignment in which you will not only answer questions in regards to integers, but also find the mean and median of the data as well as graphing the data.
Objectives:
- Identify the absolute value of an integer and locate where integers fall on the number line
- Compare and order a set of integers
- Calculate the sum, difference, product, and quotient of integers
- Solve equations with integers

Lesson 1: What Is an Integer?
Objectives:
- Locate an integer on the number line
- Identify the absolute value of an integer

Lesson 2: Comparing and Ordering Integers
Objectives:
- Compare two integers
- Identify the order of a set of integers

Lesson 3: Addition of Integers
Objectives:
- Calculate the sum of integers

Lesson 4: Subtraction of Integers
Objectives:
- Calculate the difference of integers

Lesson 5: Multiplication of Integers
Objectives:
- Calculate the product of integers

Lesson 6: Division of Integers
Objectives:
- Calculate the quotient of integers

Lesson 7: Solving Equations with Integers
Objectives:
- Solve equations with integers

Lesson 9: Integers Review
Objectives:
- Identify the absolute value of an integer and locate where integers fall on the number line
- Compare and order a set of integers from least to greatest
- Calculate the sum, difference, product, and quotient of integers
- Solve equations with integers

Lesson 10: Integers Unit Test

Unit 5: Graphing, Equations, and Inequalities
In this unit, you will be learning about graphing, functions, two-step equations, and inequalities. First, you will plot points in any of the four quadrants on the coordinate plane, and draw polygons in the coordinate plane when given a set of ordered pairs. Then you will identify missing values in a function table, find the rule for the function, and graph it. Next, you will solve two-step equations. Finally, you will write, graph, and solve inequalities. For your portfolio assignment, you will apply your knowledge of graphing polygons, functions, and inequalities.

Objectives:
- Locate and name the ordered pair for points on the coordinate plane
- Write rules and equations for functions
- Evaluate functions
- Identify the solution to a two-step equation
Lesson 1: Understanding the Coordinate Plane (two-day lesson)

Objectives:
• Name points by their ordered pairs
• Graph points in the coordinate plane

Lesson 2: Using Rational Numbers on the Coordinate Plane (two-day lesson)

Objectives:
• Plot ordered pairs consisting of rational numbers on a coordinate plane

Lesson 3: Finding Distances on the Coordinate Plane

Objectives:
• Calculate the distance between two points on a coordinate plane
• Create a polygon in the coordinate plane from a set of ordered pairs

Lesson 4: What Are Functions? (two-day lesson)

Objectives:
• Identify the output or y-value when given an input or x-value and the rule
• Calculate the rule when given the input and output
• Graph the function on a coordinate plane

Lesson 5: Independent and Dependent Variables

Objectives:
• Identify the independent and dependent variable in a function
• Generate an equation for the function

Lesson 6: Graphing and Functions Review

Objectives:
• Discuss the definition of a function and identify an example to support the definition

Lesson 7: Solving Equations with Two Steps

Objectives:
• Solve two-step equations
• Use two-step equations to solve problems

Lesson 8: Writing and Graphing Inequalities (two-day lesson)

Objectives:
• Represent a situation by writing and/or graphing an inequality

Lesson 9: Solving One-Step Inequalities

Objectives:
• Solve one-step inequalities

Lesson 10: Graphing, Equations, and Inequalities Review (two-day lesson)

Objectives:
• Locate and name the ordered pair for points on the coordinate plane
• Write rules and equations for functions
• Evaluate functions
• Identify the solution to a two-step equation
• Name, graph, and solve inequalities
Lesson 11: Graphing, Equations, and Inequalities Unit Test

Unit 6: Exploring Probability

In this unit, you will be developing your skills in the area of probability. You will learn strategies to count the number of possible outcomes and then apply these skills to identify the probability of an event. Then you will be calculating the theoretical and experimental probability of events. Next, you will use your prediction skills to predict the probability of an event using data. Finally, you will identify the probability of independent events, such as flipping a coin twice.

Objectives:
- Calculate the total number of outcomes
- Calculate the theoretical and/or experimental probability
- Predict the probability of an event based on data
- Calculate the probability of independent events

Lesson 1: Counting Outcomes

Objectives:
- Identify the total number of possible outcomes using either a tree diagram or the counting principle

Lesson 2: What Is Probability?

Objectives:
- Identify the probability that an event will or will not occur

Lesson 3: Theoretical and Experimental Probability (two-day lesson)

Objectives:
- Identify the theoretical and experimental probability of a situation
- Conduct a series of experiments and communicate their findings in writing

Lesson 4: Using Data to Make Predictions

Objectives:
- Make a prediction based on data

Lesson 5: Probability of Independent Events

Objectives:
- Calculate the probability of independent events for a given situation

Lesson 6: Exploring Probability Review

Objectives:
- Calculate the total number of outcomes
- Calculate theoretical and/or experimental probability
- Predict the probability of an event based on data
- Calculate the probability of independent events

Lesson 7: Exploring Probability Unit Test
MATH 7 A
Math 7 A
In this course, the student will use the four operations with decimals, fractions, and integers to solve equations and inequalities. The student will simplify expressions with exponents and rational numbers. In the study of number theory, the student will further strengthen his or her skills as he solves problems involving factors and multiples by using divisibility tests and prime factorization. The student will apply ratios, rates, proportions, and scale drawings to solve various problems and then solve percent problems, including percent of change and commission.

Unit 1: Focus on Success in Math 7
In this unit, you will focus on ways to think about and approach mathematics. You will learn how to set personal goals, establish study strategies that reduce math anxiety, and review ways to be an active learner. In addition, this unit introduces the various resources that are available to you in your Math 7 course.

Objectives:
- Reflect on personal strengths and weaknesses in order to improve mathematical performance
- Recognize the importance of personal ownership of learning
- Assess personal readiness for study and learning
- Use resources to assist with goal-setting and attainment

Lesson 1: Planning Ahead
Objectives:
- Describe the characteristics of quality goals
- Set goals for success in mathematics
- Reflect on strengths, weaknesses, and how to apply them
- Recognize the importance of being an active learner

Lesson 2: Resources for Success
Objectives:
- Identify the various resources that you can use in the course
- Modify goals to include using resources effectively

Unit 2: Decimals and Integers
In this unit, you will learn to add, subtract, multiply, and divide decimals. You will learn how to align decimals to find sums and differences and how to properly place decimal points in products and quotients. You will apply properties of addition and multiplication as tools for solving problems using mental math. You will perform basic operations using a set of numbers called integers, which includes both positive and negative numbers. You will also learn how to represent a large set of numbers with just one number, called a measure of central tendency (such as mean, median, or mode). Finally, you will practice constructing and interpreting box-and-whisker plots to analyze distribution of data.

Objectives:
- Perform operations on decimals
- Perform operations on integers
- Calculate measures of central tendency

Lesson 1: Adding and Subtracting Decimals
Objectives:
- Add and subtract decimals
- Apply properties of addition to add decimal numbers using mental math

Lesson 2: Multiplying Decimals
Objectives:
- Multiply decimals
- Apply properties of multiplication to multiply decimal numbers using mental math

Lesson 3: Dividing Decimals
Objectives:
• Divide decimals

**Lesson 4: Comparing and Ordering Integers**

Objectives:
• Compare and order integers
• Find absolute values

*Objectives derived from Pearson Education, Inc. © Pearson Education, Inc., publishing as Pearson Prentice Hall. All rights reserved.*

**Lesson 5: Adding Integers**

Objectives:
• Add integers with the same sign
• Add integers with different signs

**Lesson 6: Subtracting Integers**

Objectives:
• Subtract integers with the same sign
• Subtract integers with different signs

**Lesson 7: Multiplying and Dividing Integers**

Objectives:
• Multiply and divide integers with the same sign
• Multiply and divide integers with different signs

**Lesson 8: Mean, Median, Mode, and Range**

Objectives:
• Describe data using mean, median, mode, and range

*Objectives derived from Pearson Education, Inc. © Pearson Education, Inc., publishing as Pearson Prentice Hall. All rights reserved.*

**Lesson 9: Box-and-Whisker Plots**

Objectives:
• Construct and interpret box-and-whisker plots

**Lesson 10: Decimals and Integers Unit Review (two-day lesson)**

Objectives:
• Decide which strategies you will use to prepare for your exam
• Organize your time and study materials
• Review your notes, Key Words, formulas, and all important concepts that may be covered on this exam

*Objectives derived from Pearson Education, Inc. © Pearson Education, Inc., publishing as Pearson Prentice Hall. All rights reserved.*

**Lesson 11: Decimals and Integers Unit Test**

**Unit 3: Exponents, Factors, and Fractions**

In this unit, you will begin working with exponents and learning how to simplify expressions using the order of operations. You will work with fractions of all sorts—both proper and improper—as well as mixed numbers. You will learn how to compare and order fractions and how to write them in simplest form. You will also discover rules and shortcuts for converting fractions to decimals and decimals to fractions.

Objectives:
• Evaluate exponents
• Compare fractions
• Convert between fractions and decimals

**Lesson 1: Exponents and Order of Operations (two-day lesson)**

Objectives:
• Write and simplify expressions with exponents
Lesson 2: Divisibility Tests

Objectives:
• Apply divisibility rules to integers

Lesson 3: Prime Factorization

Objectives:
• Determine factors and multiples of numbers by applying prime factorization

Lesson 4: Simplifying Fractions

Objectives:
• Determine equivalent fractions by simplifying

Lesson 5: Comparing and Ordering Fractions

Objectives:
• Compare and order fractions

Lesson 6: Mixed Numbers and Improper Fractions

Objectives:
• Convert between improper fractions and mixed numbers

Lesson 7: Mid-Unit Review

Objectives:
• Review the concepts, keywords, and all important concepts covered so far in this unit

Lesson 8: Fractions and Decimals

Objectives:
• Convert between fractions and decimals

Lesson 9: Rational Numbers

Objectives:
• Compare and order rational numbers

Lesson 10: Scientific Notation

Objectives:
• Convert numbers between scientific notation and standard form

Lesson 11: Exponents, Factors, and Fractions Review (two-day lesson)

Objectives:
• Decide which strategies you will use to prepare for your exam
• Organize your time and study materials
• Review your notes, key words, formulas, and other important information that may be covered on this exam

Lesson 12: Exponents, Factors, and Fractions Unit Test

Unit 4: Operations with Fractions and Rational Numbers
In this unit, you will perform operations—addition, subtraction, multiplication and division—on rational numbers like fractions and mixed numbers. You will begin by extending your estimation skills to include problems involving fractions and mixed numbers. Finally, you will learn to convert units of measure in both the standard and metric systems.

Objectives:
- Add and subtract rational numbers
- Multiply and divide rational numbers
- Convert standard and metric units of measure

Lesson 1: Estimating With Fractions and Mixed Numbers

Objectives:
- Estimate sums, differences, products, and quotients of fractions

Lesson 2: Adding and Subtracting Fractions

Objectives:
- Add and subtract fractions and solve problems involving fractions

Lesson 3: Adding and Subtracting Mixed Numbers

Objectives:
- Add and subtract mixed numbers

Lesson 4: Adding and Subtracting Rational Numbers

Objectives:
- Add and subtract rational numbers

Lesson 5: Multiplying Fractions and Mixed Numbers

Objectives:
- Multiply fractions and mixed numbers

Lesson 6: Multiplication of Rational Numbers

Objectives:
- Multiply rational numbers

Lesson 7: Dividing Fractions and Mixed Numbers

Objectives:
- Divide fractions and mixed numbers

Lesson 8: Division of Rational Numbers

Objectives:
- Divide rational numbers

Lesson 9: Changing Units in the Customary System

Objectives:
- Convert standard units of length, weight, and capacity
Lesson 10: Changing Units in the Metric System

Objectives:
- Convert metric units of length, weight, and capacity

Lesson 11: Operations with Fractions Review (two-day lesson)

Objectives:
- Decide which strategies you will use to prepare for your exam
- Organize your time and study materials
- Review your notes, key words, formulas, and all important concepts that may be covered on this exam

Lesson 12: Operations with Fractions Unit Test

Unit 5: Equations and Inequalities

In this unit, you'll be using basic algebraic skills to solve an equation for an unknown quantity called a variable. You'll work up from simple one-step equations to more advanced two-step equations. Then you will solve inequalities and represent the solutions on a number line.

Objectives:
- Write algebraic expressions
- Solve one-step and two-step equations
- Solve and graph inequalities

Lesson 1: Evaluating and Writing Algebraic Expressions

Objectives:
- Write and evaluate algebraic expressions

Lesson 2: Simplifying Expressions (two-day lesson)

Objectives:
- Apply the Distributive Property to expand expressions
- Simplify expressions by combining like terms and applying order of operations

Lesson 3: Using Number Sense to Solve Equations

Objectives:
- Solve one-step equations using substitution, mental math, and estimation

Lesson 4: Solving One-Step Equations by Adding/Subtracting

Objectives:
- Solve equations by adding or subtracting

Lesson 5: Solving One-Step Equations by Multiplying/Dividing

Objectives:
- Solve equations by multiplying or dividing
Lesson 6: Exploring Two-Step Problems

Objectives:
- Write and evaluate expressions with two operations
- Solve two-step equations using number sense

Lesson 7: Solving Two-Step Equations

Objectives:
- Solve two-step equations using inverse operations

Lesson 8: Solving Equations of the Form \( p(x + q) = r \)

Objectives:
- Apply the Distributive Property to solve equations

Lesson 9: Graphing and Writing Inequalities

Objectives:
- Graph and write algebraic inequalities

Lesson 10: Solving Inequalities by Adding and Subtracting

Objectives:
- Solve inequalities by adding or subtracting

Lesson 11: Solving Inequalities by Multiplying or Dividing

Objectives:
- Solve inequalities by multiplying or dividing

Lesson 12: Solving Two-Step Inequalities

Objectives:
- Solve two-step inequalities and graph the solutions on a number line

Lesson 13: Equations and Inequalities Review (two-day lesson)

Objectives:
- Discuss the meaning of an equation and how to keep an equation balanced
- Review notes, Key Words, and homework
- Use online tools to practice skills studied in this unit

Lesson 14: Equations and Inequalities Unit Test

Unit 6: Ratios, Rates, and Proportions

A ratio is a comparison of two things. A proportion is an equation stating that two ratios are equivalent to each other. In this unit, you will use ratios and proportions to find unknown quantities. At the end of the unit, you will complete a portfolio project where you will design a scale drawing of your dream room.

Objectives:
- Simplify and use ratios
- Use unit rates
- Solve proportions
- Use and create similar figures
Lesson 1: Ratios
Objectives:
• Create ratios to compare given quantities
• Recognize equivalent ratios

Lesson 2: Unit Rates and Proportional Reasoning
Objectives:
• Apply proportional reasoning to compute unit rates and unit costs

Lesson 3: Unit Rates and Ratios of Fractions
Objectives:
• Apply proportional reasoning to compute unit rates associated with ratios of fractions

Lesson 4: Using Conversion Factors
Objectives:
• Apply conversion factors to convert measures to varying units

Lesson 5: Proportions
Objectives:
• Evaluate ratios to determine if they form a proportional relationship

Lesson 6: Solving Proportions
Objectives:
• Identify the unit rate in proportional relationships
• Use unit rates, cross products, and number sense to solve proportions

Lesson 7: Mid-Unit Review
Objectives:
• Review and reinforce understanding of ratios, rates, and proportions

Lesson 8: Similar Figures
Objectives:
• Evaluate figures for similarity
• Formulate and solve proportions to discover missing side lengths of similar polygons

Lesson 9: Maps and Scale Drawings
Objectives:
• Apply proportions to interpret scale drawings and solve problems based on scale ratios

Lesson 10: Ratios, Rates, and Proportions Unit Review (two-day lesson)
Objectives:
• Organize your time and study materials
• Review your notes, key words, steps, and other important information that may be covered on the exam

Lesson 11: Ratios, Rates, and Proportions Unit Test

Unit 7: Percents
This unit will focus on percents. People use percents often in everyday life, from calculating the score on a test to the finding the sale price of a shirt. At the end of this unit, you'll be able to use percents to solve real-world problems.
Objectives:
• Convert between fractions, decimals, and percents
• Solve percent problems
Lesson 1: Understanding Percents
Objectives:
• Create graphic models of percents
• Rewrite percents as equivalent ratios

Lesson 2: Percents, Fractions, and Decimals
Objectives:
• Convert fractions, decimals, and percents to equivalent fractions, decimals, or percents

Lesson 3: Percents Greater Than 100% or Less than 1%
Objectives:
• Evaluate and convert percents greater than 100%
• Evaluate and convert percents less than 1%

Lesson 4: Finding a Percent of a Number
Objectives:
• Estimate and calculate the percent of a given number

Lesson 5: Mid-Unit Review
Objectives:
• Review and reinforce understanding of percents

Lesson 6: Solving Percent Problems Using Proportions
Objectives:
• Solve percent problems by applying proportions

Lesson 7: Solving Percent Problems Using Equations
Objectives:
• Solve percent problems by generating and solving equations

Lesson 8: Applications of Percent (two-day lesson)
Objectives:
• Generate and solve equations involving real-world applications of percents
• Estimate solutions to problems involving real-world applications of percents

Lesson 9: Finding Percent of Change
Objectives:
• Solve applications of percent problems by determining percents of increase and decrease

Lesson 10: Percents Review (two-day lesson)
Objectives:
• Review your notes, key words, steps, and other important information that may be covered on the exam

Lesson 11: Percents Unit Test
MATH 7 B
Math 7 B

In this course, the student will explore concepts in geometry including identifying and describing the properties of geometric figures, as well as the relationships that exist between them. The student will find perimeter, area, and volume of two-dimensional figures and extend measurement skills to determine surface area and volume of three-dimensional figures. Next, the student will use tables, graphs, formulas, and functions to identify and extend number patterns. The student will graph linear and nonlinear relationships, identify slope, and explore translations. In the study of statistics, the student will create, analyze, and interpret different data displays. At the end of the course, the student will study probability and explore dependent events, compound events, and combinations.

Unit 1: Geometry

In this unit, you will work with basic geometric ideas. You will learn how to classify angles, triangles, and polygons and identify the parts of a circle. Lastly, you will construct different types of geometric figures.

Objectives:
- Identify lines, segments, and rays
- Identify and classify angles and polygons
- Calculate missing angle measurements from a triangle
- Analyze and construct circles and circle graphs

Lesson 1: Lines and Planes

Objectives:
- Identify planes and points
- Distinguish between parallel, perpendicular, and skew lines

Lesson 2: Identifying and Classifying Angles: 1

Objectives:
- Classify acute, right, obtuse, and straight angles
- Classify pairs of angles as supplementary and complementary angles
- Write and solve equations to determine missing angle measures

Lesson 3: Identifying and Classifying Angles: 2

Objectives:
- Classify sets of angles as vertical and adjacent angles
- Apply knowledge of angle theorems to determine missing angle measures

Lesson 4: Classifying Triangles

Objectives:
- Classify triangles by side length and angle measure
- Write and solve equations to determine missing angle measures

Lesson 5: Drawing Triangles

Objectives:
- Construct triangles from three measures of angles or sides
- Evaluate triangle characteristics to distinguish unique triangles

Lesson 6: Classifying Polygons

Objectives:
- Identify polygons according to side and angle measures
- Distinguish between regular and irregular polygons

Lesson 7: Classifying Quadrilaterals

Objectives:
- Identify special quadrilaterals according to side and angle measures

Lesson 8: Congruent Figures

© 2016 Connections Education LLC. All rights reserved.
Objectives:
• Recognize congruent figures
• Analyze congruent figures to determine missing measures

Lesson 9: Circles

Objectives:
• Recognize the parts of a circle and their relationships to one another

Lesson 10: Circle Graphs

Objectives:
• Construct circle graphs with given conditions
• Analyze data contained in a circle graph

Lesson 11: Constructions

Objectives:
• Create congruent line segments and perpendicular bisectors using a compass and straight edge

Lesson 12: Geometry Unit Review (two-day lesson)

Objectives:
• Organize your time and study materials
• Review your notes, key words, steps, and other important information that may be covered on the exam

Lesson 13: Geometry Unit Test

Unit 2: Measurement

This unit will take some of the basic ideas you learned in the previous unit and put them to work. In this unit, you will be calculating perimeter, area, surface area, and volume of figures. In addition, you will be introduced to the Pythagorean Theorem and to irrational numbers. You will demonstrate what you learned in this unit with a portfolio project at the end where you will calculate the surface area and volume of common household items.

Objectives:
• Calculate the area and perimeter of various polygons and circles
• Evaluate square roots
• Use the Pythagorean Theorem
• Calculate the surface area and volume of prisms and cylinders

Lesson 1: Area and Perimeter of Parallelograms

Objectives:
• Calculate the area and perimeter of parallelograms

Lesson 2: Area and Perimeter of Triangles

Objectives:
• Calculate the area and perimeter of triangles

Lesson 3: Area of Trapezoids and Other Figures

Objectives:
• Apply area formulas to calculate areas of trapezoids and other irregular polygons

Lesson 4: Circumference and Area of a Circle

Objectives:
• Apply appropriate formulas to calculate circumference and area of a circle

Lesson 5: Square Roots and Irrational Numbers
Lesson 6: The Pythagorean Theorem Part 1
Objectives:
- Apply the Pythagorean Theorem to find missing lengths of right triangle legs or hypotenuse

Lesson 7: The Pythagorean Theorem Part 2
Objectives:
- Apply the Pythagorean Theorem to calculate solutions to real-world situations

Lesson 8: Mid-Unit Review
Objectives:
- Review and reinforce your understanding of measurement

Lesson 9: Three-Dimensional Figures
Objectives:
- Identify three-dimensional figures according to faces, edges, and vertices
- Sketch three-dimensional figures on graph paper

Lesson 10: Three Views of an Object
Objectives:
- Create two-dimensional sketches of the top, front, and side views of three-dimensional objects

Lesson 11: Cross-Sections
Objectives:
- Recognize and describe cross sections of three-dimensional objects

Lesson 12: Drawing Nets
Objectives:
- Sketch nets of three-dimensional figures
- Recognize nets of three-dimensional figures

Lesson 13: Surface Area of Prisms and Cylinders
Objectives:
- Apply knowledge of nets to calculate surface area of prisms and cylinders

Lesson 14: Volume of Prisms and Cylinders
Objectives:
- Apply appropriate formulas to calculate the volume of prisms and cylinders
Lesson 15: Efficiency Expert Portfolio

Objectives:
- Apply knowledge of dimensions, area, and volume

Objectives derived from Pearson Education, Inc. © Pearson Education, Inc., publishing as Pearson Prentice Hall. All rights reserved.

Lesson 16: Measurement Review (two-day lesson)

Objectives:
- Organize your time and study materials
- Review your notes, Key Words, steps, and other important information that may be covered on the exam

Lesson 17: Measurement Unit Test

Unit 3: Patterns and Rules

This unit will review patterns and lay the foundation for your future study with functions. By the end of this unit, you will be able to create and interpret graphs and calculate interest on an amount of money.

Objectives:
- Identify and continue patterns and graphs
- Classify number sequences
- Create and interpret graphs
- Calculate interest

Lesson 1: Number Sequences

Objectives:
- Recognize patterns in arithmetic and geometric sequences and write rules to describe them
- Analyze patterns to find missing terms in sequences

Lesson 2: Patterns and Tables

Objectives:
- Create tables to represent patterns
- Interpret patterns in tables to find missing terms

Lesson 3: Function Rules

Objectives:
- Generate rules for functions
- Apply function rules to find missing terms

Lesson 4: Using Tables, Rules, and Graphs

Objectives:
- Create tables, function rules, and graphs and apply them to solve real-world problems

Lesson 5: Interpreting Graphs

Objectives:
- Create graphs to analyze real-world situations

Lesson 6: Simple Interest

Objectives:
- Apply the appropriate formula to compute simple interest

Lesson 7: Compound Interest

Objectives:
- Apply appropriate formula to compute compound interest

Lesson 8: Transforming Formulas
Objectives:
• Evaluate formulas to find solutions to problems

Lesson 9: Patterns and Rules Review (two-day lesson)
Objectives:
• Organize your time and study materials
• Review your notes, key words, steps, and other important information that may be covered on the exam

Lesson 10: Patterns and Rules Unit Test

Unit 4: Graphing in the Coordinate Plane
The functions that you learned about previously can be graphed on a coordinate plane. In this unit, you will learn to graph points and lines. You will also find lines of symmetry and graph reflections, translations, and rotations.
Objectives:
• Graph points, lines, translations, reflections, and rotations
• Find the slope of a line

Lesson 1: Graphing Points in Four Quadrants
Objectives:
• Identify points on all four quadrants of a coordinate plane
• Graph points on all four quadrants of a coordinate plane

Lesson 2: Graphing Linear Equations
Objectives:
• Determine solutions and graph to test solutions of linear equations

Lesson 3: Finding the Slope of a Line
Objectives:
• Determine the slope of a line
• Recognize characteristics of slope
• Apply slope to problem solving

Lesson 4: Graphs and Proportional Relationships
Objectives:
• Analyze graphs and tables to determine whether or not two quantities have a proportional relationship

Lesson 5: Constant of Proportionality
Objectives:
• Identify the constant of proportionality (unit rate) in tables, graphs, and equations

Lesson 6: Graphing Nonlinear Relationships
Objectives:
• Graph nonlinear equations and absolute value equations

Lesson 7: Translations
Objectives:
• Graph translations on a coordinate plane
• Generate rules to describe translations

Lesson 8: Line Symmetry and Reflections
Objectives:
• Recognize lines of symmetry and apply them to graph reflections

Lesson 9: Exploring Tessellations
Objectives:
• Create a tessellation of a figure

Lesson 10: Rotational Symmetry and Rotations
Objectives:
• Recognize rotational symmetry by identifying the center of rotation
• Determine the angle of rotation and graph a rotation of a figure

Lesson 11: Graphing in the Coordinate Plane Review (two-day lesson)
Objectives:
• Organize your time and study materials
• Review your notes, key words, steps, and other important information that may be covered on the exam

Lesson 12: Graphing in the Coordinate Plane Unit Test

Unit 5: Displaying and Analyzing Data
In this unit, you will be working with sets of data and displaying them in a way that they can be quickly and easily understood. By the end, you’ll be able to distinguish a valid survey from an invalid one, and identify graphical representations that are misleading.
Objectives:
• Identify, interpret, and create different displays of sets of data
• Identify misleading graphs and statistics

Lesson 1: Reporting Frequency
Objectives:
• Generate frequency tables, histograms, and line plots to represent data
• Interpret frequency tables, histograms, and line plots

Lesson 2: Stem-and-Leaf Plots
Objectives:
• Generate stem-and-leaf plots to represent data
• Interpret data represented on stem-and-leaf plots

Lesson 3: Choosing the Best Data Display
Objectives:
• Determine the most accurate and appropriate way to display data

Lesson 4: Data Variability
Objectives:
• Interpret data displays according to the visual overlap of two data sets
• Compare two data sets according to mean, median, and variability

Lesson 5: Random Samples and Surveys
Objectives:
• Compose a survey question
• Identify biased questions
• Recognize a random sample of a population

Lesson 6: Estimating Population Size (two-day lesson)
Objectives:
• Apply proportions to estimate population sizes
• Draw inferences about a population
• Generate simulated random samples

Lesson 7: Using Data to Persuade
Objectives:
• Identify misleading graphs and statistics
Lesson 8: Exploring Scatter Plots (two-day lesson)

Objectives:
- Create scatter plots
- Interpret scatter plots

Lesson 9: Displaying and Analyzing Data Unit Review (two-day lesson)

Objectives:
- Organize your time and study materials
- Review your notes, key words, steps, and other important information that may be covered on the exam

Lesson 10: Displaying and Analyzing Data Unit Test

Unit 6: Using Probability

The probability of an event is the likelihood that the event will occur. In this unit, you will be calculating the probabilities of given events including events that are dependent on another event occurring first. You will also determine how many possible outcomes there are for a given set of circumstances.

Objectives:
- Find the probability of dependent and independent events
- Represent all possible outcomes of an experiment in a sample space
- Find permutations and combinations

Lesson 1: Probability (two-day lesson)

Objectives:
- Determine the probability of an event
- Determine the complement of an event
- Find the probability of the complement of an event

Lesson 2: Experimental Probability

Objectives:
- Find experimental probability
- Use simulations

Lesson 3: Sample Spaces

Objectives:
- Make and use sample spaces
- Use the counting principle

Lesson 4: Compound Events

Objectives:
- Find the probability of independent and dependent events

Lesson 5: Simulating Compound Events

Objectives:
- Design and use a simulation to generate frequencies for compound events

Lesson 6: Permutations
Objectives:
• Determine permutations using the counting principle or factorials

Lesson 7: Combinations
Objectives:
• Determine combinations of objects

Lesson 8: Unit Review (two-day lesson)
Objectives:
• Organize your time and study materials
• Review your notes, key words, steps, and other important information that may be covered on the unit test

Lesson 9: Using Probability Unit Test
ESSENTIAL MATH 3 A
Essential Math 3 A

Essential Math 3 is an elementary school math course designed for the student who needs extended instruction, review, and reinforcement to master prerequisite and grade-level math skills. The units and lessons within this course focus on the fundamental skills and standards the student will need in order to master the concepts from the previous and current grade level and be successful in math.

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

The answer key document for enVisionMATH Lessons is located in the Virtual Library in the Answer Keys section and is not included as a resource in the Course Guide. You can access the Answer Keys in the Virtual Library: Home > Curriculum and Instruction > Answer Keys.

Unit 1: Let’s Learn Math!

In this unit, your student will learn about the activities she will do in Math 3. The first lesson, intended for Learning Coaches, provides advice for using the Lesson Guide to support your student, and details the resources found in the course. It also offers helpful tips for building your student’s math skills. The second lesson is intended for students and their Learning Coaches. This lesson will introduce your student to the concept of math, and describe the structure of math lessons.

Objectives:
• Learn how to find and use the Coaching Guide
• Locate and describe lesson resources
• Learn ways to promote mathematical thinking in your daily life
• Describe the different parts of a lesson
• Describe the different types of assessments

Lesson 1: Learning Coach: Support Your Student in Math

Objectives:
• Learn how to find and use the Coaching Guide
• Locate and describe lesson resources
• Learn ways to promote mathematical thinking in your daily life

Lesson 2: Welcome to Math 3!

Objectives:
• Locate and describe lesson resources
• Describe the different parts of a lesson
• Describe the different types of assessments

Unit 2: Addition Strategies

The sole purpose of this unit is to practice and improve your student’s ability to solve addition problems using mental math. There are many strategies for using mental math to find the sum of an addition sentence, and individual preference plays a large role in the development of each student’s choice. Grounded by a solid knowledge of basic fact relationships, your student’s familiarity with addends is crucial to the development of mental math approaches to addition problems. The unit’s problem-solving strategy is “look for a pattern.” Addition facts, strategies, and properties are reinforced in this unit. Your student will practice using different techniques to commit facts to memory. This makes mental math increasingly easier as your student will be able to quickly answer addition sentences. Your student will develop associations between fact families, such as understanding that addends can be combined in any order, as well as find the sum of multiple numbers.

Objectives:
• Use mental math to add tens and ones to a two-digit number
• Use a hundred chart to add 2 two-digit numbers
• Use number patterns to solve problems

Lesson 1: Adding Tens

Objectives:
• Mentally add multiples of 10 to a two-digit number
Lesson 2: Adding Ones

Objectives:
- Mentally add a two-digit number to a one-digit number

Lesson 3: Adding Tens and Ones

Objectives:
- Add a two-digit number to a two-digit number using mental math

Lesson 4: Add on a Hundred Chart

Objectives:
- Use a hundred chart to add two-digit numbers and develop mental math strategies
- Solve problems by adding with mental math

Lesson 5: Look for a Pattern

Objectives:
- Use number patterns to solve problems

Lesson 6: Addition Strategies Review

Objectives:
- Review unit concepts

Lesson 7: Addition Strategies Unit Test

Lesson Guide (Coaching Guide):
Assessment
Today your student will take the Addition Strategies Unit Test. The test covers material presented in Unit 2.

Review any questions answered incorrectly with your student to ensure she has mastered the concepts before proceeding to the next lesson.

Unit 3: Adding Numbers

In this unit, your student will use his knowledge and skills of basic addition facts to add whole numbers of greater value. As your student learns to estimate and compute sums of numbers less than 1,000, he will use his background knowledge of place value to model the process of regrouping in the ones and tens place values. Several properties of addition are introduced to further develop your student’s addition strategies. This unit will provide your student with meaningful computational practice through word problems that are presented in authentic contexts.

Objectives:
- Use addition properties
- Learn to round and estimate using mental math
- Add 2- and 3-digit numbers
- Add three or more numbers

Lesson 1: Rounding
- Round three-digit whole numbers to the nearest ten or hundred, by comparing to the number halfway between or by using place value.

**Lesson 2: Estimating Sums**

Objectives:
- Solve problems by estimating sums.

**Lesson 3: Models to Add Two-Digit Numbers**

Objectives:
- Use place-value models and the standard algorithm to add 2 two-digit numbers.

**Lesson 4: Adding 2-Digit Numbers**

Objectives:
- Add 2-digit numbers using paper-and-pencil methods and use addition to solve problems.

**Lesson 5: Models for Adding 3-Digit Numbers**

Objectives:
- Add 3-digit numbers using place-value blocks or pictures and record the results using the standard addition algorithm.

**Lesson 6: Adding 3-Digit Numbers**

Objectives:
- Add 3-digit numbers using paper-and-pencil methods and use addition to solve problems.

**Lesson 7: Adding 3 or More Numbers**

Objectives:
- Add 3 or more 2- and/or 3-digit numbers using paper-and-pencil methods and use addition to solve problems.

**Lesson 8: Adding Numbers Review**

**Lesson 9: Adding Numbers Unit Test**

**Unit 4: Subtraction Strategies**

In this unit, your student will explore the meaning of subtraction through several types of situations, including taking away and comparing. Fact families, modeling, and mental math are presented to provide your student with multiple strategies in basic facts mastery, estimation, and computing differences.

Objectives:
- Learn subtraction meanings
- Subtract on a hundred chart
- Use mental math to subtract
- Estimate differences
Lesson 1: Subtraction Meanings

Objectives:
- Recognize situations when subtraction is used to solve a problem and write number sentences

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 2: Subtracting on a Hundred Chart

Objectives:
- Use a hundred chart to subtract 2-digit numbers and develop mental math strategies

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 3: Using Mental Math to Subtract

Objectives:
- Solve problems by subtracting with mental math

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 4: Estimating Differences

Objectives:
- Solve problems by estimating differences

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 5: Making Sense of Addition and Subtraction Equations

Objectives:
- Decide if both sides of an equation are equal and determine the value of an unknown number in an equation

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 6: Missing or Extra Information

Objectives:
- Identify whether there is extra information or missing information in a problem
- Determine whether it is possible to solve a problem if it has missing information or extra information

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 7: Subtraction Strategies Review

Lesson 8: Subtraction Strategies Unit Test

Unit 5: Subtracting Numbers

In this unit, your student’s knowledge and skills in basic facts will support him as he learns to compute differences of whole numbers that are less than 1,000. Your student will use manipulatives and his knowledge of place value to model the process of regrouping in the ones, tens, and hundreds place values. The use of manipulatives is one method for your student to visualize the process of subtraction with regrouping. Your student will also learn the algorithmic process of subtraction with regrouping. Finally, your student will practice his computational skills through word problems that are presented in authentic contexts. The problem-solving strategy that will be introduced to your student is “draw a picture and write a number sentence.”

Objectives:
- Use models to subtract 2- and 3-digit numbers
- Subtract 2- and 3-digit numbers
- Subtract across zero
- Learn to write a number sentence
Lesson 1: Regrouping 1 Ten for 10 Ones

Objectives:
- Regroup 1 ten as 10 ones when subtracting

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 2: Models to Subtract 2- and 1-Digit Numbers

Objectives:
- Use models to subtract a 1-digit number from a 2-digit number with or without regrouping

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 3: Subtracting 2- and 1-Digit Numbers

Objectives:
- Subtract a 1-digit number from a 2-digit number with and without regrouping using the standard algorithm

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 4: Models for Subtracting 2-Digit Numbers

Objectives:
- Subtract 2-digit numbers using place-value blocks or pictures and record the results using the standard subtraction algorithm

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 5: Subtracting 2-Digit Numbers

Objectives:
- Subtract 2-digit numbers using paper-and-pencil methods and use subtraction to solve problems

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 6: Models for Subtracting 3-Digit Numbers

Objectives:
- Subtract 3-digit numbers using place-value blocks or pictures and record the results using the standard subtraction algorithm

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 7: Subtracting 3-Digit Numbers

Objectives:
- Subtract 3-digit numbers using paper-and-pencil methods and use subtraction to solve problems

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 8: Subtracting Across Zero/Writing a Number Sentence (two-day lesson)

Objectives:
- Subtract 3-digit numbers using paper-and-pencil methods and use subtraction to solve problems
- Solve problems by choosing an operation based on a picture she has drawn describing the problem

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 9: Using Addition to Check Subtraction

Objectives:
Unit 6: Multiplication Strategies

In this unit, your student will revisit the concepts of equal groups and skip counting as she equates multiplication to repeated addition. Before your student practices the basic multiplication facts for mastery, it is important that she masters the strategies for knowing how to multiply. Thus, your student will make arrays and use counters to model how multiplication works. In addition, your student will learn to write personal multiplication stories in order to demonstrate a multiplication fact. After your student is introduced to the concept and process of multiplication, she will learn some of the basic multiplication facts. Specifically, the strategies of using patterns and applying properties of multiplication will be used to multiply with the numbers 0, 1, 2, 5, 9, and 10. The problem solving strategies in this unit are “writing to explain” and “two-question problems.”

Objectives:
- Use multiplication as repeated addition
- Identify arrays and multiply
- Write multiplication stories
- Use 2, 5, 9, and 10 as factors
- Multiply with 0 and 1

Lesson 1: Repeated Addition and Multiplication

Objectives:
- Model multiplication by repeated addition of concrete objects

Lesson 2: Building Arrays

Objectives:
- Build arrays to model multiplication situations

Lesson 3: Using Multiplication to Compare

Objectives:
- Use models and write multiplication sentences to compare amounts

Lesson 4: Writing Multiplication Stories/Writing to Explain

Objectives:
- Write math stories for given multiplication facts
- Use objects, words, pictures, numbers, and technology to provide a written explanation reflecting their understanding

Lesson 5: Vertical Form/Multiplying in Any Order

Objectives:
- Write multiplication problems in both horizontal and vertical forms
- Use arrays to investigate multiplying in any order

Lesson 6: 2 and 5 as Factors
Lesson 7: 10 as a Factor

Objectives:
- Use patterns to multiply with 10 as a factor

Lesson 8: 9 as a Factor

Objectives:
- Use patterns to multiply with 9 as a factor

Lesson 9: Multiplying with 0 and 1

Objectives:
- Use patterns and properties to multiply with 0 and 1 as factors

Lesson 10: Two-Question Problems

Objectives:
- Solve for one problem and use the solution to complete a second problem

Lesson 11: Multiplication Strategies Review

Lesson 12: Multiplication Strategies Unit Test

Unit 7: Multiplication

This unit continues to provide your student with multiple strategies to learn his basic multiplication facts before committing them to memory. Your student will learn to use the "break apart" and "known-facts" strategies for multiplication facts in which the numbers 3, 4, 6, 7, 8, 11, and 12 are factors. By the end of this unit, your student will know the basic multiplication facts up to 12. Your student should continue to practice these basic multiplication facts throughout the year to ensure that he mastered the concept. The problem-solving strategy in this unit is "multiple-step problems."

Objectives:
- Use 3, 4, 6, 7, 8, 11, and 12 as factors
- Solve multiple-step problems

Lesson 1: 3 as a Factor / 4 as a Factor (two-day lesson)

Objectives:
- Use known facts to find products with 3 as a factor
- Use known facts and doubles to find products with 4 as a factor

Lesson 2: 6 and 7 as Factors (two-day lesson)

Objectives:
- Use known facts to find products with 6 and 7 as factors

Lesson 3: 8 as a Factor

Objectives:
- Use known facts and double to find products with 8 as a factor
Lesson 4: 11 and 12 as Factors (two-day lesson)

Objectives:
• Use patterns to multiply with 11 and 12 as factors

Lesson 5: Multiple-Step Problems

Objectives:
• Solve multiple-step problems

Lesson 6: Multiplication Review

Lesson 7: Multiplication Unit Test

Unit 8: Division Strategies

In this unit, your student will explore two interpretations of division: division as sharing and division as repeated subtraction. Your student will make arrays, use counters, and draw pictures to model division. Your student will learn how to analyze a word problem in order to interpret how the remainder will be displayed in the problem. Finally, your student will learn to write and solve her own division stories. The problem-solving strategy in this unit is “use objects and draw a picture.”

Objectives:
• Identify division as sharing
• Use division as repeated subtraction
• Write division stories
• Use objects and draw a picture

Lesson 1: Division as Sharing

Objectives:
• Use models to solve division problems involving sharing and record solutions using division number sentences

Lesson 2: Finding Missing Numbers in a Multiplication Table

Objectives:
• Use multiplication tables to find answers to division problems

Lesson 3: Understanding Remainders

Objectives:
• Learn that when dividing, there may be some left over called a remainder

Lesson 4: Division as Repeated Subtraction

Objectives:
• Use models to solve division problems involving repeated subtraction and record solutions using division number sentences

Lesson 5: Problem-Solving: Choose an Appropriate Equation
Lesson 6: Writing Division Stories

Objectives:
- Write and solve number stories involving division

Lesson 7: Make a Table and Look for a Pattern

Objectives:
- Use tables to solve problems involving number patterns

Lesson 8: Division Strategies Review

Lesson 9: Division Strategies Unit Test

Unit 9: Division

In this unit, your student will learn that, like addition and subtraction, multiplication and division have an inverse relationship; this means that their operations undo each other. Subsequently, your student will be able to produce related multiplication and division facts, or fact families. A strong knowledge of basic multiplication facts will lend the use of fact families as an efficient strategy for learning division facts. Other useful strategies that your student will continue to use to explore division concepts are pictures and counters. This unit provides your student with instruction on division facts from zero to nine. Continued practice throughout the year will enhance his memory of the facts.

Objectives:
- Relate multiplication and division
- Identify fact families with 2, 3, 4, 5, 6, 7, 8, and 9
- Divide with 0 and 1

Lesson 1: Relating Multiplication and Division

Objectives:
- Give a multiplication fact, state a related division fact and vice versa

Lesson 2: Fact Families with 2, 3, 4, and 5

Objectives:
- Give quotients for division facts with divisors of 2, 3, 4, or 5

Lesson 3: Fact Families with 6 and 7

Objectives:
- Give quotients for division facts with divisors of 6 and 7

Lesson 4: Fact Families with 8 and 9

Objectives:
- Give quotients for division facts with divisors of 8 and 9

Lesson 5: Dividing with 0 and 1

Objectives:
• Use patterns and fact families to find answers to division facts with 0 and 1

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 6: Division Review

Lesson 7: Division Unit Test
ESSENTIAL MATH 3 B
Essential Math 3 B

Essential Math 3 is an elementary school math course designed for the student who needs extended instruction, review, and reinforcement to master prerequisite and grade-level math skills. The units and lessons within this course focus on the fundamental skills and standards the student will need in order to master the concepts from the previous and current grade level and be successful in math.

Your student will have access to DimensionU™, which includes online math games that support your student’s understanding of lesson concepts. You will find the link to DimensionU™ on your student’s home page. Follow the directions to download the necessary software first. Once installed, DimensionU™ allows your student to access DimensionM™ to practice grades 3–7 and pre-algebra math skills in a gaming environment.

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

The answer key document for enVisionMATH Lessons is located in the Virtual Library in the Answer Keys section and is not included as a resource in the Course Guide. You can access the Answer Keys in the Virtual Library: Home > Curriculum and Instruction > Answer Keys.

Unit 1: Patterns and Relationships

In this unit, your student will learn to identify, describe, extend, and write a rule for a variety of nonnumeric and numeric patterns that repeat in predictable ways. He will also learn that patterns between pairs of numbers exist when they are related by multiplication, addition, or subtraction. Your student will encounter such related numbers in two-column or two-row tables. Given the value of one of the numbers, your student will learn to find the value of the other number by writing a rule for the relationship and thereby extending the table. In addition, your student will use his knowledge of numbers and operation symbols to translate words from a given mathematical scenario into a numerical expression. He will also develop skills in comparing numerical expressions.

Objectives:
- Solve repeating patterns
- Determine number sequences
- Extend tables
- Write rules for situations and translate words to expressions
- Solve geometric patterns

Lesson 1: Repeating Patterns/Number Sequences (two-day lesson)

Objectives:
- Identify and extend repeating geometric or repeating number patterns
- Identify and extend whole-number patterns involving addition and subtraction

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 2: Extending Tables

Objectives:
- Extend tables of ordered pairs for situations involving multiplication, addition, or subtraction

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 3: Writing Rules for Situations

Objectives:
- Find the rule and extend the table, given a table of number pairs

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 4: Translating Words to Expressions

Objectives:
Unit 2: Solids and Shapes

In this unit, your student will learn to identify, describe, and classify two-dimensional objects, referred to as shapes or polygons, and three-dimensional objects, or solid figures, based on the similarities and differences between their attributes. Your student will also learn about points and lines, the building blocks used to describe polygons and solid figures. She will recognize that while a point has no size, a set of points that extend in opposite directions form a straight line and two lines joined at a point result in an angle. Relationships between these building blocks result in the formation of several types of lines and angles. These lines and angles help constitute polygons and solid figures in unique ways. This unit is rich in mathematical terminology. Relating the vocabulary to as many real-life examples will help your student gain familiarity with the terms.

Objectives:
- Identify solid figures
- Relate solids and shapes
- Identify lines, line segments, and angles
- Identify polygons, triangles, and quadrilaterals

Lesson 1: Solid Figures / Relating Solids and Shapes (two-day lesson)

Objectives:
- Identify solid figures by name and describe their attributes
- Identify shapes related to given solids

Lesson 2: Lines and Line Segments

Objectives:
- Identify lines and line segments and explore their different relationships

Lesson 3: Angles

Objectives:
- Identify and classify angles in relation to right angles

Lesson 4: Polygons

Objectives:
- Identify and classify polygons

Lesson 5: Triangles

Objectives:
- Identify and classify triangles
Lesson 6: Quadrilaterals

Objectives:
• Identify and classify quadrilaterals

Lesson 7: Combining and Separating Shapes

Objectives:
• Create new shapes by combining shapes or by separating shapes

Lesson 8: Making New Shapes

Objectives:
• Make a new shape by cutting apart a shape and rearranging the pieces

Lesson 9: Solids and Shapes Review (two-day lesson)

Lesson 10: Solids and Shapes Unit Test

Unit 3: Understanding Fractions

In this unit, your student will use manipulatives to represent fractions of a region and fractions of a set. The use of manipulatives will help your student develop proficiency in understanding how to identify fractions. Your student will also use models, pictures, and fraction strips to find equivalent fractions. Future math courses will use the basic fraction skills presented in this unit and apply them throughout all branches of mathematics, including measurement, geometry, probability, and statistics. Relating fractions to as many real-life examples as possible will help your student gain familiarity with the concepts presented in this unit.

Objectives:
• Write fractions to describe regions and sets that are divided into equal parts
• Use benchmark fractions to estimate
• Determine equivalent fractions using models
• Identify fractions on a number line

Lesson 1: Dividing Regions into Equal Parts

Objectives:
• Identify regions that have been divided into equal-sized parts and divide regions into equal-sized parts

Lesson 2: Fractions and Regions

Objectives:
• Associate the model, symbol, and words used to describe a fractional part of a whole region

Lesson 3: Fractions and Sets

Objectives:
• Associate the model, symbol, and words used to describe a fractional part of a set

Lesson 4: Benchmark Fractions

Objectives:
• Use benchmark fractions to estimate fractional parts

Lesson 5: Comparing Fractions Using Benchmarks

Objectives:
• Use benchmark numbers to compare fractions with the same numerator or the same denominator

Lesson 6: Finding Equivalent Fractions

Objectives:
• Use models to find equivalent fractions

Lesson 7: Fractions on the Number Line

Objectives:
• Find and write fractions and mixed numbers on a number line
• Compare and order fractions and mixed numbers

Lesson 8: Equivalent Fractions and the Number Line

Objectives:
• Use number lines to identify equivalent fractions

Lesson 9: Whole Numbers and Fractions

Objectives:
• Use fraction strips and number lines to find fraction names for whole numbers

Lesson 10: Understanding Fractions Review (two-day lesson)

Lesson 11: Understanding Fractions Unit Test

Unit 4: Customary Measurement

In this unit, your student will learn to estimate, measure, and select appropriate tools and units for length, capacity, and weight in the customary system. At the beginning of this unit, your student will measure length with nonstandard units. This process illustrates to your student the need for standard units of measurement. Then she will measure lengths of objects using standard units of measurement. Once your student has practiced measuring to the nearest inch, she will learn how to measure with greater precision by finding length to the nearest one-half inch and one-fourth inch. Your student will continue her study of measurement by changing customary units of length. Throughout this topic, each unit of measurement is compared to a real-life object.

Objectives:
• Measure length to the nearest inch and to the nearest fraction of an inch
• Estimate and measure length using inches, feet, yards, and miles
• Use customary units to estimate and measure capacity
• Use customary units to estimate and measure weight

Lesson 1: Understanding Measurement

Objectives:
• Understand the measurement process and the need for standard units
• Learn to measure length with nonstandard units and to the nearest inch
Lesson 2: Fractions of an Inch

Objectives:
- Measure length to the nearest 1/2 and 1/4 inch

Lesson 3: Using Inches, Feet, Yards, and Miles

Objectives:
- Choose an appropriate unit, estimate, and measure in feet, yards, and miles
- Convert units among inches, feet, and yards

Lesson 4: Customary Units of Capacity

Objectives:
- Choose an appropriate unit and tool, estimate, and measure in cups, pints, quarts, and gallons
- Identify objects which hold about a cup, a pint, a quart, or a gallon

Lesson 5: Units of Weight

Objectives:
- Choose an appropriate unit and tool, estimate, and measure in ounces, pounds, and tons
- Identify objects that weigh about an ounce, a pound, or a ton

Lesson 6: Customary Measurement Review (two-day lesson)

Lesson 7: Customary Measurement Unit Test

Unit 5: Metric Measurement

In this unit, your student will learn to estimate, measure, and select appropriate tools and units for length, capacity, and mass in the metric system. Your student may remember the pattern of the base-ten numeration system when he discovers that the metric system of measurement is based on powers of 10. Your student will also convert metric units of length. When each unit of measurement is introduced throughout this unit, each unit is compared to a real-life object. The object serves as a benchmark that your student can use to estimate the length, capacity, and mass of an object before he measures it. Finally, your student will determine whether his estimate seems reasonable. This unit’s problem-solving strategy is “make a table and look for a pattern.”

Objectives:
- Estimate and measure length using metric units
- Estimate and measure capacity using metric units
- Estimate and measure mass using metric units
- Make a table and look for a pattern

Lesson 1: Using Centimeters and Decimeters

Objectives:
- Estimate and measure lengths in centimeters

Lesson 2: Using Meters and Kilometers

Objectives:
Lesson 3: Metric Units of Capacity

Objectives:
- Choose an appropriate unit and tool, estimate, and measure in milliliters and liters
- Identify objects that hold about a liter or a milliliter

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 4: Units of Mass

Objectives:
- Choose an appropriate unit and tool, estimate, and measure in grams and kilograms
- Identify objects with a mass of about a gram or kilogram

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 5: Problem Solving: Draw a Picture

Objectives:
- Draw a picture to solve a problem involving units of capacity and mass

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 6: Make a Table and Look for a Pattern

Objectives:
- Make a table and look for a pattern to solve a problem

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 7: Metric Measurement Review (two-day lesson)

Lesson 8: Metric Measurement Unit Test

Unit 6: Perimeter and Area

In this unit, your student will learn that the distance around a plane shape is its perimeter. She will explore several strategies for calculating perimeter. Your student will investigate how to make a shape with a given perimeter and how different shapes can have the same perimeter. Then your student will explore the concept of area, which is the space inside a plane shape. Your student will solve problems involving area, and represent the answer using square units. She will learn the process of estimating and finding the area of regular and irregular shapes. The problem-solving strategy in this unit is "solve a simpler problem."

Objectives:
- Measure perimeter of common shapes and find different shapes with the same perimeter
- Understand, estimate, and measure area
- Solve a simpler problem

Lesson 1: Understanding Perimeter

Objectives:
- Use standard units to find the perimeter of a shape

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 2: Perimeter of Common Shapes

Objectives:
- Use standard units to find the perimeter of a shape

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.
Lesson 3: Understanding Area/Estimating and Measuring Area (two-day lesson)

Objectives:
- Use concrete and pictorial models of square units to determine the area of two-dimensional surfaces

Lesson 4: Areas of Squares and Rectangles

Objectives:
- Find the area of rectangles by counting units or by using a formula

Lesson 5: Area of Irregular Shapes

Objectives:
- Find the area of irregular shapes

Lesson 6: Equal Areas and Fractions

Objectives:
- Use equal areas of parts of figures to model unit fractions

Lesson 7: Solve a Simpler Problem

Objectives:
- Solve complex problems asking for the area of irregular shapes

Lesson 8: Perimeter and Area Review (two-day lesson)

Lesson 9: Perimeter and Area Unit Test

Unit 7: Time and Temperature

In this unit, your student will solve many real-life problems involving time and temperature. Your student will learn how to tell time to the half hour, quarter hour, and to the minute on both analog and digital clocks. Your student’s knowledge of counting by fives and by ones will help your student measure time on an analog clock, while his understanding of fractions will support his comprehension of the terms “half hour” and “quarter hour.” Your student will also convert units of time and determine elapsed time. For problems involving temperature, your student will read thermometers and learn the benchmarks for freezing and boiling water in degrees Fahrenheit and degrees Celsius. These benchmarks will help your student connect appropriate temperatures for given real-world activities.

Objectives:
- Tell time to the half hour, quarter hour, and minute
- Convert units of time
- Determine elapsed time
- Measure temperatures

Lesson 1: Time to the Half Hour and Quarter Hour
Lesson 2: Time to the Minute

Objectives:
- Tell time to the nearest minute using analog and digital clocks

Lesson 3: Units of Time

Objectives:
- Perform simple conversions for units of time

Lesson 4: Elapsed Time

Objectives:
- Find elapsed time in intervals of minutes

Lesson 5: Temperature

Objectives:
- Read temperatures on Fahrenheit thermometers, and determine appropriate temperatures for given activities

Lesson 6: Time and Temperature Review (two-day lesson)

Lesson 7: Time and Temperature Unit Test

Unit 8: Data and Graphs

In this unit, your student will collect, organize, display, analyze, and interpret real-world data. Your student will collect data in an organized way by using a tally chart. Once the data has been gathered, your student will display the data in pictographs and bar graphs in order to read and interpret the information. The problem-solving strategy in this unit is “use tables and graphs to draw conclusions.”

Objectives:
- Organize data
- Read and make pictographs and bar graphs
- Create line plots
- Use tables and graphs to draw conclusions

Lesson 1: Organizing Data

Objectives:
- Use tally charts to record and organize survey data

Lesson 2: Reading Pictographs and Bar Graphs

Objectives:
- Read and interpret data from a pictograph and a bar graph

Lesson 3: Making Pictographs

Objectives:
- Make a pictograph from a table or tally chart

Lesson 4: Making Bar Graphs
Objectives:
• Make a bar graph to represent the data in a table or tally chart

Lesson 5: Length and Line Plots

Objectives:
• Use line plots to organize and represent measurement data

Lesson 6: Use Tables and Graphs to Draw Conclusions

Objectives:
• Solve problems by using tables and graphs to draw conclusions

Lesson 7: Data and Graphs Review (two-day lesson)

Lesson 8: Data and Graphs Unit Test
ESSENTIAL MATH 4 A
Essential Math 4 A

Essential Math 4 is an elementary school math course designed for the student who needs extended instruction, review, and reinforcement to master prerequisite and grade-level math skills. The units and lessons within this course focus on the fundamental skills and standards the student will need in order to master the concepts from the previous and current grade level and be successful in math.

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

The answer key document for enVisionMATH Lessons is located in the Virtual Library in the Answer Keys section and is not included as a resource in the Course Guide. You can access the Answer Keys in the Virtual Library: Home > Curriculum and Instruction > Answer Keys.

Unit 1: Let's Get Ready to Learn Math!

In this unit, your student will learn about the activities he will do in Math 4. The first lesson, intended for Learning Coaches, provides advice for using the Lesson Guide to support your student, and details the resources found in the course. It also offers helpful tips for building your student’s math skills. The second lesson is intended for students and their Learning Coaches. This lesson will introduce your student to the concept of math, and describe the structure of math lessons.

Objectives:
- Learn how to find and use the Coaching Guide
- Locate and describe lesson resources
- Learn ways to promote mathematical thinking in your daily life
- Learn ways to become a confident math learner
- Describe the different parts of a lesson and the different types of assessments

Lesson 1: Learning Coach: Support Your Student in Math

Objectives:
- Learn how to find and use the Coaching Guide
- Locate and describe lesson resources
- Learn ways to promote mathematical thinking in your daily life

Lesson 2: Welcome to Math 4!

Objectives:
- Learn ways to become a confident math learner
- Locate and describe lesson resources
- Describe the different parts of a lesson
- Describe the different types of assessments

Unit 2: Numeration

This unit reinforces a solid comprehension of the base ten numeration system. Previously, your student used his understanding of place value to read and write numbers in the hundreds and thousands. As your student delves deeper into place value throughout this course, he will extend his ability to read, order, compare, round, and represent larger numbers in a variety of ways. Manipulatives will play a key role in developing your student’s understanding of numbers in the thousands and millions place values. Proficiency of the concepts presented in this unit will provide your student with the foundation to grasp more complex math concepts. Finally, your student will read, write, and compare decimal values as he counts money and makes change to solve problems using real-world scenarios.

Objectives:
- Work with numbers in thousands and millions
- Compare and order whole numbers
- Use money to understand decimals
- Count money and make change

Lesson 1: Thousands

Objectives:
- Represent numbers with place-value blocks and number lines
• Write numbers in standard form, expanded form, and word form

Lesson 2: Millions

Objectives:
• Represent numbers in the millions using a place-value chart
• Write numbers in expanded form, using periods to help write numbers in word form

Lesson 3: Place Value Relationships

Objectives:
• Learn how digits within a multi-digit whole number relate to each other by their place value

Lesson 4: Comparing and Ordering Whole Numbers

Objectives:
• Apply knowledge of place value to compare and order numbers

Lesson 5: Rounding Whole Numbers

Objectives:
• Show how to use place value to round whole numbers

Lesson 6: Using Money to Understand Decimals

Objectives:
• Use place-value charts to read, write, and compare decimals in tenths and hundredths using money

Lesson 7: Counting Money and Making Change

Objectives:
• Convert a collection of coins and bills into a total amount and make change

Lesson 8: Solving Problems Involving Money

Objectives:
• Solve real-world problems that involve money and giving change by counting

Lesson 9: Numeration Review

Lesson 10: Numeration Unit Test

Unit 3: Adding and Subtracting Whole Numbers

In this unit, your student will apply her knowledge and skills of basic addition and subtraction facts to solve addition and subtraction problems involving whole numbers of greater value. As your student learns to estimate and compute sums of numbers less than 100,000, she will use her background knowledge of place value to model the process of...
adding and subtracting numbers in the thousands period, with and without regrouping. This unit will provide your student with meaningful computational practice through word problems that are presented in authentic contexts. The problem-solving strategies that will be introduced to your student are “missing or extra information” and “draw a picture and write an equation.”

Objectives:
- Use estimation strategies
- Add and subtract whole numbers
- Subtract across zeros
- Problem solving strategies

**Lesson 1: Mentally Add & Subtract/Estimate Sum & Difference**

Objectives:
- Round whole numbers to estimate sums and differences

**Lesson 2: Missing or Extra Information**

Objectives:
- Identify what information in a problem is not needed or not present

**Lesson 3: Adding Whole Numbers**

Objectives:
- Add numbers to hundred thousands with and without regrouping

**Lesson 4: Subtracting Whole Numbers**

Objectives:
- Subtract numbers to thousands with and without regrouping

**Lesson 5: Subtracting Across Zeros**

Objectives:
- Subtract numbers with zeros to thousands

**Lesson 6: Draw a Picture and Write an Equation**

Objectives:
- Use a picture or diagram to translate an everyday situation into a number sentence or equation

**Lesson 7: Adding and Subtracting Whole Numbers Review**

**Lesson 8: Adding and Subtracting Whole Numbers Unit Test**

**Unit 4: Multiplication Meanings and Facts**

In this unit, your student will revisit the concepts of equal groups and skip counting as he equates multiplication to repeated addition. Your student will use arrays and counters to model how multiplication works. In addition, your student will use patterns and apply properties of multiplication to multiply with the numbers 0, 1, 2, 5, 9, 10, 11, and 12. By mastering these basic multiplication facts, you student will develop his ability to solve multi-digit multiplication problems and division problems. The problem solving strategy in this unit is “draw a picture and write an equation.”

Objectives:
Lesson 1: Meanings of Multiplication

Objectives:
- Recognize multiplication as repeated addition of equal groups, used in arrays and comparisons

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 2: Patterns for Facts

Objectives:
- Use patterns to find products with factors of 2, 5, and 9

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 3: Multiplication Properties

Objectives:
- Use multiplication properties to simplify computations

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 4: 3 and 4 as Factors

Objectives:
- Use the Distributive Property to simplify multiplication problems by rewriting one of the factors as a sum of two numbers

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 5: 6, 7, and 8 as Factors

Objectives:
- Use the Distributive Property and other regrouping properties to simplify multiplication involving 6s, 7s, and 8s by rewriting one of the factors

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 6: 10, 11, and 12 as Factors

Objectives:
- Use patterns as aids to master facts and multiples of 10, 11, and 12

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 7: Draw a Picture and Write an Equation

Objectives:
- Draw pictures to problem solve multiplication situations and use the pictures to write number sentences

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 8: Multiplication Meanings and Facts Review

Lesson 9: Multiplication Meanings and Facts Unit Test

Unit 5: Multiplying by 1-Digit Numbers

In this unit, your student’s knowledge of basic facts and number patterns will support her as she learns to multiply single-digit numbers by multiples of 10 and 100. Your student will use strategies, such as compatible numbers and rounding, to estimate products. This unit will also engage your student in 2-digit by 1-digit, 3-digit by 1-digit, and 4-digit by 1-digit.
multiplication problems. The standard algorithm, expanded algorithm, and break apart strategies are some strategies that your student will employ to solve these multiplication problems.

Objectives:
- Multiply by multiples of 10 and 100
- Use estimation, and reasonableness to solve problems
- Use an expanded algorithm
- Multiply 1-digit numbers by 2-digit, 3-digit, and 4-digit numbers

**Lesson 1: Multiplying by Multiples of 10 and 100**

Objectives:
- Use basic multiplication facts and number patterns to multiply by multiples of 10 and 100

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

**Lesson 2: Round to Estimate**

Objectives:
- Use compatible numbers and rounding to estimate solutions to multiplication problems

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

**Lesson 3: Reasonableness**

Objectives:
- Check for reasonableness by making sure calculations answer the questions asked and by using estimation to make sure the calculation was performed correctly

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

**Lesson 4: Multiplication and Arrays**

Objectives:
- Use an array to multiply 1-digit times 2-digit numbers

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

**Lesson 5: Using an Expanded Algorithm**

Objectives:
- Record multiplication using an expanded algorithm

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

**Lesson 6: Connecting the Expanded and Standard Algorithms**

Objectives:
- Multiply 2-digit numbers by 1-digit numbers using paper-and-pencil methods

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

**Lesson 7: Multiplying 2-Digit by 1-Digit Numbers**

Objectives:
- Multiply 2-digit numbers by 1-digit numbers using paper-and-pencil methods

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

**Lesson 8: Multiplying 3- and 4-Digit by 1-Digit Numbers**

Objectives:
- Use the standard algorithm to multiply 3-digit or 4-digit numbers by 1-digit numbers
Lesson 9: Multiplying by 1-Digit Numbers Review

Lesson 10: Multiplying by 1-Digit Numbers Unit Test

Unit 6: Multiplying by 2-Digit Numbers

In this unit, your student will multiply with multiples of 10 and 100, round factors, and use compatible numbers to estimate products. Your student will use several strategies, including arrays, tables, the traditional algorithm, and the expanded algorithm, to solve 2-digit by 2-digit multiplication problems. Your student will practice his mental math skills by multiplying greater numbers. This unit's problem-solving strategy is “two-question problems.”

Objectives:
- Estimate products
- Use arrays and an expanded algorithm
- Multiply 2-digit numbers by multiples of 10 and other 2-digit numbers

Lesson 1: Estimate Products

Objectives:
- Use rounding and compatible numbers to estimate solutions to multiplication problems

Lesson 2: Arrays and an Expanded Algorithm

Objectives:
- Use arrays and expanded algorithms to multiply two-digit numbers by two-digit numbers to find the product

Lesson 3: Multiplying 2-Digit Numbers by Multiples of Ten

Objectives:
- Use grids and patterns to multiply 2-digit numbers and multiples of 10

Lesson 4: Multiplying 2-Digit by 2-Digit Numbers

Objectives:
- Use partial products to multiply two-digit numbers by two-digit numbers and find the products

Lesson 5: Two-Question Problems

Objectives:
- Solve two-question problems

Lesson 6: Multiplying by 2-Digit Numbers Review

Lesson 7: Multiplying by 2-Digit Numbers Unit Test

Unit 7: Division Meanings and Facts

In this unit, your student will explore two interpretations of division: division as sharing and division as repeated subtraction. Your student will use arrays, counters, number lines, and pictures to model division. She will investigate special division rules that involve dividing by the numbers 0 and 1. Finally, your student will practice her skills to relate a multiplication
fact to a division fact. She will learn that, like addition and subtraction, multiplication and division have an inverse relationship; this means that their operations undo each other. Subsequently, your student will be able to produce related multiplication and division facts, or fact families. A strong knowledge of basic multiplication facts will lend the use of fact families as an efficient strategy for solving division facts. The problem-solving strategy in this unit is “draw a picture and write an equation.”

Objectives:
- Use meanings of division
- Relate multiplication and division
- Use special quotients
- Use multiplication facts to find division facts
- Draw a picture and write an equation

Lesson 1: Meanings of Division

Objectives:
- Use and draw models to solve division problems

Lesson 2: Relating Multiplication and Division

Objectives:
- Use arrays to write and complete multiplication and division fact families

Lesson 3: Special Quotients

Objectives:
- Use multiplication facts with 0 and 1 to learn about special division rules with 0 and 1

Lesson 4: Fact Families with 2, 3, 4, and 5

Objectives:
- Give quotients for division facts with divisors of 2, 3, 4, or 5

Lesson 5: Fact Families with 6 and 7

Objectives:
- Give quotients for division facts with divisors of 6 and 7

Lesson 6: Fact Families with 8 and 9

Objectives:
- Give quotients for division facts with divisors of 8 and 9

Lesson 7: Draw a Picture and Write an Equation

Objectives:
- Draw pictures and write related number sentences to solve problems

Lesson 8: Division Meanings and Facts Review

Lesson 9: Division Meanings and Facts Unit Test

Unit 8: Dividing by 1-Digit Divisors
In this unit, your student will estimate quotients and divide 2-, 3-, and 4-digit dividends by single-digit divisors. Your student will encounter remainders in some of the division problems presented in this unit. He will use arrays and counters to visualize remainders. Your student will also analyze word problems to determine how to interpret and use remainders. Your student’s knowledge of place-value, related multiplication and division facts, and estimation will allow him to understand and use a standard algorithm when dividing with larger numbers. The standard algorithm will help your student to split the calculation into simpler steps. Finally, your student will learn how to factor a whole number. He will find that prime numbers have only two factors, while composite numbers have more than two factors. This unit’s problem-solving strategy is “multiple-step problems.”

Objectives:
- Use estimation to divide
- Divide with remainders
- Determine prime and composite numbers
- Divide 2-, 3-, and 4-digit numbers by 1-digit numbers
- Use factors

Lesson 1: Using Mental Math to Divide/Estimating Quotients

Objectives:
- Use compatible numbers and rounding to estimate quotients

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 2: Estimating Quotients for Greater Dividends

Objectives:
- Estimate quotients of multi-digit division problems using multiplication facts and place-value concepts

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 3: Using Objects/Division as Repeated Subtraction

Objectives:
- Use repeated subtraction to model division
- Record division as repeated subtraction

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 4: Dividing with Remainders

Objectives:
- Divide whole numbers by 1-digit divisors resulting in quotients with remainders

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 5: Connecting Models and Symbols

Objectives:
- Use place value to understand the algorithm of long division

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 6: Dividing 2-Digit by 1-Digit Numbers

Objectives:
- Use the standard algorithm to divide a two-digit number by a one-digit number

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 7: Dividing 3-Digit by 1-Digit Numbers

Objectives:
- Use the standard algorithm to divide 3-digit numbers by 1-digit numbers

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.
Lesson 8: Mid-Unit Review
Objectives:
• Review concepts presented thus far in the unit

Lesson 9: Deciding Where to Start Dividing
Objectives:
• Use the standard algorithm to divide 3-digit numbers by 1-digit numbers and properly decide where to begin dividing

Lesson 10: Dividing 4-Digit by 1-Digit Numbers
Objectives:
• Estimate and find quotients for 4-digit dividends and 1-digit divisors

Lesson 11: Factors
Objectives:
• Learn how to factor whole numbers

Lesson 12: Prime and Composite Numbers
Objectives:
• Learn to identify prime and composite numbers

Lesson 13: Multiple-Step Problems
Objectives:
• Identify the hidden question in a multi-step problem
• Use the answer to that hidden question to solve the original problem

Lesson 14: Dividing by 1-Digit Divisors Review
Lesson 15: Dividing by 1-Digit Divisors Unit Test

Unit 9: Lines, Angles, and Shapes
In this unit, your student will learn about points, lines, and planes, which are the building blocks to other geometric figures. Your student will study how the relationships between these building blocks result in the formation of several types of lines, angles, and polygons. Using a protractor, your student will measure and draw angles of varying degrees. Polygons are named by the number of sides and angles they possess, and your student will learn to identify and describe different polygons based on such attributes. While taking a closer look at triangles, your student will find that triangles are classified based on the length of their sides and by the size of their angles. Your student will also investigate the classification system of quadrilaterals.
Objectives:
• Identify points, lines, planes, line segments, angles, and rays
• Measure angles
• Identify polygons
• Identify triangles and quadrilaterals
• Add and subtract angle measures

Lesson 1: Points, Lines, and Planes

Objectives:
• Identify and describe points, lines, and planes

Lesson 2: Line Segments, Rays, and Angles
Objectives:
• Learn geometric terms to describe parts of lines and types of angles

Lesson 3: Measuring Angles
Objectives:
• Measure and draw angles

Lesson 4: Adding and Subtracting Angle Measures
Objectives:
• Find unknown angle measures by adding and subtracting

Lesson 5: Polygons
Objectives:
• Learn to identify polygons

Lesson 6: Triangles
Objectives:
• Learn to identify and classify triangles

Lesson 7: Quadrilaterals
Objectives:
• Learn to identify quadrilaterals

Lesson 8: Lines, Angles, and Shapes Review

Lesson 9: Lines, Angles, and Shapes Unit Test
ESSENTIAL MATH 4 B
Essential Math 4 B

Essential Math 4 is an elementary school math course designed for the student who needs extended instruction, review, and reinforcement to master prerequisite and grade-level math skills. The units and lessons within this course focus on the fundamental skills and standards the student will need in order to master the concepts from the previous and current grade level and be successful in math.

Your student will have access to DimensionU™, which includes online math games that support your student’s understanding of lesson concepts. You will find the link to DimensionU™ on your student’s home page. Follow the directions to download the necessary software first. Once installed, DimensionU™ allows your student to access DimensionM™ to practice grades 3–7 and pre-algebra math skills in a gaming environment.

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

The answer key document for enVisionMATH Lessons is located in the Virtual Library in the Answer Keys section and is not included as a resource in the Course Guide. You can access the Answer Keys in the Virtual Library: Home > Curriculum and Instruction > Answer Keys.

Unit 1: Understanding Fractions

In this unit, your student will use fraction circles, fraction strips, and other models to represent, compare, order, and estimate fractions. Your student will identify fractional parts of a whole region, whole object, and whole set. Throughout this unit, your student will explore equivalent fractions, express fractions in simplest form, and write mixed numbers and improper fractions interchangeably. Your student will use the skills that he learns in this unit in future math courses as well as in everyday tasks. Relating fractions to as many real-life examples as possible will help your student gain familiarity with the concepts presented in this unit.

Objectives:
- Identify regions and sets
- Determine equivalent fractions
- Write fractions in simplest terms
- Compare and order fractions
- Convert improper fractions and mixed numbers

Lesson 1: Regions and Sets

Objectives:
- Identify and draw fractional parts of a region and a set, and divide sets to show fractional parts

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 2: Estimating Fractional Amounts

Objectives:
- Estimate fractional parts of regions and sets
- Estimate fractions for points on the number line

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 3: Equivalent Fractions

Objectives:
- Use models and objects to show equivalent fractions

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 4: Number Lines and Equivalent Fractions

Objectives:
- Use a number line to identify and write equivalent fractions

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.
Lesson 5: Fractions in Simplest Form

Objectives:
- Express equivalent fractions in simplest form

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 6: Improper Fractions and Mixed Numbers

Objectives:
- Identify and write mixed numbers as improper fractions and improper fractions as numbers

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 7: Comparing Fractions

Objectives:
- Use benchmark fractions to compare fractions with unlike denominators

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 8: Ordering Fractions (two-day lesson)

Objectives:
- Use common denominators and equivalent fractions to order fractions with unlike denominators

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 9: Understanding Fractions Review

Lesson 10: Understanding Fractions Unit Test

Unit 2: Adding and Subtracting Fractions

In this unit your student will continue to work with fractions and mixed numbers. Your student will first decompose and compose fractions as preparation for addition and subtraction of fractions and mixed numbers. Then using models and manipulatives, your student will add and subtract fractions with like denominators as well as mixed numbers with like denominators. Your student will work with models to increase her understanding of any fraction as a multiple of a unit fraction.

Objectives:
- Decompose and compose fractions
- Add and subtract fractions with like denominators
- Add and Subtract mixed numbers with like denominators
- Multiply a fraction by a whole number

Lesson 1: Decomposing and Composing Fractions

Objectives:
- Decompose fractions and represent them as compositions of fractions in a variety of ways

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 2: Using Models to Add Fractions

Objectives:
- Add fractions with like denominators, using models

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 3: Using Models to Subtract Fractions

Objectives:
- Subtract fractions with like denominators, using models
Lesson 4: Add and Subtract Fractions with Like Denominators

Objectives:
• Add and subtract fractions with like denominators using models and paper and pencil

Lesson 5: Modeling Addition and Subtraction of Mixed Numbers

Objectives:
• Use models to add and subtract mixed numbers

Lesson 6: Adding Mixed Numbers

Objectives:
• Use models and computation to add mixed numbers

Lesson 7: Subtracting Mixed Numbers

Objectives:
• Use models and computation to subtract mixed numbers

Lesson 8: Fractions as Multiples of Unit Fractions

Objectives:
• Use models and computation to add mixed numbers

Lesson 9: Multiplying a Fraction by a Whole Number

Objectives:
• Use models and computation to add mixed numbers

Lesson 10: Adding and Subtracting Fractions Review (two-day lesson)

Lesson 11: Adding and Subtracting Fractions Unit Test

Unit 3: Understanding Decimals

In this unit, your student will read and write decimals to the hundredths place in expanded, standard, and word form. Models of hundredths and place-value charts will help your student to understand the value that is represented by a decimal, which will allow him to compare and order decimals. Your student will learn to write decimals and fractions interchangeably and graph them on a number line. Additionally, your student will learn to write decimals and mixed numbers interchangeably and graph them on a number line. The problem-solving strategy in this unit is “draw a table.”

Objectives:
• Determine decimal place value
• Compare and order decimals
• Convert fractions and decimals
• Identify fractions and decimals on a number line
• Draw a picture

Lesson 1: Decimal Place Value

Objectives:
Lesson 2: Comparing and Ordering Decimals

Objectives:
- Use models and place-value charts to compare decimals to hundredths
- Use greater-than and less-than symbols to order decimal numbers

Lesson 3: Fractions and Decimals

Objectives:
- Understand how to write fractions as decimals and decimals as fractions

Lesson 4: Fractions and Decimals on the Number Line

Objectives:
- Learn to locate and name fractions and decimals on a number line

Lesson 5: Equivalent Fractions and Decimals

Objectives:
- Use equivalent fractions to write fractions as decimals

Lesson 6: Mixed Numbers and Decimals on the Number Line

Objectives:
- Understand how to graph decimals and mixed numbers on the number line

Lesson 7: Draw a Picture

Objectives:
- Solve problems using the strategy Draw a Picture

Lesson 8: Understanding Decimals Review (two-day lesson)

Lesson 9: Understanding Decimals Unit Test

Unit 4: Operations with Decimals

In this unit, your student will use models of tenths and hundredths and her knowledge of addition and subtraction basic facts to estimate and compute decimal sums and differences involving decimals through hundredths. The problem-solving strategy is “try, check, and revise.”

Objectives:
- Round and estimate decimal sums and differences
- Add and subtract decimals
- Use the try, check, and revise strategy
• Round two-place decimal numbers to one place or the nearest whole number
• Round decimal numbers to estimate sums and differences

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 2: Modeling Addition and Subtraction of Decimals

Objectives:
• Add and subtract decimals in tenths and hundredths using models

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 3: Adding and Subtracting Decimals

Objectives:
• Estimate and compute the sum or difference of whole numbers and positive decimals to two places

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 4: Try, Check, and Revise

Objectives:
• Try a solution, check the solution, and, if not correct, revise the solution, following the same method until the correct solution is determined via checking

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 5: Operations with Decimals Review (two-day lesson)

Lesson 6: Operations with Decimals Unit Test

Unit 5: Area and Perimeter
In this unit, your student will explore strategies for finding area and perimeter. Using centimeter grid paper, your student will determine the area of regular and irregular figures by counting the number of square units that cover the interior of the figure. Your student will also use formulas to find the area of squares, rectangles, parallelograms and triangles and to find the perimeter of polygons. Additionally, your student will explore line symmetry. This unit’s problem-solving strategy is “solve a simpler problem and make a table.”

Objectives:
• Determine area
• Find the area of squares, rectangles, parallelograms, triangles, and irregular shapes
• Solve for perimeter of a figure
• Determines lines of symmetry

Lesson 1: Understanding Area

Objectives:
• Measure the area of a figure by counting the number of square units that cover a region

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 2: Area of Squares and Rectangles

Objectives:
• Find the area of rectangles by counting square units or by using a formula

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 3: Area of Irregular Shapes

Objectives:
• Find the area of irregular shapes
Lesson 4: Area of Parallelograms

Objectives:
• Use the formula for the area of a rectangle in order to find a formula for the area of a parallelogram

Lesson 5: Area of Triangles

Objectives:
• Use the relationship between triangles and parallelograms to find the area of triangles

Lesson 6: Perimeter

Objectives:
• Find the perimeter of a polygon by adding the lengths of the sides or by using the formula

Lesson 7: Solving Perimeter and Area Problems

Objectives:
• Use formulas for the perimeter and area of rectangles to solve real-world problems

Lesson 8: Line Symmetry

Objectives:
• Determine if a plane figure has line symmetry and, if so, how many lines of symmetry it has

Lesson 9: Solve a Simpler Problem and Make a Table

Objectives:
• Break a problem into smaller, more manageable pieces and find a pattern to fit

Lesson 10: Area and Perimeter Review (two-day lesson)

Lesson 11: Area and Perimeter Unit Test

Unit 6: Measurement and Time

In this unit, your student will learn to select appropriate tools and units to estimate and measure length, capacity, and weight in the customary system; and length, capacity, and mass in the metric system. Using a table of units, multiplication, and division, your student will convert units of measure within the same system. Next your student will study elapsed time, start time, and end time, and use computations to solve problems involving several different units of time. Your student will also learn to measure temperature and calculate changes in temperature in both degrees Fahrenheit and degrees Celsius. The use of real measuring tools, such as thermometers, scales, and clocks, as well as real items, such as cups and daily schedules, will add meaning to your student’s study of measurement.

Objectives:
• Use customary units of length, capacity, and weight
• Convert customary units
• Use metric units of length, capacity, and mass
• Convert metric units
• Determine time, elapsed time, and temperature

**Lesson 1: Using Customary Units of Length**

Objectives:
• Estimate and measure length by choosing the most appropriate unit of length

*Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.*

**Lesson 2: Customary Units of Capacity**

Objectives:
• Estimate fluently with customary capacity units (cups, pints, quarts, and gallons)
• Compare the relative sizes of capacity measurements

*Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.*

**Lesson 3: Units of Weight**

Objectives:
• Estimate fluently and measure with units of weight

*Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.*

**Lesson 4: Changing Customary Units**

Objectives:
• Convert between customary units

*Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.*

**Lesson 5: Mid-Unit Review**

**Lesson 6: Using Metric Units of Length**

Objectives:
• Estimate and measure length to the nearest centimeter, and choose the most appropriate metric unit for measuring length

*Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.*

**Lesson 7: Metric Units of Capacity**

Objectives:
• Estimate fluently with milliliters and liters
• Measure capacity using these metric units

*Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.*

**Lesson 8: Units of Mass**

Objectives:
• Estimate and measure with units of mass—grams and kilograms

*Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.*

**Lesson 9: Changing Metric Units**

Objectives:
• Convert between metric units

*Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.*

**Lesson 10: Units of Time/Elapsed Time (two-day lesson)**

Objectives:
• Compare several different units of time and freely convert from one unit of time to another
• Find the difference in time using a beginning and an end time
• Use elapsed time to find a beginning and an end time

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 11: Measurement and Time Review (two-day lesson)

Lesson 12: Measurement and Time Unit Test

Unit 7: Data and Graphs

In this unit, your student will encounter real-world problems that require collecting, organizing, displaying, analyzing, and interpreting data. Your student will learn how to collect data in an organized way by using a tally chart. He will learn how to use different displays for different types of data, including bar graphs and line plots. Lastly, your student will solve problems using line plots. The problem-solving strategy in this unit is “make a graph.”

Objectives:
• Use data from surveys
• Interpret graphs: line plots and bar graphs
• Solve problems using line plots
• Create graphs

Lesson 1: Data from Surveys

Objectives:
• Design and use a survey with a sample size that allows accurate predictions to be made about a larger population

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 2: Interpreting Graphs

Objectives:
• Use bar graphs to display data

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 3: Line Plots

Objectives:
• Learn and understand how to draw line plots, interpret points, and recognize outliers

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 4: Solving Problems Involving Line Plots

Objectives:
• Construct line plots using given data and use the line plot to answer questions about the data set

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 5: Make a Graph

Objectives:
• Make and use graphs to display data and solve problems

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 6: Data and Graphs Review (two-day lesson)

Lesson 7: Data and Graphs Unit Test

Unit 8: Equations
In this unit, your student will study equations. She will determine if two equations are equal or not equal to each other. The equations presented in this unit also include variables. Your student will solve for the variable in addition, subtraction, multiplication, and division equations by using the inverse operation to undo the operation of the equation. The problem-solving strategy in this unit is “work backward.”

Objectives:
• Determine whether two expressions are equal
• Add and subtract to solve equations
• Multiply and divide to solve equations
• Use the work backward strategy

**Lesson 1: Equal or Not Equal**

Objectives:
• Learn and understand the properties of equality

**Lesson 2: Solving Addition and Subtraction Equations**

Objectives:
• Learn and understand how to use addition and subtraction to solve equations

**Lesson 3: Solving Multiplication and Division Equations**

Objectives:
• Learn and understand how to use multiplication and division to solve equations

**Lesson 4: Work Backward**

Objectives:
• Solve problems that require finding the original times, measurements, or quantities that led to a result that is given

**Lesson 5: Equations Review (two-day lesson)**

**Lesson 6: Equations Unit Test**
ESSENTIAL MATH 5 A
**Essential Math 5 A**

Essential Math 5 is an elementary school math course designed for the student who needs extended instruction, review, and reinforcement to master prerequisite and grade-level math skills. The units and lessons within this course focus on the fundamental skills and standards the student will need in order to master the concepts from the previous and current grade level and be successful in math.

**Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.**

The answer key document for *enVisionMATH Lessons* is located in the Virtual Library in the Answer Keys section and is not included as a resource in the Course Guide. You can access the Answer Keys in the Virtual Library: Home > Curriculum and Instruction > Answer Keys.

**Unit 1: Let's Get Ready to Learn Math!**

In this unit, your student will learn about the activities he will do in Math 5. The first lesson, intended for Learning Coaches, provides advice for using the Lesson Guide to support your student, and details the resources found in the course. It also offers helpful tips for building your student’s math skills. The second lesson is intended for students and their Learning Coaches. This lesson will introduce your student to the concept of math, and describe the structure of math lessons.

Objectives:
- Learn how to find and use the Coaching Guide
- Locate and describe lesson resources
- Learn ways to promote mathematical thinking in your daily life
- Create a goal and steps to accomplish that goal
- Describe the different parts of a lesson and different types of assessments

**Lesson 1: Learning Coach: Supporting Your Student in Math**

Objectives:
- Learn how to find and use the Coaching Guide
- Locate and describe lesson resources
- Learn ways to promote mathematical thinking in your daily life

**Lesson 2: Welcome to Math 5! 🌟**

Objectives:
- Create a goal and steps to accomplish that goal
- Locate and describe lesson resources
- Describe the different parts of a lesson
- Describe the different types of assessments

**Unit 2: Numeration**

This unit reinforces a solid comprehension of the base ten numeration system. As your student delves deeper into place value throughout this course, he will extend his ability to read, order, compare, round, and represent numbers to the billions and the thousandths place values. Proficiency of the concepts presented in this unit will provide your student with the foundation to grasp more complex math concepts. This unit’s problem solving strategy is "look for a pattern."

Objectives:
- Understand place value and decimal place value
- Compare and order whole numbers
- Compare and order decimals
- Look for a pattern

**Lesson 1: Place Value / Comparing and Ordering Whole Numbers 🌟**

Objectives:
- Write the standard, expanded, and word forms of whole numbers in the billions and identify the value of digits in whole numbers
- Compare and order whole numbers
Lesson 2: Decimal Place Value

Objectives:
- Write decimals in standard form, word form, and expanded form through millionths

Lesson 3: Comparing and Ordering Decimals

Objectives:
- Compare and order decimals through thousandths

Lesson 4: Look for a Pattern

Objectives:
- Look for patterns with decimal-number sets in order to solve problems

Lesson 5: Numeration Review

Lesson 6: Numeration Test

Unit 3: Adding and Subtracting Whole Numbers and Decimals

In this unit, your student will apply her knowledge of basic addition and subtraction facts to solve addition and subtraction problems involving whole numbers and decimals. As your student learns to estimate and compute whole number and decimal sums, she will use her background knowledge of place value to model the process of adding and subtracting with and without regrouping. This unit will provide your student with meaningful computational practice through word problems that are presented in authentic contexts. The problem-solving strategies that will be introduced to your student is "draw a picture and write an equation" and "multiple-step problems."

Objectives:
- Use rounding and estimating
- Add and subtract decimals
- Draw pictures and writing equations
- Solve multiple-step problems

Lesson 1: Rounding Whole Numbers and Decimals

Objectives:
- Round whole numbers through millions and decimals through thousandths

Lesson 2: Estimating Sums and Differences

Objectives:
- Use rounding and compatible numbers to estimate sums and differences of whole numbers and decimals

Lesson 3: Draw a Picture and Write an Equation

Objectives:
- Use pictures and write equations to help them solve problems

Lesson 4: Modeling Addition and Subtraction of Decimals

© 2016 Connections Education LLC. All rights reserved.
Objectives:

- Add and subtract decimals in tenths and hundredths using models.

Lesson 5: Adding Decimals

Objectives:

- Compute sums of decimals involving tenths, hundredths, and thousandths

Lesson 6: Counting Money and Making Change

Objectives:

- Convert a collection of coins and bills into a total amount and make change

Lesson 7: Subtracting Decimals

Objectives:

- Compute differences of decimals involving tenths, hundredths, and thousandths

Lesson 8: Multi-Step Problems

Objectives:

- Use multiple steps to solve a variety of problems

Lesson 9: Adding & Subtracting Numbers & Decimals Review (two-day lesson)

Lesson 10: Adding & Subtracting Numbers & Decimals Test

Unit 4: Multiplying Whole Numbers

Your student will learn to simplify multiplication, especially when multiplying with multiples of 10, 100, and 1,000. Your student’s prior mastery of basic multiplication facts will allow him to focus on new concepts, such as partial products and the traditional algorithm, to solve multi-digit multiplication problems.

Objectives:

- Use mental math and estimation to find products
- Multiply 2-digit numbers by 2-digit numbers
- Multiply greater numbers

Lesson 1: Using Mental Math to Multiply/Estimating Products

Objectives:

- Mentally compute products of whole numbers using place-value patterns and the properties of multiplication
- Use rounding or compatible numbers to estimate products of whole numbers

Lesson 2: Multiplying 2-Digit by 1-Digit Numbers

Objectives:

- Multiply 2-digit numbers by 1-digit numbers using paper-and-pencil methods
Lesson 3: Multiplying 3- and 4-Digit by 1-Digit Numbers

Objectives:
• Use the standard algorithm to multiply 3- and 4-digit numbers by 1-digit numbers.

Lesson 4: Multiplying 2-Digit by 2-Digit Numbers

Objectives:
• Use partial products to multiply two-digit numbers by two-digit numbers and find the products.

Lesson 5: Special Cases

Objectives:
• Learn to multiply greater numbers.

Lesson 6: Multiplying Greater Numbers

Objectives:
• Multiply two-digit numbers by factors with more than two digits.

Lesson 7: Multiplying Whole Numbers Review (two-day lesson)

Lesson 8: Multiplying Whole Numbers Test

Unit 5: Dividing by 1-Digit Divisors

In this unit, your student will estimate and divide up to four-digit dividends by single-digit divisors. Your student will learn to simplify division, especially when dividing with a dividend that is a multiple of 10 and 100. Since relating multiplication to division serves as an efficient strategy for solving division problems, your student should be fluent with her multiplication facts. In doing so, your student will be able to concentrate on learning new skills, such as dividing within the context of money, dividing with zeros in the quotient, and dividing to find factors of whole numbers. Your student will also study the concepts of prime and composite numbers. The problem-solving strategy in this unit is "reasonableness."

Objectives:
• Divide by multiples of 10 and estimate quotients
• Divide by 1-digit divisors
• Understanding factors
• Determine prime and composite numbers

Lesson 1: Divide Multiples of 10 and 100/Estimate Quotients

Objectives:
• Find the quotient of a division problem whose dividend is a multiple of 10, where division involves a basic fact
• Use rounding and compatible numbers to estimate quotients of whole numbers.

Lesson 2: Reasonableness/Connecting Models and Symbols

Objectives:
• Check problems for reasonableness by using various methods, including estimation and checking their final answer
• Find quotients using the model of sharing money
Lesson 3: Dividing with Remainders

Objectives:
- Divide whole numbers by 1-digit divisors resulting in quotients with remainders

Lesson 4: Dividing 2-Digit by 1-Digit Numbers

Objectives:
- Use the standard algorithm to divide a two-digit number by a one-digit number

Lesson 5: Dividing 3-Digit by 1-Digit Numbers

Objectives:
- Use the standard algorithm to divide 3-digit numbers by 1-digit numbers

Lesson 6: Deciding Where to Start Dividing

Objectives:
- Use the standard algorithm to divide 3-digit numbers by 1-digit numbers and properly decide where to begin dividing

Lesson 7: Zeros in the Quotient

Objectives:
- Divide with zeros in the quotient

Lesson 8: Understanding Factors

Objectives:
- Use divisibility rules to determine if a number is divisible by another and to find factor pairs of a given number

Lesson 9: Prime and Composite Numbers

Objectives:
- Learn to identify prime and composite numbers

Lesson 10: Dividing by 1-Digit Divisors Review (two-day lesson)

Lesson 11: Dividing by 1-Digit Divisors Test

Unit 6: Dividing by 2-Digit Divisors

In this unit, your student estimate quotients and divide up to five-digit dividends with two-digit divisors. The solutions to these division problems include one-digit and two-digit quotients, as well as quotients with a remainder. Basic multiplication facts will help your student find the quotient to division problems whose dividends and divisors are multiples of 10. This unit’s problem-solving strategy is “missing or extra information.”

Objectives:
- Use patterns to divide
Lesson 1: Using Patterns to Divide

Objectives:
- Find the quotients of division problems whose dividends and divisors are multiples of 10, where the division involves a basic fact

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 2: Estimating Quotients with 2-Digit Divisors

Objectives:
- Use estimation to find approximate solutions to quotients with two-digit divisors using compatible numbers

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 3: Connecting Models and Symbols

Objectives:
- Use arrays and area models to model division.

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 4: Dividing by Multiples of 10

Objectives:
- Find quotients with a two-digit divisor that is a multiple of ten

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 5: 1-Digit Quotients

Objectives:
- Find one-digit quotients where the divisor is a two-digit number

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 6: 2-Digit Quotients

Objectives:
- Divide a three-digit number by a two-digit number to find a two-digit quotient

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 7: Missing or Extra Information

Objectives:
- Determine which information is missing and identify extraneous information in problems

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 8: Dividing by 2-Digit Divisors Review (two-day lesson)

Lesson 9: Dividing by 2-Digit Divisors Test

Unit 7: Variables and Expressions

In this unit, your student will translate word phrases into algebraic expressions using variables. Then, your student will use patterns to write and solve algebraic expressions using addition, subtraction, and multiplication. Also, your student will apply the order of operations to evaluate algebraic expressions.

Objectives:
- Solve variables and expressions
• Use patterns and expressions to solve problems
• Apply the Order of Operations

**Lesson 1: Variables and Expressions (two-day lesson)**

Objectives:
- Translate words into algebraic expressions

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

**Lesson 2: Patterns and Expressions**

Objectives:
- Use patterns to show relationships and solve algebraic expressions

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

**Lesson 3: More Patterns and Expressions**

Objectives:
- Write and evaluate expressions involving multiplication, addition, and subtraction

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

**Lesson 4: Patterns: Extending Tables**

Objectives:
- Extend patterns in a table using given rules.
- Identify the relationship between corresponding terms in the sequences.

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

**Lesson 5: Order of Operations**

Objectives:
- Use given values for variables to evaluate numerical or algebraic expressions with three or more numbers and two or more operations

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

**Lesson 6: Addition and Subtraction Expressions**

Objectives:
- Model addition and subtraction patterns shown in tables and write rules for the patterns

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

**Lesson 7: Multiplication and Division Expressions**

Objectives:
- Model multiplication and division patterns shown in tables and write rules for the patterns

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

**Lesson 8: Variables and Expressions Review (two-day lesson)**

**Lesson 9: Variables and Expressions Test**

**Unit 8: Multiplying and Dividing Decimals**

In this unit, your student will use mental math strategies to estimate products and quotients of problems involving decimals. Your student will apply the standard algorithm to multiply a decimal by a whole number and to multiply a decimal by another decimal. The steps for dividing decimals, using the standard algorithm, will also be taught to divide a decimal by a whole number and to divide a decimal by another decimal. This unit’s problem-solving strategy is “multiple-step problems.”
Objectives:
• Multiply and divide decimals by 10, 100, and 1,000
• Estimate the product of a decimal and a whole number
• Multiply and divide a decimal by a whole number
• Solve multiple-step problems

Lesson 1: Multiplying Decimals by 10, 100, or 1,000
Objectives:
• Mentally multiply decimals by 10, 100, and 1,000

Lesson 2: Multiplying a Whole Number and a Decimal
Objectives:
• Multiply a decimal number by a whole number

Lesson 3: Model and Perform Decimal Multiplication
Objectives:
• Use number sense and place value to multiply decimals.
• Find products of whole numbers and decimals to ten thousandths.

Lesson 4: Multiplying Two Decimals
Objectives:
• Use the standard algorithm to multiply decimals by decimals

Lesson 5: Dividing Decimals by 10, 100, or 1,000
Objectives:
• Mentally divide decimals by 10, 100, or 1,000

Lesson 6: Number Sense: Decimal Division
Objectives:
• Use reasoning to correctly place the decimal point in a quotient.

Lesson 7: Dividing a Decimal by a Whole Number
Objectives:
• Divide a decimal number by a whole number

Lesson 8: Dividing a Decimal by a Decimal
Objectives:
• Use the standard algorithm to divide decimals by decimals

Lesson 9: Multiplying and Dividing Decimals Review (two-day lesson)

Lesson 10: Multiplying and Dividing Decimals Test

Unit 9: Shapes
In this unit, your student will learn about points, lines, and planes, the building blocks used to describe other geometric figures. Your student will recognize the appropriate labels that are needed in drawings of lines and rays. Also, your student will examine how to say specific lines and rays and how to write them with proper notation. Using a protractor, your student will measure and draw angles of varying degrees. Polygons are named by the number of sides and angles they possess, and your student will learn to identify and describe different polygons based on such attributes. While taking a closer look at triangles, your student will find that triangles fall into classifications according to the length of their sides or by the size of their angles. Your student will also investigate the classification system of quadrilaterals. This unit’s problem-solving strategy is “make and test generalizations.”

Objectives:
- Apply basic geometric ideas
- Measure and classify angles
- Identify polygons, triangles, and quadrilaterals
- Make and test generalizations

Lesson 1: Basic Geometric Ideas

Objectives:
- Use geometric terms to describe locations and parts of space

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 2: Measuring and Classifying Angles

Objectives:
- Measure, draw, and classify angles

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 3: Polygons

Objectives:
- Identify and classify polygons

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 4: Triangles

Objectives:
- Identify and classify triangles

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 5: Quadrilaterals

Objectives:
- Identify and classify quadrilaterals

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 6: Special Quadrilaterals/Classifying Quadrilaterals

Objectives:
- Learn about the properties of special quadrilaterals
- Sort a variety of quadrilaterals to develop the hierarchy or "family tree" for quadrilaterals

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 7: Make and Test Generalizations

Objectives:
- make and test generalizations of patterns in different examples

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 8: Shapes Review (two-day lesson)
ESSENTIAL MATH 5 B
Essential Math 5 B

Essential Math 5 is an elementary school math course designed for the student who needs extended instruction, review, and reinforcement to master prerequisite and grade-level math skills. The units and lessons within this course focus on the fundamental skills and standards the student will need in order to master the concepts from the previous and current grade level and be successful in math.

Your student will have access to DimensionU™, which includes online math games that support your student’s understanding of lesson concepts. You will find the link to DimensionU™ on your student’s home page. Follow the directions to download the necessary software first. Once installed, DimensionU™ allows your student to access DimensionM™ to practice grades 3–7 and pre-algebra math skills in a gaming environment.

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

The answer key document for enVisionMATH Lessons is located in the Virtual Library in the Answer Keys section and is not included as a resource in the Course Guide. You can access the Answer Keys in the Virtual Library: Home > Curriculum and Instruction > Answer Keys.

Unit 1: Fractions and Decimals

In this unit, your student will identify fractional parts of a whole region and whole set. Your student will learn how division relates to fractions through the process of dividing a whole into equal parts. This unit will explain how to show equivalent fractions, express fractions in simplest form, and write mixed numbers and improper fractions interchangeably. Your student will also learn how to write tenths and hundredths as decimals and fractions interchangeably. Determining greatest common factor and comparing and ordering on a number line are other concepts and skills included in this unit. The problem–solving strategy in this unit is “writing to explain.”

Objectives:
• Apply meanings of fractions
• Divide fractions
• Convert mixed numbers and improper fractions
• Compare and order fractions and mixed numbers
• Simplify fractions to simplest terms and determine equivalent fractions

Lesson 1: Meanings of Fractions/Fractions and Division

Objectives:
• Identify and show fractional parts of regions and sets
• Use division to segment objects into equal parts that are fractions of a whole
• Represent fractions as points on the number line

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 2: Mixed Numbers and Improper Fractions

Objectives:
• Express fractions greater than 1 as mixed numbers or improper fractions

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 3: Equivalent Fractions

Objectives:
• Use models and objects to show equivalent fractions

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 4: Compare and Order Fractions

Objectives:
• Determine which of two fractions or mixed numbers is greater or less in order to compare and order fractions and mixed numbers
Lesson 5: Common Factors and Greatest Common Factor

Objectives:
- Determine common factors and the greatest common factor of numbers

Lesson 6: Fractions in Simplest Form

Objectives:
- Express equivalent fractions in simplest form

Lesson 7: Tenths and Hundredths

Objectives:
- Represent decimals (tenths and hundredths) as fractions
- Represent fractions with denominators of 10 and 100 as decimals

Lesson 8: Fractions and Decimals on the Number Line

Objectives:
- Learn to locate and name fractions and decimals on a number line

Lesson 9: Writing to Explain

Objectives:
- Explain how they estimated fractional amounts of objects

Lesson 10: Fractions and Decimals Review (two-day lesson)

Lesson 11: Fractions and Decimals Unit Test

Unit 2: Adding and Subtracting Fractions and Mixed Numbers

In this unit, your student will use fraction models and computation skills to add and subtract fractions and mixed numbers with like and unlike denominators. Your student will study the process of finding the least common multiple of two numbers in order to change unlike denominators into like denominators for addition and subtraction purposes.

Objectives:
- Add and subtract fractions with like denominators
- Find common multiples and least common multiples
- Add and subtract fractions with unlike denominators
- Add and subtract mixed numbers

Lesson 1: Estimate/Add/Subtr Fractions with Like Denominator

Objectives:
- Use a number line to estimate sums and differences of fractions
- Use models and computational procedures to add and subtract fractions with like denominators

Lesson 2: Common Multiples and Least Common Multiple

Objectives:
- Determine common multiples and least common multiples of numbers
Lesson 3: Adding Fractions with Unlike Denominators

Objectives:
- Use models and computational procedures to add fractions with unlike denominators

Lesson 4: Subtracting Fractions with Unlike Denominators

Objectives:
- Use models and computational procedures to subtract fractions with unlike denominators

Lesson 5: Modeling Addition and Subtraction of Mixed Numbers

Objectives:
- Use models to add and subtract mixed numbers
- Use models and computational procedures to add mixed numbers

Lesson 6: Subtracting Mixed Numbers

Objectives:
- Use models and computational procedures to subtract mixed numbers

Lesson 7: More Adding and Subtracting Mixed Numbers

Objectives:
- Solve more complex problems involving the addition and subtraction of mixed numbers

Lesson 8: Add & Subtract Fractions & Mixed Numbers Review (two-day lesson)

Lesson 9: Add & Subtract Fractions & Mixed Numbers Unit Test

Unit 3: Multiplying Fractions and Mixed Numbers

In this unit, your student will learn to multiply a fraction by a whole number and by another fraction. Multiplication of mixed numbers is another concept that is presented in this unit. Several methods, such as using repeated addition, drawing a picture, and computing products, are used to develop the concepts of multiplying with fractions and multiplying with mixed numbers. The problem-solving strategy in this unit is “draw a picture and write a number sentence.”

Objectives:
- Multiply fractions and whole numbers
- Multiply two fractions
- Multiply mixed numbers
- Relate division to multiplication of fractions

Lesson 1: Fractions as Multiples of Unit Fractions

Objectives:
- Use unit fractions and multiplication to describe fractions that are multiples of unit fractions

Lesson 2: Multiplying Fractions and Whole Numbers
Lesson 3: Estimating Products/Multiplying Two Fractions

Objectives:
• Multiply a fraction by a whole number

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 4: Area of a Rectangle

Objectives:
• Use compatible numbers and rounding to estimate with fractions
• Give the product of two fractions

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 5: Multiplying Mixed Numbers

Objectives:
• Multiply mixed numbers

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 6: Multiplication as Scaling

Objectives:
• Compare the size of the product to the size of one factor without multiplying to begin to consider multiplication as scaling

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 7: Relating Division to Multiplication of Fractions

Objectives:
• Divide whole numbers by fractions

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 8: Dividing Unit Fractions by Non-Zero Whole Numbers

Objectives:
• Discover the inverse relationship between multiplication and division that will help students to divide unit fractions by whole numbers

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 9: Draw a Picture and Write an Equation

Objectives:
• Use diagrams and write equations to solve problems

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 10: Multiplying Fractions and Mixed Numbers Review (two-day lesson)

Lesson 11: Multiplying Fractions and Mixed Numbers Unit Test

Unit 4: Perimeter and Area

In this unit, your student will learn to select appropriate tools and units to measure length in the customary and metric systems. Your student will measure with greater precision by finding length to the nearest inch, half inch, quarter inch, and eighth inch in the customary system and to the nearest centimeter and millimeter in the metric system. Using formulas, your student will find the perimeter of polygons, area of squares, rectangles, and triangles,
and circumference of circles. Additionally, your student will use a formula to find the area of a parallelogram and to determine the side-lengths of a parallelogram, given the area and the length of one side.

Objectives:
- Use customary units of length
- Use metric units of length
- Find perimeter of polygons
- Find the area of squares, rectangles, parallelograms, and triangles
- Determine the circumference of circles

Lesson 1: Using Customary Units of Length

Objectives:
- Choose the most appropriate units of length and measure to the nearest inch, half inch, quarter inch, or eighth inch

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 2: Using Metric Units of Length

Objectives:
- Choose the most appropriate metric unit of length and measure to the nearest centimeter and millimeter

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 3: Perimeter

Objectives:
- Find the perimeter of polygons

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 4: Area of Squares and Rectangles

Objectives:
- Find the areas of squares and rectangles by using formulas

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 5: Differences in Perimeter and Area of Rectangles

Objectives:
- Compare different rectangles with the same perimeter to discover the change in area
- Compare different rectangles with the same area to discover the change in perimeter

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 6: Area of Parallelograms

Objectives:
- Find the area of a parallelogram by using a formula
- Find the length of the sides of a parallelogram when the area and one side length are given

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 7: Area of Triangles

Objectives:
- Find the area of a triangle by using a formula
- Find a missing length when the area and other dimensions are known

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 8: Circles and Circumference
Objectives:
- Learn the parts of a circle and calculate circumference

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

**Lesson 9: Perimeter and Area Review (two-day lesson)**

**Lesson 10: Perimeter and Area Unit Test**

**Unit 5: Solids**

This unit allows your student to examine solids in greater detail. To begin, your student will name the attributes of solid figures by their faces, edges, and vertices. Your student will identify two-dimensional shapes that constitute solid figures, as he examines nets that form solid figures upon folding. Determining surface area in square units and volume in cubic units are concepts that are studied in this unit.

Objectives:
- Identify solids
- Relate shapes and solids
- Find surface area and volume of solids
- Work with irregular shapes and solids

**Lesson 1: Solids**

Objectives:
- Identify solid figures according to faces, edges, and vertices

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

**Lesson 2: Relating Shapes and Solids**

Objectives:
- Identify a two-dimensional representation (net) of a solid

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

**Lesson 3: Volume**

Objectives:
- Count cubic units and use formulas to find the volume of rectangular prisms

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

**Lesson 4: Irregular Shapes and Solids**

Objectives:
- Find the areas and volumes of irregular shapes and solids

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

**Lesson 5: Solids Review (two-day lesson)**

**Lesson 6: Solids Unit Test**

**Unit 6: Measurement**

In this unit, your student will learn to select appropriate tools and units to measure capacity and weight in the customary system and volume and mass in the metric system. Using multiplication and division, your student will convert units of measure within the same system. Next your student will study elapsed time, start time, and end time, and use models and computations to solve problems involving minutes, hours, days, and weeks. Your student will also study temperature changes in both degrees Fahrenheit and degrees Celsius. The use of real measuring tools, such as thermometers, scales, and clocks, as well as real items, such as cups and daily schedules, will add meaning to your student’s study of measurement. This unit’s problem-solving strategy is “make a table.”

Objectives:
Lesson 1: Customary Units of Capacity

Objectives:
- Use a variety of customary units to measure liquid volume

Lesson 2: Metric Units of Capacity

Objectives:
- Use metric units to measure liquid volume

Lesson 3: Units of Weight and Mass

Objectives:
- Use units of mass and weight to determine the amount of matter an object has and how heavy or light an object is

Lesson 4: Converting Customary Units

Objectives:
- Convert customary units of measure using multiplication and division

Lesson 5: Converting Metric Units

Objectives:
- Convert metric units of measure using multiplication and division

Lesson 6: Measurement Review (two-day lesson)

Lesson 7: Measurement Unit Test

Unit 7: Solving and Writing Equations

This unit provides your student further practice with variables. The variables in this unit are used in equations that involve addition, subtraction, multiplication, or division. Your student will learn to isolate the variable in an equation in order to solve for the unknown number. Variables will also be used in inequalities. Your student will learn to solve for the variable and represent the solutions on a number line. Finally, your student will identify and write an equation for the pattern or relationship that exists between pairs of numbers that are recorded within a table. This unit’s problem-solving strategy is “draw a picture and write an equation.”

Objectives:
- Solve addition, subtraction, multiplication, and division equations
- Work with inequalities and the number line
- Determine patterns and equations

Lesson 1: Equal or Not Equal

Objectives:
- Learn and understand the properties of equality
Lesson 2: Solving Addition and Subtraction Equations

Objectives:
- Learn and understand how to use addition and subtraction to solve equations

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 3: Solving Multiplication and Division Equations

Objectives:
- Learn and understand how to use multiplication and division to solve equations

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 4: Patterns and Equations

Objectives:
- Complete a table of values for an equation or write an equation to describe the relationship between pairs of numbers in a table

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 5: Draw a Picture and Write an Equation

Objectives:
- Draw diagrams or pictures and write equations to solve problems

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 6: Solving and Writing Equations Review (two-day lesson)

Lesson 7: Solving and Writing Equations Unit Test

Unit 8: Equations and Graphs

In this unit, your student will study integers. A number line will give your student a visual of the sequence of positive and negative numbers and develop his understanding of integer values. Your student will use number lines on a coordinate plane to graph ordered pairs of integers. The study of integers will also include determining the distance between two integers and generating a list of ordered pairs, given the values of one variable in a given equation. The problem-solving strategy in this unit is “work backward.”

Objectives:
- Understand integers
- Work with ordered pairs
- Find distances on number lines and the coordinate plane
- Graph equations
- Use the work backward strategy

Lesson 1: Understanding Integers

Objectives:
- Read and write integers and represent them on a number line

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 2: Ordered Pairs

Objectives:
- Identify and graph points on a coordinate plane

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 3: Distances on Number Lines and the Coordinate Plane
• Use number lines and the coordinate plane to find distances involving positive and negative numbers

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

**Lesson 4: Graphing Equations**

Objectives:
• Make a table of x- and y-values for an equation
• Use the ordered pairs to graph the equation

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

**Lesson 5: More Patterns and Graphing**

Objectives:
• Use coordinate graphs to explore the relationship between two rules

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

**Lesson 6: Data from Surveys/Making Line Plots**

Objectives:
• Collect data and record data in frequency tables and line plots
• Interpret the results
• Make a line plot from data in a frequency table

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

**Lesson 7: Measurement Data**

Objectives:
• Use the information in a line plot to solve problems involving the data

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

**Lesson 8: Bar Graphs and Picture Graphs**

Objectives:
• Make and interpret bar graphs, double-bar graphs, and picture graphs

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

**Lesson 9: Equations and Graphs Review (two-day lesson)**

**Lesson 10: Equations and Graphs Unit Test**
ESSENTIAL MATH 6 A
Essential Math 6 A

In this middle school math course, the student will receive the extended instruction, review, and reinforcement needed to master prerequisite and grade-level math skills. The units and lessons within this course focus on the fundamental skills and standards the student will need in order to master the concepts from the previous and current grade level and be successful in math.

In this course, the student will use the four mathematical operations to solve a variety of problems with decimals and fractions. The study of patterns and variables precedes the solving of equations and inequalities. The student will learn number theory to help him understand divisibility, prime numbers, factors, and multiples. He will also learn about ratios, proportions, and percents and apply them to scale drawings.

Unit 1: Focus on Success in Math 6

In this unit, you will focus on ways to think about and approach mathematics. You will learn how to set personal goals, establish study strategies that reduce anxiety, and review ways to be an active learner. In addition, this unit introduces the various resources that are available to you in your Math 6 course.

Objectives:
- Assess personal readiness for studying and learning
- Recognize the importance of personal ownership of learning
- Reflect on personal strengths and weaknesses in order to improve mathematical performance
- Use resources to set goals

Lesson 1: Looking Ahead

Objectives:
- Describe the characteristics of quality goals
- Set goals for success in mathematics
- Reflect on strengths, weaknesses, and how to apply them
- Recognize the importance of personal effort to learning

Lesson 2: Gearing Up

Objectives:
- Identify the various resources that you can use in the course
- Modify goals to include using resources effectively

Unit 2: Whole Numbers and Decimals

In this unit, you will learn how to identify the place value of whole numbers and decimals, which you will then apply to comparing and ordering these types of numbers. You will apply estimation strategies as well as the properties of addition and multiplication as tools for solving problems. Also, you will learn how to use the order of operations to simplify numerical expressions. You will find the answers of addition, subtraction, multiplication, and division problems using whole numbers and decimals. Finally, you will learn and apply the four-step problem-solving strategy.

Objectives:
- Identify the place values of a given whole number or decimal, and use the value of the number or decimal to compare and order the numbers
- Apply the properties of addition and multiplication to solve problems
- Apply the order of operations to evaluate numerical expressions
- Perform operations with multi-digit whole numbers and decimals

Lesson 1: Identifying the Value of Whole Numbers

Objectives:
- Identify the place value of a digit in the given number
- Write numbers in three different forms
- Compare the value of two whole numbers

Lesson 2: Whole Number Estimation
Lesson 3: Computing with Whole Numbers

Objectives:
- Calculate to find the sum, difference, product, or quotient of two whole numbers

Lesson 4: Properties of Addition and Multiplication

Objectives:
- Apply the Commutative Property, Associative Property, or Identity Property of Addition or Multiplication to solve computation problems

Lesson 5: Order of Operations in Numerical Expressions

Objectives:
- Apply the order of operations to solve numerical expressions

Lesson 6: Whole Numbers and Operations Mid-Unit Review

Objectives:
- Utilize estimation strategies, properties of operations, and the order of operations to solve computation problems with whole numbers

Lesson 7: Identifying the Value of Decimals

Objectives:
- Identify the value of a specified digit in a decimal
- Apply the rules of rounding to decimals

Lesson 8: Comparing and Ordering Decimals

Objectives:
- Compare the value of decimals
- Identify the order of decimals based on their numerical value

Lesson 9: Decimal Addition and Subtraction

Objectives:
- Estimate the sums and differences of decimals by rounding
- Identify sums and differences by adding and subtracting decimals

Lesson 10: Decimal Multiplication

Objectives:
- Identify the product when a decimal is multiplied by a whole number or another decimal

Lesson 11: Multiplying and Dividing Decimals by Powers of Ten

Objectives:
- Identify the product or quotient when multiplying or dividing a decimal by a power of ten

Lesson 12: Decimal Division

Objectives:
- Identify the quotient when dividing a decimal by a whole number or another decimal

Lesson 13: Problem Solving: The Four-Step Plan

Objectives:
- Apply the four-step plan to solve word problems

Lesson 14: Whole Numbers and Decimals Review

Objectives:
• Identify how to use place value and computation skills in solving a real-world problem
• Find the answers to computation problems involving whole numbers and decimals

Lesson 15: Whole Numbers and Decimals Unit Test

Unit 3: Data and Graphs

In this unit, you will learn how to calculate the mean, median, mode, and range for a given set of data. You will also practice reading and creating a variety of visual representations of data, such as frequency charts, line plots, line graphs, bar graphs, box-and-whisker plots, double bar graphs, histograms, and stem-and-leaf plots. In addition, you will identify how graphs and statistics can be misleading. Finally, you will learn what makes a statistical question. This unit’s portfolio assignment is to develop a double-bar graph.

Objectives:
• Calculate to find the mean, median, mode, and range when given a specified set of data
• Create a double-bar graph
• Interpret data from a visual representation, such as a bar graph, histogram, or box-and-whisker plot
• Explain how graphs and statistics can be misleading

Lesson 1: Mean and Outliers

Objectives:
• Compute the mean when given a set of numbers

Lesson 2: Median and Mode

Objectives:
• Identify the median and mode of a given set of numbers
• Explain which measure of central tendency is best in a given situation

Lesson 3: Tables and Plots (two-day lesson)

Objectives:
• Identify the range, middle value, upper value, and lower value of a set of numbers
• Read a frequency table, line plot, or a box-and-whisker plot to find the mean, median, mode, or range

Lesson 4: Bar Graphs and Line Graphs (two-day lesson)

Objectives:
• Create a double bar graph when given a set of data
• Create and read a single line graph

Lesson 5: Histograms

Objectives:
• Identify the value of a bar in a given histogram

Lesson 6: Shape and Variability of Data

Objectives:
• Find the mean and range of a given data set
• Identify the degree of variability in a chart, graph, or plot

Lesson 7: Stem-and-Leaf Plots

Objectives:
• Order data to create a stem-and-leaf plot
• Read a stem-and-leaf plot in order to compute the range and measures of central tendency

Lesson 8: Misleading Graphs and Statistics

Objectives:
• Analyze graphs for misleading information

Lesson 9: Statistical Questions

Objectives:
• Differentiate between a statistical question and a question that is not statistical

Lesson 10: Data and Graphs Review

Objectives:
• Explain preferred methods for representing data and identify real-world scenarios that could be represented in this manner

Lesson 11: Data and Graphs Test

Unit 4: Patterns and Variables

In this unit, you will be learning about patterns, expressions, and equations. First, you will be discovering numerical patterns and identifying the rule for the pattern, followed by using exponents to simplify certain numerical expressions. Then, you will be using variables to represent unknown numbers in expressions and equations. Next, you will learn what an equation is and the different strategies to solve it. Then, you will learn another property, the Distributive Property, which provides another strategy for solving more complex computation problems.

Objectives:
• Identify numerical patterns and their rules
• Simplify a numerical expression through the use of exponents
• Evaluate expressions using the given values
• Apply the Distribute Property to solve computation problems
• Generate an equation and use it to solve a problem

Lesson 1: Patterns, Rules, and Numerical Expressions

Objectives:
• Identify numerical patterns
• Define the rule for a sequence

Lesson 2: What Is an Exponent?

Objectives:
• Identify the exponent for a given expression
• Apply the order of operations to solve expressions with exponents

Lesson 3: Scientific Notation

Objectives:
• Identify the standard and scientific forms for a numerical value

Lesson 4: Algebraic Expressions

Objectives:
• Differentiate between a numerical and algebraic expression
• Evaluate algebraic expressions for the given quantity

Lesson 5: From Words to Algebraic Expressions

Objectives:
• Translate words into algebraic expressions
Lesson 6: What Are Equations?

Objectives:
- Calculate the answer to a one-step question by utilizing mental math strategies

Objectives derived from Pearson Education, Inc. © Pearson Education, Inc., publishing as Pearson Prentice Hall. All rights reserved.

Lesson 7: Equations with Addition

Objectives:
- Demonstrate the Subtraction Property of Equality when solving equations with addition

Objectives derived from Pearson Education, Inc. © Pearson Education, Inc., publishing as Pearson Prentice Hall. All rights reserved.

Lesson 8: Equations with Subtraction

Objectives:
- Demonstrate the Addition Property of Equality when solving equations with subtraction

Objectives derived from Pearson Education, Inc. © Pearson Education, Inc., publishing as Pearson Prentice Hall. All rights reserved.

Lesson 9: Equations with Multiplication and Division

Objectives:
- Demonstrate the Division Property of Equality when solving an equation with multiplication
- Demonstrate the Multiplication Property of Equality when solving an equation with division

Objectives derived from Pearson Education, Inc. © Pearson Education, Inc., publishing as Pearson Prentice Hall. All rights reserved.

Lesson 10: Distributive Property

Objectives:
- Apply the distributive property in order to generate equivalent expressions

Objectives derived from Pearson Education, Inc. © Pearson Education, Inc., publishing as Pearson Prentice Hall. All rights reserved.

Lesson 11: Problem Solving (two-day lesson)

Objectives:
- Develop and solve an equation to solve a word problem

Objectives derived from Pearson Education, Inc. © Pearson Education, Inc., publishing as Pearson Prentice Hall. All rights reserved.

Lesson 12: Patterns and Variables Review

Objectives:
- Identify numerical patterns and their rules
- Simplify a numerical expression through the use of exponents
- Evaluate expressions using the given values
- Apply the Distributive Property to solve computation problems
- Generate an equation and use it to solve problems

Objectives derived from Pearson Education, Inc. © Pearson Education, Inc., publishing as Pearson Prentice Hall. All rights reserved.

Lesson 13: Patterns and Variables Test

Unit 5: Number Theory and Fractions

In this unit, you will be applying your multiplication and division skills to identify factors, prime factorization, and multiples of numbers. Also, you will apply the Distributive Property to create equivalent numerical and algebraic expressions. In the area of fractions, you will apply your skills of finding factors and multiples to find equivalent fractions, simplify fractions, and identify the least common denominator. You will also practice converting
between various forms, such as mixed numbers into improper fractions and fractions into decimals.

Objectives:
- Identify factors of numbers and apply them to identify the prime factorization of numbers
- Use factors and multiples to find the least common denominator
- Generate equivalent fractions and expressions
- Convert between forms of numbers, such as mixed numbers into fractions and fractions into decimals
- Compare and order fractions and decimals

Lesson 1: Divisibility and Mental Math

Objectives:
- Identify whether a number is divisible by a second number
- Identify whether a number is even or odd

Lesson 2: Prime Time (two-day lesson)

Objectives:
- Distinguish between prime and composite numbers
- Identify the factors of a composite number

Lesson 3: Greatest Common Factor

Objectives:
- Identify the greatest common factor of two or more numbers

Lesson 4: Writing Expressions That Are Equivalent (two-day lesson)

Objectives:
- Generate equivalent numerical and algebraic expressions using the Distributive Property

Lesson 5: Equivalent Fractions

Objectives:
- Identify fractions that are equivalent to the original fraction

Lesson 6: Fractions Greater Than 1

Objectives:
- Convert mixed numbers into improper fractions and improper fractions into mixed numbers

Lesson 7: Multiples

Objectives:
- Identify the least common multiple of at least two numbers

Lesson 8: Comparing and Ordering Fractions (two-day lesson)

Objectives:
- Compare the value of the given fractions and mixed numbers
- Identify the numerical order of a given set of fractions and/or mixed numbers

Lesson 9: Fractions and Decimals (two-day lesson)

Objectives:
- Convert decimals into fractions and fractions into decimals
- Identify the order of a set of fractions and decimals from least to greatest and greatest to least

Lesson 10: Number Theory and Fractions Review
Lesson 11: Number Theory and Fractions Test

Unit 6: Adding and Subtracting Fractions

In this unit, you will be rounding and estimating sums and differences of fractions and mixed numbers. Then you will calculate the actual sums and differences of fractions with like and unlike denominators. Next, you will apply your skills in solving addition and subtraction problems with mixed numbers, sometimes needing to rename the mixed number. Also, you will be solving addition and subtraction equations with fractions and mixed numbers. Finally, you will solve problems that use elapsed time, and apply these skills by completing a portfolio assignment with real-world scenarios.

Objectives:
- Estimate sums and differences of fractions and whole numbers
- Calculate the sums and differences of fractions and mixed numbers
- Identify the solution to an equation with fractions
- Calculate the elapsed time in a given scenario

Lesson 1: Rounding/Estimating Fractions and Mixed Numbers

Objectives:
- Demonstrate rounding fractions and mixed numbers to the nearest one-half
- Calculate the estimated sum or difference of fractions and mixed numbers

Lesson 2: Add and Subtract Fractions with Like Denominators

Objectives:
- Find the sum or difference when two or more fractions with like denominators are added or subtracted.

Lesson 3: Addition of Fractions with Unlike Denominators

Objectives:
- Calculate the sum of two or more fractions with unlike denominators added together

Lesson 4: Subtraction of Fractions with Unlike Denominators

Objectives:
- Calculate the difference of two fractions with unlike denominators

Lesson 5: Adding and Subtracting Fractions Mid-Unit Review

Objectives:
- Add and subtract fractions with like and unlike denominators

Lesson 6: Addition with Mixed Numbers

Objectives:
- Calculate the sum when adding with mixed numbers.

Lesson 7: Subtraction with Mixed Numbers

Objectives:
- Calculate the difference when subtracting with mixed numbers

Lesson 8: Solving Equations with Fractions (two-day lesson)

Objectives:
- Calculate the answer to an equation with fractions
Lesson 9: Elapsed Time (two-day lesson)

Objectives:
- Calculate the time that has elapsed between the start and end times

Lesson 10: Adding and Subtracting Fractions Review

Objectives:
- Explain the method for solving problems with addition and subtraction of fractions and mixed numbers

Lesson 11: Adding and Subtracting Fractions

Unit 7: Multiplying and Dividing Fractions

In this unit, you will apply your multiplication and division skills to fractions and mixed numbers. First, you will learn how to multiply whole numbers, fractions, and mixed numbers. Next, you will learn how to identify the reciprocal of a number and use that when dividing fractions and mixed numbers. Then you will use your problem-solving skills to solve equations with fractions. Finally, you will learn about the customary system of measurement and how to convert from one unit to another.

Objectives:
- Calculate the product of whole numbers, fractions, and mixed numbers
- Identify the reciprocal of a fraction
- Calculate the quotient of fractions and mixed numbers
- Identify customary units of measurement
- Convert between units of measurement in the customary system

Lesson 1: Multiplying a Whole Number and a Fraction

Objectives:
- Calculate the product of a whole number and a fraction

Lesson 2: Multiplying Two or More Fractions

Objectives:
- Calculate the product of two or more fractions

Lesson 3: Multiplication with Mixed Numbers

Objectives:
- Calculate the product of mixed numbers

Lesson 4: Multiplication of Fractions Review

Objectives:
- Calculate the product of fractions, whole numbers, and mixed numbers

Lesson 5: Division with Fractions (two-day lesson)

Objectives:
- Identify the reciprocal of a given fraction
- Calculate the quotient of two fractions

Lesson 6: Division with Mixed Numbers

Objectives:
- Calculate the quotient of mixed numbers

Lesson 7: Solving Equations with Fractions Through Multiplication

Objectives:
- Calculate the answer to an equation with fractions through multiplication

Lesson 8: The Customary System

Objectives:
- Identify the best customary unit for a given object
Lesson 9: Changing Units in the Customary System (two-day lesson)

Objectives:
- Convert measurements written in customary units into other customary units

Lesson 10: Multiplying and Dividing Fractions Review

Objectives:
- Calculate the product of whole numbers, fractions, and mixed numbers
- Identify the reciprocal
- Calculate the quotient of fractions and mixed numbers
- Identify customary units of measurement
- Calculate how to convert between units of measurement in the customary system

Lesson 11: Multiplying and Dividing Fractions Test
ESSENTIAL MATH 6 B
Essential Math 6 B

In this middle school math course, the student will receive the extended instruction, review, and reinforcement needed to master prerequisite and grade-level math skills. The units and lessons within this course focus on the fundamental skills and standards the student will need in order to master the concepts from the previous and current grade level and be successful in math.

In this course, the student will study the fundamentals of data and graphs as well as the basic principles of probability. He will explore the basic tools of geometry and apply skills to the study of geometry and measurement. The introduction to integers will prepare the student for the study of equations and inequalities.

Unit 1: Ratios, Proportions, and Percents

In this unit, you will identify and write ratios to show the comparison between two amounts. Then you will use what you learned about ratios to generate equivalent ratios, find unit rates, and solve proportions. Next, you will learn how to write a percent when given a fraction or decimal. Finally, you will apply what you learned about percents to find the percent of a number, interpret circle graphs, and calculate various percents found in everyday living.

Objectives:
- Identify the ratio of two amounts in simplest form
- Create and solve proportions to identify the missing amount
- Solve problems involving ratios, unit rates, and proportions
- Calculate the percent of a number
- Solve problems involving percents; use circle graphs to solve problems

Lesson 1: Ratios and Equivalent Ratios (two-day lesson)

Objectives:
- Identify the ratio for a given situation
- Identify at least one equivalent ratio for the given ratio

Objectives derived from Pearson Education, Inc. © Pearson Education, Inc., publishing as Pearson Prentice Hall. All rights reserved.

Lesson 2: Understanding and Using Unit Rates (two-day lesson)

Objectives:
- Calculate the unit rate given two amounts
- Find and use unit rates and unit costs

Objectives derived from Pearson Education, Inc. © Pearson Education, Inc., publishing as Pearson Prentice Hall. All rights reserved.

Lesson 3: Proportions

Objectives:
- Determine whether two ratios form a proportion
- Identify the missing value in a proportion

Objectives derived from Pearson Education, Inc. © Pearson Education, Inc., publishing as Pearson Prentice Hall. All rights reserved.

Lesson 4: Scale Drawings

Objectives:
- Calculate the distance of an actual item or the model using a scale

Objectives derived from Pearson Education, Inc. © Pearson Education, Inc., publishing as Pearson Prentice Hall. All rights reserved.

Lesson 5: Using Ratios, Rates, and Proportions

Objectives:
- Calculate ratios, unit rates, equivalent rates, and the missing values in proportions

Objectives derived from Pearson Education, Inc. © Pearson Education, Inc., publishing as Pearson Prentice Hall. All rights reserved.
Lesson 6: Writing Percents, Fractions, and Decimals (two-day lesson)

Objectives:
- Identify the decimal, fractional form, and percent form for a given value
- Ordering percents, fractions, and decimals

Objectives derived from Pearson Education, Inc. © Pearson Education, Inc., publishing as Pearson Prentice Hall. All rights reserved.

Lesson 7: Learning About Percents of Numbers (two-day lesson)

Objectives:
- Calculate a percentage of a given number
- Identify the whole number when given the part and percentage

Objectives derived from Pearson Education, Inc. © Pearson Education, Inc., publishing as Pearson Prentice Hall. All rights reserved.

Lesson 8: Using Circle Graphs

Objectives:
- Use a circle graph to solve problems

Objectives derived from Pearson Education, Inc. © Pearson Education, Inc., publishing as Pearson Prentice Hall. All rights reserved.

Lesson 9: Using Percents in Everyday Life

Objectives:
- Calculate sales tax, amount to tip, discounts, and sale price

Objectives derived from Pearson Education, Inc. © Pearson Education, Inc., publishing as Pearson Prentice Hall. All rights reserved.

Lesson 10: Ratios, Proportions, and Percents Review

Objectives:
- Use your knowledge of ratios, rates, proportions, and percents to solve problems
- Review key words and assessments from the unit

Objectives derived from Pearson Education, Inc. © Pearson Education, Inc., publishing as Pearson Prentice Hall. All rights reserved.

Lesson 11: Ratios, Proportions, and Percents Unit Test

Unit 2: Tools of Geometry

In this unit, you will classify lines, angles, and polygons by their size, shape, or orientation. You will calculate the missing angle measure when given the remaining angle measurements, particularly in a triangle or quadrilateral. You will distinguish between shapes that are congruent and shapes that are similar. Next, you will learn about line symmetry. Then, you will learn about transformations, which include translations, reflections, and rotations.

Objectives:
- Classify types of lines, angles, triangles, polygons, and quadrilaterals when given a figure
- Distinguish between congruent and similar figures
- Identify lines of symmetry
- Identify transformations

Lesson 1: Points, Segments, Rays, Lines, Planes

Objectives:
- Identify and name the specified point, segment, ray, line, or plane when given a figure

Objectives derived from Pearson Education, Inc. © Pearson Education, Inc., publishing as Pearson Prentice Hall. All rights reserved.

Lesson 2: Types of Angles

Objectives:
- Classify types of angles
Lesson 3: Special Angles (two-day lesson)

Objectives:
- Identify and classify special angle pairs in a figure
- Calculate the measure of an angle in a special angle pair

Lesson 4: Types of Triangles (two-day lesson)

Objectives:
- Classify a triangle based on its angle measures or by its sides

Lesson 5: Points, Lines, Angles, and Triangles Review

Objectives:
- Classify lines, angles, and triangles when given a figure

Lesson 6: Classifying Quadrilaterals and Other Polygons (two-day lesson)

Objectives:
- Classify a polygon based on the number and length of its sides
- Determine missing angle measures in a quadrilateral

Lesson 7: Figures that are Congruent or Similar

Objectives:
- Classify figures as being congruent, similar, or neither

Lesson 8: Line Symmetry

Objectives:
- Identify lines of symmetry

Lesson 9: Translations, Reflections, and Rotations

Objectives:
- Classify transformations as translations, reflections, or rotations

Lesson 10: Tools of Geometry Review (two-day lesson)

Objectives:
- Classify lines, angles and figures
- Identify congruent and similar figures
- Identify lines of symmetry
- Classify transformations

Lesson 11: Tools of Geometry Unit Test

Unit 3: Geometry and Measurement

In this unit, you will learn the different units of measurement in the metric system and convert among units. Then, you will find the perimeter and area of polygons. Next, you will find the perimeter and area of circles. Later in the unit, you will learn about three-dimensional figures and how to find the surface area and volume of rectangular prisms. As your portfolio assessment, you will be required to locate five circles and five rectangular prisms in your home, and use their dimensions to calculate circumference, area, and volume.

Objectives:
- Identify metric units and convert a value from one unit to another within the same category
- Calculate the perimeter and area of polygons
- Calculate the circumference and area of a circle
- Calculate the surface area and volume of prisms

Lesson 1: Metric Units

Objectives:
• Identify the best metric unit of measure for a given situation

**Lesson 2: Conversions in the Metric System**

Objectives:
• Calculate a measurement in a metric unit, given the measurement in another metric unit in the same category

**Lesson 3: Perimeters and Areas of Rectangles and Squares**

Objectives:
• Calculate the perimeter and area of rectangles and squares

**Lesson 4: Areas of Parallelograms, Trapezoids, and Triangles (two-day lesson)**

Objectives:
• Calculate the area of parallelograms, trapezoids, and triangles

**Lesson 5: Finding the Area Using Composites**

Objectives:
• Find the area of a composite figure

**Lesson 6: Mid-Unit Review (two-day lesson)**

Objectives:
• Identify the best metric unit of measure for a given situation
• Calculate the perimeter or area of a figure given the formula

**Lesson 7: Circumference of a Circle**

Objectives:
• Calculate the circumference of a circle

**Lesson 8: Area of a Circle**

Objectives:
• Calculate the area of a circle when given the length of the radius or diameter

**Lesson 9: Three-Dimensional Figures**

Objectives:
• Name three-dimensional figures

**Lesson 10: Prisms and Surface Area**

Objectives:
• Find the surface area of prisms

**Lesson 11: Rectangular Prisms and Volume (two-day lesson)**

Objectives:
• Calculate the volume of a rectangular prism

**Lesson 12: Geometry and Measurement Review (two-day lesson)**

Objectives:
• Calculate the perimeter, area, surface area, and/or volume of a given figure
• Name two-dimensional and three-dimensional figures
• Identify metric units and convert from one unit to another
Lesson 13: Geometry and Measurement Unit Test

Unit 4: Integers

In this unit, you will be working with integers. You will learn what an integer is and how to find the absolute value of integers. Then you will compare integers as well as order them from least to greatest. Next, you will work on your computation skills by adding, subtracting, multiplying, and dividing integers. Then you will solve equations with integers.

Objectives:
- Identify the absolute value of an integer and locate where integers fall on the number line
- Compare and order a set of integers
- Calculate the sum, difference, product, and quotient of integers
- Solve equations with integers

Lesson 1: What Is an Integer?

Objectives:
- Locate an integer on the number line
- Identify the absolute value of an integer

Lesson 2: Comparing and Ordering Integers

Objectives:
- Compare two integers
- Identify the order of a set of integers

Lesson 3: Addition of Integers

Objectives:
- Calculate the sum of integers

Lesson 4: Subtraction of Integers

Objectives:
- Calculate the difference of integers

Lesson 5: Multiplication of Integers

Objectives:
- Calculate the product of integers

Lesson 6: Division of Integers

Objectives:
- Calculate the quotient of integers

Lesson 7: Solving Equations with Integers

Objectives:
- Solve equations with integers

Lesson 8: Applications of Integers (two-day lesson)

Objectives:
- Calculate the sum or difference of integers to solve application problems

Lesson 9: Integers Review

Objectives:
- Identify the absolute value of an integer and locate where integers fall on the number line
- Compare and order a set of integers from least to greatest
- Calculate the sum, difference, product, and quotient of integers
- Solve equations with integers

Lesson 10: Integers Unit Test

Unit 5: Graphing, Equations, and Inequalities
In this unit, you will be learning about graphing, functions, two-step equations, and inequalities. First, you will plot points in any of the four quadrants on the coordinate plane, and draw polygons in the coordinate plane when given a set of ordered pairs. Then you will identify missing values in a function table, find the rule for the function, and graph it. Next, you will solve two-step equations. Finally, you will write, graph, and solve inequalities. For your portfolio assignment, you will apply your knowledge of graphing polygons, functions, and inequalities.

Objectives:
- Locate and name the ordered pair for points on the coordinate plane
- Write rules and equations for functions
- Evaluate functions
- Identify the solution to a two-step equation
- Name, graph, and solve inequalities

Lesson 1: Understanding The Coordinate Plane (two-day lesson)

Objectives:
- Name points by their ordered pairs
- Graph points in the coordinate plane

Lesson 2: Using Rational Numbers on the Coordinate Plane (two-day lesson)

Objectives:
- Plot ordered pairs consisting of rational numbers on a coordinate plane

Lesson 3: Finding Distances on the Coordinate Plane

Objectives:
- Calculate the distance between two points on a coordinate plane
- Create a polygon in the coordinate plane from a set of ordered pairs

Lesson 4: What are Functions? (two-day lesson)

Objectives:
- Identify the output or y-value when given an input or x-value and the rule
- Calculate the rule when given the input and output
- Graph the function on a coordinate plane

Lesson 5: Independent and Dependent Variables

Objectives:
- Identify the independent and dependent variable in a function
- Generate an equation for the function

Lesson 6: Graphing and Functions Review

Objectives:
- Discuss the definition of a function and identify an example to support the definition

Lesson 7: Solving Equations with Two Steps

Objectives:
- Solve two-step equations
- Use two-step equations to solve problems

Lesson 8: Writing and Graphing Inequalities (two-day lesson)

Objectives:
- Represent a situation by writing and/or graphing an inequality

Lesson 9: Solving One-Step Inequalities
Lesson 10: Graphing, Equations, and Inequalities Review (two-day lesson)

Objectives:
- Locate and name the ordered pair for points on the coordinate plane
- Write rules and equations for functions
- Evaluate functions
- Identify the solution to a two-step equation
- Name, graph, and solve inequalities

Lesson 11: Graphing, Equations, and Inequalities Test

Unit 6: Exploring Probability

In this unit, you will develop your skills in the area of probability. You will learn strategies to count the number of possible outcomes and then apply these skills to identify the probability of an event. Then you will calculate the theoretical and experimental probability of events. Next, you will use your prediction skills to predict the probability of an event using data. Finally, you will identify the probability of independent events, such as flipping a coin twice.

Objectives:
- Calculate the total number of outcomes
- Calculate the theoretical and/or experimental probability
- Predict the probability of an event based on data
- Calculate the probability of independent events

Lesson 1: Counting Outcomes

Objectives:
- Identify the total number of possible outcomes using either a tree diagram or the counting principle

Lesson 2: What Is Probability?

Objectives:
- Identify the probability that an event will or will not occur

Lesson 3: Theoretical and Experimental Probability (two-day lesson)

Objectives:
- Identify the theoretical and experimental probability of a situation
- Conduct a series of experiments and communicate findings in writing

Lesson 4: Using Data to Make Predictions

Objectives:
- Make a prediction based on data

Lesson 5: Probability of Independent Events

Objectives:
- Calculate the probability of independent events for a given situation

Lesson 6: Exploring Probability Review

Objectives:
- Calculate the total number of outcomes
- Calculate theoretical and/or experimental probability
- Predict the probability of an event based on data
- Calculate the probability of independent events

Lesson 7: Exploring Probability Unit Test
ESSENTIAL MATH 7 A
Essential Math 7 A

In this course, the student will reinforce proficiency working with rational numbers and solving equations and inequalities. The student will extend his or her study of number theory and operations with rational numbers to include exponents. The student will continue his or her study of ratios and proportions and apply these skills to scale drawings and similar figures. The student will also extend work with percentages to include working with the percent equation and finding percent of change.

Unit 1: Focus on Success in Math 7

In this unit, you will focus on ways to think about and approach mathematics. You will learn how to set personal goals, establish study strategies that reduce math anxiety, and review ways to be an active learner. In addition, this unit introduces the various resources that are available to you in your Math 7 course.

Objectives:
- Reflect on personal strengths and weaknesses in order to improve mathematical performance
- Recognize the importance of personal ownership of learning
- Assess personal readiness for study and learning
- Use resources to assist with goal-setting and attainment

Lesson 1: Planning Ahead

Objectives:
- Describe the characteristics of quality goals
- Set goals for success in mathematics
- Reflect on strengths, weaknesses, and how to apply them
- Recognize the importance of being an active learner

Lesson 2: Resources for Success

Objectives:
- Identify the various resources that you can use in the course
- Modify goals to include using resources effectively

Unit 2: Decimals and Integers

In this unit, you will learn to add, subtract, multiply, and divide decimals. You will learn how to align decimals to find sums and differences and how to properly place decimal points in products and quotients. You will apply properties of addition and multiplication as tools for solving problems using mental math. You will perform basic operations using a set of numbers called integers, which includes both positive and negative numbers. You will also learn how to represent a large set of numbers with just one number, called a measure of central tendency (such as mean, median, or mode). Finally, you will practice constructing and interpreting box-and-whisker plots to analyze distribution of data.

Objectives:
- Perform operations on decimals
- Perform operations on integers
- Calculate measures of central tendency

Lesson 1: Adding and Subtracting Decimals

Objectives:
- Add and subtract decimals
- Apply properties of addition to add decimal numbers using mental math

Lesson 2: Multiplying Decimals

Objectives:
- Multiply decimals
- Apply properties of multiplication to multiply decimal numbers using mental math

Lesson 3: Dividing Decimals

© 2016 Connections Education LLC. All rights reserved.
Objectives:
- Divide decimals

Lesson 4: Comparing and Ordering Integers

Objectives:
- Compare and order integers
- Find absolute values

Lesson 5: Adding Integers

Objectives:
- Add integers with the same sign
- Add integers with different signs

Lesson 6: Subtracting Integers

Objectives:
- Subtract integers with the same sign
- Subtract integers with different signs

Lesson 7: Multiplying and Dividing Integers

Objectives:
- Multiply and divide integers with the same sign
- Multiply and divide integers with different signs

Lesson 8: Mean, Median, Mode, and Range

Objectives:
- Describe data using mean, median, mode, and range

Lesson 9: Box-and-Whisker Plots

Objectives:
- Construct and interpret box-and-whisker plots

Lesson 10: Decimals and Integers Review

Objectives:
- Decide which strategies you will use to prepare for your exam
- Organize your time and study materials
- Review your notes, keywords, formulas, and all important concepts that may be covered on this exam

Lesson 11: Decimals and Integers Unit Test

Unit 3: Exponents, Factors, and Fractions

In this unit, you will begin working with exponents and learning how to simplify expressions using the order of operations. You will work with fractions of all sorts—both proper and improper—as well as mixed numbers. You will learn how to compare and order fractions and how to write them in simplest form. You will also discover rules and shortcuts for converting fractions to decimals and decimals to fractions.

Objectives:
- Evaluate exponents
- Compare fractions
- Convert between fractions and decimals

Lesson 1: Exponents and Order of Operations

Objectives:
- Write and simplify expressions with exponents
Lesson 2: Divisibility Tests

Objectives:
- Apply divisibility rules to integers

Lesson 3: Prime Factorization

Objectives:
- Determine factors and multiples of numbers by applying prime factorization

Lesson 4: Simplifying Fractions

Objectives:
- Determine equivalent fractions by simplifying

Lesson 5: Comparing and Ordering Fractions

Objectives:
- Compare and order fractions

Lesson 6: Mixed Numbers and Improper Fractions

Objectives:
- Convert between improper fractions and mixed numbers

Lesson 7: Mid-Unit Review (two-day lesson)

Objectives:
- Review the concepts, key words, and all important concepts covered so far in this unit

Lesson 8: Fractions and Decimals

Objectives:
- Convert between fractions and decimals

Lesson 9: Comparing Numbers in Different Forms

Objectives:
- Compare and order rational numbers

Lesson 10: Scientific Notation

Objectives:
- Convert numbers between scientific notation and standard form

Lesson 11: Exponents, Factors, and Fractions Review (two-day lesson)

Objectives:
- Decide which strategies you will use to prepare for your exam
- Organize your time and study materials
- Review your notes, key words, formulas, and other important information that may be covered on this exam

Lesson 12: Exponents, Factors, and Fractions Unit Test

Unit 4: Operations with Fractions
In this unit, you will perform operations—addition, subtraction, multiplication and division—on rational numbers like fractions and mixed numbers. You will begin by extending your estimation skills to include problems involving fractions and mixed numbers. Finally, you will learn to convert units of measure in both the standard and metric systems.

Objectives:
- Add and subtract rational numbers
- Multiply and divide rational numbers
- Convert standard and metric units of measure

**Lesson 1: Estimating With Fractions and Mixed Numbers**

Objectives:
- Estimate sums, differences, products, and quotients of fractions

**Lesson 2: Adding and Subtracting Fractions**

Objectives:
- Add and subtract fractions and solve problems involving fractions.

**Lesson 3: Adding and Subtracting Mixed Numbers**

Objectives:
- Add and subtract mixed numbers

**Lesson 4: Adding and Subtracting Rational Numbers**

Objectives:
- Add and subtract rational numbers

**Lesson 5: Multiplying Fractions and Mixed Numbers**

Objectives:
- Multiply fractions and mixed numbers

**Lesson 6: Multiplication of Rational Numbers**

Objectives:
- Multiply rational numbers

**Lesson 7: Dividing Fractions and Mixed Numbers**

Objectives:
- Divide fractions and mixed numbers

**Lesson 8: Division of Rational Numbers**

Objectives:
- Divide rational numbers

**Lesson 9: Changing Units in the Customary System**

Objectives:
- Convert standard units of length, weight, and capacity
Lesson 10: Changing Units in the Metric System

Objectives:
- Convert metric units of length, weight, and capacity

Lesson 11: Operations with Fractions Review (two-day lesson)

Objectives:
- Decide which strategies you will use to prepare for your exam
- Organize your time and study materials
- Review your notes, Key Words, formulas, and all important concepts that may be covered on this exam

Lesson 12: Operations with Fractions Unit Test

Unit 5: Equations and Inequalities

In this unit, you'll be using basic algebraic skills to solve an equation for an unknown quantity called a variable. You'll work up through simple one-step equations to more advanced two-step equations. Then you will solve inequalities and represent the solutions on a number line.

Objectives:
- Write algebraic expressions
- Solve one-step and two-step equations
- Solve and graph inequalities

Lesson 1: Evaluating and Writing Algebraic Expressions

Objectives:
- Write and evaluate algebraic expressions

Lesson 2: Simplifying Expressions

Objectives:
- Apply the Distributive Property to expand expressions
- Simplify expressions by combining like terms and applying order of operations

Lesson 3: Using Number Sense to Solve Equations

Objectives:
- Solve one-step equations using substitution, mental math, and estimation

Lesson 4: Solving One-Step Equations by Adding/Subtracting

Objectives:
- Solve equations by adding or subtracting

Lesson 5: Solving One-Step Equations by Multiplying/Dividing

Objectives:
- Solve equations by multiplying or dividing
Lesson 6: Exploring Two-Step Problems

Objectives:
- Write and evaluate expressions with two operations
- Solve two-step equations using number sense

Lesson 7: Solving Two-Step Equations

Objectives:
- Solve two-step equations using inverse operations

Lesson 8: Solving Equations of the Form \( p(x + q) = r \)

Objectives:
- Apply the Distributive Property to solve equations

Lesson 9: Graphing and Writing Inequalities

Objectives:
- Graph and write algebraic inequalities

Lesson 10: Solving Inequalities by Adding and Subtracting

Objectives:
- Solve inequalities by adding or subtracting

Lesson 11: Solving Inequalities by Multiplying or Dividing

Objectives:
- Solve inequalities by multiplying or dividing

Lesson 12: Solving Two-Step Inequalities

Objectives:
- Solve two-step inequalities and graph the solutions on a number line

Lesson 13: Equations and Inequalities Review (two-day lesson)

Objectives:
- Discuss the meaning of an equation and how to keep an equation balanced
- Review notes, key words, and homework
- Use online tools to practice skills studied in this unit

Lesson 14: Equations and Inequalities Unit Test

Unit 6: Ratios, Rates, and Proportions

A ratio is a comparison of two things. A proportion is an equation stating that two ratios are equivalent to each other. In this unit, you will use ratios and proportions to find unknown quantities. At the end of the unit, you will complete a portfolio project where you will create a scale drawing of your dream room.

Objectives:
Lesson 1: Ratios

Objectives:
• Create ratios to compare given quantities
• Recognize equivalent ratios

Lesson 2: Unit Rates and Proportional Reasoning

Objectives:
• Apply proportional reasoning to compute unit rates and unit costs

Lesson 3: Unit Rates and Ratios of Fractions

Objectives:
• Apply proportional reasoning to compute unit rates associated with ratios of fractions

Lesson 4: Using Conversion Factors

Objectives:
• Apply conversion factors to convert measures to varying units

Lesson 5: Proportions

Objectives:
• Evaluate ratios to determine if they form a proportional relationship

Lesson 6: Solving Proportions

Objectives:
• Identify the unit rate in proportional relationships
• Use unit rates, cross products, and number sense to solve problems

Lesson 7: Mid-Unit Review

Objectives:
• Review and reinforce understanding of ratios, rates, and proportions

Lesson 8: Similar Figures (two-day lesson)

Objectives:
• Evaluate figures for similarity
• Formulate and solve proportions to discover missing side lengths of similar polygons

Lesson 9: Maps and Scale Drawings

Objectives:
• Apply proportions to interpret scale drawings and solve problems based on scale ratios

Lesson 10: Ratios, Rates, and Proportions Review (two-day lesson)

Objectives:
• Organize your time and study materials
• Review your notes, key words, steps, and other important information that may be covered on the exam

Lesson 11: Ratios, Rates, and Proportions Unit Test

Unit 7: Percents

This unit will focus on percentages. People use percentages often in everyday life, from calculating the score on a test to finding the sale price of a shirt. At the end of this unit, you’ll be able to use percentages to solve real-world problems. The portfolio assessment for
this unit will be a project in which you will calculate the after-tax sale price of items you find online.

Objectives:
- Convert between fractions, decimals, and percentages
- Solve percent problems

**Lesson 1: Understanding Percents**

Objectives:
- Create graphic models of percents
- Rewrite percents as equivalent ratios

**Lesson 2: Percents, Fractions, and Decimals (two-day lesson)**

Objectives:
- Convert fractions, decimals, and percents to equivalent fractions, decimals, or percents

**Lesson 3: Percents Greater Than 100% or Less Than 1%**

Objectives:
- Evaluate and convert percents greater than 100%
- Evaluate and convert percents less than 1%

**Lesson 4: Finding a Percent of a Number**

Objectives:
- Estimate and calculate the percent of a given number

**Lesson 5: Mid-Unit Review (two-day lesson)**

Objectives:
- Review and reinforce understanding of percents

**Lesson 6: Solving Percent Problems Using Proportions**

Objectives:
- Solve percent problems by applying proportions

**Lesson 7: Solving Percent Problems Using Equations**

Objectives:
- Solve percent problems by generating and solving equations

**Lesson 8: Applications of Percent (two-day lesson)**

Objectives:
- Generate and solve equations involving real-world applications of percents
- Estimate solutions to problems involving real-world applications of percents

**Lesson 9: Finding Percent of Change**

Objectives:
- Solve applications of percent problems by determining percents of increase and decrease

**Lesson 10: Percents Review (two-day lesson)**

Objectives:
- Review your notes, key words, steps, and other important information that may be covered on the exam

**Lesson 11: Percents Unit Test**
ESSENTIAL MATH 7 B
Essential Math 7 B

In this middle school math course, the student will receive the extended instruction, review, and reinforcement needed to master prerequisite and grade-level math skills. The units and lessons within this course focus on the fundamental skills and standards the student will need in order to master the concepts from the previous and current grade level and be successful in math.

In this course, the student will continue to explore geometry by classifying polygons and using measurement skills to find the perimeter, area, and volume of geometric figures. In addition to learning basic probability and permutations, the student will begin algebra studies with the study of patterns, functions, and graphs.

Unit 1: Geometry

In this unit, you will work with basic geometric ideas. You will learn how to classify angles, triangles, and polygons and identify the parts of a circle. Lastly you will construct different types of geometric figures.

Objectives:
- Identify lines, segments, and rays
- Identify and classify angles and polygons
- Calculate missing angle measurements from a triangle
- Analyze and construct circles and circle graphs

Lesson 1: Lines and Planes

Objectives:
- Identify lines, planes, points, rays, segments
- Distinguish between parallel, perpendicular, and skew lines

Lesson 2: Identifying and Classifying Angles

Objectives:
- Classify acute, right, obtuse, and straight angles
- Classify pairs of angles as adjacent
- Write and solve equations to determine missing angle measures

Lesson 3: Special Angle Pairs

Objectives:
- Classify sets of angles as complementary, supplementary, and vertical
- Apply knowledge of angle theorems to determine missing angle measures

Lesson 4: Classifying Triangles

Objectives:
- Classify triangles by side length and angle measure
- Write and solve equations to determine missing angle measures

Lesson 5: Drawing Triangles

Objectives:
- Construct triangles from three measures of angles or sides
- Evaluate triangle characteristics to distinguish unique triangles

Lesson 6: Classifying Polygons

Objectives:
- Identify polygons according to side and angle measures
- Distinguish between regular and irregular polygons

Lesson 7: Classifying Quadrilaterals

Objectives:
- Identify special quadrilaterals according to side and angle measures

Lesson 8: Congruent Figures
Objectives:
- Recognize congruent figures
- Analyze congruent figures to determine missing measures

**Lesson 9: Circles**

Objectives:
- Recognize the parts of a circle and their relationships to one another

**Lesson 10: Circle Graphs**

Objectives:
- Construct circle graphs with given conditions
- Analyze data contained in a circle graph

**Lesson 11: Constructions**

Objectives:
- Create congruent line segments and perpendicular bisectors using a compass and straightedge

**Lesson 12: Geometry Unit Review (two-day lesson)**

Objectives:
- Organize your time and study materials
- Review your notes, key words, steps, and other important information that may be covered on the exam

**Lesson 13: Geometry Unit Test**

**Unit 2: Measurement**

This unit will take some of the basic ideas you learned previously and put them to work. In this unit, you will be calculating perimeter, area, surface area, and volume of figures. In addition, you will be introduced to irrational numbers. You will demonstrate what you learned in this unit with a portfolio project in which you will calculate the surface area and volume of common household items.

Objectives:
- Calculate the area and perimeter of various polygons and circles
- Evaluate square roots
- Calculate the surface area and volume of prisms and cylinders

**Lesson 1: Area and Perimeter of Parallelograms**

Objectives:
- Calculate the area and perimeter of parallelograms

**Lesson 2: Area and Perimeter of Triangles**

Objectives:
- Calculate the area and perimeter of triangles

**Lesson 3: Area of Trapezoids and Other Figures**

Objectives:
- Apply area formulas to calculate areas of trapezoids and other irregular polygons

**Lesson 4: Circumference and Area of a Circle**

Objectives:
- Apply appropriate formulas to calculate circumference and area of a circle

**Lesson 5: Square Roots and Irrational Numbers**

Objectives:
Lesson 6: Mid-Unit Review

Objectives:
- Review and reinforce your understanding of measurement

Lesson 7: Three-Dimensional Figures

Objectives:
- Identify three-dimensional figures according to faces, edges, and vertices
- Sketch three-dimensional figures on graph paper

Lesson 8: Three Views of an Object

Objectives:
- Create two-dimensional sketches of the top, front, and side views of three-dimensional objects

Lesson 9: Cross-Sections

Objectives:
- Recognize and describe cross-sections of three-dimensional objects

Lesson 10: Drawing Nets

Objectives:
- Sketch nets of three-dimensional figures
- Recognize nets of three-dimensional figures

Lesson 11: Surface Area of Prisms and Cylinders

Objectives:
- Apply knowledge of nets to calculate surface area of prisms and cylinders

Lesson 12: Volume of Prisms and Cylinders

Objectives:
- Apply appropriate formulas to calculate the volume of prisms and cylinders

Lesson 13: Efficiency Expert Portfolio

Objectives:
- Apply knowledge of dimensions, area, and volume

Lesson 14: Measurement Review (two-day lesson)

Objectives:
- Organize your time and study materials
- Review your notes, key words, steps, and other important information that may be covered on the exam
Lesson 15: Measurement Unit Test

Unit 3: Patterns and Rules

This unit will review patterns and lay the foundation for your future study with functions. By the end of this unit, you will be able to create and interpret graphs and calculate interest on an amount of money.

Objectives:
- Identify and continue patterns and graphs
- Classify number sequences
- Create and interpret graphs
- Calculate interest

Lesson 1: Number Sequences

Objectives:
- Recognize patterns in arithmetic and geometric sequences and write rules to describe them
- Analyze patterns to find missing terms in sequences

Lesson 2: Patterns and Tables

Objectives:
- Create tables to represent patterns
- Interpret patterns in tables to find missing terms

Lesson 3: Function Rules

Objectives:
- Generate rules for functions
- Apply function rules to find missing terms

Lesson 4: Using Tables, Rules, and Graphs

Objectives:
- Create tables, function rules, and graphs and apply them to solve real-world problems

Lesson 5: Interpreting Graphs

Objectives:
- Create graphs to analyze real-world situations

Lesson 6: Simple Interest

Objectives:
- Apply the appropriate formula to compute simple interest

Lesson 7: Compound Interest

Objectives:
- Apply appropriate formula to compute compound interest

Lesson 8: Transforming Formulas

Objectives:
- Evaluate formulas to find solutions to problems

Lesson 9: Patterns and Rules Review (two-day lesson)

Objectives:
- Organize your time and study materials
- Review your notes, key words, steps, and other important information that may be covered on the exam

Lesson 10: Patterns and Rules Unit Test

Unit 4: Graphing in the Coordinate Plane
The functions that you learned about previously can be graphed on a coordinate plane. In this unit, you will learn to graph points and lines. You will also find lines of symmetry and graph reflections, translations, and rotations.

Objectives:
- Graph points, lines, translations, reflections, and rotations
- Find the slope of a line

Lesson 1: Graphing Points in Four Quadrants

Objectives:
- Identify points on all four quadrants of a coordinate plane
- Graph points on all four quadrants of a coordinate plane

Lesson 2: Graphing Linear Equations

Objectives:
- Determine solutions and graph to test solutions of linear equations.

Lesson 3: Finding the Slope of a Line

Objectives:
- Determine the slope of a line
- Recognize characteristics of slope
- Apply slope to problem solving

Lesson 4: Graphs and Proportional Relationships

Objectives:
- Analyze graphs and tables to determine whether or not two quantities have a proportional relationship

Lesson 5: Constant of Proportionality

Objectives:
- Identify the constant of proportionality (unit rate) in tables, graphs, and equations

Lesson 6: Graphing Nonlinear Relationships (two-day lesson)

Objectives:
- Graph nonlinear equations and absolute value equations

Lesson 7: Translations

Objectives:
- Graph translations on a coordinate plane
- Generate rules to describe translations

Lesson 8: Line Symmetry and Reflections

Objectives:
- Recognize lines of symmetry and apply them to graph reflections

Lesson 9: Exploring Tessellations

Objectives:
- Create a tessellation of a figure

Lesson 10: Rotational Symmetry and Rotations (two-day lesson)

Objectives:
- Rotational Symmetry and Rotations
- Determine the angle of rotation and graph a rotation of a figure
Lesson 11: Graphing in the Coordinate Plane Review (two-day lesson)

Objectives:
- Organize your time and study materials
- Review your notes, key words, steps, and other important information that may be covered on the exam

Lesson 12: Graphing in the Coordinate Plane Unit Test

Unit 5: Displaying and Analyzing Data

In this unit, you will be working with sets of data and displaying them in a way that they can be quickly and easily understood. By the end, you’ll be able to distinguish a valid survey from an invalid one, and identify graphical representations that are misleading.

Objectives:
- Identify, interpret, and create different displays of sets of data
- Identify misleading graphs and statistics

Lesson 1: Reporting Frequency

Objectives:
- Generate frequency tables, histograms, and line plots to represent data
- Interpret frequency tables, histograms, and line plots

Lesson 2: Stem-and-Leaf Plots

Objectives:
- Generate stem-and-leaf plots to represent data
- Interpret data represented on stem-and-leaf plots

Lesson 3: Choosing the Best Data Display (two-day lesson)

Objectives:
- Determine the most accurate and appropriate way to display data

Lesson 4: Data Variability

Objectives:
- Interpret data displays according to the visual overlap of two data sets
- Compare two data sets according to the mean, median, and variability

Lesson 5: Random Samples and Surveys

Objectives:
- Compose a survey question
- Identify biased questions
- Recognize a random sample of a population

Lesson 6: Estimating Population Size (two-day lesson)

Objectives:
- Apply proportions to estimate population sizes
- Draw inferences about a population
- Generate simulated random samples

Lesson 7: Using Data to Persuade

Objectives:
- Identify misleading graphs and statistics

Objectives derived from Pearson Education, Inc. © Pearson Education, Inc., publishing as Pearson Prentice Hall. All rights reserved.

Lesson 8: Exploring Scatter Plots (two-day lesson)

Objectives:
- Create scatter plots
- Interpret scatter plots
Lesson 9: Displaying and Analyzing Data Unit Review

Objectives:
- Organize your time and study materials
- Review your notes, key words, steps, and other important information that may be covered on the exam

Lesson 10: Displaying and Analyzing Data Unit Test

Unit 6: Using Probability

The probability of an event is the likelihood that the event will occur. In this unit, you will be calculating the probabilities of given events including events that are dependent on another event occurring first. You will also determine how many possible outcomes there are for a given set of circumstances.

Objectives:
- Find the probability of dependent and independent events
- Represent all possible outcomes of an experiment in a sample space
- Find permutations and combinations

Lesson 1: Probability (two-day lesson)

Objectives:
- Determine the probability of an event
- Determine the complement of an event
- Find the probability of the complement of an event

Lesson 2: Experimental Probability

Objectives:
- Find experimental probability
- Use simulations

Lesson 3: Sample Spaces

Objectives:
- Make and use sample spaces
- Use the counting principle

Lesson 4: Compound Events

Objectives:
- Find the probability of independent and dependent events

Lesson 5: Simulating Compound Events

Objectives:
- Design and use a simulation to generate frequencies for compound events

Lesson 6: Permutations

Objectives:
- Determine permutations using the counting principal or factorials

Lesson 7: Combinations

Objectives:
- Determine combinations of objects
Lesson 8: Unit Review (two-day lesson)

Objectives:
- Organize your time and study materials
- Review your notes, key words, steps, and other important information that may be covered on the unit test

Lesson 9: Using Probability Unit Test
ALGEBRA READINESS A
Algebra Readiness (Pre-Algebra) A

This is the first of two courses that comprise Algebra Readiness. In this course, the student will be introduced to basic algebraic principles. The student will review properties of expressions and integers. The student will solve one-step equations and inequalities with positive and negative integers, decimals, fractions, and exponents. Then the student will explore problems involving operations of fractions and will apply his knowledge of algebra to solve real-world ratio, proportion, and percent problems. Finally, the student will examine and evaluate two-step and multi-step equations and inequalities.

Unit 1: Focus on Success in Algebra Readiness

In this unit, you will focus on ways to think about and approach mathematics. You will learn how to set personal goals, establish study strategies that reduce anxiety, and review ways to be an active learner. In addition, this unit introduces the various resources that are available to you in your algebra readiness course.

Objectives:
• Assess personal readiness for studying and learning
• Recognize the importance of personal ownership of learning
• Reflect on personal strengths and weaknesses in order to improve mathematical performance
• Use resources to set goals

Lesson 1: Preparing for Success

Objectives:
• Describe the characteristics of quality goals
• Set goals for success in mathematics
• Reflect on strengths, weaknesses, and how to apply them
• Recognize the importance of personal effort to learning

Lesson 2: Resources for Success

Objectives:
• Identify the various resources that you can use in the course
• Modify goals to include using resources effectively

Unit 2: Integers and Algebraic Expressions

In this unit, you will review the foundational concepts necessary for algebra and mathematical reasoning including integer operations and use of variables to represent unknown quantities. Emphasis will be placed upon achieving mastery of integer operations and the skill of rewriting a subtraction expression as addition of an opposite integer.

Objectives:
• Apply the order of operations and number properties
• Use appropriate operations to solve problems involving integers
• Rewrite equations replacing subtraction with addition involving an integer

Lesson 1: Order of Operations (two-day lesson)

Objectives:
• Apply the order of operations to correctly solve an equation
• Evaluate variable expressions when the value of the variable is given
• Translate phrases into mathematical expressions

Lesson 2: Integers and Absolute Value

Objectives:
• Identify the absolute value of a given integer
• Identify the opposite of a given integer
• Evaluate expressions with absolute value
• Order integers

Lesson 3: Adding and Subtracting Integers (two-day lesson)

Objectives:
• Apply the rules of addition and subtraction of integers
• Change subtraction problems to involve addition of an opposite

**Lesson 4: Multiplying and Dividing Integers**

Objectives:
• Apply the rules of multiplication and division of integers

**Lesson 5: Properties of Numbers**

Objectives:
• Identify the additive and multiplicative inverse of a number
• Use the Distributive Property to make mental math easier

**Lesson 6: Solving Equations by Adding and Subtracting**

Objectives:
• Write and solve equations using addition and subtraction

**Lesson 7: Solve Equations by Multiplying and Dividing**

Objectives:
• Write and solve equations using multiplication and division

**Lesson 8: Integers and Algebra Review (two-day lesson)**

Objectives:
• Organize your time and study materials
• Review your notes, key words, steps, and other important information that may be covered on the exam

**Lesson 9: Integers and Algebraic Expressions Unit Test**

**Unit 3: Rational Numbers**

This unit will focus on the use of fractions and exponents. In this unit, you will order rational numbers, convert between decimals and fractions, and perform operations using fractions and mixed numbers. In addition, you will learn to use a formula and to evaluate a power. At the conclusion of this unit, you will complete a portfolio project using fractions to adjust portions for more or fewer people in a healthy recipe of your choosing.

Objectives:
• Perform operations using positive and negative rational numbers
• Predict the size and sign of a product relative to its multiplicand and multiplier
• Identify and use powers, including numbers in scientific notation

**Lesson 1: Rational and Irrational Numbers**

Objectives:
• Differentiate between rational and irrational numbers

**Lesson 2: Fractions and Decimals**

Objectives:
• Convert between fractions and decimals

**Lesson 3: Adding and Subtracting Fractions (two-day lesson)**

Objectives:
• Add and subtract fractions
• Add and subtract mixed numbers

**Lesson 4: Multiplying and Dividing Fractions (two-day lesson)**

Objectives:
• Multiply and divide fractions
• Multiply and divide mixed numbers
• Scale up a favorite recipe 2 1/2 times
• Scale down a different favorite recipe by 1/4

**Lesson 5: Exponent Basics**
Objectives:
• Use powers and exponents in expressions
• Evaluate expressions using exponents

Lesson 6: Properties of Exponents
Objectives:
• Multiply powers
• Divide powers
• Apply negative and zero exponents

Lesson 7: Scientific Notation Basics (two-day lesson)
Objectives:
• Convert between scientific notation and standard form
• Convert between standard form and scientific notation

Lesson 8: Scientific Notation Comparison
Objectives:
• Compare relative size of numbers in scientific notation

Lesson 9: Operations and Applications of Scientific Notation
Objectives:
• Perform operations expressed in scientific notation
• Apply scientific notation to real world problems

Lesson 10: Unit Review (two-day lesson)
Objectives:
• Organize your time and study materials
• Review your notes, key words, steps, and other important information that may be covered on the exam

Lesson 11: Rational Numbers Unit Test

Unit 4: Real Numbers and the Coordinate Plane
Previously in your studies, you worked with a set of numbers called the rationals. In this unit, you will begin to work with another set of numbers called the irrationals. By the end of this unit, you will be able to estimate the value of an irrational number by comparing it to one or two rational numbers. You will also use irrational numbers to approximate the length of lines by applying the Pythagorean Theorem. Finally, you will use a coordinate plane to create symmetrical figures.

Objectives:
• Identify the differences between rational and irrational numbers and use rational numbers to estimate and order irrational numbers
• Estimate the value of a square root
• Use the Pythagorean Theorem to find the lengths of sides of a right triangle

Lesson 1: Squares and Square Roots
Objectives:
• Find the square and square roots of numbers

Lesson 2: Real Numbers (two-day lesson)
Objectives:
• Identify rational and irrational numbers

Lesson 3: Estimating Irrationals
Objectives:
• Estimate the value of an irrational number by comparing it to rational numbers

Lesson 4: Roots as Solutions to Equations, Cube Roots
Objectives:
• Evaluate perfect squares and cubes
• Use roots to represent solutions to equations

Lesson 5: Pythagorean Theorem (two-day lesson)
Objectives:
• Solve problems using the Pythagorean Theorem

Lesson 6: Converse of Pythagorean Theorem (two-day lesson)
Objectives:
• Apply the converse of the Pythagorean Theorem
• Identify a right triangle
• Prove the Pythagorean Theorem

Lesson 7: Coordinate Plane
Objectives:
• Graph points on the coordinate plane
• Use the Pythagorean Theorem to find the distance between two graphed points
• Apply the Distance Formula

Lesson 8: Movement in the Coordinate Plane (two-day lesson)
Objectives:
• Graph and describe translations in the coordinate plane
• Graph reflections in the coordinate plane and identify lines of symmetry

Lesson 9: Rotations in the Coordinate Plane
Objectives:
• Graph rotations and identify rotational symmetry

Lesson 10: Real Numbers and the Coordinate Plane Unit Review (two-day lesson)
Objectives:
• Organize your time and study materials
• Review your notes, key words, steps, and other important information that may be covered on the exam

Lesson 11: Real Numbers and the Coordinate Plane Unit Test

Unit 5: Applications of Proportions
This unit will focus on ratios and proportions. You will use ratios to compare two things, and then use those ratios to solve proportions. There will be a portfolio project for this unit, using a real-world scenario. You will take detailed measurements of your bedroom and create a to-scale map using appropriate measurements.

Objectives:
• Identify and simplify ratios to solve proportions
• Perform unit conversions and dilations
• Use proportions in real-world applications, including scale models and indirect measurements

Lesson 1: Ratios and Rates
Objectives:
• Write ratios and unit rates
• Use rates to solve problems
Lesson 2: Proportions

Objectives:
- Identify and solve proportions

Objectives derived from Pearson Education, Inc. © Pearson Education, Inc., publishing as Pearson Prentice Hall. All rights reserved.

Lesson 3: Similar Figures

Objectives:
- Identify similar figures
- Use proportions to find missing measurements in similar figures

Objectives derived from Pearson Education, Inc. © Pearson Education, Inc., publishing as Pearson Prentice Hall. All rights reserved.

Lesson 4: Ratios of Similar Figures

Objectives:
- Compare the lengths, perimeters, and areas of similar rectangles
- Calculate the perimeter and area of a similar figure

Lesson 5: Dilations

Objectives:
- Graph dilations on the coordinate plane
- Determine the scale factor of a dilation

Objectives derived from Pearson Education, Inc. © Pearson Education, Inc., publishing as Pearson Prentice Hall. All rights reserved.

Lesson 6: Scale Drawings (two-day lesson)

Objectives:
- Use proportions to solve problems involving scale

Objectives derived from Pearson Education, Inc. © Pearson Education, Inc., publishing as Pearson Prentice Hall. All rights reserved.

Lesson 7: Unit Review (two-day lesson)

Objectives:
- Review information from previous lessons to prepare for the test
- Submit the scale drawing of your room

Lesson 8: Applications of Proportions Unit Test

Unit 6: Applications of Percents

In this unit, you will learn that a percent is a ratio comparing a number to one hundred. You will then use percents to find and compare amounts of increase or decrease and to calculate new prices based on markup, discount, and sales tax. The portfolio project at the end of this unit will require you to find products online and calculate a new price based upon a percent discount and state sales tax.

Objectives:
- Determine a quantity as a percent of a whole, a total based upon the percent amount of a portion, and the percent of a portion based upon its total
- Use percents to find an amount of increase or decrease

Lesson 1: Fractions, Decimals, and Percents

Objectives:
- Convert between fractions, decimals, and percents
- Order rational numbers

Objectives derived from Pearson Education, Inc. © Pearson Education, Inc., publishing as Pearson Prentice Hall. All rights reserved.

Lesson 2: Estimating with Percents

Objectives:
- Estimate percents using decimals and fractions
Lesson 3: Percents and Proportions (two-day lesson)

Objectives:
• Use proportions to find part of a whole, a whole amount, or a percent

Lesson 4: Percent Equations (two-day lesson)

Objectives:
• Use equations to solve problems involving percents

Lesson 5: Percent of Change (two-day lesson)

Objectives:
• Find percent of change
• Solve problems involving percent of increase and percent of decrease

Lesson 6: Markup, Discount, and Sales Tax (two-day lesson)

Objectives:
• Use percent of change to find markup, discount, and selling price

Lesson 7: Simple Interest (two-day lesson)

Objectives:
• Find simple interest and account balances

Lesson 8: Unit Review (two-day lesson)

Objectives:
• Organize your time and study materials
• Review your notes, key words, steps, and other important information that may be covered on the exam

Lesson 9: Applications of Percent Unit Test

Unit 7: Equations and Inequalities
In this unit, you will use algebraic skills to solve for an unknown quantity in an equation or inequality. You will start with two-step equations and work your way through multiple-step equations to solving equations with variables on both sides of the equal sign.

Objectives:
• Combine like terms in a mathematic expression
• Balance equations and inequalities using inverse operations
• Solve equations and inequalities for a variable

Lesson 1: Solving Two-Step Equations

Objectives:
• Solve two-step equations
• Use two-step equations to solve problems

Lesson 2: Simplifying Algebraic Expressions

Objectives:
• Simplify algebraic expressions by combining like terms
Lesson 3: Solving Multi-Step Equations (two-day lesson)

Objectives:
• Write and solve multi-step equations

Objectives derived from Pearson Education, Inc. © Pearson Education, Inc., publishing as Pearson Prentice Hall. All rights reserved.

Lesson 4: Variables on Both Sides (two-day lesson)

Objectives:
• Write and solve equations with variables on both sides

Objectives derived from Pearson Education, Inc. © Pearson Education, Inc., publishing as Pearson Prentice Hall. All rights reserved.

Lesson 5: Transforming Equations

Objectives:
• Transform equations into simpler forms to determine the number of solutions

Lesson 6: Graphing and Solving Inequalities

Objectives:
• Write and solve inequalities

Objectives derived from Pearson Education, Inc. © Pearson Education, Inc., publishing as Pearson Prentice Hall. All rights reserved.

Lesson 7: Solving Inequalities by Multiplying or Dividing (two-day lesson)

Objectives:
• Solve inequalities by multiplication and division

Lesson 8: Unit Review (two-day lesson)

Objectives:
• Review materials within this unit

Lesson 9: Equations and Inequalities Unit Test
ALGEBRA READINESS B
Algebra Readiness (Pre-Algebra) B

This is the second of two courses that comprise Algebra Readiness. In this course, the student will explore basic algebraic principles. The student will also examine and evaluate two-step and multi-step equations and inequalities and then explore and use graphs to solve linear relations and functions. Next, the student will be introduced to basic concepts of geometry including angle relationships, parallel lines, polygons, circles, and transformations. The student will continue to apply his knowledge of geometry and algebra to solve area and volume problems. Then the student will explore nonlinear functions and polynomials. Finally, the student will examine properties of right triangles, data analysis, and probability.

Unit 1: Geometry

In this unit, you will learn to classify polygons based upon their sides and angles, and perform computations using related angles and parallel lines. In addition, you will find the area of common figures and the circumference of circles. Finally, you will use basic geometry tools to construct angles and parallel lines.

Objectives:
- Classify a polygon based upon its sides and angles
- Identify and use congruent figures
- Calculate the area of figures and circumference of circles

Lesson 1: Pairs of Angles

Objectives:
- Explore and classify angles
- Determine angle measures based on angle relationships

Lesson 2: Parallel Lines and Angles

Objectives:
- Identify parallel lines
- Identify the types of angles formed by a transversal
- Find the measures of angles formed by parallel lines

Lesson 3: Congruent Polygons (two-day lesson)

Objectives:
- Determine if figures are congruent or similar to one another
- Describe a sequence of transformations for congruent and similar figures

Lesson 4: Classifying Polygons

Objectives:
- Classify certain polygons

Lesson 5: Polygons and Angles

Objectives:
- Classify polygons
- Find the interior angle measure of polygons

Lesson 6: Area of Polygons (two-day lesson)

Objectives:
- Find the area of parallelograms, triangles, and trapezoids

Lesson 7: Area and Circumference of Circles

Objectives:
- Calculate the circumference and area of circles
- Calculate the area of an irregular figure

Lesson 8: Geometric Constructions (two-day lesson)
Objectives:
- Perform geometric constructions

Lesson 9: Geometry Unit Review (two-day lesson)

Lesson 10: Geometry Unit Test

Unit 2: Measurement
This unit focuses on the skills of calculating surface area and volume. By the end of the unit, you will be able to calculate the exact surface area and volumes of specific 3-D figures that are based upon rectangles and circles, including spheres. You will display your knowledge at the end in a portfolio project by finding, measuring, and calculating the surface area and volume of two items you probably already have at home.

Objectives:
- Identify solids and their parts
- Calculate the surface area and volume of cylinders, prisms, cones, pyramids, and spheres
- Determine how a change in one dimension affects changes in surface area and volume

Lesson 1: Polyhedrons, 3-D Figures, and Solids

Objectives:
- Identify solids, parts of solids, and skewed line segments

Objectives derived from Pearson Education, Inc. © Pearson Education, Inc., publishing as Pearson Prentice Hall. All rights reserved.

Lesson 2: 3-D Views

Objectives:
- Draw 3-D figures, base plans, and isometric views

Objectives derived from Pearson Education, Inc. © Pearson Education, Inc., publishing as Pearson Prentice Hall. All rights reserved.

Lesson 3: 3-D Figures and Nets

Objectives:
- Identify nets of solids

Objectives derived from Pearson Education, Inc. © Pearson Education, Inc., publishing as Pearson Prentice Hall. All rights reserved.

Lesson 4: Surface Area of Prisms and Cylinders (two-day lesson)

Objectives:
- Find surface area of prisms and cylinders using nets and formulas

Objectives derived from Pearson Education, Inc. © Pearson Education, Inc., publishing as Pearson Prentice Hall. All rights reserved.

Lesson 5: Surface Area of Pyramids and Cones

Objectives:
- Find surface area of pyramids and cones using nets and formulas

Objectives derived from Pearson Education, Inc. © Pearson Education, Inc., publishing as Pearson Prentice Hall. All rights reserved.

Lesson 6: Using Pythagorean Theorem with 3-D Figures

Objectives:
- Apply the Pythagorean Theorem in three-dimensional figures

Objectives derived from Pearson Education, Inc. © Pearson Education, Inc., publishing as Pearson Prentice Hall. All rights reserved.

Lesson 7: Volumes of Prisms and Cylinders

Objectives:
- Calculate the volume of prisms and cylinders

Objectives derived from Pearson Education, Inc. © Pearson Education, Inc., publishing as Pearson Prentice Hall. All rights reserved.
Lesson 8: Volumes of Pyramids and Cones

Objectives:
• Calculate the volume of pyramids and cones

Objectives derived from Pearson Education, Inc. © Pearson Education, Inc., publishing as Pearson Prentice Hall. All rights reserved.

Lesson 9: Spheres

Objectives:
• Find the surface area and volume of a sphere

Objectives derived from Pearson Education, Inc. © Pearson Education, Inc., publishing as Pearson Prentice Hall. All rights reserved.

Lesson 10: Similar Solids

Objectives:
• Apply proportional reasoning to find the missing measurement in similar solids

Objectives derived from Pearson Education, Inc. © Pearson Education, Inc., publishing as Pearson Prentice Hall. All rights reserved.

Lesson 11: Surface Area and Volume in the Real World (two-day lesson)

Objectives:
• Calculate the surface area and volume (in appropriate units) of three-dimensional objects found in the home, such as a can of food, box of tissues, shoebox, etc.

Lesson 12: Measurement Unit Review (two-day lesson)

Objectives:
• Review previously studied material

Lesson 13: Measurement Unit Test

Unit 3: Using Graphs to Analyze Data

In this unit of the course, you will examine, analyze, and construct scatter plots and tables. With these skills, you will be able to roughly predict the strength and direction of a pattern of association between two things. You will also find measures of central tendency and determine which graph and measure of central tendency best represents a data set.

Objectives:
• Calculate the mean, median, and mode of a data set and explain the best use of each
• Determine the best type of graph to display a data set
• Identify patterns of association—indicating strength and direction—of two factors and make predictions based upon a scatter plot

Lesson 1: Measures of Center

Objectives:
• Compute mean, median, mode, range and select appropriate measure of tendency

Objectives derived from Pearson Education, Inc. © Pearson Education, Inc., publishing as Pearson Prentice Hall. All rights reserved.

Lesson 2: Frequency

Objectives:
• Utilize line plots, frequency tables, and histograms to display data

Objectives derived from Pearson Education, Inc. © Pearson Education, Inc., publishing as Pearson Prentice Hall. All rights reserved.

Lesson 3: Venn Diagrams

Objectives:
• Examine relationships between data with Venn diagrams

Objectives derived from Pearson Education, Inc. © Pearson Education, Inc., publishing as Pearson Prentice Hall. All rights reserved.
Lesson 4: Stem-and-Leaf Plots (two-day lesson)

Objectives:
- Represent and interpret data using stem-and-leaf plots

Objectives derived from Pearson Education, Inc. © Pearson Education, Inc., publishing as Pearson Prentice Hall. All rights reserved.

Lesson 5: Box-and-Whisker Plots

Objectives:
- Represent and interpret data using box-and-whisker plots

Objectives derived from Pearson Education, Inc. © Pearson Education, Inc., publishing as Pearson Prentice Hall. All rights reserved.

Lesson 6: Scatter Plots

Objectives:
- Create scatter plots and analyze trends to make predictions

Objectives derived from Pearson Education, Inc. © Pearson Education, Inc., publishing as Pearson Prentice Hall. All rights reserved.

Lesson 7: Bivariate Data

Objectives:
- Analyze bivariate data
- Describe patterns of association in bivariate data

Objectives derived from Pearson Education, Inc. © Pearson Education, Inc., publishing as Pearson Prentice Hall. All rights reserved.

Lesson 8: Modeling Data with Lines

Objectives:
- Examine data to determine accuracy of models

Objectives derived from Pearson Education, Inc. © Pearson Education, Inc., publishing as Pearson Prentice Hall. All rights reserved.

Lesson 9: Circle Graphs

Objectives:
- Interpret data using circle graphs
- Present data by creating circle graphs

Objectives derived from Pearson Education, Inc. © Pearson Education, Inc., publishing as Pearson Prentice Hall. All rights reserved.

Lesson 10: Choosing the Right Graph

Objectives:
- Choose the best graph to represent various data

Objectives derived from Pearson Education, Inc. © Pearson Education, Inc., publishing as Pearson Prentice Hall. All rights reserved.

Lesson 11: Relative Frequency (two-day lesson)

Objectives:
- Create and analyze data using a two-way table

Objectives derived from Pearson Education, Inc. © Pearson Education, Inc., publishing as Pearson Prentice Hall. All rights reserved.

Lesson 12: Using Graphs to Analyze Data Unit Review (two-day lesson)

Objectives:
- Review for unit test

Lesson 13: Using Graphs to Analyze Data Unit Test

Unit 4: Probability

In this unit of the course, you will find probabilities and odds of events.
Objectives:
- Calculate odds and probabilities of dependent and independent events, and make predictions using those calculations
- Calculate permutations and combinations of sets of objects

Lesson 1: Theoretical and Experimental Probability (two-day lesson)

Objectives:
- Find theoretical probabilities, experimental probabilities, and odds

Lesson 2: Independent and Dependent Events

Objectives:
- Find the probabilities of independent and dependent events

Lesson 3: Making Predictions

Objectives:
- Make predictions based on theoretical and experimental probabilities

Lesson 4: Permutations

Objectives:
- Find the number of permutations of a set of objects

Lesson 5: Combinations (two-day lesson)

Objectives:
- Find the number of combinations of a set of objects using lists and combination notation

Lesson 6: Unit Review (two-day lesson)

Objectives:
- Review the unit

Lesson 7: Probability Unit Test

Unit 5: Functions

This unit focuses on the concept of functions. By the end, you will be able to identify a function as an equation having one output for every input, and you will be able to graph linear and non-linear functions on a coordinate plane.

Objectives:
- Describe a sequence
- Identify and graph functions and determine slope and y-intercept
- Determine the solution of two functions by graphing

Lesson 1: Sequences

Objectives:
- Write rules for sequences and use the rules to find terms

Lesson 2: Relating Graphs and Events

Objectives:
- Interpret and sketch graphs that represent real-world situations
Lesson 3: Functions

Objectives:
- Identify functions
- Represent functions with equations, tables, and function notation

Objectives derived from Pearson Education, Inc. © Pearson Education, Inc., publishing as Pearson Prentice Hall. All rights reserved.

Lesson 4: Understanding Slope

Objectives:
- Calculate slope of a line from different representations

Objectives derived from Pearson Education, Inc. © Pearson Education, Inc., publishing as Pearson Prentice Hall. All rights reserved.

Lesson 5: Slope and Similar Triangles (two-day lesson)

Objectives:
- Demonstrate that the slope between any two points on a line is the same
- Derive the equation for a line in slope-intercept form: \( y = mx + b \)

Objectives derived from Pearson Education, Inc. © Pearson Education, Inc., publishing as Pearson Prentice Hall. All rights reserved.

Lesson 6: Graphing Linear Functions

Objectives:
- Use tables and equations to graph linear functions

Objectives derived from Pearson Education, Inc. © Pearson Education, Inc., publishing as Pearson Prentice Hall. All rights reserved.

Lesson 7: Graphing Proportional Relationships (two-day lesson)

Objectives:
- Graph proportional relationships
- Explore the relationship between the slope of a line on a graph and unit rate

Objectives derived from Pearson Education, Inc. © Pearson Education, Inc., publishing as Pearson Prentice Hall. All rights reserved.

Lesson 8: Writing Rules for Linear Functions

Objectives:
- Write function rules from words, tables, and graphs

Lesson 9: Solving Systems of Equations

Objectives:
- Solve systems of equations by graphing and by substitution

Lesson 10: Nonlinear Functions

Objectives:
- Graph and write quadratic functions and other nonlinear functions

Objectives derived from Pearson Education, Inc. © Pearson Education, Inc., publishing as Pearson Prentice Hall. All rights reserved.

Lesson 11: Comparing Functions

Objectives:
- Compare functions represented in various ways

Lesson 12: Functions Unit Review (two-day lesson)

Objectives:
- Review for unit test

Lesson 13: Functions Unit Test

Unit 6: Polynomials and Properties of Exponents
In this final unit, you will be working with expressions called polynomials. By the end, you will be able to add, subtract, and multiply these expressions. You will also simplify powers and use negative and zero exponents.

Objectives:
- Add, subtract, and multiply polynomials
- Multiply and divide powers with the same base, including numbers in scientific notation

**Lesson 1: Polynomials**

Objectives:
- Write algebraic expressions and simplify polynomials

Objectives derived from Pearson Education, Inc. © Pearson Education, Inc., publishing as Pearson Prentice Hall. All rights reserved.

**Lesson 2: Adding and Subtracting Polynomials**

Objectives:
- Add and subtract polynomials

Objectives derived from Pearson Education, Inc. © Pearson Education, Inc., publishing as Pearson Prentice Hall. All rights reserved.

**Lesson 3: Exponents and Multiplication (two-day lesson)**

Objectives:
- Multiply powers with the same base
- Multiply numbers in scientific notation

Objectives derived from Pearson Education, Inc. © Pearson Education, Inc., publishing as Pearson Prentice Hall. All rights reserved.

**Lesson 4: Multiplying Polynomials**

Objectives:
- Multiply monomials and binomials

Objectives derived from Pearson Education, Inc. © Pearson Education, Inc., publishing as Pearson Prentice Hall. All rights reserved.

**Lesson 5: Exponents and Division (two-day lesson)**

Objectives:
- Divide powers with the same base
- Simplify expressions with negative exponents

Objectives derived from Pearson Education, Inc. © Pearson Education, Inc., publishing as Pearson Prentice Hall. All rights reserved.

**Lesson 6: Polynomials and Properties of Exponents Review (two-day lesson)**

Objectives:
- Review problems and terms

**Lesson 7: Polynomials and Properties of Exponents Unit Test**
ESSENTIAL
ALGEBRA READINESS A
Essential Algebra Readiness (Pre-Algebra) A

This is the first of two courses that comprise Essential Algebra Readiness (Pre-Algebra). In this course, the student will be introduced to basic algebraic principles. The student will review properties of expressions and integers. The student will solve one-step equations and inequalities with positive and negative integers, decimals, fractions, and exponents. Then the student will explore problems involving operations of fractions and will apply his knowledge of algebra to solve real-world ratio, proportion, and percent problems. Finally, the student will be able to examine and evaluate two-step and multi-step equations and inequalities.

Unit 1: Focus on Success in Algebra Readiness

In this unit, you will focus on ways to think about and approach mathematics. You will learn how to set personal goals, establish study strategies that reduce anxiety, and review ways to be an active learner. In addition, this unit introduces the various resources that are available to you in your algebra readiness course.

Objectives:
- Assess personal readiness for studying and learning
- Recognize the importance of personal ownership of learning
- Reflect on personal strengths and weaknesses in order to improve mathematical performance
- Use resources to set goals

Lesson 1: Preparing for Success

Objectives:
- Describe the characteristics of quality goals
- Set goals for success in mathematics
- Reflect on strengths, weaknesses, and how to apply them
- Recognize the importance of personal effort to learning

Lesson 2: Resources for Success

Objectives:
- Identify the various resources that you can use in the course
- Modify goals to include using resources effectively

Unit 2: Integers and Algebraic Expressions

In this unit, you will review the foundational concepts necessary for algebra and mathematical reasoning including integer operations and use of variables to represent unknown quantities. Emphasis will be placed upon achieving mastery of integer operations and the skill of rewriting a subtraction expression as addition of an opposite integer.

Objectives:
- Apply the order of operations and number properties
- Use appropriate operations to solve problems involving integers
- Rewrite equations replacing subtraction with addition involving an integer

Lesson 1: Order of Operations (two-day lesson)

Objectives:
- Apply the order of operations to correctly solve an equation
- Evaluate variable expressions when the value of the variable is given
- Translate phrases into mathematical expressions

Lesson 2: Integers and Absolute Value

Objectives:
- Identify the absolute value of a given integer
- Identify the opposite of a given integer
- Evaluate expressions with absolute value
- Order integers

Lesson 3: Adding and Subtracting Integers (two-day lesson)
Objectives:
• Apply the rules of addition and subtraction of integers
• Change subtraction problems to involve addition of an opposite

Lesson 4: Multiply and Divide Integers

Objectives:
• Apply the rules of multiplication and division of integers

Lesson 5: Properties of Numbers

Objectives:
• Identify the additive and multiplicative inverse of a number
• Use the Distributive Property to make mental math easier

Lesson 6: Solving Equations by Adding and Subtracting (two-day lesson)

Objectives:
• Write and solve equations using addition and subtraction

Lesson 7: Solve Equations by Multiplying and Dividing (two-day lesson)

Objectives:
• Write and solve equations using multiplication and division

Lesson 8: Integers and Algebra Review (two-day lesson)

Objectives:
• Organize your time and study materials
• Review your notes, key words, steps, and other important information that may be covered on the exam

Lesson 9: Integers and Algebra Unit Test

Unit 3: Rational Numbers

This unit will focus on the use of fractions and exponents. In this unit, you will order rational numbers, convert between decimals and fractions, and perform operations using fractions and mixed numbers. In addition, you will learn to use a formula and to evaluate a power. At the conclusion of this unit, you will complete a portfolio project using fractions to adjust portions for more or fewer people in a healthy recipe of your choosing.

Objectives:
• Perform operations using positive and negative rational numbers
• Predict the size and sign of a product relative to its multiplicand and multiplier
• Identify and use powers, including numbers in scientific notation

Lesson 1: Rational and Irrational Numbers

Objectives:
• Differentiate between rational and irrational numbers

Lesson 2: Fractions and Decimals

Objectives:
• Convert between fractions and decimals

Lesson 3: Adding and Subtracting Fractions (two-day lesson)

Objectives:
• Add and subtract fractions
• Add and subtract mixed numbers

Lesson 4: Multiplying and Dividing Fractions (two-day lesson)

Objectives:
• Multiply and divide fractions
• Multiply and divide mixed numbers
Lesson 5: Exponent Basics
Objectives:
• Use powers and exponents in expressions
• Evaluate expressions using exponents

Lesson 6: Properties of Exponents (two-day lesson)
Objectives:
• Multiply powers
• Divide powers
• Apply negative and zero exponents

Lesson 7: Scientific Notation Basics (two-day lesson)
Objectives:
• Convert between scientific notation and standard form
• Convert between standard form and scientific notation

Lesson 8: Scientific Notation Comparison
Objectives:
• Compare relative size of numbers in scientific notation

Lesson 9: Operations and Applications of Scientific Notation
Objectives:
• Perform operations expressed in scientific notation
• Apply scientific notation to real world problems

Lesson 10: Rational Numbers Unit Review (two-day lesson)
Objectives:
• Organize your time and study materials
• Review your notes, Key Words, steps, and other important information that may be covered on the exam

Lesson 11: Rational Numbers Unit Test

Unit 4: Real Numbers and the Coordinate Plane
Previously in your studies, you worked with a set of numbers called the rationals. In this unit, you will begin to work with another set of numbers called the irrationals. By the end of this unit, you will be able to estimate the value of an irrational number by comparing it to one or two rational numbers. You will also use irrational numbers to approximate the length of lines by applying the Pythagorean Theorem. Finally, you will use a coordinate plane to create symmetrical figures.

Objectives:
• Identify the differences between rational and irrational numbers and use rational numbers to estimate and order irrational numbers
• Estimate the value of a square root
• Use the Pythagorean Theorem to find the lengths of sides of a right triangle

Lesson 1: Squares and Square Roots
Objectives:
• Find the square and square roots of numbers

Lesson 2: Real Numbers
Objectives:
• Identify rational and irrational numbers

Lesson 3: Estimating Irrationals
Objectives:
• Estimate the value of an irrational number by comparing it to rational numbers
Lesson 4: Roots as Solutions To Equations, Cube Roots

Objectives:
- Evaluate perfect squares and cubes
- Use roots to represent solutions to equations

Lesson 5: Pythagorean Theorem

Objectives:
- Solve problems using the Pythagorean Theorem

Lesson 6: Converse of Pythagorean Theorem

Objectives:
- Apply the converse of the Pythagorean Theorem
- Identify a right triangle
- Prove the Pythagorean Theorem

Lesson 7: Coordinate Plane

Objectives:
- Graph points on the coordinate plane
- Use the Pythagorean Theorem to find the distance between two graphed points
- Apply the Distance Formula

Lesson 8: Movement in the Coordinate Plane (two-day lesson)

Objectives:
- Graph and describe translations in the coordinate plane
- Graph reflections in the coordinate plane and identify lines of symmetry

Objectives derived from Pearson Education, Inc. © Pearson Education, Inc., publishing as Pearson Prentice Hall. All rights reserved.

Lesson 9: Rotations in the Coordinate Plane (two-day lesson)

Objectives:
- Graph rotations and identify rotational symmetry

Objectives derived from Pearson Education, Inc. © Pearson Education, Inc., publishing as Pearson Prentice Hall. All rights reserved.

Lesson 10: Real Numbers and the Coordinate Plane Unit Review (two-day lesson)

Objectives:
- Organize your time and study materials
- Review your notes, Key Words, steps, and other important information that may be covered on the exam

Lesson 11: Real Numbers and the Coordinate Plane Unit Test

Unit 5: Applications of Proportions

This unit will focus on ratios and proportions. You will use ratios to compare two things, and then use those ratios to solve proportions. There will be a portfolio project for this unit, using a real-world scenario. You will take detailed measurements of your bedroom and create a to-scale map using appropriate measurements.

Objectives:
- Identify and simplify ratios to solve proportions
- Perform unit conversions and dilations
- Use proportions in real-world applications, including scale models and indirect measurements

Lesson 1: Ratios and Rates

Objectives:
- Write ratios and unit rates
- Use rates to solve problems
Lesson 2: Proportions

Objectives:
- Identify and solve proportions

Lesson 3: Similar Figures

Objectives:
- Identify similar figures
- Use proportions to find missing measurements in similar figures

Lesson 4: Ratios of Similar Figures (two-day lesson)

Objectives:
- Compare the lengths, perimeters, and areas of similar rectangles
- Calculate the perimeter and area of a similar figure

Lesson 5: Dilations

Objectives:
- Graph dilations on the coordinate plane
- Determine the scale factor of a dilation

Lesson 6: Scale Drawings (two-day lesson)

Objectives:
- Use proportions to solve problems involving scale

Lesson 7: Applications of Proportions Unit Review

Objectives:
- Review information from previous lessons to prepare for the test
- Submit the scale drawing of your room

Lesson 8: Applications of Proportions Unit Test

Unit 6: Applications of Percents

In this unit, you will learn that a percent is a ratio comparing a number to one hundred. You will then use percents to find and compare amounts of increase or decrease and to calculate new prices based on markup, discount, and sales tax. The portfolio project at the end of this unit will require you to find products online and calculate a new price based upon a percent discount and state sales tax.

Objectives:
- Determine a quantity as a percent of a whole, a total based upon the percent amount of a portion, and the percent of a portion based upon its total
- Use percents to find an amount of increase or decrease

Lesson 1: Fractions, Decimals, and Percents

Objectives:
- Convert between fractions, decimals, and percents
- Order rational numbers

Lesson 2: Estimating with Percents
Lesson 3: Percent Proportions (two-day lesson)

Objectives:
- Use proportions to find the part of a whole, a whole amount, or a percent

Objectives derived from Pearson Education, Inc. © Pearson Education, Inc., publishing as Pearson Prentice Hall. All rights reserved.

Lesson 4: Percent Equations (two-day lesson)

Objectives:
- Use equations to solve problems involving percents

Objectives derived from Pearson Education, Inc. © Pearson Education, Inc., publishing as Pearson Prentice Hall. All rights reserved.

Lesson 5: Percent of Change

Objectives:
- Find percent of change
- Solve problems involving percent of increase and percent of decrease

Objectives derived from Pearson Education, Inc. © Pearson Education, Inc., publishing as Pearson Prentice Hall. All rights reserved.

Lesson 6: Markup, Discount, and Sales Tax (two-day lesson)

Objectives:
- Use percent of change to find markup, discount, and selling price

Objectives derived from Pearson Education, Inc. © Pearson Education, Inc., publishing as Pearson Prentice Hall. All rights reserved.

Lesson 7: Simple and Compound Interest

Objectives:
- Find simple interest and account balances

Lesson 8: Applications of Percent Unit Review (two-day lesson)

Objectives:
- Organize your time and study materials
- Review your notes, Key Words, steps, and other important information that may be covered on the exam

Lesson 9: Applications of Percent Unit Test

Unit 7: Equations and Inequalities

In this unit, you will use algebraic skills to solve for an unknown quantity in an equation or inequality. You will start with two-step equations and work your way through multiple-step equations to solving equations with variables on both sides of the equal sign.

Objectives:
- Combine like terms in a mathematic expression
- Balance equations and inequalities using inverse operations
- Solve equations and inequalities for a variable

Lesson 1: Solving Two-Step Equations

Objectives:
- Solve two-step equations
- Use two-step equations to solve problems

Objectives derived from Pearson Education, Inc. © Pearson Education, Inc., publishing as Pearson Prentice Hall. All rights reserved.

Lesson 2: Simplifying Algebraic Expressions
Objectives:
- Simplify algebraic expressions by combining like terms

**Lesson 3: Solving Multi-Step Equations (two-day lesson)**

Objectives:
- Write and solve multi-step equations

Objectives derived from Pearson Education, Inc. © Pearson Education, Inc., publishing as Pearson Prentice Hall. All rights reserved.

**Lesson 4: Variables on Both Sides (two-day lesson)**

Objectives:
- Write and solve equations with variables on both sides

Objectives derived from Pearson Education, Inc. © Pearson Education, Inc., publishing as Pearson Prentice Hall. All rights reserved.

**Lesson 5: Transforming Equations (two-day lesson)**

Objectives:
- Transform equations into simpler forms to determine the number of solutions

**Lesson 6: Graphing and Solving Inequalities**

Objectives:
- Write and solve inequalities

Objectives derived from Pearson Education, Inc. © Pearson Education, Inc., publishing as Pearson Prentice Hall. All rights reserved.

**Lesson 7: Solving Inequalities by Multiplying or Dividing (two-day lesson)**

Objectives:
- Solve inequalities by multiplication and division

**Lesson 8: Equations and Inequalities Unit Review (two-day lesson)**

Objectives:
- Review materials within this unit

**Lesson 9: Equations and Inequalities Unit Test**
ESSENTIAL
ALGEBRA READINESS B
Essential Algebra Readiness (Pre-Algebra) B

This is the second of two courses that comprise Essential Algebra Readiness (Pre-Algebra). In this course, the student will explore basic algebraic principles. The student will examine and evaluate two-step and multi-step equations and inequalities and then explore and use graphs to solve linear relations and functions. Next, the student will be introduced to basic concepts of geometry including angle relationships, parallel lines, polygons, circles, and transformations. The student will also apply his knowledge of geometry and algebra to solve area and volume problems. Then the student will explore nonlinear functions and polynomials. Finally, the student will examine properties of right triangles, data analysis, and probability.

Unit 1: Geometry

In this unit, you will learn to classify polygons based upon their sides and angles, and perform computations using related angles and parallel lines. In addition, you will find the area of common figures and the circumference of circles. Finally, you will use basic geometry tools to construct angles and parallel lines.

Objectives:
- Classify a polygon based upon its sides and angles
- Identify and use congruent figures
- Calculate the area of figures and circumference of circles

Lesson 1: Pairs of Angles

Objectives:
- Explore and classify angles
- Determine angle measures based on angle relationships

Lesson 2: Parallel Lines and Angles

Objectives:
- Identify parallel lines
- Identify the types of angles formed by a transversal
- Find the measures of angles formed by parallel lines

Lesson 3: Congruent Polygons (two-day lesson)

Objectives:
- Determine if figures are congruent or similar to one another
- Describe a sequence of transformations for congruent and similar figures

Lesson 4: Classifying Polygons

Objectives:
- Classify certain polygons

Lesson 5: Polygons and Angles

Objectives:
- Classify polygons
- Find the interior angle measure of polygons

Lesson 6: Area of Polygons

Objectives:
- Find the area of parallelograms, triangles, and trapezoids

Lesson 7: Area and Circumference of Circles

Objectives:
- Calculate the circumference and area of circles
- Calculate the area of an irregular figure

Objectives derived from Pearson Education, Inc. © Pearson Education, Inc., publishing as Pearson Prentice Hall. All rights reserved.
Lesson 8: Geometric Constructions

Objectives:
• Perform geometric constructions

Lesson 9: Geometry Unit Review (two-day lesson)

Objectives:
• Prepare for the unit test

Lesson 10: Geometry Unit Test

Unit 2: Measurement

This unit focuses on the skills of calculating surface area and volume. By the end of the unit, you will be able to calculate the exact surface area and volumes of specific 3-D figures that are based upon rectangles and circles, including spheres. You will display your knowledge at the end in a portfolio project by finding, measuring, and calculating the surface area and volume of two items you probably already have at home.

Objectives:
• Identify solids and their parts
• Calculate the surface area and volume of cylinders, prisms, cones, pyramids, and spheres
• Determine how a change in one dimension affects changes in surface area and volume

Lesson 1: Polyhedrons, 3-D Figures, and Solids

Objectives:
• Identify solids, parts of solids, and skewed line segments

Objectives derived from Pearson Education, Inc. © Pearson Education, Inc., publishing as Pearson Prentice Hall. All rights reserved.

Lesson 2: 3-D Views

Objectives:
• Draw 3-D figures, base plans, and isometric views

Objectives derived from Pearson Education, Inc. © Pearson Education, Inc., publishing as Pearson Prentice Hall. All rights reserved.

Lesson 3: 3-D Figures and Nets

Objectives:
• Identify nets of solids

Objectives derived from Pearson Education, Inc. © Pearson Education, Inc., publishing as Pearson Prentice Hall. All rights reserved.

Lesson 4: Surface Areas of Prisms and Cylinders (two-day lesson)

Objectives:
• Find surface area of prisms and cylinders using nets and formulas

Objectives derived from Pearson Education, Inc. © Pearson Education, Inc., publishing as Pearson Prentice Hall. All rights reserved.

Lesson 5: Surface Areas of Pyramids and Cones (two-day lesson)

Objectives:
• Find surface area of pyramids and cones using nets and formulas

Objectives derived from Pearson Education, Inc. © Pearson Education, Inc., publishing as Pearson Prentice Hall. All rights reserved.

Lesson 6: Using Pythagorean Theorem with 3-D Figures

Objectives:
• Apply the Pythagorean Theorem in three-dimensional figures

Lesson 7: Volumes of Prisms and Cylinders (two-day lesson)

Objectives:
Lesson 8: Volumes of Pyramids and Cones (two-day lesson)

Objectives:
- Calculate the volume of pyramids and cones

Lesson 9: Spheres

Objectives:
- Find the surface area and volume of a sphere

Lesson 10: Similar Solids

Objectives:
- Apply proportional reasoning to find the missing measurement in similar solids

Lesson 11: Surface Area & Volume in the Real World (two-day lesson)

Objectives:
- Calculate the surface area and volume (in appropriate units) of three-dimensional objects found in the home, such as a can of food, box of tissues, shoebox, etc.

Lesson 12: Measurement Unit Review

Objectives:
- Review previously studied material

Lesson 13: Measurement Unit Test

Unit 3: Using Graphs to Analyze Data

In this unit of the course, you will examine, analyze and construct scatter plots and tables. With these skills, you will be able to roughly predict the strength and direction of a pattern of association between two things. You will also find measures of central tendency, and determine which graph and measure of central tendency best represents a data set.

Objectives:
- Calculate the mean, median, and mode of a data set, and explain the best use of each
- Determine the best type of graph to display a data set
- Identify patterns of association—indicating strength and direction—of two factors, and make predictions based upon a scatter plot

Lesson 1: Measures of Center

Objectives:
- Compute mean, median, mode, range, and select appropriate measure of tendency

Lesson 2: Frequency

Objectives:
- Utilize line plots, frequency tables, and histograms to display data

Lesson 3: Venn Diagram

Objectives derived from Pearson Education, Inc. © Pearson Education, Inc., publishing as Pearson Prentice Hall. All rights reserved.
Objectives:
• Examine relationships between data with Venn diagrams

Lesson 4: Stem-and-Leaf Plots (two-day lesson)

Objectives:
• Represent and interpret data using stem-and-leaf plots

Lesson 5: Box-and-Whisker Plots (two-day lesson)

Objectives:
• Represent and interpret data using box-and-whisker plots

Lesson 6: Scatter Plots

Objectives:
• Create scatter plots and analyze trends to make predictions

Lesson 7: Bivariate Data (two-day lesson)

Objectives:
• Analyze bivariate data
• Describe patterns of association in bivariate data

Lesson 8: Modeling Data with Lines

Objectives:
• Examine data to determine accuracy of models

Lesson 9: Circle Graphs (two-day lesson)

Objectives:
• Interpret data using circle graphs
• Present data by creating circle graphs

Lesson 10: Choosing the Right Graph

Objectives:
• Choose the best graph to represent various data

Lesson 11: Relative Frequency (two-day lesson)

Objectives:
• Create and analyze data using a two-way table

Lesson 12: Using Graphs to Analyze Data Unit Review (two-day lesson)

Objectives:
• Review for unit test

Lesson 13: Using Graphs to Analyze Data Unit Test

Unit 4: Probability
In this unit of the course, you will find probabilities and odds of events. You will learn that events can be independent or dependent and that results of events may be used to make predictions about future events. You will learn the rules for calculating the numbers of ways objects can be arranged, depending on whether the order of the arrangement matters.

Objectives:
- Calculate odds and probabilities of dependent and independent events, and make predictions using those calculations
- Calculate permutations and combinations of sets of objects

**Lesson 1: Theoretical and Experimental Probability (two-day lesson)**

Objectives:
- Find theoretical probabilities, experimental probabilities, and odds

**Lesson 2: Independent and Dependent Events**

Objectives:
- Find the probabilities of independent and dependent events

**Lesson 3: Making Predictions**

Objectives:
- Make predictions based on theoretical and experimental probabilities

**Lesson 4: Permutations**

Objectives:
- Find the number of permutations of a set of objects

**Lesson 5: Combinations (two-day lesson)**

Objectives:
- Find the number of combinations of a set of objects using lists and combination notation

**Lesson 6: Probability Unit Review (two-day lesson)**

Objectives:
- Review to increase your probability of success on the unit test

**Lesson 7: Probability Unit Test**

**Unit 5: Functions**

This unit focuses on the concept of functions. By the end, you will be able to identify a function as an equation having one output for every input, and you will be able to graph linear and non-linear functions on a coordinate plane.

Objectives:
- Describe a sequence
- Identify and graph functions and determine slope and y-intercept
- Determine the solution of two functions by graphing

**Lesson 1: Sequences**

Objectives:
- Write rules for sequences and use the rules to find terms
Lesson 2: Relating Graphs and Events

Objectives:
- Interpret and sketch graphs that represent real-world situations

Objectives derived from Pearson Education, Inc. © Pearson Education, Inc., publishing as Pearson Prentice Hall. All rights reserved.

Lesson 3: Functions

Objectives:
- Identify functions
- Represent functions with equations, tables, and function notation

Objectives derived from Pearson Education, Inc. © Pearson Education, Inc., publishing as Pearson Prentice Hall. All rights reserved.

Lesson 4: Understanding the Slope

Objectives:
- Calculate slope of a line from different representations

Objectives derived from Pearson Education, Inc. © Pearson Education, Inc., publishing as Pearson Prentice Hall. All rights reserved.

Lesson 5: Slope and Similar Triangles (two-day lesson)

Objectives:
- Demonstrate that the slope between any two points on a line is the same
- Derive the equation for a line in slope-intercept form: \( y = mx + b \)

Objectives derived from Pearson Education, Inc. © Pearson Education, Inc., publishing as Pearson Prentice Hall. All rights reserved.

Lesson 6: Graphing Linear Functions

Objectives:
- Use tables and equations to graph linear functions

Objectives derived from Pearson Education, Inc. © Pearson Education, Inc., publishing as Pearson Prentice Hall. All rights reserved.

Lesson 7: Graphing Proportional Relationships (two-day lesson)

Objectives:
- Graph proportional relationships
- Explore the relationship between the slope of a line on a graph and unit rate

Objectives derived from Pearson Education, Inc. © Pearson Education, Inc., publishing as Pearson Prentice Hall. All rights reserved.

Lesson 8: Writing Rules for Linear Functions

Objectives:
- Write function rules from words, tables, and graphs

Objectives derived from Pearson Education, Inc. © Pearson Education, Inc., publishing as Pearson Prentice Hall. All rights reserved.

Lesson 9: Solving Systems of Equations (two-day lesson)

Objectives:
- Solve systems of equations by graphing and by substitution

Objectives derived from Pearson Education, Inc. © Pearson Education, Inc., publishing as Pearson Prentice Hall. All rights reserved.

Lesson 10: Nonlinear Functions

Objectives:
- Graph and write quadratic functions and other nonlinear functions

Objectives derived from Pearson Education, Inc. © Pearson Education, Inc., publishing as Pearson Prentice Hall. All rights reserved.

Lesson 11: Comparing Functions

Objectives:
Lesson 12: Functions Unit Review (two-day lesson)

Objectives:
• Review for unit test

Lesson 13: Functions Unit Test

Unit 6: Polynomials and Properties of Exponents

In this final unit, you will be working with expressions called polynomials. By the end, you will be able to add, subtract, and multiply these expressions. You will also simplify powers and use negative and zero exponents.

Objectives:
• Add, subtract, and multiply polynomials
• Multiply and divide powers with the same base, including numbers in scientific notation

Lesson 1: Polynomials

Objectives:
• Write algebraic expressions and simplify polynomials

Lesson 2: Adding and Subtracting Polynomials

Objectives:
• Add and subtract polynomials

Lesson 3: Exponents and Multiplication (two-day lesson)

Objectives:
• Multiply powers with the same base
• Multiply numbers in scientific notation

Lesson 4: Multiplying Polynomials

Objectives:
• Multiply monomials and binomials

Lesson 5: Exponents and Division

Objectives:
• Divide powers with the same base
• Simplify the expressions with negative exponents

Lesson 6: Polynomials and Properties of Exponents Review (two-day lesson)

Objectives:
• Review problems and terms

Lesson 7: Polynomials and Properties of Exponents Unit Test
ALGEBRA 1 A
Algebra 1 A

This course is the first of two that comprise Algebra 1. In this course, the student will gain a foundational understanding of the real number system, expressions, equations, and inequalities. The student will be taught to solve simple and multi-step equations and inequalities and represent those solutions graphically. In addition, students will explore linear or nonlinear functions and represent those functions on the coordinate plane. Finally, the student will solve systems of equations and inequalities and represent those solutions graphically.

Throughout the course, problem solving, critical thinking, and real-world application of mathematical concepts will be required.

Unit 1: Foundations for Algebra

In this unit, you will be provided with a general introduction to Algebra 1 by reviewing many concepts from previous math courses including variables, expressions, and real-number operations. This unit provides you with a solid foundation for the remainder of Algebra 1. You will complete a unit portfolio project in which you will apply your knowledge of using variables to represent unknown and variable quantities, and writing expressions and equations.

Objectives:
• Write and simplify expressions
• Graph, order, and compare real numbers on a number line
• Use properties of real numbers to simplify expressions
• Add, subtract, multiply, and divide real numbers

Lesson 1: Variables and Expressions

Objectives:
• Write algebraic expressions

Lesson 2: Order of Operations and Evaluating Expressions

Objectives:
• Simplify expressions involving exponents
• Use the order of operations to evaluate expressions

Lesson 3: Real Numbers and the Number Line

Objectives:
• Classify, graph, and compare real numbers
• Find and estimate square roots

Lesson 4: Properties of Real Numbers

Objectives:
• Identify and use properties of real numbers, including Associative Properties of Addition and Multiplication, Commutative Properties of Addition and Multiplication, Identity Properties of Addition and Multiplication, and Zero Property of Multiplication

Lesson 5: Adding and Subtracting Real Numbers

Objectives:
• Find sums and differences of real numbers
Lesson 6: Multiplying and Dividing Real Numbers

Objectives:
- Find products and quotients of real numbers

Lesson 7: The Distributive Property

Objectives:
- Use the Distributive Property to simplify expressions

Lesson 8: Foundations for Algebra Unit Review

Objectives:
- Decide which strategies you will use to prepare for your exam
- Organize your time and study

Lesson 9: Unit Test: Unit 1 Foundations for Algebra

Objectives:
- Demonstrate understanding of Unit 1 concepts

Unit 2: Solving Equations

In this unit, you will learn how to solve problems using a variety of problem-solving strategies including tables, graphs, and equations. This unit also includes instruction on solving one, two, or multi-step equations, a skill that is essential to your learning of higher-level mathematics. You will complete a variety of assessments in this unit, including Quick Checks, quizzes, and a unit test.

Objectives:
- Use tables and graphs to solve a problem
- Solve equations with one, two, or multiple steps
- Solve equations with variables on both sides
- Solve equations and formulas for a given variable, using them in real-world scenarios

Lesson 1: Introduction to Equations

Objectives:
- Solve equations using tables and mental math

Lesson 2: Patterns, Equations, and Graphs (two-day lesson)

Objectives:
- Use tables, equations, and graphs to describe relationships

Lesson 3: Solving One-Step Equations

Objectives:
- Solve one-step equations with one variable

Lesson 4: Solving Two-Step Equations

Objectives:
- Solve two-step equations with one variable

Lesson 5: Solving Multi-Step Equations (two-day lesson)

Objectives:
Lesson 6: Solving Equations with Variables on Both Sides (two-day lesson)

Objectives:
• Solve equations with variables on both sides
• Identify equations that are identities or have no solution

Lesson 7: Literal Equations and Formulas (two-day lesson)

Objectives:
• Rewrite and use literal equations and formulas

Lesson 8: Solving Equations Unit Review

Objectives:
• Decide which strategies you will use to prepare for your exam
• Organize your time and study materials
• Review your notes, Key Words, formulas, and all important concepts that may be covered on this exam

Lesson 9: Solving Equations Unit Test

Unit 3: Solving Inequalities

In this unit, you will learn how to solve inequalities that require one or more steps. You will also learn how to graph the solutions to inequalities on the number line. Finally, you will explore absolute value equations.

Objectives:
• Solve inequalities with one, two, or multiple steps
• Graph the solutions to inequalities on the number line
• Solve and graph absolute value equations and inequalities

Lesson 1: Graphing Inequalities

Objectives:
• Write, graph, and identify solutions of inequalities

Lesson 2: Solving Inequalities Using Addition or Subtraction

Objectives:
• Use addition or subtraction to solve inequalities

Lesson 3: Solving Inequalities Using Multiplication/Division

Objectives:
• Use multiplication or division to solve inequalities

Lesson 4: Solving Multi-Step Inequalities (two-day lesson)

Objectives:
• Solve multi-step inequalities
Lesson 5: Compound Inequalities (two-day lesson)

Objectives:
- Solve and graph inequalities containing the word and
- Solve and graph inequalities containing the word or

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 6: Absolute Value Equations and Inequalities (three-day lesson)

Objectives:
- Solve equations and inequalities involving absolute value

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 7: Solving Inequalities Unit Review

Objectives:
- Decide which strategies you will use to prepare for your exam
- Organize your time and study materials
- Review your notes, keywords, formulas, and all important concepts that may be covered on this exam

Lesson 8: Unit 3 Test

Unit 4: Introduction to Functions

In this unit, you will explore functions and their applications. You will be introduced to the characteristics of a function and learn to compare linear and nonlinear functions. You will also graph functions on the coordinate plane and write functions given their graph. Functions are an important part of algebra because they lay a foundation for understanding higher-level mathematics problems that depend on your understanding of the characteristics of functions.

Objectives:
- Write, graph, and identify the solutions to inequalities
- Represent mathematical relationships using graphs
- Identify linear and nonlinear functions
- Graph functions on the coordinate plane
- Write equations to represent a function

Lesson 1: Using Graphs to Relate Two Quantities (two-day lesson)

Objectives:
- Represent mathematical relationships using graphs

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 2: Formalizing Relations and Functions (two-day lesson)

Objectives:
- Determine whether a relation is a function
- Find domain and range and use function notation

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 3: Patterns and Linear Functions (two-day lesson)

Objectives:
- Identify and represent patterns that describe linear functions

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 4: Patterns and Nonlinear Functions (two-day lesson)

Objectives:
- Identify and represent patterns that describe nonlinear functions

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.
Lesson 5: Graphing a Function Rule (two-day lesson)  
Objectives:  
- Graph equations that represent functions

Lesson 6: Writing a Function Rule (two-day lesson)  
Objectives:  
- Write equations that represent functions

Lesson 7: Sequences and Functions (two-day lesson)  
Objectives:  
- Identify and extend patterns in sequences
- Represent arithmetic sequences using function notation

Lesson 8: Introduction to Functions Unit Review  
Objectives:  
- Decide which strategies you will use to prepare for your exam
- Organize your time and study materials
- Review your notes, Key Words, formulas, and all important concepts that may be covered on this exam

Lesson 9: Unit 4 Test  

Lesson 5: Linear Functions  
In this unit, you will learn how to use several types of linear equations, including slope-intercept, point-slope, and standard forms. You will use slope to compare parallel and perpendicular lines and explore relationships between these types of lines.

Objectives:  
- Write linear equations in standard form, point-slope form, and slope-intercept form
- Find slope and x- and y-intercepts
- Write equations of parallel and perpendicular lines
- Write equations to represent direct variation
- Graph linear equations, equations of direct variations, and horizontal and vertical translations

Lesson 1: Rate of Change and Slope (two-day lesson)  
Objectives:  
- Find rates of change from tables
- Find slope

Lesson 2: Direct Variation (two-day lesson)  
Objectives:  
- Write and graph an equation of a direct variation

Lesson 3: Slope-Intercept Form (two-day lesson)  
Objectives:  
- Write linear equations using slope-intercept form
- Graph linear equations in slope-intercept form
Lesson 4: Point-Slope Form (two-day lesson)

Objectives:
- Write and graph linear equations using point-slope form

Lesson 5: Standard Form (two-day lesson)

Objectives:
- Graph linear equations using intercepts
- Write linear equations in standard form

Lesson 6: Parallel and Perpendicular Lines (two-day lesson)

Objectives:
- Determine whether lines are parallel, perpendicular, or neither
- Write equations of parallel lines and perpendicular lines

Lesson 7: Linear Functions Unit Review

Objectives:
- Decide which strategies you will use to prepare for your exam
- Organize your time and study materials
- Review your notes, Key Words, formulas, and all important concepts that may be covered on this exam

Lesson 8: Linear Functions Unit Test

Unit 6: Systems of Equations and Inequalities

In this unit, you will apply what you know about linear equations and inequalities to systems of linear equations or inequalities. You will solve systems of linear equations by graphing, substitution, or elimination. You will graph linear inequalities and solve systems of two linear equalities. Finally, you will apply these topics to solve real-world scenarios.

Objectives:
- Solve systems of linear equations by graphing
- Solve systems of linear equations by elimination
- Solve systems of linear equations by substitution
- Determine which method to use when solving a system of linear equations

Lesson 1: Solving Systems by Graphing (two-day lesson)

Objectives:
- Analyze special systems
- Solve systems of equations by graphing

Lesson 2: Solving Systems Using Substitution (three-day lesson)

Objectives:
- Solve systems of equations using substitution

Lesson 3: Solving Systems Using Elimination (three-day lesson)

Objectives:
- Solve systems by adding or subtracting to eliminate a variable
Lesson 4: Applications of Linear Systems (three-day lesson)

Objectives:
- Choose the best method for solving a system of linear equations

Lesson 5: Linear Inequalities (two-day lesson)

Objectives:
- Solve systems of linear inequalities by graphing
- Model real-world situations using systems of linear inequalities

Lesson 6: Systems of Linear Inequalities (three-day lesson)

Objectives:
- Solve systems of linear inequalities
- Model real-world situations using systems of linear inequalities

Lesson 7: Systems of Equations and Inequalities Unit Review

Objectives:
- Decide which strategies you will use to prepare for your exam
- Organize your time and study materials
- Review your notes, key words, formulas, and all important concepts that may be covered in this exam

Lesson 8: Unit 6 Test

Unit 7: Algebra 1 A Semester Exam

In this unit, you will have the opportunity to prepare for and take the semester exam. Since this is a comprehensive exam, it may be helpful to organize your notes in the order of the course outline before you begin to review. Using the test-taking strategies that you have previously learned can help you be successful with both objective and essay questions.

Lesson 1: Algebra 1 A Semester Review (two-day lesson)

Objectives:
- Decide which strategies you will use to prepare for your exam
- Organize your time and study materials
- Review your notes, keywords and vocabulary terms, and all important concepts that may be covered on this exam

Lesson 2: Algebra 1 A Semester Exam
ALGEBRA 1 A, PART 1
Algebra 1 A, Part 1

This course includes the first half of the Algebra 1 A course content. In this course, the student will gain a foundational understanding of the real number system, expressions, equations, and inequalities. The student will solve simple and multi-step equations and inequalities and represent those solutions graphically.

There are many opportunities for review and reflection in the course and the student is encouraged to monitor progress with the course content. Throughout the course, problem solving, critical thinking, and real-world application of mathematical concepts will be required.

Unit 1: Ready, Set, Algebra

In this unit, you will focus on new ways to think about and approach mathematics. You will learn how to set SMART goals, establish study strategies that reduce math anxiety, and review ways to be an active learner. In addition, this unit introduces the various resources that are available to you in your Algebra 1 course.

Objectives:
- Use strategies such as self-assessment and reflection in order to improve mathematical performance
- Distinguish between effort-based and ability-based models of learning
- Assess personal readiness for study and learning
- Use resources to assist with goal-setting and attainment

Lesson 1: Preparation for Success

Objectives:
- Examine organizational skills and learning strategies
- Set goals in the context of mathematical learning
- Reflect on strengths, weaknesses, and the value of goal-setting
- Distinguish between effort-based and ability-based models of learning

Lesson 2: Be Your Own Best Resource

Objectives:
- Identify the various resources that you can use in the course
- Discuss strategies for using resources effectively

Unit 2: Foundations for Algebra

This unit provides you with a solid foundation for the remainder of the Algebra 1 course. In this unit, you will begin with a review of many concepts from previous math courses, including variables, expressions, and real-number operations.

Objectives:
- Write and simplify expressions
- Graph, order, and compare real numbers on a number line
- Use properties of real numbers to simplify expressions
- Add, subtract, multiply, and divide real numbers

Lesson 1: Variables and Expressions (two-day lesson)

Objectives:
- Write algebraic expressions

Lesson 2: Order of Operations and Evaluating Expressions (two-day lesson)

Objectives:
- Simplify expressions involving exponents
- Use the order of operations to evaluate expressions
Lesson 3: Real Numbers and the Number Line (two-day lesson)

Objectives:
- Classify, graph, and compare real numbers
- Find and estimate square roots

Objectives derived from Pearson Education, Inc. © Pearson Education, Inc., publishing as Pearson Prentice Hall. All rights reserved.

Lesson 4: Properties of Real Numbers (two-day lesson)

Objectives:
- Identify and use properties of real numbers, including Associative Properties of Addition and Multiplication, Commutative Properties of Addition and Multiplication, Identity Properties of Addition and Multiplication, and Zero Property of Multiplication

Objectives derived from Pearson Education, Inc. © Pearson Education, Inc., publishing as Pearson Prentice Hall. All rights reserved.

Lesson 5: Mid-Unit Review (two-day lesson)

Objectives:
- Review concepts from Lessons 1–4 of the Foundations for Algebra unit

Lesson 6: Adding and Subtracting Real Numbers (two-day lesson)

Objectives:
- Find sums and differences of real numbers

Objectives derived from Pearson Education, Inc. © Pearson Education, Inc., publishing as Pearson Prentice Hall. All rights reserved.

Lesson 7: Multiplying and Dividing Real Numbers (two-day lesson)

Objectives:
- Find products and quotients of real numbers

Objectives derived from Pearson Education, Inc. © Pearson Education, Inc., publishing as Pearson Prentice Hall. All rights reserved.

Lesson 8: The Distributive Property (two-day lesson)

Objectives:
- Use the Distributive Property to simplify expressions

Objectives derived from Pearson Education, Inc. © Pearson Education, Inc., publishing as Pearson Prentice Hall. All rights reserved.

Lesson 9: Foundations for Algebra Unit Review (two-day lesson)

Objectives:
- Decide which strategies you will use to prepare for your exam
- Organize your time and study

Lesson 10: Foundations for Algebra Unit Test

Objectives:
- Demonstrate understanding of Unit 1 concepts

Unit 3: Solving Equations

In this unit, you will learn how to solve problems using a variety of problem-solving strategies, including tables, graphs, and equations. This unit also includes instruction on solving one-, two-, or multi-step equations, a skill that is essential to learning higher-level mathematics. You will complete a variety of assessments in this unit, including Quick Checks, quizzes, and a unit test.

Objectives:
- Use tables and graphs to solve a problem
- Solve equations with one, two, or multiple steps
- Solve equations with variables on both sides
- Solve equations and formulas for a given variable, using them in real-world scenarios

Lesson 1: Introduction to Equations (two-day lesson)
Objectives:
• Solve equations using tables and mental math

Lesson 2: Patterns, Equations, and Graphs (two-day lesson)
Objectives:
• Use tables, equations, and graphs to describe relationships

Lesson 3: Solving One-Step Equations (two-day lesson)
Objectives:
• Solve one-step equations in one variable

Lesson 4: Solving Two-Step Equations (two-day lesson)
Objectives:
• Solve two-step equations in one variable

Lesson 5: Mid-Unit Review (two-day lesson)
Objectives:
• Review concepts from Lessons 1–4 of the Solving Equations unit

Lesson 6: Solving Multi-Step Equations (two-day lesson)
Objectives:
• Solve multi-step equations in one variable

Lesson 7: Solving Equations with Variables on Both Sides
Objectives:
• Solve equations with variables on both sides
  • Identify equations that are identities or have no solution

Lesson 8: Literal Equations and Formulas (two-day lesson)
Objectives:
• Rewrite and use literal equations and formulas

Lesson 9: Solving Equations Unit Review (two-day lesson)
Objectives:
• Decide which strategies you will use to prepare for your exam
  • Organize your time and study materials
  • Review your notes, Key Words, formulas, and all important concepts that may be covered on this exam

Lesson 10: Solving Equations Unit Test

Unit 4: Solving Inequalities
In this unit, you will learn how to solve inequalities that require one or more steps. You will also learn how to graph the solutions to inequalities on the number line. Set notation will be introduced as a tool for expressing the solutions to inequalities. Finally, you will explore absolute value equations and inequalities, and the union and intersection of sets.

Objectives:
• Solve inequalities with one, two, or multiple steps
  • Graph the solutions to inequalities on the number line
  • Use set notation to express the solutions to inequalities
  • Solve and graph absolute value equations and inequalities
  • Find the intersection, union, and complements of sets
Lesson 1: Graphing Inequalities (two-day lesson)

Objectives:
- Write, graph, and identify solutions of inequalities

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 2: Solving Inequalities Using Addition or Subtraction (two-day lesson)

Objectives:
- Use addition or subtraction to solve inequalities

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 3: Solving Inequalities by Multiplying and Dividing (two-day lesson)

Objectives:
- Use multiplication or division to solve inequalities

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 4: Solving Multi-Step Inequalities (two-day lesson)

Objectives:
- Solve multi-step inequalities

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 5: Mid-Unit Review (two-day lesson)

Objectives:
- Review concepts from Lessons 1–4 of the Solving Inequalities unit

Lesson 6: Working with Sets (two-day lesson)

Objectives:
- Write sets and identify subsets
- Find the complement of a set

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 7: Compound Inequalities (two-day lesson)

Objectives:
- Solve and graph inequalities containing the word "and"
- Solve and graph inequalities containing the word "or"

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 8: Absolute Value Equations and Inequalities (three-day lesson)

Objectives:
- Solve equations and inequalities involving absolute value

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 9: Unions and Intersections of Sets (two-day lesson)

Objectives:
- Find the unions and intersections of sets

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 10: Solving Inequalities Review (two-day lesson)

Objectives:
- Decide which strategies you will use to prepare for your exam.
• Organize your time and study materials.
• Review your notes, keywords, formulas, and all important concepts that may be covered on this exam.

Lesson 11: Solving Inequalities Unit Test

Unit 5: Semester Review and Exam

In this unit, you will have the opportunity to prepare for and take the semester exam. Since this is a comprehensive exam, it may be helpful to organize your notes in the order of the course outline before you begin to review. Using the test-taking strategies that you have previously learned can help you be successful with both objective and essay questions.

Lesson 1: Algebra 1 A, Part 1 Review (two-day lesson)

Objectives:
• Decide which strategies you will use to prepare for your exam
• Organize your time and study materials
• Review your notes, key words and vocabulary terms, formulas, and all important concepts that may be covered on this exam

Lesson 2: Semester Exam
ALGEBRA 1 A, PART 2
Algebra 1 A, Part 2

This course includes the second half of the Algebra 1 A course content. In this course, the student will study functions that are either linear or nonlinear in nature and represent those functions on the coordinate plane. Also, the student will solve systems of equations and inequalities and represent those solutions graphically.

There are many opportunities for review and reflection in the course and the student is encouraged to monitor progress with the course content. Throughout the course, problem solving, critical thinking, and real-world application of mathematical concepts will be required.

Unit 1: Introduction to Functions

In this unit, you will explore functions and their applications. You will be introduced to the characteristics of a function and be able to compare linear and nonlinear functions. You will also graph functions on a coordinate plane and write functions given their graph. Functions are an important part of algebra because they lay a foundation for understanding higher-level mathematics problems that depend on your understanding of the characteristics of functions.

Objectives:
- Write, graph, and identify the solutions to inequalities
- Represent mathematical relationships using graphs
- Identify linear and nonlinear functions
- Graph functions on the coordinate plane
- Write equations to represent a function

Lesson 1: Using Graphs to Relate Two Quantities (two-day lesson)

Objectives:
- Represent mathematical relationships using graphs

Lesson 2: Patterns and Linear Functions (two-day lesson)

Objectives:
- Identify and represent patterns that describe linear functions

Lesson 3: Patterns and Nonlinear Functions (two-day lesson)

Objectives:
- Identify and represent patterns that describe nonlinear functions

Lesson 4: Mid-Unit Review (two-day lesson)

Objectives:
- Review concepts from the first three lessons of the Introduction to Functions unit

Lesson 5: Graphing a Function Rule (two-day lesson)

Objectives:
- Graph equations that represent functions

Lesson 6: Writing a Function Rule (two-day lesson)

Objectives:
- Write equations that represent functions
Lesson 7: Formalizing Relations and Functions (two-day lesson)

Objectives:
- Determine whether a relation is a function
- Find domain and range and use function notation
- Find the inverse of a function

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 8: Sequences and Functions (two-day lesson)

Objectives:
- Identify and extend patterns in sequences
- Represent arithmetic sequences using function notation

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 9: Introduction to Functions Unit Review (two-day lesson)

Objectives:
- Decide which strategies you will use to prepare for your exam
- Organize your time and study materials
- Review your notes, keywords, formulas, and all important concepts that may be covered on this exam

Lesson 10: Functions Unit Test

Unit 2: Linear Functions

In this unit, you will learn how to use several types of linear equations, including slope-intercept, point-slope, and standard forms. You will use slope to compare parallel and perpendicular lines, and you will explore relationships between those types of lines. You will also graph and translate absolute value functions on the coordinate plane. You will also analyze scatter plots and fit regression lines to the data points.

Objectives:
- Write linear equations in standard form, point-slope form, and slope-intercept form
- Write equations of parallel and perpendicular lines
- Write equations to represent direct variation
- Graph linear equations, equations of direct variations, absolute value functions, and horizontal and vertical translations
- Describe the direction and strength of the relationship between two variables on a scatter plot

Lesson 1: Rate of Change and Slope (two-day lesson)

Objectives:
- Find rates of change from tables
- Find slope

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 2: Direct Variation (two-day lesson)

Objectives:
- Write and graph an equation of a direct variation

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 3: Slope-Intercept Form (two-day lesson)

Objectives:
- Write linear equations using slope-intercept form
- Graph linear equations in slope-intercept form

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 4: Point Slope Form (two-day lesson)
Objectives:
- Write and graph linear equations using point-slope form

Lesson 5: Mid-Unit Review (two-day lesson)

Objectives:
- Review concepts from Lessons 1–4

Lesson 6: Standard Form (two-day lesson)

Objectives:
- Graph linear equations using intercepts
- Write linear equations in standard form

Lesson 7: Parallel and Perpendicular Lines (two-day lesson)

Objectives:
- Determine whether lines are parallel, perpendicular, or neither
- Write equations of parallel lines and perpendicular lines

Lesson 8: Graphing Absolute Value Functions (two-day lesson)

Objectives:
- Graph an absolute value function
- Translate the graph of an absolute value function

Lesson 9: Scatter Plots and Regression Lines (two-day lesson)

Objectives:
- Describe the direction and strength of the relationship between two variables on a scatter plot
- Make predictions about a data set and evaluate the reliability of predictions

Lesson 10: Linear Functions Unit Review (two-day lesson)

Objectives:
- Decide which strategies you will use to prepare for your exam
- Organize your time and study materials
- Review your notes, Key Words, formulas, and all important concepts that may be covered on this exam

Lesson 11: Linear Functions Unit Test

Unit 3: Systems of Equations and Inequalities

In this unit, you will apply what you know about linear equations and inequalities to systems of linear equations or inequalities. You will solve systems of linear equations using different methods including graphing, substituting, and eliminating. You will graph linear inequalities and solve systems of two linear equalities. Finally, you will apply these topics to solve real-world scenarios.

Objectives:
- Solve systems of linear equations by graphing
- Solve systems of linear equations by elimination
- Solve systems of linear equations by substitution
- Graph linear inequalities and systems of linear inequalities

Lesson 1: Solving Systems by Graphing (two-day lesson)
Lesson 2: Solving Systems Using Substitution (two-day lesson)

Objectives:
- Solve systems of equations using substitution

Lesson 3: Solving Systems Using Elimination (two-day lesson)

Objectives:
- Solve systems by adding or subtracting to eliminate a variable

Lesson 4: Applications of Linear Systems (two-day lesson)

Objectives:
- Choose the best method for solving a system of linear equations

Lesson 5: Mid-Unit Review (two-day lesson)

Objectives:
- Review material from Lessons 1–4

Lesson 6: Linear Inequalities (two-day lesson)

Objectives:
- Solve systems of linear inequalities by graphing
- Model real-world situations using systems of linear inequalities

Lesson 7: Systems of Linear Inequalities (two-day lesson)

Objectives:
- Solve systems of linear inequalities
- Model real-world situations using systems of linear inequalities

Lesson 8: Systems of Equations and Inequalities Unit Review (two-day lesson)

Objectives:
- Decide which strategies you will use to prepare for your exam
- Organize your time and study materials
- Review your notes, keywords, formulas, and all important concepts that may be covered on this exam

Lesson 9: Systems of Equations and Inequalities Unit Test

Unit 4: Semester Review and Exam

In this unit, you will have the opportunity to prepare for and take the semester exam. Since this is a comprehensive exam, it may be helpful to organize your notes in the order of the course outline before you begin to review. Using the test-taking strategies that you have previously learned will help you to be successful with both the objective and essay questions.

Lesson 1: Algebra 1 A, Part 2 Review (two-day lesson)

Objectives:
- Decide which strategies you will use to prepare for your exam
• Organize your time and study materials
• Review your notes, key words and vocabulary terms, formulas, and all important concepts that may be covered on this exam

Lesson 2: Algebra 1 A Semester Exam
ALGEBRA 1 B
Algebra 1 B

This course is the second part of a two-part sequence covering Algebra 1. The student will use their knowledge of real number operations, expressions, equations, inequalities, and functions to solve algebra concepts. This course will introduce the student to exponents and use those exponent rules to solve exponential functions. The student will learn how to identify and solve polynomial equations using a variety of methods including factoring. The student will also learn how to work with quadratic functions and equations and represent both of those on a coordinate plane. Students will work with and solve both radical and rational expressions and equations. Finally, the student will be introduced to statistics and learn to use data to apply to probability problems in theory and real-world scenarios.

Throughout the course, problem solving, critical thinking, and real-world application of mathematical concepts will be required.

Unit 1: Exponents and Exponential Functions

In this unit, you will learn about expressions involving exponents in several forms. You will learn about zero and negative exponents and use what you know about exponents to solve problems using standard and scientific notation. You will learn and apply the rules for multiplication and division of expressions involving exponents. Finally, you will evaluate exponential functions and use exponential functions to solve real-world problems of exponential growth and decay.

Objectives:
- Write numbers in scientific notation
- Define and use zero and negative exponents
- Apply rules for multiplying powers
- Apply the rules for dividing powers
- Use exponential functions to show growth or decay

Lesson 1: Zero and Negative Exponents (two-day lesson)

Objectives:
- Simplify expressions involving zero and negative exponents

Objectives derived from Pearson Education, Inc. © Pearson Education, Inc., publishing as Pearson Prentice Hall. All rights reserved.

Lesson 2: Scientific Notation (two-day lesson)

Objectives:
- Write numbers in scientific and standard notation
- Compare and order numbers using standard notation

Objectives derived from Pearson Education, Inc. © Pearson Education, Inc., publishing as Pearson Prentice Hall. All rights reserved.

Lesson 3: Multiplying Powers with the Same Base (two-day lesson)

Objectives:
- Multiply powers with the same base

Objectives derived from Pearson Education, Inc. © Pearson Education, Inc., publishing as Pearson Prentice Hall. All rights reserved.

Lesson 4: More Multiplication Properties of Exponents (two-day lesson)

Objectives:
- Raise a power to a power
- Raise a product to a power

Objectives derived from Pearson Education, Inc. © Pearson Education, Inc., publishing as Pearson Prentice Hall. All rights reserved.

Lesson 5: Division Properties of Exponents (two-day lesson)

Objectives:
- Divide powers with the same base
- Raise a quotient to a power

Objectives derived from Pearson Education, Inc. © Pearson Education, Inc., publishing as Pearson Prentice Hall. All rights reserved.
Lesson 6: Exponential Functions

Objectives:
- Evaluate and graph exponential functions

Objectives derived from Pearson Education, Inc. © Pearson Education, Inc., publishing as Pearson Prentice Hall. All rights reserved.

Lesson 7: Exponential Growth and Decay

Objectives:
- Model exponential growth or decay

Objectives derived from Pearson Education, Inc. © Pearson Education, Inc., publishing as Pearson Prentice Hall. All rights reserved.

Lesson 8: Exponents and Exponential Functions Unit Review

Objectives:
- Decide which strategies you will use to prepare for your exam
- Organize your time and study materials
- Review your notes, Key Words, formulas, and all important concepts that may be covered on this exam

Lesson 9: Exponents and Exponential Functions Unit Test

Unit 2: Polynomials and Factoring

In this unit, you will learn how to classify, add, and subtract polynomials. You will also learn to multiply polynomials and monomials, and how to factor polynomials using GCF. You will then find the squares of a binomial, the sum and difference of squares, the product of a sum and difference, and you will factor higher-degree polynomials.

Objectives:
- Classify, add, and subtract polynomials
- Multiply a monomial by a polynomial
- Factor a monomial from a polynomial
- Multiply two binomials or a binomial by a trinomial
- Find a square of a binomial

Lesson 1: Adding and Subtracting Polynomials (two-day lesson)

Objectives:
- Classify, add, and subtract polynomials

Objectives derived from Pearson Education, Inc. © Pearson Education, Inc., publishing as Pearson Prentice Hall. All rights reserved.

Lesson 2: Multiplying and Factoring Polynomials (two-day lesson)

Objectives:
- Multiply a monomial by a polynomial
- Factor a monomial from a polynomial

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 3: Multiplying Binomials (three-day lesson)

Objectives:
- Multiply two binomials or a binomial by a trinomial

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 4: Multiplying Special Cases (two-day lesson)

Objectives:
- Find a square of a binomial
- Find the product of a sum and a difference

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 5: Factoring x^2 + bx + c (two-day lesson)
Objectives:
• Factor trinomials in the form $x^2 + bx + c$

Lesson 6: Factoring $ax^2 + bx + c$ (two-day lesson)

Objectives:
• Factor trinomials of the form $ax^2 + bx + c$

Lesson 7: Factoring Special Cases (two-day lesson)

Objectives:
• Factor perfect-square trinomials and the differences of two squares

Lesson 8: Factoring by Grouping (two-day lesson)

Objectives:
• Factor perfect square trinomials and the differences of two squares

Lesson 9: Polynomials and Factoring Unit Review

Objectives:
• Decide which strategies you will use to prepare for your exam
• Organize your time and study materials
• Review your notes, Key Words, formulas, and all important concepts that may be covered on this exam

Lesson 10: Polynomials and Factoring Unit Test

Unit 3: Quadratic Functions and Equations

In this unit, you will learn how to work with quadratic functions and quadratic equations. You will learn to graph functions in several forms and solve both quadratic equations and quadratic functions. You will learn to simplify radicals and solve problems using radicals in expressions and equations. You will also learn to identify extraneous solutions to radical equations. These topics will be important foundational skills for your study of higher level mathematics.

Objectives:
• Graph quadratic functions of the form $y = ax^2$ and $y = ax^2 + c$
• Graph functions of the form $y = ax^2 + bx + c$
• Solve quadratic equations by graphing and using square roots and by factoring

Lesson 1: Quadratic Graphs and Their Properties (two-day lesson)

Objectives:
• Graph quadratic functions of the form $y = ax^2$ and $y = ax^2 + c$

Lesson 2: Quadratic Functions (two-day lesson)

Objectives:
• Graph quadratic functions of the form $y = ax^2 + bx + c$

Lesson 3: Solving Quadratic Equations (two-day lesson)

Objectives:
• Solve quadratic equations by graphing and using square roots
Lesson 4: Factoring to Solve Quadratic Equations (three-day lesson)

Objectives:
- Solve quadratic equations by factoring

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 5: The Quadratic Formula and the Discriminant (three-day lesson)

Objectives:
- Solve quadratic equations by using the quadratic formula

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 6: Simplifying Radicals (two-day lesson)

Objectives:
- Simplify radicals involving products and quotients

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 7: Solving Radical Equations (two-day lesson)

Objectives:
- Solve equations containing radicals
- Identify extraneous solutions

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 8: Quadratic Functions and Equations Unit Review

Objectives:
- Decide which strategies you will use to prepare for your exam
- Organize your time and study materials
- Review your notes, Key Words, formulas, and all important concepts that may be covered on this exam.

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 9: Quadratic Functions and Equations Unit Test

Unit 4: Rational Expressions and Functions

In this unit you will work with rational expressions and equations. To begin, you will learn to simplify rational expressions. Then, you will learn to multiply and divide rational expressions and polynomials. You will also learn to simplify complex fractions. You will learn to define inverse variations and compare direct and inverse variations, as well as graphing rational functions.

Objectives:
- Simplify rational expressions
- Multiply and divide rational expressions
- Simplify complex fractions
- Divide polynomials
- Add and subtract rational expressions

Lesson 1: Simplifying Rational Expressions (two-day lesson)

Objectives:
- Simplify rational expressions

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 2: Multiplying and Dividing Rational Expressions (two-day lesson)

Objectives:
- Multiply and divide rational expressions
Lesson 3: Dividing Polynomials (two-day lesson)

Objectives:
- Divide polynomials

Lesson 4: Adding and Subtracting Rational Expressions (two-day lesson)

Objectives:
- Add and subtract rational expressions

Lesson 5: Solving Rational Equations (two-day lesson)

Objectives:
- Solve rational equations and proportions

Lesson 6: Inverse Variation (two-day lesson)

Objectives:
- Write and graph equations for inverse operations
- Compare direct and inverse variations

Lesson 7: Graphing Rational Functions (two-day lesson)

Objectives:
- Graph rational functions

Lesson 8: Rational Expressions and Functions Unit Review

Objectives:
- Decide which strategies you will use to prepare for your exam
- Organize your time and study materials
- Review your notes, Key Words, formulas, and all important concepts that may be covered on this exam

Lesson 9: Rational Expressions and Functions Unit Test

Unit 5: Data Analysis and Probability

In this unit, you will explore data analysis and probability. You will work with various graphic representations of data including tables, histograms, box-and-whisker plots, and line graphs. Using data, you will explore measures of central tendency including mean, median, mode, and range. Finally, you will work with permutations, combinations, and independent and dependent events.

Objectives:
- Make and interpret frequency tables and histograms
- Find mean, median, mode, and range
- Make and interpret box-and-whisker plots

Lesson 1: Frequency and Histograms (two-day lesson)
Lesson 2: Measures of Central Tendency and Dispersion (two-day lesson)

Objectives:
- Find mean, median, mode, and range

Lesson 3: Box-and-Whisker Plots (two-day lesson)

Objectives:
- Find quartiles and percents
- Make and interpret box-and-whisker plots

Lesson 4: Samples and Surveys

Objectives:
- Classify data and analyze samples and surveys

Lesson 5: Permutations and Combinations (two-day lesson)

Objectives:
- Find permutations and combinations

Lesson 6: Theoretical and Experimental Probability (two-day lesson)

Objectives:
- Find theoretical and experimental probability

Lesson 7: Probability of Compound Events (two-day lesson)

Objectives:
- Find probabilities of mutually exclusive and overlapping events
- Find probabilities of independent and dependent events

Lesson 8: Data Analysis and Probability Unit Review

Objectives:
- Decide which strategies you will use to prepare for your exam
- Organize your time and study materials
- Review your notes, Key Words, formulas, and all important concepts that may be covered on this exam

Lesson 9: Data Analysis and Probability Unit Test

Unit 6: Semester B Exam and Review

This unit reviews concepts from Semester B of the Algebra 1 course. The unit begins with a review assignment that will help you recall topics from Units 1–6. You will also spend time utilizing the one-page review guides created at the end of each unit. These review guides contain key vocabulary, points to remember, and sample problems that you can rework. Practice opportunities from the textbook are included. The assessment is included at the conclusion of the unit in the form of the semester exam.

Lesson 1: Semester B Review (two-day lesson)

Lesson 2: Semester B Exam
ALGEBRA 1 B, PART 1
Algebra 1 B, Part 1

This course includes the first half of the Algebra 1 B course content. The course begins with a review of concepts and skills from Algebra 1 A. Then, the student will be introduced to operations involving exponents and then explore exponential functions. The student will learn how to identify and solve polynomial equations using a variety of methods including factoring. Lastly, the student will graph quadratic equations and solve them using a variety of methods, including the quadratic formula.

There are many opportunities for review and reflection in the course and the student is encouraged to monitor progress with the course content. Throughout the course, problem solving, critical thinking, and real-world application of mathematical concepts will be required.

Unit 1: Ready, Set, Algebra

In this unit, you will focus on new ways to think about and approach mathematics. You will learn how to set SMART goals, establish study strategies that reduce math anxiety, and review ways to be an active learner. In addition, this unit introduces the various resources that are available to you in your Algebra 1 course.

Objectives:
- Use strategies such as self-assessment and reflection in order to improve mathematical performance
- Distinguish between effort-based and ability-based models of learning
- Assess personal readiness for study and learning
- Use resources to assist with goal-setting and attainment

Lesson 1: Preparation for Success

Objectives:
- Examine organizational skills and learning strategies
- Set goals in the context of mathematical learning
- Reflect on strengths, weaknesses, and the value of goal-setting
- Distinguish between effort-based and ability-based models of learning

Lesson 2: Be Your Own Best Resource

Objectives:
- Identify the various resources that you can use in the course
- Discuss strategies for using resources effectively

Unit 2: Review of Algebra 1 A

In this unit, you will review the major concepts from Algebra 1A that are applicable to Algebra 1B. These include working with integers, order of operations, solving linear equations, working with linear functions, and graphing on a coordinate plane.

Objectives:
- Add and subtract integers
- Use the Order of Operations to simplify an expression
- Solve one-step, two-step, and multi-step equations
- Graph linear functions
- Solve systems of equations by graphing, substitution, and elimination

Lesson 1: Review of Foundations for Algebra (two-day lesson)

Objectives:
- Add and subtract integers
- Use the Order of Operations to simplify an expression
- Apply the Distributive Property

Lesson 2: Review of Solving Equations (two-day lesson)

Objectives:
- Solve one-step and two-step equations
- Solve equations with variables on both sides
Lesson 3: Review of Linear Functions (two-day lesson)

Objectives:
• Graph linear equations

Lesson 4: Review of Graphing and Systems of Equations (two-day lesson)

Objectives:
• Graph functions using the slope-intercept form
• Solve systems of equations by graphing
• Solve systems of equations by substitution
• Solve systems of equations by elimination

Lesson 5: Review of Algebra 1 A Quiz

Unit 3: Exponents and Exponential Functions

In this unit, you will learn about expressions involving exponents in several forms. These lessons include topics on zero and negative exponents, scientific notation, and a variety of lessons on different forms of simplifying problems with exponents. You will evaluate exponential functions and use them to solve real problems of exponential growth and decay.

Objectives:
• Learn to write numbers in scientific notation
• Define and use zero and negative exponents
• Learn the rules for multiplying powers
• Learn the rules for dividing powers
• Use exponential functions to show growth or decay

Lesson 1: Zero and Negative Exponents (two-day lesson)

Objectives:
• Simplify expressions involving zero and negative exponents

Lesson 2: Scientific Notation (two-day lesson)

Objectives:
• Write numbers in scientific and standard notation
• Compare and order numbers using standard notation

Lesson 3: Multiplying Powers with the Same Base (two-day lesson)

Objectives:
• Multiply powers with the same base

Lesson 4: More Multiplication Properties of Exponents (two-day lesson)

Objectives:
• Raise a power to a power
• Raise a product to a power

Lesson 5: Mid-Unit Review (two-day lesson)

Objectives:
• Review the concepts covered so far in the Exponents and Exponential Functions unit
• Determine which skills need further review and practice before proceeding to the next lesson
Lesson 6: Division Properties of Exponents (two-day lesson)

Objectives:
- Divide powers with the same base
- Raise a quotient to a power

Lesson 7: Exponential Functions (three-day lesson)

Objectives:
- Evaluate and graph exponential functions

Lesson 8: Exponential Growth and Decay (three-day lesson)

Objectives:
- Model exponential interest

Lesson 9: Exponents and Exponential Functions Unit Review (three-day lesson)

Objectives:
- Decide which strategies you will use to prepare for your test
- Organize your time and study materials
- Review your notes, Key Words, formulas, and all important concepts that may be covered on the test

Lesson 10: Exponents and Exponential Functions Unit Test

Unit 4: Polynomials and Factoring

In this unit, you will learn how to classify, add, and subtract polynomials. You will also learn to multiply polynomials and monomials and how to factor polynomials using GCF, Greatest Common Factor, as well as how to factor higher-degree polynomials. In addition, you will learn how to find the squares of a binomial, the sum and difference of perfect squares, and the product of a sum and difference.

Objectives:
- Classify, add, and subtract polynomials
- Multiply a monomial by a polynomial
- Factor a monomial from a polynomial
- Multiply two binomials or a binomial by a trinomial
- Factor trinomials including special cases

Lesson 1: Adding and Subtracting Polynomials (three-day lesson)

Objectives:
- Classify, add, and subtract polynomials

Lesson 2: Multiplying and Factoring Polynomials (three-day lesson)

Objectives:
- Multiply a monomial by a polynomial
- Factor a monomial from a polynomial

Lesson 3: Multiplying Binomials (three-day lesson)

Objectives:
- Multiply two binomials or a binomial by a trinomial
Lesson 4: Multiplying Special Cases (three-day lesson)

Objectives:
• Find a square of a binomial
• Find the product of a sum and a difference

Lesson 5: Mid-Unit Review (two-day lesson)

Objectives:
• To review the concepts covered so far in Unit 2, lessons 1–4
• To determine which skills need further review and practice before proceeding to the next lesson

Lesson 6: Factoring $x^2 + bx + c$ (three-day lesson)

Objectives:
• Factor trinomials in the form $x^2 + bx + c$

Lesson 7: Factoring $ax^2 + bx + c$ (three-day lesson)

Objectives:
• Factor trinomials of the form $ax^2 + bx + c$

Lesson 8: Factoring Special Cases (three-day lesson)

Objectives:
• Factor perfect-square trinomials and the differences of two squares

Lesson 9: Polynomials and Factoring Unit Review (two-day lesson)

Objectives:
• Decide which strategies you will use to prepare for your test
• Organize your time and study materials
• Review your notes, Key Words, formulas, and all important concepts that may be covered on this test

Lesson 10: Polynomials and Factoring Unit Test

Unit 5: Semester Review and Exam

In this unit, you will have the opportunity to prepare for and take the semester exam. Since this is a comprehensive exam, it may be helpful to organize your notes in the order of the course outline before you begin to review. Using the test-taking strategies that you have previously learned can help you be successful with both objective and essay questions.

Lesson 1: Algebra 1B, Part 1 Review (two-day lesson)

Objectives:
• Decide which strategies you will use to prepare for your exam
• Organize your time and study materials
• Review your notes, key words and vocabulary terms, formulas, and all important concepts that may be covered on this exam

Lesson 2: Semester Exam
ALGEBRA 1 B, PART 2
**Algebra 1 B, Part 2**

This course includes the second half of the Algebra 1 B course content. In this course, the student will perform operations with radical expressions, graph square root functions, and explore trigonometric ratios. The student will solve both radical and rational equations and explore the graphs of rational functions. Finally, the student will be introduced to statistics and learn how to organize and display data. Lastly, the student will solve problems involving probability.

There are many opportunities for review and reflection in the course and the student is encouraged to monitor progress with the course content. Throughout the course, problem solving, critical thinking, and real-world application of mathematical concepts will be required.

**Unit 1: Quadratic Functions and Equations**

In this unit, you will learn how to work with quadratic functions and quadratic equation. You will learn to graph quadratic functions in several forms and solve both quadratic equations and functions. You will also learn to choose between different models to display data, and finally, you will learn to solve systems of linear and quadratic equations. These topics are important foundational skills for your study of higher-level mathematics.

Objectives:
- Graph quadratic functions of the form \( y = ax^2 \) and \( y = ax^2 + c \)
- Graph functions of the form \( y = ax^2 + bx + c \)
- Solve quadratic equations by graphing and using square roots and by factoring
- Solve quadratic equations by completing the square and by using the quadratic formula
- Choose a linear, quadratic, or exponential model for data and solve systems of linear and quadratic equations

**Lesson 1: Quadratic Graphs and Their Properties (two-day lesson)**

Objectives:
- Graph quadratic functions of the form \( y = ax^2 \) and \( y = ax^2 + c \)

**Lesson 2: Quadratic Functions (two-day lesson)**

Objectives:
- Graph quadratic functions of the form \( y = ax^2 + bx + c \)

**Lesson 3: Solving Quadratic Equations (two-day lesson)**

Objectives:
- Solve quadratic equations by graphing and using square roots

**Lesson 4: Factoring to Solve Quadratic Equations (two-day lesson)**

Objectives:
- Solve quadratic equations by factoring

**Lesson 5: Mid-Unit Review (two-day lesson)**

Objectives:
- Review the concepts covered so far in this unit
- Determine which skills need further review and practice before proceeding to the next lesson

**Lesson 6: Completing the Square (two-day lesson)**

© 2011 Connections Education LLC. All rights reserved.
Lesson 7: The Quadratic Formula and the Discriminant (two-day lesson)

Objectives:
• Solve quadratic equations by using the quadratic formula

Lesson 8: Linear, Quadratic, and Exponential Models (two-day lesson)

Objectives:
• Choose a linear, quadratic, or exponential model for data

Lesson 9: Systems of Linear and Quadratic Equations (two-day lesson)

Objectives:
• Solve systems of linear and quadratic equations

Lesson 10: Quadratic Functions and Equations Unit Review (two-day lesson)

Objectives:
• Decide which strategies you will use to prepare for your exam
• Organize your time and study materials
• Review your notes, Key Words, formulas, and all important concepts that may be covered on this exam

Lesson 11: Quadratic Functions and Equations Unit Test

Unit 2: Radical Expressions and Data Analysis

In this unit, you will work with radical expressions and learn various ways to analyze data. First, you will learn to simplify radicals and perform operations on radical expressions. You will learn to analyze square root functions by graphing them. Finally, you will learn to analyze data both graphically and numerically through the use of histograms, box-and-whisker plots, and measures of central tendency and dispersion.

Objectives:
• Simplify radicals involving products and quotients
• Simplify sums and differences of radical expressions
• Simplify products and quotients of radical expressions
• Find the mean, median, mode, and range of a data set
• Make and interpret box-and-whisker plots

Lesson 1: Simplifying Radicals (two-day lesson)

Objectives:
• Simplify radicals involving products and quotients

Lesson 2: Operations with Radical Expressions (two-day lesson)

Objectives:
• Simply sums and differences of radical expressions
• Simplify products and quotients of radical expressions
Lesson 3: Graphing Square Root Functions (two-day lesson)

Objectives:
- Graph square root functions
- Translate graphs of square root functions

Lesson 4: Mid-Unit Review (two-day lesson)

Objectives:
- Review the concepts covered so far in this unit.
- Determine which skills need further review and practice before proceeding to the next lesson.

Lesson 5: Frequency and Histograms (three-day lesson)

Objectives:
- Make and interpret frequency tables and histograms

Lesson 6: Measures of Central Tendency and Dispersion (three-day lesson)

Objectives:
- Find mean, median, mode, and range

Lesson 7: Box-and-Whisker Plots (three-day lesson)

Objectives:
- Find quartiles and percents
- Make and interpret box-and-whisker plots

Lesson 8: Radical Expressions and Data Analysis Unit Review (two-day lesson)

Objectives:
- Decide which strategies you will use to prepare for your exam
- Organize your time and study materials
- Review your notes, Key Words, formulas, and all important concepts that may be covered on this exam

Lesson 9: Radical Expressions and Equations Test

Unit 3: Rational Expressions and Functions

In this unit, you will work with rational expressions and equations. To begin, you will learn to simplify rational expressions. Then you will learn to multiply and divide rational expressions and polynomials. You will also learn to simplify complex fractions. You will learn to define and recognize inverse variations and compare direct and inverse variations.

Objectives:
- Simplify rational expressions
- Multiply and divide rational expressions
- Add and subtract rational expressions
- Define and identify inverse variation

Lesson 1: Simplifying Rational Expressions (two-day lesson)
• Simplify rational expressions

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 2: Multiplying and Dividing Rational Expressions (two-day lesson)

Objectives:
• Multiply and divide rational expressions
• Simplify complex fractions

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 3: Dividing Polynomials (two-day lesson)

Objectives:
• Divide polynomials

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 4: Adding and Subtracting Rational Expressions (two-day lesson)

Objectives:
• Add and subtract rational expressions

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 5: Mid-Unit Review (two-day lesson)

Objectives:
• Review the concepts covered so far in this unit
• Determine skills that need further review and practice these skills before proceeding to the next lesson

Lesson 6: Solving Rational Equations (three-day lesson)

Objectives:
• Solve rational equations and proportions

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 7: Inverse Variation (two-day lesson)

Objectives:
• Write and graph equations for inverse operations
• Compare direct and inverse variations

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 8: Rational Expressions and Functions Unit Review (two-day lesson)

Objectives:
• Decide which strategies you will use to prepare for your exam
• Organize your time and study materials
• Review your notes, Key Words, formulas, and all important concepts that may be covered on this exam

Objectives derived from Pearson Education, Inc. © Pearson Education, Inc., publishing as Prentice Hall. All rights reserved.

Lesson 9: Rational Expressions and Functions Unit Test

Unit 4: Semester Review and Exam

In this unit, you will have the opportunity to prepare for and take the semester exam. Since this is a comprehensive exam, it may be helpful to organize your notes in the order of the course outline before you begin to review. Using the test-taking strategies that you have previously learned can help you be successful with both objective and essay questions.
Lesson 1: Algebra 1 B, Part 2 Review (two-day lesson)

Objectives:
- Decide which strategies you will use to prepare for your exam
- Organize your time and study materials
- Review your notes, key words and vocabulary terms, formulas, and all important concepts that may be covered on this exam

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 2: Algebra 1 B, Part 2 Exam
ALGEBRA 2 A
Algebra 2 A

In this first semester of Algebra 2, the student will review and expand on her learning from Algebra 1. The beginning units will focus mostly on the equation and the inequality. The student will write, solve, and graph these in a variety of real-world scenarios. The last few units will focus on types of functions. The student will continue her study of quadratic functions from Algebra 1, but will expand this to include exponential and logarithmic functions. As before, the student will write, solve, and graph these functions. Use of a graphing calculator is encouraged.

Unit 1: Focus on Success in Algebra 2

In this unit, you will focus on ways to think about success in Algebra 2. You will learn how to set personal goals, establish study strategies that reduce anxiety, and review ways to be an active learner. The goal of this unit is to help you establish a positive mindset at the start of the course. This includes understanding how effort impacts goal obtainment, appreciating the importance of taking initiative with learning, and embracing the many resources available to help you throughout the course, such as your fellow students, your teacher, online tools, and your Learning Coach.

Objectives:

• Use strategies such as self-assessment and reflection in order to improve mathematical performance
• Distinguish between effort-based and ability-based models of learning
• Assess personal readiness for study and learning
• Use resources to assist with goal-setting and attainment

Lesson 1: Get in Shape for Algebra 2

Objectives:

• Examine organizational skills and learning strategies
• Set goals in the context of mathematical learning
• Reflect on strengths, weaknesses, and the value of goal-setting
• Distinguish between effort-based and ability-based models of learning

Lesson 2: Resources for Success

Objectives:

• Identify the various resources that can be used to promote active learning
• Discuss strategies for using resources effectively

Unit 2: Expressions, Equations, and Inequalities

In this unit, you will explore algebraic expressions, equations, and inequalities, including how to model and solve real-world applications using these concepts. Some of these concepts, such as those involved in simplifying algebraic expressions and solving equations, are a review from previous math courses, and other concepts, such as those concerned with writing and solving equations and inequalities involving absolute value, are new for this course. The concepts presented in this unit will be used throughout this course, as they are the basics of Algebra 2.

Objectives:

• Use variables to represent unknown quantities in order to identify and use patterns to solve problems
• Represent quantities with algebraic expressions and use properties to manipulate and evaluate algebraic expressions
• Use properties to solve equations and inequalities, including compound inequalities and those involving absolute value
• Write, graph, and use equations and inequalities to model and solve problems

Lesson 1: Patterns and Expressions

Objectives:

• Identify and describe patterns
• Make predictions based on patterns

Objectives derived from Pearson Education, Inc. © Pearson Education, Inc., publishing as Pearson Prentice Hall. All rights reserved.
Lesson 2: Properties of Real Numbers

Objectives:
- Identify and use properties of real numbers
- Write numerical expressions in different forms
- Plot real numbers on a number line

Objectives derived from Pearson Education, Inc. © Pearson Education, Inc., publishing as Pearson Prentice Hall. All rights reserved.

Lesson 3: Algebraic Expressions

Objectives:
- Rewrite algebraic expressions
- Solve algebraic expressions
- Model situations using algebraic expressions

Lesson 4: Solving Equations (two-day lesson)

Objectives:
- Solve multi-step equations
- Write and use equations to solve problems
- Rewrite and solve literal equations

Objectives derived from Pearson Education, Inc. © Pearson Education, Inc., publishing as Pearson Prentice Hall. All rights reserved.

Lesson 5: Solving Inequalities (two-day lesson)

Objectives:
- Solve and graph inequalities
- Write and solve compound inequalities

Objectives derived from Pearson Education, Inc. © Pearson Education, Inc., publishing as Pearson Prentice Hall. All rights reserved.

Lesson 6: Absolute Value Equations and Inequalities (two-day lesson)

Objectives:
- Write and solve equations and inequalities involving absolute value

Objectives derived from Pearson Education, Inc. © Pearson Education, Inc., publishing as Pearson Prentice Hall. All rights reserved.

Lesson 7: Expressions, Equations, and Inequalities Review (two-day lesson)

Objectives:
- Use variables to model real-world situations
- Use the properties of real numbers to simplify and evaluate algebraic expressions
- Solve an equation or inequality, including absolute value and compound inequalities
- Review concepts in order to prepare for the unit test

Objectives derived from Pearson Education, Inc. © Pearson Education, Inc., publishing as Pearson Prentice Hall. All rights reserved.

Lesson 8: Expressions, Equations, and Inequalities Unit Test

Unit 3: Functions, Equations, and Graphs

In this unit, you will expand your knowledge of equations by exploring relations that can be represented by special equations, called functions. Direct variation, linear, and absolute value functions and their graphs will be used to solve a variety of problems. In addition, you will learn the different forms in which a linear equation can be written as well as identify transformations of functions, such as vertical and horizontal translations, reflection, stretching, and compressing.

Objectives:
- Identify and graph relations and functions, including direct variation and absolute value
- Model real-world data and make predictions using linear equations
• Identify and graph transformations of functions
• Graph two-variable inequalities, including absolute value inequalities
• Use functions and inequalities to model and solve real-world problems

**Lesson 1: Relations and Functions (two-day lesson)**

Objectives:
• Graph relations in the coordinate plane
• Determine if relation is a function
• Write and use functions to solve problems

**Lesson 2: Direct Variation**

Objectives:
• Create and summarize direct variation equations
• Graph direct variation equations

**Lesson 3: Linear Functions and Slope Intercept**

Objectives:
• Create the graph of a linear equation
• Derive the equation of a line from its graph
• Interpret key features of graphs of linear functions

**Lesson 4: More About Linear Equations**

Objectives:
• Derive the equation of a line given its slope and a point on the line
• Write an equation of a line given two points on the line
• Write the equation of a line in different forms

**Lesson 5: Families of Functions (two-day lesson)**

Objectives:
• Analyze transformations of functions

Objectives derived from Pearson Education, Inc. © Pearson Education, Inc., publishing as Pearson Prentice Hall. All rights reserved.

**Lesson 6: Two-Variable Inequalities**

Objectives:
• Graph two-variable inequalities

Objectives derived from Pearson Education, Inc. © Pearson Education, Inc., publishing as Pearson Prentice Hall. All rights reserved.

**Lesson 7: Functions, Equations, and Graphs Unit Review (two-day lesson)**

Objectives:
• Review concepts in order to prepare for the unit test

Objectives derived from Pearson Education, Inc. © Pearson Education, Inc., publishing as Pearson Prentice Hall. All rights reserved.

**Lesson 8: Functions, Equations, and Graphs Unit Test**

**Unit 4: Linear Systems**

In this unit, you will learn about linear systems and how to use them to solve problems that come up in real situations. Throughout the unit, you will explore the different methods for solving systems, such as using tables, graphs, or matrices, and the different ways in which a system can be solved algebraically. Linear programming will be used to solve real-world problems, such as ones involving maximizing profit.

Objectives:
• Write, solve, and use systems of linear equations to solve problems
• Write, solve, and use systems of linear inequalities to solve problems
• Use linear programming to model and solve real-world problems
• Solve systems in three variables using elimination, substitution, and matrices
Lesson 1: Solving Systems Using Tables and Graphs

Objectives:
- Solve a linear system of equations by using a graph or a table of values
- Write and use a linear system to solve problems

Objectives derived from Pearson Education, Inc. © Pearson Education, Inc., publishing as Pearson Prentice Hall. All rights reserved.

Lesson 2: Solving Systems Algebraically

Objectives:
- Solve a linear system of equations using algebra
- Write and use a linear system to solve problems

Lesson 3: Systems of Inequalities (two-day lesson)

Objectives:
- Solve a system of linear inequalities by graphing
- Use systems of linear inequalities to model situations

Lesson 4: Linear Programming (two-day lesson)

Objectives:
- Solve problems using linear programming

Objectives derived from Pearson Education, Inc. © Pearson Education, Inc., publishing as Pearson Prentice Hall. All rights reserved.

Lesson 5: Systems With Three Variables (two-day lesson)

Objectives:
- Solve systems in three variables using elimination
- Solve systems in three variables using substitution

Objectives derived from Pearson Education, Inc. © Pearson Education, Inc., publishing as Pearson Prentice Hall. All rights reserved.

Lesson 6: Solving Systems Using Matrices (two-day lesson)

Objectives:
- Represent a system of linear equations with a matrix
- Solve a system of linear equations using matrices

Objectives derived from Pearson Education, Inc. © Pearson Education, Inc., publishing as Pearson Prentice Hall. All rights reserved.

Lesson 7: Linear Systems Unit Review (two-day lesson)

Objectives:
- Review concepts in order to prepare for the unit test

Objectives derived from Pearson Education, Inc. © Pearson Education, Inc., publishing as Pearson Prentice Hall. All rights reserved.

Lesson 8: Linear Systems Unit Test

Unit 5: Quadratic Functions and Equations

In this unit, you will explore quadratic equations and functions. You will see that when a quadratic equation is graphed, it forms a particular type of curve called a parabola. Some real-world situations can be modeled by parabolas—for example, the path a baseball makes when thrown up in the air. You will learn how to use multiple methods for solving quadratic equations including graphing, factoring, and applying the quadratic formula. Lastly, you will explore the set of complex numbers and quadratic systems.

Objectives:
- Identify and graph quadratic functions and transformations
- Model and interpret real-world problems using quadratic equations
- Write and solve quadratic equations by graphing, factoring, and applying the quadratic formula
- Identify, graph, and solve quadratic equations with complex solutions
- Solve and graph systems of linear and quadratic equations and inequalities
Lesson 1: Quadratic Functions and Transformations (two-day lesson)

Objectives:
- Identify quadratic functions
- Graph quadratic functions
- Write and use quadratic functions to solve problems
- Graph translations of quadratic functions

Lesson 2: Standard Form of a Quadratic Function

Objectives:
- Graph quadratic functions
- Write and use quadratic functions to solve problems

Lesson 3: Modeling with Quadratic Functions

Objectives:
- Use quadratic functions to model data sets
- Interpret the domain of a function and relate the domain to its graph

Lesson 4: Factoring Quadratic Expressions

Objectives:
- Find common and binomial factors of quadratic expressions
- Factor special quadratic expressions

Objectives derived from Pearson Education, Inc. © Pearson Education, Inc., publishing as Pearson Prentice Hall. All rights reserved.

Lesson 5: Quadratic Equations

Objectives:
- Solve quadratic equations by graphing and factoring
- Write and use quadratic equations to solve problems

Lesson 6: The Quadratic Formula

Objectives:
- Solve quadratic equations using the quadratic formula
- Determine the number of solutions by using the discriminant

Objectives derived from Pearson Education, Inc. © Pearson Education, Inc., publishing as Pearson Prentice Hall. All rights reserved.

Lesson 7: Complex Numbers (two-day lesson)

Objectives:
- Identify, graph, and perform operations with complex numbers
- Find complex number solutions of quadratic equations

Objectives derived from Pearson Education, Inc. © Pearson Education, Inc., publishing as Pearson Prentice Hall. All rights reserved.

Lesson 8: Quadratic Systems (two-day lesson)

Objectives:
- Solve and graph systems of linear and quadratic equations
- Solve and graph systems of quadratic inequalities

Objectives derived from Pearson Education, Inc. © Pearson Education, Inc., publishing as Pearson Prentice Hall. All rights reserved.

Lesson 9: Quadratic Functions and Equations Unit Review (two-day lesson)

Objectives:
- Review concepts in order to prepare for the unit test

Lesson 10: Quadratic Functions and Equations Unit Test

Unit 6: Polynomials and Polynomial Functions
Previously, you explored a specific type of polynomial, a quadratic polynomial. In this unit, you will explore a variety of polynomials, including monomials, binomials, and trinomials. You will learn how to identify and describe the properties of polynomials equations based on the powers of the variable terms they contain. In addition, you will learn methods to identify and represent factors, zeros, and x-intercepts of polynomial functions. You will identify the features of polynomial functions and their graphs and use them to model real-world situations such as maximizing the volume of a box and representing energy with power functions. You will also be introduced to methods and theorems that you will apply to solve polynomial equations.

Objectives:
- Identify the number of zeros and degree of a polynomial equation
- Find zeros of a polynomial equation by factoring or graphing and finding x-intercepts
- Write and use polynomial functions to solve problems

Lesson 1: Polynomial Functions

Objectives:
- Classify polynomials by degree and number of terms
- Graph polynomial functions
- Describe the end behavior of the graph of a polynomial function
- Use polynomial expressions to model situations

Lesson 2: Polynomials, Linear Factors, and Zeroes

Objectives:
- Factor polynomial expressions
- Derive a polynomial function from its zeroes
- Interpret features of the graphs of polynomial functions

Lesson 3: Solving Polynomial Equations

Objectives:
- Solve polynomial equations by factoring
- Solve polynomial equations by graphing

Lesson 4: Dividing Polynomials (two-day lesson)

Objectives:
- Divide polynomials using long division
- Divide polynomials using synthetic division

Lesson 5: Theorems About Roots of Polynomial Equations

Objectives:
- Solve polynomial equations using the Rational Root and Conjugate Root Theorems
- Solve quadratic equations that have complex solutions
- Rewrite complex numbers using polynomial identities

Lesson 6: The Fundamental Theorem of Algebra

Objectives:
- Use the Fundamental Theorem of Algebra to solve polynomial equations with complex numbers

Lesson 7: The Binomial Theorem (two-day lesson)

Objectives:
- Expand a binomial using Pascal's Triangle
- Apply the Binomial Theorem
Lesson 8: The Polynomial Models in the Real World (two-day lesson)

Objectives:
- Fit data to linear, quadratic, cubic, or quartic models

Lesson 9: Transforming Polynomial Functions (two-day lesson)

Objectives:
- Transform graphs of polynomials
- Find zeroes of a transformed polynomial function

Lesson 10: Polynomials and Polynomial Functions Unit Review (two-day lesson)

Objectives:
- Review concepts in order to prepare for the unit test

Lesson 11: Polynomials and Polynomial Functions Unit Test

Unit 7: Exponential and Logarithmic Functions

In this unit, you will explore two more types of functions, exponential and logarithmic. You will use exponential functions to model real-world situations and solve real-world problems, including problems involving interest and population growth or decay. You will also learn how using logarithms can help you solve exponential equations. Finally, you will learn to graph both exponential and logarithmic functions.

Objectives:
- Model situations using exponential functions
- Solve logarithmic equations using exponents
- Solve exponential equations using logarithms
- Graph exponential and logarithmic functions

Lesson 1: Exploring Exponential Models (two-day lesson)

Objectives:
- Identify exponential growth and decay functions
- Write exponential functions to solve problems
- Use exponential growth and decay functions to model situations

Lesson 2: Properties of Exponential Functions (two-day lesson)

Objectives:
- Explore the properties of exponential functions
- Graph exponential functions, including those that have base e
- Use exponential functions to solve problems

Lesson 3: Logarithmic Functions as Inverses (two-day lesson)

Objectives:
- Write and solve logarithmic expressions
- Draw the graph of a logarithmic function
- Use logarithmic functions and their inverses to solve problems

Lesson 4: Properties of Logarithms (two-day lesson)

Objectives:
- Use the properties of logarithms

Lesson 5: Exponential and Logarithmic Equations (two-day lesson)

Objectives:
- Solve exponential and logarithmic equations
Lesson 6: Natural Logarithms

Objectives:
- Evaluate and simplify natural logarithmic expressions
- Solve equations using natural logarithms

Objectives derived from Pearson Education, Inc. © Pearson Education, Inc., publishing as Pearson Prentice Hall. All rights reserved.

Lesson 7: Exponential and Logarithmic Functions Unit Review (two-day lesson)

Objectives:
- Review concepts in order to prepare for the unit test

Lesson 8: Exponential and Logarithmic Functions Unit Test

Unit 8: Semester A Review and Exam

In this unit, you will review concepts from Semester A in order to prepare for the semester exam, which you will take at the end of this unit.

Objectives:
- To review concepts in order to prepare for the semester exam

Lesson 1: Semester A Review (two-day lesson)

Objectives:
- Review concepts in order to prepare for the semester exam

Lesson 2: Semester A Exam
ALGEBRA 2 A, PART 1
Algebra 2 A, Part 1

In this first semester of Algebra 2 A, the student will review and expand on learning from previous math and algebra courses. This course will move at a slower pace than other Algebra 2 courses, and there will be a greater emphasis placed on instructional support. The units of this semester will focus mostly on the equation and the inequality; the student will write, solve, and graph these in a variety of real-world scenarios.

Unit 1: Focus on Success in Algebra 2

In this unit, you will focus on ways to think about success in Algebra 2. You will learn how to set personal goals, establish study strategies that reduce anxiety, and review ways to be an active learner. The goal of this unit is to help you establish a positive mindset at the start of the course. This includes understanding how effort impacts goal obtainment, appreciating the importance of taking initiative with learning, and embracing the many resources available to help you throughout the course, such as your fellow students, your teacher, online tools, and your Learning Coach.

Objectives:
• Use strategies such as self-assessment and reflection in order to improve mathematical performance
• Distinguish between effort-based and ability-based models of learning
• Assess personal readiness for study and learning
• Use resources to assist with goal-setting and attainment

Lesson 1: Get in Shape for Algebra 2

Objectives:
• Examine organizational skills and learning strategies
• Set goals in the context of mathematical learning
• Reflect on strengths, weaknesses, and the value of goal-setting
• Distinguish between effort-based and ability-based models of learning

Lesson 2: Resources for Success

Objectives:
• Identify the various resources that can be used to promote active learning
• Discuss strategies for using resources effectively

Unit 2: Expressions, Equations, and Inequalities

In this unit, you will explore algebraic expressions, equations, and inequalities, including how to model and solve real-world applications using these concepts. Some of these concepts, such as those involved in simplifying algebraic expressions and solving equations, are a review from previous math courses, and other concepts, such as those concerned with writing and solving equations and inequalities involving absolute value, are new for this course. The concepts presented in this unit will be used throughout this course, as they are the basics of Algebra 2.

Objectives:
• Use variables to represent unknown quantities in order to identify and use patterns to solve problems
• Represent quantities with algebraic expressions and use properties to manipulate and evaluate algebraic expressions
• Use properties to solve equations and inequalities, including compound inequalities and those involving absolute value
• Write, graph, and use equations and inequalities to model and solve problems

Lesson 1: Patterns and Expressions

Objectives:
• Identify and describe patterns
• Make predictions based on patterns

Objectives derived from Pearson Education, Inc. © Pearson Education, Inc., publishing as Pearson Prentice Hall. All rights reserved.
Lesson 2: Properties of Real Numbers

Objectives:
• Identify and use properties of real numbers
• Write numerical expressions in different forms
• Plot real numbers on a number line

Objectives derived from Pearson Education, Inc. © Pearson Education, Inc., publishing as Pearson Prentice Hall. All rights reserved.

Lesson 3: Algebraic Expressions (two-day lesson)

Objectives:
• Evaluate algebraic expressions
• Simplify algebraic expressions
• Model situations using algebraic expressions

Objectives derived from Pearson Education, Inc. © Pearson Education, Inc., publishing as Pearson Prentice Hall. All rights reserved.

Lesson 4: Solving Equations (two-day lesson)

Objectives:
• Solve multi-step equations
• Write and use equations to solve problems
• Rewriting and solving literal equations

Objectives derived from Pearson Education, Inc. © Pearson Education, Inc., publishing as Pearson Prentice Hall. All rights reserved.

Lesson 5: Mid-Unit Review

Objectives:
• Identify and use patterns to make predictions
• Identify and use the properties of real numbers to simplify and evaluate algebraic expressions
• Evaluate, simplify, and use algebraic expressions to model situations
• Write and use equations to solve problems
• Review material from each lesson that you have completed so far

Lesson 6: Solving Inequalities

Objectives:
• Solve and graph inequalities
• Write and solve compound inequalities

Objectives derived from Pearson Education, Inc. © Pearson Education, Inc., publishing as Pearson Prentice Hall. All rights reserved.

Lesson 7: Absolute Value Equations and Inequalities (two-day lesson)

Objectives:
• Write and solve equations and inequalities involving absolute value

Objectives derived from Pearson Education, Inc. © Pearson Education, Inc., publishing as Pearson Prentice Hall. All rights reserved.

Lesson 8: Expressions, Equations, & Inequalities Unit Review (two-day lesson)

Objectives:
• Use variables to model real-world situations
• Use the properties of real numbers to simplify and evaluate algebraic expressions
• Solve an equation or inequality, including absolute value and compound inequalities
• Review concepts in order to prepare for the unit test

Objectives derived from Pearson Education, Inc. © Pearson Education, Inc., publishing as Pearson Prentice Hall. All rights reserved.

Lesson 9: Expressions, Equations, and Inequalities Unit Test
Unit 3: Functions, Equations, and Graphs

In this unit, you will expand your knowledge of equations by exploring relations that can be represented by special equations, called functions. Direct variation, linear, and absolute value functions and their graphs will be used to solve a variety of problems. In addition, you will learn the different forms in which a linear equation can be written as well as identify transformations of functions, such as vertical and horizontal translations, reflection, stretching, and compressing.

Objectives:
- Identify and graph relations and functions, including direct variation and absolute value
- Model real-world data and make predictions using linear equations
- Identify and graph transformations of functions
- Graph two-variable inequalities, including absolute value inequalities
- Use functions and inequalities to model and solve real-world problems

Lesson 1: Relations and Functions (two-day lesson)

Objectives:
- Graph relations
- Identify functions
- Write and use functions to solve problems

Lesson 2: Direct Variation

Objectives:
- Write and interpret direct variation
- Graph direct variation equations

Lesson 3: Linear Functions and Slope-Intercept

Objectives:
- Graph linear equations
- Write equations of lines
- Interpret key features of graphs of linear functions

Lesson 4: More About Linear Equations (two-day lesson)

Objectives:
- Write an equation of a line given its slope and a point on the line
- Write an equation of a line given two points on the line
- Write the equation of a line in different forms

Lesson 5: Mid-Unit Review

Objectives:
- Graph relations
- Identify functions
- Write and use functions to solve problems
- Write and interpret direct variation
- Graph direct variation equations
- Graph linear equations
- Write equations of lines

Lesson 6: Families of Functions (two-day lesson)

Objectives:
- Analyze transformations of functions

Objectives derived from Pearson Education, Inc. © Pearson Education, Inc., publishing as Pearson Prentice Hall. All rights reserved.
Lesson 7: Two-Variable Inequalities (two-day lesson)

Objectives:
- Graph two-variable inequalities

Objectives derived from Pearson Education, Inc. © Pearson Education, Inc., publishing as Pearson Prentice Hall. All rights reserved.

Lesson 8: Functions, Equations, and Graphs Unit Review (two-day lesson)

Objectives:
- Review concepts in order to prepare for the unit test

Objectives derived from Pearson Education, Inc. © Pearson Education, Inc., publishing as Pearson Prentice Hall. All rights reserved.

Lesson 9: Functions, Equations, and Graphs Unit Test

Unit 4: Linear Systems

In this unit, you will learn about linear systems and how to use them to solve problems that come up in real situations. Throughout the unit, you will explore the different methods for solving systems, such as using tables, graphs, or matrices, and the different ways in which a system can be solved algebraically. Linear programming will be used to solve real-world problems, such as those involving maximizing profit.

Objectives:
- Write, solve, and use systems of linear equations to solve problems
- Write, solve, and use systems of linear inequalities to solve problems
- Use linear programming to model and solve real-world problems
- Solve systems in three variables using elimination, substitution, and matrices

Lesson 1: Solving Systems Using Tables and Graphs

Objectives:
- Solve a linear system using a graph or a table
- Write and use a linear system to solve problems

Objectives derived from Pearson Education, Inc. © Pearson Education, Inc., publishing as Pearson Prentice Hall. All rights reserved.

Lesson 2: Solving Systems Algebraically (two-day lesson)

Objectives:
- Solve linear systems algebraically
- Write and use a linear system to solve problems

Objectives derived from Pearson Education, Inc. © Pearson Education, Inc., publishing as Pearson Prentice Hall. All rights reserved.

Lesson 3: Systems of Inequalities (two-day lesson)

Objectives:
- Solve systems of linear inequalities
- Use systems of linear inequalities to model situations

Objectives derived from Pearson Education, Inc. © Pearson Education, Inc., publishing as Pearson Prentice Hall. All rights reserved.

Lesson 4: Mid-Unit Review

Objectives:
- Solve systems in three variables using elimination and substitution
- Write, solve, and use systems of linear inequalities to solve problems
- Write, solve, and use systems of linear equations to solve problems

Lesson 5: Linear Programming (two-day lesson)

Objectives:
- Solve problems using linear programming

Objectives derived from Pearson Education, Inc. © Pearson Education, Inc., publishing as Pearson Prentice Hall. All rights reserved.
Lesson 6: Systems With Three Variables (two-day lesson)

Objectives:
- Solve systems in three variables using elimination
- Solve systems in three variables using substitution

Objectives derived from Pearson Education, Inc. © Pearson Education, Inc., publishing as Pearson Prentice Hall. All rights reserved.

Lesson 7: Solving Systems Using Matrices (two-day lesson)

Objectives:
- Represent a system of linear equations with a matrix
- Solve a system of linear equations using matrices

Objectives derived from Pearson Education, Inc. © Pearson Education, Inc., publishing as Pearson Prentice Hall. All rights reserved.

Lesson 8: Linear Systems Unit Review (two-day lesson)

Objectives:
- Review concepts in order to prepare for the unit test

Lesson 9: Linear Systems Unit Test

Unit 5: Quadratic Functions and Equations

In this unit, you will explore quadratic equations and functions. You will see that when a quadratic equation is graphed, it forms a particular type of curve called a parabola. Some real-world situations can be modeled by parabolas—for example, the path a baseball makes when thrown up in the air. You will learn how to use multiple methods for solving quadratic equations including graphing, factoring, and applying the quadratic formula. You will also explore the set of complex numbers and quadratic systems.

Objectives:
- Identify and graph quadratic functions and transformations
- Model and interpret real-world problems using quadratic equations
- Write and solve quadratic equations by graphing, factoring, and using the quadratic formula
- Identify, graph, and solve quadratic equations with complex solutions
- Solve and graph systems of linear and quadratic equations and inequalities

Lesson 1: Quadratic Functions and Transformations (two-day lesson)

Objectives:
- Identify and graph quadratic functions
- Write and use quadratic functions to solve problems
- Graph translations of quadratic functions

Objectives derived from Pearson Education, Inc. © Pearson Education, Inc., publishing as Pearson Prentice Hall. All rights reserved.

Lesson 2: Standard Form of a Quadratic Function

Objectives:
- Graph quadratic functions written in standard form
- Write and use quadratic functions to solve problems

Objectives derived from Pearson Education, Inc. © Pearson Education, Inc., publishing as Pearson Prentice Hall. All rights reserved.

Lesson 3: Modeling with Quadratic Functions (two-day lesson)

Objectives:
- Model data with quadratic functions
- Interpret the domain of a function and relate the domain to its graph

Objectives derived from Pearson Education, Inc. © Pearson Education, Inc., publishing as Pearson Prentice Hall. All rights reserved.

Lesson 4: Factoring Quadratic Expressions with a = 1 (two-day lesson)

Objectives:
Lesson 5: Factoring Quadratic Expressions (two-day lesson)

Objectives:
- Find common and binomial factors of quadratic expressions
- Factor special quadratic expressions

Lesson 6: Mid-Unit Review

Objectives:
- Identify and graph quadratic functions and transformations
- Model and interpret real-world problems using quadratic equations
- Write and solve quadratic equations by graphing and factoring

Lesson 7: Quadratic Equations (two-day lesson)

Objectives:
- Solve quadratic equations by factoring
- Solve quadratic equations by graphing
- Write and use quadratic equations to solve problems

Lesson 8: The Quadratic Formula (two-day lesson)

Objectives:
- Solve quadratic equations using the quadratic formula
- Determine the number of solutions by using the discriminant

Lesson 9: Complex Numbers (two-day lesson)

Objectives:
- Identify, graph, and perform operations with complex numbers
- Find complex number solutions of quadratic equations

Lesson 10: Quadratic Systems (two-day lesson)

Objectives:
- Solve and graph systems of linear and quadratic equations
- Solve and graph systems of quadratic inequalities

Lesson 11: Quadratic Functions and Equations Unit Review (two-day lesson)

Objectives:
- Review concepts in order to prepare for the unit test

Lesson 12: Quadratic Functions and Equations Unit Test

Unit 6: Algebra 2 A, Part 1 Semester Test

Lesson 1: Algebra 2 A, Part 1 Semester Review (two-day lesson)

Objectives:
- Review for the semester exam
- Identify areas of strength and weakness in the material
- Complete a practice assessment and analyze your results
ALGEBRA 2 A, PART 2
Algebra 2 A, Part 2

In this second semester of Algebra 2 A, the student will review and expand on learning from the previous semester. This course will move at a slower pace than other Algebra 2 courses, and there will be a greater emphasis placed on instructional support. The units of this semester will focus on types of functions. The student will continue to study quadratic and radical functions, but will expand this to include exponential and logarithmic functions. The student will write, solve, and graph these functions.

Unit 1: Polynomials and Polynomial Functions

You previously explored a specific type of polynomial, a quadratic polynomial. In this unit, you will explore a variety of polynomials, including monomials, binomials, and trinomials. You will learn how to identify and describe the properties of polynomial equations based on the powers of the variable terms they contain. In addition, you will learn methods to identify and represent factors, zeroes, and x-intercepts of polynomial functions. You will identify the features of polynomial functions and their graphs and use them to model real-world situations, such as maximizing the volume of a box and representing energy with power functions. You will also be introduced to methods and theorems that you will apply to solve polynomial equations.

Objectives:
- Identify the number of zeroes and degree of a polynomial equation
- Find zeroes of a polynomial equation by factoring or graphing and finding x-intercepts
- Write and use polynomial functions to solve problems

Lesson 1: Polynomial Functions (two-day lesson)

Objectives:
- Classify polynomials
- Graph polynomial functions and describe end behavior
- Use polynomial expressions to model situations

Lesson 2: Polynomials, Linear Factors, and Zeroes (two-day lesson)

Objectives:
- Analyze the factored form of a polynomial
- Write a polynomial function from its zeroes
- Interpret features of the graphs of polynomial functions

Lesson 3: Solving Polynomial Equations (two-day lesson)

Objectives:
- Solve polynomial equations by factoring
- Solve polynomial equations by graphing

Lesson 4: Dividing Polynomials (two-day lesson)

Objectives:
- Divide polynomials using long division
- Divide polynomials using synthetic division

Lesson 5: Mid-Unit Review

Objectives:
- Identify the number of zeroes and degree of a polynomial equation
- Find zeroes of a polynomial equation by factoring or graphing and finding x-intercepts
Lesson 6: Theorems About Roots of Polynomial Equations (two-day lesson)

Objectives:
- Solve polynomial equations using the Rational Root and Conjugate Root Theorems
- Solve quadratic equations that have complex solutions
- Rewrite complex numbers using polynomial identities

Lesson 7: The Fundamental Theorem of Algebra (two-day lesson)

Objectives:
- Use the Fundamental Theorem of Algebra to solve polynomial equations with complex numbers

Objectives derived from Pearson Education, Inc. © Pearson Education, Inc., publishing as Pearson Prentice Hall. All rights reserved.

Lesson 8: The Binomial Theorem (two-day lesson)

Objectives:
- Expand a binomial using Pascal’s Triangle
- Apply the Binomial Theorem

Objectives derived from Pearson Education, Inc. © Pearson Education, Inc., publishing as Pearson Prentice Hall. All rights reserved.

Lesson 9: The Polynomial Models in the Real World (two-day lesson)

Objectives:
- Fit data to linear, quadratic, cubic, or quartic models

Objectives derived from Pearson Education, Inc. © Pearson Education, Inc., publishing as Pearson Prentice Hall. All rights reserved.

Lesson 10: Transforming Polynomial Functions (two-day lesson)

Objectives:
- Apply transformations to graphs of polynomials
- Find zeroes of a transformed polynomial function

Lesson 11: Polynomials and Polynomial Functions Unit Review (two-day lesson)

Objectives:
- Review concepts in order to prepare for the unit test

Lesson 12: Polynomials and Polynomial Functions Unit Test

Unit 2: Radical Functions and Rational Exponents

In this unit, you will continue to explore functions, specifically radical functions. Operations such as addition, subtraction, multiplication, and division are performed with radical expressions, which you will learn in addition to how to simplify radical expressions. You will learn that radical functions can be written using a symbol or by using exponents that are fractions. You will also explore the graphs of radical functions and their inverses. Finally, you will continue modeling real-world applications using radical functions, such as calculating voltage or circular velocity.

Objectives:
- Simplify radical expressions and solve radical equations
- Determine the domain of radical functions and find extraneous solutions
- Find and graph inverse functions

Lesson 1: Properties of Rational Exponents (two-day lesson)

Objectives:
- Simplify and rewrite expressions using properties of integer exponents.

Lesson 2: Roots and Radical Expressions (two-day lesson)
Lesson 3: Multiplying and Dividing Radical Expressions (two-day lesson)

Objectives:
- Multiply and divide radical expressions

Lesson 4: Binomial Radical Expressions (two-day lesson)

Objectives:
- Add and subtract radical equations

Lesson 5: Rational Exponents (two-day lesson)

Objectives:
- Simplify expressions with rational exponents

Lesson 6: Mid-Unit Review

Objectives:
- Simplify and rewrite expressions using properties of rational exponents
- Find nth roots
- Write radical expressions in different forms
- Multiply and divide radical expressions
- Add and subtract radical equations

Lesson 7: Solving Square Root and Other Radical Equations (two-day lesson)

Objectives:
- Solve square root and other radical equations

Lesson 8: Function Operations (two-day lesson)

Objectives:
- Add, subtract, multiply, and divide functions
- Find the composite of two functions

Lesson 9: Inverse Relations and Functions (two-day lesson)

Objectives:
- Find the inverse of a relation or function

Lesson 10: Graphing Radical Functions (two-day lesson)

Objectives:
- Graph square root and other radical functions

Lesson 11: Radical Functions & Rational Exponents Unit Review (two-day lesson)
Unit 3: Exponential and Logarithmic Functions

In this unit, you will explore two more types of functions, exponential and logarithmic. You will use exponential functions to model real-world situations and solve real-world problems, including problems involving interest and population growth or decay. You will also learn how using logarithms can help you solve exponential equations. Finally, you will learn to graph both exponential and logarithmic functions.

Objectives:
- Model situations using exponential functions
- Solve logarithmic equations using exponents
- Solve exponential equations using logarithms
- Graph exponential and logarithmic functions

Lesson 1: Exploring Exponential Models (two-day lesson)

Objectives:
- Identify exponential growth and decay functions
- Write exponential functions to solve problems
- Use exponential growth and decay functions to model situations

Lesson 2: Properties of Exponential Functions (two-day lesson)

Objectives:
- Explore the properties of functions of \( y = ab^x \)
- Graph exponential functions that have base \( e \)
- Use exponential functions to solve problems

Objectives derived from Pearson Education, Inc. © Pearson Education, Inc., publishing as Pearson Prentice Hall. All rights reserved.

Lesson 3: Logarithmic Functions as Inverses (two-day lesson)

Objectives:
- Write and evaluate logarithmic expressions
- Graph logarithmic functions
- Use logarithmic functions and their inverses to solve problems

Objectives derived from Pearson Education, Inc. © Pearson Education, Inc., publishing as Pearson Prentice Hall. All rights reserved.

Lesson 4: Properties of Logarithms (two-day lesson)

Objectives:
- Use the properties of logarithms

Objectives derived from Pearson Education, Inc. © Pearson Education, Inc., publishing as Pearson Prentice Hall. All rights reserved.

Lesson 5: Mid-Unit Review

Objectives:
- Identify exponential growth and decay functions
- Write exponential functions to solve problems
- Use exponential growth and decay functions to model situations
- Graph exponential and logarithmic functions
- Use exponential functions to solve problems
- Write and evaluate logarithmic expressions
- Use the properties of logarithms

Lesson 6: Exponential and Logarithmic Equations (two-day lesson)

Objectives:
- Solve exponential and logarithmic equations

Objectives derived from Pearson Education, Inc. © Pearson Education, Inc., publishing as Pearson Prentice Hall. All rights reserved.
Lesson 7: Natural Logarithms (two-day lesson)

Objectives:
- Evaluate and simplify natural logarithmic expressions
- Solve equations using natural logarithms

Objectives derived from Pearson Education, Inc. © Pearson Education, Inc., publishing as Pearson Prentice Hall. All rights reserved.

Lesson 8: Exponential and Logarithmic Functions Unit Review (three-day lesson)

Objectives:
- Review concepts in order to prepare for the unit test

Lesson 9: Exponential and Logarithmic Functions Unit Test

Unit 4: Semester A Review and Exam

In this unit, you will review concepts from Semester A in order to prepare for the semester exam, which you will take at the end of this unit.

Objectives:
- To review concepts in order to prepare for the semester exam

Lesson 1: Algebra 2 A, Part 2 Semester Review (two-day lesson)

Objectives:
- Review for the semester exam
- Identify areas of strength and weakness in the material
- Complete a practice assessment and analyze your results

Lesson 2: Algebra 2 A, Part 2 Semester Exam
ALGEBRA 2 B
Algebra 2 B

In this second semester of Algebra 2, the student will strengthen his algebraic problem-solving abilities and deepen an understanding of mathematics. The student will, among other things, explore operations, graphs, and real-world applications related to both radical and rational functions, observe different types of geometric and arithmetic patterns, examine graphs and equations of conic sections, and calculate probabilities. The course will conclude with an introduction to trigonometry and its associated functions.

Unit 1: Review of Algebra 2 A

In this unit, you will review the major concepts from Algebra 2 A that are applicable to Algebra 2 B. These include working with linear systems of equations, quadratic functions, exponential and logarithmic functions, as well as polynomials and polynomial functions.

Objectives:
- Review expressions, equations, and inequalities
- Review linear systems
- Review quadratic functions and equations
- Review polynomials and polynomial functions
- Review exponential and logarithmic functions

Lesson 1: Review of Expressions, Equations, and Inequalities

Objectives:
- Review evaluating expressions
- Review solving linear equations
- Review solving inequalities in one variable

Lesson 2: Review of Linear Systems

Objectives:
- Review systems of linear equations
- Review systems of linear inequalities

Lesson 3: Review of Quadratic Functions and Equations

Objectives:
- Review graphing quadratic functions
- Review solving quadratic equations by factoring
- Review solving quadratic equations using the quadratic formula
- Review using the discriminant to determine the number of solutions to a quadratic equation

Lesson 4: Review of Polynomials and Polynomial Functions

Objectives:
- Review the definition of a polynomial
- Review factoring polynomials
- Review solving polynomial equations

Lesson 5: Review of Exponential and Logarithmic Functions

Objectives:
- Review exponential functions
- Review logarithmic functions

Unit 2: Radical Functions and Rational Exponents

In this unit, you will continue to explore functions, specifically radical functions. Operations such as addition, subtraction, multiplication, and division are performed with radical expressions which you will learn in addition to how to simplify radical expressions. You will learn that radical functions can be written using a symbol or by using exponents that are fractions. You will also explore the graphs of radical functions and their inverses. Finally, you will continue modeling real-world applications using radical functions, such as calculating voltage or circular velocity.

Objectives:
- To simplify radical expressions and solve radical equations
To determine the domain of radical functions and find extraneous solutions
To find and graph inverse functions

Lesson 1: Roots and Radical Expressions
Objectives:
- Find nth roots of numbers and expressions
- Write radical expressions in different forms

Lesson 2: Multiplying and Dividing Radical Expressions
Objectives:
- Multiply and divide radical expressions

Lesson 3: Binomial Radical Expressions
Objectives:
- Add and subtract radical equations

Lesson 4: Rational Exponents
Objectives:
- Simplify expressions with rational exponents

Lesson 5: Solving Square Root and Other Radical Equations
Objectives:
- Solve square root and other radical equations

Lesson 6: Function Operations
Objectives:
- Add, subtract, multiply, and divide functions
- Find the composite of two functions

Lesson 7: Inverse Relations and Functions
Objectives:
- Find the inverse of a relation or function

Lesson 8: Graphing Radical Functions
Objectives:
- Graph square root and other radical functions

Lesson 9: Radical Functions and Rational Exponents Review (two-day lesson)
Objectives:
- Review concepts in order to prepare for the unit test

Lesson 10: Radical Functions and Rational Exponents Unit Test

Unit 3: Rational Functions
In this unit, you will be exploring rational functions beginning with inverse and direct variations. Next, you will have the opportunity to stretch, compress, reflect, and translate functions while exploring reciprocal functions. Finally, you will be adding and subtracting rational expressions, and then solving rational equations. These concepts will be used to solve real situations that involve two different rates, such as calculating speed while taking into account the wind.

Objectives:
- Write and graph functions to solve problems
- Write and interpret rational expressions to solve problems
- Apply skills in a variety of contexts on the unit test

**Lesson 1: Inverse Variation (two-day lesson)**

Objectives:
- Recognize and apply inverse variation to solve problems
- Apply joint and other variations to solve problems

**Lesson 2: The Reciprocal Function Family**

Objectives:
- Draw the graph of reciprocal functions
- Perform translations on the graph of reciprocal functions
- Write and graph functions to solve problems

**Lesson 3: Rational Functions and Their Graphs (two-day lesson)**

Objectives:
- Identify properties of rational functions
- Graph rational functions

**Lesson 4: Rational Expressions**

Objectives:
- Change rational expressions to simpler forms
- Divide and multiply rational expressions
- Use and interpret rational expressions to solve problems

**Lesson 5: Adding and Subtracting Rational Expressions (two-day lesson)**

Objectives:
- Add and subtract rational expressions

**Lesson 6: Solving Rational Equations (two-day lesson)**

Objectives:
- Use rational equations to solve problems

**Lesson 7: Rational Functions Unit Review (two-day lesson)**

Objectives:
- Review concepts in order to prepare for the unit test

**Lesson 8: Rational Functions Unit Test**

**Unit 4: Sequences and Series**

In this unit, you will explore different types of patterns in arithmetic and geometric sequences. You will identify mathematical patterns and create a rule to describe a pattern.
Finally, you will find the sum of an arithmetic or geometric series, or use the sum of a series to determine the number of terms.

Objectives:
- Identify mathematical patterns found in a sequence
- Identify mathematical sequences and series as arithmetic or geometric
- Apply a formula to find the nth term of an arithmetic or geometric sequence
- Write and apply recursive and expresssive rules for arithmetic and geometric sequences
- Apply a formula to find the sum of an arithmetic or geometric series

**Lesson 1: Mathematical Patterns**

Objectives:
- Identify mathematical patterns found in a sequence
- Use a formula to find the nth term of a sequence

Objectives derived from Pearson Education, Inc. © Pearson Education, Inc., publishing as Pearson Prentice Hall. All rights reserved.

**Lesson 2: Arithmetic Sequences**

Objectives:
- Define, identify, and apply arithmetic sequences

Objectives derived from Pearson Education, Inc. © Pearson Education, Inc., publishing as Pearson Prentice Hall. All rights reserved.

**Lesson 3: Geometric Sequences (two-day lesson)**

Objectives:
- Define, identify, and apply geometric sequences

Objectives derived from Pearson Education, Inc. © Pearson Education, Inc., publishing as Pearson Prentice Hall. All rights reserved.

**Lesson 4: Arithmetic Series**

Objectives:
- Define arithmetic series and find their sums

Objectives derived from Pearson Education, Inc. © Pearson Education, Inc., publishing as Pearson Prentice Hall. All rights reserved.

**Lesson 5: Geometric Series (two-day lesson)**

Objectives:
- Define geometric series and find their sums

Objectives derived from Pearson Education, Inc. © Pearson Education, Inc., publishing as Pearson Prentice Hall. All rights reserved.

**Lesson 6: Sequences and Series Unit Review (two-day lesson)**

Objectives:
- Review concepts in order to prepare for the unit test

**Lesson 7: Sequences and Series Unit Test**

**Unit 5: Quadratic Relations and Conic Sections**

Different types of curves are formed when a plane and a cone intersect, depending on the angle of intersection. In this unit, you will explore these different types of conic sections, referred to as parabolas, circles, ellipses, and hyperbolas. You will learn about their graphs and equations, and how to use these conic sections to model and solve problems.

Objectives:
- Identify conic sections
- Write the equation of a circle, a parabola, an ellipse, and a hyperbola
- Graph a circle, a parabola, an ellipse, and a hyperbola
- Model and solve problems using conic sections

**Lesson 1: Exploring Conic Sections**

Objectives:
Lesson 2: Parabolas (two-day lesson)

Objectives:
- Write the equation of a parabola and graph parabolas

Lesson 3: Circles (two-day lesson)

Objectives:
- Write and graph the equation of a circle
- Find the center and radius of a circle and use them to graph the circle

Lesson 4: Ellipses (two-day lesson)

Objectives:
- Write the equation of an ellipse
- Find the foci of an ellipse
- Graph an ellipse

Lesson 5: Hyperbolas (two-day lesson)

Objectives:
- Graph hyperbolas
- Find and use the foci of a hyperbola

Lesson 6: Quadratic Relations and Conic Sections Unit Review (two-day lesson)

Objectives:
- Review concepts in order to prepare for the unit test

Unit 6: Probability and Statistics

Chances of winning a lottery, batting averages, and surveys are a few of the many places where probability and statistics appear in real-world situations. In this unit, you will explore ideas concerning the number of ways events can occur using permutations and combinations. You’ll learn which sampling methods reduce bias and provide good statistical information.

Objectives:
- Determine the number of permutations and combinations
- Find the theoretical or experimental probability of dependent, independent, and conditional events
- Calculate and apply measures of central tendency, the standard deviation, and the variance of a set of values
- Identify and evaluate sampling methods
- Apply the properties of binomial and normal distributions

Lesson 1: Permutations and Combinations

Objectives:
- Count permutations
- Count combinations
Lesson 2: Probability

Objectives:
- Find the probability of an event using theoretical, experimental, and simulation methods

Objectives derived from Pearson Education, Inc. © Pearson Education, Inc., publishing as Pearson Prentice Hall. All rights reserved.

Lesson 3: Probability of Multiple Events

Objectives:
- Become familiar with several terms related to probability
- Calculate the probability of multiple events happening
- Distinguish between dependent and independent events
- Distinguish between mutually exclusive and not mutually exclusive events

Lesson 4: Conditional Probability

Objectives:
- Find conditional probabilities
- Use tables and tree diagrams to determine conditional probabilities

Objectives derived from Pearson Education, Inc. © Pearson Education, Inc., publishing as Pearson Prentice Hall. All rights reserved.

Lesson 5: Analyzing Data (two-day lesson)

Objectives:
- Calculate measures of central tendency
- Draw and interpret box-and-whisker plots

Objectives derived from Pearson Education, Inc. © Pearson Education, Inc., publishing as Pearson Prentice Hall. All rights reserved.

Lesson 6: Standard Deviation (two-day lesson)

Objectives:
- Find the standard deviation and variance of a set of values
- Apply standard deviation and variance

Objectives derived from Pearson Education, Inc. © Pearson Education, Inc., publishing as Pearson Prentice Hall. All rights reserved.

Lesson 7: Samples and Surveys (two-day lesson)

Objectives:
- Identify and name sampling methods
- Distinguish between fair and biased survey questions and methods
- Use data from a sample survey to make estimates about the population

Lesson 8: Binomial Distributions (two-day lesson)

Objectives:
- Find binomial probabilities and use binomial distributions

Objectives derived from Pearson Education, Inc. © Pearson Education, Inc., publishing as Pearson Prentice Hall. All rights reserved.

Lesson 9: Normal Distributions (two-day lesson)

Objectives:
- Use a normal distribution

Objectives derived from Pearson Education, Inc. © Pearson Education, Inc., publishing as Pearson Prentice Hall. All rights reserved.

Lesson 10: Statistics Unit Review (two-day lesson)

Objectives:
- Review concepts in order to prepare for the unit test

Lesson 11: Statistics Unit Test
Unit 7: Periodic Functions and Trigonometry

In this unit, you will explore periodic functions and trigonometry. The unit will begin with exploring periodic data, which represent periodic behavior such as a heartbeat or a sound wave. You will then use the unit circle, radian angle measures, and trigonometric functions, such as sine, cosine, and tangent. You will learn how to model real-world situations and solve problems using trigonometric functions. Finally, you will explore trigonometric identities and equations. Using inverse trigonometric functions and basic identities, such as reciprocal, tangent, and cotangent identities, you will be able to create and solve trigonometric equations in order to solve problems.

Objectives:
• Determine the cycle, period, and amplitude of a periodic function and relate it to positions on the unit circle
• Graph the sine, cosine, and tangent functions
• Graph the secant, cosecant, and cotangent functions
• Measure angles using radian measure
• Apply inverse trigonometric functions to solve trigonometric equations

Lesson 1: Exploring Periodic Data

Objectives:
• Identify cycles and periods of periodic functions
• Find the amplitude of periodic functions

Lesson 2: Angles and the Unit Circle

Objectives:
• Work with angles in standard position
• Find coordinates of points on the unit circle

Lesson 3: Radian Measure

Objectives:
• Use radian measure for angles
• Find the length of an arc of a circle

Lesson 4: The Sine Function

Objectives:
• Identify properties of the sine function
• Graph sine curves

Lesson 5: The Cosine Function

Objectives:
• Graph and write cosine functions
• Solve trigonometric equations

Lesson 6: The Tangent Function

Objectives:
• Graph the tangent function

Lesson 7: Reciprocal Trigonometric Functions

Objectives:
Lesson 8: Trigonometric Identities (two-day lesson)

Objectives:

- Evaluate reciprocal trigonometric functions
- Graph reciprocal trigonometric functions

Objectives derived from Pearson Education, Inc. © Pearson Education, Inc., publishing as Pearson Prentice Hall. All rights reserved.

Lesson 9: Solving Trigonometric Equations Using Inverses (two-day lesson)

Objectives:

- Evaluate inverse trigonometric functions
- Solve trigonometric equations

Objectives derived from Pearson Education, Inc. © Pearson Education, Inc., publishing as Pearson Prentice Hall. All rights reserved.

Lesson 10: Periodic Functions and Trigonometry Unit Review (two-day lesson)

Objectives:

- Review concepts in order to prepare for the Unit Test

Lesson 11: Periodic Functions and Trigonometry Unit Test

Unit 8: Semester B Review and Exam

In this unit, you will review concepts from semester B in order to prepare for the semester exam, which you will take at the end of this unit.

Objectives:

- Review concepts in order to prepare for the semester exam

Lesson 1: Semester B Review (two-day lesson)

Objectives:

- Review concepts in order to prepare for the semester exam

Lesson 2: Semester B Exam
ALGEBRA 2 B, PART 1
Algebra 2 B, Part 1

In this first semester of Algebra 2 B, the student will strengthen algebraic problem-solving abilities and develop a deeper understanding of mathematics. This course will move at a slower pace than other Algebra 2 courses, and there will be a greater emphasis placed on instructional support. The first unit is a review of prerequisite knowledge. The student will, among other things, explore operations, graphs, and real-world applications related to rational functions, observe different types of geometric and arithmetic patterns, explore the properties of quadratic functions, and examine graphs and equations of conic sections.

Unit 1: Review of Algebra 2 A

In this unit, you will review the major concepts from Algebra 2 A that are applicable to Algebra 2 B. These include working with linear systems of equations, quadratic functions, exponential and logarithmic functions, as well as polynomials and polynomial functions.

Objectives:
- Review expressions, equations, and inequalities
- Review linear systems
- Review quadratic functions and equations
- Review polynomials and polynomial functions
- Review exponential and logarithmic functions

Lesson 1: Review of Expressions, Equations, and Inequalities

Objectives:
- Review evaluating expressions
- Review solving linear equations
- Review solving inequalities in one variable

Lesson 2: Review of Linear Systems

Objectives:
- Review systems of linear equations
- Review systems of linear inequalities

Lesson 3: Review of Quadratic Functions and Equations

Objectives:
- Review graphing quadratic functions
- Review solving quadratic equations by factoring
- Review solving quadratic equations using the quadratic formula
- Review using the discriminant to determine the number of solutions to a quadratic equation

Lesson 4: Review of Polynomials and Polynomial Functions

Objectives:
- Review the definition of a polynomial
- Review factoring polynomials
- Review solving polynomial equations

Lesson 5: Review of Exponential and Logarithmic Functions

Objectives:
- Review exponential functions
- Review logarithmic functions

Unit 2: Rational Functions

In this unit, you will be exploring rational functions beginning with inverse and direct variations. Next, you will have the opportunity to stretch, compress, reflect, and translate functions while exploring reciprocal functions. Finally, you will be adding and subtracting rational expressions, and then solving rational equations. These concepts will be used to solve real situations that involve two different rates, such as calculating speed while taking into account the wind.

Lesson 1: Inverse Variation (two-day lesson)
Objectives:
- Recognize and apply inverse variation to solve problems
- Apply joint and other variations to solve problems

Objectives derived from Pearson Education, Inc. © Pearson Education, Inc., publishing as Pearson Prentice Hall. All rights reserved.

Lesson 2: The Reciprocal Function Family (three-day lesson)

Objectives:
- Graph reciprocal functions
- Graph translations of reciprocal functions
- Write and graph functions to solve problems

Objectives derived from Pearson Education, Inc. © Pearson Education, Inc., publishing as Pearson Prentice Hall. All rights reserved.

Lesson 3: Rational Functions and Their Graphs (three-day lesson)

Objectives:
- Identify properties of rational functions
- Graph rational functions

Objectives derived from Pearson Education, Inc. © Pearson Education, Inc., publishing as Pearson Prentice Hall. All rights reserved.

Lesson 4: Mid-Unit Review (two-day lesson)

Objectives:
- Review the skills from the first part of the unit

Lesson 5: Rational Expressions (two-day lesson)

Objectives:
- Simplify rational expressions
- Multiply and divide rational expressions
- Use and interpret rational expressions to solve problems

Objectives derived from Pearson Education, Inc. © Pearson Education, Inc., publishing as Pearson Prentice Hall. All rights reserved.

Lesson 6: Adding and Subtracting Rational Expressions (three-day lesson)

Objectives:
- Add and subtract rational expressions

Objectives derived from Pearson Education, Inc. © Pearson Education, Inc., publishing as Pearson Prentice Hall. All rights reserved.

Lesson 7: Solving Rational Equations (three-day lesson)

Objectives:
- Use rational equations to solve problems

Objectives derived from Pearson Education, Inc. © Pearson Education, Inc., publishing as Pearson Prentice Hall. All rights reserved.

Lesson 8: Rational Functions Unit Review (three-day lesson)

Objectives:
- Review concepts in order to prepare for the unit test

Lesson 9: Rational Functions Unit Test

Unit 3: Sequences and Series

In this unit, you will explore different types of patterns in arithmetic and geometric sequences. You will identify mathematical patterns and create a rule to describe a pattern. Finally, you will find the sum of an arithmetic or geometric series, or use the sum of a series to determine the number of terms.

Objectives:
- Identify mathematical patterns found in a sequence
- Identify mathematical sequences and series as arithmetic or geometric
- Apply a formula to find the nth term of an arithmetic or geometric sequence
• Write and apply recursive and expressive rules for arithmetic and geometric sequences
• Apply a formula to find the sum of an arithmetic or geometric series

Lesson 1: Mathematical Patterns (two-day lesson)

Objectives:
• Identify mathematical patterns found in a sequence
• Use a formula to find the nth term of a sequence

Lesson 2: Arithmetic Sequences (two-day lesson)

Objectives:
• Define, identify, and apply arithmetic sequences

Lesson 3: Geometric Sequences (two-day lesson)

Objectives:
• Define, identify, and apply geometric sequences

Lesson 4: Mid-Unit Review (two-day lesson)

Objectives:
• Review the skills from the first part of the unit

Lesson 5: Arithmetic Series (two-day lesson)

Objectives:
• Define arithmetic series and find their sums

Lesson 6: Geometric Series (two-day lesson)

Objectives:
• Define geometric series and find their sums

Lesson 7: Sequences and Series Unit Review (three-day lesson)

Objectives:
• Review concepts in order to prepare for the unit test

Lesson 8: Sequences and Series Unit Test

Unit 4: Quadratic Relations and Conic Sections

Different types of curves are formed when a plane and a cone intersect, depending on the angle of intersection. In this unit, you will explore these different types of conic sections, referred to as parabolas, circles, ellipses, and hyperbolas. You will learn about their graphs and equations, and how to use these conic sections to model and solve problems.

Objectives:
• Identify conic sections
• Write the equation of a circle, a parabola, an ellipse, and a hyperbola
• Graph a circle, a parabola, an ellipse, and a hyperbola
• Model and solve problems using conic sections

Lesson 1: Exploring Conic Sections (two-day lesson)

Objectives:
• Graph and identify conic sections
Lesson 2: Parabolas (three-day lesson)

Objectives:
- Write the equation of a parabola and graph parabolas

Lesson 3: Circles (three-day lesson)

Objectives:
- Write and graph the equation of a circle
- Find the center and radius of a circle and use them to graph the circle

Lesson 4: Mid-Unit Review (two-day lesson)

Objectives:
- Review the skills from the first part of the unit

Lesson 5: Ellipses (three-day lesson)

Objectives:
- Write the equation of an ellipse
- Find the foci of an ellipse
- Graph an ellipse

Lesson 6: Hyperbolas (three-day lesson)

Objectives:
- Graph hyperbolas
- Find and use the foci of a hyperbola

Lesson 7: Quadratic Relations and Conic Sections Unit Review (three-day lesson)

Objectives:
- Review concepts in order to prepare for the unit test

Lesson 8: Quadratic Relations and Conic Sections Unit Test

Unit 5: Algebra 2 B, Part 1 Semester Test

Lesson 1: Algebra 2 B, Part 1 Review (two-day lesson)

Objectives:
- Review for the semester exam
- Identify areas of strength and weakness in the material
- Complete a practice assessment and analyze your results

Lesson 2: Algebra 2 B, Part 1 Semester Exam
ALGEBRA 2 B, PART 2
Algebra 2 B, Part 2

In this second semester of Algebra 2 B, the student will strengthen algebraic problem-solving abilities and develop a deeper understanding of mathematics. This course will move at a slower pace than other Algebra 2 courses, and there will be a greater emphasis placed on instructional support. The first unit is a review of prerequisite knowledge. The student will explore probabilities and be introduced to trigonometry and its associated functions.

Unit 1: Algebra Review

This unit provides you with a solid foundation for the second part of the Algebra 2B course. In this unit, you will begin with a review of many concepts from previous math courses, including ratios and percents, geometry of triangles and circles, and graphs of rational functions.

Objectives:
- Solve mathematical problems involving ratios and percents
- Understand and apply properties of triangles, including triangle similarity
- Recognize and solve special right triangles
- Identify parts of a circle
- Graph and interpret graphs of rational functions

Lesson 1: Ratios and Percents

Objectives:
- Write ratios to represent context
- Simplify ratios
- Calculate percents

Lesson 2: Triangles Part 1

Objectives:
- Classify triangles
- Understand and apply properties of triangles, including triangle similarity

Lesson 3: Triangles Part 2

Objectives:
- Apply the Pythagorean Theorem
- Recognize and solve special right triangles

Lesson 4: Circles

Objectives:
- Identify parts of a circle
- Understand and apply relationships among parts of a circle

Lesson 5: Algebra Unit Review

Objectives:
- Review concepts from the lesson

Unit 2: Probability and Statistics

Chances of winning a lottery, batting averages, and surveys are a few of the many places where probability and statistics appear in real-world situations. In this unit, you will explore ideas concerning the number of ways events can occur using permutations and combinations. You’ll learn which sampling methods reduce bias and provide good statistical information.

Objectives:
- Determine the number of permutations and combinations
- Find the theoretical or experimental probability of dependent, independent, and conditional events
- Calculate and apply measures of central tendency, the standard deviation, and the variance of a set of values
- Identify and evaluate sampling methods
- Apply the properties of binomial and normal distributions
Lesson 1: Permutations and Combinations (two-day lesson)

Objectives:
- Count permutations
- Count combinations

Objectives derived from Pearson Education, Inc. © Pearson Education, Inc., publishing as Pearson Prentice Hall. All rights reserved.

Lesson 2: Probability (two-day lesson)

Objectives:
- Find the probability of an event using theoretical, experimental, and simulation methods

Objectives derived from Pearson Education, Inc. © Pearson Education, Inc., publishing as Pearson Prentice Hall. All rights reserved.

Lesson 3: Probability of Multiple Events (two-day lesson)

Objectives:
- Become familiar with several terms related to probability
- Calculate the probability of multiple events happening
- Distinguish between dependent and independent events
- Distinguish between mutually exclusive and not mutually exclusive events

Objectives derived from Pearson Education, Inc. © Pearson Education, Inc., publishing as Pearson Prentice Hall. All rights reserved.

Lesson 4: Conditional Probability (three-day lesson)

Objectives:
- Find conditional probabilities
- Use tables and tree diagrams to determine conditional probabilities

Objectives derived from Pearson Education, Inc. © Pearson Education, Inc., publishing as Pearson Prentice Hall. All rights reserved.

Lesson 5: Mid-Unit Review (two-day lesson)

Objectives:
- Review the skills from the first part of the unit

Lesson 6: Analyzing Data (three-day lesson)

Objectives:
- Calculate measures of central tendency
- Draw and interpret box-and-whisker plots

Objectives derived from Pearson Education, Inc. © Pearson Education, Inc., publishing as Pearson Prentice Hall. All rights reserved.

Lesson 7: Standard Deviation (two-day lesson)

Objectives:
- Find the standard deviation and variance of a set of values
- Apply standard deviation and variance

Objectives derived from Pearson Education, Inc. © Pearson Education, Inc., publishing as Pearson Prentice Hall. All rights reserved.

Lesson 8: Samples and Surveys (two-day lesson)

Objectives:
- Identify sampling methods
- Recognize bias in samples and surveys
- Use data from a sample survey to make estimates about the population

Objectives derived from Pearson Education, Inc. © Pearson Education, Inc., publishing as Pearson Prentice Hall. All rights reserved.

Lesson 9: Binomial Distributions (two-day lesson)

Objectives:
- Find binomial probabilities and use binomial distributions
Lesson 10: Normal Distributions (three-day lesson)

Objectives:
- Use a normal distribution

Lesson 11: Probability and Statistics Unit Review (three-day lesson)

Objectives:
- Review concepts in order to prepare for the unit test

Lesson 12: Probability and Statistics Unit Test

Unit 3: Periodic Functions and Trigonometry

In this unit, you will explore periodic functions and trigonometry. The unit will begin with exploring periodic data, which represent periodic behavior such as a heartbeat or a sound wave. You will then use the unit circle, radian angle measures, and trigonometric functions, such as sine, cosine, and tangent. You will learn how to model real-world situations and solve problems using trigonometric functions. Finally, you will explore trigonometric identities and equations. Using inverse trigonometric functions and basic identities, such as reciprocal, tangent, and cotangent identities, you will be able to create and solve trigonometric equations in order to solve problems.

Objectives:
- Determine the cycle, period, and amplitude of a periodic function and relate it to positions on the unit circle
- Graph the sine, cosine, and tangent functions
- Graph the secant, cosecant, and cotangent functions
- Evaluate trigonometric functions and cofunctions
- Measure angles using radian measure

Lesson 1: Exploring Periodic Data (two-day lesson)

Objectives:
- Identify cycles and periods of periodic functions
- Find the amplitude of periodic functions

Lesson 2: Angles and the Unit Circle (three-day lesson)

Objectives:
- Work with angles in standard position
- Find coordinates of points on the unit circle

Lesson 3: Radian Measure (three-day lesson)

Objectives:
- Use radian measure for angles
- Find the length of an arc of a circle

Lesson 4: Mid-Unit Review (two-day lesson)

Objectives:
- Review the skills from the first part of the unit.

Lesson 5: The Sine Function (two-day lesson)

Objectives:
- Identify properties of the sine function
Lesson 6: The Cosine Function (two-day lesson)

Objectives:
- Graph and write cosine functions
- Solve trigonometric equations

Lesson 7: The Tangent Function (two-day lesson)

Objectives:
- Graph the tangent function

Lesson 8: Reciprocal Trigonometric Functions (three-day lesson)

Objectives:
- Evaluate reciprocal trigonometric functions
- Graph reciprocal trigonometric functions

Lesson 9: Trigonometric Identities (three-day lesson)

Objectives:
- Verify trigonometric identities

Lesson 10: Solving Trigonometric Equations Using Inverses (three-day lesson)

Objectives:
- Evaluate inverse trigonometric functions
- Solve trigonometric equations

Lesson 11: Periodic Functions and Trigonometry Unit Review (three-day lesson)

Objectives:
- Review concepts in order to prepare for the unit test

Lesson 12: Periodic Functions and Trigonometry Unit Test

Unit 4: Semester B Review and Exam

In this unit, you will review concepts from semester B in order to prepare for the semester exam, which you will take at the end of this unit.

Objectives:
- Review for the semester exam
- Identify areas of strength and weakness in the material
- Complete a practice assessment and analyze your results

Lesson 1: Algebra 2 B, Part 2 Semester Review (two-day lesson)

Objectives:
- Review for the semester exam
- Identify areas of strength and weakness in the material
- Complete a practice assessment and analyze your results

Lesson 2: Algebra 2 B, Part 2 Semester Exam
PRE-CALCULUS A
Precalculus A

This is the first of two courses that comprise Precalculus. In this course, the student will continue their study higher-level mathematics. The student will begin by reviewing the fundamental concepts in algebra including linear relations and functions, systems of linear equations and inequalities, and polynomial and rational functions. Next, the student will explore and analyze trigonometric identities, and examine and test algebraic properties using graphs. The student will continue their study of graphs and trigonometric identities by graphing trigonometric functions. Finally, the student will explore trigonometric identities and equations in preparation for their study of calculus.

Throughout the course the student will be introduced to many problem-solving strategies, exposed to various technologies, and taught test-taking strategies.

Unit 1: Linear Relations and Functions

In this unit, you will review previously learned mathematical principles and extend prior mathematical knowledge. Concepts emphasized in this unit will reappear throughout the course, so take the time to complete each lesson carefully.

As you work through the unit, you will have the opportunity to review properties and operations of linear and nonlinear relations and functions. You will focus on the concepts of function composition and use these concepts to graph functions. You will also review how to write linear equations as well as equations for parallel and perpendicular lines. Then, you will use these concepts to model real-world situations that involve linear functions. Finally, you will identify and graph piecewise functions.

Objectives:
- Determine whether a given relation is a function and perform operations with functions.
- Evaluate and find zeros of linear functions using functional notation.
- Graph and write functions and inequalities.
- Write equations of parallel and perpendicular lines.
- Model data using scatter plots and write predictions equations.

Lesson 1: Relations and Functions

Objectives:
- Determine whether a given relation is a function
- Identify the domain and range of a relation or function
- Evaluate functions

Objectives derived from The McGraw-Hill Companies, Inc. © The McGraw-Hill Companies, Inc., publishing as Glencoe. All rights reserved.

Lesson 2: Composition of Functions

Objectives:
- Perform operations with functions
- Find composite functions
- Iterate functions using real numbers

Objectives derived from The McGraw-Hill Companies, Inc. © The McGraw-Hill Companies, Inc., publishing as Glencoe. All rights reserved.

Lesson 3: Graphing Linear Equations

Objectives:
- Graph linear equations
- Find the x- and y-intercepts of a line
- Find the slope of a line through two points
- Find zeros of linear functions

Objectives derived from The McGraw-Hill Companies, Inc. © The McGraw-Hill Companies, Inc., publishing as Glencoe. All rights reserved.

Lesson 4: Writing Linear Equations

Objectives:
- Write linear equations
Lesson 5: Writing Equations of Parallel/Perpendicular Lines

Objectives:
- Write equations of parallel and perpendicular lines

Lesson 6: Modeling Real-World Data with Linear Functions

Objectives:
- Draw and analyze scatter plots
- Write a prediction equation and draw best fit lines
- Use a graphing calculator to compute correlation coefficients to determine goodness of fit
- Solve problems using prediction equation models

Lesson 7: Piecewise Functions

Objectives:
- Identify and graph piecewise functions including greatest integer, step, and absolute value functions

Lesson 8: Graphing Linear Inequalities

Objectives:
- Graph linear inequalities

Lesson 9: Unit 1 Review

Objectives:
- Review unit material

Lesson 10: Unit 1 Test

Unit 2: Systems of Linear Equations and Inequalities

In this unit, you will evaluate and graph systems of equations with two and three variables. You will review how to add, subtract, and multiply matrices. Then, you will use matrices to model motion and solve systems of equations using the inverses of matrices. You will also solve systems of linear inequalities by graphing and locating the minimum and maximum values. Finally, you will be introduced to linear programming procedures and use these procedures to solve real-world linear programming problems.

Objectives:
- Solve systems of equations and inequalities.
- Define matrices and add, subtract, and multiply matrices.
- Use matrices to model transformations.
- Find determinants and inverses of matrices.
- Use linear programming to solve problems.

Lesson 1: Solving Systems of Equations in Two Variables

Objectives:
- Solve systems of equations graphically
- Solve systems of equations algebraically

Lesson 2: Solving Systems of Equations in Three Variables
Lesson 3: Modeling Real-World Data with Matrices
Objectives:
- Model data using matrices
- Add, subtract, and multiply matrices

Lesson 4: Modeling Motion with Matrices
Objectives:
- Use matrices to determine the coordinates of polygons under a given transformation

Lesson 5: Determinants & Multiplicative Inverses of Matrices
Objectives:
- Evaluate determinants
- Find inverses of matrices
- Solve systems of equations by using inverses of matrices

Lesson 6: Solving Systems of Linear Inequalities
Objectives:
- Graph systems of inequalities
- Find the maximum or minimum value of a function defined for polygonal convex set

Lesson 7: Linear Programming
Objectives:
- Use linear programming procedures to solve applications
- Recognize situations where exactly one solution to a linear programming application may exist

Lesson 8: Unit 2 Review
Lesson 9: Unit 2 Test

Unit 3: The Nature of Graphs
In this unit, you will analyze and create graphs to solve many real-world situations. First, you will perform tests on a graph to determine if the graph of a relation is symmetrical. You will also identify and sketch linear and nonlinear families of graphs, including transformations, polynomials, absolute value, and radical inequalities. Then, you will solve and graph inverses of relations and functions problems. You will identify and evaluate continuity, end behavior, critical points, and extrema of functions. Finally, you will graph radical functions and solve direct, inverse, and joint variation problems.

Objectives:
- Graph functions, relations, inverses, and inequalities.
- Analyze families of graphs.
- Investigate symmetry, continuity, end behavior, and transformations of graphs.
- Find asymptotes and extrema of functions.
- Solve problems involving direct, inverse, and joint variation.
Objectives:
- Use algebraic tests to determine if the graph of a relation is symmetrical
- Classify functions as even or odd

Objectives derived from The McGraw-Hill Companies, Inc. © The McGraw-Hill Companies, Inc., publishing as Glencoe. All rights reserved.

Lesson 2: Families of Graphs
Objectives:
- Identify transformations of simple graphs
- Sketch graphs of related functions

Objectives derived from The McGraw-Hill Companies, Inc. © The McGraw-Hill Companies, Inc., publishing as Glencoe. All rights reserved.

Lesson 3: Graphs of Nonlinear Inequalities
Objectives:
- Graph polynomial, absolute value, and radical inequalities in two variables
- Solve absolute value inequalities

Objectives derived from The McGraw-Hill Companies, Inc. © The McGraw-Hill Companies, Inc., publishing as Glencoe. All rights reserved.

Lesson 4: Inverse Functions and Relations
Objectives:
- Determine inverses of relations and functions
- Graph functions and their inverses

Objectives derived from The McGraw-Hill Companies, Inc. © The McGraw-Hill Companies, Inc., publishing as Glencoe. All rights reserved.

Lesson 5: Continuity and End Behavior
Objectives:
- Determine whether a function is continuous or discontinuous
- Identify the end behavior functions
- Determine whether a function is increasing or decreasing at an interval

Objectives derived from The McGraw-Hill Companies, Inc. © The McGraw-Hill Companies, Inc., publishing as Glencoe. All rights reserved.

Lesson 6: Critical Points and Extrema
Objectives:
- Find the extrema of a function

Objectives derived from The McGraw-Hill Companies, Inc. © The McGraw-Hill Companies, Inc., publishing as Glencoe. All rights reserved.

Lesson 7: Graphs of Rational Functions
Objectives:
- Graph rational functions
- Determine vertical, horizontal, and slant asymptotes

Objectives derived from The McGraw-Hill Companies, Inc. © The McGraw-Hill Companies, Inc., publishing as Glencoe. All rights reserved.

Lesson 8: Direct, Inverse, and Joint Variation
Objectives:
- Solve problems involving direct, inverse, and joint variation

Objectives derived from The McGraw-Hill Companies, Inc. © The McGraw-Hill Companies, Inc., publishing as Glencoe. All rights reserved.

Lesson 9: Unit 3 Review

Lesson 10: Unit 3 Test

Unit 4: Polynomial and Rational Functions
In this unit, you will continue your study of polynomial and rational functions. You will find the roots of polynomial equations as well as use the discriminant to describe the roots of quadratic equations. You will calculate the factors of a polynomial using the Remainder, Factor, and Rational Root Theorems. Then, you will solve rational equations and decompose a fraction into partial fractions. You will also solve radical equations and inequalities using the same procedures you learned throughout this unit. Finally, you will use polynomial functions to solve real-world situations.

Objectives:
- Determine roots of polynomial equations.
- Solve quadratic, rational, and radical equations and rational and radical inequalities.
- Find the factors of polynomials.
- Approximate real zeros of polynomial functions.
- Write and interpret polynomial functions that model real-world data.

Lesson 1: Polynomial Functions

Objectives:
- Determine roots of polynomial equations
- Apply the Fundamental Theorem of Algebra

Objectives derived from The McGraw-Hill Companies, Inc. © The McGraw-Hill Companies, Inc., publishing as Glencoe. All rights reserved.

Lesson 2: Quadratic Equations (two-day lesson)

Objectives:
- Solve quadratic equations
- Use the discriminant to describe the roots of quadratic equations

Objectives derived from The McGraw-Hill Companies, Inc. © The McGraw-Hill Companies, Inc., publishing as Glencoe. All rights reserved.

Lesson 3: The Remainder and Factor Theorems

Objectives:
- Find the factors of polynomials using the Remainder and Factor Theorems

Objectives derived from The McGraw-Hill Companies, Inc. © The McGraw-Hill Companies, Inc., publishing as Glencoe. All rights reserved.

Lesson 4: The Rational Root Theorem (two-day lesson)

Objectives:
- Identify all possible rational roots of a polynomial equation by using the Rational Root Theorem
- Determine the number of positive and negative real roots a polynomial function has

Objectives derived from The McGraw-Hill Companies, Inc. © The McGraw-Hill Companies, Inc., publishing as Glencoe. All rights reserved.

Lesson 5: Locating Zeros of a Polynomial Function (two-day lesson)

Objectives:
- Approximate the real zeros of a polynomial function

Objectives derived from The McGraw-Hill Companies, Inc. © The McGraw-Hill Companies, Inc., publishing as Glencoe. All rights reserved.

Lesson 6: Rational Equations and Partial Fractions

Objectives:
- Solve rational equations and inequalities
- Decompose a fraction into partial fractions

Objectives derived from The McGraw-Hill Companies, Inc. © The McGraw-Hill Companies, Inc., publishing as Glencoe. All rights reserved.

Lesson 7: Radical Equations and Inequalities

Objectives:
- Solve radical equations and inequalities
Lesson 8: Modeling Real-World Data with Polynomial Functions (two-day lesson)

Objectives:
- Write polynomial functions to model real-world data
- Use polynomial functions to interpret real-world data

Lesson 9: Unit 4 Review

Lesson 10: Unit 4 Test

Unit 5: The Trigonometric Functions

In this unit, you will explore trigonometric functions. You will review angle and degree measure concepts as well as how to calculate the values for the trigonometric ratios using a right triangle. You will find the values of the six trigonometric ratios using the unit circle. Then, you will apply your knowledge of trigonometry to determine inverse trigonometric functions, to find missing angle and side measures, and to solve right triangles. Finally, you will explore and solve problems using the Law of Sines and the Law of Cosines.

Objectives:
- Convert decimal degree measures to degrees, minutes, and seconds and vice versa.
- Identify angles that are coterminal with a given angle.
- Solve triangles.
- Find the values of trigonometric functions.
- Find the areas of triangles.

Lesson 1: Angles and Degree Measure

Objectives:
- Convert decimal degree measures to degrees, minutes, and seconds, and vice versa
- Find the number of degree in a given number of rotations
- Identify angles that are coterminal with a given angle

Lesson 2: Trigonometric Ratios in Right Triangles (two-day lesson)

Objectives:
- Find the values of trigonometric ratios for acute angles of right triangles

Lesson 3: Trigonometric Functions on the Unit Circle

Objectives:
- Find the values of the six trigonometric functions using the unit circle
- Find the values of the six trigonometric functions of an angle in standard position given a point on its terminal side

Lesson 4: Applying Trigonometric Functions

Objectives:
- Use trigonometry to find the measures of the sides of right triangles

Lesson 5: Solving Right Triangles (two-day lesson)

Objectives:
- Evaluate inverse trigonometric functions
• Find missing angle measurements
• Solve right triangles

Objectives derived from The McGraw-Hill Companies, Inc. © The McGraw-Hill Companies, Inc., publishing as Glencoe. All rights reserved.

Lesson 6: The Law of Sines

Objectives:
• Solve triangles by using the Law of Sines if the measures of two angles and side are given
• Find the area of a triangle if the measures of two sides and the included angle or the measures of two angles are a side are given

Objectives derived from The McGraw-Hill Companies, Inc. © The McGraw-Hill Companies, Inc., publishing as Glencoe. All rights reserved.

Lesson 7: The Ambiguous Case for the Law of Sines (two-day lesson)

Objectives:
• Determine whether a triangle has zero, one, or no solutions
• Solve triangles using the Law of Sines

Objectives derived from The McGraw-Hill Companies, Inc. © The McGraw-Hill Companies, Inc., publishing as Glencoe. All rights reserved.

Lesson 8: The Law of Cosines

Objectives:
• Solve triangles by using the Law of Cosines
• Find the area of triangles if the measures of the three sides are given

Objectives derived from The McGraw-Hill Companies, Inc. © The McGraw-Hill Companies, Inc., publishing as Glencoe. All rights reserved.

Lesson 9: Unit 5 Review

Lesson 10: Unit 5 Test

Unit 6: Graphs of Trigonometric Functions

In this unit, you will continue your study of trigonometry by examining graphs of trigonometric functions. You will review angle and radian measure concepts including radian and degree measure, arc length, and area of a sector. You will explore linear and angular velocity. Then, you will examine the graphs for the sine and cosine functions. In addition, you will learn how to calculate the amplitude and period as well as translate the graphs for the sine and cosine functions. Finally, you will graph other trigonometric functions including secant, cosecant, tangent, and cotangent functions as well as graph inverse trigonometric functions.

Objectives:
• Change from radian measure to degree measure, and vice versa.
• Find linear and angular velocity.
• Use and draw graphs of trigonometric functions and their inverses.
• Find the amplitude, the period, the phase shift, and the vertical shift for trigonometric functions.
• Write trigonometric equations to model a given situation.

Lesson 1: Angles and Radian Measure

Objectives:
• Change from radian measure to degree measure, and vice versa
• Find the length of an arc given the measure of the central angle
• Find the area of a sector

Objectives derived from The McGraw-Hill Companies, Inc. © The McGraw-Hill Companies, Inc., publishing as Glencoe. All rights reserved.

Lesson 2: Linear and Angular Velocity

Objectives:
• Find linear and angular velocity
Lesson 3: Graphing Sine and Cosine Functions (two-day lesson)

Objectives:
- Use the graphs of the sine and cosine functions

Objectives derived from The McGraw-Hill Companies, Inc. © The McGraw-Hill Companies, Inc., publishing as Glencoe. All rights reserved.

Lesson 4: Amplitude and Period of Sine and Cosine Functions (two-day lesson)

Objectives:
- Find the amplitude and period for sine and cosine functions
- Write equations of sine and cosine functions given the amplitude and period

Objectives derived from The McGraw-Hill Companies, Inc. © The McGraw-Hill Companies, Inc., publishing as Glencoe. All rights reserved.

Lesson 5: Translations of Sine and Cosine Functions (two-day lesson)

Objectives:
- Find the phase shift and the vertical translation for sine and cosine functions
- Write the equations of sine and cosine functions given the amplitude, period, phase shift, and vertical translation
- Graph compound functions

Objectives derived from The McGraw-Hill Companies, Inc. © The McGraw-Hill Companies, Inc., publishing as Glencoe. All rights reserved.

Lesson 6: Modeling Real-World Data with Sinusoidal Functions

Objectives:
- Model real-world data using sine and cosine functions
- Use sinusoidal functions to solve problems

Objectives derived from The McGraw-Hill Companies, Inc. © The McGraw-Hill Companies, Inc., publishing as Glencoe. All rights reserved.

Lesson 7: Graphing Other Trigonometric Functions (two-day lesson)

Objectives:
- Graph tangent, cotangent, secant, and cosecant functions
- Write equations of trigonometric functions

Objectives derived from The McGraw-Hill Companies, Inc. © The McGraw-Hill Companies, Inc., publishing as Glencoe. All rights reserved.

Lesson 8: Trigonometric Inverses and Their Graphs (two-day lesson)

Objectives:
- Graph inverse trigonometric functions
- Find principal values of inverse trigonometric functions

Objectives derived from The McGraw-Hill Companies, Inc. © The McGraw-Hill Companies, Inc., publishing as Glencoe. All rights reserved.

Lesson 9: Unit 6 Review

Lesson 10: Unit 6 Test

Unit 7: Trigonometric Identities and Equations

In this unit, you will identify trigonometric identities and solve trigonometric equations. You will explore reciprocal, quotient, Pythagorean, symmetry, and opposite-angle trigonometric identities and use them to verify other trigonometric identities. Then, you will learn and solve trigonometric equations and inequalities using the sum, difference, double-angle, and half-angle identities. Finally, you will learn how to write a linear equation in normal form and find the distance from a point to a line.

Objectives:
- Use reciprocal, quotient, Pythagorean, symmetry, and opposite-angle identities.
- Verify trigonometric identities.
- Use sum, difference, double-angle, and half-angle identities.
• Solve trigonometric equations and inequalities.
• Write a linear equation in normal form; Find the distance from a point to a line.

Lesson 1: Basic Trigonometric Identities (two-day lesson)

Objectives:
• Identify and use reciprocal identities, quotient identities, Pythagorean identities, symmetry identities, and opposite-angle identities

Lesson 2: Verifying Trigonometric Identities

Objectives:
• Use the basic trigonometric identities to verify other identities
• Find numerical values of trigonometric functions

Lesson 3: Sum and Difference Identities (two-day lesson)

Objectives:
• Use the sum and difference identities for the sine, cosine, and tangent functions

Lesson 4: Double-Angle and Half-Angle Identities (two-day lesson)

Objectives:
• Use the double-angle and half-angle identities for the sine, cosine, and tangent functions

Lesson 5: Solving Trigonometric Equations

Objectives:
• Solve trigonometric equations and inequalities

Lesson 6: Normal Form of a Linear Equation

Objectives:
• Write the standard form of a linear equation given the length of the normal and the angle it makes with the x-axis
• Write linear equations in normal form

Lesson 7: Distance From a Point to a Line

Objectives:
• Find the distance from a point to a line
• Find the distance between two parallel lines
• Write equations of lines that bisect angles formed by intersecting lines

Lesson 8: Unit 7 Review

Lesson 9: Unit 7 Test

Unit 8: Precalculus A Final

In this unit, you will have the opportunity to prepare for and take the final exam. Since this is a comprehensive exam, it may be helpful to organize your notes in the order of the course
outline before you begin to review. Using the test-taking strategies that you have previously learned can help you be successful with both objective and essay questions.

**Lesson 1: Precalculus A Final Review**

**Lesson 2: Precalculus A Final**
PRE-CALCULUS B
Precalculus B

This is the second of two courses that comprise Precalculus. In this course, the student will continue their study higher-level mathematics. The student will review trigonometric concepts before being introduced to vectors and parametric equations. Next, the student will explore and solve problems involving polar coordinates and complex numbers. The student will continue their study of geometry by analyzing and transforming conic sections. Then, the student will explore and solve real-world exponential and logarithmic functions, sequences and series, probability, statistics, and data analysis problems. Finally, the student will examine calculus concepts including limits, derivatives, and the fundamental theorem of calculus in preparation for their study of calculus.

Throughout the course the student will be introduced to many problem-solving strategies, exposed to various technologies, and taught test-taking strategies.

Unit 1: Vectors and Parametric Equations

In this unit, you will review previously learned mathematical principles and extend prior mathematical knowledge. Concepts emphasized in this unit will reappear throughout the course, so take the time to complete each lesson carefully.

As you work through the unit, you will be introduced to vectors and parametric equations. You will explore vector notation, including terms such as magnitude, direction, and resultant. You will learn how to add, subtract, and multiply vectors algebraically and geometrically. Then, you will determine if two vectors are perpendicular by finding their cross product. You will write, solve, and graph two-dimensional and three-dimensional vector and parametric equation problems. Finally, you will use your knowledge of vectors to solve real-world applications involving vectors.

Objectives:
- Add, subtract, and multiply vectors.
- Represent vectors as ordered pairs or ordered triples and determine their magnitudes.
- Write and graph vector and parametric equations.
- Solve problems using vectors and parametric equations.
- Use matrices to model transformations in three-dimensional space.

Lesson 1: Geometric Vectors

Objectives:
- Find equal, opposite, and parallel vectors
- Add and subtract vectors geometrically

Objectives derived from The McGraw-Hill Companies, Inc. © The McGraw-Hill Companies, Inc., publishing as Glencoe. All rights reserved.

Lesson 2: Algebraic Vectors

Objectives:
- Find ordered pairs that represent vectors
- Add, subtract, multiply, and find the line of magnitude of vectors algebraically

Objectives derived from The McGraw-Hill Companies, Inc. © The McGraw-Hill Companies, Inc., publishing as Glencoe. All rights reserved.

Lesson 3: Vectors in Three-Dimensional Space

Objectives:
- Add and subtract vectors in three-dimensional space
- Find the magnitude of vectors in three-dimensional space

Objectives derived from The McGraw-Hill Companies, Inc. © The McGraw-Hill Companies, Inc., publishing as Glencoe. All rights reserved.

Lesson 4: Perpendicular Vectors (two-day lesson)

Objectives:
- Find the inner and cross products of two vectors
- Determine whether two vectors are perpendicular

Objectives derived from The McGraw-Hill Companies, Inc. © The McGraw-Hill Companies, Inc., publishing as Glencoe. All rights reserved.
Lesson 5: Applications with Vectors

Objectives:
- Solve problems using vectors and right triangle trigonometry

Objectives derived from The McGraw-Hill Companies, Inc. © The McGraw-Hill Companies, Inc., publishing as Glencoe. All rights reserved.

Lesson 6: Vectors and Parametric Equations (two-day lesson)

Objectives:
- Write vector and parametric equations of lines
- Graph parametric equations

Objectives derived from The McGraw-Hill Companies, Inc. © The McGraw-Hill Companies, Inc., publishing as Glencoe. All rights reserved.

Lesson 7: Modeling Motion Using Parametric Equations (two-day lesson)

Objectives:
- Model the motion of a projectile using parametric equations
- Solve problems related to the motion of a projectile, its trajectory, and range

Objectives derived from The McGraw-Hill Companies, Inc. © The McGraw-Hill Companies, Inc., publishing as Glencoe. All rights reserved.

Lesson 8: Transformation Matrices in Three-Dimensional Space (two-day lesson)

Objectives:
- Transform three-dimensional figures using matrix operations to describe the transformation

Objectives derived from The McGraw-Hill Companies, Inc. © The McGraw-Hill Companies, Inc., publishing as Glencoe. All rights reserved.

Lesson 9: Unit 8 Review

Lesson 10: Unit 8 Test

Unit 2: Polar Coordinates and Complex Numbers

In this unit, you will expand your knowledge of complex numbers and be introduced to polar coordinates. You will continue your study of polar coordinates by graphing polar equations, converting polar and rectangular coordinates, and writing the polar form of a linear equation. Then, you will learn how to add, subtract, multiply, and divide complex numbers in rectangular form as well as multiply and divide complex numbers in polar form. Finally, you will use De Moivre’s Theorem to calculate the powers and roots of complex numbers.

Objectives:
- Graph polar equations.
- Convert between polar and rectangular coordinates.
- Add, subtract, multiply, and divide complex numbers in rectangular and polar forms.
- Convert between rectangular and polar forms of complex numbers.
- Find powers and roots of complex numbers.

Lesson 1: Polar Coordinates

Objectives:
- Graph points in polar coordinates
- Graph simple polar equations
- Determine the distance between two points with polar coordinates

Objectives derived from The McGraw-Hill Companies, Inc. © The McGraw-Hill Companies, Inc., publishing as Glencoe. All rights reserved.

Lesson 2: Graphs of Polar Equations

Objectives:
- Graph polar equations

Objectives derived from The McGraw-Hill Companies, Inc. © The McGraw-Hill Companies, Inc., publishing as Glencoe. All rights reserved.
Lesson 3: Polar and Rectangular Coordinates

Objectives:
- Convert between polar and rectangular coordinates

Objectives derived from The McGraw-Hill Companies, Inc. © The McGraw-Hill Companies, Inc., publishing as Glencoe. All rights reserved.

Lesson 4: Polar Form of a Linear Equation

Objectives:
- Write the polar form of a linear equation
- Graph the polar form of a linear equation

Objectives derived from The McGraw-Hill Companies, Inc. © The McGraw-Hill Companies, Inc., publishing as Glencoe. All rights reserved.

Lesson 5: Simplifying Complex Numbers (two-day lesson)

Objectives:
- Add, subtract, multiply, and divide complex numbers in rectangular form

Objectives derived from The McGraw-Hill Companies, Inc. © The McGraw-Hill Companies, Inc., publishing as Glencoe. All rights reserved.

Lesson 6: Complex Plane and Polar Form of Complex Numbers (two-day lesson)

Objectives:
- Graph complex numbers in the complex plane
- Convert complex numbers from rectangular to polar form and vice versa

Objectives derived from The McGraw-Hill Companies, Inc. © The McGraw-Hill Companies, Inc., publishing as Glencoe. All rights reserved.

Lesson 7: Products/Quotients of Complex Numbers

Objectives:
- Find the product and quotient of complex numbers in polar form

Objectives derived from The McGraw-Hill Companies, Inc. © The McGraw-Hill Companies, Inc., publishing as Glencoe. All rights reserved.

Lesson 8: Powers and Roots of Complex Numbers (two-day lesson)

Objectives:
- Find powers and roots of complex numbers in polar form using De Moivre's Theorem

Objectives derived from The McGraw-Hill Companies, Inc. © The McGraw-Hill Companies, Inc., publishing as Glencoe. All rights reserved.

Lesson 9: Unit 9 Review

Lesson 10: Unit 9 Test

Unit 3: Conics

In this unit, you will review and expand your knowledge of geometry. You will review how to find the distance and midpoint using a coordinate plane and prove geometric relationships. Then, you will use algebra to write and graph the standard and general form of an equation for circles, ellipses, hyperbolas, and parabolas. You will explore rectangular and parametric forms of conic sections. You will identify the discriminant and graph conic transformations. Finally, you will solve systems of second-degree equations and inequalities.

Objectives:
- Use analytic methods to prove geometric relationships.
- Use the standard and general forms of the equations of circles, parabolas, ellipses, and hyperbolas.
- Graph circles, parabolas, ellipses, and hyperbolas.
- Find the eccentricity of conic sections; Recognize conic sections by their equations.
- Find parametric equations for conic sections defined by rectangular equations and vice versa.

Lesson 1: Introduction to Analytic Geometry
Objectives:
• Find the distance and midpoint between two points on a coordinate plane
• Prove geometric relationships among points and lines using analytical methods

Objectives derived from The McGraw-Hill Companies, Inc. © The McGraw-Hill Companies, Inc., publishing as Glencoe. All rights reserved.

Lesson 2: Circles
Objectives:
• Use and determine the standard and general forms of the equation of a circle
• Graph circles

Objectives derived from The McGraw-Hill Companies, Inc. © The McGraw-Hill Companies, Inc., publishing as Glencoe. All rights reserved.

Lesson 3: Ellipses
Objectives:
• Use and determine the standard and general forms of the equation of an ellipse
• Graph ellipses

Objectives derived from The McGraw-Hill Companies, Inc. © The McGraw-Hill Companies, Inc., publishing as Glencoe. All rights reserved.

Lesson 4: Hyperbolas
Objectives:
• Use and determine the standard and general forms of the equation of a hyperbola
• Graph hyperbolas

Objectives derived from The McGraw-Hill Companies, Inc. © The McGraw-Hill Companies, Inc., publishing as Glencoe. All rights reserved.

Lesson 5: Parabolas
Objectives:
• Use and determine the standard and general forms of the equation of a parabola
• Graph parabolas

Objectives derived from The McGraw-Hill Companies, Inc. © The McGraw-Hill Companies, Inc., publishing as Glencoe. All rights reserved.

Lesson 6: Rectangular and Parametric Forms of Conic Sections (two-day lesson)
Objectives:
• Recognize conic sections in their rectangular form by their equations
• Find a rectangular equation for a curve defined parametrically and vice versa

Objectives derived from The McGraw-Hill Companies, Inc. © The McGraw-Hill Companies, Inc., publishing as Glencoe. All rights reserved.

Lesson 7: Transformations of Conics (two-day lesson)
Objectives:
• Find the equations of conic sections that have translated or rotated
• Graph rotations and/or translations of conic sections
• Identify the equations of conic sections using the discriminant
• Find the angle of rotation for a given equation

Objectives derived from The McGraw-Hill Companies, Inc. © The McGraw-Hill Companies, Inc., publishing as Glencoe. All rights reserved.

Lesson 8: Systems of Second-Degree Equations/Inequalities (two-day lesson)
Objectives:
• Graph and solve systems of second degree equations and inequalities
Unit 4: Exponential and Logarithmic Functions

In this unit, you will explore exponential and logarithmic functions. You will evaluate and simplify rational exponent expressions and equations, graph exponential equations and functions, and solve exponential growth and decay problems using the number $e$. Then, you will solve equations and inequalities involving common and natural logarithms. Finally, you will model real-world situations with exponential and logarithmic functions.

Objectives:
- Simplify and evaluate expressions containing rational and irrational exponents.
- Use and graph exponential functions and inequalities.
- Evaluate expressions and graph and solve equations using logarithms.
- Model real-world situations and solve problems using common and natural logarithms.

Lesson 1: Real Exponents

Objectives:
- Use the properties of exponents
- Evaluate and simplify expressions containing rational exponents
- Solve equations containing rational exponents

Lesson 2: Exponential Functions

Objectives:
- Graph exponential functions and inequalities
- Solve problems involving exponential growth and decay

Lesson 3: The Number $e$

Objectives:
- Use the exponential function $y = e^x$.

Lesson 4: Logarithmic Functions (two-day lesson)

Objectives:
- Evaluate expressions involving logarithms
- Solve equations and inequalities involving logarithms
- Graph logarithmic functions and inequalities

Lesson 5: Common Logarithms

Objectives:
- Find common logarithms and antilogarithms of numbers
- Solve equations and inequalities using common logarithms
- Solve real-world applications with common logarithmic functions

Lesson 6: Natural Logarithms

Objectives:
- Find natural logarithms of numbers
- Solve equations and inequalities using natural logarithms
- Solve real-world applications with natural logarithmic functions
Lesson 7: Modeling Real-World Data with Functions (two-day lesson)

Objectives:
- Find the doubling time of an exponential quantity
- Find exponential and logarithmic functions to model real-world data
- Linearize data

Lesson 8: Unit 11 Review

Lesson 9: Unit 11 Test

Unit 5: Sequences and Series

In this unit, you will continue your study of sequences and series. You will identify and use formulas to generate mathematical patterns, arithmetic sequences, and geometric sequences. You will explore limits and use them to evaluate infinite arithmetic and geometric sequences and series. Then, you will analyze a series to determine if it convergent or divergent. You will write a series in sigma notation using the nth term. You will learn the Binomial Theorem and use it to solve special sequences and series. Finally, you will solve and graph functions using iteration and prove conjectures using mathematical induction.

Objectives:
- Identify and find nth terms of arithmetic, geometric, and infinite sequences.
- Find sums of arithmetic, geometric, and infinite series.
- Determine whether a series is convergent or divergent.
- Use sigma notation; Use the Binomial Theorem to expand binomials.
- Evaluate expressions using exponential, trigonometric, and iterative series.

Lesson 1: Arithmetic Sequences and Series

Objectives:
- Find the nth term and arithmetic means of an arithmetic sequence
- Find the sum of n terms of an arithmetic series

Lesson 2: Geometric Sequences and Series

Objectives:
- Find the nth term and geometric means of a geometric sequence
- Find the sum of n terms of a geometric series

Lesson 3: Infinite Sequences and Series (two-day lesson)

Objectives:
- Find the limit of the terms of an infinite sequence
- Find the sum of an infinite geometric series

Lesson 4: Convergent and Divergent Series (two-day lesson)

Objectives:
- Determine whether a series is convergent or divergent

Lesson 5: Sigma Notation and the nth Term

Objectives:
- Use sigma notation
Lesson 6: The Binomial Theorem

Objectives:
• Use the Binomial Theorem to expand binomials

Lesson 7: Special Sequences and Series (two-day lesson)

Objectives:
• Approximate e^x trigonometric values, and logarithms of negative numbers by using series
• Use Euler's Formula to write the exponential form of a complex number

Lesson 8: Sequences and Iteration

Objectives:
• Iterate functions using real and complex numbers

Lesson 9: Mathematical Induction

Objectives:
• Use mathematical induction to prove the validity of mathematical statements

Lesson 10: Unit 12 Review

Lesson 11: Unit 12 Test

Unit 6: Combinatorics and Probability

In this unit, you will extend your knowledge of probability. You will review the Counting Principle, independent and dependent events, permutations, and combinations. You will explore permutations with repetitions and circular combinations. Then, you will solve problems that involve the probability of an event, odds, probability of a compound event, and conditional probability. Finally, you will find the probability of an event using the Binomial Theorem.

Objectives:
• Solve problems involving combinations and permutations.
• Distinguish between independent and dependent events and between mutually exclusive and mutually inclusive events.
• Find probabilities.
• Find odds for the success and failure of an event.

Lesson 1: Permutations and Combinations

Objectives:
• Solve problems related to the Basic Counting Principle
• Distinguish between dependent and independent events
• Solve problems involving permutations and combinations

Lesson 2: Permutations: Repetitions & Circular Permutations

Objectives:
• Solve problems involving permutations with repetitions
• Solve problems involving circular permutations

Lesson 3: Probability and Odds
Lesson 4: Probabilities of Compound Events

Objectives:
- Find the probability of an event
- Find the odds for the success and failure of an event

Lesson 5: Conditional Probability

Objectives:
- Find the probability of an event given the occurrence of another event

Lesson 6: The Binomial Theorem and Probability (two-day lesson)

Objectives:
- Find the probability of an event by using the Binomial Theorem

Lesson 7: Unit 13 Review

Lesson 8: Unit 13 Test

Unit 7: Statistics and Data Analysis

In this unit, you will explore statistics and data analysis methods. You will draw and interpret data using bar graphs, line plots, back-to-back bar graphs, three-dimensional bar graphs, and histograms. You will calculate measures of central tendency for a set of data. Then, you will analyze data using measures of variability including range, quartiles, interquartile range, semi-interquartile range, mean deviation, and standard deviation. You will explore normal distributions. Finally, you will determine the standard error of the mean and level of confidence for a sample set of data.

Objectives:
- Make and use bar graphs, histograms, frequency distribution tables, stem-and-leaf plots, and box-and-whisker plots.
- Find the measures of central tendency and the measures of variability.
- Use the normal distribution curve.
- Find the standard error of the mean to predict the true mean of a population with a certain level of confidence.

Lesson 1: The Frequency Distribution

Objectives:
- Draw, analyze, and use bar graphs and histograms
- Organize data into a frequency or distribution table

Lesson 2: Measures of Central Tendency (two-day lesson)

Objectives:
- Find the mean, median, and mode of a set of data
- Find measures of central tendency of data organized in a stem-and-leaf plot or a frequency distribution table

Lesson 3: Measures of Variability (two-day lesson)

© 2009 Connections Education LLC. All rights reserved.
© 2006 The McGraw-Hill Companies, Inc. All rights reserved.
Objectives:
- Find the interquartile range, the semi-interquartile range, mean deviation, and standard deviation of a set of data
- Organize and compare data using box-and-whisker plots

Objectives derived from The McGraw-Hill Companies, Inc. © The McGraw-Hill Companies, Inc., publishing as Glencoe. All rights reserved.

Lesson 4: The Normal Distribution

Objectives:
- Use the normal distribution curve

Objectives derived from The McGraw-Hill Companies, Inc. © The McGraw-Hill Companies, Inc., publishing as Glencoe. All rights reserved.

Lesson 5: Sample Sets of Data (two-day lesson)

Objectives:
- Find the standard error of the mean to predict the true mean of a population with a certain level of confidence

Objectives derived from The McGraw-Hill Companies, Inc. © The McGraw-Hill Companies, Inc., publishing as Glencoe. All rights reserved.

Lesson 6: Unit 14 Review

Lesson 7: Unit 14 Test

Unit 8: Precalculus B Final

In this unit, you will have the opportunity to prepare for and take the final exam. Since this is a comprehensive exam, it may be helpful to organize your notes in the order of the course outline before you begin to review. Using the test-taking strategies that you have previously learned can help you be successful with both objective and essay questions.

Lesson 1: Precalculus B Final Review

Lesson 2: Precalculus B Final Exam
CONSUMER MATH A
**Consumer Math A**

This is the first of two courses that comprise Consumer Math. In this course, the student will learn that money is lost or gained depending upon the information a consumer has to help him make informed decisions. Retailers, banks, and credit card companies may not provide consumers with all the information they need to make good decisions. By the end of this course, the student will understand the history of money, define fixed costs and discretionary spending, understand the importance of savings, and recognize the dangers of debt. This course will ask the student to look hard at his financial choices including spending patterns, purchasing motivations, and how to make some difficult decisions.

**Unit 1: Money and Spending**

In this unit, you will learn the necessary skills to establish a solid consumer mathematics foundation. Concepts emphasized in this unit will reappear throughout the course, so take the time to complete each lesson carefully.

As you work through the unit, you will explore the history of currency and how it has changed over time. You will calculate discount, sales tax, and the cost of single items using many real-world situations. You will learn how to estimate expenses before going to the register at a store or receiving a check at a restaurant. You will analyze the information on an invoice and examine the different methods of payment. Finally, you will explore the fundamentals of creating a budget by estimating your expenses and saving money.

**Objectives:**
- Compute basic money exchange problems
- Calculate how to save money by using discounts and sales
- Use multiplication to quickly calculate a total
- Use a percentage discount to calculate savings
- Use various methods of discounting to compare savings

**Lesson 1: The History of Money: Introducing Trade**

Objectives:
- Explore how the need for trade led to bartering and eventually the development of currency
- Trace the history of money across the centuries
- Compute a basic exchange

**Lesson 2: History of Money: Using Metal & Paper as Currency**

Objectives:
- Justify the development of metal and paper currencies
- Explore how exchanges occur in current economies
- Compute basic money exchange problems

**Lesson 3: History of Money Activity: Exchanging Currency**

Objectives:
- Discover how currency values are established globally
- Determine where to find exchange rates
- Use currency exchange formulas to compute values

**Lesson 4: Department Store Sales**

Objectives:
- Explore how money is used in shopping
- Determine what items fit within a limited amount of money

**Lesson 5: Calculating Change and Discounts**

Objectives:
- Explore how money is used in shopping
- Calculate how to save money by using discounts and sales

**Lesson 6: The Department Store: Getting the Best Deal**

Objectives:
Lesson 7: History of Money and Department Store

Objectives:
- Calculate exchange rates using multiplication of decimals
- Compare the results of using two different buying scenarios
- Calculate how you can save money by using discounts and sales

Lesson 8: The Grocery Store

Objectives:
- Use multiplication to quickly calculate a total
- Calculate the cost of a single item by using division

Lesson 9: The Grocery Store: Shopping with Coupons

Objectives:
- Use multiplication to quickly calculate a total
- Calculate the cost of a single item by using division
- Add and subtract money in order to compare cost savings

Lesson 10: The Electronics Store: Percentages and Sales Tax

Objectives:
- Use a percentage discount to calculate savings
- Compute how sales tax increases the amount you pay for something

Lesson 11: The Electronics Store: Online vs In-Store Savings

Objectives:
- Use a percentage discount to compare savings
- Review the use of percentages, adding and subtracting money, and discounts

Lesson 12: What’s My Total Bill? (two-day lesson)

Objectives:
- Use various methods of discounting to compare savings
- Compute two different scenarios each for a grocery store and electronics store purchase

Lesson 13: The Outlet Mall

Objectives:
- Explore real-world examples of effective shopping
- Calculate the impact of discounts and taxes on a total payment

Lesson 14: Unit Review

Objectives:
- Review some of the early history of money
- Complete problems involving foreign exchange rates
- Compare savings using coupons or percentage discounts

Lesson 15: Unit Test

Unit 2: Controlling Expenses

This unit focuses on calculating total expenses using addition and subtraction of decimals, multiplication and division of decimals, and percentages of numbers. You will learn to read tables with specific situational data including time and money to determine the best plan for using electricity and telephones. You will also learn how to make estimations when shopping and then use those estimations to calculate the total bill at a restaurant including sales tax and tip. Then, you will complete activities to keep track of your expenses and checking balance. Lastly, you will perform computations involving wage earnings in order to determine how many work hours a purchase requires.

Objectives:
• Use estimation to calculate the total bill
• Examine different ways of paying for something
• Calculate purchases including discounts and sales tax
• Use steps for calculating a bill in order to pay by check
• Compare plans and determine the best choice for a given situation

Lesson 1: The Restaurant: The Bill
Objectives:
• Use estimation to calculate the total bill before ordering
• Calculate the individual items that go into the restaurant's "grand total"

Lesson 2: Discounts and Tip
Objectives:
• Use percentages in order to calculate sales tax and tip
• Complete calculations to determine the total cost of a restaurant visit

Lesson 3: Paying Retailers
Objectives:
• Examine different ways of paying for something
• Consider the advantages and disadvantages of paying with cash, debit cards, checks, and credit cards

Lesson 4: Cash, Check, or Charge
Objectives:
• Examine different ways of paying for something
• Consider the advantages and disadvantages of paying with cash, debit cards, checks, and credit cards

Lesson 5: Controlling Your Checkbook (two-day lesson)
Objectives:
• Calculate purchases including discounts and sales tax
• Complete entries in a checkbook register and submit the completed entries as a part of the portfolio

Lesson 6: Reviewing and Paying the Power Bill
Objectives:
• Analyze the information on a customer statement such as a bill
• Use steps for calculating a bill in order to pay by check

Lesson 7: Time to Pay the Power Bill
Objectives:
• Analyze the information on a customer statement such as a bill
• Use steps for calculating a bill in order to pay by check
• Calculate the cost of various plans and their benefits

Lesson 8: Comparing Choices
Objectives:
• Calculate savings on various plans
• Compare plans and determine the best choice for a given situation

Lesson 9: Estimating Your Expenses
Objectives:
• Tally monthly expenses
• Learn to estimate expenses that vary from month to month
• Calculate monthly expenses and make a savings plan

Lesson 10: Other Types of Expenses
Objectives:
• Tally monthly expenses
• Learn to estimate expenses that vary from month to month
Lesson 11: Receipts, Bills, and Estimates, Oh My!

Objectives:
- Calculate how much money is earned when working
- Compute the amount of time worked and how that translates into wages

Lesson 12: Interest Rates

Objectives:
- Calculate how much money is earned when working
- Identify key information for calculating interest earned

Lesson 13: Time is Money

Objectives:
- Calculate wages earned
- Compute the amount of time saved with interest earned

Lesson 14: Unit Review

Objectives:
- Calculate problems using estimation
- Compute wages using multiplication of decimals
- Determine “time saved” through analyzing interest rates

Lesson 15: Unit Test

Unit 3: Finances: Income and Debt

Interest, earnings, and savings are the key concepts in this unit. You will solve problems involving the formula for simple interest to determine various earnings on savings. You will learn the difference between involuntary and voluntary pay deductions and use a percentage of a number to determine net income. You will also have an opportunity to explore the effects of compounding interest on a traditional savings over a long period of time as compared to a simple interest computation over the same period of time. By the end of the unit, you will have a greater understanding of how credit cards have an impact on your financial health by completing problems using interest calculations and late fees. Through these calculations, you will compare the final cost of these credit card purchases, which may change your mind about purchasing items that are wants (luxuries) rather than needs (necessities).

Objectives:
- Explain the differences between gross pay and net income
- Explore the importance of savings in planning a healthy financial future
- Calculate savings based on income and expenses
- Compute interest on savings using online CD calculators
- Identify the long-term benefits of following a savings plan

Lesson 1: Hourly vs. Salaried

Objectives:
- Explain the differences between gross pay and net income
- Identify the differences between a salaried employee and an hourly employee
- Calculate the gross pay differences based on hourly wage rates and salary information

Lesson 2: Withholdings

Objectives:
- Explain the differences between gross pay and net income
- Identify the differences between a salaried employee and an hourly employee
- Calculate the gross pay and net pay differences based on various deductions

Lesson 3: How Much Money Do I Spend?
Objectives:
• Recognize the difference between fixed expenses and discretionary spending
• Explore the importance of savings in planning a healthy financial future

Lesson 4: Discretionary and Fixed Expenses

Objectives:
• Recognize the difference between fixed expenses and discretionary spending
• Calculate savings based on income and expenses

Lesson 5: Am I Financially Healthy? Planning

Objectives:
• Explore the problems caused by spending more than you make
• Define surplus and deficit as applied to personal spending
• Calculate fixed expenses and discretionary income

Lesson 6: Buyer Beware

Objectives:
• Explore the problems caused by spending more than you make
• Define surplus and deficit as applied to personal spending
• Calculate the true cost of some special finance deals

Lesson 7: CD Investments

Objectives:
• Explore the problems caused by spending more than you make
• Compute interest on savings using online CD calculators

Lesson 8: Saving Is Stability: Controlling Spending

Objectives:
• Identify the long-term benefits of following a savings plan
• Explore some of the roadblocks to savings—and see how to overcome them
• Calculate interest on savings accounts versus credit cards

Lesson 9: Spendaholics

Objectives:
• Identify the long-term benefits of following a savings plan
• Explore some of the roadblocks to savings—and see how to overcome them
• Calculate the impact of choice on savings

Lesson 10: How Much Have I Saved? (two-day lesson)

Objectives:
• Explore how banks determine their interest rates
• Calculate interest payments on a savings account based on annual, monthly and daily periods

Lesson 11: Debt Is Dangerous: Pay More Than the Minimum

Objectives:
• Explain the danger of carrying debt
• Explore how credit card companies and banks determine their interest rates
• Calculate interest payments based on a variety of different payment options

Lesson 12: Don't Be a Doris

Objectives:
• Explain the danger of carrying debt
Lesson 13: Debt Is Dangerous

Objectives:
- Explain the danger of carrying debt
- Explore how credit card companies and banks determine their interest rates
- Calculate monthly interest earned in a savings account

Lesson 14: Unit Review

Objectives:
- Calculate the cost of an item using sales tax and interest charges
- Compute the equivalent work hours for purchasing a good
- Review concepts taught in Lessons 1–13 of the unit

Lesson 15: Unit Test

Unit 4: Dealing with Debt

Debt is an inevitable part of your financial life and this unit focuses on different types of debt and the mathematical computations involved. You differentiate between fixed expenses and discretionary expenses, then calculate your total fixed expenses using addition, subtraction, multiplication, and division of decimals, and finally determine how much of your gross pay is allowed for housing and fixed expenses using percentage of a number. You complete decimal computations again when paying off credit card debt over a long period of time. Finally, you explore the methods used to calculate your credit score and your credit scores impact on interest rates involving debt and savings. You will interpret a data table to complete your calculations, and then compare outcomes based on several situations.

Objectives:
- Calculate how to increase savings by reducing expenses
- Compute different interest amounts due based on different principal amounts due
- Compute interest on credit cards
- Compare the impact on principal reduction of changes in monthly payments
- Explain what your credit score means and how it is developed

Lesson 1: Debt Ratio

Objectives:
- Use percentages to determine the maximum amount of money that should be spent on housing costs
- Calculate how to increase savings by reducing expenses

Lesson 2: Necessity or Luxury

Objectives:
- Calculate the impact of luxury items on debt ratios
- Learn how to increase your savings by reducing your expenses

Lesson 3: When Debt Is Acceptable: Secured vs. Unsecured

Objectives:
- Identify the difference between secured debt and credit card debt
- Calculate the savings that result from paying off debt rather than investing in a savings account

Lesson 4: When Debt Is Acceptable: Mortgage Loans

Objectives:
- Describe the specific attributes of mortgage loans that make them good debt
- Compute different interest amounts due based on different principal amounts due
Lesson 5: When Debt Isn't Acceptable: Minimum Due and Missed

Objectives:
- Identify what types of debt are unacceptable
- Compute the accumulated interest on credit card debt
- Calculate the impact of cash advances on credit card interest

Lesson 6: When Debt Isn't Acceptable: Credit Cards

Objectives:
- Identify what types of debt are unacceptable
- Compute interest on credit cards

Lesson 7: When Debt Isn't Acceptable: Rewards Programs

Objectives:
- Identify what types of debt are unacceptable
- Compare credit and debit card rewards programs
- Calculate interest on credit card purchases

Lesson 8: I Already Have Too Many Credit Cards

Objectives:
- Analyze which of your credit cards to pay off first by calculating and comparing interest due
- Identify the benefits of zero-rate APR balance transfers

Lesson 9: I Already Have Too Many Credit Cards: Debt Ratios

Objectives:
- Calculate debt ratios using various balance information
- Identify the problems that can arise from closing credit accounts

Lesson 10: Give Yourself Credit for Avoiding Credit Problems

Objectives:
- Calculate interest due based on various principal amounts
- Create a table showing a schedule to pay off a credit card with a given monthly payment plan
- Compare the impact on principal reduction of changes in monthly payments

Lesson 11: How a Credit Score Works: Financial Decisions

Objectives:
- Explain what your credit score means and how it is developed
- Compare the impact different interest rates (caused by high credit scores and low credit scores) can have on balances

Lesson 12: How a Credit Score Works: The Payoff

Objectives:
- Explain what your credit score means and how it is developed
- Compare the impact different interest rates (caused by high credit scores and low credit scores) can have on balances

Lesson 13: How a Credit Score Works: The Perfect Score

Objectives:
- Explain what your credit score means and how it is developed
- Compare the impact different interest rates (caused by high credit scores and low credit scores) can have on balances

Lesson 14: Unit Review

Objectives:
- Identify differences among different types of financial transactions
- Compute savings based on different interest rates
- Compare interest accrued based on various scenarios
- Review information and concepts related to dealing with debt
Lesson 15: Unit Test

Unit 5: Review

This unit reviews the information taught in Units 1 – 4 in preparation for the course final. You review key concepts from Unit 1 such as bartering, exchange rates, and purchasing goods from grocery and departments stores. You use decimal computations to calculate final costs and then comparing of decimals to make recommendations on purchases. Unit 2’s review continues the theme of decimal computations but expands to include controlling your expenses and keeping track of income through utilization of a checking account. Unit 3 focused on tabulating interest using the I=Prt simple interest formula and the impact long periods of time can have on savings growth. You also review calculating gross pay, deductions, and net income. Finally for Unit 4’s review, you complete comparisons involving credit card debt versus savings lost, the impact of various payments of paying off debt, the work hours cost of purchases, and the effects of different credit scores on interest rates.

Objectives:
- Review concepts presented in Unit 1: Money and Spending
- Review concepts presented in Unit 2: Controlling Expenses
- Review concepts presented in Unit 3: Finances: Income and Debt
- Review concepts presented in Unit 4: Dealing with Debt
- Study for the final exam

Lesson 1: Unit 1 Review: Money and Spending

Lesson 2: Unit 2 Review: Controlling Expenses

Lesson 3: Unit 3 Review: Finances: Income and Debt

Lesson 4: Unit 4 Review: Dealing with Debt

Unit 6: Final Exam

In this unit, you will take the final exam. The final exam may include any material that has been presented throughout the semester. Since this is a comprehensive exam, it may be helpful to organize your notes before you begin to review.

Objectives:
- Identify strategies that you will use to prepare for your exam
- Organize your time and study materials
- Review your notes, answers to lesson questions, and key vocabulary terms

Lesson 1: Final Exam
CONSUMER MATH B
Consumer Math B

This is the second of two courses that comprise Consumer Math. In this course, students will continue to learn how to make good financial decisions. Retailers, banks, and credit card companies may not provide consumers with all the information they need to make good decisions. By the end of this course, the student will differentiate between secured and unsecured debt, learn how to create a budget, examine a credit report, and discover the best way to increase income and decrease expenses. This course will provide the student with the skills to make good financial decisions.

Unit 1: Debt vs. Savings

In this unit, you learn more about types of debt from credit cards (unsecured debt) to home mortgages (secured debt). You learn why good credit is an advantage when acquiring debt and how to avoid bad credit. Using interest rate tables that take credit scores and secured versus unsecured loans into consideration, you will compute interest accrued on loans. You will analyze the impacts of maintaining a good credit history on your long term ability to save. Given various credit situations, you will determine which financial approach is the best by completing computations involving simple interest, money, and long term payoff amounts.

Objectives:
- Identify the differences between secured debt and unsecured debt
- Explain the relationship between accrued interest and principal balance
- Interpret and analyze data from tables
- Compute how depreciation affects the cost of buying a car
- Identify the advantages and disadvantages of owning a home instead of renting

Lesson 1: Secured Debt

Objectives:
- Identify the differences between secured debt and unsecured debt
- Calculate the consequences of defaulting on a secure debt
- Identify the impact of maintaining a good credit score on debt
- Analyze data in a table

Lesson 2: Unsecured Debt

Objectives:
- Identify the differences between secured debt and unsecured debt
- Calculate the consequences of defaulting on unsecured debt
- Identify the impact of maintaining a good credit score on debt
- Analyze and use data from a table

Lesson 3: Exploring Other Forms of Debt

Objectives:
- Identify the differences between secured debt and unsecured debt
- Determine trends within data
- Analyze and use data from a table

Lesson 4: Unsecured Debt Payment

Objectives:
- Identify the steps involved in building a strong credit history and some specific ways of raising your credit score
- Identify how a good credit score can be advantageous to you

Lesson 5: Future Wealth

Objectives:
- Identify the steps involved in building a strong credit history and some specific ways of raising your credit score
- Determine which debt should be eliminated by comparing several situations
- Explain the relationship between accrued interest and principal balance

Lesson 6: Good Credit vs. Bad Credit: An Overview

© 2010 Connections Education LLC. All rights reserved.
Objectives:
- Identify how a high credit score decreases your fixed expenses
- Calculate how your credit score affects your mortgage payments when you buy a house
- Calculate how your credit score affects your car payments when you purchase an automobile
- Determine other ways that your credit score impacts your financial situation

Lesson 7: Examples of Good Credit

Objectives:
- Identify how a high credit score decreases your fixed expenses
- Calculate how your credit score affects your mortgage payments when you buy a house
- Calculate how your credit score affects your car payments when you purchase an automobile
- Determine other ways that your credit score impacts your financial situation
- Interpret and analyze data from tables

Lesson 8: Examples of Bad Credit

Objectives:
- Identify how a high credit score decreases your fixed expenses
- Calculate how your credit score affects your mortgage payments when you buy a house
- Calculate how your credit score affects your car payments when you purchase an automobile
- Determine other ways that your credit score impacts your financial situation

Lesson 9: Savings vs. Debt (two-day lesson)

Objectives:
- Calculate interest accrued based on various principal balances
- Compare total accrued interest to determine savings amounts
- Determine the differences and sums for each month’s credit payments

Lesson 10: Cars: Used or New

Objectives:
- Compute how depreciation affects the cost of buying a car
- Compare the advantages (and disadvantages) of buying a used car instead of a new car

Lesson 11: Cars: Lease or Own

Objectives:
- Compute how depreciation affects the cost of buying a car
- Compare the advantages (and disadvantages) of buying a used car instead of a new car
- Identify the differences between leasing a car and buying a car

Lesson 12: Homes: Rent

Objectives:
- Identify the advantages and disadvantages of owning a home instead of renting
- Use proportions to work backwards with percentages

Lesson 13: Homes: Mortgage

Objectives:
- Itemize the various expenses that are a part of the cost of home ownership
- Calculate net income and allowable housing expense ratios
Lesson 14: Unit Review

Objectives:
- Identify differences among different types of financial transactions
- Compute savings based on different interest rates
- Compare interest accrued based on various scenarios
- Review information and concepts relating to dealing with debt

Lesson 15: Unit Test

Unit 2: Budgeting

Budgets are used to accomplish a variety of financial goals whether you are saving for an emergency fund or retirement. This unit focuses on the key parts of a budget and the proper way to develop one. You revisit computations involving housing expenses and fixed costs and use proportions to determine the realized income needed to stay within the percentage limits allowed. You will calculate how much of an emergency fund you need based on housing expenses and fixed costs and then develop a plan of saving involving either a percentage of your discretionary monies or income from a 2nd job. Lastly, you will complete computations for how much money an emergency fund can save you in the case when you need to use it versus if you had used a credit card, and then how long it will take you to rebuild your emergency fund.

Objectives:
- Identify how the concepts of budgeting, expenses, saving, credit management, and retirement tie together
- Analyze the impact of expenses on savings
- Analyze data for trends in savings
- Identify the important reasons for having an emergency fund
- Determine the steps of creating your own budget

Lesson 1: Budgeting

Objectives:
- Identify how the concepts of budgeting, expenses, saving, credit management, and retirement tie together
- Calculate the effect that inflation has on your purchasing power
- Compute how appreciation offsets the effects of inflation

Lesson 2: Creating a Hypothetical Budget (two-day lesson)

Objectives:
- Create a budget using income, fixed expenses, and discretionary expenses
- Calculate realized income
- Analyze the impact of expenses on savings

Lesson 3: Fixed Costs

Objectives:
- Determine how much money you need in your own emergency fund
- Calculate the amount of discretionary monies available

Lesson 4: Assets and "Net" Savings

Objectives:
- Analyze data for trends in savings
- Identify ways to create your emergency "safety net"

Lesson 5: Discretionary Spending: The Extras of Life

Objectives:
- Calculate how you can save money by eliminating a few simple luxuries
- Analyze why the earlier you start saving for your retirement, the better
- Compute how paying down credit card debt can save you more money than investing the same amount of money
Lesson 6: The Second Job

Objectives:
- Calculate how you can save money by eliminating a few simple luxuries
- Determine how a low interest rate, when compounded over a long period of time, can generate a significant return on your investment
- Analyze why the earlier you start saving for your retirement, the better
- Compute why reducing discretionary spending doesn't mean you have to eliminate luxuries altogether

Lesson 7: Emergency Funds: Cash Reserves

Objectives:
- Identify the important reasons for having an emergency fund
- Compute the different forms your emergency fund can take
- Calculate the impact different types of investments can have on total interest accrued

Lesson 8: Emergency Funds: Insurance Policies

Objectives:
- Determine the benefits insurance can have in emergency situations
- Perform percentage computations involving money and interest compounding
- Compare accrued interest given different scenarios

Lesson 9: Emergencies – A Brainstorming Activity

Objectives:
- Identify different situations that may require an emergency fund
- Calculate the different impacts that using an emergency fund can have on savings

Lesson 10: Budgeting Summary: Reviewing the Process

Objectives:
- Determine the steps of creating your own budget
- Identify the steps you should take when you are finally able to create a budget surplus

Lesson 11: Budgeting Summary: The Never-ending Budget Process

Objectives:
- Determine the steps of creating your own budget
- Calculate steps you can take to turn a deficit situation into a surplus
- Identify the steps you should take when you are finally able to create a budget surplus

Lesson 12: Budgeting Summary: Learning from Experience

Objectives:
- Determine the steps of creating your own budget
- Calculate steps you can take to turn a deficit situation into a surplus
- Identify the steps you should take when you are finally able to create a budget surplus

Lesson 13: Unit Review

Objectives:
- Identify different parts of a budget
- Compute fixed expenses based on various types of data
- Use percentages and proportions to calculate realized income

Lesson 14: Unit Test

Unit 3: Finances

You have already considered the impact of your credit score on your ability to save and interest rates on debt. This unit will focus you on increasing your savings through other
ways. You will complete calculations involving paying off high interest debt more quickly by paying more than the minimum and compare the savings both in money and time. You will learn about how carpooling can save you and coworkers money on transportation costs, and compare the benefits of moving from one part-time job to another even though the base pay rate may be less. Coupons were one form of saving when shopping but another is bulk or volume purchasing. You learn when it is a good thing to visit a wholesale club store and the savings that can be had when compared to local store prices by completing multiplication and division problems involving money. Lastly, you will learn the statistical value of attaining certain educational degrees by analyzing data from the United States Bureau of Labor and turning your educational level into money terms.

Objectives:
• Calculate the ways to increase your income
• Interpret and analyze data in a table using various mathematical operations
• Calculate the impact of using a variety of ways to cut your everyday expenses
• Identify the first step you should take in your campaign to save money
• Calculate the impact credit card debt can have on your financial well-being

**Lesson 1: A Part-Time Job**

Objectives:
• Calculate the ways to increase your income
• Compute the increase to your income from getting a part-time job
• Compare net hourly income wage

**Lesson 2: Promotions and Merit Pay**

Objectives:
• Calculate the ways to increase your income
• Compute increases to your income from getting a job or taking a second job

**Lesson 3: A New Job**

Objectives:
• Calculate the ways to increase your income
• Compute changes in realized income and discretionary monies

**Lesson 4: Labor Statistics**

Objectives:
• Identify the single best way to increase your income
• Calculate the actual monetary advantage to getting your high school diploma
• Compare the benefits of following further educational paths beyond high school
• Interpret and analyze data in a table using various mathematical operations

**Lesson 5: Investigating Labor Statistics (two-day lesson)**

Objectives:
• Identify the single best way to increase your income
• Calculate the actual monetary advantage to getting your high school diploma
• Compare the benefits of following further educational paths beyond high school
• Interpret and analyze data from a table

**Lesson 6: Degree Effect**

Objectives:
• Identify the single best way to increase your income
• Calculate the actual monetary advantage to getting your high school diploma
• Compare the benefits of following further educational paths beyond high school
Lesson 7: Gifts and Bulk Buying

Objectives:
- Calculate the impact of using a variety of ways to cut your everyday expenses
- Determine the financial benefits of using coupons and buying in volume as ways to decrease your expenses

Lesson 8: Sharing Expenses

Objectives:
- Calculate the impact of using a variety of ways to cut your everyday expenses
- Determine the financial benefits of carpooling, using coupons, and buying in volume as ways to decrease your expenses
- Calculate the financial impact of carpooling

Lesson 9: Benefits of Coupons

Objectives:
- Calculate the impact of using a variety of ways to cut your everyday expenses
- Determine the financial benefits of carpooling, using coupons, and buying in volume as ways to decrease your expenses
- Demonstrate proficiency with concepts covered in previous lessons

Lesson 10: Credit Card Debt Revisited

Objectives:
- Calculate the impact of the single best way to decrease your expenses
- Determine the financial benefits of paying more than the minimum payment on your credit card bill
- Compute how a small increase in your monthly payment results in huge savings over time

Lesson 11: Paying More Than the Minimum

Objectives:
- Calculate the impact of the single best way to decrease your expenses
- Determine the financial benefits of paying more than the "minimum payment" on your credit card bill
- Compute how a small increase in your monthly payment results in huge savings over time

Lesson 12: Balancing Act of Debt

Objectives:
- Identify the first step you should take in your campaign to save money
- Explain why investing in a savings account is not necessarily the first thing you should do to save money
- Calculate the impact credit card debt can have on your financial well-being

Lesson 13: Retirement Savings vs. Debt

Objectives:
- Identify the first step you should take in your campaign to save money
- Explain why investing in a savings account is not necessarily the first thing you should do to save money
- Calculate the impact credit card debt can have on your financial well-being

Lesson 14: Unit Review

Objectives:
- Compute the impact of changing jobs or taking a part-time job
• Compare benefits of investing in a savings plan versus paying off credit card debt
• Identify the instances when investing makes sense
• Calculate income implications from attaining different levels of education

**Lesson 15: Unit Test**

**Unit 4: Savings and Financial Planning**

This unit takes a more detailed look at savings plans. You will learn the key element to a good savings plan and then why it is important to diversify. You will learn about the stock market and treasury bonds as other options to reach your savings goals but also identify the advantages and disadvantages of these options. You will make many calculations using percentages and money, whether to calculate your realized income or the down payment for a house. You will compare savings outcomes and the effect of shifting monies from one savings instrument to another. This unit will also explain how a long-term savings goal can be translated into monthly goals. Lastly, you will examine the importance of contracts to your life and their specific implications when you loan money to friends or when your parents rent you an apartment to attend college away from home.

Objectives:
• Outline the steps in planning your savings strategy
• Identify the relationship between risk and reward
• Practice how to write basic contracts
• Identify the financial benefits of direct deposit and paying bills online
• Plan your future financial activities

**Lesson 1: Goal Setting**

Objectives:
• Outline the steps in planning your savings strategy
• Computationally compare the differences between short-term and long-term financial goals
• Calculate the significant impacts of long-term financial goals

**Lesson 2: Short-term vs. Long-term**

Objectives:
• Outline the steps in planning your savings strategy
• Computationally compare the differences between short-term and long-term financial goals
• Calculate the significant impacts of long-term financial goals

**Lesson 3: An Introduction to Investing: Being Realistic**

Objectives:
• Outline the steps in planning your savings strategy
• Computationally compare the differences between short-term and long-term financial goals
• Calculate the significant impacts of long-term financial goals

**Lesson 4: An Introduction to Investing: Risk**

Objectives:
• Identify the relationship between risk and reward
• Compute why high-risk investments do not make good savings instruments
• Calculate the differences diversity can have in your savings program

**Lesson 5: Diversifying Your Savings (two-day lesson)**

Objectives:
• Identify the relationship between risk and reward
• Compute why high-risk investments do not make good savings instruments
• Calculate the differences diversity can have in a savings program

**Lesson 6: An Introduction to Investing: Stock Market**
Lesson 7: Get It in Writing: Renting

Objectives:
- Identify why it's important to get all your agreements in writing
- Differentiate between negotiable agreements and unilateral contracts
- Practice how to write basic contracts
- Calculate the financial impact of different types of contracts

Lesson 8: Get It in Writing: Unilateral Contracts

Objectives:
- Identify why it's important to get all your agreements in writing
- Differentiate between negotiable agreements and unilateral contracts
- Practice how to write basic contracts
- Calculate the financial impact of different types of contracts

Lesson 9: The Internet Is Your Friend: Online Banking

Objectives:
- Calculate the advantages of online banking
- Identify the financial benefits of direct deposit and paying bills online
- Determine the time and cost savings of using computer-based financial software programs to help you manage finances

Lesson 10: The Internet Is Your Friend: Direct Deposit

Objectives:
- Calculate some of the advantages of online banking
- Identify the financial benefits of direct deposit and paying bills online
- Determine the time and cost savings of using computer-based financial software programs to help manage finances

Lesson 11: The Internet Is Your Friend: Financial Software

Objectives:
- Calculate some of the advantages of online banking
- Identify the financial benefits of direct deposit and paying bills online
- Determine the time and cost savings of using computer-based financial software programs to help manage finances

Lesson 12: Review: Money's Many Uses

Objectives:
- Review the important concepts presented in the Consumer Math course by completing calculations involving a variety of financial situations
- Identify ways you have already changed your thinking involving your finances
- Plan your future financial activities

Lesson 13: Review: Planning Ahead and Contracts

Objectives:
- Review the important concepts presented in the Consumer Math course by completing calculations involving a variety of financial situations
- Identify ways you have already changed your thinking involving your finances
- Plan your future financial activities

Lesson 14: Unit Review

Objectives:
- Calculate the amounts needing to be saved over various periods of time
- Compare the effect of different interest rates on savings
Lesson 15: Unit Test

Unit 5: Review

This unit reviews the information taught in Units 1–4 in preparation for the course final. You will review key concepts from Unit 1, such as the difference between secured and unsecured debt, the benefits of maintaining good credit, and the effects these items have on the interest rates you pay. The review for Unit 2 focuses on the development of a budget and the impact a second job (or in your case, a part-time job) can have on your ability to save. The review for Unit 3 revisits how to increase your income by obtaining a job, a part-time job, or gaining more education. You will also review additional ways you can reduce your spending through sharing of expenses by doing such things as carpooling or buying items in bulk. Lastly, you will reexamine Unit 4, which looks in more detail at developing a savings plan, being realistic about your goals, and the importance of contracts to your financial well-being. Key vocabulary from these units includes appreciation, assets, depreciation, educational attainment, part-time job, median income, down payment, and closing costs. Mathematical skills that are important in this review include the ability to work with money using addition, subtraction, multiplication, and division—computing your net hourly income to computing how many hours you must work to purchase an item or meet a goal.

Objectives:
- Review concepts presented in Unit 1: Debt vs. Saving
- Review concepts presented in Unit 2: Budgeting
- Review concepts presented in Unit 3: Finances
- Review concepts presented in Unit 4: Savings and Financial Planning
- Study for the final exam

Lesson 1: Review: Debt vs. Saving

Lesson 2: Review: Budgeting

Lesson 3: Review: Finances

Lesson 4: Review: Savings and Financial Planning

Unit 6: Final Exam

In this unit, you will take the final exam. The final exam may include any material that has been presented throughout the semester. Since this is a comprehensive exam, it may be helpful to organize your notes before you begin to review.

Objectives:
- Identify strategies that you will use to prepare for your exam
- Organize your time and study materials
- Review your notes, answers to lesson questions, and key vocabulary terms

Lesson 1: Consumer Math B Final Exam
GEOMETRY A
Geometry A

This is the first of two courses that comprise Geometry. Throughout the course, the student will use virtual manipulatives and tools to explore the principles of logic, proofs, and constructions. The student will use the midpoint and distance formulas to solve a variety of problems involving the coordinate plane. The student will also study parallel and perpendicular lines, including special angle pairs. The student will explore transformations in the coordinate plane and apply them to other geometrical concepts. This course will conclude with the use of triangle concepts to find angle measures, prove triangles congruent, and discover relationships within one and two triangles. Throughout the course, the student will learn concepts through a variety of instructional strategies, solve real-world applications, and complete an assortment of activities.

Unit 1: Focus on Success in Geometry

In this unit, you will focus on ways to think about and approach geometry. You will learn how to set personal goals, establish study strategies that reduce anxiety, and review ways to be an active learner. The goal of this unit is to help you establish a positive mindset at the start of the course. This includes understanding how effort impacts goal obtainment, appreciating the importance of taking initiative with learning, and embracing the many resources available to help you throughout the course, such as your fellow students, your teacher, online tools, and your Learning Coach.

Objectives:
- Use strategies such as self-assessment and reflection in order to improve mathematical performance
- Distinguish between effort-based and ability-based models of learning
- Assess personal readiness for study and learning
- Use resources to assist with goal-setting and attainment

Lesson 1: Get in Shape for Geometry

Objectives:
- Examine organizational skills and learning strategies
- Set goals in the context of mathematical learning
- Reflect on strengths, weaknesses, and the value of goal-setting
- Distinguish between effort-based and ability-based models of learning

Lesson 2: Resources for Success

Objectives:
- Identify the various resources that can be used to promote active learning
- Discuss strategies for using resources effectively

Unit 2: Tools of Geometry

This unit introduces various topics in geometry. The beginning of the unit involves representing three-dimensional solid figures using nets, isometric drawings, and orthographic drawings. Special drawing techniques are introduced, such as slanted lines to represent three-dimensional perspective and dashed lines to represent hidden lines. An introduction to basic geometry terms such as points, lines, and planes is included. These are introduced as the building blocks of geometry on which all other geometry terms are defined. Postulates and axioms are introduced as well as naming techniques.

Measuring segments and angles are introduced along with the Ruler Postulate, Segment Addition Postulate, Protractor Postulate, and Angle Addition Postulate. Types of angles as well as special angle pairs and their relationships are included. The degree unit is introduced and the use of a protractor to find angle measure is included. A ruler is also used to find segment length. Problems involving algebra, such as solving linear equations, are used to find segment lengths and angle measures. The concept of creating constructions without the use of measurement by using only a straightedge and protractor is introduced in this unit. Four basic constructions are included, such as constructing congruent segments, congruent angles, perpendicular bisectors, and angle bisectors. These constructions will be used to create other constructions, such as an equilateral triangle. They will also be used to solve problems, such as creating a 45° angle.
The unit concludes with finding the midpoint of segments on a number line and on a coordinate plane using the midpoint formulas. The distance formula is used to find the distance between two points in a coordinate plane. Algebra skills are reviewed as necessary for solving problems using midpoint and distance formulas. Other formulas included at the end of the unit are formulas used to find perimeter, circumference, and area of geometric figures such as squares, rectangles, triangles, and circles. The area of a region is also explored.

Many new vocabulary terms associated with the topics are included. A variety of real-world applications are embedded throughout the unit. A variety of activities are also used to enhance instruction, such as BrainPOP® movies, Gizmos, Discovery Education™ streaming movies, SkillsTutor™, and PowerGeometry. Assessments in this unit include quick checks, quizzes, a discussion on how math is used in daily life, and a unit test.

Objectives:
- Make nets and drawings of three-dimensional figures
- Understand basic terms and postulates of geometry
- Find and compare lengths of segments and measures of angles
- Identify special angle pairs and use their relationships to find angle measures; Make basic constructions using a straightedge and a compass
- Find the perimeter, circumference, and area of basic shapes

Lesson 1: Nets and Drawings for Visualizing Geometry (two-day lesson)

Objectives:
- Make nets and drawings of three-dimensional figures

Lesson 2: Points, Lines, and Planes (two-day lesson)

Objectives:
- Understand basic terms and postulates of geometry

Lesson 3: Measuring Segments

Objectives:
- Find and compare lengths of segments

Lesson 4: Measuring Angles

Objectives:
- Find and compare the measures of angles

Lesson 5: Exploring Angles

Objectives:
- Identify special angle pairs and use their relationships to find angle measures

Lesson 6: Basic Constructions (two-day lesson)

Objectives:
- Make basic constructions using a straightedge and a compass
Lesson 7: Midpoint and Distance in the Coordinate Plane (two-day lesson)

Objectives:
- Find the midpoint of a segment
- Find the distance between two points in the coordinate plane

Lesson 8: Perimeter, Circumference, and Area

Objectives:
- Find the perimeter or circumference of basic shapes
- Find the area of basic shapes

Lesson 9: Tools of Geometry Unit Review (two-day lesson)

Objectives:
- Review lesson material from Tools of Geometry to prepare for the unit test

Lesson 10: Tools of Geometry Unit Test

Unit 3: Reasoning and Proof

This unit focuses on reasoning and writing formal proofs. You will explore conditional and biconditional statements. The conclusion of the unit introduces two types of formal proofs, two-column proofs and paragraph proofs. Finally, you will participate in a discussion on biconditionals and definitions.

Objectives:
- Write high-quality definitions using biconditionals
- Connect reasoning in algebra and geometry
- Prove and apply theorems about angles

Lesson 1: Conditional Statements

Objectives:
- Recognize conditional statements and their parts
- Write converses, inverses, and contrapositives of conditionals

Lesson 2: Biconditionals and Definitions

Objectives:
- Write biconditionals and recognize good definitions

Lesson 3: Reasoning in Algebra and Geometry (two-day lesson)

Objectives:
- Connect reasoning in algebra and geometry

Lesson 4: Proving Angles Congruent (two-day lesson)

Objectives:
- Prove and apply theorems about angles

Lesson 5: Reasoning and Proof Unit Review (two-day lesson)

Objectives:
Lesson 6: Reasoning and Proof Unit Test

Unit 4: Parallel and Perpendicular Lines

In this unit, you will explore concepts associated with parallel and perpendicular lines. The unit begins with identifying parallel, perpendicular, and skew lines. Parallel and perpendicular planes will also be introduced, as well as the special types of angles formed by two lines and a transversal. You will participate in a discovery activity that explores special properties of angles formed by two parallel lines and a transversal. The theorems and postulate for the special angle pairs will be proven and used to find angle measures. Then the converse of these theorems and postulate are introduced and used to prove lines parallel. Different forms of proofs such as two-column, paragraph, and flow-proofs involving parallel and perpendicular lines will be included. Theorems involving triangles are also introduced, such as the triangle angle-sum theorem and triangle exterior angle theorem. New constructions involving parallel and perpendicular lines are then introduced, as well as constructions involving special quadrilaterals and a regular polygon inscribed in a circle.

Activities throughout the unit include dynamic online activities, BrainPOP® movies, Gizmos, SkillsTutor™, and Teachlet® tutorials. Practice opportunities such as online practice, textbook problems, journal problems, and worksheets are included. Assessments are included throughout the unit in the form of Quick Checks, quizzes, a unit test, and a portfolio involving constructions.

Objectives:
- Identify relationships between figures in space and angles formed by two lines and a transversal
- Prove theorems about parallel lines and use parallel lines to prove a theorem about triangles
- Use properties of parallel lines to find angle measures
- Determine whether two lines are parallel or perpendicular
- Construct parallel and perpendicular lines

Lesson 1: Lines and Angles (two-day lesson)

Objectives:
- Identify relationships between figures in space
- Identify angles formed by two lines and a transversal

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 2: Properties of Parallel Lines (two-day lesson)

Objectives:
- Prove theorems about parallel lines
- Use properties of parallel lines to find angle measures

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 3: Proving Lines Parallel (two-day lesson)

Objectives:
- Determine whether two lines are parallel
- Write a flow proof to prove lines are parallel

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 4: Parallel and Perpendicular Lines

Objectives:
- Relate parallel and perpendicular lines

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 5: Lines and Triangles
Objectives:
• Use parallel lines to prove a theorem about triangles
• Find measures of angles of triangles

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 6: Constructing Parallel and Perpendicular Lines (two-day lesson)

Objectives:
• Construct parallel and perpendicular lines
• Construct special quadrilaterals and a regular polygon inscribed in a circle

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 7: Constructions

Objectives:
• Perform constructions using a straightedge and a compass.

Lesson 8: Parallel and Perpendicular Lines Unit Review (two-day lesson)

Objectives:
• Review lesson material associated with parallel and perpendicular lines to prepare for the unit test

Lesson 9: Parallel and Perpendicular Lines Unit Test

Unit 5: Transformations

Concepts related to transformations are explored in this unit. Students will explore translations, reflections (including glide reflection and compositions of reflections), rotations, and dilations. Students will identify, find, and compose transformations both on and off the coordinate plane. Students will identify isometries as well as the type of symmetry in figures and three-dimensional objects. Students will also use reflection to minimize distance, find angles of rotation, and scale factor for dilation.

A variety of activities are used in lessons throughout the unit to aid instruction. Activities involving the textbook, Teachlet® tutorials, and movie clips provide information on concepts and using concepts to solve problems. Real-world examples are incorporated into each lesson. A variety of worksheets, such as question worksheets based on examples in the textbook, puzzle worksheets, and practice worksheets involving problem-solving are used to practice concepts and review vocabulary. Math writing journal activities as well as online interactive activities provide discovery learning opportunities for students.

A variety of assessment tools are incorporated into each lesson. Online practices, self-check activities, and feedback are used throughout. Assessments such as quick checks, quizzes, and a unit test appear at the end of each lesson. A portfolio will require students to make connections between transformations and corporate logos.

Objectives:
• Identify and classify isometries
• Describe, find, and compose figure translations
• Identify, find, and compose figure reflections, and use reflection to minimize a distance
• Identify, find, and compose compositions of reflections, including glide reflection
• Identify, find, and compose figure rotations and find angle rotation

Lesson 1: Translations (two-day lesson)

Objectives:
• Identify isometries
• Find translation images of figures

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.
Lesson 2: Reflections
Objectives:
- Find reflection images of figures

Lesson 3: Rotations (two-day lesson)
Objectives:
- Draw and identify rotation images of figures

Lesson 4: Symmetry (two-day lesson)
Objectives:
- Identify the type of symmetry in a figure

Lesson 5: Dilations (two-day lesson)
Objectives:
- Understand dilation images of figures

Lesson 6: Compositions of Isometries (two-day lesson)
Objectives:
- Find compositions of reflections, including glide reflections
- Classify isometries

Lesson 7: Personal Logo
Objectives:
- Find examples of transformations in the real world.
- Create a personal logo demonstrating two transformations.

Lesson 8: Transformations Unit Review (two-day lesson)
Objectives:
- Review concepts associated with transformations to prepare for the unit test

Lesson 9: Transformations Unit Test

Unit 6: Congruent Triangles
This unit covers concepts associated with congruent triangles, such as identifying corresponding parts of congruent triangles, identifying isosceles and equilateral triangles, proving triangles congruent, and proving parts of triangles congruent. Lessons build on your understanding and skills related to angles and triangles. Visualization skills will be used for overlapping triangles. Theorems and postulates such as SSS, SAS, ASA, AAS, and HL will be introduced throughout the unit. Corresponding parts of congruent triangles are congruent (CPCTC) are used to prove parts of triangles congruent. You will use and apply properties of isosceles and equilateral triangles. You will also prove two triangles congruent using other congruent triangles.

A variety of methods will be used throughout the unit for instruction, practice, and review of concepts. You will complete worksheets and online practice for various concepts. Math writing journal activities require you to relate concepts to real-world applications and apply your knowledge in order to respond to thought-provoking questions. Online and interactive activities, such as Teachlet® tutorials, SkillsTutor™ exercises, and Gizmos will be used to further your understanding of concepts.
Various assessments will be used throughout the unit to measure your progress such as Quick Checks, quizzes, and a unit test. Students will also complete a unit portfolio which involves using various tools to construct congruent triangles.

Objectives:
- Identify congruent figures and corresponding parts of congruent figures
- Prove that two triangles are congruent using various methods such as SSS, SAS, ASA, AAS, and HL
- Prove that parts of two triangles are congruent
- Identify and use properties of isosceles and equilateral triangles

**Lesson 1: Congruent Figures (two-day lesson)**

Objectives:
- Recognize congruent figures and their corresponding parts

**Lesson 2: Triangle Congruence by SSS and SAS (two-day lesson)**

Objectives:
- Prove two triangles congruent using the SSS and SAS Postulates

**Lesson 3: Triangle Congruence by ASA and AAS (two-day lesson)**

Objectives:
- Prove two triangles congruent using the ASA Postulate and the AAS Theorem

**Lesson 4: Using Corresponding Parts of Congruent Triangles**

Objectives:
- Use triangle congruence and corresponding parts of congruent triangles to prove that parts of two triangles are congruent

**Lesson 5: Isosceles and Equilateral Triangles**

Objectives:
- Use and apply properties of isosceles and equilateral triangles

**Lesson 6: Congruence in Right Triangles (two-day lesson)**

Objectives:
- Prove right triangles congruent using the Hypotenuse-Leg Theorem

**Lesson 7: Congruence in Overlapping Triangles (two-day lesson)**

Objectives:
- Identify congruent overlapping triangles
- Prove two triangles congruent using other congruent triangles

**Lesson 8: Exploring Congruent Triangles**

Objectives:
- Illustrate SSS, SAS, and ASA using string and a protractor.
- Create a method of illustrating AAS using string and a protractor.
Lesson 9: Congruent Triangles Unit Review (two-day lesson)

Objectives:
- Review lesson material associated with congruent triangles to prepare for the unit test

Lesson 10: Congruent Triangles Unit Test

Unit 7: Triangles

In this unit, you will discover and explore concepts involving relationships within triangles. You will expand on the skills learned in previous units, such as using the midpoint formula to find the midsegments of triangles and the distance formula to examine relationships in triangles. You will learn new theorems, such as the Triangle Midsegment Theorem, Perpendicular Bisector Theorem, and Angle Bisector Theorem, as well as theorems related to concurrency in triangles and triangle inequality. You will also explore relationships within a triangle using the Corollary to the Triangle Exterior Angle Theorem as well as those theorems related to triangle inequality. Finally, you will identify and use properties of midsegments, perpendicular bisectors, angle bisectors, medians, altitudes, and inequalities involving angles and sides of triangles through a variety of activities. Activities in this unit include Teachlet® tutorials, worksheets, writing journal activities, Gizmos, and online interactive activities aligned to the textbook through PowerGeometry. You will take a variety of assessments throughout the unit to gauge your comprehension of concepts. You will get instant feedback from self-check assessments embedded in each lesson. Other assessments include Quick Checks, quizzes, and a unit test.

Objectives:
- Identify and use properties of triangles, such as midsegments, perpendicular bisectors, angle bisectors, medians, and altitudes
- Use indirect reasoning to write proofs
- Use and apply inequalities in one triangle involving angles and sides

Lesson 1: Midsegments of Triangles (two-day lesson)

Objectives:
- Use properties of midsegments to solve problems

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 2: Perpendicular and Angle Bisectors (two-day lesson)

Objectives:
- Use properties of perpendicular bisectors and angle bisectors

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 3: Bisectors in Triangles

Objectives:
- Identify properties of perpendicular bisectors and angle bisectors

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 4: Medians and Altitudes (two-day lesson)

Objectives:
- Identify properties of medians and altitudes of a triangle

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 5: Inequalities in One Triangle

Objectives:
- Use inequalities involving angles and sides of triangles

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 6: Triangles Unit Review (two-day lesson)

© 2011 Connections Education LLC. All rights reserved.
Objectives:
- Review lesson material associated with relationships within triangles to prepare for the unit test

Lesson 7: Triangles Unit Test

Unit 8: Geometry A Semester Exam

In this unit, you will have the opportunity to prepare for and take the semester exam. Since this is a comprehensive exam, it may be helpful to organize your notes in the order of the course outline before you begin to review. Using the test-taking strategies that you have previously learned can help you with both the objective questions and essays.

Objectives:
- Decide which strategies you will use to prepare for your exam
- Organize your time and study materials
- Review your notes, key words and vocabulary terms, and all important concepts that may be covered in this exam

Lesson 1: Geometry A Semester Review (two-day lesson)

Lesson 2: Geometry A Semester Exam
GEOMETRY B
Geometry B

This is the second of two courses that comprise Geometry. Throughout the course, the student will use virtual manipulatives and tools to explore area, surface area, and volume, and study the concept of similarity as it relates to various figures. The student will begin with an exploration of polygons, with a focus on different types of quadrilaterals. The student will use Trigonometry and right triangle concepts, such as 30-60-90, 45-45-90, and the Pythagorean Theorem to solve problems. The student will learn to use formulas to find the areas of a variety of two-dimensional shapes. This course concludes with an exploration of concepts related to circles, such as arcs, angles, and intersecting lines such as chords, secants, and tangents.

Throughout the course, the student will learn concepts through a variety of instructional strategies, solve real-world applications, and complete an assortment of activities.

Unit 1: Review of Geometry A

In this unit, you will review the major concepts from Geometry A that are applicable to Geometry B. These include the basic tools of geometry, reasoning and proof, properties of parallel and perpendicular lines, and working with congruent triangles.

Objectives:
- Review the basic terms of geometry
- Review conditional and biconditional statements
- Review properties of parallel and perpendicular lines
- Review finding triangles congruent

Lesson 1: Review of the Tools of Geometry

Objectives:
- Review the basic terms and postulates of geometry
- Identify special angle pairs and solve problems involving them
- Solve problems involving midpoint and distance in the coordinate plane
- Calculate the perimeter (or circumference) and the area of basic shapes

Lesson 2: Review of Reasoning and Proof

Objectives:
- Write conditional statements and their converses, inverses, and contrapositives
- Write biconditional statements
- Prove statements about angles using properties

Lesson 3: Review of Parallel and Perpendicular Lines

Objectives:
- Describe angle pairs formed by parallel lines and a transversal
- Determine whether lines are parallel, perpendicular, or neither
- Use relationships between lines to prove statements

Lesson 4: Review of Congruent Triangles

Objectives:
- Identify corresponding parts in congruent triangles
- Prove triangles congruent using postulates and theorems

Unit 2: Polygons and Quadrilaterals

In this unit, you will examine properties of quadrilaterals and use the properties to prove and classify special types of quadrilaterals such as parallelograms, rectangles, rhombuses, squares, trapezoids, and kites. You will use properties of parallel and perpendicular lines and diagonals to classify quadrilaterals. You will also use theorems to find angle measures of polygons, both interior and exterior angles. You will explore geometry in the coordinate plane through classifying polygons in the coordinate plane with formulas such as slope, midpoint, and distance as well as naming coordinates using variables for a general polygon and proving theorems using coordinate proofs.

You will complete various activities throughout the unit to apply your knowledge. You
will create and use Venn diagrams to show the relationships among polygons, equilateral polygons, equiangular polygons, and regular polygons. You will also complete interactive Gizmos to explore angle sums of polygons and properties of special parallelograms, and to classify quadrilaterals. You will watch BrainPOP® movies and Teachlet® tutorials throughout the unit to aid instruction. Finally, you will engage in online practice and math writing journal activities to further reinforce understanding of various concepts.

There are self-check activities, feedback, and assessments embedded throughout the unit. Assessments include a portfolio where you will create a blueprint using polygons, as well as quick checks, quizzes, and a unit test.

Objectives:
- Find the sum of the measures of the interior angles of a polygon
- Find the sum of the measures of the exterior angles of a polygon

Lesson 1: The Polygon-Angle Sum Theorems (two-day lesson)

Objectives:
- Find the sum of the measures of the interior angles of a polygon
- Find the sum of the measures of the exterior angles of a polygon

Lesson 2: Properties of Parallelograms

Objectives:
- Use relationships among sides and angles of parallelograms.
- Use relationships among diagonals of parallelograms.

Lesson 3: Proving That a Quadrilateral Is a Parallelogram (two-day lesson)

Objectives:
- Determine whether a quadrilateral is a parallelogram

Lesson 4: Properties of Rhombuses, Rectangles, and Squares

Objectives:
- Define and classify special types of parallelograms
- Use properties of diagonals of rhombuses and rectangles

Lesson 5: Conditions for Rhombuses, Rectangles, and Squares

Objectives:
- Determine whether a parallelogram is a rhombus or rectangle

Lesson 6: Trapezoids and Kites

Objectives:
- Verify and use properties of trapezoids and kites

Lesson 7: Polygons in the Coordinate Plane (two-day lesson)

Objectives:
- Classify polygons in the coordinate plane

Lesson 8: Applying Coordinate Geometry (two-day lesson)
Lesson 9: Proofs Using Coordinate Geometry (two-day lesson)

Objectives:
• Prove theorems using figures in the coordinate plane

Lesson 10: Blueprint Project

Objectives:
• Create a blueprint of an ideal room in your house using a coordinate plane
• Classify three of the shapes in your blueprint and justify your classification using theorems about quadrilaterals and triangles
• Use coordinates to calculate the perimeter and area of the room in your blueprint

Lesson 11: Polygons and Quadrilaterals Unit Review (two-day lesson)

Objectives:
• Review concepts associated with polygons and quadrilaterals to prepare for the unit test.

Lesson 12: Polygons and Quadrilaterals Unit Test

Unit 3: Similarity

In this unit on similarity, you will learn to use ratios to compare quantities, write proportions, and solve problems. You will also use ratios and proportions to determine whether two polygons are similar, to find unknown side lengths of similar figures, and to solve problems relating to scale factor. You will explore similar triangles and related postulates and theorems. Finally, you will use similarity to find indirect measurements in right triangles, as well as the relationship between segments and between lengths.

Objectives:
• Write ratios and proportions and use them to solve problems
• Identify similar polygons and the corresponding parts
• Prove triangles similar using AA~, SAS~, and SSS~
• Use proportions to find measurements in similar polygons

Lesson 1: Ratios and Proportions

Objectives:
• Write ratios and solve problems

Lesson 2: Similar Polygons (three-day lesson)

Objectives:
• Identify and apply similar polygons
• Identify similarity transformations and verify properties of similarity

Lesson 3: Proving Triangles Similar (two-day lesson)

Objectives:
• Use the AA Similarity Postulate and the SAS Similarity and SSS Similarity Theorems
• Use similarity to find indirect measurements
Lesson 4: Similarity in Right Triangles (two-day lesson)

Objectives:
- Find and use relationships in similar right triangles

Lesson 5: Proportions in Triangles

Objectives:
- Use the Side-Splitter Theorem and the Triangle-Angle-Bisector Theorem

Lesson 6: Similarity Unit Review (two-day lesson)

Objectives:
- Review lesson material associated with similarity to prepare for the unit test

Lesson 7: Similarity Unit Test

Unit 4: Right Triangles and Trigonometry

In this unit, you will explore concepts related to right triangles. You will use the Pythagorean Theorem and explore the concept of a Pythagorean triple, as well as properties of special right triangles. You will use trigonometric ratios to find side lengths and angle measures of right triangles. To solve real-world scenarios, you will use angles of elevation and depression. Your activities include a class discussion involving ramp building codes.

Objectives:
- Find missing length and angle measures in right triangles using the Pythagorean Theorem
- Identify properties of 30°–60°–90° and 45°–45°–90° triangles and the trigonometric functions sine, cosine, and tangent
- Use theorems to classify triangles as right, obtuse, or acute
- Identify and use angles of elevation and depression to solve problems

Lesson 1: The Pythagorean Theorem and Its Converse

Objectives:
- Use the Pythagorean Theorem and its converse

Lesson 2: Special Right Triangles (two-day lesson)

Objectives:
- Use the properties of 45°-45°-90° triangles and 30°-60°-90° triangles

Lesson 3: Trigonometry (two-day lesson)

Objectives:
- Use the sine, cosine, and tangent ratios to determine side lengths and angle measures in right triangles

Lesson 4: Angles of Elevation and Depression

Objectives:
- Use angles of elevation and depression to solve problems
Lesson 5: Law of Sines and Law of Cosines (two-day lesson)

Objectives:
- Use the Law of Sines
- Use the Law of Cosines in finding the measures of sides and angles of a triangle

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 6: Right Triangles and Trigonometry Unit Review (two-day lesson)

Objectives:
- Review lesson material associated with right triangles and trigonometry to prepare for the unit test

Lesson 7: Right Triangles and Trigonometry Unit Test

Unit 5: Area

In this unit, you will explore and find the area of polygons and circles. You will use formulas to find areas of regular polygons, parallelograms, triangles, trapezoids, rhombuses, kites, and circles, including parts of circles such as sectors and segments. You will use trigonometry to find the areas of regular polygons and triangles, as well as the area formula for a triangle given SAS. In addition, you will use 30°-60°-90° and 45°-45°-90° special triangles to find area. You will also learn and apply concepts related to regular polygons, including perimeter and area ratios of similar figures, as well as circle concepts like naming arcs, finding arc measure and length, and finding the circumference of a circle. You will use these concepts to find the area of composite figures and missing dimensions of figures, in addition to using them to solve real-world applications. Finally, you will complete a portfolio project relating the circumference of a circle to the total distance a car's tires can travel, and participate in a discussion about Heron's Formula.

Objectives:
- Use formulas to find the area of parallelograms, triangles, trapezoids, rhombuses, kites, regular polygons, and circles
- Use ratios to find the perimeter and area of similar polygons
- Use trigonometry to find the areas of regular polygons and triangles
- Find the measures of central angles, arc measure, arc length, and circumference of circles
- Use arc measure and arc length to find the areas of sectors and segments of circles

Lesson 1: Areas of Parallelograms and Triangles

Objectives:
- Find the area of parallelograms and triangles

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 2: Areas of Trapezoids, Rhombuses, and Kites (two-day lesson)

Objectives:
- Find the area of a trapezoid, rhombus, or kite

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 3: Areas of Regular Polygons

Objectives:
- Find the area of a regular polygon

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 4: Perimeters and Areas of Similar Figures

Objectives:
- Find the perimeters and areas of similar polygons
Lesson 5: Trigonometry and Area (two-day lesson)

Objectives:
- Find the areas of regular polygons and triangles using trigonometry

Lesson 6: Circles and Arcs

Objectives:
- Find the measures of central angles and arcs
- Find the circumference and arc length

Lesson 7: Areas of Circles and Sectors (two-day lesson)

Objectives:
- Find the areas of circles, sectors, and segments of circles

Lesson 8: Car Wheel Project

Objectives:
- Determine the number of rotations of a circle of a specified size it takes to cover a given distance

Lesson 9: Area Unit Review (two-day lesson)

Objectives:
- Review lesson material associated with area to prepare for the unit test

Lesson 10: Area Unit Test

Unit 6: Surface Area and Volume

This unit covers area and volume of three-dimensional solids. The unit begins with defining the polyhedron space figure, the parts of a polyhedron, and examining cross sections. Euler’s Formula is introduced and used to find the number of faces, vertices, or edges of a polyhedron. Students will explore and use formulas to find lateral areas, surface areas, and volume of three-dimensional solids, such as prisms, cylinders, pyramids, cones, and composite figures. Sphere terminology such as center, radius, diameter, great circle, hemispheres, and circumference are explored and defined. Students will use formulas to find the area and volume of spheres. The unit ends with exploring the areas and volumes of similar solids, including identifying similar solids, finding scale factor, and using area and volume ratios to solve problems.

Objectives:
- Recognize a polyhedron and its parts and cross sections
- Use Euler’s Formula to determine the number of faces, vertices, or edges of a polyhedron
- Find lateral area and surface area of a prism, cylinder, pyramid, cone, and sphere
- Find the volume of a prism, cylinder, pyramid, cone, and sphere
- Determine if two solids are similar

Lesson 1: Space Figures and Cross Sections

Objectives:
- Recognize polyhedrons and their parts
- Visualize cross sections of space figures

Lesson 2: Surface Areas of Prisms and Cylinders

Objectives:
Lesson 3: Surface Areas of Pyramids and Cones

Objectives:

• Find the surface area of a pyramid and a cone

Lesson 4: Volumes of Prisms and Cylinders (two-day lesson)

Objectives:

• Find the volume of a prism and the volume of a cylinder

Lesson 5: Volumes of Pyramids and Cones

Objectives:

• Find the volume of a pyramid and a cone

Lesson 6: Surface Areas and Volumes of Spheres

Objectives:

• Find the surface area and volume of a sphere

Lesson 7: Areas and Volumes of Similar Solids (two-day lesson)

Objectives:

• Compare and find the areas and volumes of similar solids

Lesson 8: Cereal Box Design Project

Objectives:

• Use properties of surface area and volume to improve packaging design

Lesson 9: Surface Area and Volume Unit Review (two-day lesson)

Objectives:

• Review lesson material associated with the surface area and volume to prepare for the unit test

Lesson 10: Surface Area and Volume Unit Test

Unit 7: Circles

This unit explores concepts related to circles, such as central angles, inscribed angles, and angles formed by intersecting lines—including chords, tangents, and secants. Students will examine the relationships between angles both inside and outside of a circle and the measure of the intercepted arcs. These relationships, as well as properties of tangents, will be used to solve problems involving angle measure, arc measure, and segment lengths. Students will also explore circles in the coordinate plane, including writing an equation of a circle in standard form. Using radius, circle center, or a point on the circle, students will graph circles in the coordinate plane and be able to identify circle center and radius in an equation of a circle in standard form.

A variety of instructional strategies and activities are used to engage students and enhance instruction. Such activities include online Teachlet tutorials, Gizmo activities, math writing journal activities, puzzles, and practice worksheets. Online practice, self-assessment, and problem feedback are included throughout the unit.
Objectives:
• Use properties of a tangent to a circle
• Use congruent chords, arcs, and central angles
• Use perpendicular bisectors to chords
• Find the measure of an inscribed angle
• Find the measure of an angle formed by a tangent and a chord

Lesson 1: Tangent Lines (two-day lesson)
Objectives:
• Use properties of a tangent to a circle

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 2: Chords and Arcs
Objectives:
• Use congruent chords, arc, and central angles
• Use perpendicular bisector to chords

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 3: Inscribed Angles
Objectives:
• Find the measure of an inscribed angle
• Find the measure of an angle formed by a tangent and a chord

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 4: Angle Measures and Segment Lengths
Objectives:
• Find the measures of angels formed by chords, secants, and tangents
• Find the lengths of segments associated with circles

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 5: Circles in the Coordinate Plane (two-day lesson)
Objectives:
• Write the equation of a circle
• Find the center and radius of a circle

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 6: Circles Unit Review (two-day lesson)
Objectives:
• Review lesson material associated with circles to prepare for the unit test

Lesson 7: Circles Unit Test

Unit 8: Geometry B Semester Exam
This unit reviews concepts from Semester B of the Geometry course. The unit begins with a review assignment which intends to help the student recall topics from Units 1 through 6. A vocabulary activity explores special terms and properties from the course. Two Quarter Tests are also given for students to practice the concepts from this semester in a more formal format. The assessment is included at the conclusion of the unit in the form of the Semester Exam.

Lesson 1: Semester B Exam Review (two-day lesson)

Lesson 2: Semester B Exam
APPENDIX A
CURRICULUM

A.2 COURSE GUIDES

c. SCIENCE
This document is part of Appendix A: Curriculum.

It includes course guides for each Science class for students in Kindergarten through Grade 12.

- Physical Science B

Course guides provide detailed information on the curriculum including course descriptions, unit summaries, lesson objectives, activities, and assessment types. Course guides include information on:

- Planned instruction (provided in the unit summary of each unit within individual Course Guides)
- Course objectives (provided in the unit and lesson objectives within individual Course Guides)
- Activities (provided in the unit summary and lesson objectives of each unit within individual Course Guides)
SCIENCE K A
In this course, the student will explore the nature of science and how to solve problems, as well as investigate living and nonliving things. The student will learn how to study the surrounding world by observing, collaborating, and sharing with others. Using illustrations and labels, the student will identify the steps used to solve problems and use these steps to plan, design, and test a solution to a problem. Finally, the student will examine, describe, compare, and analyze the characteristics of living and nonliving things in order to complete portfolio assessments.

**Unit 1: The Nature of Science**

In this unit, your student will gain an understanding of what science is. Your student will learn how to study the world around him by making observations using his five senses. He will learn that working with others to ask questions and seek answers is an important part of the scientific process. In order to more accurately share his work with others, your student will create visual representations. He will also learn about the types of tools used for observation, data collection, and safety. This unit will culminate with an investigation throughout which your student will demonstrate the important steps involved in the scientific process.

Objectives:
- Formulate questions and make accurate observations using the five senses
- Identify the importance of collaborating with others to perform a fair scientific test
- Discover ways to record, explain, and share information about observations and tests
- Demonstrate how to use tools to make observations and collect information
- Select the appropriate tools and safety rules to use when conducting science experiments

**Lesson 1: What Is Science?**

Objectives:
- Define science
- Identify the five senses as different methods of observation
- Make accurate observations using the five senses
- Discuss and illustrate observations made during a nature walk

**Lesson 2: What Questions Can You Ask?**

Objectives:
- Define scientist
- Explain the advantages of working together
- Observe an environment
- Ask and answer questions during observation

**Lesson 3: How Do You Observe?**

Objectives:
- Construct accurate written or illustrated observations using the five senses
- Determine how and when each sense will be helpful in observations

**Lesson 4: How Do You Learn Together?**

Objectives:
- Define cooperation
- Explain the importance of cooperating with others to perform a fair test
- Distinguish between a fair test and an unfair test

**Lesson 5: How Do You Share What You Learn?**

Objectives:
- Discover ways to record, explain, and share information about observations and tests
- Share information through illustrations, charts, speech, and/or compositions

**Lesson 6: What Do You Use to Observe?**

Objectives:
- Identify scientific tools
- Demonstrate how to use tools to make observations and collect information

**Lesson 7: How Do You Stay Safe?**

Objectives:
- Select the appropriate tools to use for making safe observations during a science experiment
- Identify and recognize the importance of safety rules children should use when conducting science experiments
Lesson 8: Bubble Experiment (two-day lesson)

Objectives:
• Formulate questions and make accurate observations using the five senses
• Identify the importance of collaborating with others to perform a fair scientific test
• Discover ways to record, explain, and share information about observations and tests
• Demonstrate how to use tools to make observations and collect information
• Select the appropriate tools and safety rules children should use when conducting science experiments

Lesson 9: The Nature of Science Review

Objectives:
• Formulate questions and make accurate observations using the five senses
• Identify the importance of collaborating with others to perform a fair scientific test
• Discover ways to record, explain, and share information about observations and tests
• Demonstrate how to use tools to make observations and collect information
• Select the appropriate tools and safety rules to use when conducting science experiments

Lesson 10: The Nature of Science Unit Test

Objectives:
• Identify the importance of collaborating with others to perform a fair scientific test
• Discover ways to record, explain, and share information about observations and tests
• Demonstrate how to use tools to make observations and collect information
• Select the appropriate tools and safety rules to use when conducting science experiments

Unit 2: Solve Problems

In this unit, your student will learn how to solve problems. She will learn the problem-solving steps of planning, designing, and testing in order to find a solution. Your student will also have the opportunity to share her solutions with others. This unit will culminate with a portfolio assessment involving the scientific process.

Objectives:
• Identify a problem and predict possible solutions
• Plan, create, and conduct an investigation
• Construct accurate observations using the five senses
• Record, display, and share information with others using drawings, photos, writings, and oral presentations

Lesson 1: How Can You Solve Problems?

Objectives:
• Identify a problem and predict possible solutions
• Record, display, and share information with others using drawings, photos, writings, and oral presentations

Lesson 2: What Problems Can You Solve?

Objectives:
• Identify a problem and predict possible solutions
• Use illustrations to record observations and demonstrate possible solutions

Lesson 3: How Can You Make a Plan?

Objectives:
• Use illustrations, labels, and writing to make a plan for solving a problem

Lesson 4: How Can You Share Your Ideas With Others?

Objectives:
• Use illustrations, labels, and writing to make a plan for solving a problem

Lesson 5: Lifting Experiment (two-day lesson)

Objectives:
• Identify a problem and predict possible solutions
Lesson 6: Solve Problems Review

Objectives:
- Identify a problem and predict possible solutions
- Plan, create, and conduct an investigation
- Construct accurate observations using the five senses
- Select and use appropriate tools to accurately conduct an investigation
- Record, display, and share information with others using drawings, photos, writings, and oral presentations

Lesson 7: Solve Problems Unit Test

Objectives:
- Identify a problem and predict possible solutions
- Plan, create, and conduct an investigation
- Construct accurate observations using the five senses
- Select and use appropriate tools to accurately conduct an investigation
- Record, display, and share information with others using drawings, photos, writings, and oral presentations

Unit 3: Living and Nonliving Things

In this unit, your student will explore the characteristics of living and nonliving things. Through comparisons, readings, and pictorial representations; he will learn that non-living things do not move or change on their own, and that living things can grow, change and move. He will compare and contrast different animals and plants and identify the essential needs of all living things. At the end of the unit, your student will complete a portfolio assessment that enables him to demonstrate his understanding of living and nonliving things.

Objectives:
- Describe characteristics of living and nonliving things
- Differentiate between living and nonliving things
- Identify the essential needs of all living things
- Compare characteristics of animals that make them alike and different from other animals
- Compare characteristics of plants that make them alike and different from other plants

Lesson 1: Can You Talk about Living and Nonliving Things?

Objectives:
- Describe characteristics of living and nonliving things
- Differentiate between living and nonliving things

Lesson 2: What Are Nonliving Things?

Objectives:
- Describe characteristics of living things
- Differentiate between living and nonliving things

Lesson 3: What Are Living Things?

Objectives:
- Describe characteristics of living things
- Differentiate between living and nonliving things

Lesson 4: What Do Living Things Need?

Objectives:
- Identify the essential needs of all living things

Lesson 5: How Are Animals Alike and Different?

Objectives:
- Compare characteristics of animals that make them alike and different from other animals

Lesson 6: How Are Plants Alike and Different?

Objectives:
- Compare characteristics of plants that make them alike and different from other plants
Lesson 7: Plant and Animal Comparison (two-day lesson)

Objectives:
• Describe characteristics of living things
• Identify the essential needs of all living things
• Compare characteristics of animals that make them alike and different from other animals
• Compare characteristics of plants that make them alike and different from other plants
• Compare characteristics of plants and animals that make them alike and different from each other

Lesson 8: Living and Nonliving Things Review

Objectives:
• Describe characteristics of living things
• Differentiate between living and nonliving things
• Identify the essential needs of all living things
• Compare characteristics of animals that make them alike and different from other animals
• Compare characteristics of plants that make them alike and different from other plants
• Compare characteristics of plants and animals that make them alike and different from each other

Lesson 9: Living and Nonliving Things Unit Test

Objectives:
• Describe characteristics of living and nonliving things
• Differentiate between living and nonliving things
• Identify the essential needs of all living things
• Compare characteristics of animals that make them alike and different from other animals
• Compare characteristics of plants that make them alike and different from other plants
• Compare characteristics of plants and animals that make them alike and different from each other

Unit 4: Plants and Animals

In this unit, the student will relate her prior knowledge about plants and animals to investigate how plants and animals change as they grow. The student will recognize the characteristics in animals that are passed on from parents to their babies. These characteristics help animals grow and change as they adapt to their environment, whether it be land or water. These skills will be assessed in a portfolio assessment in which the student observes and collects data on how plants and animals depend on the land, air and water.

Objectives:
• Classify young animals and their parents
• Describe how animals, plants, and people change as they grow
• Distinguish between plants and animals that live on land and in water
• Observe and collect data to show the interdependence between plants, animals, humans, and the Earth

Lesson 1: How Do Living Things Change As They Grow?

Objectives:
• Describe how animals, plants, and people change as they grow

Lesson 2: How Are Animals Like Their Parents?

Objectives:
• Classify young animals and their parents
• Compare and contrast a baby animal with its parent

Lesson 3: How Do Animals Change?

Objectives:
• Classify young animals and their parents
• Describe how animals change as they grow

Lesson 4: How Do Plants Change?

Objectives:
• Describe how plants change as they grow using illustrations and writing
Lesson 5: How Do People Change?

Objectives:
- Describe how people change as they grow
SCIENCE K B
Science K B

In this course, the student will explore life, Earth, and physical science. The student will learn how to investi‌gate using critical thinking skills. The student will answer questions about the Earth and the sky. In the final chapter, physical science, the student will utilize inquiry methods to explore objects, matter, and mixtures. Throughout this course, the student will enhance skills in language arts, mathematics, and computer literacy. In portfolio assessments, students may choose to chart weather observations over a period of time; observe and collect data on how plants and animals depend on the land, air and water; or observe and compare solids and liquids at room temperature.

Unit 1: More Plants and Animals

In this unit, the student will relate his prior knowledge about plants and animals to investigate how plants and animals change as they grow. The student will recognize the characteristics in animals that are passed on from parents to their babies. These characteristics help animals grow and change as they adapt to their environment, whether it be land or water. These skills will be assessed in a portfolio assessment in which the student observes and collects data on how plants and animals depend on the land, air, and water.

Objectives:
- Classify young animals and their parents
- Describe how animals, plants, and people change as they grow
- Distinguish between plants and animals that live on land and in water
- Observe and collect data to show the interdependence between plants, animals, humans, and the Earth

Lesson 1: Which Plants and Animals Live on Land?

Objectives:
- Identify plants and animals that live on land
- Define what a habitat is
- Explain how people are changing their environment and tell what people can do to protect it
- Identify how an animal can change its own environment

Lesson 2: Which Plants and Animals Live in Water?

Objectives:
- Identify plants and animals that live in the water
- Define what a habitat is
- Explain how people are changing their environment and tell what people can do to protect it

Lesson 3: My Animal and Habitat Report (two-day lesson)

Objectives:
- Describe how animals, plants, and people change as they grow
- Describe an animal’s habitat
- Gather and share information about an animal and its habitat

Lesson 4: More Plants and Animals Review

Objectives:
- Classify young animals and their parents
- Describe how animals, plants, and people change as they grow
- Distinguish between plants and animals that live on land and water
- Observe and collect data to show the interdependence between plants, animals, and the Earth

Lesson 5: More Plants and Animals Unit Quiz

Objectives:
- Classify young animals and their parents
- Describe how animals, plants, and people change as they grow
- Distinguish between plants and animals that live on land and water
- Observe and collect data to show the interdependence between plants, animals, and the Earth

Unit 2: Earth and Sky

In this unit, your student will investigate Earth and the sky. She will be able to identify the resources that make up Earth and recognize how the sky changes from day to night. In addition, she will acknowledge the similarities and differences that occur in weather patterns. Lastly, your student will utilize math skills to collect and analyze weather data in a portfolio assessment. This integration of math and science skills will help your student make the real-world connection necessary to develop critical thinking skills.

Objectives:
- Investigate the Earth’s covering
- Identify characteristics of the day and night sky
- Identify characteristics of each season
- Summarize the relationship between the sun’s position and the time of day
- Compare and contrast weather patterns

Lesson 1: Introduction: What Are Earth and the Sky Like

Objectives:
- Identify objects found in the sky
Lesson 2: What Makes Up Earth?

Objectives:
• Investigate Earth’s covering
• Describe ways people interact with Earth’s features

Lesson 3: What Can You See in the Day Sky?

Objectives:
• Describe characteristics of the day sky

Lesson 4: How Does the Sun Seem to Move?

Objectives:
• Summarize the relationship between the sun’s position and the time of day

Lesson 5: What Can You See in the Night Sky?

Objectives:
• Describe characteristics of the night sky
• Compare and contrast the day and night sky

Lesson 6: What Are Some Kinds of Weather?

Objectives:
• Compare and contrast weather patterns
• Collect weather data

Lesson 7: What Are the Seasons?

Objectives:
• Identify the four seasons
• Compare and contrast weather patterns within the four seasons
• Identify and describe different types of severe weather
• Explain the importance of a weather forecast
• Collect weather data

Lesson 8: Reporting on Today’s Weather! (two-day lesson)

Objectives:
• Compare and contrast weather patterns
• Collect and analyze weather data
• Develop and create a forecast of the weather

Lesson 9: Earth and Sky Review

Objectives:
• Investigate the Earth’s covering
• Identify characteristics of the day and night sky and seasons
• Summarize the relationship between the sun’s position and the time of day
• Compare and contrast weather patterns
• Collect and analyze weather data

Lesson 10: Earth and Sky Unit Test

Objectives:
• Investigate the Earth’s covering
• Identify characteristics of the day and night sky and seasons
• Summarize the relationship between the sun’s position and the time of day
• Compare and contrast weather patterns
• Collect and analyze weather data

Unit 3: All About Objects

This unit is the foundation of physical science. As the student progresses through the lessons and activities, he will see how his five senses can help him describe, identify, and find uses for objects. The unit also provides opportunities for the student to sort and compare objects, important skills that cross multiple disciplines. The assessments in this unit will help the student relate information about objects to everyday life.

Objectives:
• Observe and tell about objects using the five senses
• Analyze and categorize objects by their composition and characteristics
• Explore how various objects can be used based on their characteristics
• Compare loud and soft sounds

Lesson 1: What Are Objects Like?

Objectives:
• Explore the concept of objects
• Describe objects

Lesson 2: What Are Your Five Senses?

Objectives:
• Observe and tell about objects using the five senses
Lesson 3: What Are Objects Made Of?
Objectives:
• Analyze and categorize objects by their composition

Lesson 4: What Can You Tell About Objects?
Objectives:
• Analyze and categorize objects by their composition and characteristics

Lesson 5: How Can You Sort Objects?
Objectives:
• Analyze and categorize objects by their composition, properties, and use

Lesson 6: How Can You Use Objects?
Objectives:
• Explore how various objects can be used based on their properties or characteristics

Lesson 7: How Is Sound Made?
Objectives:
• Compare loud and soft sounds
• Identify different ways sound is used in everyday life

Lesson 8: Exploring Objects
Objectives:
• Observe and tell about objects using the five senses
• Analyze and categorize objects by their composition and characteristics
• Identify properties by which objects might be categorized

Lesson 9: All About Objects Review
Objectives:
• Observe and tell about objects using the five senses
• Analyze and categorize objects by their composition and characteristics
• Explore how various objects can be used based on their characteristics
• Compare loud and soft sounds

Unit 4: Matter and Mixtures
In this unit, your student will investigate the concept of matter as well as the three states of matter: solids, liquids, and gases. Each state of matter has different characteristics. Your student will see how liquids and gases take the shape of the container while solids keep their shape. The portfolio assessment will allow your student to observe changes in solids and liquids. Lastly, your student will study how matter can be mixed to create mixtures.

Objectives:
• Describe and measure matter as a solid
• Discover and investigate the properties of solids, liquids, and gases
• Investigate how gases fill their containers
• Observe changes in water caused by freezing, melting and boiling
• Create and describe a mixture

Lesson 1: What Are Matter and Mixtures?
Objectives:
• Define the concepts of matter and mixtures

Lesson 2: What Are Solids Like?
Objectives:
• Describe and measure matter as a solid
• Discover and investigate the properties of a solid

Lesson 3: What Are Liquids Like?
Objectives:
• Discover and investigate the properties of liquids

Lesson 4: What Are Gases Like?
Objectives:
• Discover and investigate the properties of gases

Lesson 5: How Can Water Change?
Objectives:
• Observe changes in water caused by freezing, melting and boiling

Lesson 6: What Is a Mixture?
Objectives:
• Create and describe a mixture
Lesson 7: Matter and Mixtures Review

Objectives:
- Describe and measure matter as a solid
- Discover and investigate the properties of solids, liquids, and gases
- Investigate how gases fill their containers
- Observe changes in water caused by freezing, melting and boiling
- Create and describe a mixture

Lesson 8: Matter and Mixtures Unit Test

Objectives:
- Describe and measure matter as a solid
- Discover and investigate the properties of solids, liquids, and gases
- Investigate how gases fill their containers
- Observe changes in water caused by freezing, melting and boiling
- Create and describe a mixture
SCIENCE 1 A
Science 1 A

Science provides a way for people to actively learn about the world around them. Throughout this course, the student will perform hands-on activities to explore organisms and habitats and examine the composition of Earth. The McGraw-Hill textbook Science: A Closer Look and the science kit are the primary resources for this course. The life science units explore how plants and animals grow and change. The Earth science units analyze Earth's land and resources, as well as how to care for Earth. The student will also explore the scientific method and different careers in science.

In this course, the student will investigate how sunlight affects leaves, design an experiment to discover what plants need to survive, create a model of a mountain, and delve into many more exciting experiments. The lessons in this course are designed to accommodate a variety of learning styles and to provide a variety of opportunities for the entire family to participate in the student’s education. Some lessons, or groups of lessons, in each unit are activity-centered, which allows the student to engage the new concepts through exploration and discovery; others are more traditional, requiring the student to read, research, and reflect on the underlying theory.

Unit 1: Be a Scientist

In this introductory unit, your student will learn about scientists and what they do. He will study the basic steps of the scientific method, and he will learn why it is important for scientists to be careful during experiments.

Objectives:
- Identify basic science skills
- Describe the scientific method
- Explain why science safety is important

Lesson 1: Science Skills (two-day lesson)

Objectives:
- Identify and apply the skills used for basic scientific inquiry

Lesson 2: Scientific Method

Objectives:
- Apply the method that scientists use to study the natural world

Lesson 3: Science Safety

Objectives:
- Identify important safety procedures

Unit 2: Plants are Living things

In this unit, your student will learn about plants. She will find out what plants need to live and grow, and she will compare different plants and their parts. Your student will also complete a hands-on activity that requires her to make observations of a plant.

Objectives:
- Identify living and nonliving things
- Describe plant parts
- Compare different plants

Lesson 1: Learning About Living Things

Objectives:
- Compare and classify living and nonliving things
- Explain what plants need to live and grow

Appendix A.2.c Science Course Guides
Lesson 2: Inquiry Skill: Observe

Objectives:
- Observe a plant

Lesson 3: Parts of Plants

Objectives:
- Identify plant parts such as leaves, stems, and roots
- Describe what different parts do for the plant

Lesson 4: Different Plants

Objectives:
- Classify and compare different plants
- Identify some edible plant parts

Lesson 5: Unit Review

Objectives:
- Review and compare the parts of plants

Lesson 6: Unit Test

Unit 3: Plants Grow and Change

In this unit, your student will learn how plants grow and change. He will explore flowers, fruits, and seeds, and he will learn how plants are able to survive in different places of the world. Your student will also complete a hands-on activity to explore how sunlight affects a plant’s leaves.

Objectives:
- Compare flowers, fruits, and seeds
- Describe plant life cycles
- Identify desert, forest, and arctic environments

Lesson 1: Flowers, Fruits, and Seeds

Objectives:
- Explain why flowers and fruits are important to plants
- Describe and compare different seeds

Lesson 2: Inquiry Skill: Classify

Objectives:
- Categorize different objects by what they have in common

Lesson 3: How Plants Grow and Change

Objectives:
- Describe the life cycle of a plant
- Explain how plants can grow from seeds and other plant parts
Lesson 4: Lab: How Does Sunlight Affect Leaves?

Objectives:
- Observe how sunlight affects a plant

Objectives derived from The McGraw-Hill Companies, Inc. © The McGraw-Hill Companies, Inc. All rights reserved.

Lesson 5: Plants Live in Many Places

Objectives:
- Describe how plants survive in different places
- Identify desert, rain forest, and arctic environments

Objectives derived from The McGraw-Hill Companies, Inc. © The McGraw-Hill Companies, Inc. All rights reserved.

Lesson 6: Unit Review

Objectives:
- Review and compare flowers, fruits, and seeds

Objectives derived from The McGraw-Hill Companies, Inc. © The McGraw-Hill Companies, Inc. All rights reserved.

Lesson 7: Unit Test

Unit 4: All About Animals

In this unit, your student will learn about animals. She will explore different kinds of animals, and how they eat, grow, and change throughout their lifetime. Your student will also complete an activity on animal comparison.

Objectives:
- Explain how different animals survive
- Describe what animals eat
- Identify animal life cycles

Lesson 1: All Kinds of Animals

Objectives:
- Observe and describe different kinds of animals
- Explain how animals are alike and different

Objectives derived from The McGraw-Hill Companies, Inc. © The McGraw-Hill Companies, Inc. All rights reserved.

Lesson 2: Inquiry Skill: Compare

Objectives:
- Compare two animals

Objectives derived from The McGraw-Hill Companies, Inc. © The McGraw-Hill Companies, Inc. All rights reserved.

Lesson 3: What Animals Need to Live

Objectives:
- Identify what animals need to survive
- Explain how different animals meet their needs

Objectives derived from The McGraw-Hill Companies, Inc. © The McGraw-Hill Companies, Inc. All rights reserved.

Lesson 4: How Animals Eat Food

Objectives:
- Relate the shape of an animal’s teeth to what it eats
- Classify animals according to what they eat

Objectives derived from The McGraw-Hill Companies, Inc. © The McGraw-Hill Companies, Inc. All rights reserved.

Lesson 5: Animals Grow and Change

Objectives:
- Describe the life cycles of different kinds of animals
• Explain what animals can do at different ages

Lesson 6: Unit Review

Objectives:
• Review different kinds of animals and what they need

Lesson 7: Unit Test

Unit 5: Places to Live

In this unit, your student will learn about habitats. He will explore land and water habitats, and he will find out how plants and animals live together in different habitats. Your student will also practice his communication skills when learning about desert habitats.

Objectives:
• Describe land habitats
• Describe water habitats
• Explain how plants and animals can live in the same habitat

Lesson 1: Land Habitats

Objectives:
• Describe land habitats
• Explain how different animals adapt to different environments

Lesson 2: Inquiry Skill: Communicate

Objectives:
• Communicate information about a desert habitat

Lesson 3: Water Habitats

Objectives:
• Describe water habitats
• Explain how plants and animals meet their needs in water habitats

Lesson 4: Plants and Animals Live Together

Objectives:
• Explain how plants and animals live together in habitats
• Describe why each part of a food chain is important

Lesson 5: Unit Review

Objectives:
• Review and compare habitats and animals' adaptations for survival

Lesson 6: Unit Test

Unit 6: Looking at Earth

In this unit, your student will learn about landforms on Earth. She will learn what different landforms look like, and she will explore characteristics of rocks and soil. Your student will also complete a hands-on activity about using models in science.
Objectives:
- Identify different landforms
- Classify rocks and soil
- Explain weathering and erosion

**Lesson 1: What Earth Looks Like**

Objectives:
- Identify different types of land on Earth
- Describe differences between bodies of water

**Lesson 2: Inquiry Skill: Make a Model**

Objectives:
- Make a model to identify details and learn more about something

**Lesson 3: Rocks and Soil**

Objectives:
- Identify rocks and sort them into groups based on physical properties
- Classify soil according to color, texture, and composition

**Lesson 4: Changing the Land**

Objectives:
- Describe how and why weathering occurs
- Explain the process of erosion and how it can be prevented

**Lesson 5: Unit Review**

Objectives:
- Review different forms of land and water

**Lesson 6: Unit Test**

**Unit 7: Caring for Earth**

In this unit, your student will learn about Earth’s resources. He will explore what natural resources are, how people use them, and how they can be protected by reducing, reusing, and recycling. Your student will also complete an investigation to find out how much water soil can hold.

Objectives:
- Define natural resources
- Explain how people use natural resources
- Explain the importance of reducing, reusing, and recycling

**Lesson 1: Earth's Resources**

Objectives:
- Identify and describe natural resources
- Explain how people use natural resources

**Lesson 2: Inquiry Skill: Investigate**

Objectives:
- Identify how much water two kinds of soil will hold
Lesson 3: Using Earth’s Resources

Objectives:
• Explain why water and air are important resources
• Define pollution and the need for clean land, water, and air

Lesson 4: Saving Earth’s Resources

Objectives:
• Describe how to conserve resources by reusing, reducing, and recycling

Lesson 5: Unit Review

Objectives:
• Reinforce what natural resources are and why it is important to care for them

Lesson 6: Unit Test
SCIENCE 1 B
Science 1 B

Science provides a way for people to actively learn about the world around them. Throughout this course the student will perform hands-on activities to explore organisms and habitats and examine the composition of Earth. The McGraw-Hill textbook, Science: A Closer Look, and the science kit are the primary resources for this course. The Earth science units explore the seasons and the solar system. The physical science units investigate changes in matter and energy. The student will also explore the scientific method and different careers in science.

In this course, the student will investigate which liquids flow faster, how water can change from a liquid to a gas, create a weather chart, and delve into many more exciting experiments. The lessons in this course are designed to accommodate a variety of learning styles and to provide a variety of opportunities for the entire family to participate in the student’s education. Some lessons, or groups of lessons, in each unit are activity-centered, which allows the student to engage the new concepts through exploration and discovery; others are more traditional, requiring the student to read, research, and reflect on the underlying theory.

Unit 1: Weather and Seasons

In this unit, your student will learn about weather and seasons. He will identify different weather conditions, and he will describe common weather during winter, spring, summer, and fall. Your student will also complete a hands-on activity to explore different types of weather throughout a week.

Objectives:
- Identify weather conditions
- Explain how clouds form
- Describe weather conditions during different seasons

Lesson 1: Weather All Around Us

Objectives:
- Identify different weather conditions
- Investigate ways to measure different weather conditions

Lesson 2: Inquiry Skill: Predict

Objectives:
- Predict what will happen using information from a picture

Lesson 3: The Water Cycle

Objectives:
- Explain how clouds form and why water falls back to Earth
- Identify different kinds of clouds

Lesson 4: Lab: What is the Weather Like this Week?

Objectives:
- Measure and record weather conditions

Lesson 5: Spring and Summer

Objectives:
- Describe how weather changes as seasons change
- Identify characteristics of spring and summer
Lesson 6: Fall and Winter

Objectives:
- Describe weather conditions in fall and winter
- Explain how fall and winter affect plants and animals

Objectives derived from The McGraw-Hill Companies, Inc. © The McGraw-Hill Companies, Inc. All rights reserved.

Lesson 7: Unit Review

Objectives:
- Review weather and seasons through independent reading

Objectives derived from The McGraw-Hill Companies, Inc. © The McGraw-Hill Companies, Inc. All rights reserved.

Lesson 8: Unit Test

Unit 2: The Sky

In this unit, your student will learn about Earth and the solar system. She will study the movements of Earth, the moon, and the sun, and she will learn why the sun is important to living things. Your student will also complete an activity in which she will record data about the sun at different times of day.

Objectives:
- Explain why living things need the sun
- Describe the movement of Earth, the moon, and the sun
- Explain the movement of the planets

Lesson 1: The Sky Above

Objectives:
- Classify objects in the sky during day and night
- Explain why the sun is important for life on Earth

Objectives derived from The McGraw-Hill Companies, Inc. © The McGraw-Hill Companies, Inc. All rights reserved.

Lesson 2: Inquiry Skill: Record Data

Objectives:
- Record data about the sun's warmth at different times of day

Objectives derived from The McGraw-Hill Companies, Inc. © The McGraw-Hill Companies, Inc. All rights reserved.

Lesson 3: Earth Moves

Objectives:
- Recognize Earth’s movement by observing shadows and seasons
- Explain the effects of Earth's rotation and orbit around the sun

Objectives derived from The McGraw-Hill Companies, Inc. © The McGraw-Hill Companies, Inc. All rights reserved.

Lesson 4: Lab: How Many Hours of Sunlight Are There?

Objectives:
- Observe how the amount of sunlight changes each day

Objectives derived from The McGraw-Hill Companies, Inc. © The McGraw-Hill Companies, Inc. All rights reserved.

Lesson 5: Earth's Neighbors

Objectives:
- Observe what the moon looks like from Earth
- Explain that eight planets, including Earth, move around the sun

Objectives derived from The McGraw-Hill Companies, Inc. © The McGraw-Hill Companies, Inc. All rights reserved.

Lesson 6: Unit Review

Objectives:
Lesson 7: Unit Test

Unit 3: Matter Everywhere

In this unit, your student will learn about matter. He will come to understand that all things are made of matter, and he will identify properties of solids, liquids, and gases. Your student will also practice measuring objects using standard and nonstandard units.

Objectives:
- Describe the properties of matter
- Identify solids, liquids, and gases
- Explain why everything is made of matter

Lesson 1: Describing Matter

Objectives:
- Comprehend that all things are made of matter
- Describe the properties of matter

Lesson 2: Solids

Objectives:
- Identify the properties of solids
- Compare the properties of different solids

Lesson 3: Inquiry Skill: Measure

Objectives:
- Measure objects using standard and nonstandard units

Lesson 4: Liquids and Gases

Objectives:
- Describe the properties of liquids and gases
- Compare the properties of different kinds of liquids and gases

Lesson 5: Unit Review

Objectives:
- Review the three main states of matter and their properties

Lesson 6: Unit Test

Unit 4: Changes in Matter

In this unit, your student will learn about changes in matter. She will learn how to make mixtures, and she will explore the processes of freezing, melting, and evaporation. Your student will observe evaporation as it occurs.

Objectives:
- Explain how mixtures form
- Describe how heat changes matter
- Define freezing, melting, and evaporation

Lesson 1: Lab: How Can Water Change to Gas?
Lesson 2: Matter Can Change

Objectives:
- Observe and describe how solids can change

Objectives derived from The McGraw-Hill Companies, Inc. © The McGraw-Hill Companies, Inc. All rights reserved.

Lesson 3: Making Mixtures

Objectives:
- Prepare mixtures of different solids and liquids
- Explain why some mixtures can be separated and others cannot

Objectives derived from The McGraw-Hill Companies, Inc. © The McGraw-Hill Companies, Inc. All rights reserved.

Lesson 4: Heat Can Change Matter

Objectives:
- Describe how heat changes solids, liquids, and gases
- Explain the process of freezing, melting, and evaporation

Objectives derived from The McGraw-Hill Companies, Inc. © The McGraw-Hill Companies, Inc. All rights reserved.

Lesson 5: Unit Review

Objectives:
- Reinforce the characteristics of different mixtures

Objectives derived from The McGraw-Hill Companies, Inc. © The McGraw-Hill Companies, Inc. All rights reserved.

Lesson 6: Unit Test

Unit 5: On the Move

In this unit, your student will learn about position and motion. He will identify pushes and pulls as forces, and he will explain why magnets attract magnetic objects. Your student will also investigate how quickly different liquids flow.

Objectives:
- Explain position and motion
- Identify different forces
- Describe the properties of magnets

Lesson 1: Position and Motion

Objectives:
- Describe the position of an object in relation to other objects
- Observe an object’s motion and speed by recording it’s change in position

Objectives derived from The McGraw-Hill Companies, Inc. © The McGraw-Hill Companies, Inc. All rights reserved.

Lesson 2: Inquiry Skill: Infer

Objectives:
- Infer how body structure affects an animal’s speed

Objectives derived from The McGraw-Hill Companies, Inc. © The McGraw-Hill Companies, Inc. All rights reserved.

Lesson 3: Pushes and Pulls

Objectives:
- Identify pushes, pulls, gravity, and friction as forces
- Explain how different forces change the motion of objects
Lesson 4: Lab: Which Liquid Flows the Fastest?

Objectives:
• Evaluate how quickly different liquids flow

Lesson 5: Simple Machines

Objectives:
• Discover how simple machines make it easier to move objects
• Explain the functions of pulleys, levers, and ramps

Lesson 6: Magnets

Objectives:
• Explain why magnets attract some objects and not others
• Identify the two poles on a magnet

Lesson 7: Unit Review

Objectives:
• Review motion and forces that affect motion

Lesson 8: Unit Test

Unit 6: Energy Everywhere

In this unit, your student will learn about energy. She will study energy in different forms, such as heat, sound, and electricity. Your student will also complete an investigation about heat energy.

Objectives:
• Describe different sources of heat
• Explain what causes sounds
• Identify uses of electricity

Lesson 1: Energy and Heat

Objectives:
• Describe different sources of energy and heat

Lesson 2: Inquiry Skill: Draw Conclusions

Objectives:
• Draw conclusions about heat energy

Lesson 3: Sound

Objectives:
• Identify vibration as the cause of sound
• Describe the volume and pitch of sounds

Lesson 4: Light
• Explain that light passes through some objects but not others
• Describe how people use different light sources

Lesson 5: Electricity

Objectives:
• Describe how people use electricity

Lesson 6: Unit Review

Objectives:
• Review different kinds of energy

Lesson 7: Unit Test
SCIENCE 2 A
Science 2 A

Studying science helps us understand the world around us as well as the world that existed before us. The McGraw-Hill textbook Science: A Closer Look and the science kit are the primary resources for this course. The student will study the major branches of science as he performs hands-on activities. The life science units explore different organisms and their habitats. The Earth science units investigate Earth’s resources and physical composition.

The lessons in this course are designed to accommodate a variety of learning styles and to provide a variety of opportunities for the entire family to participate in the student’s education. Some lessons, or groups of lessons, in each unit are activity-centered, which allows the student to engage the new concepts he encounters through exploration and discovery; others are more traditional, requiring the student to read, research, and reflect on the underlying theory.

Unit 1: Be a Scientist

In this introductory unit, your student will learn about the skills used to study science. He will explore skills used in the scientific method, and he will learn why safety procedures are important when conducting science experiments.

Objectives:
- Identify basic scientific inquiry skills
- Practice using the scientific method
- Explain why “safe science” is important

Lesson 1: Science Skills (two-day lesson)

Objectives:
- Identify skills scientists use to investigate questions
- Explain how science skills are used to learn about pond animals

Lesson 2: Scientific Method

Objectives:
- Explain the steps scientists use to investigate questions

Lesson 3: Science Safety

Objectives:
- Identify important safety procedures

Unit 2: Plants

In this unit, your student will learn about plants. She will explore plant parts and plant life cycles, and she will examine how different plants are alike and different. Your student will also learn how to make scientific observations by observing a flower.

Objectives:
- Explain why plants are living things
- Identify the different parts of a plant
- Describe the life cycle of a plant

Lesson 1: What Living Things Need

Objectives:
- Identify living and nonliving things
- Explain why plants are living things and describe their parts

Lesson 2: Inquiry Skill: Observe
Lesson 3: Plants Make New Plants

Objectives:
- Describe seeds and their origins
- Identify the stages in a plant’s life cycle

Lesson 4: How Plants Are Alike and Different

Objectives:
- Recognize that plants look and act like their parent plants
- Describe ways that plants change to meet their needs

Lesson 5: Unit Review

Objectives:
- Review and describe how plants grow and change throughout their life cycle

Lesson 6: Unit Test

Unit 3: Animals

In this unit, your student will learn about animals. He will study different groups of animals, and he will learn how animals change throughout their lifetime. Your student will also learn about classification by classifying types of animals to show how they are alike.

Objectives:
- Identify different types of animals
- Describe the life cycle of an animal
- Explain why animals use camouflage

Lesson 1: Animal Groups

Objectives:
- Describe, classify, and compare animals
- Explain how animal parts help animals meet their needs

Lesson 2: Inquiry Skill: Classify

Objectives:
- Classify animals to show how they are alike

Lesson 3: Animals Grow and Change

Objectives:
- Explain that every animal has a life cycle
- Describe and compare the life cycles of animals

Lesson 4: Staying Alive

Objectives:
- Identify how camouflage helps animals stay safe
- Explain how animals protect themselves
Lesson 5: Unit Review

Objectives:
- Review the needs, traits, and survival behaviors of animals

Lesson 6: Unit Test

Unit 4: Looking at Habitats

In this unit, your student will learn about habitats. She will learn how plants and animals use their habitats, and what happens to food webs when habitats change. Your student will also learn how to put things in order by completing an activity about beaver dams and how they are made. In addition, your student will practice matching leaf prints to specific leaf types.

Objectives:
- Describe different plant and animal habitats
- Define a food chain and a food web
- Explain how and why habitats change

Lesson 1: Places to Live

Objectives:
- Describe different habitats
- Explain how plants and animals use their habitats

Lesson 2: Inquiry Skill: Putting Things in Order

Objectives:
- Put in order the way a beaver creates a dam

Lesson 3: Food Chains and Food Webs

Objectives:
- Describe a food chain
- Describe a food web

Lesson 4: Habitat Change

Objectives:
- Explain why habitats change
- Describe what happens when habitats change

Lesson 5: Lab: How Do Clues Help Scientists Study Fossils?

Objectives:
- Infer which leaf prints match specific leaves

Lesson 6: Unit Review

Objectives:
- Review habitats

Lesson 7: Unit Test
Unit 5: Kinds of Habitats

In this unit, your student will learn about forest, desert, and ocean habitats. He will learn how different plants and animals survive in these habitats. Your student will also complete an activity in which he will study human and animal footprints.

Objectives:
- Explain how plants and animals live in different forest habitats
- Describe deserts and how living things survive there
- Explain how plants and animals live in the ocean

Lesson 1: Forests

Objectives:
- Compare and contrast woodland forests and rain forests
- Explain how different animals live in forest habitats

Lesson 2: Hot and Cold Deserts

Objectives:
- Describe desert habitats
- Explain how plants and animals survive in a dry habitat

Lesson 3: Inquiry Skill: Infer

Objectives:
- Study human footprints to make inferences about animal footprints

Lesson 4: Oceans and Ponds

Objectives:
- Describe oceans and ponds
- Explain how plants and animals live in oceans and ponds

Lesson 5: Unit Review

Objectives:
- Review and compare different kinds of habitats

Lesson 6: Unit Test

Unit 6: Land and Water

In this unit, your student will learn about land and water on Earth. She will study Earth’s layers and landforms, and she will identify Earth’s water resources and how they are used. Your student will also complete an activity in which she will make a model to study landforms on Earth.

Objectives:
- Describe Earth’s layers and its landforms
- Identify sources of water on Earth
- Explain how wind and water change Earth’s surface

Lesson 1: Earth’s Land

Objectives:
- Compare the different landforms on Earth’s surface
- Identify Earth’s layers
Lesson 2: Inquiry Skill: Make a Model

Objectives:
- Make a model to understand landforms

Objectives derived from The McGraw-Hill Companies, Inc. © The McGraw-Hill Companies, Inc. All rights reserved.

Lesson 3: Earth's Water

Objectives:
- Identify sources of Earth's water
- Classify how people use water

Objectives derived from The McGraw-Hill Companies, Inc. © The McGraw-Hill Companies, Inc. All rights reserved.

Lesson 4: Changes on Earth

Objectives:
- Explain slow and fast changes on Earth
- Describe how wind and water can change rocks

Objectives derived from The McGraw-Hill Companies, Inc. © The McGraw-Hill Companies, Inc. All rights reserved.

Lesson 5: Unit Review

Objectives:
- Review Earth's landforms, water, and changes

Objectives derived from The McGraw-Hill Companies, Inc. © The McGraw-Hill Companies, Inc. All rights reserved.

Lesson 6: Unit Test

Unit 7: Earth's Resources

In this unit, your student will learn about Earth's resources. He will study rocks, minerals, and soil, and he will learn why Earth's resources should be taken care of. Your student will also compare different rocks using a Venn diagram, and he will complete an activity in which he will predict how much water different soils can hold.

Objectives:
- Describe rocks and minerals and how they are used
- Explain how soil forms and describe what's in soil
- Identify ways natural resources are used

Lesson 1: Rocks and Minerals

Objectives:
- Explain what rocks are and how they are used
- Explain what minerals are and how they are used

Objectives derived from The McGraw-Hill Companies, Inc. © The McGraw-Hill Companies, Inc. All rights reserved.

Lesson 2: Inquiry Skill: Compare

Objectives:
- Compare two rocks using a Venn diagram

Objectives derived from The McGraw-Hill Companies, Inc. © The McGraw-Hill Companies, Inc. All rights reserved.

Lesson 3: Soil

Objectives:
- Describe what things make up soil
- Explain how soil is formed

Objectives derived from The McGraw-Hill Companies, Inc. © The McGraw-Hill Companies, Inc. All rights reserved.

Lesson 4: Lab: Which Soil Holds More Water?

Objectives:
Lesson 5: Using Earth’s Resources

Objectives:
- Describe how people use natural resources
- Explain why people should take care of Earth’s resources

Lesson 6: Unit Review

Objectives:
- Review rocks, soils, and natural resources

Lesson 7: Unit Test
SCIENCE 2 B
Science 2 B

Studying science helps us understand the world around us as well as the world that existed before us. The McGraw-Hill textbook, Science: A Closer Look, and the science kit are the primary resources for this course. The student will study the major branches of science as he performs hands on activities. The Earth science units investigate Earth's weather patterns and seasons as well as the solar system. The physical science units analyze changes in matter and explore different forms of energy.

In this course, the student will compare the strength of different magnets, analyze the affect of sunlight on temperature, and do much, much more! The lessons in this course are designed to accommodate a variety of learning styles and to provide a variety of opportunities for the entire family to participate in the student's education. Some lessons, or groups of lessons, in each unit are activity-centered, which allow the student to engage the new concepts he encounters through exploration and discovery; others are more traditional, requiring the student to read, research, and reflect on the underlying theory.

Unit 1: Observing Weather

In this unit, your student will learn about weather. He will study temperature, wind, and precipitation, and he will learn about the water cycle and how it affects changes in weather. Your student will also learn how to predict the weather based on collected data.

Objectives:
- Describe how weather is measured
- Illustrate and explain the water cycle
- Understand how weather can be predicted

Lesson 1: Weather

Objectives:
- Describe temperature, wind, and precipitation
- Identify and use tools to measure weather

Lesson 2: The Water Cycle

Objectives:
- Identify the different stages of the water cycle
- Describe and illustrate the water cycle

Lesson 3: Inquiry Skill: Predict

Objectives:
- Predict the weather based on data

Lesson 4: Changes in Weather

Objectives:
- Predict weather by observing clouds
- Identify different types of clouds and storms

Lesson 5: Unit Review

Objectives:
- Review the water cycle

Lesson 6: Unit Test
Unit 2: Earth and Space

In this unit, your student will learn about Earth’s place in space. She will study Earth’s rotation and its orbit around the sun, and she will identify and describe the planets in the solar system. Your student will also complete an activity in which she will observe and record the moon’s phases.

Objectives:
- Explain what causes day, night, and seasons
- Describe the planets in the solar system
- Identify the moon’s phases

Lesson 1: Day and Night

Objectives:
- Identify how Earth rotates to make day and night
- Explain how shadows change as Earth moves

Lesson 2: Inquiry Skill: Draw Conclusions

Objectives:
- Observe and record the time of day using reference objects

Lesson 3: Why Seasons Happen

Objectives:
- Describe seasonal and annual patterns on Earth
- Relate seasonal patterns to Earth’s orbit around the sun

Lesson 4: The Moon and Stars

Objectives:
- Observe the moon and its phases as it orbits Earth
- Recognize that the sun is the closest star to Earth

Lesson 5: Lab: How Does the Moon Seem to Change?

Objectives:
- Observe and record the moon’s phases

Lesson 6: The Solar System

Objectives:
- Explain the relationship between the planets and the sun
- Describe the planets in the solar system

Lesson 7: Unit Review

Objectives:
- Review how the sun and Earth interact to create day, night, and the seasons

Lesson 8: Unit Test

Unit 3: Looking at Matter
In this unit, your student will learn about matter. He will identify and compare solids, liquids, and gases; and he will compare and contrast different properties of matter. Your student will also practice recording data when he completes a sorting activity about solids and liquids.

Objectives:
- Define matter and its properties
- Describe solids, liquids, and gases
- Explain how matter is measured

Lesson 1: Describing Matter

Objectives:
- Identify matter as anything that has mass and takes up space
- Compare and contrast different properties of matter

Lesson 2: Inquiry Skill: Record Data

Objectives:
- Describe and sort matter into two groups: solid and liquid

Lesson 3: Solids

Objectives:
- Compare and contrast the properties of solids
- Use different ways to measure solids

Lesson 4: Liquids and Gases

Objectives:
- Describe the properties of liquids and gases
- Compare and contrast liquids and gases

Lesson 5: Unit Review

Objectives:
- Reinforce the properties of matter

Lesson 6: Unit Test

Unit 4: Changes in Matter

In this unit, your student will learn about chemical and physical changes of matter. She will read how heat can change matter and how mixtures form. Your student will also make observations and communicate data when she completes a hands-on activity using cream.

Objectives:
- Identify chemical changes in matter
- Identify physical changes in matter
- Observe how matter changes state

Lesson 1: Matter Changes

Objectives:
- Identify chemical and physical changes

Lesson 2: Inquiry Skill: Communicate

Objectives:
Lesson 3: Lab: What Happens When You Shake Cream?

Objectives:
• Observe a liquid become a solid

Lesson 4: Changes of State

Objectives:
• Observe how heat can change matter

Lesson 5: Mixtures

Objectives:
• Observe how solids, liquids, and gases mix

Lesson 6: Unit Review

Objectives:
• Review the concepts of physical and chemical changes

Lesson 7: Unit Test

Unit 5: How Things Move

In this unit, your student will learn about forces, motion, and magnets. He will read about the forces of gravity and friction, and he will learn how to measure and record changes in a moving object’s position. Your student will also complete an activity that investigates the speeds of different objects.

Objectives:
• Describe the forces of gravity and friction
• Explain an object’s position and motion
• Identify magnetic objects

Lesson 1: Position and Motion

Objectives:
• Describe an object's position in relation to another object
• Measure and record changes in an object's position

Lesson 2: Inquiry Skill: Investigate

Objectives:
• Investigate the speeds of different objects

Lesson 3: Forces

Objectives:
• Identify a force as a push or a pull
• Describe the forces of gravity and friction

Lesson 4: Using Simple Machines
Objectives:
- Identify simple tools
- Discover that simple machines change force to make work easier

Objectives derived from The McGraw-Hill Companies, Inc. © The McGraw-Hill Companies, Inc. All rights reserved.

Lesson 5: Exploring Magnets

Objectives:
- Observe magnets attract and repel objects
- Identify magnet poles and explain how they function

Objectives derived from The McGraw-Hill Companies, Inc. © The McGraw-Hill Companies, Inc. All rights reserved.

Lesson 6: Lab: How Can You Compare the Strength of Magnets?

Objectives:
- Record the results of an experiment in a bar graph

Objectives derived from The McGraw-Hill Companies, Inc. © The McGraw-Hill Companies, Inc. All rights reserved.

Lesson 7: Unit Review

Objectives:
- Review simple machines, forces, and movement

Objectives derived from The McGraw-Hill Companies, Inc. © The McGraw-Hill Companies, Inc. All rights reserved.

Lesson 8: Unit Test

Unit 6: Using Energy

In this final unit, your student will learn about energy. She will study heat, sound, light, and electricity, and she will learn how the sun provides heat to planets in the solar system. Your student will also practice measuring and comparing temperatures using thermometers.

Objectives:
- Describe how Earth receives energy from the sun
- Explain how sounds are produced
- Identify properties of light and electricity

Lesson 1: Heat

Objectives:
- Recognize that the sun supplies heat and energy to Earth

Objectives derived from The McGraw-Hill Companies, Inc. © The McGraw-Hill Companies, Inc. All rights reserved.

Lesson 2: Inquiry Skill: Measure

Objectives:
- Measure and compare temperatures by using thermometers

Objectives derived from The McGraw-Hill Companies, Inc. © The McGraw-Hill Companies, Inc. All rights reserved.

Lesson 3: Sound

Objectives:
- Discover how different sounds are produced
- Describe the volume of pitch and sounds

Objectives derived from The McGraw-Hill Companies, Inc. © The McGraw-Hill Companies, Inc. All rights reserved.

Lesson 4: Light

Objectives:
- Identify the composition and properties of light

Objectives derived from The McGraw-Hill Companies, Inc. © The McGraw-Hill Companies, Inc. All rights reserved.
Lesson 5: Lab: How Does Sunlight Affect Temperature?

Objectives:
- Compare how sunlight affects the temperature of light and dark objects

Objectives derived from The McGraw-Hill Companies, Inc. © The McGraw-Hill Companies, Inc. All rights reserved.

Lesson 6: Exploring Electricity

Objectives:
- Identify forms of electricity and their uses

Objectives derived from The McGraw-Hill Companies, Inc. © The McGraw-Hill Companies, Inc. All rights reserved.

Lesson 7: Unit Review

Objectives:
- Review types of energy

Objectives derived from The McGraw-Hill Companies, Inc. © The McGraw-Hill Companies, Inc. All rights reserved.

Lesson 8: Unit Test
SCIENCE 3 A
Science 3 A

Science provides a way for people to actively learn about the world around them. Throughout this course the student will continue to perform hands-on activities to explore organisms, investigate changes, and examine the solar system. The McGraw-Hill textbook, Science: A Closer Look, and the science kit are the primary resources for this course. The life science units describe and analyze components of the living world. The Earth science unit describes Earth’s features and the changes it undergoes. The student will also explore different careers in science and the scientific method.

In this course, the student will design an experiment to discover what plants need to survive, make a model of a cave, and delve into many more exciting experiments. The lessons in this course are designed to accommodate a variety of learning styles and to provide a variety of opportunities for the entire family to participate in the student’s education. Some lessons, or groups of lessons, in each unit are activity-centered, which allows the student to engage the new concepts through exploration and discovery; others are more traditional, requiring the student to read, research, and reflect on the underlying theory.

Unit 1: Be a Scientist

In this introductory unit, your student will learn about the scientific method through the actions of two scientists who are studying animals in Madagascar. Your student will learn how these scientists, Chris and Paule, use the scientific method to learn more about the world around them. He will read how the scientific method helps them study animals like the Madagascan chameleon.

Your student will also be introduced to the many inquiry-based skills that he will use throughout this course. He will learn how to form a hypothesis, make observations, analyze data, draw conclusions, and communicate results. Before your student begins the next unit, he will learn about science safety and why it’s important for scientists to be safe and responsible when conducting research.

Before beginning this unit, look at the materials list in the Course Summary backpack. There may be items that you need to supply to complete the labs.

Objectives:
- Explain why the scientific method is important to scientists
- Learn how scientists develop hypotheses and use inquiry skills
- Recognize that safety is very important in the field of science

Lesson 1: The Scientific Method: Part 1

Objectives:
- Identify the steps in the scientific method

Objectives derived from The McGraw-Hill Companies, Inc. © The McGraw-Hill Companies, Inc. All rights reserved.

Lesson 2: The Scientific Method: Part 2

Objectives:
- Learn how scientists form and test a hypothesis

Objectives derived from The McGraw-Hill Companies, Inc. © The McGraw-Hill Companies, Inc. All rights reserved.

Lesson 3: Focus on Skills and Safety

Objectives:
- Understand and use inquiry skills
- Identify the reasons safety procedures are important

Objectives derived from The McGraw-Hill Companies, Inc. © The McGraw-Hill Companies, Inc. All rights reserved.

Lesson 4: Unit Review and Test

Objectives:
- Summarize chapter concepts
Unit 2: A Look at Living Things

In this unit, your student will explore what living things need to survive. She will learn how to identify living things and nonliving things in an ecosystem and will be introduced to the basic needs of all organisms, including food, water, air, and space.

During this unit, your student will conduct an inquiry-based experiment with plants, which will help her identify what factors influence a plant’s ability to survive. She will study plant parts, as well as animal parts, and will learn how to classify plants and animals based on their characteristics.

Before beginning this unit, look at the materials list in the Course Summary backpack. There may be items that you need to supply to complete the labs.

Objectives:
- Recognize the differences between living things and nonliving things
- Describe what plants and animals need to survive
- Explain how plants and animals are classified into groups
- Identify important plant and animal structures and functions

Lesson 1: Living Things and Their Needs: Part 1

Objectives:
- Compare nonliving things and living things

Lesson 2: Living Things and Their Needs: Part 2

Objectives:
- Describe what living things need to survive

Lesson 3: Plants and Their Parts: Part 1

Objectives:
- Relate plant structures to their functions

Lesson 4: Plants and Their Parts: Part 2

Objectives:
- Describe how plants are classified

Lesson 5: Lab: What Do Plants Need to Survive?

Objectives:
- Predict if plants need water and light to grow

Lesson 6: Animals and Their Parts (two-day lesson)

Objectives:
- Describe what an animal needs to survive
- Relate how an animal meets its needs

Lesson 7: Classifying Animals: Part 1

Objectives:
- Identify two major groups of animals
Lesson 8: Classifying Animals: Part 2

Objectives:
- Classify animals into groups based on their structures

Lesson 9: Unit Review

Objectives:
- Summarize chapter concepts

Lesson 10: Unit Test

Unit 3: Living Things Grow and Change

In this unit, your student will explore the life cycles of plants and animals. He will identify the different life stages of organisms. Your student will use the scientific method to develop and test a hypothesis related to plant growth.

During this unit, your student will explore the process of metamorphosis by studying amphibians and insects. He will learn how traits, such as hair and eye color, can be passed on from parents to offspring. By the end of this unit, your student will have a better understanding of where some of her traits may have come from.

Before beginning this unit, look at the materials list in the Course Summary backpack. There may be items that you need to supply to complete the labs.

Objectives:
- Identify different life cycles of plants and animals
- Explain reproduction and identify inherited traits and learned traits
- Develop a hypothesis and test it with an experiment

Lesson 1: Plant Life Cycles: Part 1

Objectives:
- Understand how plants grow and reproduce

Lesson 2: Plant Life Cycles: Part 2

Objectives:
- Recognize the life cycles of different types of plants

Lesson 3: Inquiry Skill: Form a Hypothesis

Objectives:
- Form a hypothesis and test it by conducting an experiment and gathering data

Lesson 4: Animal Life Cycles

Objectives:
- Identify the different stages that animals go through in a life cycle
- Compare the life cycles of different animals

Lesson 5: From Parents to Young
Objectives:
• Explain how some traits are inherited from parents
• Distinguish between inherited traits and learned traits

Lesson 6: Unit Review

Objectives:
• Summarize chapter concepts

Lesson 7: Unit Test

Unit 4: Living Things in Ecosystems

In this unit, your student will be introduced to ecosystems and the organisms that inhabit them. She will examine food chains and food webs, then identify roles that different organisms play within their ecosystem. She will learn how to use communication skills to share information about energy within an ecosystem.

During this unit, your student will study different types of ecosystems, including deserts, tropical rain forests, temperate forests, oceans, and wetlands. She will learn how plants and animals have specific adaptations—structures or behaviors that help them survive in their environment.

Before beginning this unit, look at the materials list in the Course Summary backpack. There may be items that you need to supply to complete the labs.

Objectives:
• Explain what an ecosystem is and how energy flows throughout an ecosystem
• Define food chains and food webs and how they vary in different ecosystems
• Identify various examples of plant and animal adaptations and explain how adaptations help organisms survive
• Explain why camouflage is very important to animals that use it

Lesson 1: Food Chains and Food Webs: Part 1

Objectives:
• Define an ecosystem

Lesson 2: Food Chains and Food Webs: Part 2

Objectives:
• Understand how energy moves through a food chain
• Identify the roles of different organisms in a food web

Lesson 3: Inquiry Skill: Communicate

Objectives:
• Communicate information about energy transfer in an ecosystem

Lesson 4: Types of Ecosystems: Part 1

Objectives:
• Identify different ecosystems

Lesson 5: Types of Ecosystems: Part 2

Objectives:
• Describe the characteristics of different ecosystems
Lesson 6: Adaptations: Part 1

Objectives:
- Recognize adaptations that allow organisms to survive in certain environments

Lesson 7: Adaptations: Part 2

Objectives:
- Explain how adaptations help organisms survive

Lesson 8: Lab: Does Camouflage Help Animals Stay Safe?

Objectives:
- Perform an investigation to observe how camouflage helps animals survive

Lesson 9: Unit Review

Objectives:
- Summarize chapter concepts

Lesson 10: Unit Test

Unit 5: Changes in Ecosystems

In this unit, your student will examine how changes to the environment affect living things. He will learn how organisms compete for food, water, space, and other resources in their environment. Your student will also learn that pollution can have lasting effects on organisms and their habitats.

During this unit, your student will explore the ways in which people can protect the environment. He will learn how to help the environment by following the “Three Rs”—reduce, reuse, and recycle. By the end of this unit, your student will understand how populations of organisms can be affected by drastic changes to the environment, such as fires and floods. He will learn how scientists study fossils to gain information about environmental changes that occurred in the past.

Before beginning this unit, look at the materials list in the Course Summary backpack. There may be items that you need to supply to complete the labs.

Objectives:
- Explain how living things can change the environment that they live in
- Identify how environmental changes can affect living things
- Describe how scientists use fossils to learn about organisms that lived in the past
- Recognize the difference between organisms that are endangered and those that are extinct

Lesson 1: Living Things Change Their Environment

Objectives:
- Identify ways that living things change their environment
- Explain how different organisms compete with each other for food, water, and shelter

Lesson 2: Changes Affect Living Things: Part 1
Lesson 3: Changes Affect Living Things: Part 2

Objectives:
• Explain what it means for an animal to be endangered

Lesson 4: Living Things of the Past

Objectives:
• Explain how scientists learn about ancient plants and animals by studying fossils
• Show how present-day organisms are similar to those that lived long ago

Lesson 5: Unit Review

Objectives:
• Summarize chapter concepts

Lesson 6: Unit Test

Unit 6: Earth Changes

In this unit, your student will explore Earth’s structure. She will learn to identify Earth’s oceans and continents as well as specific landforms, such as mountains, valleys, canyons, plains, and coasts. By studying an image in her textbook, your student will investigate unique features of the ocean floor. She will identify and define a continental shelf, an abyssal plain, and a seafloor trench.

Your student will also examine Earth’s layers: the crust, mantle, and core. She will read about earthquakes and how they can affect the physical structure of Earth’s crust. In addition, your student will read about volcanoes, landslides, and floods—and how they can alter the appearance of Earth’s surface. Finally, your student will discover how the processes of weathering and erosion change landscapes across the world.

Before beginning this unit, look at the materials list in the Course Summary backpack. There may be items that you need to supply to complete the labs.

Objectives:
• Identify features on Earth’s surface, including features on the ocean floor
• Explain how earthquakes and volcanic eruptions occur
• Identify the effects of landslides and floods
• Explain Earth’s layered interior

Lesson 1: Earth’s Features: Part 1

Objectives:
• Identify Earth’s landforms

Lesson 2: Earth’s Features: Part 2

Objectives:
• Identify the features of the ocean floor
• Describe the layers of Earth

Lesson 3: Inquiry Skill: Make a Model
Objectives:
- Make a model of a cave

Lesson 4: Sudden Changes to Earth: Part 1
Objectives:
- Describe earthquakes and identify their effects

Lesson 5: Sudden Changes to Earth: Part 2
Objectives:
- Describe volcanoes and identify their effects
- Describe the effects of landslides and floods

Lesson 6: Weathering and Erosion
Objectives:
- Describe and identify the forces that cause weathering and erosion
- Analyze how people change the land

Lesson 7: Unit Review
Objectives:
- Summarize chapter concepts

Lesson 8: Unit Test
SCIENCE 3 B
Science 3 B

Science provides a way for people to actively learn about the world around them. Throughout this course the student will continue to perform hands-on activities to explore organisms, investigate changes, and examine the solar system. The McGraw-Hill textbook, *Science: A Closer Look*, and the science kit are the primary resources for this course. The Earth science units detail Earth’s composition and the relationships between the Earth, moon, and sun. The physical science unit explores the properties of matter. The student will also explore different careers in science and the scientific method.

In this course, the student will create a model to investigate how simple machines work, investigate why the moon’s shape appears to change during the month, and delve into many more exciting experiments. The lessons in this course are designed to accommodate a variety of learning styles and to provide a variety of opportunities for the entire family to participate in the student’s education. Some lessons, or groups of lessons, in each unit are activity-centered, which allows the student to engage the new concepts through exploration and discovery; others are more traditional, requiring the student to read, research, and reflect on the underlying theory.

Unit 1: Using Earth’s Resources

In this unit, your student will explore Earth’s minerals. He will examine mineral properties such as color, streak, luster, and hardness. After studying minerals, your student will learn how minerals combine to form rocks. He will explore the three types of rocks: igneous, sedimentary, and metamorphic.

In the second part of the unit, your student will learn how to use variables to answer a scientific question. He will do this by conducting an experiment with different types of soil. Your student will then read about fossils and how they form. He will explore Earth’s renewable and nonrenewable resources and will read about the ways people can conserve natural resources.

Before beginning this unit, look at the materials list in the Course Summary backpack. There may be items that you need to supply to complete the labs.

Objectives:
- Identify different mineral properties and explain the three main types of rocks
- Explain how different soils can hold different quantities of water
- Define fossil fuels and explain how fossils form
- Explain why air and water are considered valuable resources and investigate air pollution

Lesson 1: Minerals and Rocks: Part 1

Objectives:
- Compare and contrast properties of minerals

Objectives derived from The McGraw-Hill Companies, Inc. © The McGraw-Hill Companies, Inc. All rights reserved.

Lesson 2: Minerals and Rocks: Part 2

Objectives:
- Describe how three main kinds of rocks form

Objectives derived from The McGraw-Hill Companies, Inc. © The McGraw-Hill Companies, Inc. All rights reserved.

Lesson Guide (Coaching Guide):

Lesson 3: Soil

Objectives:
- Explore soil and identify its components
- Compare and contrast different soils

Objectives derived from The McGraw-Hill Companies, Inc. © The McGraw-Hill Companies, Inc. All rights reserved.

Lesson 4: Inquiry Skill: Use Variables
Objectives:
• Compare how much water different soils hold

**Lesson 5: Fossils and Fuels**

Objectives:
• Model and describe how fossils form
• List examples of fossil fuels and other sources of energy

**Lesson 6: Air and Water Resources**

Objectives:
• Describe how air and water are used as resources
• Explain reasons and methods for conserving and protecting air and water

**Lesson 7: Lab: What Things Pollute the Air?**

Objectives:
• Collect and compare things carried in air in different locations

**Lesson 8: Unit Review**

Objectives:
• Summarize unit concepts

**Lesson 9: Unit Test**

**Unit 2: Changes in Weather**

In this unit, your student will explore weather. She will learn how different types of weather form in Earth’s atmosphere, and she will read about predicting weather. Your student will test her inquiry skills when she completes the lab, “Interpret Data.” She will learn how to interpret weather data that was collected throughout a year.

Next, your student will study the water cycle and how it relates to different weather patterns. She will read about evaporation, condensation, and precipitation; and she will examine a detailed diagram in her textbook that illustrates the water cycle. Finally, your student will discover the difference between weather and climate. She will learn how and why climates vary across the world.

Before beginning this unit, look at the materials list in the Course Summary backpack. There may be items that you need to supply to complete the labs.

Objectives:
• Define weather and explain different types of weather
• Identify different stages of the water cycle and how it relates to weather
• Identify global climates and seasonal differences across the world

**Lesson 1: Weather**

Objectives:
• Define weather
• Describe four characteristics of weather

**Lesson 2: Inquiry Skill: Interpret Data**

Objectives:
Unit 3: Planets, Moons, and Stars

In this unit, your student will investigate the solar system. He will first study the Earth-moon-sun relationship and will learn why there are seasons on Earth and why there are phases of the moon. Next, your student will explore other planets in the solar system. He will compare and contrast the inner and outer planets. When reading about the outer planets, be sure that your student understands that Pluto is now considered a dwarf planet.

At the end of this unit, your student will explore stars. He will learn why stars can only be seen at night and why the Big Dipper is not a constellation. Your student will be able to explain why different stars can be viewed during different seasons. After completing the reading assignments for this unit, your student will have a better understanding of the many features of the solar system.

Before beginning this unit, look at the materials list in the Course Summary backpack. There may be items that you need to supply to complete the labs.

Objectives:
- Explain the relationship between Earth and the sun and describe what causes seasons
- Identify phases of the moon and describe the moon’s features
- Describe the solar system and identify the inner and outer planets
- Explain stars and constellations and identify the locations in which they can be viewed

Lesson 1: The Sun and Earth

Objectives:
- Explain what causes day and night
- Explain what causes the seasons
- Describe the sun

Lesson 2: The Moon and Earth
Objectives:
- Identify the phases of the moon and explain why the moon seems to change shape
- Describe features of the moon

Lesson 3: Lab: Why Does the Moon's Shape Appear to Change?

Objectives:
- Model the changes in the appearance of the moon

Lesson 4: The Planets

Objectives:
- Describe our solar system
- Describe the inner and outer planets

Lesson 5: The Stars

Objectives:
- Describe stars and constellations
- Describe why different constellations can be seen during different seasons

Lesson 6: Unit Review

Objectives:
- Summarize unit concepts

Lesson 7: Unit Test

Unit 4: Observing Matter

In this unit, your student will begin to investigate matter. She will learn how to identify examples of matter and will study several properties of matter, including mass and volume. Your student will learn that matter is composed of elements. Practical examples of elements are pictured in your student’s textbook.

After learning what matter is, your student will explore the ways that matter can be measured. She will learn the standard units of measurement for length, volume, and mass. She will also learn how to differentiate between mass and weight. At the end of the unit, your student will explore the three states of matter—solids, liquids, and gases—and how she uses them every day.

Before beginning this unit, look at the materials list in the Course Summary backpack. There may be items that you need to supply to complete the labs.

Objectives:
- Define matter and describe various properties of matter
- Measure matter using standard units and explain the difference between mass and weight
- Differentiate between solids, liquids, and gases

Lesson 1: Properties of Matter

Objectives:
- Define matter as anything that has mass and takes up space
Lesson 2: Measuring Matter: Part 1

Objectives:
- Measure matter using tools that record standard units

Objectives derived from The McGraw-Hill Companies, Inc. © The McGraw-Hill Companies, Inc. All rights reserved.

Lesson 3: Measuring Matter: Part 2

Objectives:
- Compare and contrast weight and mass

Objectives derived from The McGraw-Hill Companies, Inc. © The McGraw-Hill Companies, Inc. All rights reserved.

Lesson 4: Solids, Liquids, and Gases

Objectives:
- Define the three common states of matter: solid, liquid, and gas
- Explain the properties of solids, liquids, and gases

Objectives derived from The McGraw-Hill Companies, Inc. © The McGraw-Hill Companies, Inc. All rights reserved.

Lesson 5: Unit Review

Objectives:
- Summarize unit concepts

Objectives derived from The McGraw-Hill Companies, Inc. © The McGraw-Hill Companies, Inc. All rights reserved.

Lesson 6: Unit Test

Unit 5: Changes in Matter

In this unit, your student will continue learning about matter. He will explore changes to matter’s state. Your student will learn what happens to matter when it freezes, melts, condenses, and evaporates. He will conduct an experiment to determine whether salt water freezes faster—or slower—than fresh water.

Your student will also learn how to differentiate between physical changes and chemical changes in matter. He will read how physical changes can be observed, but some chemical changes cannot. Your student will learn that the release of heat and/or gas generally indicates that a chemical change has occurred.

Before beginning this unit, look at the materials list in the Course Summary backpack. There may be items that you need to supply to complete the labs.

Objectives:
- Recognize how water changes temperature in different states
- Investigate the freezing point of saltwater and freshwater
- Differentiate between physical changes and chemical changes
- Explain what a mixture is

Lesson 1: Changes of State: Part 1

Objectives:
- Measure and record the temperature of water in different states

Objectives derived from The McGraw-Hill Companies, Inc. © The McGraw-Hill Companies, Inc. All rights reserved.

Lesson 2: Changes of State: Part 2

Objectives:
- Identify the effect of heating and cooling matter

Objectives derived from The McGraw-Hill Companies, Inc. © The McGraw-Hill Companies, Inc. All rights reserved.

Lesson 3: Inquiry Skill: Predict

Objectives:
- Determine whether salt water or fresh water freezes faster
Lesson 4: Physical Changes

Objectives:
• Define physical changes as those that do not change the identity of a material
• Describe how to make and separate mixtures

Lesson 5: Chemical Changes

Objectives:
• Describe chemical changes
• Understand that chemical changes are part of our everyday life

Lesson 6: Lab: Physical and Chemical Changes in Matter

Objectives:
• Observe physical and chemical changes in a piece of chalk

Lesson 7: Unit Review

Objectives:
• Summarize unit concepts

Lesson 8: Unit Test

Unit 6: Forces and Motion

In this unit, your student will study the relationship between forces and motion. She will learn how to define factors such as position, distance, and speed. She will also learn how forces change the motion of objects. Your student will learn about magnetic force, and will conduct an experiment to determine how magnetic force is affected by the distance between an object and a magnet.

Your student will go on to study work, energy, and simple machines. She will define kinetic and potential energy, and will be able to explain how energy can change from one form to another. She will explore the six simple machines: levers, pulleys, wheels and axles, inclined planes, screws, and wedges. After your student has completed all of the reading assignments, see if she can identify a compound machine at home.

Before beginning this unit, look at the materials list in the Course Summary backpack. There may be items that you need to supply to complete the labs.

Objectives:
• Define position, motion, speed, friction, gravity, and magnetism
• Describe how forces relate to motion
• Investigate how distance affects the force of a magnet
• Differentiate between energy and work and identify different forms of energy

Lesson 1: Position and Motion

Objectives:
• Describe and relate position and motion
• Define speed using distance and time

Lesson 2: Forces
Lesson 3: Lab: How Distance Affects the Pull of a Magnet

Objectives:
- Experiment to determine how the distance between a magnet and an object affects magnetic force

Lesson 4: Work and Energy

Objectives:
- Define energy and work
- Discuss the forms of energy and how energy changes from one form to another

Lesson 5: Inquiry Skill: Infer

Objectives:
- Relate the speed of water and the energy it has

Lesson 6: Unit Review

Objectives:
- Summarize unit concepts

Lesson 7: Unit Test

Unit 7: Forms of Energy

In this final unit, your student will explore the following forms of energy—heat, sound, light, and electricity. He will learn how to differentiate between heat and temperature, and will learn about conductors and insulators in an experiment with three potential insulators. In this unit, your student will learn how sound travels and will learn the difference between volume and pitch.

Your student will also explore properties of light and be able to define opaque, transparent, and translucent. He will learn how different colors are made and how light can be reflected and refracted. At the end of this unit, your student will study electricity. He will gain a basic understanding of static electricity and will explore how electric currents flow through circuits.

Before beginning this unit, look at the materials list in the Course Summary backpack. There may be items that you need to supply to complete the labs.

Objectives:
- Describe heat transfer and identify insulators and conductors
- Explain how sound is produced and define pitch and volume
- Explain how light travels and describe how colors form

Lesson 1: Heat

Objectives:
- Describe how heat moves
- Compare insulators and conductors

Lesson 2: Inquiry Skill: Experiment

Objectives:
• Experiment to compare the effectiveness of three different materials as insulators

Objectives derived from The McGraw-Hill Companies, Inc. © The McGraw-Hill Companies, Inc. All rights reserved.

Lesson 3: Sound

Objectives:
• Describe how vibrations produce sounds
• Compare the pitch and volume of a sound

Objectives derived from The McGraw-Hill Companies, Inc. © The McGraw-Hill Companies, Inc. All rights reserved.

Lesson 4: Light

Objectives:
• Explore how light travels
• Describe how colors are seen

Objectives derived from The McGraw-Hill Companies, Inc. © The McGraw-Hill Companies, Inc. All rights reserved.

Lesson 5: Electricity

Objectives:
• Describe electrical charge
• Identify the parts of a circuit

Objectives derived from The McGraw-Hill Companies, Inc. © The McGraw-Hill Companies, Inc. All rights reserved.

Lesson 6: Unit Review

Objectives:
• Summarize unit concepts

Objectives derived from The McGraw-Hill Companies, Inc. © The McGraw-Hill Companies, Inc. All rights reserved.

Lesson 7: Unit Test
SCIENCE 4 A
Science 4 A

Science is an adventure in which everyone can take part! In this first semester course, the student will be participating in scientific investigations of many different forms including simple observations and experiments. Results from these investigations will provide information about the surrounding world. The McGraw-Hill textbook, *Science: A Closer Look*, and the science kit are the primary resources for this course.

The opening unit examines volcano exploration and reviews the scientific method. The life science units examine the commonalities and differences among organisms. The Earth Science units provide an opportunity for the student to investigate the different land features on Earth, as well as how to care for Earth. In this course the student will observe seed growth, explore the effects of flooding on a riverbank, and much, much more!

The lessons in this course are designed to accommodate a variety of learning styles, and to provide a variety of opportunities for the entire family to participate in the student's education. Some lessons, or groups of lessons, in each unit are activity-centered, which allows the student to engage the new concepts he encounters through exploration and discovery; others are more traditional, requiring the student to read, research, and reflect on the underlying theory.

**Unit 1: Be a Scientist**

In this introductory unit, your student will learn about the scientific method through the actions of two scientists who are studying volcanoes in Indonesia. Your student will learn how geologists Jim and Francesca use the steps of the scientific method to explore the nature of volcanic eruptions. He will read how this process helps them study the relationship between explosive volcanic eruptions and the element chlorine.

Your student will also be introduced to the many inquiry-based skills that he will use throughout this course. He will learn how to form a hypothesis, make observations, analyze data, draw conclusions, and communicate results. Before your student begins the next unit, he will learn about science safety and why it’s important for scientists to be safe when conducting scientific research.

Objectives:
- Explain why the scientific method is important to scientists
- Learn how scientists develop hypotheses and use inquiry skills
- Recognize that safety is very important in the field of science

**Lesson 1: The Scientific Method: Part 1**

Objectives:
- Identify the steps in the scientific method

**Lesson 2: The Scientific Method: Part 2**

Objectives:
- Learn how scientists test a hypothesis

**Lesson 3: Focus on Skills and Safety**

Objectives:
- Understand and use inquiry skills
- Identify the reasons why safety procedures are important

**Lesson 4: Unit Review and Test**

Objectives:
- Summarize unit concepts
Unit 2: Kingdoms of Life

In this unit, your student will investigate living things. She will learn that living things have specific needs, including food, water, shelter, and oxygen. Your student will compare and contrast plant and animal cells; and she will learn how cells combine to form tissues, organs, and organ systems within organisms.

During the unit, your student will conduct an observation-based experiment with plants, which will help her understand that, like animals, plants have special organ systems that perform certain jobs. She will learn how scientists classify living things into six kingdoms and will take an in-depth look into the plant kingdom. By the end of the unit, your student will have a better understanding of plant parts and how different plants reproduce.

Objectives:
- Identify the kingdoms of living things and summarize five functions of living things
- Compare and contrast plant and animal cells
- Observe plants and identify plant parts and their functions
- Be able to explain photosynthesis, respiration, and pollination
- Identify and describe different microorganisms

Lesson 1: Cells: Part 1

Objectives:
- Summarize five functions of living things

Lesson 2: Cells: Part 2

Objectives:
- Compare plant and animal cells

Lesson 3: Inquiry Skill: Observe

Objectives:
- Observe plants and interpret observations

Lesson 4: Classifying Living Things: Part 1

Objectives:
- Define and compare the kingdoms of living things

Lesson 5: Classifying Living Things: Part 2

Objectives:
- Describe different types of microorganisms

Lesson 6: The Plant Kingdom: Part 1

Objectives:
- Describe the functions of roots, stems, and leaves

Lesson 7: The Plant Kingdom: Part 2

Objectives:
- Explain the processes of photosynthesis and respiration
Unit 3: The Animal Kingdom

In this unit, your student will explore the animal kingdom. He will identify vertebrates and invertebrates and will study seven organ systems in animals. Your student will use the scientific method to form and test a hypothesis related to animal adaptations.

During the unit, your student will define the terms life cycle, life span, and metamorphosis. He will study animal reproduction and will learn how traits are passed on from parents to offspring. By the end of the unit, your student will have a better understanding of the different ways in which animals reproduce.

Objectives:
- Compare and contrast characteristics of vertebrates and invertebrates
- Identify and describe the basic needs of all animals
- Explain the seven organ systems and how they interact
- Define complete and incomplete metamorphosis
- Explain how certain traits are passed from parents to offspring

Lesson 1: Animals without Backbones: Part 1

Objectives:
- Define animal and list the basic needs and characteristics of animals

Lesson 2: Animals without Backbones: Part 2

Objectives:
- Summarize the characteristics of groups of invertebrates

Lesson 3: Animals with Backbones

Objectives:
- Define vertebrates and describe their characteristics
- Describe the seven groups of vertebrates

Lesson 4: Systems in Animals

Objectives:
- Identify seven organ systems of animals
- Summarize the structures and functions of the seven organ systems

Lesson 5: Lab: How do Feet Help Birds Move in Water?

Objectives:
Unit 4: Exploring Ecosystems

In this unit, your student will study ecosystems, communities, and populations, and she will learn how to identify biotic and abiotic factors within an ecosystem. In addition, your student will be introduced to Earth’s six major biomes: deciduous forest, tropical rain forest, grassland, desert, tundra, and taiga.

The latter part of the unit focuses on relationships among organisms in an ecosystem. Your student will define the terms producer, consumer, and decomposer; she will learn where these different types of organisms can be found in a food chain and in a food web. Your student will discover how organisms compete for vital resources in their ecosystems and how all organisms seek energy from food.

Objectives:
- Explain the difference between ecosystems, communities, and populations
- Identify and describe Earth’s major biomes
- Explain how energy flows throughout an ecosystem and describe food webs
- Be able to discuss predator-prey relationships

Lesson 1: Introduction to Ecosystems

Objectives:
- Identify abiotic and biotic factors in an ecosystem
- Describe ecosystems, communities, and populations

Lesson 2: Inquiry Skill: Predict

Objectives:
- Observe how seeds grow in polluted and unpolluted soil

Lesson 3: Biomes

Objectives:
- Define a biome
- Describe Earth’s six main biomes

Lesson 4: Relationships in Ecosystems: Part 1

Objectives:
- Explain how energy is cycled through an ecosystem

Lesson 5: Relationships in Ecosystems: Part 2
Objectives:
• Describe food webs and give examples of predator-and-prey relationships

Objectives derived from The McGraw-Hill Companies, Inc. © The McGraw-Hill Companies, Inc. All rights reserved.

Lesson 6: Unit Review and Test

Objectives:
• Summarize unit concepts

Objectives derived from The McGraw-Hill Companies, Inc. © The McGraw-Hill Companies, Inc. All rights reserved.

Unit 5: Surviving in Ecosystems

In this unit, your student will learn how organisms adapt to their surroundings. He will complete a reading assignment that provides examples of how certain animal species survive in desert ecosystems. Your student will also learn how some animals have body parts that are adaptations, such as a porcupine’s sharp quills.

During the unit, your student will also study plant adaptations, such as a cactus’ ability to store water. He will learn how an environmental change, such as a drought, can have a dramatic effect on plants in an ecosystem. By the end of the unit, your student will be able to provide examples of species that are endangered or extinct.

Objectives:
• Explain how adaptations allow plants and animals to survive in different environments
• Describe how living things and nonliving things can cause ecosystems to change
• Explain how changes to an ecosystem affects the living things in that ecosystem

Lesson 1: Animal Adaptations

Objectives:
• Define adaptation and give examples of how adaptations help animals to survive in their habitats
• Define and describe the types of symbiotic relationships

Objectives derived from The McGraw-Hill Companies, Inc. © The McGraw-Hill Companies, Inc. All rights reserved.

Lesson 2: Inquiry Skill: Form a Hypothesis

Objectives:
• Form a hypothesis about how an organism’s coloring or patterning affects how easily the organism can be seen in an environment

Objectives derived from The McGraw-Hill Companies, Inc. © The McGraw-Hill Companies, Inc. All rights reserved.

Lesson 3: Plants and Their Surroundings

Objectives:
• Describe ways in which plants respond to their environments
• Describe plant adaptations

Objectives derived from The McGraw-Hill Companies, Inc. © The McGraw-Hill Companies, Inc. All rights reserved.

Lesson 4: Changes in Ecosystems: Part 1

Objectives:
• Describe how living and nonliving things cause ecosystems to change

Objectives derived from The McGraw-Hill Companies, Inc. © The McGraw-Hill Companies, Inc. All rights reserved.

Lesson 5: Changes in Ecosystems: Part 2

Objectives:
• Understand that changes to ecosystems affect living organisms

Objectives derived from The McGraw-Hill Companies, Inc. © The McGraw-Hill Companies, Inc. All rights reserved.
Lesson 6: Unit Review and Test

Objectives:
- Summarize unit concepts

Objectives derived from The McGraw-Hill Companies, Inc. © The McGraw-Hill Companies, Inc. All rights reserved.

Unit 6: Shaping Earth

In this unit, your student will explore Earth’s structure, along with the processes that change the shape of Earth’s surface. She will learn how to identify landforms on Earth’s continents as well as physical structures on the ocean floor. Your student will conduct an experiment that will help her understand how landslides can dramatically change landscapes.

Towards the end of the unit, your student will discover how mountains, earthquakes, and volcanoes form. She will define folds and faults and will learn what people can do to protect themselves in case of an earthquake. Finally, your student will study how weather-related phenomena, such as floods, forest fires, tornadoes, and hurricanes, can cause dramatic changes to Earth’s surface.

Objectives:
- Describe Earth’s layers and explain how plate movement causes earthquakes and volcanic eruptions to occur
- Identify different landforms and features on the ocean floor
- Compare and contrast physical and chemical weathering
- Define erosion and explain how erosion builds up and breaks down Earth’s surface
- Describe the effects of floods, wildfires, tornadoes, hurricanes, landslides, and avalanches

Lesson 1: Earth

Objectives:
- Identify Earth’s landforms and the features of the ocean floor
- Describe the layers of Earth

Objectives derived from The McGraw-Hill Companies, Inc. © The McGraw-Hill Companies, Inc. All rights reserved.

Lesson 2: Inquiry Skill: Experiment

Objectives:
- Experiment to learn how damage from landslides can be lessened

Objectives derived from The McGraw-Hill Companies, Inc. © The McGraw-Hill Companies, Inc. All rights reserved.

Lesson 3: The Moving Crust: Part 1

Objectives:
- Describe how the movement of plates builds mountains and causes earthquakes and volcanoes

Objectives derived from The McGraw-Hill Companies, Inc. © The McGraw-Hill Companies, Inc. All rights reserved.

Lesson 4: The Moving Crust: Part 2

Objectives:
- Explain how scientists use seismic waves to study earthquakes

Objectives derived from The McGraw-Hill Companies, Inc. © The McGraw-Hill Companies, Inc. All rights reserved.

Lesson 5: Weathering and Erosion: Part 1

Objectives:
- Define and give examples of physical and chemical weathering

Objectives derived from The McGraw-Hill Companies, Inc. © The McGraw-Hill Companies, Inc. All rights reserved.

Lesson 6: Weathering and Erosion: Part 2

Objectives:
Lesson 7: Changes Caused by the Weather: Part 1

Objectives:
- Describe the effects of floods, fires, tornadoes, and hurricanes

Lesson 8: Changes Caused by the Weather: Part 2

Objectives:
- Explain the causes and effects of landslides and avalanches

Lesson 9: Lab: What Happens When a River Floods?

Objectives:
- Model the effects of a flood on a riverbank

Lesson 10: Unit Review and Test

Objectives:
- Summarize unit concepts

Unit 7: Saving Earth's Resources

In this unit, your student will complete reading assignments on minerals, rocks, soil, and fossils. Your student's knowledge of natural resources will increase as he explores how fossil fuels are used and as he identifies renewable resources and nonrenewable resources.

Your student will also study Earth’s supply of saltwater and freshwater. He will explore how water is used and how water can become polluted. The unit will introduce your student to conservation. Your student will read about ways he can conserve resources at home.

Objectives:
- Explain mineral classification and describe the rock cycle
- Describe different types of soil and explain why some soils drain water better than others
- Define fossil fuels and identify renewable and nonrenewable resources
- Explain why land, water, and air are considered resources
- Discuss the effects of pollution and identify ways to conserve natural resources

Lesson 1: Minerals and Rocks: Part 1

Objectives:
- Describe the properties used to identify and classify minerals

Lesson 2: Minerals and Rocks: Part 2

Objectives:
- Compare the three types of rocks

Lesson 3: Inquiry Skill: Communicate

Objectives:
- Communicate the changes in size and shape of mineral grains under pressure
Lesson 4: Soil

Objectives:
- Describe the different layers of soil and how they form
- Define the texture, porosity, and permeability of soil

Lesson 5: Lab: How Different Soil Types Hold Minerals

Objectives:
- Analyze how soil permeability affects the draining away, or leaching, of nutrients and minerals during heavy rainfall

Lesson 6: Resources from the Past

Objectives:
- Describe the different kinds of fossils, the ways they form, and how they provide evidence of Earth's past
- Explain why fossil fuels are a valuable and nonrenewable resource

Lesson 7: Water

Objectives:
- Explain how the water cycle renews Earth's fresh water
- Describe ways people use and obtain fresh water

Lesson 8: Pollution and Conservation

Objectives:
- Identify the effects of pollution to land, water, and air
- Describe ways to reduce pollution and conserve resources

Lesson 9: Unit Review and Test

Objectives:
- Summarize unit concepts
SCIENCE 4 B
Science 4 B

Science is an adventure in which everyone can take part! In this second semester course, the student will be participating in scientific investigations of many different forms including simple observations and experiments. Results from these investigations will provide information about the surrounding world. The McGraw-Hill textbook, Science: A Closer Look, and the science kit are the primary resources for this course.

The Earth Science units provide an opportunity for the student to investigate the solar system and the effects of different climates on Earth. The Physical Science units enable the student to explore the composition and use of different forms of energy. In this course the student will analyze the effect of warmed air on weather, explore chemical reactions, create a compound machine, and much, much more!

The lessons in this course are designed to accommodate a variety of learning styles, and to provide a variety of opportunities for the entire family to participate in the student's education. Some lessons, or groups of lessons, in each unit are activity-centered, which allows the student to engage the new concepts he encounters through exploration and discovery; others are more traditional, requiring the student to read, research, and reflect on the underlying theory.

Unit 1: Weather and Climate

In the beginning of this unit, your student will be introduced to different types of weather. By studying the water cycle, your student will be able to explain how water moves on Earth’s surface and through its atmosphere. She will read about various forms of precipitation and will learn how different types of weather, such as hurricanes and tornadoes, form.

In the latter part of the unit, your student will explore climate. She will learn that climates differ on Earth; some regions have cold and dry climates, while others have warm, humid, and rainy climates. Your student will complete the unit by conducting an experiment to investigate how large masses of warm air can affect regional climates.

Objectives:
- Compare and contrast weather and climate and describe how weather can be measured
- Explain the water cycle and identify different cloud types
- Explain air masses and how hot and cold air affects the weather
- Identify different types of climate on Earth

Lesson 1: Air and Weather

Objectives:
- Define the atmosphere as a mixture of different gases
- Describe four properties of weather that can be measured and the tools used to measure them

Lesson 2: The Water Cycle: Part 1

Objectives:
- Sequence the steps of the water cycle

Lesson 3: The Water Cycle: Part 2

Objectives:
- Identify and describe types of clouds and precipitation

Lesson 4: Tracking the Weather

Objectives:
• Explain how air masses form and identify the types of weather they cause
• Forecast the weather by interpreting data on a weather map

Objectives derived from The McGraw-Hill Companies, Inc. © The McGraw-Hill Companies, Inc. All rights reserved.

Lesson 5: Climate

Objectives:
• Define and give examples of climate
• Explain the main factors that determine climate

Objectives derived from The McGraw-Hill Companies, Inc. © The McGraw-Hill Companies, Inc. All rights reserved.

Lesson 6: Lab: How Does Warmed Air Affect the Weather?

Objectives:
• Describe how warm air affects the weather

Objectives derived from The McGraw-Hill Companies, Inc. © The McGraw-Hill Companies, Inc. All rights reserved.

Lesson 7: Unit Review and Test

Objectives:
• Summarize unit concepts

Objectives derived from The McGraw-Hill Companies, Inc. © The McGraw-Hill Companies, Inc. All rights reserved.

Unit 2: The Solar System and Beyond

In this unit, your student will explore the many wonders of the universe. He will complete reading assignments that focus on Earth, the moon and sun, the inner and outer planets, and stars and constellations. Your student will practice the inquiry skill of data interpretation as he investigates a record of the moon’s phases.

During the unit, your student will learn that gravity is the force of attraction between the sun and planets in the solar system. He will learn how scientists use telescopes to study the rocky planets and the gas giants. By the end of the unit, your student will have a greater understanding of the universe and its phenomena, including constellations.

Objectives:
• Explain what causes day and night and the different seasons
• Describe the Earth-moon-sun relationship and describe Earth’s place in the solar system
• Compare and contrast the inner and outer planets
• Describe the main characteristics of the moon and the sun
• Be able to discuss stars and what they are made of

Lesson 1: Earth and Sun

Objectives:
• Explain how Earth’s rotation causes the cycle of day and night
• Explain why the sun’s apparent motion in the sky differs from season to season

Objectives derived from The McGraw-Hill Companies, Inc. © The McGraw-Hill Companies, Inc. All rights reserved.

Lesson 2: Earth and Moon

Objectives:
• Explain why the moon is covered with craters
• Identify the causes of the moon's phases, solar eclipses, and lunar eclipses

Objectives derived from The McGraw-Hill Companies, Inc. © The McGraw-Hill Companies, Inc. All rights reserved.

Lesson 3: Inquiry Skill: Interpret Data

Objectives:
Unit 3: Properties of Matter

In this unit, your student will investigate matter and how it can be measured and classified. Her reading assignments will cover the states of matter, properties of matter, and the system of measurement that scientists use to measure matter—the metric system. Your student will focus on length, width, area, volume, mass, and density.

In addition to measurement, your student will study classification. She will define the terms element, atom, metal, nonmetal, and metalloid; and she will learn how the elements are organized in the periodic table. By the end of the unit, your student will be prepared to study how matter can change states.

Objectives:
- Explain the states of matter and compare and contrast properties of matter
- Be able to discuss how the properties of matter can be measured
- Explain the periodic table and be able to discuss how the elements are arranged in the periodic table

Lesson 1: Describing Matter: Part 1

Objectives:
- Compare and contrast properties of matter

Lesson 2: Describing Matter: Part 2

Objectives:
- Define and describe the three states of matter

Lesson 3: Measurement

Objectives:
- Describe some properties of matter that can be measured
Unit 4: Matter and Its Changes

In this unit, your student will continue to learn about different types of matter. He will learn how to differentiate between a physical change and a chemical change and will discover that mixtures are simply combinations of matter.

In the beginning of the unit, your student will conduct an experiment that will allow him to practice using variables. He will determine how heat affects a liquid’s evaporation rate. Towards the end of the unit, your student will conduct another experiment to determine if lemon juice can prevent fruit from turning brown.

Objectives:
- Differentiate between physical and chemical changes
- Explain what a mixture is and describe how mixtures can be separated
- Define compounds and explain their properties
- Define and provide examples of acids and bases
Lesson 6: Compounds

Objectives:
- Describe how compounds form and their physical properties
- Compare and contrast acids and bases

Lesson 7: Lab: How Can You Change a Chemical Reaction?

Objectives:
- Predict which substance can prevent the oxidation of fruit

Lesson 8: Unit Review and Test

Objectives:
- Summarize unit concepts

Unit 5: Forces

Throughout this unit, your student will study forces and motion. She will define motion, speed, velocity, and acceleration, and she will learn how they are all related. Your student will watch movies that explain work, energy, and simple machines. She will discover how simple machines are used in everyday life.

By the end of the unit, your student will have a better understanding of how balanced forces and unbalanced forces affect an object's motion. She will be able to explain potential energy and kinetic energy, and she will also be able to describe the following forms of energy: chemical, electrical, light, mechanical, thermal, and nuclear. Your student will read how energy can be transferred and transformed.

Objectives:
- Define motion, speed, velocity, acceleration, friction, and gravity
- Explain how forces act on a moving object
- Define potential and kinetic energy and differentiate between work and energy
- Describe the six simple machines and what they are used for

Lesson 1: Motion and Forces

Objectives:
- Explain how motion, speed, velocity, and acceleration are related
- Summarize the forces that act on a moving object, including friction and gravity

Lesson 2: Changing Motion

Objectives:
- Demonstrate a basic understanding of how forces affect motion
- Explain how friction affects motion

Lesson 3: Work and Energy: Part 1

Objectives:
- Define work and energy

Lesson 4: Work and Energy: Part 2

Objectives derived from The McGraw-Hill Companies, Inc. © The McGraw-Hill Companies, Inc. All rights reserved.
Unit 6: Energy

In this final unit, your student’s knowledge of energy will increase as he studies heat, sound, light, electricity, and magnetism. The first reading assignment in the unit will help your student understand the following terms: conduction, convection, radiation, insulator, and conductor. Your student will go on to learn how sound is produced and how sound can travel through a medium such as air or water.

Finally, your student will explore light, electricity, and magnetism. He will learn about the electromagnetic spectrum and will discover that although light is made up of waves, it travels in a straight line. Your student will investigate positive and negative particles and how they cause an object to become electrically charged. He will end the unit by studying magnetic particles, poles, and fields.

Objectives:
• Define heat and explain how heat is transferred between objects
• Explain how sound travels and define frequency, pitch, and volume
• Explain how light can be absorbed, reflected, or refracted
• Describe electricity and how objects can be electrically charged
• Define electromagnets and explain magnetic fields

Lesson 1: Heat

Objectives:
• Explain that heat flows from warmer materials to cooler materials
• Describe and define conduction, convection, and radiation

Lesson 2: Inquiry Skill: Infer

Objectives:
• Infer which material tested is the best insulator

Lesson 3: Sound

Objectives:
• Explain how sound is produced and how it travels through a medium
Lesson 4: Light: Part 1

Objectives:
- Demonstrate that light travels in a straight line

Lesson 5: Light: Part 2

Objectives:
- Describe ways light can be absorbed, reflected, or refracted by objects

Lesson 6: Electricity: Part 1

Objectives:
- Describe the characteristics of electrically charged objects

Lesson 7: Electricity: Part 2

Objectives:
- Explain the difference between static and current electricity

Lesson 8: Lab: Electrically Charged Balloons

Objectives:
- Learn how electric charge can be transferred

Lesson 9: Magnetism and Electricity: Part 1

Objectives:
- Describe a magnetic field and the effect of distance on magnetic force

Lesson 10: Magnetism and Electricity: Part 2

Objectives:
- Understand how an electromagnet, an electric motor, and a generator work

Lesson 11: Unit Review and Test

Objectives:
- Summarize unit concepts
SCIENCE 5 A
Science 5 A

Science is an ongoing process that constantly renders new discoveries! In this first semester course, the student will be sharpening his investigative skills and expanding upon his existing knowledge in order to make his own new discoveries. The McGraw-Hill textbook, Science: A Closer Look, and the science kit are the primary resources for the course. The opening unit explores the role of scientists and the scientific method. The life science units explore cells and heredity. The Earth science units provide an opportunity for the student to design experiments to investigate Earth’s composition and the factors that affect its composition.

The lessons in this course are designed to accommodate many learning styles, and to provide a variety of opportunities for the entire family to participate in the student’s education. Some lessons, or groups of lessons, in each unit are activity-centered, which allow the student to engage the new concepts he encounters through exploration and discovery; others are more traditional, requiring the student to read, research, and reflect on the underlying theory.

Unit 1: Be a Scientist

In this introductory unit, your student will learn about the scientific method through the actions of two scientists who work for the American Museum of Natural History. Your student will learn how biologists Liliana and Susan use the steps of the scientific method to explore how diseases affect organisms. He will read how this process helps them study the parasite that causes a particular disease called malaria.

During this unit, your student will be introduced to several skills that he will use throughout this course. He will learn how to test a hypothesis and how to analyze data and form conclusions. Your student will also learn about science safety and why it’s important to follow safety rules in any science laboratory.

Objectives:
- Explain how scientists use the scientific method to solve scientific problems
- Identify why safety procedures are important when conducting science experiments
- Describe how a hypothesis is formed and how scientists use inquiry skills

Lesson 1: The Scientific Method: Part 1

Objectives:
- Identify the steps in the scientific method

Lesson 2: The Scientific Method: Part 2

Objectives:
- Learn how scientists form and test a hypothesis

Lesson 3: Focus on Skills and Safety

Objectives:
- Understand and use inquiry skills
- Identify the reasons why safety procedures are important

Lesson 4: Unit Review & Unit Test

Objectives:
- Summarize chapter concepts

Unit 2: Cells and Kingdoms
In this unit, your student will explore different forms of life on Earth. She will carefully study plant and animal cells and will identify unicellular and multicellular organisms. Your student will delve deeper into the subject of organ systems; she will learn about the specific functions of organs within a system and will conduct an experiment on the heart.

During the unit, your student will review how organisms are classified into the following groups: kingdom, phylum, class, order, family, genus, and species. She will differentiate between animals that are vertebrates and invertebrates, and plants that are vascular and nonvascular. Your student will also take a closer look at bacteria and viruses. By the end of the unit, your student will have studied plant and animal classification in great detail.

Objectives:
- Explain the similarities and differences between plant and animal cells
- Describe how living things are organized into groups and identify organisms in the plant, animal, and fungi kingdoms
- Identify plant parts and their functions, including how leaves carry out photosynthesis
- List differences between invertebrates and vertebrates
- Summarize how body systems in animals work together to allow an animal to survive and perform functions

Lesson 1: Cells: Part 1

Objectives:
- Describe cells and explain how they are organized in living things

Lesson 2: Cells: Part 2

Objectives:
- Compare and contrast the structures of animals cells and plant cells

Lesson 3: Classifying Life: Part 1

Objectives:
- Describe kingdom and species

Lesson 4: Classifying Life: Part 2

Objectives:
- Describe the organisms in the animal, plant, and fungi kingdoms

Lesson 5: Plants: Part 1

Objectives:
- Describe the structure and function of roots

Lesson 6: Plants: Part 2

Objectives:
- Describe the structure and function of stems and leaves
- Discuss the process by which leaves carry out photosynthesis

Lesson 7: Classifying Animals: Part 1

Objectives:
- Define invertebrates; describe invertebrate groups
Lesson 8: Classifying Animals: Part 2
Objectives:
• Define vertebrates; describe the four major vertebrate groups

Lesson 9: Animal Systems: Part 1
Objectives:
• Summarize the functions of animal systems
• Describe how the skeletal system and muscular system work together to produce movement

Lesson 10: Animal Systems: Part 2
Objectives:
• Summarize the functions of animal systems

Lesson 11: Lab: When Does Your Heart Work the Hardest?
Objectives:
• Determine when your heart works the hardest

Lesson 12: Unit Review
Objectives:
• Summarize chapter concepts

Lesson 13: Unit Test

Unit 3: Parents and Offspring
In this unit, your student will explore plant and animal life cycles. He will review the parts of a flower and will differentiate between perfect and imperfect flowers. He will also review the stages of complete metamorphosis and will learn how fertilization occurs in animals. Your student will study sexual and asexual reproduction and will learn why organisms reproduce in different ways.

During the unit, your student will learn about heredity, or the passing of traits from parents to offspring. Your student will learn about inherited traits and will explore the difference between dominant and recessive traits. By the end of this unit, your student should be able to explain how an organism can inherit a gene for a specific trait, such as blue eye color.

Objectives:
• Compare and contrast sexual and asexual reproduction
• Explain the different life cycles of plants, including those of the angiosperm and conifer
• Explain the different life cycles of animals, including complete and incomplete metamorphosis
• Identify inherited traits and learned behaviors

Lesson 1: Reproduction
Objectives:
• Explain sexual and asexual reproduction
• Compare and contrast sexual and asexual reproduction

Lesson 2: Plant Life Cycles: Part 1
Objectives derived from The McGraw-Hill Companies, Inc. © The McGraw-Hill Companies, Inc. All rights reserved.
Objectives:
- Describe the life cycles of mosses and ferns

Lesson 3: Plant Life Cycles: Part 2

Objectives:
- Learn about the angiosperm life cycle
- Understand the conifer life cycle

Lesson 4: Inquiry Skill: Observe

Objectives:
- Observe a flower and draw a diagram

Lesson 5: Animal Life Cycles

Objectives:
- Define complete and incomplete metamorphosis
- Discuss fertilization and explain how the processes of external and internal fertilization work

Lesson 6: Traits and Heredity

Objectives:
- Describe how traits are passed from one generation to the next
- Explain dominant and recessive traits

Lesson 7: Unit Review

Objectives:
- Summarize chapter concepts

Lesson 8: Unit Test

Unit 4: Interactions in Ecosystems

In this unit, your student will explore connections between organisms in an ecosystem. She will learn where producers, consumers, and decomposers fall within a food chain and will identify examples of herbivores, carnivores, and omnivores. Your student will explore how energy flows through each layer of an ecosystem—how it moves from the bottom to the top of a food pyramid.

During the unit, your student will learn how some organisms compete with each other for resources, while other organisms do things to help each other survive. Your student will learn about the following symbiotic relationships: mutualism, commensalism, and parasitism. She will also learn how organisms develop structural and/or behavioral adaptations so they can survive in a changing environment.

Objectives:
- Describe how energy flows throughout an ecosystem and explain food chains and food webs
- Identify structural and behavioral adaptations in animals and structural adaptations in plants
- Explain how living things compete for natural resources
- Define the following terms: habitat, niche, population, community

Lesson 1: Energy Flow in Ecosystems: Part 1
Lesson 2: Energy Flow in Ecosystems: Part 2

Objectives:
- Describe how food chains, food webs, and energy pyramids work

Lesson 3: Relationships in Ecosystems

Objectives:
- Explain how populations compete and are limited by the resources they need
- Define habitat, niche, symbiosis, commensalism, mutualism, and parasitism

Lesson 4: Inquiry Skill: Predict

Objectives:
- Predict how population size will change

Lesson 5: Adaptation and Survival: Part 1

Objectives:
- Explain structural and behavioral adaptations

Lesson 6: Adaptation and Survival: Part 2

Objectives:
- Describe plant and animal adaptations including camouflage and mimicry

Lesson 7: Unit Review

Objectives:
- Summarize chapter concepts

Lesson 8: Unit Test

Unit 5: Ecosystems and Biomes

In this unit, your student will explore ecosystems and biomes. He will study cycles in ecosystems, including the water cycle, the carbon cycle, and the nitrogen cycle—and will be able to explain why they are important. Your student will also study changes in ecosystems and how drastic changes can cause extinction.

During the unit, your student will read about the following biomes: desert, tundra, taiga, tropical rain forest, temperate rain forest, deciduous forest, and grassland. He will also explore ecosystems that are composed of fresh water, salt water, or a mixture of both. Your student will gain a clear understanding of different environments on Earth.

Objectives:
- Identify naturally-occurring cycles in ecosystems and explain how recycling and composting benefit the environment
- Identify different ways in which ecosystems can change and describe how a changed ecosystem affects the living things in it
• Identify and describe Earth's major biomes
• Summarize water ecosystems on Earth

**Lesson 1: Cycles in Ecosystems: Part 1**

Objectives:
• List the steps in the water, carbon, and nitrogen cycles and explain their importance

**Lesson 2: Cycles in Ecosystems: Part 2**

Objectives:
• Explain how recycling and composting benefit the ecosystem

**Lesson 3: Changes in Ecosystems: Part 1**

Objectives:
• Analyze how changes in ecosystems can cause extinction

**Lesson 4: Changes in Ecosystems: Part 2**

Objectives:
• Describe the natural and human-caused changes in ecosystems

**Lesson 5: Inquiry Skill: Interpret Data**

Objectives:
• Understand how the use of an insecticide affected bald eagles' eggs

**Lesson 6: Biomes: Part 1**

Objectives:
• Describe harsh climate biomes: desert, tundra, and taiga

**Lesson 7: Biomes: Part 2**

Objectives:
• Describe the biomes of forests and grasslands

**Lesson 8: Water Ecosystems: Part 1**

Objectives:
• Understand how oceans get salty

**Lesson 9: Water Ecosystems: Part 2**

Objectives:
• Describe freshwater, ocean, and estuary ecosystems

**Lesson 10: Unit Review**

Objectives:
Lesson 11: Unit Test

Unit 6: Our Dynamic Earth

In this unit, your student will learn about Earth's structure. She will explore features on Earth's surface and on the ocean floor, and will define the following terms: atmosphere, hydrosphere, lithosphere, asthenosphere, and biosphere. Your student will also explore topography and she will make a model of a topographic map.

During the unit, your student will learn how plate tectonics is related to mountain formation, volcanic eruptions, and earthquakes. She will watch several movies that explain this relationship in detail. Finally, your student will study weathering and erosion. She will be able to differentiate between chemical and physical weathering, and explain the processes of erosion and deposition.

Objectives:

- Describe Earth's physical features—those on landforms and on the ocean floor
- Explain Earth's layered interior and how topographical maps are useful tools
- Explain the theory of plate tectonics and how it relates to continental drift
- Describe earthquakes and volcanoes and where they occur
- Compare and contrast the processes of weathering and erosion

Lesson 1: Earth's Landforms: Part 1

Objectives:

- Classify Earth's physical features including landforms and features of the ocean floor

Lesson 2: Earth's Landforms: Part 2

Objectives:

- Define Earth's layers

Lesson 3: Inquiry Skill: Make a Model

Objectives:

- Construct a model of a mountain and manipulate it to produce a topographical map

Lesson 4: Plate Tectonics

Objectives:

- Discuss how the theory of plate tectonics explains continental drift
- Identify the processes that produce different kinds of mountains

Lesson 5: Volcanoes

Objectives:

- Explain why a volcano erupts
- Describe how volcanoes build land

Lesson 6: Earthquakes
Lesson 7: Shaping Earth’s Surface: Part 1

Objectives:
- Describe weathering

Lesson 8: Shaping Earth’s Surface: Part 2

Objectives:
- Discuss the relationship between erosion and deposition

Lesson 9: Unit Review

Objectives:
- Summarize chapter concepts

Lesson 10: Unit Test

Unit 7: Protecting Earth’s Resources

In this unit, your student will investigate Earth’s natural resources, including minerals, coal, oil, natural gas, water, and air. He will explore how fossil fuels formed and how fossils help scientists determine the age of rock layers. Your student will also learn how fossil fuels are used and will define renewable and nonrenewable resources.

During the unit, your student will conduct an experiment that will take several days to complete. He will determine what kind of soil is best for plant growth. Your student will finish the unit by reading and watching videos on air and water. He will learn why air and water are considered resources and how pollution affects them.

Objectives:
- Explain the rock cycle and identify the three main types of rocks
- Describe soil and how polluted soil affects living things
- Identify fossils and explain how fossil fuels form and how they are used to create energy
- Explain why air and water are considered natural resources
- Discuss the importance of conservation

Lesson 1: Minerals and Rocks: Part 1

Objectives:
- Compare and contrast igneous, sedimentary, and metamorphic rocks

Lesson 2: Minerals and Rocks: Part 2

Objectives:
- Compare and contrast igneous, sedimentary, and metamorphic rocks
- Trace the pathways of the rock cycle

Lesson 3: Inquiry Skill: Classify

Objectives:
- Classify rocks by their properties
Lesson 4: Soil

Objectives:
- Describe how soil is formed and kinds of soil
- Understand how soil is used and polluted

Objectives derived from The McGraw-Hill Companies, Inc. © The McGraw-Hill Companies, Inc. All rights reserved.

Lesson 5: Fossils and Energy: Part 1

Objectives:
- Identify and compare types of fossils

Objectives derived from The McGraw-Hill Companies, Inc. © The McGraw-Hill Companies, Inc. All rights reserved.

Lesson 6: Fossils and Energy: Part 2

Objectives:
- Discuss and identify renewable and nonrenewable energy resources, including fossil fuels

Objectives derived from The McGraw-Hill Companies, Inc. © The McGraw-Hill Companies, Inc. All rights reserved.

Lesson 7: Air and Water: Part 1

Objectives:
- Explain why air and water are resources

Objectives derived from The McGraw-Hill Companies, Inc. © The McGraw-Hill Companies, Inc. All rights reserved.

Lesson 8: Air and Water: Part 2

Objectives:
- Describe important ideas about the pollution and conservation of air and water

Objectives derived from The McGraw-Hill Companies, Inc. © The McGraw-Hill Companies, Inc. All rights reserved.

Lesson 9: Unit Review

Objectives:
- Summarize chapter concepts

Objectives derived from The McGraw-Hill Companies, Inc. © The McGraw-Hill Companies, Inc. All rights reserved.

Lesson 10: Unit Test
SCIENCE 5 B
Science 5 B

Science is an ongoing process that constantly renders new discoveries. In this second semester course, the student will be sharpening his investigative skills and expanding upon his existing knowledge in order to make his own new discoveries. The McGraw-Hill textbook, Science: A Closer Look, and the science kit are the primary resources for the course. The Earth science units provide an opportunity for the student to investigate weather patterns and the universe. The physical science units examine the characteristics of matter, energy, and forces.

The lessons in this course are designed to accommodate many learning styles, and to provide a variety of opportunities for the entire family to participate in the student's education. Some lessons, or groups of lessons, in each unit are activity-centered, which allow the student to engage the new concepts he encounters through exploration and discovery; others are more traditional, requiring the student to read, research, and reflect on the underlying theory.

Unit 1: Weather Patterns

In this unit, your student will explore weather patterns. She will learn how clouds form and why certain types of severe storms occur in specific locations. From the layers of the atmosphere to global climates, your student will explore the diverse nature of weather on Earth.

During the unit, your student will complete two labs. The first lab will require her to use the scientific inquiry skill of communication to investigate balloons. The second lab will give her the opportunity to form a hypothesis and conduct a hands-on experiment to determine if water vapor is in the air.

Objectives:
- Explain how different types of weather form in the atmosphere
- Describe how Earth's shape and tilt affect global temperatures and wind patterns
- Explain how different types of clouds and precipitation form
- Describe severe storms and how they form
- Identify different climates on Earth

Lesson 1: The Atmosphere and Weather: Part 1

Objectives:
- Explain how Earth's shape and tilt affect temperatures and winds

Lesson 2: The Atmosphere and Weather: Part 2

Objectives:
- Explain how global and local winds form

Lesson 3: Inquiry Skill: Communicate

Objectives:
- Find out and communicate whether balloons can be used to lift a notebook

Lesson 4: Clouds and Precipitation: Part 1

Objectives:
- Explain how clouds and precipitation form

Lesson 5: Clouds and Precipitation: Part 2
• Summarize how air masses and fronts affect the weather

**Lesson 6: Lab: Can You Tell that Water Vapor Is in the Air?**

Objectives:
• Find out how to determine if water vapor is in the air

**Lesson 7: Severe Storms: Part 1**

Objectives:
• Summarize the different kinds of severe storms
• Explain how severe storms form

**Lesson 8: Severe Storms: Part 2**

Objectives:
• Summarize the different kinds of severe storms
• Explain how severe storms form

**Lesson 9: Climate**

Objectives:
• Explain what determines an area's climate
• Summarize the factors that affect climate

**Lesson 10: Unit Review**

Objectives:
• Summarize chapter concepts

**Lesson 11: Unit Test**

**Unit 2: The Universe**

In this unit, your student will read and watch movies about various aspects of the universe. He will learn about the solar system, as a whole—and will then explore the relationship between the Earth, moon, and sun. Your student will read about human exploration and the solar system.

During the unit, your student will study stars. He will learn about the colors and sizes of stars, and will be able to explain the life cycle of a star in detail. Your student will also complete a hands-on experiment to determine how craters form on planets and their moons. By the end of the unit, your student will have a better understanding of the universe.

Objectives:
• Describe the sun-Earth-moon relationship and explain what causes seasons
• Explain why the moon has different phases and how eclipses occur
• Describe the planets and some of their defining features
• Summarize space exploration over time
• Describe stars and explain the Big Bang

**Lesson 1: Earth and Sun**

Objectives:
• Describe the movements of Earth and the sun
• Explain how Earth's movements cause the seasons and day and night
Lesson 2: Inquiry Skill: Use Numbers

Objectives:
- Use numbers to calculate a student’s age on other planets

Lesson 3: Earth and Moon

Objectives:
- Describe the features of the moon, and identify the relative positions of the moon, Earth, and the sun that produce each of the moon’s major phases
- Explain how eclipses and tides occur

Lesson 4: The Solar System: Part 1

Objectives:
- Describe the planets and some of their major features, as well as asteroids, meteors, and comets
- Describe how humans have explored the solar system

Lesson 5: The Solar System: Part 2

Objectives:
- Describe the planets and some of their major features, as well as asteroids, meteors, and comets
- Describe how humans have explored the solar system

Lesson 6: Stars and the Universe: Part 1

Objectives:
- Learn about the cycles, colors, and sizes of stars

Lesson 7: Stars and the Universe: Part 2

Objectives:
- Identify star systems and learn about the big bang theory

Lesson 8: Unit Review

Objectives:
- Summarize chapter concepts

Lesson 9: Unit Test

Unit 3: Comparing Kinds of Matter

In this unit, your student will begin to explore matter and its properties. Your student will study the periodic table and will read about different types of elements, including metals and nonmetals. She will also explore electrical conductivity with relation to metals and nonmetals.

During the unit, your student will learn about the structure of matter and will be able to identify the parts of an atom. She will learn how to compare different kinds of matter and
will explore matter in its different states. Finally, your student will learn how to make a scientific inference by completing the Inquiry Skill activity, Infer.

Objectives:
- Identify different types of matter and explain matter's three states
- Describe how matter can be measured using scientific tools
- Describe elements and explain where different elements are located on the periodic table
- Explain the differences between metals, nonmetals, and metalloids
- Explain how different elements can/cannot conduct electricity

**Lesson 1: Properties of Matter**

Objectives:
- Describe matter and the three states of matter: solid, liquid, and gas
- Measure and calculate density as mass divided by volume

*Objectives derived from The McGraw-Hill Companies, Inc. © The McGraw-Hill Companies, Inc. All rights reserved.*

**Lesson 2: Inquiry Skill: Infer**

Objectives:
- Infer conclusions after experimenting and analyzing data gathered from an experiment and recorded on a chart

*Objectives derived from The McGraw-Hill Companies, Inc. © The McGraw-Hill Companies, Inc. All rights reserved.*

**Lesson 3: Elements: Part 1**

Objectives:
- Explain the structure of matter, elements, and atoms
- Name the parts of an atom

*Objectives derived from The McGraw-Hill Companies, Inc. © The McGraw-Hill Companies, Inc. All rights reserved.*

**Lesson 4: Elements: Part 2**

Objectives:
- Describe common elements and their properties

*Objectives derived from The McGraw-Hill Companies, Inc. © The McGraw-Hill Companies, Inc. All rights reserved.*

**Lesson 5: Metals, Nonmetals, and Metalloids: Part 1**

Objectives:
- Describe the properties of metals, nonmetals, and metalloids

*Objectives derived from The McGraw-Hill Companies, Inc. © The McGraw-Hill Companies, Inc. All rights reserved.*

**Lesson 6: Metals, Nonmetals, and Metalloids: Part 2**

Objectives:
- Determine whether an element is a metal, nonmetal, or metalloid

*Objectives derived from The McGraw-Hill Companies, Inc. © The McGraw-Hill Companies, Inc. All rights reserved.*

**Lesson 7: Lab: Electrical Conductivity**

Objectives:
- Compare the conductivity of metals and nonmetals

**Lesson 8: Unit Review**

Objectives:
- Summarize chapter concepts

*Objectives derived from The McGraw-Hill Companies, Inc. © The McGraw-Hill Companies, Inc. All rights reserved.*

**Lesson 9: Unit Test**

© 2016 Connections Education LLC. All rights reserved.
© 2008 The McGraw-Hill Companies, Inc. All rights reserved.
Unit 4: Physical and Chemical Changes

In this unit, your student will focus on learning about physical and chemical changes in matter. He will explore how mixtures form and will investigate whether or not a mixture can be separated into its parts. He will also investigate what temperature of water freezes the fastest—hot, warm, cool, or cold.

During the unit, your student will complete reading assignments about chemical changes, and acids and bases. He will learn how to determine whether a reaction is a chemical reaction or a physical reaction. He will also learn how salts are formed.

Objectives:
- Explain physical and chemical changes in matter
- Describe what a mixture is and explain how mixtures can be separated
- Describe compounds and explain how to identify chemical changes
- Define acids, bases, and salts and explain their properties

Lesson 1: Changes of State

Objectives:
- Learn that changes of state occur at distinct temperatures or points
- Predict whether an object will expand or contract based on a change in temperature

Objectives derived from The McGraw-Hill Companies, Inc. © The McGraw-Hill Companies, Inc. All rights reserved.

Lesson 2: Inquiry Skill: Use Variables

Objectives:
- Investigate whether hot water, warm water, cool water, or cold water freezes fastest

Objectives derived from The McGraw-Hill Companies, Inc. © The McGraw-Hill Companies, Inc. All rights reserved.

Lesson 3: Mixtures: Part 1

Objectives:
- Identify different kinds of mixtures and their parts

Objectives derived from The McGraw-Hill Companies, Inc. © The McGraw-Hill Companies, Inc. All rights reserved.

Lesson 4: Mixtures: Part 2

Objectives:
- Understand methods of separating mixtures

Objectives derived from The McGraw-Hill Companies, Inc. © The McGraw-Hill Companies, Inc. All rights reserved.

Lesson 5: Lab: How Can You Separate Mixtures?

Objectives:
- Compare and contrast different methods of separating a mixture

Objectives derived from The McGraw-Hill Companies, Inc. © The McGraw-Hill Companies, Inc. All rights reserved.

Lesson 6: Compounds and Chemical Changes: Part 1

Objectives:
- Find that compounds are made of two or more elements and have different properties than their component elements

Objectives derived from The McGraw-Hill Companies, Inc. © The McGraw-Hill Companies, Inc. All rights reserved.

Lesson 7: Compounds and Chemical Changes: Part 2

Objectives:
- Learn the common signs of chemical change

Objectives derived from The McGraw-Hill Companies, Inc. © The McGraw-Hill Companies, Inc. All rights reserved.
Lesson Guide (Coaching Guide):

Lesson 8: Acids, Bases, and Salts: Part 1

Objectives:
• Describe the properties of acids and bases, and find out how indicators work with them

Objective derived from The McGraw-Hill Companies, Inc. © The McGraw-Hill Companies, Inc. All rights reserved.

Lesson 9: Acids, Bases, and Salts: Part 2

Objectives:
• Describe the properties of acids and bases, and find out how indicators work with them
• Learn how salts are formed

Objective derived from The McGraw-Hill Companies, Inc. © The McGraw-Hill Companies, Inc. All rights reserved.

Lesson 10: Unit Review

Objectives:
• Summarize chapter concepts

Objective derived from The McGraw-Hill Companies, Inc. © The McGraw-Hill Companies, Inc. All rights reserved.

Lesson 11: Unit Test

Unit 5: Using Forces

In this unit, your student will learn about forces and motion. She will complete labs that will require her to measure the acceleration of a model car and measure the effect of friction on the energy of an object. Your student will also investigate the six different types of simple machines.

During the unit, your student will learn how motion is affected by the force of gravity. She will define balanced and unbalanced forces and will explore Newton’s three laws of motion. Finally, your student will learn how energy is related to work.

Objectives:
• Define velocity, speed, and acceleration and explain the relationship between position and motion
• Describe how motion is affected by gravity and friction
• Explain Newton’s three laws of motion and provide examples for each law
• Differentiate between work and energy and explain potential and kinetic energy
• List the six simple machines and explain how they are used

Lesson 1: Motion: Part 1

Objectives:
• Understand the relationship between position, motion, velocity, and acceleration

Objective derived from The McGraw-Hill Companies, Inc. © The McGraw-Hill Companies, Inc. All rights reserved.

Lesson 2: Motion: Part 2

Objectives:
• Calculate velocity and acceleration

Objective derived from The McGraw-Hill Companies, Inc. © The McGraw-Hill Companies, Inc. All rights reserved.

Lesson 3: Forces and Motion: Part 1

Objectives:
• Understand how gravity and friction affect motion

Objective derived from The McGraw-Hill Companies, Inc. © The McGraw-Hill Companies, Inc. All rights reserved.
Lesson 4: Forces and Motion: Part 2

Objectives:
- Learn about balanced and unbalanced forces
- Learn how to apply Newton’s three laws of motion

Objectives derived from The McGraw-Hill Companies, Inc. © The McGraw-Hill Companies, Inc. All rights reserved.

Lesson 5: Inquiry Skill: Measure

Objectives:
- Measure the acceleration of a model car

Objectives derived from The McGraw-Hill Companies, Inc. © The McGraw-Hill Companies, Inc. All rights reserved.

Lesson 6: Work and Energy

Objectives:
- Define work and energy
- Understand how work and energy are related

Objectives derived from The McGraw-Hill Companies, Inc. © The McGraw-Hill Companies, Inc. All rights reserved.

Lesson 7: Lab: What Affects Potential and Kinetic Energy?

Objectives:
- Measure the effect of friction on the energy of an object

Objectives derived from The McGraw-Hill Companies, Inc. © The McGraw-Hill Companies, Inc. All rights reserved.

Lesson 8: Simple Machines

Objectives:
- Identify the six types of simple machines
- Calculate the output force and output distance for a given effort force and effort distance

Objectives derived from The McGraw-Hill Companies, Inc. © The McGraw-Hill Companies, Inc. All rights reserved.

Lesson 9: Unit Review

Objectives:
- Summarize chapter concepts

Objectives derived from The McGraw-Hill Companies, Inc. © The McGraw-Hill Companies, Inc. All rights reserved.

Lesson 10: Unit Test

Unit 6: Using Energy

In this final unit, your student will explore various types of energy: heat, sound, light, electricity, and magnetism. He will complete three labs that will require him to develop a hypothesis about heat flow, explore the pitch of a sound, and examine the polarity of a magnet.

During the unit, your student will learn how to differentiate between heat and energy. He will also learn how light travels and how colors are made. By the end of this unit, your student will have a better understanding of different forms of energy and how energy is used.

Objectives:
- Explain the difference between temperature and heat
- Explain how sound travels and define frequency, pitch, and volume
- Understand how light travels and explain how different colors form
- Define static electricity and describe electric circuits
- Explain magnetism and describe how a magnet works

Lesson 1: Heat

Objectives:
• Learn the difference between heat and energy
• Find out how heat is transferred by conduction, convection, and radiation

**Lesson 2: Inquiry Skill: Form a Hypothesis**

Objectives:
• Form a hypothesis about how temperature change from heat flow is related to an object's mass

Objectives derived from The McGraw-Hill Companies, Inc. © The McGraw-Hill Companies, Inc. All rights reserved.

**Lesson 3: Sound**

Objectives:
• Find out how sound waves travel and how echolocation works
• Learn the parts of a wave: frequency, pitch, and volume

Objectives derived from The McGraw-Hill Companies, Inc. © The McGraw-Hill Companies, Inc. All rights reserved.

**Lesson 4: Lab: How Can You Change a Sound?**

Objectives:
• Learn how the length of a column of vibrating air affects the pitch of a sound

Objectives derived from The McGraw-Hill Companies, Inc. © The McGraw-Hill Companies, Inc. All rights reserved.

**Lesson 5: Light**

Objectives:
• Learn that light is a wave and a particle
• Recognize that light can be reflected and bent, and that it has wavelengths and colors

Objectives derived from The McGraw-Hill Companies, Inc. © The McGraw-Hill Companies, Inc. All rights reserved.

**Lesson 6: Electricity**

Objectives:
• Understand static electricity and the attraction between charged objects
• Describe the different types of electric circuits

Objectives derived from The McGraw-Hill Companies, Inc. © The McGraw-Hill Companies, Inc. All rights reserved.

**Lesson 7: Magnetism**

Objectives:
• Explain how magnetism works and how electromagnets work and are used
• Describe how generators produce electricity

Objectives derived from The McGraw-Hill Companies, Inc. © The McGraw-Hill Companies, Inc. All rights reserved.

**Lesson 8: Lab: Electric Current and Electromagnets**

Objectives:
• Relate the direction of current flow to the polarity of a magnet

Objectives derived from The McGraw-Hill Companies, Inc. © The McGraw-Hill Companies, Inc. All rights reserved.

**Lesson 9: Unit Review**

Objectives:
• Summarize chapter concepts

Objectives derived from The McGraw-Hill Companies, Inc. © The McGraw-Hill Companies, Inc. All rights reserved.

SCIENCE 6 A
Science 6 A

Welcome to Science 6, an innovative course based on the framework for the Next Generation Science standards (NGSS). NGSS focuses on science and engineering practices; Earth, life and physical science core ideas; and fundamental crosscutting concepts vital to relating the various fields of science and developing a scientific world view. The course provides the student opportunities to engage in inquiry-based investigations, STEM (Science Technology Engineering Mathematics) projects, and other dynamic activities. Hands-on and online activities encourage the student to make connections, collaborate, and reflect on his or her learning. Because the course is designed to meet both national and state-based standards, the sequence of content will vary by state.

Tip: Links to Pearson® student interactive SCIENCE online textbooks have been added to the Backpack in the Web Links section. These textbooks are intended as supplemental resources as they are organized differently than this course.

Unit 1: Introduction to Science

In this unit, you will explore what it means to think like a scientist and carry out scientific investigations using the scientific method, a process that is essential to scientific inquiry and problem solving. You will learn how to design and conduct a sound science experiment and how to use math skills to take measurements and collect and analyze data. As you work through the unit, you will gain an appreciation for the attitudes that scientists possess and for the reason behind using a standard system of measurement in science. You will identify scientific tools that are used to solve problems and why it is important to prepare and use caution when carrying out investigations in the laboratory and in the field.

Objectives:

• Explain what scientific inquiry is and describe the attitudes that are necessary for thinking scientifically
• List the steps of the scientific method and apply the scientific processes that are important to science investigations
• Identify the math skills and tools that scientists use in collecting data, making measurements, experimentation, and analyzing data
• Describe the goal of technology and explain how technology relates to science
• Explain why preparation is important to doing science experiments in the lab and in the field

Lesson 1: Thinking like a Scientist

Objectives:

• Identify the steps of the scientific method
• Identify and apply the scientific processes that are important in solving problems
• Describe the attitudes, or habits of mind, that are necessary for thinking scientifically, ethically, and without bias

Lesson 2: Inquiry

Objectives:

• Explain what a scientific inquiry is and how it involves posing questions and developing hypotheses
• Describe how to design and conduct an experiment so that it uses sound scientific principles
• Differentiate between a scientific theory and a scientific law

Lesson 3: Investigation

Objectives:

• Describe the importance of investigation in science
• Apply the scientific method and processes in testing a hypothesis
• Distinguish between qualitative and quantitative data

Lesson 4: Scientific Tools: Mathematics

Objectives:
• Describe math skills scientists use in collecting data and making measurements
• Identify the math tools scientists use to analyze their data

Lesson 5: Scientific Tools: Measurement

Objectives:
• Explain why scientists use a standard measurement system
• Identify the SI units and the tools of measure for length, mass, volume, density, time, and temperature

Lesson 6: Scientific Tools: Models

Objectives:
• Describe the different types of systems and identify characteristics that all systems share
• Explain why models are used in science

Lesson 7: Scientific Tools: Technology

Objectives:
• Describe the goal of technology and explain how technology relates to science
• Identify factors that cause technology to progress

Lesson 8: Being Safe in the Lab

Objectives:
• Explain why preparation is important in carrying out investigations in the lab and in the field
• Describe what you should do if an accident occurs in the lab
• Identify specific safety symbols that are commonly found in science labs

Lesson 9: Introduction to Science Unit Review (two-day lesson)

Objectives:
• Explain what scientific inquiry is and describe the attitudes that are necessary for thinking scientifically
• List the steps of the scientific method and apply the scientific processes that are important to science investigations
• Identify the math skills and tools that scientists use in collecting data, making measurements, experimentation, and analyzing data
• Describe the goal of technology and explain how technology relates to science
• Explain why preparation is important to doing science experiments in the lab and in the field

Lesson 10: Introduction to Science Unit Test

Unit 2: Structure, Function, and Information Processing

In this unit, you will explore, describe, discuss, and investigate the characteristics and basic needs of living things as you engage in hands-on and virtual activities. You will model the basic building blocks of life, explore the body systems of plants and animals, and discover how these systems work together to keep organisms alive.

Objectives:
• Describe the composition of living things and investigate the tools scientists use to study them
• Identify the resources needed for living things to survive and investigate the effects of limited resources
• Use models to illustrate and explain how cell structure is related to cell function
• Summarize the way in which body systems work together to keep an organism alive
• Plan and conduct investigations that show how organisms sense and react to their surroundings

Lesson 1: What Is Life? (two-day lesson)
• Identify the characteristics of living things and their basic needs
• Investigate and generate evidence that organisms need food and water, a way to dispose of waste, and space to survive

Lesson 2: The Chemistry of Life (two-day lesson)

Objectives:
• Distinguish between inorganic and organic molecules
• Carry out investigations to identify the nutrients in food
• Communicate the reason that carbon and water are essential to living things
• Identify the elements and molecules commonly found in living things

Lesson 3: Cells

Objectives:
• Describe a cell
• Explain how scientists discovered cells and how the cell theory was developed
• Analyze the way a microscope works
• Distinguish between prokaryotic cells and eukaryotic cells
• Identify structures within a cell and describe their function

Lesson 4: The Parts of a Cell (two-day lesson)

Objectives:
• Identify and explain the function of specific cell organelles, including the nucleus, mitochondria, chloroplasts, ribosomes, endoplasmic reticulum, vacuole, Golgi bodies, and lysosomes
• Distinguish between the cell membrane and cell wall and explain the functions of each

Lesson 5: Cell Membrane

Objectives:
• Analyze how the cell membrane allows substances into and out of the cell
• Distinguish between active and passive transport and identify substances that are transported by each method
• Compare and contrast diffusion and osmosis
• Describe how substances move across the cell membrane in terms of concentration gradients
• Explain the difference between endocytosis and exocytosis

Lesson 6: Cells Working Together (two-day lesson)

Objectives:
• Distinguish between unicellular and multicellular organisms
• Explain the relationship between cells, tissues, organs, and organ systems

Lesson 7: Plant Body Systems

Objectives:
• Identify the three major body systems of a plant and explain their functions
• Analyze how the structure of plant tissue is related to its function
• Explain the difference between phloem and xylem

Lesson 8: Plant Response

Objectives:
• Identify and give examples of plant tropisms
• Carry out experiments to investigate plant tropisms
• Communicate ways in which plants respond to seasonal changes

Lesson 9: Animals

Objectives:
Lesson 10: Animal Body Plans

Objectives:
- Explain how symmetry is related to body structure in animals
- Classify animals into phyla and give an example of each

Lesson 11: Animal Body Systems

Objectives:
- Analyze the process of cellular respiration and explain its function
- Explain the function of the skeletal, digestive, respiratory, circulatory, and excretory systems
- Summarize the way the digestive, respiratory, and circulatory systems work together in animals

Lesson 12: Animal Response and Memory (two-day lesson)

Objectives:
- Explain the relationship between the senses, sensory neurons, interneurons, and motor neurons
- Summarize the difference between reflexes and voluntary movement and give examples of each
- Plan and conduct investigations into how animals respond to their surroundings
- Compare short-term memory and long-term memory and how they are stored

Lesson 13: Structure, Function, Information Processing Review (two-day lesson)

Objectives:
- Review the concepts presented in the Structure, Function, and Information Processing unit

Lesson 14: Structure, Function, Information Processing Test

Unit 3: Reproduction and Development of Organisms

In this unit, you will explore, describe, discuss and investigate the reproduction and development of organisms as you engage in hands-on and virtual activities. You will compare types of reproduction, explore how plants use animals to help them reproduce, and discuss the roles of environment and genetics in the development and growth of organisms.

Objectives:
- Discuss how the growth of organisms is affected by environmental and genetic factors
- Demonstrate that plants use photosynthesis to grow throughout their lives
- Plan and conduct investigations into how animal behaviors and plant structures affect the successful reproduction of the plant
- Analyze empirical evidence that explains how the chance of successful reproduction depends on animal behaviors
- Communicate ways that technology makes it possible to influence the inheritance of traits

Lesson 1: Flowers and Fruit (two-day lesson)

Objectives:
- Understand that some plants have developed specialized features that enhance animal behaviors that aid in the plant’s reproduction
- Analyze how flower structure is related to its function
- Analyze empirical evidence that explains how the chance of successful reproduction depends on animal behaviors
Lesson 2: Seeds and Spores (two-day lesson)

Objectives:
- Understand that plants reproduce in a variety of ways
- Distinguish gymnosperms and angiosperms
- Illustrate the alternation of generations

Lesson 3: Plant Growth (two-day lesson)

Objectives:
- Demonstrate that plants use photosynthesis to grow throughout their lives
- Explain that organisms are regulated both internally and externally
- Discuss how environmental conditions can affect the growth of plants

Lesson 4: Animal Reproduction

Objectives:
- Give examples of characteristic behaviors that increase the odds of reproduction in animals
- Contrast internal and external fertilization and explain the advantages and disadvantages of each

Lesson 5: Animal Development

Objectives:
- Understand that some animals undergo metamorphosis, while others do not
- Explain the advantages and disadvantages of internal versus external development on land
- Discuss how environmental conditions can affect the growth of animals

Lesson 6: Human Growth and Reproduction

Objectives:
- Identify and explain the function of the structures of the male and female reproductive systems
- Summarize the stages of human development from fertilization to birth
- Use models to understand how a zygote develops and how a developing embryo is protected
- Explain how a developing embryo is nourished

Lesson 7: Human Inheritance (two-day lesson)

Objectives:
- Understand how human gender is determined
- Distinguish between human traits that are sex-linked and those that are not
- Use Punnett squares and pedigrees to demonstrate how human traits are inherited
- Identify human genetic syndromes

Lesson 8: Using Genetic Information (two-day lesson)

Objectives:
- Communicate ways that technology makes it possible to influence the inheritance of traits
- Discuss the advantages and disadvantages of the use of genetic information in society
- Give examples of the importance of selective breeding in society

Lesson 9: Reproduction and Development of Organisms Review (two-day lesson)

Objectives:
- Discuss how the growth of organisms is affected by environmental and genetic factors
• Demonstrate that plants use photosynthesis to grow throughout their lives
• Plan and conduct investigations into how animal behaviors and plant structures affect the successful reproduction of the plant
• Analyze empirical evidence that explains how the chance of successful reproduction depends on animal behaviors
• Communicate ways that technology makes it possible to influence the inheritance of traits

Lesson 10: Reproduction and Development of Organisms Test

Unit 4: Interdependent Relationships in Ecosystems

In this unit, you will explore, describe, discuss, and investigate the relationships between organisms in an ecosystem as you engage in hands-on and virtual activities. You will explore the effects of predation, competition, and social interactions on the survival of individual organisms and on larger populations, model an ecosystem to determine its carrying capacity, and evaluate how human activities and biodiversity affect one another.

Objectives:
• Use models to illustrate and explain the factors that determine the number of organisms an ecosystem can support
• Recognize competitive, predatory, and mutually beneficial interactions between organisms, and give an example of each
• Describe biodiversity and its role in a healthy ecosystem
• Evaluate and discuss the ways in which human activity and biodiversity affect one other

Lesson 1: Populations (two-day lesson)

Objectives:
• Use models to illustrate population changes within an ecosystem
• Summarize reasons why populations increase and decrease and give examples of each
• Relate limiting factors to carrying capacity
• Identify limiting factors affecting a population
• Explain what is meant by carrying capacity

Lesson 2: Competition and Predation

Objectives:
• Identify competitive and predatory interactions between organisms and give an example of each
• Explain how adaptations help organisms survive
• Recognize patterns between the number of prey in an ecosystem and the number of predators
• Describe the roles of organisms within an ecosystem

Lesson 3: Symbiosis

Objectives:
• Distinguish between the three types of symbiosis and give an example of each

Lesson 4: Behavior (two-day lesson)

Objectives:
• Recognize competitive, predatory, and mutually beneficial interactions between organisms and give an example of each
• Distinguish between instinct and learning
• Explain how a behavior can be an adaptation
• Describe cyclic behavior

Lesson 5: Biodiversity

Objectives:
• Describe biodiversity and its role in a healthy ecosystem
• Explain the role of a keystone species in a healthy ecosystem
Lesson 6: Changes in Biodiversity

Objectives:
- Evaluate and discuss the ways in which human activity and biodiversity affect one another

Lesson 7: Space to Live (two-day lesson)

Objectives:
- Identify the way humans use land and how this affects biodiversity
- Evaluate methods of waste disposal

Lesson 8: Impact of Energy Use

Objectives:
- Explain where fossil fuels come from and how obtaining and burning them affects the environment
- Compare renewable and nonrenewable resources and discuss the effects of each on biodiversity
- Summarize how humans can conserve energy and how this affects biodiversity

Lesson 9: Clean Air

Objectives:
- Summarize sources of air pollution, the effect it has on the environment, and solutions to prevent it

Lesson 10: Clean Water (two-day lesson)

Objectives:
- Summarize sources of water pollution, the effect it has on the environment, and solutions to prevent it
- Discuss the effects of human activity on the environment and ways of lessening the impacts of those activities

Lesson 11: Ecosystem Recovery (two-day lesson)

Objectives:
- Explain the process of succession
- Describe how changes in an ecosystem can affect organisms that live there
- Describe the amount of time needed for ecosystem recovery

Lesson 12: Interdependent Relationships in Ecosystems Review (two-day lesson)

Objectives:
- Use models to illustrate and explain the factors that determine the number of organisms an ecosystem can support
- Recognize competitive, predatory, and mutually beneficial interactions between organisms, and give an example of each
- Describe biodiversity and its role in a healthy ecosystem
- Evaluate and discuss the ways in which human activity and biodiversity affect one other

Lesson 13: Interdependent Relationships in Ecosystems Test

Objectives:
- Use models to illustrate and explain the factors that determine the number of organisms an ecosystem can support
- Recognize competitive, predatory, and mutually beneficial interactions between organisms and give an example of each
- Describe biodiversity and its role in a healthy ecosystem
- Evaluate and discuss the ways in which human activity and biodiversity affect one other
SCIENCE 6 B
Welcome to Science 6, an innovative course based on the framework for the Next Generation Science standards (NGSS). NGSS focuses on science and engineering practices; Earth, life and physical science core ideas; and fundamental crosscutting concepts vital to relating the various fields of science and developing a scientific world view. The course provides the student opportunities to engage in inquiry-based investigations, STEM (Science Technology Engineering Mathematics) projects, and other dynamic activities. Hands-on and online activities encourage the student to make connections, collaborate, and reflect on his or her learning. Because the course is designed to meet both national and state-based standards, the sequence of content will vary by state.

Tip: Links to Pearson® student interactive SCIENCE online textbooks have been added to the Backpack in the Web Links section. These textbooks are intended as supplemental resources as they are organized differently than this course.

Unit 1: Introduction to Planet Earth

In this unit, you will gain an understanding of why Earth can be described as a system with four main parts, and you will explore some of Earth’s properties that make it suitable for life. You will study Earth’s atmosphere and learn how temperatures on Earth are just right for various life forms. By studying Earth’s rotation and its revolution, you will learn what causes day and night and why there are seasonal cycles on the “blue planet.” By the end of the unit, you will also be able to describe characteristics of Earth’s moon, list the phases of the moon, and explain why the moon goes through phases. This unit will give you an introductory look at Earth and its place in the solar system, and it will prepare you for upcoming units in astronomy and space science.

Objectives:
• Identify and describe the four main components of the Earth system and explain the properties of Earth that support life
• Define rotation and revolution and explain why day and night and seasons occur
• Identify what determines the strength of the force of gravity between two objects and describe what factors keep the moon and Earth in orbit
• Describe the features and characteristics of the moon and explain why the moon has phases and the effect the sun and the moon have on tides
• Define the term eclipse and explain when solar and lunar eclipses occur

Lesson 1: Systems of the Earth

Objectives:
• Identify and describe the main components of the Earth system: atmosphere, geosphere, biosphere, and hydrosphere
• Summarize the effects of constructive and destructive forces

Lesson 2: Properties of Planet Earth that Support Life

Objectives:
• Explain the properties of Earth that support life

Lesson 3: Gravity and Motion (two-day lesson)

Objectives:
• Identify what determines the strength of the force of gravity between two objects
• Describe what factors keep the moon and Earth in orbit

Lesson 4: Earth’s Day and Night

Objectives:
• Define rotation and revolution
• Describe the process by which day and night occur

Lesson 5: Reason for the Seasons (two-day lesson)

Objectives:
• Describe what causes the cycle of seasons on Earth
Lesson 6: Earth’s Moon (two-day lesson)

Objectives:
- Explain the features and characteristics of the moon
- Explain why the moon has phases

Lesson 7: Eclipses

Objectives:
- Describe solar and lunar eclipses
- Explain when eclipses occur

Lesson 8: Tides

Objectives:
- Define tides
- Describe the effects of the moon and sun on tides
- Identify and explain spring and neap tides

Lesson 9: Introduction to Planet Earth Unit Review (two-day lesson)

Objectives:
- Identify and describe the four main components of the Earth system and explain the properties of Earth that support life
- Define rotation and revolution and explain why day and night and seasons occur
- Identify what determines the strength of the force of gravity between two objects and describe what factors keep the moon and Earth in orbit
- Describe the features and characteristics of the moon and explain why the moon has phases and the effect the sun and the moon have on tides
- Define the term eclipse and explain when solar and lunar eclipses occur

Lesson 10: Introduction to Planet Earth Unit Test

Unit 2: Weather and Climate

In this unit, you will relate temperature and precipitation from around the globe to variations in weather. You will assess severe weather events and their likelihood. You will summarize the influences that cause uneven heating of Earth's surface and the resulting regional climates. You will relate the sun's energy to greenhouse gases in the atmosphere and their impact on temperature and habitability. You will evaluate carbon storage within Earth's systems.

Objectives:
- Describe the water cycle and its processes
- Name the main kinds of storms and explain how they form
- Explain the factors that affect climate
- Discuss greenhouse gases and their effect on organisms and the environment

Lesson 1: The Water Cycle (two-day lesson)

Objectives:
- Explain the water cycle
- Describe humidity and how it is measured

Lesson 2: Clouds

Objectives:
- Explain how clouds form
- Name the three kinds of clouds and describe the weather they indicate

Lesson 3: Precipitation (two-day lesson)

Objectives:
- Identify the common types of precipitation
- Describe floods and droughts and their effects and explain how they can be prevented

Lesson 4: Severe Weather (two-day lesson)
Objectives:
- Describe the main kinds of storms and explain how they form
- Explain measures that can be taken to ensure safety in a storm

Lesson 5: Predicting the Weather

Objectives:
- Explain how weather forecasts use observations, data, and technology to predict the weather
- Describe what information can be learned from the information shown on weather maps

Lesson 6: What Causes Climate?

Objectives:
- Identify the factors that influence temperature
- Identify the factors that influence precipitation

Lesson 7: Climate Regions (two-day lesson)

Objectives:
- Explain how climate regions are classified
- Describe the six climate regions
- Explain how organisms adapt to certain climates

Lesson 8: Greenhouse Gases and Habitation (two-day lesson)

Objectives:
- Describe greenhouse gases and explain their effects on the environment and on organisms
- Explain measures for reducing global warming

Lesson 9: Weather and Climate Unit Review (two-day lesson)

Objectives:
- Describe the water cycle and its processes
- Name the main kinds of storms and explain how they form
- Explain the factors that affect climate
- Discuss greenhouse gases and their effect on organisms and the environment

Lesson 10: Weather and Climate Unit Test

Objectives:
- Describe the water cycle and its processes
- Name the main kinds of storms and explain how they form
- Explain the factors that affect climate
- Discuss greenhouse gases and their effect on organisms and the environment

Unit 3: Structures and Properties of Matter

In this unit, you will investigate the physical world from a chemical viewpoint. You will compare the physical and chemical properties of substances, create models of molecules, and demonstrate how different factors, such as thermal energy, affect substances. You will have an opportunity to design a procedure to separate a mixture and discuss with your classmates how thermal energy impacts a substance in different phases.

Objectives:
- Construct models that show that atoms are the building blocks of molecules
- Investigate and explain how pure substances differ from one another
- Describe and model the effect of the removal and addition of thermal energy on motion and temperature of different substances
- Explain the effect on atomic and molecular motion of adding or removing thermal energy to a pure substance in different phases and during a phase change
- Measure the effect sample size has on the change in temperature of a sample

Lesson 1: Describing Matter
Objectives:
- Define matter
- Identify and describe physical and chemical properties of matter

Lesson 2: Atoms and Molecules

Objectives:
- Create models to analyze the composition of molecules in terms of atoms
- Recognize that there are over 100 different types of atoms, which can be combined in various ways to produce different substances
- Describe the composition of a pure substance

Lesson 3: Mixtures (two-day lesson)

Objectives:
- Describe the properties of a mixture
- Compare heterogeneous and homogeneous mixtures
- Design and carry out a plan to separate a mixture
- Make revisions to a plan based on observations and analysis

Lesson 4: Measuring Matter (two-day lesson)

Objectives:
- Explain the relationships among mass, weight, volume, and density
- Use the density equation to calculate density

Lesson 5: Physical and Chemical Changes (two-day lesson)

Objectives:
- Compare chemical and physical changes
- Utilize models to explain that atoms combine to form new substances of varying complexity
- Demonstrate the law of conservation of mass
- Identify Antoine Lavoisier’s role in the discovery of the law of conservation of mass
- Explain that the body of science grows due to the contributions of many scientists

Lesson 6: States of Matter

Objectives:
- Distinguish among solids, liquids, and gases at the molecular level.

Lesson 7: Phase Changes (two-day lesson)

Objectives:
- Relate phase changes to changes in motion of particles of matter due to changes in temperature and/or pressure
- Demonstrate that the particles of matter are in motion
- Utilize models to demonstrate and predict phase changes due to changes in temperature or pressure
- Argue the effects of adding or removing thermal energy to a pure substance in different phases and during a phase change

Lesson 8: Lab: Factors Affecting Temperature Change (two-day lesson)

Objectives:
- Investigate the effects the nature of the matter, the size of the sample, and the environment have on the amount of energy transfer needed to change the temperature of a sample of matter by a given amount
- Describe the effects of the removal and addition of thermal energy on the temperature of different substances

Lesson 9: Structures and Properties of Matter Review (two-day lesson)

Objectives:
- Construct models that show that atoms are the building blocks of molecules
• Investigate and explain how pure substances differ from one another
• Describe and model the effect of the removal and addition of thermal energy on motion and temperature of different substances
• Explain the effect on molecular motion of adding or removing thermal energy to a pure substance in different phases and during a phase change
• Measure the effect sample size has on the change in temperature of a sample

Lesson 10: Structures and Properties of Matter Unit Test

Unit 4: Forces and Motion
Can you identify three forces acting on you right now? In this unit, you will investigate forces and motion by engaging in hands-on and virtual activities. You will demonstrate that outside forces can affect an object's motion, shape, and orientation. You will also collect data to verify Newton's third law of motion and explain the cause and effect relationship between an object's motion and the sum of the forces acting on it.

Objectives:
• Explain how motion is described
• Analyze how outside forces affect an object's motion, position, and shape
• Demonstrate Newton's third law of motion
• Analyze how an object's mass affects its acceleration, and how a force exerted on the object affects its acceleration

Lesson 1: Reference Points and Motion
Objectives:
• Explain the importance of an observer's point of reference when describing motion
• Explain the importance of using the correct units when describing motion

Lesson 2: Speed, Velocity, and Acceleration
Objectives:
• Investigate and analyze how an object's motion can be affected by speed, velocity, and acceleration

Lesson 3: The Nature of Force
Objectives:
• Investigate and analyze how an object's motion can be affected by outside forces
• Use data to verify that an object's motion is the result of the total forces acting on the object

Lesson 4: The Effects of Force
Objectives:
• Investigate and analyze how an object's shape can be affected by outside forces

Lesson 5: Friction and Gravity
Objectives:
• Investigate and analyze how an object's motion, shape, and orientation can be affected by friction and gravity

Lesson 6: Newton's First Law of Motion (two-day lesson)
Objectives:
• Investigate and analyze how an object's motion can be affected by outside forces according to Newton's first law of motion

Lesson 7: Newton's Second Law of Motion (two-day lesson)
Objectives:
• Investigate and analyze how an object's motion can be affected by outside forces according to Newton's second law of motion

Lesson 8: Newton's Third Law of Motion (two-day lesson)

Objectives:
• Investigate and analyze how an object's motion can be affected by outside forces according to Newton's third law of motion

Lesson 9: Momentum

Objectives:
• Explain the relationship between an object's mass, velocity, and momentum

Lesson 10: Freefall and Circular Motion (two-day lesson)

Objectives:
• Investigate and analyze how an object's motion can be affected by free fall and centripetal force

Lesson 11: Forces and Motion Unit Review (two-day lesson)

Objectives:
• Explain how motion is described
• Analyze how outside forces affect an object's motion, position, and shape
• Demonstrate Newton's third law of motion
• Analyze how an object's mass affects its acceleration, and how a force exerted on the object affects its acceleration

Lesson 12: Forces and Motion Unit Test
SCIENCE 7 A
Welcome to Science 7, an innovative course based on the framework for the Next Generation Science standards (NGSS). NGSS focuses on science and engineering practices; Earth, life and physical science core ideas; and fundamental crosscutting concepts vital to relating the various fields of science and developing a scientific world view. The course provides the student opportunities to engage in inquiry-based investigations, STEM (Science Technology Engineering Mathematics) projects, and other dynamic activities. Hands-on and online activities encourage the student to make connections, collaborate, and reflect on his or her learning. Because the course is designed to meet both national and state-based standards, the sequence of content will vary by state.

Tip: Links to Pearson® student interactive SCIENCE online textbooks have been added to the Backpack in the Web Links section. These textbooks are intended as supplemental resources as they are organized differently than this course.

Unit 1: Introduction to Science

Science is a continuous and ongoing quest to understand the natural world through observation and experimentation. In this unit, you will be introduced to the nature of science as you engage in hands-on and virtual activities. Just like real scientists, you will outline an inquiry process and use it to guide you through an experiment. You will distinguish between the different variables in an experiment. You will also research and discuss scientific theories with your classmates and summarize ways in which science and technology have influenced society.

Objectives:
- Defend the use of the inquiry process as an effective way to study science
- Differentiate between the independent, dependent, and constant variables in an experiment
- Justify why scientific theories are modified, but seldom discarded
- Explain the nature of science, science research, and how scientific progress is made
- Specify ways science and technology have influenced society

Lesson 1: Why Science?

Objectives:
- Describe scientific skills, ways of thinking, and methods of research
- Analyze the influence of bias on scientific research

Lesson 2: Working Like a Scientist (two-day lesson)

Objectives:
- Describe scientific skills, ways of thinking, and methods of research
- Identify common tools scientists use

Lesson 3: Scientific Inquiry (two-day lesson)

Objectives:
- Defend the use of the inquiry process as an effective way to study science
- Differentiate between the independent, dependent, and constant variables in an experiment
- Identify several ways to stay safe in the science lab

Lesson 4: Scientific Literacy (two-day lesson)

Objectives:
- Explain ways science has influenced society
- Describe characteristics of scientific literacy and identify its importance to the average citizen
- Evaluate claims for and against a real-world, science-related controversy

Lesson 5: Products of Science: Theories and Laws (two-day lesson)

Objectives:
• Explain that science must be a continuous and ongoing progression of study because scientific ideas and theories are subject to change and improve through continued research
• Justify why scientific theories are modified, but seldom discarded

**Lesson 6: Products of Science: Technology (two-day lesson)**

Objectives:
• Explain ways science and technology have influenced society

**Lesson 7: Introduction to Science Unit Review (two-day lesson)**

Objectives:
• Defend the use of the inquiry process as an effective way to study science
• Differentiate between the independent, dependent, and constant variables in an experiment
• Justify why scientific theories are modified, but seldom discarded
• Explain the nature of science, science research, and how scientific progress is made
• Specify ways science and technology have influenced society

**Lesson 8: Introduction to Science Unit Test**

**Unit 2: Earth’s Interior Systems**

In this unit, you will explore, describe, discuss, and investigate the properties of different types of rocks and minerals as you engage in hands-on and virtual activities. You will also have the opportunity to discover and explore pieces of evidence that support the plate tectonics and continental drift theory. In this unit, you will learn about how scientists develop and use data to predict and monitor earthquakes, tsunamis, and volcanic eruptions.

Objectives:
• Describe the properties of minerals
• Explain the processes involved in the rock cycle. Investigate and describe the three major types of rocks: igneous, sedimentary, and metamorphic
• Explain and describe the theory of plate tectonics and drifting continents
• Describe how earthquakes and volcanic eruptions occur
• Analyze and interpret data sets that set the location and frequency of natural hazards like earthquakes and tsunamis

**Lesson 1: Properties of Minerals**

Objectives:
• Define and identify several types of minerals
• Describe the chemical and physical properties of minerals
• Explain how minerals form and where mineral resources are located

**Lesson 2: Classifying Rocks**

Objectives:
• Explain the characteristics that are used to identify rocks
• Describe and classify the three major groups of rocks: igneous rock, sedimentary rock, and metamorphic rock

**Lesson 3: The Rock Cycle**

Objectives:
• Explain the rock cycle

**Lesson 4: Drifting Continents**

Objectives:
• Explain the theory of continental drift
• Explain the evidence of continental drift

**Lesson 5: Sea-Floor Spreading**

Objectives:
Lesson 6: Plate Tectonics (two-day lesson)

Objectives:
- Explain the theory of plate tectonics
- Describe the three types of plate boundaries

Lesson 7: Earth’s Cycling of Matter (two-day lesson)

Objectives:
- Explain how heat is transferred
- Explain how cycling of matter occurs in the mantle
- Describe convection currents in the mantle

Lesson 8: Earthquakes (two-day lesson)

Objectives:
- Explain the causes of earthquakes
- Explain how scientists locate the epicenter of an earthquake
- Describe how seismic waves travel through Earth and explain how seismographs work

Lesson 9: Volcanoes

Objectives:
- Describe how volcanoes form
- Explain what happens when a volcano erupts
- Describe the stages of volcanic activity

Lesson 10: Earth’s Interior Systems Unit Review (two-day lesson)

Objectives:
- Describe the properties of minerals
- Investigate and describe the three major types of rocks: igneous, sedimentary, and metamorphic
- Explain the processes involved in the rock cycle
- Explain and describe the theory of plate tectonics and drifting continents
- Describe how earthquakes and volcanic eruptions occur

Lesson 11: Earth’s Interior Systems Unit Test

Objectives:
- Describe the properties of minerals
- Investigate and describe the three major types of rocks: igneous, sedimentary and metamorphic
- Explain the processes involved in the rock cycle
- Explain and describe the theory of plate tectonics and drifting continents
- Describe how earthquakes and volcanic eruptions occur

Unit 3: Earth’s Surface Systems

In this unit, you will explore, describe, discuss, and investigate the processes of weathering, erosion, and deposition as you engage in hands-on and virtual activities. You will also have the opportunity to discover Earth’s surface land and water features. In this unit, you will also learn about soil formation and conservation.

Objectives:
- Describe Earth’s surface land and water features
- Investigate the causes of weathering
- Explain the processes of erosion and deposition and how they shape Earth’s surface
- Explain and describe the agents of erosion: gravity, water, wind, and glaciers
- Describe how soil is formed and conserved

Lesson 1: Exploring Earth’s Surface

Objectives:
Lesson 2: Water, Water Everywhere

Objectives:
- Explain what a river system is
- Describe ponds and lakes
- Identify characteristics of the ocean and ocean water
- Identify the features and main sections of the ocean floor

Lesson 3: Weathering (two-day lesson)

Objectives:
- Explain how weathering and erosion affect Earth’s surface
- Explain what causes mechanical and chemical weathering
- Describe the factors that determine how fast weathering occurs

Lesson 4: Erosion and Deposition: Mass Movement (two-day lesson)

Objectives:
- Describe the processes that wear down and build up Earth’s surface
- Identify the different types of mass movement
- Identify the causes of the different types of mass movement

Lesson 5: Water Erosion (two-day lesson)

Objectives:
- Explain how moving water can cause erosion
- Describe some of the land features that are formed by water erosion and deposition

Lesson 6: Glacial Erosion (two-day lesson)

Objectives:
- Describe the two kinds of glaciers and explain how glaciers form and move
- Explain how glaciers cause erosion and deposition

Lesson 7: Wind Erosion (two-day lesson)

Objectives:
- Explain how wind causes erosion and deposition

Lesson 8: Soil Formation

Objectives:
- Describe the composition of soil
- Identify the roles of plants and animals in soil formation

Lesson 9: Soil Conservation

Objectives:
- Explain how soil can lose its value to humans and other organisms
- Identify and describe methods of soil conservation

Lesson 10: Earth’s Surface Systems Unit Review (two-day lesson)

Objectives:
- Describe Earth’s surface land and water features
- Investigate the causes of weathering
- Explain the processes of erosion and deposition and how they shape Earth’s surface
- Explain and describe the agents of erosion: gravity, water, wind, and glaciers
Lesson 11: Earth’s Surface Systems Unit Test

Objectives:
- Describe Earth’s surface land and water features
- Investigate the causes of weathering
- Explain the processes of erosion and deposition and how they shape Earth’s surface
- Explain and describe the agents of erosion: gravity, water, wind, and glaciers
- Describe how soil is formed and conserved

Unit 4: Chemical Reactions

Have you ever seen a chemical reaction before? In this unit, you will perform and observe chemical reactions, and compare the physical and chemical properties of reactants and products. You will also design your own experiment to show that reactants and products are different substances. Finally, you will create a digital poster to model the events of the carbon cycle.

Objectives:
- Relate the principle of conservation of mass to chemical reactions
- Verify that substances at the end of a reaction have different properties than the original substances
- Explain why some reactions release energy while some others absorb energy
- Construct models to show the movement of matter and energy through the carbon cycle

Lesson 1: Atomic Models

Objectives:
- Compare the different atomic models leading to the modern atomic model
- Analyze the modern model of an atom
- Explain why the atomic model and theory is subject to change

Lesson 2: The Periodic Table

Objectives:
- Describe the arrangement of elements on the periodic table
- Explain the information provided by the periodic table
- Distinguish among metals, nonmetals, and metalloids
- Use the periodic table to predict properties of elements

Lesson 3: Chemical Bonds (two-day lesson)

Objectives:
- Analyze and explain the types of chemical bonds that occur when atoms combine to form new substances

Lesson 4: Observing Chemical Changes (two-day lesson)

Objectives:
- Verify that substances at the end of a reaction have different properties than the original substances

Lesson 5: Endothermic and Exothermic Reactions (three-day lesson)

Objectives:
- Explain why some reactions release energy while some others absorb energy
- Explain that photosynthesis is a chemical reaction that absorbs energy
- Differentiate between endothermic and exothermic reactions

Lesson 6: Describing Chemical Reactions

Objectives:
- Relate the principle of conservation of mass to chemical reactions

Appendix A.2.c Science Course Guides  Science 7 A

© 2013 Connections Education LLC. All rights reserved.
Differentiate among synthesis, decomposition, and replacement reactions
Formulate and interpret balanced chemical equations
Explain that the reactants and products of a chemical reaction are chemically different because atoms have regrouped

Lesson 7: Making and Breaking Bonds: The Carbon Cycle (two-day lesson)

Objectives:
- Construct models to show the movement of matter and energy through the carbon cycle
- Explain that the process of photosynthesis is one way carbon is cycled through the ecosystem
- Explain that both the burning of fuel and cellular respiration in plants and animals are ways carbon is cycled through the ecosystem

Lesson 8: Chemical Reactions Unit Review (two-day lesson)

Objectives:
- Relate the principle of conservation of mass to chemical reactions
- Verify that substances at the end of a reaction have different properties than the original substances
- Explain why some reactions release energy, while some others absorb energy
- Construct models to show the movement of matter and energy through the carbon cycle

Lesson 9: Chemical Reactions Unit Test
SCIENCE 7 B
Welcome to Science 7, an innovative course based on the framework for the Next Generation Science standards (NGSS). NGSS focuses on science and engineering practices; Earth, life and physical science core ideas; and fundamental crosscutting concepts vital to relating the various fields of science and developing a scientific world view. The course provides the student opportunities to engage in inquiry-based investigations, STEM (Science Technology Engineering Mathematics) projects, and other dynamic activities. Hands-on and online activities encourage the student to make connections, collaborate, and reflect on his or her learning. Because the course is designed to meet both national and state-based standards, the sequence of content will vary by state.

Tip: Links to Pearson® student interactive SCIENCE online textbooks have been added to the Backpack in the Web Links section. These textbooks are intended as supplemental resources as they are organized differently than this course.

Unit 1: Energy

Energy is everywhere and in everything. In this unit, you will learn about energy by engaging in hands-on and virtual activities. You will investigate kinetic and potential energy. You will search your own house for examples of thermal energy transfer. You will figure out ways to increase or decrease friction in everyday machines, and even come up with plans for your own device that can operate without producing lots of waste heat.

Objectives:
• Examine and explain the relationship between the kinetic energy of an object and its mass and speed
• Estimate the amount of potential energy an object has based on its position within an electrical, gravitational, or magnetic field
• Use and/or construct models that illustrate energy transfer by convection, conduction, and radiation
• Determine possible ways to maximize or minimize friction and energy transfer in everyday machines
• Devise plans for a device that can operate without generating large amounts of heat and justify your choice of materials

Lesson 1: Work and Machines (two-day lesson)

Objectives:
• Calculate and describe work
• Describe ways machines make work easier
• Explain that by reducing friction, machines can be made more efficient, thus requiring less energy input to perform a task
• Calculate and describe the mechanical advantage and efficiency of machines

Lesson 2: An Overview of Energy (two-day lesson)

Objectives:
• Characterize all motion energy as kinetic energy
• Characterize all stored energy as potential energy
• Differentiate among the different forms of energy

Lesson 3: Kinetic Energy

Objectives:
• Calculate kinetic energy
• Analyze and explain the relationship between the kinetic energy of an object and its mass and speed

Lesson 4: Gravitational Potential Energy

Objectives:
• Analyze the potential energy of an object based on its position within a gravitational field

Lesson 5: Electric and Magnetic Potential Energy (two-day lesson)
Objectives:
• Analyze the potential energy of an object based on its position within an electrical or magnetic field

Lesson 6: Energy Transformation and Conservation

Objectives:
• Identify and describe energy transformations
• Explain that energy transformations occur whenever the motion energy of an object changes
• Identify ways to increase or decrease friction and energy transfer

Lesson 7: Temperature, Thermal Energy, and Heat (two-day lesson)

Objectives:
• Explain that temperature is a measure of the average kinetic energy of particles of matter, and that the types, states, and amounts of matter present determine the temperature and the total energy of a system.

Lesson 8: Transfer of Heat

Objectives:
• Analyze models of energy transfer by convection, conduction, and radiation
• Compare and contrast conduction, convection, and radiation

Lesson 9: Conductors and Insulators

Objectives:
• Compare and contrast different materials’ ability to conduct heat
• Differentiate between conductors and insulators

Lesson 10: Virtual Lab: Reducing Heat Transfer (two-day lesson)

Objectives:
• Identify appropriate methods and materials for reducing heat transfer

Lesson 11: Energy Unit Review (two-day lesson)

Objectives:
• Examine and explain the relationship between the kinetic energy of an object and its mass and speed
• Estimate the amount of potential energy an object has based on its position within an electrical, gravitational, or magnetic field
• Use and/or construct models that illustrate energy transfer by convection, conduction, and radiation
• Determine possible ways to maximize or minimize friction and energy transfer in everyday machines
• Devise plans for a device that can operate without generating large amounts of heat and justify your choice of materials

Lesson 12: Energy Unit Test

Unit 2: Waves and Electromagnetic Radiation

What do spear fishing, wireless devices, and rainbows have in common? In this unit, you will investigate and describe waves and electromagnetic radiation. You will investigate the causes of different colors and brightness of light, and determine if sound waves travel in space. You will also investigate the properties of light that make things like blue blocker sunglasses and wireless devices work.

Objectives:
• Investigate and interpret the relationship between properties of waves and various wave behaviors and characteristics
• Summarize various ways modern technology uses waves to enhance communication

Lesson 1: Wave Properties (two-day lesson)
• Describe the basic properties of waves
• Compare and contrast transverse and longitudinal waves
• Differentiate among absorption, reflection, and refraction

Lesson 2: Sound (two-day lesson)

Objectives:
• Use and/or construct models to investigate and illustrate the conditions necessary for sound waves to travel
• Explain how sound waves are reflected, absorbed, or transmitted
• Identify factors that affect the speed of sound
• Correlate the properties of sound (i.e., loudness, pitch) with wave properties
• Describe how animals and people use sound

Lesson 3: Electromagnetic Radiation

Objectives:
• Use the wave model of light to investigate and interpret various characteristics of light
• Describe the waves of the electromagnetic spectrum
• Compare and contrast the waves of the electromagnetic spectrum

Lesson 4: Enhancing Communication with Waves

Objectives:
• Generalize ways modern technology uses waves to enhance communication
• Explain how radio waves transmit information
• Explain how cell phones work
• Explain how satellites work

Lesson 5: Properties of Visible Light (two-day lesson)

Objectives:
• Use the wave model of light to investigate and interpret various characteristics of light
• Differentiate among transparent, translucent, and opaque objects
• Differentiate between the two kinds of reflection
• Explain why light rays refract when they enter a medium at an angle

Lesson 6: Investigating Refraction of Light (two-day lesson)

Objectives:
• Use data to support the hypothesis that light travels in straight lines except at the point it enters a new medium

Lesson 7: Radioactivity (two-day lesson)

Objectives:
• Summarize the accidental discovery of radioactivity in uranium minerals
• Summarize the accomplishments and contributions to science of Marie and Pierre Curie
• Explain that the discovery of radioactivity as a source of Earth's heat energy made it possible to understand how Earth can be several billion years old and still have a hot interior

Lesson 8: Waves and Electromagnetic Radiation Unit Review (two-day lesson)

Objectives:
• Investigate and interpret the relationship between properties of waves and various wave behaviors and characteristics
• Summarize various ways modern technology uses waves to enhance communication

Lesson 9: Waves and Electromagnetic Radiation Unit Test
Unit 3: Introduction to Genetics

In this unit, you will explore, describe, discuss, and investigate the passing of biological information from one generation to the next as you engage in hands-on and virtual activities. You will compare mitosis and meiosis, discuss the roles of environment and genetics in the development and growth of organisms, and assess the ways in which varying genes can affect characteristics.

Objectives:
- Use models to explain variation and duplication in offspring in sexual and asexual reproduction
- Relate specific inherited traits to mutations of genes
- Explain how mutations and changes to the formation of proteins affect traits
- Illustrate how probability can be used to predict traits

Lesson 1: Introduction to Heredity (two-day lesson)

Objectives:
- Understand the concept of heredity
- Recognize that some traits are inherited and some are not
- Compare and contrast the roles of genetic factors and local conditions in determining physical traits

Lesson 2: Inheritance and Traits

Objectives:
- Explain the location of genes, and that chromosome pairs contain two variations of many different genes
- Contrast dominant and recessive traits

Lesson 3: Probability and Heredity

Objectives:
- Analyze the basic laws of genetics using Punnett squares
- Use a Punnett square to determine the probability of an offspring inheriting a particular genotype and phenotype

Lesson 4: Patterns of Inheritance

Objectives:
- Contrast dominant, recessive, codominant, and incomplete dominant traits and give examples of each

Lesson 5: Asexual and Sexual Reproduction

Objectives:
- Explain that an individual organism does not live forever and must reproduce in order to pass on its traits
- Categorize reproduction as sexual or asexual
- Analyze asexual reproduction and determine why the spread of detrimental characteristics is limited, allowing genetic continuity
- Summarize the process of sexual reproduction and explain how variations of inherited traits can increase or decrease an organism’s chance of survival

Lesson 6: Mitosis and Meiosis (two-day lesson)

Objectives:
- Illustrate mitosis and understand the functions of cell division
- Illustrate meiosis and explain what happens during gamete production and fertilization
- Summarize the differences between mitosis and meiosis

Lesson 7: DNA and Proteins

Objectives:
- Explain what makes up the genetic code
- Summarize how genes determine the traits of an individual
- Understand how genes code for proteins
Lesson 8: Mutations

Objectives:
- Explain how mutations in DNA affect protein synthesis
- Relate specific inherited traits to mutations of genes
- Describe how mutations occur

Lesson 9: Introduction to Genetics Unit Review (two-day lesson)

Objectives:
- Use models to explain variation and duplication in offspring in sexual and asexual reproduction
- Relate specific inherited traits to mutations of genes
- Explain how mutations and changes to the formation of proteins affect traits
- Illustrate how probability can be used to predict traits

Lesson 10: Introduction to Genetics Unit Test

Unit 4: Natural Selection and Adaptation

In this unit, you will explore, describe, discuss and investigate the role of natural selection in the adaptation of organisms to their environment, as you engage in hands-on and virtual activities. You will explore the effects of natural selection on a population, discover how two populations of the same species can develop into separate species, and evaluate the evidence of evolution.

Objectives:
- Explain why fossils of some extinct organisms have been found while others have not
- Describe how scientists use the fossil record, comparative anatomy, and similarities in development between species to understand the history of life on Earth
- Summarize the way in which natural selection can change the characteristics of a population
- Explain how two populations of the same species can develop into separate species

Lesson 1: Darwin's Theory

Objectives:
- Summarize Darwin's theory of evolution by natural selection

Lesson 2: Natural Selection (three-day lesson)

Objectives:
- Summarize the way in which environmental pressures can change the characteristics of a population
- Explain how genetic variation between individuals in a population can lead to evolution
- Compare and contrast natural and artificial selection

Lesson 3: Evidence of Evolution

Objectives:
- Explain how homologous structures, similarities in early development, and conservation in DNA structure led scientists to infer an evolutionary relationship between living and once-living organisms

Lesson 4: Fossil Record (two-day lesson)

Objectives:
- Explain why fossils of some extinct organisms have been found while others have not
- Discuss how scientists use the fossil record, comparative anatomy, and similarities in development between species to understand the history of life on Earth

Lesson 5: How Do New Species Form?
Lesson 6: How Fast Does Evolution Occur?
Objectives:
- Explain the difference between the patterns of gradualism and punctuated equilibrium

Lesson 7: Evolution and Biological Classification
Objectives:
- Summarize how scientists classify organisms with similar evolutionary histories

Lesson 8: Natural Selection and Adaptation Unit Review (two-day lesson)
Objectives:
- Explain why fossils of some extinct organisms have been found while others have not
- Describe how scientists use the fossil record, comparative anatomy, and similarities in development between species to understand the history of life on Earth
- Summarize the way in which natural selection can change the characteristics of a population
- Explain how two populations of the same species can develop into separate species

Lesson 9: Natural Selection and Adaptation Unit Test
Objectives:
- Summarize Darwin's theory of evolution by natural selection
- Describe how scientists use the fossil record, comparative anatomy, and similarities in development between species to understand the history of life on Earth
- Summarize the way in which natural selection can change the characteristics of a population
- Explain how two populations of the same species can develop into separate species
- Summarize how scientists classify organisms with similar evolutionary histories
SCIENCE 8 A
**Science 8 A**

Welcome to Science 8, an innovative course based on the framework for the Next Generation Science standards (NGSS). NGSS focuses on science and engineering practices; Earth, life and physical science core ideas; and fundamental crosscutting concepts vital to relating the various fields of science and developing a scientific world view. The course provides the student opportunities to engage in inquiry-based investigations, STEM (Science Technology Engineering Mathematics) projects, and other dynamic activities. Hands-on and online activities encourage the student to make connections, collaborate, and reflect on his or her learning. Because the course is designed to meet both national and state-based standards, the sequence of content will vary by state.

Tip: Links to Pearson® student interactive SCIENCE online textbooks have been added to the Backpack in the Web Links section. These textbooks are intended as supplemental resources as they are organized differently than this course.

**Unit 1: Introduction to Science**

In this unit, you will explore the branches of science and the scientists that study them as you engage in hands-on and virtual activities. You will discover how scientists think and work, investigate the tools they use and how to use them safely, and evaluate how science and technology influence everyday life.

Objectives:
- Define science and give examples of what different scientists study
- Evaluate, design, and explain the use of models and experimental design in science
- Summarize the differences between a scientific theory and scientific law
- Analyze the tools scientists use and when and how to use them appropriately
- Explain how science and technology influences everyday life

**Lesson 1: Science Is All Around You (two-day lesson)**

Objectives:
- Define science and give examples of what different scientists study
- Recognize possible benefits of studying science

**Lesson 2: Science Skills**

Objectives:
- Analyze the roles of observation, inference, prediction, classification, and evaluation in science

**Lesson 3: Think Like a Scientist**

Objectives:
- Analyze the roles of curiosity, honesty, and creativity in science
- Explain why scientists need to be open-minded, skeptical, ethical, and aware of bias
- Understand the difference between deductive reasoning and inductive reasoning

**Lesson 4: Work Like a Scientist (two-day lesson)**

Objectives:
- Describe the scientific method
- Evaluate, design, and explain the use of experimental design in science
- Summarize the differences between a scientific theory and a scientific law

**Lesson 5: Scientific Literacy**

Objectives:
- Develop an argument that explains why it is important to study science
- Analyze scientific claims

**Lesson 6: The Tools of Science**

Objectives:
• Identify the standard units of measurement for and the tools used to measure length, mass, volume, temperature, and time
• Explain why scientists use standard units of measurements
• Distinguish between the concepts of mass and weight
• Identify the parts of a microscope and how they work

Lesson 7: Mathematics in Science

Objectives:
• Distinguish between the concepts of accuracy and precision
• Determine the number of significant figures in a measurement and in a calculation
• Explain how and why scientists use line graphs

Lesson 8: Models and Systems

Objectives:
• Analyze the reasons scientists use models to help them understand the natural world
• Understand the roles of input, process, output, and feedback in a system
• Compare models of natural systems to the system itself

Lesson 9: Laboratory Safety (two-day lesson)

Objectives:
• Analyze the tools scientists use and when and how to use them appropriately
• Explain the safety precautions necessary for carrying out scientific experiments and field testing
• Understand standard safety symbols
• Describe what should be done if an accident occurs

Lesson 10: Technology and You

Objectives:
• Distinguish between science and technology
• Explain how science and technology influences everyday life
• Describe the goal of technology and how it progresses
• Analyze a technological system and identify the input, process, output, and feedback within the system

Lesson 11: Study Skills

Objectives:
• Identify and implement effective study skills

Lesson 12: Introduction to Science Unit Review (two-day lesson)

Objectives:
• Review the concepts presented in the unit

Lesson 13: Introduction to Science Unit Test

Unit 2: Our Solar System

In this unit, you will study the solar system and how it is made up of the sun, the planets, their moons, and a variety of smaller objects, including asteroids, comets, and meteors. You will learn about the sun’s surface features as well as its interior and its atmosphere and how the sun fits into the universe. You will study both the inner planets and outer planets and will be able to describe the unique characteristics that distinguish each planet. You will learn about the similarities and differences between small bodies in the solar system, including asteroids, meteors, and comets, and you will study the life cycle of stars and learn how stars are classified. By the end of the unit, you will be able to identify major types of galaxies and explain the big bang theory. You will also be able to describe pieces of evidence that indicate that the universe is expanding, and you will be able to discuss how space technology has benefitted people.

Objectives:
• Identify objects within the solar system and explain how the solar system was formed
• Describe the physical characteristics of the sun, including its interior and its atmosphere, and identify each of the inner and outer planets and describe the characteristics that distinguish them from one another
• Explain how scientists classify small bodies in the solar system, including asteroids, meteors, and comets
• Explain the big bang theory and reasons why scientists believe the universe is expanding
• Describe the benefits that space technology has provided for modern society

Lesson 1: Introducing the Solar System

Objectives:
• Identify the objects that make up the solar system
• Explain how the solar system formed

Lesson 2: The Sun (two-day lesson)

Objectives:
• Identify the layers of the sun’s interior and atmosphere
• Describe the features that form on or above the sun’s surface

Lesson 3: The Inner Planets (two-day lesson)

Objectives:
• Describe the characteristics that the inner planets have in common
• Identify the main characteristics that distinguish each of the inner planets

Lesson 4: The Outer Planets (two-day lesson)

Objectives:
• Describe the characteristics that the gas giants have in common
• Identify the characteristics that distinguish each outer planet

Lesson 5: Smaller Solar System Objects

Objectives:
• Explain how scientists classify small bodies in the solar system
• Explain the similarities and differences between asteroids, meteors, and comets

Lesson 6: Stars and Constellations

Objectives:
• Explain how stars are classified
• Summarize the life cycle of stars
• Define and give examples of constellations

Lesson 7: Star Systems and Galaxies

Objectives:
• Define a star system
• Identify the major types of galaxies

Lesson 8: The Expanding Universe (two-day lesson)

Objectives:
• Explain the big bang theory
• Describe pieces of evidence that show that the universe is expanding

Lesson 9: Using Space Science on Earth (two-day lesson)

Objectives:
• Describe the conditions in space, including near vacuum, extreme temperatures, and microgravity
• Identify the benefits that space technology has provided for modern society
• Describe some uses of satellites orbiting Earth
Lesson 10: Our Solar System Unit Review (two-day lesson)

Objectives:
- Identify objects within the solar system and explain how the solar system formed
- Describe the physical characteristics of the sun, including its interior and its atmosphere, and identify each of the inner and outer planets and describe the characteristics that distinguish them from one another
- Explain how scientists classify small bodies in the solar system, including asteroids, meteors, and comets
- Explain the big bang theory and reasons why scientists believe the universe is expanding
- Describe the benefits that space technology has provided for modern society

Lesson 11: Our Solar System Unit Test

Unit 3: Earth’s History

In this unit, you will learn about Earth’s history through actual evidence of Earth’s past—fossils. You will learn how fossils are formed and how there are different types of fossils, depending on environmental conditions that were present during burial and fossilization. You will learn what it would be like to be a paleontologist and how geologists can use the rock record to determine the relative age of rock layers and radioactive dating to determine the absolute age of rock samples that contain radioactive elements. You will study the geologic time scale and construct your own timeline to get a better idea of how Earth’s timeline highlights important events throughout history. Finally, you will learn about major time periods in Earth’s history, including Precambrian time and the Paleozoic, Mesozoic, and Cenozoic eras, and some of the significant events that occurred during those time periods. By the end of the unit, you will be able to explain how some species survived changes throughout Earth’s history, while others have become extinct.

Objectives:
- Explain how different types of fossils form and describe what fossils tell about organisms of the past
- Describe how geologists determine the relative age of rock layers using the law of superposition and explain how scientists can determine the absolute age of rocks using radioactive dating
- Explain the importance of the geologic time scale and how it can be used to learn about Earth’s history
- Identify significant events during Precambrian time and the Paleozoic, Mesozoic, and Cenozoic eras and explain the factors that can cause the extinction of organisms
- Explain how some species have survived, while others have become extinct, and explain the carbon cycle and its importance to nutrient cycling on Earth

Lesson 1: Fossils

Objectives:
- Explain how fossils are formed
- Identify the different kinds of fossils
- Describe what fossils tell about organisms and environments of the past

Lesson 2: Relative Age of Rocks

Objectives:
- Describe how geologists determine the relative age of rocks
- Explain how unconformities and folding can alter the order of rock layers

Lesson 3: Radioactive Dating (two-day lesson)

Objectives:
- Explain what happens during radioactive decay
- Define and explain half-life
- Describe what scientists can learn from radioactive dating

Lesson 4: Geologic Time Scale

Objectives:
Lesson 5: Early Earth

Objectives:
- Explain how Earth developed during Precambrian time

Lesson 6: Eras of Earth’s History (two-day lesson)

Objectives:
- Describe the major events in the Paleozoic era
- Describe the major events in the Mesozoic era
- Describe the major events in the Cenozoic era

Lesson 7: Extinction (two-day lesson)

Objectives:
- Explain the factors that cause extinction of organisms
- Identify organisms that are extinct

Lesson 8: Life Prevails (two-day lesson)

Objectives:
- Explain how some species survived and flourished through time when others have become extinct
- Explain the carbon cycle

Lesson 9: Earth’s History Unit Review (two-day lesson)

Objectives:
- Explain how different types of fossils form and describe what fossils tell about organisms of the past
- Describe how geologists determine the relative age of rock layers using the law of superposition and explain how scientists can determine the absolute age of rocks using radioactive dating
- Explain the importance of the geologic time scale and how it can be used to learn about Earth’s history
- Identify significant events during Precambrian time and the Paleozoic, Mesozoic, and Cenozoic eras and explain the factors that can cause the extinction of organisms
- Explain how some species have survived, while others have become extinct, and explain the carbon cycle and its importance to nutrient cycling on Earth

Lesson 10: Earth’s History Unit Test

Unit 4: Human Impact on the Environment

In this unit, you will appraise the significant impact humans and their activities are having on Earth's systems and resources. You will design solutions to reduce human impacts that deplete resources. You will evaluate renewable energy resources and explore the positive impact these technologies can have. You will evaluate ways in which technology monitoring assists in creating a well-informed and environmentally responsible public.

Objectives:
- Describe renewable and nonrenewable resources
- Explain how water, air, and land pollution impact the environment
- Explain ways of conserving natural resources

Lesson 1: Exploring Environmental Issues

Objectives:
- Identify general categories of environmental issues
- Describe local and global environmental issues
- Identify sources and types of pollution
- Describe how decision-makers balance opposing needs and concerns

Lesson 2: Renewable and Nonrenewable Resources
Objectives:
- Explain what natural resources are and distinguish between renewable and nonrenewable resources
- Explain why natural resources are important

Lesson 3: Human Population Growth

Objectives:
- Describe how the human population has grown over time
- Explain how population growth affects the environment
- Identify factors that affect the rate of human population growth

Lesson 4: Air Pollution

Objectives:
- Identify the causes of indoor and outdoor air pollution
- Explain the importance of the ozone layer and how it has been damaged
- Explain ways of reducing air pollution

Lesson 5: Water Pollution (two-day lesson)

Objectives:
- Explain why freshwater is a limited resource
- Identify the major sources of water pollution
- Describe how water pollution can be reduced

Lesson 6: Waste Disposal and Recycling (two-day lesson)

Objectives:
- Describe methods of solid waste disposal
- Differentiate biodegradable and nonbiodegradable wastes
- Explain the advantages and disadvantages of each solid waste disposal method
- Explain recycling as a method of solid waste disposal

Lesson 7: The True Cost of Fossil Fuels

Objectives:
- Explain why fossil fuels are considered nonrenewable resources
- Explain how fossil fuels are formed
- Describe the three major fossil fuels

Lesson 8: Achieving Stability: Alternative Sources of Energy (two-day lesson)

Objectives:
- Identify and describe alternative sources of energy
- Describe the advantages and disadvantages of using alternative forms of energy
- Explain how a nuclear power plant produces electricity

Lesson 9: Preserving Biodiversity

Objectives:
- Explain the value of biodiversity
- Identify the factors that affect biodiversity
- Identify ways that human activity threatens and protects biodiversity

Lesson 10: Human Impact on the Environment Unit Review (two-day lesson)

Objectives:
- Describe renewable and nonrenewable resources
- Explain how water, air, and land pollution impact the environment
- Explain ways of conserving natural resources

Lesson 11: Human Impact on the Environment Unit Test
• Describe renewable and nonrenewable resources
• Explain how water, air, and land pollution impact the environment
• Explain ways of conserving natural resources
SCIENCE 8 B
Science 8 B

Welcome to Science 8, an innovative course based on the framework for the Next Generation Science standards (NGSS). NGSS focuses on science and engineering practices; Earth, life and physical science core ideas; and fundamental crosscutting concepts vital to relating the various fields of science and developing a scientific world view. The course provides the student opportunities to engage in inquiry-based investigations, STEM (Science Technology Engineering Mathematics) projects, and other dynamic activities. Hands-on and online activities encourage the student to make connections, collaborate, and reflect on his or her learning. Because the course is designed to meet both national and state-based standards, the sequence of content will vary by state.

Tip: Links to Pearson® student interactive SCIENCE online textbooks have been added to the Backpack in the Web Links section. These textbooks are intended as supplemental resources as they are organized differently than this course.

Unit 1: Matter and Energy in Organisms and Ecosystems

In this unit, you will explore, describe, discuss, and investigate the cycling of matter and energy through an ecosystem as you engage in hands-on and virtual activities. You will explore the roles of producers, consumers, and decomposers in an ecosystem, model their interactions, and discover how changes in an ecosystem affect the organisms that live there.

Objectives:
• Describe photosynthesis and conduct investigations to determine how changing conditions affect the process
• Use models to illustrate and explain the transfer of matter and energy through an ecosystem
• Summarize the roles of producers, consumers, and decomposers in the transfer of matter and energy through an ecosystem
• Conduct investigations and use models to illustrate and explain how matter is cycled through the living and nonliving parts of an ecosystem
• Plan and conduct investigations into how changes in an ecosystem can affect organisms in the ecosystem

Lesson 1: Living Things and Their Environment

Objectives:
• Distinguish between abiotic and biotic factors in an ecosystem and give examples of each
• Describe the levels of organization in an ecosystem
• Draw conclusions about and explain the importance of abiotic factors in an ecosystem
• Analyze the resources in the environment that living things need to survive

Lesson 2: Land Biomes (two-day lesson)

Objectives:
• Identify major land biomes by their characteristics
• Discuss the relationship between climate and biomes
• Compare and contrast the six land biomes

Lesson 3: Aquatic Ecosystems

Objectives:
• Explain why sunlight is important to all aquatic ecosystems
• Distinguish between freshwater and marine ecosystems and provide examples of organisms that live in each
• Identify factors that distinguish aquatic biomes
• Describe aquatic biomes

Lesson 4: Biogeography (two-day lesson)

Objectives:
• Summarize the ways in which species are dispersed
• Define an exotic species and explain how they are dispersed
• Distinguish between exotic species and invasive species
• Explain the concept of adaptation
• Explain the role of continental drift in the distribution of species

Lesson 5: Producers (two-day lesson)

Objectives:
• Explain the role of producers in ecosystems
• Describe photosynthesis
• Conduct investigations to determine how changing conditions affect photosynthesis
• Explain how photosynthesis results in a change from light energy to chemical energy
• Explain the role of photosynthesis in plant survival

Lesson 6: Consumers and Decomposers (two-day lesson)

Objectives:
• Describe the relationship of producers, consumers, and decomposers within an ecosystem
• Distinguish between carnivores, herbivores, and omnivores and give examples of foods they might eat
• Summarize the differences between an autotroph and a heterotroph
• Describe the interaction between predator and prey

Lesson 7: Food Webs and Pyramids (two-day lesson)

Objectives:
• Use models to illustrate and explain the transfer of matter and energy through an ecosystem
• Summarize the roles of producers, consumers, and decomposers in the transfer of matter and energy through an ecosystem
• Use models to illustrate and explain how matter and energy is cycled through the living and nonliving parts of an ecosystem
• Evaluate the consequences of changes to a food web

Lesson 8: The Water Cycle (two-day lesson)

Objectives:
• Use models to illustrate and explain the cycling of water through an ecosystem
• Explain why water is a limited resource

Lesson 9: The Carbon and Oxygen Cycles

Objectives:
• Summarize the carbon-oxygen cycle
• Discuss global warming

Lesson 10: The Nitrogen Cycle

Objectives:
• Summarize the nitrogen cycle
• Explain the role of decomposers in the nitrogen cycle
• Explain the role of soil bacteria in the nitrogen cycle

Lesson 11: Changes in an Ecosystem

Objectives:
• Discuss how changes in an ecosystem can affect organisms in the ecosystem
• Plan and conduct investigations into how changes in an ecosystem can affect organisms in the ecosystem

Lesson 12: Matter and Energy Unit Review (two-day lesson)

Objectives:
• Describe photosynthesis and conduct investigations to determine how changing conditions affect the process
Lesson 13: Matter and Energy Unit Test

Objectives:
- Use models to illustrate and explain the transfer of matter and energy through an ecosystem
- Draw conclusions about and explain the importance of abiotic factors in an ecosystem
- Distinguish between abiotic and biotic factors in an ecosystem and give examples of each
- Compare and contrast the six land biomes
- Identify factors that distinguish aquatic biomes
- Summarize the ways in which species are dispersed
- Explain the concept of adaptation

Unit 2: The Human Body

In this unit, you will explore, describe, discuss, and investigate structures and functions of the human body as you engage in hands-on and virtual activities. You will analyze how the major systems in your body work individually and how all of the systems work together to maintain overall function of the body. You will also explore the nature of disease and infection, and how scientists’ ideas about disease have changed over time. Finally, you will discuss the impact antibiotic resistant bacteria can have on human health.

Objectives:
- Identify the components and functions of the major systems of the human body
- Explain how the major body systems interact and work together
- Analyze the causes of infection and disease
- Explore how humans can fight and prevent disease
- Synthesize the information learned about the human body to promote good health

Lesson 1: Human Body Organization

Objectives:
- Describe the levels of organization in the human body
- Identify the major organ systems of the human body and describe their functions
- Analyze how the major organ systems work together

Lesson 2: Holding It All Together: Muscles and Bones

Objectives:
- Explain how the circulatory system relies on the skeletal system
- Describe how the skeletal system and the muscular system work together to allow movement
- Distinguish between different types of muscles found in the body
- Describe how muscle structure is related to its function
- Identify the structure of bones
- Explain ways to keep bones healthy

Lesson 3: Holding It All Together: Joints and Skin

Objectives:
- Describe the role of joints in the body
- Distinguish between different types of joints
- Describe the structure of the skin and the role it serves for the body
- Identify ways to keep skin healthy
- Describe how a joint functions like a lever

Lesson 4: Food and Energy (two-day lesson)
Objectives:
- Sequence the organs and structures through which food passes as it moves through the digestive system
- Explain why the body needs food
- Explain how the structure of the digestive system assists in its function
- Explain how the digestive system and circulatory system work together to provide the body's cells with the nutrients they need

Lesson 5: The Body's Transport System

Objectives:
- Summarize the structures of the circulatory system
- Summarize the function of the circulatory system
- Explain how the structure of the circulatory system assists in its function
- Describe the characteristics of blood
- Describe how blood moves through the body

Lesson 6: Getting Oxygen

Objectives:
- Summarize the structures of the respiratory system
- Summarize the function of the respiratory system
- Explain how the structure of the respiratory system assists in its function
- Explain how the respiratory system and circulatory system work together to deliver oxygen and remove waste from body cells
- Describe the processes of breathing and gas exchange

Lesson 7: Removing Waste

Objectives:
- Explain why excretion is necessary for the body to maintain homeostasis
- Summarize the structures of the excretory system
- Summarize the function of the excretory system

Lesson 8: What Causes Disease? (three-day lesson)

Objectives:
- Explain the nature of disease and infection
- Compare and contrast types of infectious agents and how they spread
- Identify the positive and negative ways viruses, bacteria, and fungi affect living things
- Communicate and give examples of how the idea of what causes disease has evolved over time based on evidence

Lesson 9: Fighting Disease (two-day lesson)

Objectives:
- Describe the immune response and how vaccines build immunity
- Summarize the structures and function of the immune system
- Use models to show how the immune system fights disease
- Discuss how antibiotic resistance occurs and its impact on human health

Lesson 10: Processing Information

Objectives:
- Summarize the structures of the nervous system
- Summarize the function of the nervous system
- Describe how the senses work
- Distinguish between reflex and voluntary movement and describe how nerve impulses move during each
- Explain how impulses move between neurons

Lesson 11: Hormones and Homeostasis (two-day lesson)

Objectives:
- Summarize the structure and function of the endocrine system
- Explain that hormone levels are controlled by negative feedback
- Describe how diabetes occurs and how it affects the body
• Summarize how body systems interact to keep a stable internal environment
• Describe the growth and development of humans from infancy to old age

**Lesson 12: The Human Body Unit Review (two-day lesson)**

Objectives:
• Identify the components and functions of the major systems of the human body
• Explain how the major body systems interact and work together
• Analyze the causes of infection and disease
• Explore how humans can fight and prevent disease
• Synthesize the information learned about the human body to promote good health

**Lesson 13: The Human Body Unit Test**

Objectives:
• Analyze the structures found in body systems to explain how they carry out their functions
• Analyze the individual roles of the major systems of the human body
• Summarize how the major systems of the human body work together to maintain homeostasis
• Explain the nature of disease and infection
• Compare and contrast types of infectious agents
• Communicate and give examples of how the idea of what causes disease has evolved over time based on evidence
• Explain how the major systems of the human body work together to carry out functions needed by the body

**Unit 3: Interaction of Forces**

In this unit, you will continue your study of forces by investigating ways non-contact forces, like gravity and magnetism, interact with and affect matter. You will use your knowledge of forces to predict how objects should move in space and on Earth. You will discover ways to strengthen and weaken electric and magnetic forces. You will also design your own experiment to investigate ways to move objects without touching them. Finally, you will create a model to demonstrate the effect of gravitational attractions on the movements of objects in space.

Objectives:
• Devise ways to change the strength of electric and magnetic forces
• Construct and refine a model to illustrate how gravitational interactions among objects in space affect their motion
• Describe the components of an electric circuit
• Predict the stability of a physical system

**Lesson 1: Electric Force**

Objectives:
• Investigate the properties of electric forces

**Lesson 2: Magnetism**

Objectives:
• Investigate the properties of magnetic forces

**Lesson 3: Electromagnetism (two-day lesson)**

Objectives:
• Understand the relationship between electric currents and magnetic fields
• Analyze how motors and generators use electromagnetic forces

**Lesson 4: Electric Circuits (two-day lesson)**

Objectives:
• Understand the components of a simple electric circuit
• Explain voltage, current, and resistance in simple electric circuits
• Contrast parallel and series circuits

Lesson 5: Gravity (two-day lesson)

Objectives:
• Analyze how gravity is affected by mass or distance

Lesson 6: Stability of Physical Systems

Objectives:
• Predict the stability of a physical system

Lesson 7: Interaction of Forces Unit Review (two-day lesson)

Objectives:
• Devise ways to change the strength of electric and magnetic forces
• Construct and refine a model to illustrate how gravitational interactions among objects in space affect their motion
• Understand the components of an electric circuit
• Predict the stability of a physical system

Lesson 8: Interaction of Forces Unit Test

Unit 4: Energy and the Environment

There are many sources of energy available on Earth, and humans use a lot of it! In this unit, you will investigate different sources and types of energy, the pros and cons of their use, and ways to conserve them. You will also research and critique the economic and environmental effects of using different energy sources, and discuss your findings with your classmates.

Objectives:
• Categorize various types of energy resources
• Determine how various nonrenewable resources are obtained and used
• Determine how various renewable resources are obtained and used
• Specify ways to sustain renewable resources and to reduce, reuse, and recycle
• Determine the environmental and economic effects of the use of various energy sources

Lesson 1: Natural Resources (two-day lesson)

Objectives:
• Categorize various types of energy resources

Lesson 2: Nonrenewable Resources

Objectives:
• Determine how various nonrenewable resources are obtained and used
• Determine the environmental and economic effects of the use of nonrenewable energy sources

Lesson 3: Renewable Resources – Sources and Uses

Objectives:
• Determine how various renewable resources are obtained and used
• Determine the environmental and economic effects of the use of renewable energy sources

Lesson 4: Renewable Resources – Conservation and Protection

Objectives:
• Specify ways to sustain renewable resources and to reduce, reuse, and recycle

Lesson 5: Alternative Energy Sources (two-day lesson)

Objectives:
• Determine how various inexhaustible resources are obtained and used
• Determine the environmental and economic effects of the use of alternative energy sources
Lesson 6: Pollution and Solutions (two-day lesson)

Objectives:
- Determine the environmental and economic effects of the use of various energy sources

Lesson 7: Real World Connections (two-day lesson)

Objectives:
- Determine the environmental and economic effects of various energy sources

Lesson 8: Energy and the Environment Unit Review (two-day lesson)

Objectives:
- Categorize various types of energy resources
- Determine how various nonrenewable resources are obtained and used
- Determine how various renewable resources are obtained and used
- Specify ways to sustain renewable resources and to reduce, reuse, and recycle
- Determine the environmental and economic effects of the use various energy sources

Lesson 9: Energy and the Environment Unit Test
BIOLOGY A
Biology A

In this course, the student will study the science of life. The student will explore the idea that living things are extremely diverse in form, yet are unified by certain core characteristics that they all share. In learning about these core characteristics, the student will be able to critically evaluate data and information related to biological problems, connect many ideas to the student's own life, and see the world in a new way.

Unit 1: The Nature of Life

In this unit, you will begin by considering the fundamental nature of science and the role it plays in the study of biology. You will lay a foundation for the remainder of the course by exploring the unifying factors that are common to all living things.

Objectives:
- Explain the role of science in the study of life
- Describe the chemical basis of life

Lesson 1: The Nature of Science

Objectives:
- Identify three goals of science
- Describe the steps used in scientific methodology
- Apply the scientific method to example cases

Lesson 2: Science and Society (two-day lesson)

Objectives:
- Describe the factors that encourage scientific investigation
- Describe how science and society are interconnected
- Analyze ethical consideration of scientific research

Lesson 3: The Science of Life

Objectives:
- List the characteristics of living things
- Explain how life can be studied at different levels
- Evaluate characteristics of things to determine whether they are living or non-living

Lesson 4: The Building Blocks of Life (two-day lesson)

Objectives:
- Identify the three subatomic particles found in atoms
- Analyze the similarities and differences between the isotopes of an element
- Explain how compounds are different from their component elements
- Describe the two main types of chemical bonds

Lesson 5: The Importance of Water (two-day lesson)

Objectives:
- Discuss the unique properties of water
- Evaluate the impact of water's properties on living things
- Explain what acidic solutions and basic solutions are

Lesson 6: Organic Compounds (two-day lesson)

Objectives:
Lesson 7: The Chemistry of Life

Objectives:
- Describe the basis of life in terms of chemistry
- Analyze developments that moved understanding of the chemical basis of life forward
- Explain the concept of metabolism

Lesson 8: Chemical Reactions and Life (two-day lesson)

Objectives:
- Explain how chemical reactions affect chemical bonds
- Describe the two ways that energy may be involved in a chemical reaction
- Analyze how living things use chemical reactions to sustain the living state

Lesson 9: Essential Enzymes

Objectives:
- Describe the effect of an enzyme on a chemical reaction
- Analyze enzyme-catalyzed chemical reactions
- Explain why enzymes are important to living things

Lesson 10: Keystone Exam Review

Objectives:
- Review concepts presented in the unit
- Practice analysis and writing skills
- Examine test taking strategies

Lesson 11: The Nature of Life Unit Review

Objectives:
- Review the concepts presented in the unit

Lesson 12: The Nature of Life Unit Test

Objectives:
- Complete a unit assessment

Unit 2: Cells

In this unit, you will focus on the cell as the smallest unit of life. You will investigate cell size, structure, and organization, and link these characteristics to the many functions that the cell performs. As a unit portfolio assessment, you will carry out a lab exercise to study the effect of cell size on diffusion of materials into the cell.

Objectives:
- Describe the cell as the fundamental unit of life and explain how cell structure supports the various life functions it must carry out
- Explain how photosynthetic organisms convert radiant energy from the sun to chemical energy
- Explain how organisms use chemical energy to drive basic life functions
- Describe the cell cycle and cell division and explain their importance to an organism

Lesson 1: The Basic Unit of Life (two-day lesson)

Objectives:
Objectives derived from Pearson Education, Inc. © Pearson Education, Inc., publishing as Pearson Prentice Hall. All rights reserved.

Lesson 2: Cell Structure (two-day lesson)

Objectives:
- Describe the structure and function of the cell nucleus
- Describe the role of vacuoles, lysosomes, and the cytoskeleton
- Identify the role of ribosomes, endoplasmic reticulum, and Golgi apparatus in making proteins
- Describe the function of chloroplasts and mitochondria in the cell

Objectives derived from Pearson Education, Inc. © Pearson Education, Inc., publishing as Pearson Prentice Hall. All rights reserved.

Lesson 3: Material Transport

Objectives:
- Explain the process of diffusion as it relates to transport across a cell membrane
- Describe two types of material transport across the cell membrane
- Analyze effects of osmosis on cells

Objectives derived from Pearson Education, Inc. © Pearson Education, Inc., publishing as Pearson Prentice Hall. All rights reserved.

Lesson 4: Lab: The Effect of Cell Size on Material Transport (two-day lesson)

Objectives:
- Explain why cell size is limited

Objectives derived from Pearson Education, Inc. © Pearson Education, Inc., publishing as Pearson Prentice Hall. All rights reserved.

Lesson 5: Cells and Homeostasis (two-day lesson)

Objectives:
- Explain how unicellular organisms maintain homeostasis
- Explain how multicellular organisms maintain homeostasis

Objectives derived from Pearson Education, Inc. © Pearson Education, Inc., publishing as Pearson Prentice Hall. All rights reserved.

Lesson 6: Energy and Life

Objectives:
- Describe the role of ATP in cellular activities
- Explain where plants get the energy they need to produce food

Objectives derived from Pearson Education, Inc. © Pearson Education, Inc., publishing as Pearson Prentice Hall. All rights reserved.

Lesson 7: Overview of Photosynthesis

Objectives:
- Describe the role of light in photosynthesis
- Explain the requirement for chlorophyll in photosynthesis
- Describe the two sequential processes for photosynthesis
- Identify the reactants and products of photosynthesis

Objectives derived from Pearson Education, Inc. © Pearson Education, Inc., publishing as Pearson Prentice Hall. All rights reserved.

Lesson 8: The Process of Photosynthesis (two-day lesson)

Objectives:
- Explain what happens during the light-dependent reactions
- Explain what happens during the light-independent reactions

Objectives derived from Pearson Education, Inc. © Pearson Education, Inc., publishing as Pearson Prentice Hall. All rights reserved.

Lesson 9: Overview of Cellular Respiration

Objectives:
- Make comparisons between cellular respiration and photosynthesis
- Analyze the energy content of food
- Explain the function of cellular respiration in the cell

Objectives derived from Pearson Education, Inc. © Pearson Education, Inc., publishing as Pearson Prentice Hall. All rights reserved.

Lesson 10: The Process of Cellular Respiration (two-day lesson)
Objectives:
- Explain what happens during glycolysis
- Explain what happens during the Krebs cycle
- Explain how high-energy electrons are used by the electron transport chain

Objectives derived from Pearson Education, Inc. © Pearson Education, Inc., publishing as Pearson Prentice Hall. All rights reserved.

Lesson 11: Fermentation

Objectives:
- Compare aerobic and anaerobic respiration
- Explain conditions leading to anaerobic respiration
- Distinguish between the two types of fermentation
- Analyze everyday examples of fermentation

Objectives derived from Pearson Education, Inc. © Pearson Education, Inc., publishing as Pearson Prentice Hall. All rights reserved.

Lesson 12: Cells Overview—Mid-unit Review

Objectives:
- Review basic cell biology
- Review Key Words

Lesson 13: Cell Growth, Division, and Reproduction (two-day lesson)

Objectives:
- Explain why cells divide
- Analyze the requirement for passing intact genetic information from parent to offspring during reproduction or from cell to cell during cell division

Lesson 14: Cell Division (two-day lesson)

Objectives:
- Describe processes occurring at each stage of mitosis
- Describe what happens to chromosomes during cell division

Lesson 15: The Cell Cycle (two-day lesson)

Objectives:
- Analyze the structure of a eukaryotic chromosome
- Analyze the stages of the cell cycle
- Compare and contrast the amount of time a cell spends at the different stages of the cell cycle

Lesson 16: Regulating the Cell Cycle (two-day lesson)

Objectives:
- Describe cell cycle regulation
- Analyze ways that the cell cycle can be manipulated
- Evaluate the benefits and problems associated with human intervention in cell cycle regulation

Lesson 17: Cell Differentiation

Objectives:
- Analyze the process of differentiation
- Explain why stem cells are important to a multicellular organism

Lesson 18: Keystone Exam Review

Objectives:
- Review concepts presented in the unit
- Practice analysis and writing skills
- Examine test taking strategies

Lesson 19: Cells Unit Review
Objectives:
• Review the concepts presented in the unit

Lesson 20: Cells Unit Test

Objectives:
• Complete a unit assessment

Unit 3: Genetics

In this unit, you will learn how biological information is encoded and passed from an organism to its offspring. You will begin with the work of Gregor Mendel to understand the basis for the patterns of inheritance that can be observed any time the features of parents and their young are compared. You will move on to develop an understanding of the basic unit of biological information, the gene, as a sequence of DNA. As part of this unit, you will complete a portfolio assessment in which you will make and present a model to describe the process of meiosis.

Objectives:
• Explain how traits of organisms are passed from one generation to the next using the principles of Mendel and the concept of meiosis
• Explain the chemical basis of biological information
• Describe the flow of biological information from gene to protein
• Describe ways that the study of genetics is being applied to understand human biology and to understand and manipulate the traits of other organisms

Lesson 1: Mendel's Experiments (two-day lesson)

Objectives:
• Describe the experiments and conclusions of Gregor Mendel
• Analyze results of genetic crosses
• Describe the process of segregation of alleles

Lesson 2: Applying Mendel's Principles I (two-day lesson)

Objectives:
• Predict the outcomes of genetic crosses using Punnett squares
• Explain what is meant by independent assortment

Lesson 3: Applying Mendel's Principles II (two-day lesson)

Objectives:
• Explain codominance, incomplete dominance, multiple alleles, and polygenic traits
• Evaluate situations involving codominance, incomplete dominance, multiple alleles, and polygenic traits
• Explain how environmental factors can influence phenotype

Lesson 4: Meiosis (two-day lesson)

Objectives:
• Explain the process of meiosis

Lesson 5: The Molecular Nature of Genes

Objectives:
• Explain the role of DNA in heredity
• Evaluate results of experiments that test the nature of a cell’s genetic material

Lesson 6: Chromosomes and DNA (two-day lesson)

Objectives:
• Analyze the steps leading to the development of the double helix model of DNA
• Analyze the structure of DNA

Lesson 7: DNA Replication (two-day lesson)

Objectives:
Lesson 8: DNA Sequencing and Analysis (two-day lesson)

Objectives:
• Describe ways that DNA is analyzed
• Evaluate results of lab tests on DNA to draw conclusions

Lesson 9: Molecular Biology of the Cell (two-day lesson)

Objectives:
• Describe the central dogma
• Explain the different roles of DNA and proteins in forming an individual’s identity

Lesson 10: The Process of Transcription (two-day lesson)

Objectives:
• Contrast RNA and DNA
• Explain the process of transcription

Lesson 11: The Process of Translation (two-day lesson)

Objectives:
• Explain how the genetic code is read
• Summarize the process of translation

Lesson 12: The Effects of Mutations (two-day lesson)

Objectives:
• Describe different types of mutations and identify examples
• Analyze mutations and their effects on proteins and on organisms

Lesson 13: Regulation of Gene Expression in Prokaryotes

Objectives:
• Describe how prokaryotes regulate gene expression
• Analyze regulation by an operon

Lesson 14: Regulation of Gene Expression in Eukaryotes

Objectives:
• Explain how genes are regulated in eukaryotes
• Explain the purpose of gene regulation in cell differentiation
• Describe how gene regulation controls development in multicellular organisms

Objectives:
• Review cellular processes related to storage and expression of genetic information
• Review key words

Lesson 16: The Human Genome (two-day lesson)
Objectives:
- Identify chromosomes in a karyotype
- Explain the inheritance of traits in humans
- Explain how pedigrees can provide information about human inheritance
- Analyze human pedigrees

Objectives derived from Pearson Education, Inc. © Pearson Education, Inc., publishing as Pearson Prentice Hall. All rights reserved.

Lesson 17: Genetic Engineering (two-day lesson)

Objectives:
- Explain selective breeding
- Evaluate the effects produced by creating recombinant DNA
- Explain the usefulness of transgenic organisms to humans
- Explain the processes involved in genetic engineering research

Objectives derived from Pearson Education, Inc. © Pearson Education, Inc., publishing as Pearson Prentice Hall. All rights reserved.

Lesson 18: Applications and Ethics of Genetic Engineering

Objectives:
- Describe some applications of genetic engineering
- Identify some of the pros and cons of genetically modified organisms and products made from them
- Argue an opinion about whether genetically modified organisms should be used to solve human problems

Objectives derived from Pearson Education, Inc. © Pearson Education, Inc., publishing as Pearson Prentice Hall. All rights reserved.

Lesson 19: Keystone Exam Review

Objectives:
- Review concepts presented in the unit
- Practice analysis and writing skills
- Examine test taking strategies

Lesson 20: Genetics Unit Review

Objectives:
- Review the concepts presented in the unit

Objectives derived from Pearson Education, Inc. © Pearson Education, Inc., publishing as Pearson Prentice Hall. All rights reserved.

Lesson 21: Genetics Unit Test

Objectives:
- Complete a unit assessment

Objectives derived from Pearson Education, Inc. © Pearson Education, Inc., publishing as Pearson Prentice Hall. All rights reserved.

Unit 4: Semester Review and Final

Lesson 1: Biology Semester A Exam Review (two-day lesson)

Objectives:
- Review the concepts presented throughout the course

Lesson 2: Keystone Review Quiz

Objectives:
- Review concepts presented in Semester A
- Practice analysis and writing skills

Lesson 3: Biology Semester A Exam

Objectives:
- Complete a semester assessment
BIOLOGY B
Biology B

In this course, the student will study the science of life. The student will explore the idea that living things are extremely diverse in form, yet are unified by certain core characteristics that they all share. In learning about these core characteristics, the student will be able to critically evaluate data and information related to biological problems, connect many ideas to the student's own life, and see the world in a new way.

Unit 1: Evolution

In this unit, you will consider the observations Charles Darwin made that led him to propose his theory of evolution. You will explore the range of diversity of living organisms as well as the methods biologists use to classify them, which are rooted in evolutionary theory. As a portfolio assessment, you will develop a dichotomous key for identifying a group of organisms in your local area.

Objectives:
- Explain the concept of natural selection
- Explain how species evolve
- Describe the classification of organisms by biologists
- Explain why fossils have been important in establishing current thinking about the history of life on Earth

Lesson 1: Darwin's Voyage of Discovery

Objectives:
- State Charles Darwin's contribution to science
- Describe the three patterns of biodiversity noted by Darwin

Lesson 2: Ideas That Shaped Darwin's Thinking

Objectives:
- Describe the theories that laid the foundation for Darwin's theory of natural selection
- Explain the process of artificial selection

Lesson 3: Darwin's Theory of Natural Selection

Objectives:
- Describe the conditions under which natural selection occurs
- Explain the theory of natural selection
- Explain the principle of common descent

Lesson 4: Evidence of Evolution

Objectives:
- Describe the conditions under which natural selection occurs
- Explain the principle of common descent

Lesson 5: Genes and Variation

Objectives:
- Define evolution in genetic terms
- Identify the main sources of genetic variation in a population
- State what determines the number of phenotypes for a trait

Lesson 6: Genetic Change in Populations: 1

© 2012 Connections Education LLC. All rights reserved.
Lesson 7: Genetic Change in Populations: 2

Objectives:
- Explain how different factors affect genetic equilibrium

Objectives derived from Pearson Education, Inc. © Pearson Education, Inc., publishing as Pearson Prentice Hall. All rights reserved.

Lesson 8: Speciation (two-day lesson)

Objectives:
- Identify the types of isolation that can lead to the formation of new species
- Describe the current hypothesis about Galapagos finch speciation

Objectives derived from Pearson Education, Inc. © Pearson Education, Inc., publishing as Pearson Prentice Hall. All rights reserved.

Lesson 9: Molecular Evolution: 1

Objectives:
- Explain how molecular clocks are used
- Explain how new genes evolve

Objectives derived from Pearson Education, Inc. © Pearson Education, Inc., publishing as Pearson Prentice Hall. All rights reserved.

Lesson 10: Molecular Evolution: 2

Objectives:
- Explain how molecular clocks are used
- Explain how new genes evolve

Objectives derived from Pearson Education, Inc. © Pearson Education, Inc., publishing as Pearson Prentice Hall. All rights reserved.

Lesson 11: Evolution Review

Objectives:
- Explain Darwin’s theory of natural selection
- Describe how populations change over time
- Identify adaptations and explain how and why they develop in an organism

Lesson 12: Finding Order in Diversity: 1

Objectives:
- Describe the goals of binomial nomenclature and systematics
- Identify the taxa in the classification system devised by Linnaeus

Objectives derived from Pearson Education, Inc. © Pearson Education, Inc., publishing as Pearson Prentice Hall. All rights reserved.

Lesson 13: Finding Order in Diversity: 2

Objectives:
- Describe the goals of binomial nomenclature and systematics
- Identify the taxa in the classification system devised by Linnaeus

Objectives derived from Pearson Education, Inc. © Pearson Education, Inc., publishing as Pearson Prentice Hall. All rights reserved.

Lesson 14: Modern Evolutionary Classification

Objectives:
- Explain the difference between evolutionary classification and Linnaean classification
- Describe how to make and interpret a cladogram
- Explain the use of DNA sequences in classification
Lesson 15: Building the Tree of Life

Objectives:
• Name the six kingdoms of life as they are currently identified
• Explain what the tree of life represents

Lesson 16: The Fossil Record

Objectives:
• Explain what information fossils can reveal about ancient life

Lesson 17: Patterns and Processes of Evolution

Objectives:
• Distinguish between background extinction and mass extinction
• Explain what other organisms are related to dinosaurs and the supporting evidence
• Describe two models of speciation
• Identify examples of adaptive radiation, convergent evolution, and coevolution

Lesson 18: The Mysteries of Life’s Origins

Objectives:
• Explain what the Miller-Urey experiment demonstrated
• Describe self-replication, mutation, and selection as operating principles needed for life to arise
• Explain the cause for the rise in oxygen in Earth’s atmosphere

Lesson 19: Keystone Exam Review

Objectives:
• Review concepts presented in the unit
• Practice analysis and writing skills
• Examine test-taking strategies

Lesson 20: Evolution Unit Review

Objectives:
• Review concepts presented in unit

Lesson 21: Evolution Unit Test

Unit 2: Ecology

In this unit, you will study the environmental factors, both living and non-living, that affect the survival of organisms. You will learn how matter and energy move in and between ecosystems, creating networks and links that connect all of the organisms on Earth. You will complete a unit portfolio assessment in which you measure the biodiversity of organisms in a simulated ecosystem.

Objectives:
• Explain how the survival of organisms is affected by interactions between the organisms and the living and non-living things in their environment
• Analyze the factors that shape ecosystems
• Explain the factors that influence the sizes of populations
• Evaluate the effects of humans on ecosystems

Lesson 1: Introduction to Ecology

Objectives:
• Describe ecology
• Apply the hierarchy of levels in the biosphere to specific cases
Lesson 2: Energy Roles of Organisms

Objectives:
• Differentiate between producers and consumers
• Compare and contrast types of consumers
• Compare and contrast types of producers
• Evaluate energy roles of organisms

Lesson 3: Movement of Energy in Ecosystems

Objectives:
• Analyze the movement of energy through the biosphere
• Explain the concept of an ecological pyramid

Lesson 4: Movement of Matter in Ecosystems

Objectives:
• Analyze the factors that affect the cycling of matter
• Describe the cycling of matter in both living and nonliving parts of an ecosystem
• Explain the importance of nutrients to living systems
• Compare the flow of energy and the cycling of matter in the biosphere

Lesson 5: Interactions Between Organisms in an Ecosystem (two-day lesson)

Objectives:
• Analyze competition’s role in determining the composition of a community
• Analyze the various types of relationships that organisms can have with one another

Lesson 6: Population Changes Due to Organism Interactions (two-day lesson)

Objectives:
• Explain why a population might change in a cyclic fashion
• Predict changes in an ecosystem as a result of changing populations
• Describe a healthy ecosystem

Lesson 7: Ecosystem Changes Over Time (two-day lesson)

Objectives:
• Evaluate ecosystem recovery following a disturbance
• Compare and contrast primary and secondary succession
• Compare succession following natural and human disturbances

Lesson 8: Ecology Overview—Review of Lessons 1–7

Objectives:
• Review principles of ecology
• Review Key Words

Lesson 9: Climate

Objectives:
• Explain the difference between weather and climate
• Analyze factors that affect climate
• Explain the greenhouse effect

Lesson 10: Biomes

Objectives:
• Describe the major land biomes on Earth
• Compare the major land biomes on Earth
• Evaluate the factors that give rise to different types of terrestrial biomes
Lesson 11: Aquatic Ecosystems

Objectives:
- Analyze the factors that affect aquatic ecosystems
- Analyze the importance of estuaries
- Describe and compare the distinct ocean zones that make up marine ecosystems

Objectives derived from Pearson Education, Inc. © Pearson Education, Inc., publishing as Pearson Prentice Hall. All rights reserved.

Lesson 12: Biodiversity (two-day lesson)

Objectives:
- Define biodiversity
- Describe factors that change biodiversity

Objectives derived from Pearson Education, Inc. © Pearson Education, Inc., publishing as Pearson Prentice Hall. All rights reserved.

Lesson 13: Population Growth (two-day lesson)

Objectives:
- Analyze factors that affect population growth
- Describe exponential growth
- Describe logistic growth
- Evaluate reasons for population changes

Lesson 14: Human Impact on Ecosystems (two-day lesson)

Objectives:
- Analyze how human activities affect soil and land
- Analyze how human activities affect water resources
- Analyze how human activities affect air resources
- Define biodiversity
- Explain why biodiversity is important
- Identify current threats to biodiversity

Lesson 15: The Challenge of Protecting Earth

Objectives:
- Describe human population growth
- Describe effects human activities have on the biosphere
- Evaluate how humans can reduce their impact on ecosystems

Lesson 16: Keystone Exam Review

Objectives:
- Review concepts presented in the unit
- Practice analysis and writing skills
- Examine test-taking strategies

Lesson 17: Ecology Unit Review

Objectives:
- Review the concepts presented in the unit

Objectives derived from Pearson Education, Inc. © Pearson Education, Inc., publishing as Pearson Prentice Hall. All rights reserved.

Lesson 18: Ecology Unit Test

Objectives:
- Complete a unit assessment

Objectives derived from Pearson Education, Inc. © Pearson Education, Inc., publishing as Pearson Prentice Hall. All rights reserved.

Unit 3: From Microorganisms to Plants

In this unit, you will explore the structure, function, reproduction, and evolution of viruses and the organisms in the kingdoms of Eubacteria, Archaeabacteria, "Protista," Fungi, and Plantae. You will discover the ways in which plants respond to their environments and why
they do so. You will research and prepare a presentation about an organism that causes human disease as a portfolio assessment.

Objectives:
- Differentiate between viruses and prokaryotes, and explain how their structures and life cycles allow each to be successful
- Describe the distinguishing features of protists and fungi and explain their ecological roles
- Identify the four main groups of plants and describe the adaptations of each that have allowed them to be successful in terrestrial habitats
- Describe the structures and functions of cells, tissues, and organs in seed plants
- Explain the effects of environmental factors on plant reproduction, growth, and development

Lesson 1: Viruses

Objectives:
- Explain how viruses reproduce
- Explain how viruses cause infection

Objectives derived from Pearson Education, Inc. © Pearson Education, Inc., publishing as Pearson Prentice Hall. All rights reserved.

Lesson 2: Prokaryotes

Objectives:
- Describe how the two groups of prokaryotes differ
- Describe how prokaryotes vary in structure and function
- Explain the role of bacteria in the living world

Objectives derived from Pearson Education, Inc. © Pearson Education, Inc., publishing as Pearson Prentice Hall. All rights reserved.

Lesson 3: Viruses, Bacteria, and Disease

Objectives:
- Explain how bacteria cause disease
- Explain how viruses cause disease

Objectives derived from Pearson Education, Inc. © Pearson Education, Inc., publishing as Pearson Prentice Hall. All rights reserved.

Lesson 4: Protists: 1

Objectives:
- Explain what a protist is
- Describe how protists are related to other eukaryotes
- Describe the various methods of protist locomotion
- Describe how protists reproduce

Objectives derived from Pearson Education, Inc. © Pearson Education, Inc., publishing as Pearson Prentice Hall. All rights reserved.

Lesson 5: Protists: 2

Objectives:
- Describe the ecological significance of photosynthetic protists
- Describe how heterotrophic protists obtain food

Objectives derived from Pearson Education, Inc. © Pearson Education, Inc., publishing as Pearson Prentice Hall. All rights reserved.

Lesson 6: Fungi

Objectives:
- Explain how fungi obtain nutrients
- Explain how fungi reproduce
- Describe the ecological roles of fungi

Objectives derived from Pearson Education, Inc. © Pearson Education, Inc., publishing as Pearson Prentice Hall. All rights reserved.

Lesson 7: An Overview of Plants
Lesson 8: Seedless Plants

Objectives:
- Identify the characteristics of green algae
- Describe the adaptations of bryophytes
- Explain the importance of vascular tissue

Lesson 9: Seed Plants

Objectives:
- Describe the reproductive adaptations of seed plants
- Identify the reproductive structures of gymnosperms

Lesson 10: Flowering Plants

Objectives:
- Identify the reproductive structures of angiosperms
- Identify the functions of various structures in a flower
- Explain how fertilization differs between angiosperms and other plants

Lesson 11: Viruses to Plants Review

Objectives:
- Identify the defining characteristics of viruses, prokaryotes, protists, and fungi
- Compare methods of reproduction, locomotion, and means of obtaining basic needs among the viruses, prokaryotes, protists, and fungi
- Describe how adaptations made by vascular plants allowed more complex development
- Compare and contrast the structure, methods of reproduction, and adaptations developed in the five major plant groups

Lesson 12: Specialized Tissue in Plants

Objectives:
- Explain the primary functions of the main tissue systems of seed plants
- Describe the different functions of roots
- Describe the functions of plant stems
- Describe how leaves’ characteristics enable plants to carry out photosynthesis
- Describe the process of transpiration

Lesson 13: Gas Exchange and Vascular Transport

Objectives:
- Explain how gas exchange in leaves relates to homeostasis
- Explain the process of water movement in a plant
- Describe how the products of photosynthesis are transported through a plant
Lesson 14: Seed Germination and Plant Growth

Objectives:
• List the factors that influence the dormancy and germination of seeds

Objectives derived from Pearson Education, Inc. © Pearson Education, Inc., publishing as Pearson Prentice Hall. All rights reserved.

Lesson 15: Plant Hormones

Objectives:
• Describe the effects of hormones on plant growth and development

Objectives derived from Pearson Education, Inc. © Pearson Education, Inc., publishing as Pearson Prentice Hall. All rights reserved.

Lesson 16: Tropisms and Photoperiods

Objectives:
• Explain how plant growth response to light, gravity, and touch
• Describe how plants respond to photoperiods and changes in season

Objectives derived from Pearson Education, Inc. © Pearson Education, Inc., publishing as Pearson Prentice Hall. All rights reserved.

Lesson 17: From Microorganisms to Plants Unit Review

Objectives:
• Review concepts presented in unit

Lesson 18: From Microorganisms to Plants Unit Test

Unit 4: Animals

In this unit, you will explore the evolution and diversity of the animal kingdom. You will discover how scientists classify animals, how their body systems work together to maintain homeostasis, and how animal behavior affects their survival. You will research and prepare a presentation explaining how animal body structures are related to their function and as a portfolio assignment, and you will explore some trends in animal evolution.

Objectives:
• Describe the traits that distinguish animals from other organisms
• Explain the diversity of invertebrates, chordates, and primates using the theory of evolution
• Describe the structures and body systems of animals that allow them to maintain homeostasis
• Describe the structures and body systems of animals that allow them to sense and respond to their environment
• Describe animal behavior

Lesson 1: Defining Animals

Objectives:
• List the characteristics that all animals share
• Differentiate between invertebrates and chordates
• List and discuss the essential functions that animals perform in order to survive

Objectives derived from Pearson Education, Inc. © Pearson Education, Inc., publishing as Pearson Prentice Hall. All rights reserved.

Lesson 2: Animal Body Plans

Objectives:
• Discuss some trends in animal evolution
• Explain the differences among the animal phyla

Objectives derived from Pearson Education, Inc. © Pearson Education, Inc., publishing as Pearson Prentice Hall. All rights reserved.

Lesson 3: Invertebrate Evolution and Diversity

Objectives:
• Explain what fossil evidence indicates about the timing of the evolution of the first animals
• Interpret the cladogram of invertebrates

Lesson 4: Chordate Evolution and Diversity

Objectives:
• Describe the most ancient chordates
• Interpret the cladogram of chordates

Lesson 5: Primate Evolution and Diversity

Objectives:
• Identify the characteristics that all primates share
• Describe the major evolutionary groups of primates
• Describe the adaptations that enabled later hominine species to walk upright

Lesson 6: Animal Diversity and Evolution Review

Objectives:
• Define and identify a chordate
• Define and identify an invertebrate
• Define and identify a primate
• Describe adaptations animals have that make them successful
• Describe the diversity of form in the animal kingdom

Lesson 7: Animal Structure and Function

Objectives:
• Describe structure/function relationships in biology
• Describe the need for organisms to balance intake of nutrients and water with release of metabolic wastes

Lesson 8: Feeding and Digestion

Objectives:
• Describe the different ways animals get food
• Explain how digestion occurs in different animals
• Describe how mouthparts are adapted for an animal's diet

Lesson 9: Respiration

Objectives:
• Describe the characteristics of respiratory structures that all animals share
• Explain how aquatic animals breathe
• Identify the respiratory structures that enable land animals to breathe

Lesson 10: Circulation

Objectives:
• Compare open and closed circulatory systems
• Compare patterns of circulation in vertebrates
Lesson 11: Excretion

Objectives:
• Describe the methods animals use to manage nitrogenous wastes
• Explain how aquatic animals eliminate wastes
• Explain how land animals eliminate wastes

Lesson 12: Response and Information Processing

Objectives:
• Describe how animals respond to stimuli
• Summarize the trends in evolution of nervous systems in animals
• Describe some of the sensory systems in animals.

Lesson 13: Reproduction

Objectives:
• Compare asexual and sexual reproduction
• Contrast internal and external fertilization
• Explain how terrestrial vertebrates are adapted to reproduction on land

Lesson 14: Lab Investigator: Virtual Dissection Tool

Objectives:
• Develop a comparative understanding of systems in different specimens
• Create a lab project using the virtual dissection tool

Lesson 15: Homeostasis

Objectives:
• Explain how homeostasis is maintained in animals
• Describe the importance of body temperature control in animals

Lesson 16: Animal Behavior

Objectives:
• Identify the significance of behavior in the evolution of a species
• Explain what an innate behavior is
• Describe the major types of learning

Lesson 17: Behavior and Environment

Objectives:
• Explain how environmental changes affect animal behavior
• Explain how social behaviors increase the evolutionary fitness of a species
• Summarize the ways that animals communicate

Lesson 18: Animals Review

Objectives:
• Review the concepts presented in this unit

Lesson 19: Animals Unit Test
**Unit 5: Biology Semester B Review and Test**

**Lesson 1: Biology Semester B Review**

Objectives:
- Review the concepts presented in Biology Semester B

**Lesson 2: Biology Semester B Test**
CHEMISTRY A
Chemistry A

In this first of two courses that comprise Chemistry, the student will explore the fundamental concepts of chemistry as he engages in reading and responding exercises, hands-on and virtual lab experiments, and interdisciplinary problem-solving activities. The student will build on prior knowledge to learn how to model the structure of an atom, analyze the periodic table of elements, represent and interpret reactions between atoms and molecules, and perform calculations to solve problems in chemistry. The course provides many opportunities for the student to apply these concepts to real-world situations.

Unit 1: Introduction to Chemistry

Chemistry can help explain much of what is happening in the world around you. This branch of science is vast because it deals with the study of matter, which is present just about everywhere. In this introductory unit, you will study the different areas of chemistry, identify how chemistry affects various industries, review the steps of the scientific method, and examine the measurement system that all scientists use. You will also learn how to measure, convert, and calculate accurately to solve chemistry problems. You will repeatedly apply these math concepts throughout the course.

Objectives:

- Identify the traditional areas of study in chemistry
- Describe how chemistry research affects industries
- Describe the scientific method
- Perform accurate metric conversions
- Calculate the density of a material from experimental data

Lesson 1: Chemistry

Objectives:

- Identify five traditional areas of study in chemistry
- Relate pure chemistry to applied chemistry
- Identify reasons to study chemistry

Objectives derived from Pearson Education, Inc. © Pearson Education, Inc., publishing as Pearson Prentice Hall. All rights reserved.

Lesson 2: Chemistry Far and Wide

Objectives:

- Identify some areas affected by chemistry research
- Describe some examples of research in chemistry
- Distinguish between macroscopic and microscopic views

Objectives derived from Pearson Education, Inc. © Pearson Education, Inc., publishing as Pearson Prentice Hall. All rights reserved.

Lesson 3: Thinking Like a Scientist

Objectives:

- Describe how Lavoisier transformed chemistry
- Identify three steps in the scientific method
- Explain why collaboration and communication are important in science

Objectives derived from Pearson Education, Inc. © Pearson Education, Inc., publishing as Pearson Prentice Hall. All rights reserved.

Lesson 4: Problem Solving in Chemistry

Objectives:

- Identify two general steps in problem solving
- Describe three steps for solving numeric problems
- Describe two steps for solving conceptual problems

Objectives derived from Pearson Education, Inc. © Pearson Education, Inc., publishing as Pearson Prentice Hall. All rights reserved.

Lesson 5: Measurements and Their Uncertainty

Objectives:

- Convert measurements to scientific notation
- Distinguish among accuracy, precision, and error of measurement
Lesson 6: The International System of Units (SI) (two-day lesson)

Objectives:
• List SI units of measurement and common SI prefixes
• Distinguish between the mass and weight of an object
• Convert between the Celsius and kelvin temperature scales

Lesson 7: Conversion Problems (two-day lesson)

Objectives:
• Construct conversion factors from equivalent measurements
• Apply the technique of dimensional analysis to a variety of conversion problems
• Solve problems by breaking the solution into steps
• Convert complex units, using dimensional analysis

Lesson 8: Density

Objectives:
• Calculate the density of material from experimental data
• Describe how density varies with temperature

Lesson 9: Unit Review (two-day lesson)

Objectives:
• Review the concepts presented in this unit.

Lesson 10: Unit Test

Unit 2: An Overview of Matter and Change

Chemistry is the study of matter and the changes it undergoes. In this unit you will begin to examine the basic types of matter and the factors that may alter it. You will learn how to classify matter, review the chemical naming system of elements, describe the physical and chemical properties of different substances, and analyze chemical and physical changes of matter. You will further explore some of these concepts later in the course.

Objectives:
• Describe physical and chemical properties and changes
• Define element, compound, and mixture
• Compare different types of substances
• Identify signs that indicate a chemical change has occurred

Lesson 1: Properties of Matter

Objectives:
• Identify properties of matter as extensive or intensive
• Define physical property and list several common properties of substances
• Differentiate among three states of matter
• Describe a physical change

Lesson 2: Mixtures
Objectives:
• Categorize a sample of matter as a substance or a mixture
• Distinguish between homogeneous and heterogeneous samples of matter
• Describe two ways that components of mixtures can be separated

Lesson 3: Chromatography Lab (two-day lesson)

Objectives:
• Use paper chromatography to separate a mixture
• Calculate ratios to analyze compounds in a mixture

Lesson 4: Elements and Compounds

Objectives:
• Explain the difference between an element and a compound
• Distinguish between a substance and a mixture
• Identify the chemical symbols of elements, and name elements, given their symbols

Lesson 5: Lab Investigator: Chemical Reactions

Objectives:
• Use the Lab Investigator: Chemical Reactions Tool to build and balance chemical equations

Lesson 6: Chemical Reactions

Objectives:
• Describe what happens during a chemical change
• Identify four possible clues that a chemical change has taken place
• Apply the law of conservation of mass to chemical reactions

Lesson 7: Unit Review (two-day lesson)

Objectives:
• Review the concepts presented in this unit

Lesson 8: Unit Test

Unit 3: Atoms and Elements

In order to understand the composition of matter, you need to understand the structure of an atom, the smallest particle of an element that has all the characteristics of that element. In this unit you will study the composition of atoms and elements. You will examine various historic models of the atom, learn how to write an electron configuration for an atom, compare atoms of different elements, and learn how an atom becomes an ion. In addition, you will review how elements are organized in the periodic table and analyze trends in the table.

Objectives:
• Compare historic models of the atom
• Describe the structure of an atom
• Define isotope
• Explain how elements are organized in a periodic table
• Identify information provided in the periodic table

Lesson 1: Defining the Atom
• Explain Dalton's atomic theory
• Identify the special instruments necessary to observe individual atoms

Lesson 2: Structure of the Nuclear Atom

Objectives:
• Identify three types of subatomic particles
• Describe the structure of atoms according to the Rutherford atomic model

Lesson 3: Distinguishing Between Atoms (two-day lesson)

Objectives:
• Explain what makes the elements and isotopes different from each other
• Calculate the number of neutrons in an atom
• Calculate the atomic mass of an element

Lesson 4: Models of the Atom

Objectives:
• Identify the inadequacies in the Rutherford atomic model
• Identify the new proposal in the Bohr model of the atom
• Describe the energies and positions of electrons according to the quantum mechanical model
• Describe how the shapes of orbitals related to different sub-levels differ

Lesson 5: Electron Arrangement in Atoms

Objectives:
• Describe how to write the electron configuration for an atom
• Explain why the actual electron configurations for some elements differ from those predicted by the aufbau principle

Lesson 6: Organizing the Elements

Objectives:
• Explain how elements are organized in a periodic table
• Compare early and modern periodic tables
• Identify three broad classes of elements

Lesson 7: Classifying the Elements

Objectives:
• Describe the information in a periodic table
• Classify elements based on electron configuration
• Distinguish representative elements and transition metals

Lesson 8: Periodic Trends (two-day lesson)

Objectives:
• Describe trends among the elements for atomic size
• Explain how ions form
• Describe periodic trends for first ionization energy, ionic size, and electronegativity
Lesson 9: Researching Elements in the Periodic Table (two-day lesson)  

Objectives:  
• Use the Internet to perform research  
• Use data to create graphs  
• Compare properties of different elements  
• Analyze the relationship between two periodic traits

Lesson 10: Unit Review (two-day lesson)  

Objectives:  
• Review the concepts presented in the unit.

Lesson 11: Unit Test  

Unit 4: Chemical Bonding  

Atoms and molecules constantly combine to form new substances. In this unit you will learn how different types of chemical bonding occur. You will examine how atoms become charged ions; compare ionic, metallic, and covalent bonds; model how atoms combine; describe the properties of different types of compounds; and evaluate the strength of bonds. It is important that you understand how chemical bonding occurs before you study chemical reactions.  

Objectives:  
• Describe how cations and anions form  
• Explain the octet rule  
• Compare the properties of ionic and molecular compounds  
• Demonstrate how electron dot structures represent ionic and molecular compounds  
• Evaluate the strength of ionic and covalent bonds

Lesson 1: Ions  

Objectives:  
• Determine the number of valence electrons in an atom of a representative element  
• Explain how the octet rule applies to atoms of metallic and nonmetallic elements  
• Describe how cations form  
• Explain how anions form

Lesson 2: Ionic Bonds and Ionic Compounds  

Objectives:  
• Explain the electrical charge of an ionic compound  
• Describe three properties of ionic compounds

Lesson 3: Bonding in Metals  

Objectives:  
• Model the valence electrons of metal atoms  
• Describe the arrangement of atoms in a metal  
• Explain the importance of alloys

Lesson 4: Flame Tests for Metals  

Objectives:  
• To identify metallic ions using flame test results
Lesson 5: Molecular Compounds

Objectives:
• Distinguish between the melting points and boiling points of molecular compounds and ionic compounds
• Describe the information a molecular formula provides

Lesson 6: The Nature of Covalent Bonding (two-day lesson)

Objectives:
• Describe how electrons are shared to form covalent bonds and identify exceptions to the octet rule
• Demonstrate how electron dot structures represent shared electrons
• Describe how atoms form double or triple covalent bonds
• Distinguish between a covalent bond and a coordinate covalent bond and describe how the strength of a covalent bond is related to its bond dissociation energy
• Describe how oxygen atoms are bonded in ozone

Lesson 7: Polar Bonds and Molecules (two-day lesson)

Objectives:
• Describe how electronegativity values determine the distribution of charge in a polar molecule
• Describe what happens to polar molecules when they are placed between oppositely charged metal plates
• Evaluate the strength of ionic and covalent bonds
• Identify the reason why network solids have high melting points

Lesson 8: Modeling Molecules

Objectives:
• Construct models of molecules
• Compare different types of representations of molecules
• Explain how the structural formula of a molecule can be used to help determine its bond angles

Lesson 9: Unit Review (two-day lesson)

Objectives:
• Review the concepts presented in the unit.

Lesson 10: Unit Test

Unit 5: Chemical Formulas and Reactions

In order to understand many core chemistry concepts, you must be able represent and analyze chemical reactions. In this unit you will practice doing so as you apply rules for naming and writing chemical formulas, balance equations, compare and interpret empirical and molecular formulas, and predict the products of different types of reactions. In addition, you will learn how to convert one quantity of a substance, such as mass or volume, to another, such as moles or number of particles, and calculate percent composition of a compound.

Objectives:
• Describe and apply the rules for naming different types of compounds and formulas
• Define and apply the laws of definite proportions and multiple proportions
• Describe how to convert the mass or volume of a substance to number of particles and vice versa
• Calculate the percent compositions, empirical formulas, and molecular formulas of compounds
• Describe and analyze the major types of chemical reactions

Lesson 1: Naming Ions

Objectives:
• Identify the charges of monatomic ions by using the periodic table, and name the ions
• Define the polyatomic ion and write the names and formulas of the most common polyatomic ions
• Identify the two common endings for the names of most polyatomic ions

Objectives derived from Pearson Education, Inc. © Pearson Education, Inc., publishing as Pearson Prentice Hall. All rights reserved.

Lesson 2: Naming and Writing Formulas for Ionic Compounds (two-day lesson)

Objectives:
• Apply the rules for the naming and writing formulas for binary ionic compounds
• Apply the rules for naming and writing formulas for compounds with polyatomic ions

Objectives derived from Pearson Education, Inc. © Pearson Education, Inc., publishing as Pearson Prentice Hall. All rights reserved.

Lesson 3: Names and Formulas of Ionic Compounds

Objectives:
• Write the names and formulas for ionic compounds

Objectives derived from Pearson Education, Inc. © Pearson Education, Inc., publishing as Pearson Prentice Hall. All rights reserved.

Lesson 4: Naming and Writing Formulas: Molecular Compounds

Objectives:
• Interpret the prefixes in the names of molecular compounds in terms of their chemical formulas
• Apply the rules for naming and writing formulas for binary molecular compounds.

Objectives derived from Pearson Education, Inc. © Pearson Education, Inc., publishing as Pearson Prentice Hall. All rights reserved.

Lesson 5: Naming and Writing Formulas for Acids and Bases

Objectives:
• Apply three rules for naming acids
• Apply the rules in reverse to write formulas of acids
• Apply the rules for naming bases

Objectives derived from Pearson Education, Inc. © Pearson Education, Inc., publishing as Pearson Prentice Hall. All rights reserved.

Lesson 6: The Laws Governing Formulas and Names

Objectives:
• Define the laws of definite proportions and multiple proportions
• Apply the rules for naming chemical compounds by using a flowchart

Objectives derived from Pearson Education, Inc. © Pearson Education, Inc., publishing as Pearson Prentice Hall. All rights reserved.

Lesson 7: The Mole: A Measurement of Matter (two-day lesson)

Objectives:
• Describe the methods of measuring the amount of something
• Define Avogadro’s number as it relates to a mole of a substance
• Distinguish between the atomic mass of an element and its molar mass
• Describe how the mass of a mole of a compound is calculated

Appendix A.2.c Science Course Guides
Chemistry A
Lesson 8: Mole-Mass and Mole-Volume Relationships (two-day lesson)

Objectives:
• Describe how to convert the mass of a substance to the number of moles of a substance, and moles to mass
• Identify the volume of a quantity of gas at STP

Lesson 9: Percent Composition and Chemical Formulas

Objectives:
• Describe how to calculate the percent by mass of an element in a compound
• Interpret an empirical formula
• Distinguish between empirical and molecular formulas

Lesson 10: Describing Chemical Reactions

Objectives:
• Describe how to write a word equation
• Describe how to write a skeleton equation
• Describe the steps for writing a balanced chemical equation

Lesson 11: Types of Chemical Reactions (two-day lesson)

Objectives:
• Describe the five general types of reactions
• Predict the products of the five general types of reactions

Lesson 12: Classifying Reactions Lab (two-day lesson)

Objectives:
• Identify different types of reactions
• Predict the products of reactions
• Balance chemical equations
• Demonstrate safety precautions while performing experimental procedures

Lesson 13: Reactions in Aqueous Solution

Objectives:
• Describe the information found in a net ionic equation
• Predict the formation of a precipitate in a double-replacement reaction

Lesson 14: Unit Review (two-day lesson)

Objectives:
• Review the concepts presented in the unit.

Lesson 15: Unit Test

Unit 6: Stoichiometry

In order to thoroughly understand chemical equations, you need to be able to mathematically interpret them. In this unit you will apply math concepts in order to analyze...
chemical equations in terms of moles, particles, mass, and volume. You will also learn how to calculate the maximum amount of product that reaction can produce.

Objectives:
- Describe how balanced equations apply to both chemistry and everyday life
- Explain balanced chemical equations in terms of moles, representative particles, mass, and gas volume at standard temperature and pressure
- Calculate stoichiometric quantities from balanced chemical equations
- Identify and use the limiting reagent in a reaction to calculate the maximum amount of product(s) produced and the excess reagent that remains unreacted

**Lesson 1: The Arithmetic of Equations (two-day lesson)**

Objectives:
- Explain how balanced equations apply to both chemistry and everyday life
- Interpret balanced chemical equations in terms of moles, representative particles, mass, and gas volume at STP
- Identify the quantities that are always conserved in chemical reactions

**Lesson 2: Chemical Calculations**

Objectives:
- Construct mole ratios from balanced chemical equations and apply these ratios in stoichiometric calculations
- Calculate stoichiometric quantities from balanced chemical equations using units of moles, mass, representative particles, and volumes of gases at STP

**Lesson 3: Activity: Stoichiometry (two-day lesson)**

Objectives:
- Solve problems using dimensional analysis
- Use mass to count atoms

**Lesson 4: Limiting Percent Reagent and Percent Yield**

Objectives:
- Identify and use the limiting reagent in a reaction to calculate the maximum amount of product(s) produced and the excess reagent that remains unreacted
- Calculate theoretical yield, actual yield, or percent yield given appropriate information

**Lesson 5: Unit Review (two-day lesson)**

Objectives:
- Review the concepts presented in the unit.

**Lesson 6: Unit Test**

**Unit 7: Final Review and Exam**

In this unit, you will have the opportunity to prepare for and take the final exam. The final exam may include any material that has been presented throughout the semester. Since this is a comprehensive exam, it may be helpful to organize your notes and answers to questions in your Science journal before you begin to review.

Objectives:
• Identify strategies that you will use to prepare for your exam
• Organize your time and study materials
• Review your notes, answers to lesson questions and assessments, and key vocabulary terms

Lesson 1: Chemistry A Final Review (three-day lesson)

Objectives:
• Identify strategies that you will use to prepare for your exam
• Organize your time and study materials
• Review your notes, answers to lesson questions and assessments, and key vocabulary terms

Lesson 2: Chemistry A Final Exam
CHEMISTRY B
Chemistry B

In this second of two courses that comprise Chemistry, the student will explore the fundamental concepts of chemistry as he engages in reading and responding exercises, hands-on and virtual lab experiments, and interdisciplinary problem-solving activities. Throughout the course the student will analyze the nature of solids, liquids, and gases, investigate the properties of solutions, describe and calculate the energies of different types of reactions, begin to explore electrochemistry, and continue to examine the fundamental concepts of nuclear and organic chemistry. The course provides many opportunities for the student to apply these concepts to real-world situations.

Unit 1: Solids, Liquids, and Gases

In this unit you will analyze the states of matter in terms of particles and use the kinetic theory of matter to describe the behavior of matter in each state. You will predict how temperature, volume, and the number of particles affect gas pressure, and how to quantify these effects using Boyle’s, Charles’s, and the combined gas laws. You will have the opportunity to perform a virtual lab to investigate the relationship between the pressure and volume of a gas. Finally, you will learn how solutions form and compare different types of solutions.

Objectives:
- Describe the different states of matter
- Describe phase changes in terms of energy
- Apply the gas laws
- Compare homogeneous and heterogeneous aqueous solutions

Lesson 1: The Nature of Gases

Objectives:
- Describe the assumptions of the kinetic theory as it applies to gases.
- Interpret gas pressure in terms of kinetic theory.
- Define the relationship between Kelvin temperature and average kinetic energy.

Lesson 2: The Nature of Liquids

Objectives:
- Identify factors that determine physical properties of a liquid.
- Define evaporation in terms of kinetic energy.
- Describe the equilibrium between a liquid and its vapor.
- Identify the conditions at which boiling occurs.

Lesson 3: The Nature of Solids

Objectives:
- Evaluate how the way particles are organized explains the properties of solids.
- Identify the factors that determine the shape of a crystal.
- Explain how allotropes of an element are different.

Lesson 4: Changes of State

Objectives:
- Identify the conditions necessary for sublimation.
- Describe how equilibrium conditions are represented in a phase diagram.

Lesson 5: Properties of Gases

Objectives:
Lesson 6: The Gas Laws (two-day lesson)

Objectives:
- Describe the relationships among the temperature, pressure, and volume of a gas.
- Use the combined gas law to solve problems.

Lesson 7: Ideal Gases

Objectives:
- Compute the value of an unknown using the ideal gas law.
- Compare and contrast real and ideal gases.

Lesson 8: Virtual Lab: Gas Pressure-Volume Relationship

Objectives:
- Investigate the relationship between the pressure and volume of a gas

Lesson 9: Gases: Mixtures and Movements

Objectives:
- Relate the total pressure of a mixture of gases to the partial pressures of the component gases.
- Explain how the molar mass of a gas affects the rate at which the gas diffuses and effuses.

Lesson 10: Water and Its Properties

Objectives:
- Explain the high surface tension and low vapor pressure of water in terms of the surface structure of the water molecule and hydrogen bonding.

Lesson 11: Homogeneous Aqueous Systems (two-day lesson)

Objectives:
- Distinguish between a solvent and a solute.
- Describe what happens in the solution process.
- Explain why all ionic compounds are electrolytes.
- Demonstrate how the formula for a hydrate is written.

Lesson 12: Heterogeneous Aqueous Systems

Objectives:
- Distinguish between a suspension and a solution.
- Identify the distinguishing characteristic of a colloid.

Lesson 13: Unit Review (two-day lesson)

Objectives:
Lesson 14: Unit Test

Unit 2: Solutions, Acids, and Bases

In this unit you will continue to learn about different types of solutions as you examine some special properties of solutions and solve problems involving solubility and concentration. You will explore acids and bases as you compare acid-base theories, calculate acid and base concentrations, and describe what happens during neutralization reactions. You will have the opportunity to perform a virtual and a hands-on titration lab at the end of the unit.

Objectives:
- Identify the factors that determine the rate at which a solute dissolves
- Solve problems involving concentrations of solutions
- Define the properties of acids and bases
- Classify a solution as neutral, acidic, or basic
- Use the process of titration to determine the concentration of an acid or a base

Lesson 1: Lab Investigator: Chemical Reactions

Lesson 2: Properties of Solutions

Objectives:
- Identify the factors that determine the rate at which a solute dissolves.
- Identify the units usually used to express the solubility of a solute.
- Identify the factors that determine the mass of a solute that will dissolve in a given mass of solute.

Lesson 3: Concentrations of Solutions

Objectives:
- Solve problems involving molarity of a solution.
- Describe the effect of dilution on the total moles of solute in solution.
- Define percent by volume and percent by mass solutions.

Lesson 4: Colligative Properties of Solutions

Objectives:
- Identify three colligative properties of solutions.
- Explain why the vapor pressure, freezing point, and boiling point of a solution differ from those properties of the pure solvent.

Lesson 5: Acid-Base Theories

Objectives:
- Define the properties of acids and bases.
- Compare and contrast acids and bases as defined by the theories of Arrhenius, Bronsted-Lowry, and Lewis.

Lesson 6: Hydrogen Ions and Acidity

Objectives:
- Describe how [H+] and [OH-] are related in an aqueous solution.
- Classify a solution as neutral, acidic, or basic given the hydrogen-ion or hydroxide-ion concentrations.
- Convert hydrogen-ion concentrations into pH values and hydroxide-ion concentrations into pH values.
- Describe the purpose of an acid-base pH indicator.
Lesson 7: Strength of Acids and Bases (two-day lesson)

Objectives:
• Define strong acids and weak acids.
• Describe how an acid's strength is related to the value of its acid dissociation constant.
• Calculate an acid dissociation constant (Ka) from concentration and pH measurements.
• Order acids by strength according to their acid dissociation constants (Ka).
• Order bases by strength according to their base dissociation constants (Kb).

Lesson 8: Neutralization Reactions

Objectives:
• Define the products of an acid-base reaction.
• Explain how acid-base titration is used to calculate the concentration of an acid or a base.
• Explain the concept of equivalence in neutralization reactions.
• Describe the relationship between equivalence point and the end point of a titration.

Lesson 9: Virtual Titration Lab (two-day lesson)

Objectives:
• Define titration
• Titrate an acid and a base
• Calculate the molarity of an acid and a base

Lesson 10: Kitchen Table Titration Lab (three-day lesson)

Objectives:
• Titrate an acid
• Calibrate an eye dropper
• Calculate the molarity of an acid

Lesson 11: Unit Review (two-day lesson)

Objectives:
• Review the concepts presented in the unit.

Lesson 12: Unit Test

Unit 3: Heat, Energy, and Reactions

In this unit you will continue to explore chemical reactions in terms of heat and energy as you learn how scientists measure the heat of a reaction and solve problems involving heat transfers in chemical reactions. You will identify factors that affect the rate of a reaction and design an experiment to test these factors. Finally, you will learn how amounts of reactants and products change in a chemical system at equilibrium and identify stresses that can change the equilibrium of a chemical reaction.

Objectives:
• Explain how energy, heat, and work are related
• Solve for enthalpy changes in chemical reactions
• Design an experiment to test the factors that affect the rate of a reaction
• Describe how the amounts of reactants and products change in a chemical system at equilibrium
• Identify stresses that may compromise the equilibrium of a chemical reaction
Lesson 1: The Flow of Energy - Heat and Work

Objectives:
• Explain how energy, heat, and work are related.
• Classify processes as either exothermic or endothermic.
• Identify the units used to measure heat transfer.
• Distinguish between heat capacity and specific heat.

Objectives derived from Pearson Education, Inc. © Pearson Education, Inc., publishing as Pearson Prentice Hall. All rights reserved.

Lesson 2: Measuring and Expressing Enthalpy Changes

Objectives:
• Describe how calorimeters are used to measure heat flow.
• Construct thermochemical equations.
• Solve for enthalpy changes in chemical reactions by using heats of reaction.

Objectives derived from Pearson Education, Inc. © Pearson Education, Inc., publishing as Pearson Prentice Hall. All rights reserved.

Lesson 3: Calculating Heats of Reaction

Objectives:
• State Hess's law of heat summation and describe how it is used in chemistry.
• Solve for enthalpy changes by using Hess's law or standard heats of formation.

Objectives derived from Pearson Education, Inc. © Pearson Education, Inc., publishing as Pearson Prentice Hall. All rights reserved.

Lesson 4: Lab: Heat of Combustion

Objectives:
• Calculate the heat of combustion of methane gas

Objectives derived from Pearson Education, Inc. © Pearson Education, Inc., publishing as Pearson Prentice Hall. All rights reserved.

Lesson 5: Rates of Reactions

Objectives:
• Describe how to express the rate of a chemical reaction.
• Identify four factors that influence the rate of a chemical reaction.

Objectives derived from Pearson Education, Inc. © Pearson Education, Inc., publishing as Pearson Prentice Hall. All rights reserved.

Lesson 6: Factors that Affect the Rate of a Reaction (two-day lesson)

Objectives:
• Design an experiment
• Test factors that affect the rate of a reaction
• Record observations
• Draw conclusions based on direct observations

Lesson 7: Reversible Reactions and Equilibrium (two-day lesson)

Objectives:
• Describe how the amounts of reactants and products change in a chemical system at equilibrium.
• Identify three stresses that can change the equilibrium position of a chemical system.
• Explain what the value of Keq indicates about the position of equilibrium.

Objectives derived from Pearson Education, Inc. © Pearson Education, Inc., publishing as Pearson Prentice Hall. All rights reserved.

Lesson 8: Entropy and Free Energy

Objectives:
• Identify two characteristics of spontaneous reactions.
• Describe the role of entropy in chemical reactions.
• Identify two factors that determine the spontaneity of a reaction.
• Define Gibbs free-energy change.

Objectives derived from Pearson Education, Inc. © Pearson Education, Inc., publishing as Pearson Prentice Hall. All rights reserved.

Lesson 9: Unit Review (two-day lesson)

Objectives:
• Review the concepts presented in the unit.

Objectives derived from Pearson Education, Inc. © Pearson Education, Inc., publishing as Pearson Prentice Hall. All rights reserved.

Lesson 10: Unit Test

Unit 4: Electrochemistry

In this unit you will study electrochemistry, the branch of chemistry that deals with the relationship between electricity and chemical changes. You will examine how reactants and products gain and lose electrons, learn how to determine the oxidation number of an atom, and compare different types of electrochemical cells, which convert electrical energy into chemical energy or vice versa. In addition, you will have the opportunity to perform a virtual redox titration.

Objectives:
• Identify whether substances are being reduced or oxidized during a chemical reaction
• Determine the oxidation number of an atom
• Interpret an activity series
• Distinguish between electrolytic and voltaic cells

Lesson 1: The Meaning of Oxidation and Reduction (two-day lesson)

Objectives:
• Define oxidation and reduction in terms of the loss or gain of oxygen and the loss or gain of electrons.
• State the characteristics of a redox reaction and identify the oxidizing and reducing agent.
• Describe what happens to iron when it corrodes.

Objectives derived from Pearson Education, Inc. © Pearson Education, Inc., publishing as Pearson Prentice Hall. All rights reserved.

Lesson 2: Oxidation Numbers

Objectives:
• Determine the oxidation number of an atom of any element in a pure substance.
• Define oxidation and reduction in terms of a change in oxidation number and identify atoms being oxidized or reduced in redox reactions.

Objectives derived from Pearson Education, Inc. © Pearson Education, Inc., publishing as Pearson Prentice Hall. All rights reserved.

Lesson 3: Balancing Redox Reactions

Objectives:
• Describe how oxidation numbers are used to identify redox reactions.
• Balance a redox equation using the oxidation-number-change method.
• Balance a redox equation by breaking the equation into oxidation and reduction half-reactions, and then using the half-reaction method.

Objectives derived from Pearson Education, Inc. © Pearson Education, Inc., publishing as Pearson Prentice Hall. All rights reserved.

Lesson 4: Virtual Lab: Redox Titrations (two-day lesson)

Objectives:
• Determine the concentration of iron in a sample using an oxidation-reduction titration with potassium permanganate.

Objectives derived from Pearson Education, Inc. © Pearson Education, Inc., publishing as Pearson Prentice Hall. All rights reserved.

Lesson 5: Electrochemical Cells

Appendix A.2.c Science Course Guides Chemistry B
Objectives:
- Interpret an activity series and identify the elements that are most easily oxidized and those that are least easily oxidized.
- Name the types of reactions involved in electrochemical processes.
- Describe how a voltaic cell produces electrical energy.
- Describe current technologies that use electrochemical processes to produce energy.

Objective derived from Pearson Education, Inc. © Pearson Education, Inc., publishing as Pearson Prentice Hall. All rights reserved.

Lesson 6: Electrolytic Cells

Objectives:
- Distinguish between electrolytic and voltaic cells.
- Identify the products of the electrolysis of water.
- Describe the chemical changes that take place during the electrolysis of brine.
- Name three ways that electrolysis is used in metal processing.

Objective derived from Pearson Education, Inc. © Pearson Education, Inc., publishing as Pearson Prentice Hall. All rights reserved.

Lesson 7: Unit Review (two-day lesson)

Objectives:
- Review the concepts presented in the unit.

Objective derived from Pearson Education, Inc. © Pearson Education, Inc., publishing as Pearson Prentice Hall. All rights reserved.

Lesson 8: Unit Test

Unit 5: Organic Chemistry

Many everyday items, such as clothes, food, and containers, are carbon-based, or organic compounds. Throughout this unit you will classify organic compounds, model their structures, examine how they form, and identify the organic compounds that certain common products contain. In addition, you will learn about the roles that carbon plays in biochemical processes.

Objectives:
- Classify organic compounds
- Construct general formulas and structures of organic compounds
- Describe how enzymes affect biochemical reactions
- Identify some common plastics and their uses

Objective derived from Pearson Education, Inc. © Pearson Education, Inc., publishing as Pearson Prentice Hall. All rights reserved.

Lesson 1: Hydrocarbons

Objectives:
- Describe the relationship between the number of valence electrons and bonding in carbon.
- Define and describe alkanes.
- Relate the polarity of hydrocarbons to their solubility.

Objective derived from Pearson Education, Inc. © Pearson Education, Inc., publishing as Pearson Prentice Hall. All rights reserved.

Lesson 2: Unsaturated Hydrocarbons and Isomers (two-day lesson)

Objectives:
- Describe the difference between unsaturated and saturated hydrocarbons.
- Distinguish between the structures of alkenes and alkynes.
- Explain why structural isomers have different properties.
- Describe the conditions under which geometric isomerism are possible.
- Identify optical isomers.

Objective derived from Pearson Education, Inc. © Pearson Education, Inc., publishing as Pearson Prentice Hall. All rights reserved.

Lesson 3: Hydrocarbon Rings

Objectives:

Objective derived from Pearson Education, Inc. © Pearson Education, Inc., publishing as Pearson Prentice Hall. All rights reserved.
Lesson 4: Hydrocarbons from Earth

Objectives:
- Identify three important fossil fuels and describe their origins.
- Describe the composition of natural gas, petroleum, and coal.
- Describe what happens when petroleum is refined.

Lesson 5: Introduction to Functional Groups

Objectives:
- Explain how organic compounds are classified.
- Identify halocarbons and the IUPAC rules for naming halocarbons.
- Describe how halocarbons can be prepared.

Lesson 6: Alcohols and Ethers

Objectives:
- Identify how alcohols are classified and named.
- Predict how the solubility of an alcohol varies with the length of its carbon chain.
- Name the reactions of alkenes that may be used to introduce functional groups.
- Construct the general structure of an ether and describe how ethers are named.

Lesson 7: Carbonyl Compounds (two-day lesson)

Objectives:
- Identify the structure of a carbonyl group as found in aldehydes and ketones.
- Construct the general formula for carboxylic acids and explain how they are named.
- Describe an ester.
- Explain how dehydrogenation is an oxidation reaction.

Lesson 8: Amino Acids and Their Polymers

Objectives:
- Diagram the structure of an amino acid.
- Describe how peptide bonds form and identify what determines the properties of peptides and proteins.
- Describe how enzymes affect biochemical reactions.

Lesson 9: Properties of Plastics (two-day lesson)

Objectives:
- Identify some of common plastics and their uses
- Compare and contrast the properties of different plastics and make inferences from those comparisons
- Identify products that different plastics can become through recycling

Lesson 10: Unit Review (two-day lesson)

Objectives:
Lesson 11: Unit Test

Unit 6: Nuclear Chemistry

Although nuclear materials are fairly common, most people do not know exactly what they are or what makes them both beneficial and dangerous. In this unit, you will explore different types and uses of radioactivity and analyze the various changes that nuclear particles may undergo. Also, you will learn how nuclear waste is stored and how scientists detect radiation.

Objectives:
• Describe the three types of nuclear radiation
• Solve problems involving nuclear decay
• Compare fission and fusion reactions
• Identify devices that are used to detect radiation
• Identify different uses of radiation

Lesson 1: Nuclear Radiation

Objectives:
• Explain how an unstable nucleus releases energy.
• Describe the three types of nuclear radiation.

Lesson 2: Nuclear Transformations (two-day lesson)

Objectives:
• Describe the type of decay a radioisotope undergoes.
• Solve problems that involve half-life.
• Identify the two ways transmutation can occur.

Lesson 3: Fission and Fusion of Atomic Nuclei

Objectives:
• Describe what happens in a nuclear chain reaction.
• Explain the role of water in the storage of spent fuel rods.
• Distinguish fission reactions from fusion reactions.

Lesson 4: Radiation in Your Life

Objectives:
• Identify three devices that are used to detect radiation.
• Describe how radioisotopes are used in medicine.

Lesson 5: Unit Review (two-day lesson)

Objectives:
• Review the concepts presented in the unit.

Lesson 6: Unit Test

Unit 7: Final Review and Exam

In this unit, you will have the opportunity to prepare for and take the final exam. The final exam may include any material that has been presented throughout the semester. Since this
is a comprehensive exam, it may be helpful to organize your notes and answers to questions in your Science journal before you begin to review.

Objectives:
- Identify strategies that you will use to prepare for your exam
- Organize your time and study materials
- Review your notes, answers to lesson questions and assessments, and key vocabulary terms

Lesson 1: Chemistry B Final Review (three-day lesson)

Objectives:
- Identify strategies that you will use to prepare for your exam
- Organize your time and study materials
- Review your notes, answers to lesson questions and assessments, and key vocabulary terms

Lesson 2: Chemistry B Final Exam
EARTH SCIENCE A
Earth Science A

This is the first of two courses that comprise Earth Science. This course is designed to prepare the student to confidently enter and complete college-level Earth science courses. The Prentice Hall text, Earth Science, provides the basis for the course content.

This course consists of varied curriculum that provides the student the opportunity to explore, compare, research, reflect, and make real-world connections. The student will engage in hands-on explorations and virtual simulations, which will enhance traditional lesson formats.

During this course, the student will identify the branches of Earth science, locate geographic features on topographic maps, conduct hands-on experiments with minerals and rocks, compare and contrast weathering and erosion, explore plate tectonics with relation to earthquakes and volcanoes, and investigate the formation of mountains.

Unit 1: Introduction to Earth Science

Earth Science is a vast branch of science that covers many subject areas, including geology, oceanography, meteorology, and astronomy. Earth scientists study physical and chemical aspects of Earth and its place in the solar system, using various mapping techniques and advanced global positioning technology. Because Earth contains so many interactive parts, scientists often study Earth as a system. The Earth system is powered by energy from the sun and by geologic forces inside Earth.

In this introductory unit, you will learn about Earth’s composition and internal structure. You will read about different techniques that scientists use to study Earth and other planets in the solar system and you will learn how the theory of plate tectonics influences the field of Earth science. You will explore Earth’s four major spheres—the geosphere, hydrosphere, atmosphere, and biosphere—and you will determine how human activity impacts the Earth system.

Objectives:

• Define Earth science and identify skills that scientists use to solve problems
• Explain Earth’s major spheres and describe how Earth formed
• Identify different types of maps and what they can be used for
• Explain why Earth is often studied as a system and describe how humans affect Earth’s systems

Lesson 1: What Is Earth Science?

Objectives:

• Define Earth science
• Describe the formation of Earth and the solar system

Lesson 2: A View of Earth

Objectives:

• Describe Earth's four major spheres
• Differentiate among the three parts of the geosphere
• State the value of the theory of plate tectonics to Earth science

Lesson 3: Representing Earth's Surface

Objectives:

• Locate points on the Earth's surface by their latitude and longitude
• Describe the advantages and disadvantages of different types of maps
• Explain what makes topographic maps different from other maps

Lesson 4: Earth System Science
Lesson 5: What Is Scientific Inquiry?

Objectives:
- Define the terms hypothesis and theory

Objectives derived from Pearson Education, Inc. © Pearson Education, Inc., publishing as Pearson Prentice Hall. All rights reserved.

Lesson 6: Unit Review (two-day lesson)

Objectives:
- Review the concepts presented in the unit

Objectives derived from Pearson Education, Inc. © Pearson Education, Inc., publishing as Pearson Prentice Hall. All rights reserved.

Lesson 7: Unit Test

Unit 2: Minerals

Did you know that close to 4,000 different minerals have been identified on Earth? When scientists discover a new mineral, they study its physical characteristics and try to determine how it may have formed. Once a mineral has been named, it can be grouped with other minerals that share similar properties.

In this unit, you will examine some of the more common mineral groups on Earth, including silicates, carbonates, oxides, sulfates, sulfides, halides, and native elements. You will learn about mineral properties and the tests that scientists conduct to classify minerals. You will also study elements, atoms, and subatomic particles, and you will learn how atoms of different elements combine to form compounds.

Objectives:
- Describe how minerals, elements, atoms, and subatomic particles are related
- Explain how compounds form and describe chemical bonds within compounds
- Determine mineral characteristics that can be used for classification purposes
- Identify various tests that scientists can conduct to identify mineral samples

Lesson 1: Matter: Part 1

Objectives:
- Explain how elements are related to minerals
- Identify the kinds of particles that make up atoms
- Explain the differences between ions and isotopes

Objectives derived from Pearson Education, Inc. © Pearson Education, Inc., publishing as Pearson Prentice Hall. All rights reserved.

Lesson 2: Matter: Part 2

Objectives:
- Explain what compounds are and describe why they form
- Compare and contrast the three major types of chemical bonds

Objectives derived from Pearson Education, Inc. © Pearson Education, Inc., publishing as Pearson Prentice Hall. All rights reserved.

Lesson 3: Minerals

Objectives:
- List five characteristics of minerals
- Describe the processes that result in mineral formation
- Explain how minerals can be classified
- List some of the major groups of minerals
Lesson 4: Properties of Minerals

Objectives:
• Explain why color is often not a useful property in identifying minerals
• Define the terms luster, crystal form, streak, and Mohs scale
• Distinguish between cleavage and fracture
• Explain density and how it can be used to identify substances
• Describe some other properties that can be used to identify minerals

Lesson 5: Lab: Mineral Identification (two-day lesson)

Objectives:
• Explain some of the simple tests that can be used to identify minerals
• Differentiate among some of the common rock-forming minerals

Lesson 6: Unit Review (two-day lesson)

Objectives:
• Review the concepts presented in the unit

Lesson 7: Unit Test

Unit 3: Rocks

When different minerals mix together, they form rocks. There are three main types of rocks on Earth—igneous, sedimentary, and metamorphic—each of which forms in a unique way. Rocks can change from one type to another because of the rock cycle, which you will learn about, and the constant changes within Earth’s interior.

In this unit, you will study each rock type in great detail. You will learn how each one forms and where scientists usually find that type of rock on Earth. You will explore the rock cycle and the natural processes that influence rock transformations. At the end of the unit, you will conduct an investigation using various samples from your rock kit.

Objectives:
• Explain the rock cycle and identify the three main types of rocks
• Identify igneous, sedimentary, and metamorphic rocks and where they might be located
• Explain the forces that drive the rock cycle
• Determine which tests can be used to identify rocks

Lesson 1: The Rock Cycle

Objectives:
• Define the term rock
• Identify the three major types of rocks and explain how they differ
• Describe the rock cycle
• List the forces that power Earth's rock cycle

Lesson 2: Igneous Rocks

Objectives:
• Compare and contrast intrusive and extrusive igneous rocks
• Demonstrate how the rate of cooling affects an igneous rock's texture
• Classify igneous rocks according to texture and composition
Lesson 3: Sedimentary Rocks

Objectives:
- Describe the major processes involved in the formation of sedimentary rock
- Distinguish between clastic sedimentary rocks and chemical sedimentary rocks
- Identify the features that are unique to some sedimentary rocks

Objectives derived from Pearson Education, Inc. © Pearson Education, Inc., publishing as Pearson Prentice Hall. All rights reserved.

Lesson 4: Metamorphic Rocks

Objectives:
- Predict where most metamorphism takes place
- Distinguish contact metamorphism from regional metamorphism
- Identify the three agents of metamorphism and explain what changes they cause
- Recognize foliated metamorphic rocks and describe how they form
- Classify metamorphic rocks

Objectives derived from Pearson Education, Inc. © Pearson Education, Inc., publishing as Pearson Prentice Hall. All rights reserved.

Lesson 5: Lab: Rock Identification (two-day lesson)

Objectives:
- Explain some of the simple tests that can be used to identify rocks
- Differentiate among some of the common rocks

Objectives derived from Pearson Education, Inc. © Pearson Education, Inc., publishing as Pearson Prentice Hall. All rights reserved.

Lesson 6: Unit Review (two-day lesson)

Objectives:
- Review the concepts presented in the unit

Objectives derived from Pearson Education, Inc. © Pearson Education, Inc., publishing as Pearson Prentice Hall. All rights reserved.

Lesson 7: Unit Test

Unit 4: Earth’s Resources

Earth contains valuable resources—such as air and water—that are used every day by plants, animals, and humans. These resources are categorized into two main groups: renewable resources and nonrenewable resources. Since there are limited amounts of nonrenewable resources on Earth, scientists have determined alternative ways to extract energy from resources such as wind, water, and the sun.

In this unit, you will explore different forms of renewable and nonrenewable resources. You will read about fossil fuels and the ways they are used to produce energy for various human activities. You will identify alternative energy resources and their advantages and disadvantages, and you will explore how Earth’s natural resources can be protected from harmful pollutants and overuse.

Objectives:
- Differentiate between renewable and nonrenewable resources
- Define fossil fuels and explain how and what they are used for
- Identify alternative energy resources and explain their advantages and disadvantages
- Determine ways in which land, water, and air resources can be protected
- Identify laws that address different forms of pollution

Lesson 1: Energy and Mineral Resources

Objectives:
- Distinguish between renewable and nonrenewable resources
- Identify which energy resources are fossil fuels
- Predict which energy resources might replace dwindling petroleum supplies in the future
Lesson 2: Alternate Energy Resources

Objectives:
- Evaluate the advantages of solar energy
- Explain how nuclear power plants use nuclear fission to produce energy
- Evaluate wind power's potential for providing energy in the future
- Relate how hydroelectric power, geothermal energy, and tidal power contribute to our energy resources

Lesson 3: Water, Air, and Land Resources

Objectives:
- Explain why fresh water is a vital resource
- Recognize why the chemical composition of the atmosphere is important
- Identify Earth’s important land resources

Lesson 4: Protecting Resources

Objectives:
- Identify the first laws passed to deal with water pollution
- Name the most important law passed to deal with air pollution
- Explain what is involved in protecting land resources

Lesson 5: Lab: Products that Conserve Resources (two-day lesson)

Objectives:
- Measure the dimensions of three different-sized juice cartons
- Calculate the surface area of each carton
- Compare the amount of cardboard used in each carton
- Evaluate the packaging for which conserves resources the best

Lesson 6: Unit Review (two-day lesson)

Objectives:
- Review the concepts presented in the unit

Lesson 7: Unit Test

Unit 5: Sculpturing Earth's Surface

Geologically, Earth is constantly changing. Earth’s surface is influenced by internal forces that create mountains and external forces that weather and erode Earth’s crust. Some geologic changes occur over long periods of time, while others happen quickly, drastically changing landscapes in minutes.

In this unit, you will study processes that sculpt Earth’s surface, including weathering, erosion, deposition, and even human activities such as logging and construction. You will learn how and why mass movements occur, and you will explore the various ways water can shape landscapes over time.

Objectives:
- Explain the difference between mechanical weathering and chemical weathering and compare and contrast the processes of weathering and erosion
• Identify the major components of soil and explain how soil type varies with depth
• Explain Earth’s water cycle and describe how the water cycle is kept in balanced
• Identify different types of mass movements and explain how streams cause erosion
• Describe different forms of groundwater and explain how groundwater resources can become polluted

Lesson 1: Weathering

Objectives:
• Define mechanical weathering
• Explain chemical weathering
• Identify the factors that affect the rate of weathering

Objectives derived from Pearson Education, Inc. © Pearson Education, Inc., publishing as Pearson Prentice Hall. All rights reserved.

Lesson 2: Soil

Objectives:
• Recognize the major components of soil and list the most important factors in soil formation
• Explain how soil varies with depth
• Compare and contrast the three most common types of soil
• Demonstrate how human activities can affect the rate of soil erosion

Objectives derived from Pearson Education, Inc. © Pearson Education, Inc., publishing as Pearson Prentice Hall. All rights reserved.

Lesson 3: Mass Movements

Objectives:
• Define mass movement
• Identify the factors that trigger mass movements
• Classify mass movements

Objectives derived from Pearson Education, Inc. © Pearson Education, Inc., publishing as Pearson Prentice Hall. All rights reserved.

Lesson 4: Lab: Effect of Temperature on Chemical Weathering

Objectives:
• Determine the relationship between temperature and chemical weathering

Objectives derived from Pearson Education, Inc. © Pearson Education, Inc., publishing as Pearson Prentice Hall. All rights reserved.

Lesson 5: Running Water

Objectives:
• Explain how the water cycle circulates Earth’s water supply in an unending cycle
• Explain how the water cycle is kept in balance
• Describe the ability of a stream to erode and transport material
• Compare and contrast the changes in gradient and discharge between a stream’s headwaters and mouth
• Define base level

Objectives derived from Pearson Education, Inc. © Pearson Education, Inc., publishing as Pearson Prentice Hall. All rights reserved.

Lesson 6: The Work of Streams

Objectives:
• Explain how streams erode their channels and transport sediments
• Explain how stream deposition occurs
• Identify the two general types of stream valleys
• Predict the causes of floods and describe major flood control measures
• Explain the relationship between streams and drainage basins

Objectives derived from Pearson Education, Inc. © Pearson Education, Inc., publishing as Pearson Prentice Hall. All rights reserved.

Lesson 7: Water Beneath the Surface

Appendix A.2.c Science Course Guides
Objectives:
• Describe the location and movement of groundwater
• Describe the formation of a spring
• Explain environmental threats to water supplies
• Describe the formation of caverns
• Describe landforms in karst areas

Lesson 8: Unit Review (two-day lesson)
Objectives:
• Review the concepts presented in the unit

Lesson 9: Unit Test

Unit 6: Glaciers, Deserts, and Wind
Glaciers cover and shape approximately 10 percent of the total land area on Earth. As a glacier moves—or flows—it erodes rock from valley floors and walls. In sharp contrast, deserts are areas that lack moisture and have very little organic material. Desert ecosystems are easily shaped by running water and wind.

In this unit, you will learn about glaciers and deserts. You will study different types of glaciers and how they move, and you will read how sand- and pebble-covered deserts are affected by the processes of weathering and erosion. At the end of the unit, you will take a closer look at exactly how wind erodes desert landscapes.

Objectives:
• Identify different types of glaciers and explain glacial movement
• Use a topographic map to infer how geographic features were formed by glaciers
• Explain how running water and the process of weathering affect deserts
• Describe how landscapes are shaped by wind erosion

Lesson 1: Glaciers
Objectives:
• Describe the different types of glaciers and where each type is found
• Explain how glaciers move and describe the different types of glacial drift
• Identify the landscape features that glaciers form
• Explain the causes of the most recent ice age

Lesson 2: Lab: Interpreting a Glacial Landscape
Objectives:
• Use a topographic map to identify geographic features formed by glaciers
• Infer how geographic features were formed

Lesson 3: Deserts
Objectives:
• Describe how running water affects deserts
• Explain the roles mechanical and chemical weathering play in the formation of deserts

Lesson 4: Landscapes Shaped by Wind
Objectives:
• Describe two ways that wind can cause erosion
• Identify types of landforms that are deposited by the wind
Lesson 5: Unit Review (two-day lesson)

Objectives:
- Review the concepts presented in the unit

Lesson 6: Unit Test

Unit 7: Earthquakes and Earth's Interior

Caused by the rapid release of energy stored inside Earth, earthquakes can greatly damage Earth's surface, particularly if they occur near a large city. Earthquakes can create various hazards, including seismic shaking, landslides, and even tsunamis.

In this unit, you will explore earthquakes and why they occur. By completing the lab Locating an Earthquake you will learn how scientists are able to determine an earthquake’s epicenter and its focus. In order to understand how scientists measure earthquakes, you will study two types of seismic waves: body waves and surface waves.

Objectives:
- Describe how earthquakes occur and explain the difference between an earthquake’s epicenter and its focus
- Identify major hazards that are associated with earthquakes and explain how earthquake damage can be minimized
- Explain different types of seismic waves and describe how earthquakes are measured
- Identify Earth’s layers and describe the composition of each layer

Lesson 1: What Is an Earthquake?

Objectives:
- Compare and contrast the epicenter and focus of an earthquake
- Identify the cause of earthquakes
- Compare and contrast aftershocks and foreshocks

Lesson 2: Measuring Earthquakes

Objectives:
- Identify the three types of seismic waves
- Describe how seismic waves are recorded
- Describe the different ways earthquakes are measured
- Explain how to locate the epicenter of an earthquake

Lesson 3: Earthquake Hazards

Objectives:
- Identify the major hazards associated with earthquakes
- Describe how earthquake damage can be reduced

Lesson 4: Earth's Layered Structure

Objectives:
- List the layers of the Earth based on composition and physical properties
- Describe the composition of each layer of Earth
- Explain how scientists determined Earth's structure and composition

Lesson 5: Lab: Locating an Earthquake (two-day lesson)
Unit 8: Plate Tectonics and Other Igneous Activity

The hypothesis of continental drift, followed by the theory of plate tectonics, significantly changed scientists’ understanding of Earth’s geologic forces. As scientists began to accept new ideas about movement within Earth’s layers, they were able to explain many other geologic forces, such as earthquakes, volcanic eruptions, and even seafloor spreading.

In this unit, you will explore the theory of plate tectonics and how it impacted the field of geology. You will learn what causes tectonic plate motion and you will examine different types of plate boundaries. During the unit, you will read how volcanic eruptions are directly related to activity within Earth’s interior. You will learn about different types of volcanism and you will study the three main types of volcanoes: shield, cinder cone, and composite cone.

Objectives:
- Explain the hypothesis of continental drift and the theory of plate tectonics
- Explain seafloor spreading and identify evidence, such as paleomagnetism, that supports the idea of seafloor spreading
- Explain how volcanic activity is closely related to plate tectonics
- Identify the three main types of volcanoes and describe the different materials that are ejected from volcanoes during an eruption
- Define intrusive igneous features, such as dikes, sills, laccoliths, and batholiths

Lesson 1: Continental Drift

Objectives:
- Describe the hypothesis of continental drift
- Evaluate the evidence in support of continental drift
- Identify the main objections to Wegener’s hypothesis of continental drift

Lesson 2: Sea-Floor Spreading

Objectives:
- Identify mid-ocean ridges and deep-ocean trenches
- Explain the processes of sea-floor spreading and subduction
- Explain the evidence for sea-floor spreading, including paleomagnetism and magnetic reversals, earthquake patterns, and the age of the ocean floor

Lesson 3: Theory of Plate Tectonics

Objectives:
- Explain the theory of plate tectonics
- Describe lithospheric plates
- Identify the three types of plate boundaries

Lesson 4: Mechanisms of Plate Motion

Objectives:
Lesson 5: Lab: Paleomagnetism and the Ocean Floor (two-day lesson)

Objectives:
• Learn how the paleomagnetic patterns on the ocean floor are used to determine the rate of sea-floor spreading

Lesson 6: Volcanoes and Plate Tectonics

Objectives:
• Describe the origin of magma
• Explain the relationship between plate tectonics and volcanism, including intraplate volcanism

Lesson 7: The Nature of Volcanic Eruptions

Objectives:
• Explain the factors that determine the type of volcanic eruptions that occur
• Describe the various types of volcanic materials that are ejected from volcanoes
• List the three main types of volcanoes
• Distinguish how the different types of volcanic landforms form

Lesson 8: Intrusive Igneous Activity

Objectives:
• Describe the major intrusive igneous features such as dikes, sills, and laccoliths, and how they form
• Describe batholiths and how they form

Lesson 9: Unit Review (two-day lesson)

Objectives:
• Review the concepts presented in the unit

Lesson 10: Unit Test

Unit 9: Mountain Building

Mountains are classified into four main types: volcanic, folded, fault-block, and dome. These types of mountains can be found in various places on Earth’s surface. The mountain-building process occurs mostly at convergent plate boundaries, where colliding plates result in massive forces that create mountains.

In this unit, you will explore how and where mountains are built on Earth’s surface. You will identify the four main types of mountains and at which convergent plate boundary they usually occur. During the unit, you will complete an investigation of anticlines and synclines, which will help you better understand the different types of folded mountains.

Objectives:
• Define deformation and describe how rocks permanently deform due to stress
• Determine what role isostasy plays in the process of mountain building
Lesson 1: Forces in Earth's Crust

Objectives:
- Identify the factors that determine the strength of a rock and explain how rocks permanently deform
- Distinguish among the types of stresses that affect rocks
- Explain how isostatic adjustment is involved in mountain formation

Lesson 2: Folds, Faults, and Mountains

Objectives:
- List the three main types of folds
- Identify the main types of faults
- Describe folded mountains and fault-block mountains and explain how they form
- Describe plateaus, domes, and basins and explain how they form

Lesson 3: Mountains and Plates

Objectives:
- Identify the type of mountains associated with the different types of convergent plate boundaries
- Identify the type of mountains associated with divergent plate boundaries
- Describe the role of accretion in the formation of continents and mountain building

Lesson 4: Lab: Investigating Anticlines and Synclines (two-day lesson)

Objectives:
- Measure the angles of rock layers in diagrams of an anticline or a syncline
- Determine whether a fold is an anticline or a syncline
- Visualize how rocks are oriented in anticlines and synclines
- Make a block diagram to show the appearance of an eroded fold

Lesson 5: Unit Review (two-day lesson)

Objectives:
- Review the concepts presented in the unit

Lesson 6: Unit Test

Unit 10: Final Review and Exam

In this unit, you will have the opportunity to prepare for and take the final exam. The final exam may include any material that has been presented throughout the semester. Since this is a comprehensive exam, it may be helpful to organize your notes and answers to questions in your science journal before you begin to review.

Objectives:
- Identify strategies that you will use to prepare for the final exam
- Organize your time and study materials
• Review your notes, answers to lesson questions and assessments, and key vocabulary terms

**Lesson 1: Earth Science A Final Review (three-day lesson)**

**Lesson 2: Earth Science A Final Exam**

EARTH SCIENCE B
Earth Science B

This is the second of two courses that comprise Earth Science. This course is designed to prepare the student to confidently enter and complete college-level Earth science courses. The Prentice Hall text, *Earth Science*, provides the basis for the course content.

This course consists of varied curriculum that provides the student the opportunity to explore, compare, research, reflect, and make real-world connections. The student will engage in hands-on explorations and virtual simulations, which will enhance traditional lesson formats.

During this course, the student will explore Earth’s history by studying fossils and rock layers; investigate oceanic productivity and features on the sea floor; learn about atmospheric processes, including the water cycle; infer how severe storms form; study the Earth-moon-sun relationship; and explore other celestial bodies, such as stars.

**Unit 1: Geologic Time and Earth's History**

In this introductory unit, you will explore Earth's early history by studying fossils, the rock record, and the geologic time scale. You will learn how scientists are able to date rock layers using radiometric dating, and how they are able to develop theories of past environments using fossils. In addition, you will learn how the geologic time scale is organized and how it was originally developed by scientists in the 1800s.

During this unit, you will complete a lab on fossils, which will enable you to understand how fossils can be used to define rock sequences. At the end of the unit, you will study Precambrian Time and the Paleozoic, Mesozoic, and Cenozoic Eras. You will learn how Earth changed biologically and geologically during these important time periods in history.

Objectives:
- Describe the different types of fossils and explain how fossils and the fossil record help explain Earth's history
- Explain radiometric dating and list different elements that can be studied to date rock layers
- Explain how the geologic time scale is organized and define eons, eras, periods, and epochs
- Explain how oceans and the atmosphere formed during Precambrian Time
- Identify significant geologic and biologic factors during the Paleozoic, Mesozoic, and Cenozoic Eras

**Lesson 1: Discovering Earth’s History**

Objectives:
- List three main ideas that geologists use in studying Earth's history
- List the key principles of relative dating and describe how geologists use relative dating in their work
- Describe how geologists use inclusions, unconformities, and correlation of rock layers to interpret the rock record

*Objectives derived from Pearson Education, Inc. © Pearson Education, Inc., publishing as Pearson Prentice Hall. All rights reserved.*

**Lesson 2: Fossils: Evidence of Past Life**

Objectives:
- Describe the different types of fossils and how they form
- Identify the factors that determine if an organism will become a fossil
- Explain how the principle of fossil succession and the theory of evolution help scientists interpret the fossil record
- Describe how geologists use fossils to correlate rock layers and reconstruct past environments

*Objectives derived from Pearson Education, Inc. © Pearson Education, Inc., publishing as Pearson Prentice Hall. All rights reserved.*

**Lesson 3: Dating with Radioactivity**

Objectives:
- Define radioactivity and half-life
Lesson 4: The Geologic Time Scale

Objectives:
- Describe the geologic time scale
- Explain how the geologic time scale is organized

Lesson 5: Lab: Fossil Occurrence and the Age of Rocks (two-day lesson)

Objectives:
- Use fossils to assign relative dates to rocks and rock sequences

Lesson 6: Precambrian Time

Objectives:
- Describe the major geologic developments of Precambrian time
- Describe the major developments in the evolution of living things during Precambrian time

Lesson 7: Paleozoic Era: Life Explodes (two-day lesson)

Objectives:
- List the kinds of environmental changes that have affected the evolution of life over geologic time
- Describe the major developments in Earth's geology and life forms during the Paleozoic era

Lesson 8: Mesozoic Era: Age of Reptiles

Objectives:
- Describe the major developments in Earth's geology and life forms during the Mesozoic era
- State the cause of the mass extinction at the end of the Mesozoic era

Lesson 9: Cenozoic Era: Age of Mammals

Objectives:
- Explain why mammals became widespread and successful in the Cenozoic era
- Describe the major developments in Earth's geology and life forms during the Cenozoic era

Lesson 10: Unit Review (two-day lesson)

Lesson 11: Unit Test (two-day lesson)

Unit 2: Oceanography

In this unit, your reading assignments and activity components will immerse you in the field of oceanography. From physical features of the ocean floor to ocean productivity and the diversity of marine life, you will find that you cover most aspects of the world's oceans.
During this unit, you will study the density of seawater. You will be asked to complete a Virtual Lab in which you will experiment with different solids and liquids, to better understand density. At the end of the unit, you will learn about waves, tides, and how ocean waters circulate throughout the world. You will also learn about shoreline processes and how various features are created due to natural causes.

Objectives:
- Define oceanography and identify the main differences between land and ocean features on Earth
- Identify the main regions of the ocean floor and list the different types of seafloor sediments
- Describe how marine organisms are classified and explain how the ocean is divided into different marine zones
- Explain ocean circulation and identify the difference in density between fresh water and seawater
- Examine ocean waves, tides, and the processes that form shoreline features

Lesson 1: The Vast World Ocean

Objectives:
- Recognize that most of Earth’s surface is covered by water
- List Earth’s four main ocean basins and identify their locations
- Describe the topography of the ocean floor and compare it to land
- Identify and describe three major technologies used to study the ocean floor

Lesson 2: Ocean Floor Features

Objectives:
- List the three main regions of the ocean floor
- Differentiate between the continental margins of the Atlantic and Pacific Oceans
- Explain the features of the ocean floor at deep-ocean trenches, abyssal plains, and mid-ocean ridges

Lesson 3: Seafloor Sediments

Objectives:
- List the three types of seafloor sediments
- Describe the formation of terrigenous, biogenous, and hydrogenous sediments

Lesson 4: Resources from the Seafloor

Objectives:
- Identify ocean resources used for energy production
- Explain how gas hydrates are formed
- List other types of ocean resources

Lesson 5: The Composition of Seawater (two-day lesson)

Objectives:
- Identify the units used to express the salinity of ocean water
- List the sources of salt in ocean water
- Recognize the factors that affect the density of ocean water
- Compare and contrast the three main zones of the open ocean
Lesson 6: The Diversity of Ocean Life

Objectives:
- Recognize how marine organisms can be classified
- Differentiate between plankton and nekton
- Describe the area of the ocean in which most benthic organisms live
- List the factors used to divide the ocean into marine zones

Objectives derived from Pearson Education, Inc. © Pearson Education, Inc., publishing as Pearson Prentice Hall. All rights reserved.

Lesson 7: Oceanic Productivity

Objectives:
- List the factors that influence a region's photosynthetic productivity
- Describe the transfer of energy from one trophic level to another
- Compare and contrast food webs and food chains

Objectives derived from Pearson Education, Inc. © Pearson Education, Inc., publishing as Pearson Prentice Hall. All rights reserved.

Lesson 8: Lab: Seawater Density (two-day lesson)

Objectives:
- Learn about the difference in density between freshwater and seawater

Objectives derived from Pearson Education, Inc. © Pearson Education, Inc., publishing as Pearson Prentice Hall. All rights reserved.

Lesson 9: Ocean Circulation

Objectives:
- Explain how surface currents develop
- Describe how ocean currents affect climate
- State the importance of upwelling
- Describe the formation of density currents

Objectives derived from Pearson Education, Inc. © Pearson Education, Inc., publishing as Pearson Prentice Hall. All rights reserved.

Lesson 10: Waves and Tides (two-day lesson)

Objectives:
- Describe how ocean waves get their energy
- State three factors that determine the characteristics of a wave
- Describe how energy moves through a wave
- Explain the forces that produce tides

Objectives derived from Pearson Education, Inc. © Pearson Education, Inc., publishing as Pearson Prentice Hall. All rights reserved.

Lesson 11: Shoreline Processes and Features (two-day lesson)

Objectives:
- List the agents responsible for the movement of sediments along the shoreline
- Explain how refraction affects wave action along the shore
- Describe the processes that form shoreline features
- List the structures that can be built to protect a shoreline

Objectives derived from Pearson Education, Inc. © Pearson Education, Inc., publishing as Pearson Prentice Hall. All rights reserved.

Lesson 12: Unit Review (two-day lesson)

Objectives:
- Review the concepts presented in the unit

Objectives derived from Pearson Education, Inc. © Pearson Education, Inc., publishing as Pearson Prentice Hall. All rights reserved.

Lesson 13: Unit Test

Unit 3: Meteorology: Part 1
In this unit, you will study various topics within the field of meteorology. You will learn how to differentiate between weather and climate, and you will compare and contrast heat and temperature. When studying heat, you will complete an investigation about the specific heat of land and water.

During this unit, you will also explore how clouds form. You will learn about the four processes that lift air—orographic lifting, frontal wedging, convergence, and localized convective lifting—and you will study how different types of precipitation form. At the end of the unit, you will study air pressure and wind. You will learn how air pressure is exerted on objects and how local and regional wind patterns form.

Objectives:
- Explore characteristics of the atmosphere and compare and contrast weather and climate
- Define heat and temperature and explain how heat is transferred
- Study the heating of land and water and complete a virtual lab on specific heat
- Explain water's changes of state and describe various forms of precipitation
- Study air pressure and identify local winds and regional weather patterns

Lesson 1: Atmosphere Characteristics

Objectives:
- Compare and contrast weather and climate
- Explain why seasonal changes occur

Lesson 2: Heating the Atmosphere

Objectives:
- Explain how heat and temperature are related
- List the three major mechanisms of heat transfer
- Describe how the atmosphere is affected by heat transfer mechanisms

Lesson 3: Temperature Controls

Objectives:
- Explain what temperature control is
- Compare and contrast the heating of land and water
- Explain why some clouds reflect a portion of sunlight back to space

Lesson 4: Lab: Heating Land and Water (two-day lesson)

Objectives:
- Model the difference in the heating of land and water when they are subjected to a source of radiation

Lesson 5: Water in the Atmosphere

Objectives:
- Identify the gas that is most important for understanding atmospheric processes
- Describe what happens during a change of state
- Compare and contrast the abilities of cold air and warm air to hold water vapor
- Define relative humidity
- Describe the factors that affect the relative humidity of air

Lesson 6: Cloud Formation

Objectives:
- Describe what happens to air when it is compressed or allowed to expand
- List four mechanisms that cause air to rise
- Compare and contrast movements of stable and unstable air
- Describe the conditions in air that favor condensation of water

Objectives derived from Pearson Education, Inc. © Pearson Education, Inc., publishing as Pearson Prentice Hall. All rights reserved.

Lesson 7: Cloud Types and Precipitation

Objectives:
- Describe how clouds are classified
- Compare and contrast clouds and fogs
- Explain what must happen for precipitation to form
- Identify what controls the type of precipitation that reaches Earth's surface

Objectives derived from Pearson Education, Inc. © Pearson Education, Inc., publishing as Pearson Prentice Hall. All rights reserved.

Lesson 8: Understanding Air Pressure

Objectives:
- Describe how air pressure is exerted on objects
- Explain how changes in air pressure affect the mercury column of a barometer
- Identify the ultimate energy source for wind
- Describe how the Coriolis effect influences freely moving objects

Objectives derived from Pearson Education, Inc. © Pearson Education, Inc., publishing as Pearson Prentice Hall. All rights reserved.

Lesson 9: Pressure Centers and Winds

Objectives:
- Explain how winds blow around pressure centers in the Northern and Southern Hemispheres
- Describe the air pressure patterns within cyclones and anticyclones
- Describe how friction controls the net flow of air around a cyclone and an anticyclone
- Explain how the unequal heating of Earth's surface affects the atmosphere

Objectives derived from Pearson Education, Inc. © Pearson Education, Inc., publishing as Pearson Prentice Hall. All rights reserved.

Lesson 10: Regional Wind Systems

Objectives:
- Identify the causes of local winds
- Describe the general movement of weather in the United States
- Compare and contrast weather patterns characteristic of El Niño and La Niña events

Objectives derived from Pearson Education, Inc. © Pearson Education, Inc., publishing as Pearson Prentice Hall. All rights reserved.

Lesson 11: Unit Review (two-day lesson)

Objectives:
- Review the concepts presented in the unit

Objectives derived from Pearson Education, Inc. © Pearson Education, Inc., publishing as Pearson Prentice Hall. All rights reserved.

Lesson 12: Unit Test

Unit 4: Meteorology: Part 2

In this unit, you will continue your study of meteorology. First you will learn about air masses and how they are classified. Then you will explore fronts, including: warm fronts, cold fronts, stationary fronts, and occluded fronts. You will also study severe storms and you will identify the conditions in which they form.
During this unit, you will explore global climates and the characteristics that define them. You will learn about some of the natural processes that can cause changes in climate, and you will study global warming. Upon completion of the unit, you will have a better understanding of the consequences of global warming and climate change.

Objectives:
- Explain how air masses are classified and describe the four main types of fronts
- Become familiar with the atmospheric conditions that cause thunderstorms, tornadoes, and hurricanes
- Explain how middle-latitude cyclones affect local weather patterns
- Explain how elevation, mountain ranges, global winds, large bodies of water, and vegetation affect climate
- Compare and contrast world climates and their characteristics

Lesson 1: Air Masses

Objectives:
- Define air mass
- Explain how air masses are classified
- Explain the characteristics of each air mass class
- Explain the influence of continental polar and maritime tropical air masses on the majority of North America

Lesson 2: Fronts

Objectives:
- Describe the formation of a front
- Differentiate among the formation of a warm front, cold front, stationary front, and occluded front
- Describe the weather patterns associated with each type of front

Lesson 3: Severe Storms (two-day lesson)

Objectives:
- Explain the formation of a thunderstorm
- Describe the conditions needed for a tornado to form
- Identify the conditions that must exist for a hurricane to form

Lesson 4: Lab: Middle-Latitude Cyclones (two-day lesson)

Objectives:
- Explain how middle-latitude cyclones affect the weather of the area over which they form
- Predict how middle-latitude cyclones change weather patterns as they move through an area

Lesson 5: Factors that Affect Climate

Objectives:
- Describe how latitude affects climate
- Describe how elevation and mountain ranges affect climate
- Describe how large bodies of water affect climate
- Describe how global winds affect climate
- Describe how vegetation affects climate

Lesson 6: World Climates

Objectives:
Lesson 7: Climate Changes

Objectives:
- Describe natural processes that can cause changes in climate
- Explain the greenhouse effect
- Define global warming
- List some of the consequences of global warming

Lesson 8: Unit Review (two-day lesson)

Objectives:
- Review the concepts presented in the unit

Lesson 9: Unit Test

Unit 5: Astronomy: Part 1

In this unit, you will begin to study outer space. You will first learn how early astronomers viewed Earth's place in the solar system, and you will study famous contributors to early astronomy, such as Galileo and Newton. Next you will study the Earth-moon-sun system and you will identify different features on the surface of the moon.

During this unit, you will examine the solar system and its interrelated parts. You will learn about the terrestrial and Jovian planets, as well as other bodies such as asteroids, meteors, and comets. By the end of the lesson, you will be able to explain why Pluto is no longer considered one of the planets in our solar system.

Objectives:
- Compare and contrast the early models of the solar system and explain the contributions of early astronomers
- Describe movements of the Earth-moon-sun system and explain the physical nature of the moon
- Complete an investigation of the different phases of the moon
- List the major differences between the inner planets and the outer planets
- Explain why Pluto is not a planet and describe asteroids, meteors, and comets

Lesson 1: Early Astronomy

Objectives:
- Describe the contributions of ancient Greeks to astronomy
- Compare and contrast the geocentric and heliocentric models of the solar system
- Explain the contributions to astronomy of Copernicus, Brahe, Kepler, Galileo, and Newton

Lesson 2: The Earth-Moon-Sun System

Objectives:
- Describe the movements of Earth known as rotation, revolution, and precession
- Explain how the moon goes through phases
- Explain how eclipses occur
Lesson 3: Earth's Moon

Objectives:
- Describe how the physical features of the lunar surface were created
- Explain the history of the moon

Objectives derived from Pearson Education, Inc. © Pearson Education, Inc., publishing as Pearson Prentice Hall. All rights reserved.

Lesson 4: Virtual Lab: Tracking the Phases of the Moon (two-day lesson)

Objectives:
- Investigate the phases of the moon

Objectives derived from Pearson Education, Inc. © Pearson Education, Inc., publishing as Pearson Prentice Hall. All rights reserved.

Lesson 5: The Solar System

Objectives:
- List the major differences between the terrestrial and Jovian planets
- Explain how the solar system formed

Objectives derived from Pearson Education, Inc. © Pearson Education, Inc., publishing as Pearson Prentice Hall. All rights reserved.

Lesson 6: The Terrestrial Planets

Objectives:
- Describe the distinguishing characteristics of each terrestrial planet

Objectives derived from Pearson Education, Inc. © Pearson Education, Inc., publishing as Pearson Prentice Hall. All rights reserved.

Lesson 7: The Outer Planets (and Pluto)

Objectives:
- Describe the distinguishing characteristics of each Jovian planet
- Explain why Pluto is not considered a planet

Objectives derived from Pearson Education, Inc. © Pearson Education, Inc., publishing as Pearson Prentice Hall. All rights reserved.

Lesson 8: Minor Members of the Solar System

Objectives:
- Identify the location within our solar system where most asteroids are found
- Describe the structure of a comet
- Explain the possible origins for a meteoroid

Objectives derived from Pearson Education, Inc. © Pearson Education, Inc., publishing as Pearson Prentice Hall. All rights reserved.

Lesson 9: Unit Review (two-day lesson)

Objectives:
- Review the concepts presented in the unit

Objectives derived from Pearson Education, Inc. © Pearson Education, Inc., publishing as Pearson Prentice Hall. All rights reserved.

Lesson 10: Unit Test

Unit 6: Astronomy: Part 2

In this unit, you will study light and how it applies to the field of astronomy. You will examine the electromagnetic spectrum and you will learn how the Doppler effect can be used to study stars. You will also study the following types of telescopes: refracting, reflecting, radio, and space.

During this unit, you will investigate the orbital speed of the planets in our solar system. You will also learn about star properties and the birth, life, and death of stars. Finally, you will learn about the universe on a greater scale; you will discover that scientists believe in universal expansion and you will study the big bang theory.

Objectives:
Lesson 1: The Study of Light

Objectives:
• Describe the waves that compose the electromagnetic spectrum
• Describe what the different types of spectra reveal about stars
• Explain how the Doppler effect is applied to the motion of stars in relation to Earth

Objectives derived from Pearson Education, Inc. © Pearson Education, Inc., publishing as Pearson Prentice Hall. All rights reserved.

Lesson 2: Tools for Studying Space

Objectives:
• Explain how refracting, reflecting, and radio telescopes work
• Describe the advantages and disadvantages of each type of telescope
• Explain the advantages that a space telescope has over an Earth-based telescope

Objectives derived from Pearson Education, Inc. © Pearson Education, Inc., publishing as Pearson Prentice Hall. All rights reserved.

Lesson 3: The Sun

Objectives:
• Explain the structure of the sun
• Describe the physical features on the surface of the sun
• Explain how the sun produces energy

Objectives derived from Pearson Education, Inc. © Pearson Education, Inc., publishing as Pearson Prentice Hall. All rights reserved.

Lesson 4: Virtual Lab: Measuring Orbital Speed of Planets (two-day lesson)

Objectives:
• Determine how fast Earth and the other planets are moving

Objectives derived from Pearson Education, Inc. © Pearson Education, Inc., publishing as Pearson Prentice Hall. All rights reserved.

Lesson 5: Properties of Stars

Objectives:
• Describe what astronomers can learn by studying star properties
• Explain how distance affects parallax
• List the factors that determine a star’s apparent magnitude
• Describe the relationship shown on a Hertzprung-Russell diagram

Objectives derived from Pearson Education, Inc. © Pearson Education, Inc., publishing as Pearson Prentice Hall. All rights reserved.

Lesson 6: Stellar Evolution

Objectives:
• Identify which stage marks the birth of a star
• Explain why all stars eventually die
• List the stages of the sun’s life cycle

Objectives derived from Pearson Education, Inc. © Pearson Education, Inc., publishing as Pearson Prentice Hall. All rights reserved.

Lesson 7: The Universe

Objectives:
• Describe the size and structure of the Milky Way Galaxy
• List the ways in which galaxies differ from one another
• Cite the evidence that indicates that the universe is expanding

Objectives derived from Pearson Education, Inc. © Pearson Education, Inc., publishing as Pearson Prentice Hall. All rights reserved.
• Describe how the universe began according to the big bang theory

Lesson 8: Unit Review (two-day lesson)

Objectives:
• Review the concepts presented in the unit

Lesson 9: Unit Test

Unit 7: Final Review and Exam

In this unit, you will have the opportunity to prepare for and take the final exam. The final exam may include any material that has been presented throughout the semester. Since this is a comprehensive exam, it may be helpful to organize your notes and answers to questions in your science journal before you begin to review.

Objectives:
• Identify strategies that you will use to prepare for the final exam
• Organize your time and study materials
• Review your notes, answers to lesson questions and assessments, and key vocabulary terms

Lesson 1: Earth Science B Final Review (three-day lesson)

Objectives:
• Review the concepts presented in the course

Lesson 2: Earth Science B Final Exam
PHYSICAL SCIENCE A
Physical Science A

This is the first of two courses that comprise Physical Science. The course is designed to provide students with an understanding of essential chemistry concepts. The course extends the student's prior knowledge of the properties, states, and structure of matter, explores the dynamics of chemical bonding and reactions, and introduces the student to nuclear chemistry. Physical Science A includes hands-on explorations and virtual simulations to enhance the student's comprehension of key concepts.

Unit 1: Science Skills

In this introductory unit, you will learn that physical science is a vast branch of science that covers the physics and chemistry of nonliving things. You will explore how the major branches of science overlap and you will learn how scientists solve problems using the scientific method. By completing this unit, you will have a general understanding of the International System of Units (SI) how to present scientific data.

Objectives:
- Recognize the ways in which science and technology are related
- Explain how major branches of science overlap
- Describe and apply the scientific method
- Explain the importance of models and safety in science
- Perform calculations involving scientific notation

Lesson 1: What Is Science? (two-day lesson)

Objectives:
- Explain how science and technology are related
- List the major branches of science and describe how they overlap
- Describe the main ideas of physical science

Objectives derived from Pearson Education, Inc. © Pearson Education, Inc., publishing as Pearson Prentice Hall. All rights reserved.

Lesson 2: Using a Scientific Approach (two-day lesson)

Objectives:
- Describe the steps of the scientific method
- Compare and contrast facts, scientific theories, and scientific laws
- Explain the importance of the models in science
- Explain the importance of safety in science

Objectives derived from Pearson Education, Inc. © Pearson Education, Inc., publishing as Pearson Prentice Hall. All rights reserved.

Lesson 3: Measurement (two-day lesson)

Objectives:
- Perform calculations involving scientific notation and conversion factors
- Identify the metric and SI units used in science and convert between common metric prefixes
- Compare and contrast accuracy and precision
- Relate Celsius, Kelvin, and Fahrenheit temperature scales

Objectives derived from Pearson Education, Inc. © Pearson Education, Inc., publishing as Pearson Prentice Hall. All rights reserved.

Lesson 4: Presenting Scientific Data (two-day lesson)

Objectives:
- Organize and analyze data using tables and graphs
- Identify the relationship between a manipulated variable and a responding variable
- Explain the importance of communicating data
- Discuss the process of peer review

Objectives derived from Pearson Education, Inc. © Pearson Education, Inc., publishing as Pearson Prentice Hall. All rights reserved.

Lesson 5: VIRTUAL LAB: Introduction to Scientific Inquiry (two-day lesson)
Objectives:
• Show how the processes of scientific inquiry can help you learn about the natural world

Objectives derived from Pearson Education, Inc. © Pearson Education, Inc., publishing as Pearson Prentice Hall. All rights reserved.

Lesson 6: Science Skills Unit Review (two-day lesson)

Objectives:
• Review the concepts presented in the unit

Objectives derived from Pearson Education, Inc. © Pearson Education, Inc., publishing as Pearson Prentice Hall. All rights reserved.

Lesson 7: Science Skills Unit Test

Unit 2: Properties and States of Matter

In this first unit on chemistry, your studies will focus on the physical and chemical properties of matter. You will learn how to classify matter and how to identify physical and chemical changes in matter. By completing this unit, you will have a better understanding of the different states of matter, the gas laws, and the processes by which phase changes occur.

Objectives:
• Describe the characteristics of elements and compounds; Classify mixtures as heterogeneous or homogeneous
• Describe physical and chemical properties of matter; Describe methods used to separate mixtures
• Explain the difference between chemical and physical changes; Describe the states of matter
• Explain the behavior of solids, liquids, and gases; Explain Charles’ Law, Boyle’s Law, and the combined gas law
• Describe phase changes; Define endothermic and exothermic

Lesson 1: Classifying Matter

Objectives:
• Classify pure substances as elements or compounds
• Describe the characteristics of an element and the symbols used to identify elements
• Describe the characteristics of a compound
• Distinguish pure substances from mixtures
• Classify mixtures as heterogeneous or homogeneous
• Classify mixtures as solutions, suspensions, or colloids

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 2: Physical Properties (two-day lesson)

Objectives:
• Describe physical properties of matter
• Identify substances based on their physical properties
• Describe how properties are used to choose materials
• Describe methods used to separate mixtures
• Describe evidence that indicates a physical change is taking place

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 3: Chemical Properties (two-day lesson)

Objectives:
• Describe chemical properties of matter
• Describe clues that indicate that a chemical change is taking place
• Distinguish chemical changes from physical changes

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 4: Solids, Liquids, and Gases (two-day lesson)

Objectives:
Lesson 5: The Gas Laws (two-day lesson)

Objectives:
- Define pressure and gas pressure
- Identify factors that affect gas pressure
- Predict changes in gas pressure due to changes in temperature, volume, and number of particles
- Explain Charles’ Law, Boyle’s Law, and the combined gas law
- Apply gas laws to solve problems involving gases

Lesson 6: Phase Changes (two-day lesson)

Objectives:
- Describe phase changes
- Explain how temperature can be used to recognize a phase change
- Explain what happens to the motion, arrangement, and average kinetic energy of water molecules during phase changes
- Describe each of the six phase changes
- Identify phase changes as endothermic or exothermic

Lesson 7: VIRTUAL LAB: Changes Between a Solid and a Liquid (two-day lesson)

Objectives:
- Determine how temperature changes as ice is heated and becomes liquid water

Lesson 8: Properties and States of Matter Unit Review (two-day lesson)

Objectives:
- Review the concepts presented in the unit

Lesson 9: Properties and States of Matter Unit Test

Unit 3: Atoms, Elements, and Bonds

In this unit, you will learn how scientists’ theories and models of the atom changed over time. You will study atomic structure, focusing on atomic number, mass number, and isotopes. By completing this unit, you will be more comfortable with how elements are organized within the modern periodic table of elements. You will also have a better understanding of chemical bonds.

Objectives:
- Explain the contributions made to the atomic theory by Dalton, Thomson, and Rutherford
- Identify and compare protons, neutrons, and electrons
- Describe Bohr’s model of the atom
- Explain electron configurations
- Explain how elements are arranged in the periodic table

Lesson 1: Studying Atoms

Objectives:
- Describe ancient Greek models of matter
- List the main points of Dalton’s atomic theory and describe his evidence for the existence of atoms
• Explain how Thomson and Rutherford used data from experiments to produce their atomic models

Objectives derived from Pearson Education, Inc. © Pearson Education, Inc., publishing as Pearson Prentice Hall. All rights reserved.

Lesson 2: The Structure of an Atom (two-day lesson)

Objectives:
- Identify three subatomic particles and compare their properties
- Distinguish the atomic number of an element from the mass number of an isotope, and use these numbers to describe the structure of atoms

Objectives derived from Pearson Education, Inc. © Pearson Education, Inc., publishing as Pearson Prentice Hall. All rights reserved.

Lesson 3: Modern Atomic Theory

Objectives:
- Describe Bohr’s model of the atom and evidence for energy levels
- Explain how the electron cloud model represents the behavior and locations of electrons in atoms
- Distinguish the ground state from excited states of an atom based on electron configuration

Objectives derived from Pearson Education, Inc. © Pearson Education, Inc., publishing as Pearson Prentice Hall. All rights reserved.

Lesson 4: Organizing the Elements

Objectives:
- Describe how Mendeleev arranged the elements in his table
- Explain how the predictions Mendeleev made and the discovery of new elements demonstrated the usefulness of his periodic table

Objectives derived from Pearson Education, Inc. © Pearson Education, Inc., publishing as Pearson Prentice Hall. All rights reserved.

Lesson 5: The Modern Periodic Table (two-day lesson)

Objectives:
- Describe the arrangement of elements in the modern periodic table
- Explain how the atomic mass of an element is determined and how atomic mass units are defined
- Identify general properties of metals, nonmetals, and metalloids
- Describe how properties of elements change across a period in the periodic table

Objectives derived from Pearson Education, Inc. © Pearson Education, Inc., publishing as Pearson Prentice Hall. All rights reserved.

Lesson 6: Representative Groups (two-day lesson)

Objectives:
- Relate the number of valence electrons to groups in the periodic table and to properties of elements in those groups
- Predict the reactivity of some elements based on their locations within a group
- Identify some properties of common A group elements

Objectives derived from Pearson Education, Inc. © Pearson Education, Inc., publishing as Pearson Prentice Hall. All rights reserved.

Lesson 7: Ionic Bonding (two-day lesson)

Objectives:
- Recognize stable electron configurations
- Predict an element’s chemical properties using the number of valence electrons and electron dot diagrams
- Describe how an ionic bond forms and how ionization energy affects the process
- Predict the composition of an ionic compound from its chemical formula
- Relate the properties of ionic compounds to the structure of crystal lattices
Lesson 8: Covalent Bonding (two-day lesson)

Objectives:
• Describe how covalent bonds form and the attractions that keep atoms together in molecules
• Compare polar and nonpolar bonds and demonstrate how polar bonds affect the polarity of a molecule
• Compare the attractions between polar and nonpolar molecules

Lesson 9: Naming Compounds and Writing Formulas (two-day lesson)

Objectives:
• Recognize and describe binary ionic compounds, metals with multiple ions, and polyatomic ions
• Name and determine chemical formulas for ionic and molecular compounds

Lesson 10: Lab: Modeling Molecules (two-day lesson)

Objectives:
• Construct models of molecules
• Compare different types of representations of molecules
• Explain how the structural formula of a molecule can be used to help determine its bond angles

Lesson 11: Atoms, Elements, and Bonds Unit Review (two-day lesson)

Objectives:
• Review the concepts presented in the unit

Lesson 12: Atoms, Elements, and Bonds Unit Test

Unit 4: Chemical Reactions, Acids, and Bases

In this unit, you will study different types of chemical reactions, energy changes that occur during chemical reactions, and how to describe chemical reactions using chemical equations. You will learn about reaction rates and how to identify physical and chemical equilibrium. You will also study the physical properties of a solution and the general properties and strengths of acids and bases. By completing this unit, you will have a better understanding of changes that occur during chemical reactions.

Objectives:
• Interpret and balance chemical equations
• Explain the different types of chemical reactions
• Describe energy changes that take place during chemical reactions
• Explain endothermic and exothermic reactions
• Describe factors affecting rates of chemical reactions

Lesson 1: Describing Reactions (two-day lesson)

Objectives:
• Interpret chemical equations in terms of reactants, products, and conservation of mass
• Balance chemical equations by manipulating coefficients
• Convert between moles and mass of a substance using molar mass
• Calculate amounts of reactants or products by using molar mass, mole ratios, and balanced chemical equations

Lesson 2: Types of Reactions
Objectives:
- Classify chemical reactions as synthesis, decomposition, single-replacement, double-replacement, or combustion reactions
- Describe oxidation-reduction reactions, and relate them to other classifications of chemical reactions

Objectives derived from Pearson Education, Inc. © Pearson Education, Inc., publishing as Pearson Prentice Hall. All rights reserved.

Lesson 3: Lab Investigator: Chemical Reactions

Lesson 4: Energy Changes in Reactions (two-day lesson)

Objectives:
- Describe the energy changes that take place during chemical reactions
- Classify chemical reactions as exothermic or endothermic
- Explain how energy is conserved during chemical reactions

Objectives derived from Pearson Education, Inc. © Pearson Education, Inc., publishing as Pearson Prentice Hall. All rights reserved.

Lesson 5: Reaction Rates (two-day lesson)

Objectives:
- Explain what a reaction rate is
- Describe the factors affecting chemical reaction rates

Objectives derived from Pearson Education, Inc. © Pearson Education, Inc., publishing as Pearson Prentice Hall. All rights reserved.

Lesson 6: Equilibrium

Objectives:
- Identify and describe physical and chemical equilibrium
- Describe the factors affecting chemical equilibrium

Objectives derived from Pearson Education, Inc. © Pearson Education, Inc., publishing as Pearson Prentice Hall. All rights reserved.

Lesson 7: LAB: Classifying Reactions (two-day lesson)

Objectives:
- Identify different types of chemical reactions
- Predict the products of reactions
- Understand and balance chemical equations

Objectives derived from Pearson Education, Inc. © Pearson Education, Inc., publishing as Pearson Prentice Hall. All rights reserved.

Lesson 8: Formation of Solutions

Objectives:
- Describe how a substance can dissolve in water by dissociation, dispersion, or ionization
- Describe how the physical properties of a solution can differ from those of its solute and solvent
- Identify energy changes that occur during the formation of a solution
- Describe factors affecting the rate at which a solute dissolves in a solvent

Objectives derived from Pearson Education, Inc. © Pearson Education, Inc., publishing as Pearson Prentice Hall. All rights reserved.

Lesson 9: Solubility and Concentration (two-day lesson)

Objectives:
- Define solubility and describe factors affecting solubility
- Classify solutions as unsaturated, saturated, or supersaturated
- Calculate and compare and contrast solution concentrations expressed as percent by volume, percent by mass, and molarity

Objectives derived from Pearson Education, Inc. © Pearson Education, Inc., publishing as Pearson Prentice Hall. All rights reserved.

Lesson 10: Properties of Acids and Bases (two-day lesson)

Objectives derived from Pearson Education, Inc. © Pearson Education, Inc., publishing as Pearson Prentice Hall. All rights reserved.
Objectives:
• Define acid and describe some of the general properties of an acid
• Define base and define some of the general properties of a base
• Identify a neutralization reaction, and describe the reactants and products of neutralization
• Explain how acids and bases can be defined as proton donors and proton acceptors

Lesson 11: Strength of Acids and Bases

Objectives:
• Strength of Acids and Bases
• Distinguish between strong acids and weak acids, and between strong bases and weak bases
• Define buffer and describe how a buffer can be prepared
• Explain how electrolytes can be classified

Lesson 12: Chemical Reactions, Acids, and Bases Unit Review (two-day lesson)

Objectives:
• Review the concepts presented in the unit

Lesson 13: Chemical Reactions, Acids, and Bases Unit Test

Unit 5: Nuclear Chemistry
In this unit, you will learn about nuclear chemistry—the study of the processes that take place within an atom's nucleus. You will focus on the decay processes of a radioactive substance, half-life, radiocarbon dating, and artificial transmutation. You will also study nuclear fission and nuclear fusion; by completing this unit, you will be able to recognize the conditions that are required for these nuclear processes to occur.

Objectives:
• Describe the process of nuclear decay
• Classify nuclear radiation
• Define half-life and explain how nuclear reactions are different from chemical reactions
• Explain transmutation
• Define fission and fusion and explain how nuclear reactors are used to produce energy

Lesson 1: Radioactivity (two-day lesson)

Objectives:
• Describe the process of nuclear decay
• Classify nuclear radiation as alpha particles, beta particles, or gamma rays
• Balance nuclear equations
• Identify sources of nuclear radiation and describe how nuclear radiation affects matter
• Describe methods of detecting nuclear radiation

Lesson 2: Lab: The Properties of Alpha and Beta Particles (two-day lesson)

Objectives:
• Investigate the differences in charge and mass of alpha and beta particles

Lesson 3: Rates of Nuclear Decay (two-day lesson)
Objectives:
• Define half-life and relate half-life to the age of a radioactive sample
• Compare and contrast nuclear reaction rates with chemical reaction rates
• Describe how radioisotopes are used to estimate the age of materials

Objectives derived from Pearson Education, Inc. © Pearson Education, Inc., publishing as Pearson Prentice Hall. All rights reserved.

Lesson 4: Artificial Transmutation (two-day lesson)

Objectives:
• Describe and identify examples of transmutation
• Describe how transuranium elements are synthesized
• Explain how particle accelerators have been used in scientific research

Objectives derived from Pearson Education, Inc. © Pearson Education, Inc., publishing as Pearson Prentice Hall. All rights reserved.

Lesson 5: Fission and Fusion (two-day lesson)

Objectives:
• Compare and contrast nuclear forces
• Describe the process of nuclear fission
• Explain how nuclear reactors are used to produce energy
• Describe the process of nuclear fusion

Objectives derived from Pearson Education, Inc. © Pearson Education, Inc., publishing as Pearson Prentice Hall. All rights reserved.

Lesson 6: Nuclear Chemistry Unit Review (two-day lesson)

Objectives:
• Review the concepts presented in this unit

Lesson 7: Nuclear Chemistry Unit Test

Unit 6: Physical Science A Review and Exam

In this unit, you will prepare for and take the final exam. The exam may include any material that has been presented throughout the semester. Since the final exam is comprehensive, it may be helpful to organize your notes and answers to section and chapter assessments before you begin to review.

Objectives:
• Identify strategies that will help you prepare for the final exam
• Organize your time and study materials
• Review your notes, answers to lesson questions and assessments, and essential vocabulary terms

Lesson 1: Physical Science A Exam Review (two-day lesson)

Objectives:
• Review concepts presented throughout the course

Lesson 2: Physical Science A Exam
PHYSICAL SCIENCE B
Physical Science B

This is the second of two courses that comprise Physical Science. The course is designed to provide the student with an understanding of essential physics and earth science concepts. The physics-focused lessons cover motion, force, work, power, energy, wave mechanics, electricity, magnetism, and the electromagnetic spectrum. Earth science topics include an exploration of the Earth, sun, and planets. Physical Science B includes hands-on explorations and virtual simulations to enhance the student's comprehension of key concepts.

Unit 1: Forces and Motion

In this unit, you will study forces and motion. Your studies will focus on distance, displacement, speed, velocity, and acceleration—moving on to balanced and unbalanced forces, momentum, and universal forces. You will examine Newton's three laws of motion as well as Pascal's principle and Bernoulli's principle. You will also learn how to calculate pressure and what effects buoyancy has on the apparent weight of an object.

Objectives:
- Identify SI units for measuring distances and speed
- Calculate displacement, speed, and acceleration
- Interpret distance-time and speed-time graphs
- Compare and contrast the four kinds of friction
- Describe Newton's three laws of motion and the law of universal gravitation

Lesson 1: Distance and Displacement

Objectives:
- Identify frames of reference and describe how they are used to measure motion
- Identify appropriate SI units for measuring distances
- Distinguish between distance and displacement
- Calculate displacement using vector addition

Lesson 2: Speed and Velocity

Objectives:
- Identify appropriate SI units for speed
- Compare and contrast average speed and instantaneous speed
- Interpret distance/time graphs
- Calculate speed of an object using slopes
- Describe how velocities combine

Lesson 3: Acceleration

Objectives:
- Identify changes in motion that produce acceleration
- Describe examples of constant acceleration
- Calculate the acceleration of an object
- Interpret speed-time and distance-time graphs
- Classify acceleration as positive or negative
- Describe instantaneous acceleration

Lesson 4: Forces

Objectives:
- Describe examples of force and identify appropriate SI units to measure force
- Explain how the motion of an object is affected when balanced and unbalanced forces act on it
- Compare and contrast the four kinds of friction
- Describe how Earth's gravity and air resistance affect falling objects
• Describe the path of a projectile and identify the forces that produce projectile motion

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 5: Newton’s First and Second Laws of Motion

Objectives:
• Describe Newton’s first law of motion and its relation to inertia
• Describe Newton’s second law of motion and use it to calculate acceleration, force, and mass values
• Relate the mass of an object to its weight

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 6: Newton’s Third Law of Motion and Momentum

Objectives:
• Explain how action and reaction forces are related according to Newton’s third law of motion
• Calculate the momentum of an object and describe what happens when momentum is conserved during a collision

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 7: Virtual Momentum Lab (two-day lesson)

Objectives:
• Analyze perfectly elastic and perfectly inelastic collisions
• Calculate momentum
• Explore the law of conservation of momentum

Lesson 8: Universal Forces (two-day lesson)

Objectives:
• Identify the forms of electromagnetic force that can both attract and repel
• Identify and describe the universal forces acting within the nucleus
• Define Newton’s law of universal gravitation and describe the factors affecting gravitational force
• Describe centripetal force and the type of motion it produces

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 9: Fluid Pressure

Objectives:
• Describe and calculate pressure
• Identify appropriate SI units for measuring pressure
• Describe the relationship between water depth and the pressure it exerts
• Describe how forces from pressure are distributed at a given level in a fluid
• Explain how altitude affects air pressure

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 10: Forces and Pressure in Fluids

Objectives:
• Describe how pressure is transmitted in a fluid according to Pascal’s principle
• Explain how a hydraulic system works to change a force
• Explain how the speed and pressure of a fluid are related according to Bernoulli’s principle

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 11: Buoyancy
Objectives:
- Explain the effect of buoyancy on the apparent weight of an object
- Explain the relationship between the volume of fluid displaced by an object and buoyant force acting on the object according to Archimedes' principle
- Describe the relationship among object density, fluid density, and whether an object sinks or floats in a fluid
- Describe the relationship among object weight, buoyant force, and whether an object sinks or floats in a fluid

Lesson 12: Forces and Motion Review (two-day lesson)

Objectives:
- Review concepts covered in this unit

Lesson 13: Forces and Motion Unit Test

Unit 2: Work and Energy

In this unit, you will study work, power, machines, and energy. You will begin by learning how to calculate work and power; later on, you will learn how to calculate mechanical advantage and efficiency. You will study the six types of simple machines and learn how to identify compound machines. You will learn about heat, temperature, and thermal energy, and you will study conductors, insulators, and the laws of thermodynamics in order to better understand heat and how it can be used.

Objectives:
- Describe and calculate work and power
- Explain how machines make work easier to do
- Compare actual mechanical advantage to ideal mechanical advantage
- Calculate a machine's efficiency
- Give an example of the six types of simple machines

Lesson 1: Work and Power

Objectives:
- Describe the conditions that must exist for a force to do work on an object
- Calculate the work done on an object
- Describe and calculate power
- Compare the units of watts and horsepower as they relate to power

Lesson 2: Work and Machines

Objectives:
- Describe what a machine is and how it makes work easier to do
- Relate the work input to a machine to the work output of the machine

Lesson 3: Mechanical Advantage and Efficiency

Objectives:
- Compare a machine's actual mechanical advantage to its ideal mechanical advantage
- Calculate the ideal and actual mechanical advantage of various machines
- Explain why the efficiency of a machine is always less than 100%
- Calculate a machine's efficiency

Lesson 4: Simple Machines (two-day lesson)

Objectives:
Lesson 5: Energy and Its Forms (two-day lesson)

Objectives:
- Describe the relationship between work and energy
- Relate kinetic energy to mass and speed and calculate these quantities
- Analyze how potential energy is related to an object’s position and give examples of gravitational and elastic potential power
- Solve equations that relate an object’s gravitational potential energy to its mass and height
- Give examples of the major forms of energy and explain how each is produced

Objectives derived from Pearson Education, Inc. © Pearson Education, Inc., publishing as Pearson Prentice Hall. All rights reserved.

Lesson 6: Lab: A Roller Coaster’s Potential & Kinetic Energy (two-day lesson)

Objectives:
- Construct a structurally sound model of a roller coaster
- Calculate potential energy and kinetic energy
- Relate the principle of conservation of energy in an analysis of a roller coaster

Objectives derived from Pearson Education, Inc. © Pearson Education, Inc., publishing as Pearson Prentice Hall. All rights reserved.

Lesson 7: Energy Conversion and Conservation

Objectives:
- Describe conversions of energy from one form to another
- State and apply the law of conservation of energy
- Analyze how energy is conserved in conversions between kinetic energy and potential energy and solve equations that equate initial energy to final energy
- Describe the relationship between energy and mass and calculate how much energy is equivalent to a given mass

Objectives derived from Pearson Education, Inc. © Pearson Education, Inc., publishing as Pearson Prentice Hall. All rights reserved.

Lesson 8: Energy Resources

Objectives:
- Classify energy resources as renewable or nonrenewable
- Evaluate benefits and drawbacks of different energy sources
- Describe ways to conserve energy resources

Objectives derived from Pearson Education, Inc. © Pearson Education, Inc., publishing as Pearson Prentice Hall. All rights reserved.

Lesson 9: Thermal Energy and Matter (two-day lesson)

Objectives:
- Explain how heat and work transfer energy
- Relate thermal energy to the motion of particles that make up a material
- Relate temperature to thermal energy and to thermal expansion
- Calculate thermal energy, temperature change, or mass using the specific heat equation
- Describe how a calorimeter operates and calculate thermal energy changes or specific heat using calorimetry measurements

Objectives derived from Pearson Education, Inc. © Pearson Education, Inc., publishing as Pearson Prentice Hall. All rights reserved.

Lesson 10: Heat and Thermodynamics
Objectives:
• Describe conduction, convection, and radiation and identify which of these is occurring in a given situation
• Classify materials as thermal conductors or thermal insulators
• Apply the law of conservation of energy to conversions between thermal energy and other forms of energy
• Apply the second law of thermodynamics in situations where thermal energy moves from cooler to warmer objects
• State the third law of thermodynamics

Objectives derived from Pearson Education, Inc. © Pearson Education, Inc., publishing as Pearson Prentice Hall. All rights reserved.

Lesson 11: Using Heat

Objectives:
• Describe heat engines and explain how heat engines convert thermal energy into mechanical energy
• Describe how the different types of heating systems operate
• Describe how cooling systems, such as refrigerators and air conditioners, operate
• Evaluate benefits and drawbacks of different heating and cooling systems

Objectives derived from Pearson Education, Inc. © Pearson Education, Inc., publishing as Pearson Prentice Hall. All rights reserved.

Lesson 12: Work and Energy Unit Review (two-day lesson)

Objectives:
• Review concepts covered in this unit

Objectives derived from Pearson Education, Inc. © Pearson Education, Inc., publishing as Pearson Prentice Hall. All rights reserved.

Lesson 13: Work and Energy Unit Exam

Unit 3: Waves

In this unit, you will study the properties and behavior of waves. You will learn about different types of mechanical waves and examine how waves are affected by reflection and refraction. You will learn how sound is produced and how the ear is able to detect sound. As you study the electromagnetic spectrum, you will focus on the characteristics of electromagnetic waves and how different waves of the electromagnetic spectrum are used. You will study how light behaves, how light is produced, and how color is determined.

Objectives:
• Define mechanical waves and explain how transverse, longitudinal, and surface waves are produced
• Define frequency, period, wavelength, and wave speed
• Relate amplitude to a wave's energy
• Explain reflection, refraction, diffraction, and interference
• Explain how sound waves are produced and how the human ear detects sound

Lesson 1: Mechanical Waves

Objectives:
• Define mechanical waves and relate waves to energy
• Describe transverse, longitudinal, and surface waves and discuss how they are produced
• Identify examples of transverse and longitudinal waves
• Analyze the motion of a medium as each kind of mechanical wave passes through it

Objectives derived from Pearson Education, Inc. © Pearson Education, Inc., publishing as Pearson Prentice Hall. All rights reserved.

Lesson 2: Properties of Mechanical Waves (two-day lesson)

Objectives:
• Define frequency, period, wavelength, and wave speed and describe these properties for different kinds of waves
• Solve equations relating wave speed to wavelength and frequency or period

Objectives derived from Pearson Education, Inc. © Pearson Education, Inc., publishing as Pearson Prentice Hall. All rights reserved.
Lesson 3: Behavior of Waves

Objectives:
- Describe how reflection, refraction, diffraction, and interference affect waves
- State a rule that explains refraction of a wave as it passes from one medium to another
- Identify factors that affect the amount of refraction, diffraction, or interference
- Distinguish between constructive and destructive interference and explain how standing waves form

Lesson 4: Sound and Hearing (two-day lesson)

Objectives:
- Describe the properties of sound waves and explain how sound is produced and reproduced
- Describe how sound waves behave in applications such as ultrasound and music
- Explain how relative motion determines the frequency of sound an observer hears
- Analyze the functions of the main regions of the human ear

Lesson 5: Lab: Investigating Sound Waves (two-day lesson)

Objectives:
- Define sound as a mechanical vibration whose frequency depends on the length of the vibrating object
- State that pitch depends on the frequency and that loudness depends on the amplitude of the sound wave

Lesson 6: Electromagnetic Waves (two-day lesson)

Objectives:
- Describe the characteristics of electromagnetic waves in a vacuum and how Michelson measures the speed of light
- Calculate the wavelength and frequency of an electromagnetic wave given its speed
- Describe the evidence for the dual nature of electromagnetic radiation
- Describe how the intensity of light changes with distance from a light source

Lesson 7: The Electromagnetic Spectrum

Objectives:
- Rank and classify electromagnetic waves based on their frequencies and wavelengths
- Describe the uses for different waves of the electromagnetic spectrum

Lesson 8: Behavior of Light (two-day lesson)

Objectives:
- Classify materials as transparent, translucent, or opaque to visible light
Lesson 9: Color

Objectives:
• Explain how a prism disperses white light into different colors
• Analyze factors that determine the color of an object
• Distinguish among primary, secondary, and complementary colors of light and of pigments

Lesson 10: Sources of Light

Objectives:
• Explain how light is produced by common sources of light
• Describe the uses of different light sources
• Distinguish lasers from other light sources

Lesson 11: Unit Review (two-day lesson)

Objectives:
• Review concepts covered in this unit

Lesson 12: Unit Test

Unit 4: Electricity and Magnetism

In this unit, you will study electricity and magnetism. You will primarily focus on electric charge, current, and circuits; however, you will also learn about common electronic devices and how they work. You will identify the two types of electric current and you will study circuit diagrams for series and parallel circuits. In the latter part of the unit, you will study magnets, magnetic fields and how electromagnets work. By completing this unit, you will have a better understanding of how electricity and magnetism are related.

Objectives:
• Explain how electric forces and fields affect electric charges
• Describe electric current
• Explain Ohm's law
• Interpret diagrams for series and parallel circuits
• Describe different types of electronic devices and how they convey information

Lesson 1: Electric Charge and Static Electricity

Objectives:
• Analyze factors that affect the strength and direction of electric forces and fields
• Describe how electric forces and fields affect electric charges
• Describe how electric charges are transferred and explain why electric discharges occur

Lesson 2: Electric Current and Ohm's Law

Objectives:
• Describe electric current and identify the two types of current
• Describe conduction and classify materials as either good electrical conductors or good electric insulators
• Describe the factors that affect resistance
• Explain how voltage produces electric current
• Calculate voltage, current, and resistance using Ohm's law
Lesson 3: Electric Circuits and Safety Devices (two-day lesson)

Objectives:
- Analyze circuit diagrams for series circuits and parallel circuits
- Solve equations that relate electric power to current, voltage, and electrical energy
- Describe devices and procedures for maintaining electrical safety

Objectives derived from Pearson Education, Inc. © Pearson Education, Inc., publishing as Pearson Prentice Hall. All rights reserved.

Lesson 4: Electronic Devices

Objectives:
- Explain how electronics convey information with analog or digital signals
- Describe electronic devices used to control electron flow
- Illustrate how semiconductors are used to make three kinds of solid-state components
- Describe how solid-state components are used in electronic devices

Objectives derived from Pearson Education, Inc. © Pearson Education, Inc., publishing as Pearson Prentice Hall. All rights reserved.

Lesson 5: Lab: Building Electrical Circuits (two-day lesson)

Objectives:
- Construct series and parallel circuits and measure the voltage and current through each

Objectives derived from Pearson Education, Inc. © Pearson Education, Inc., publishing as Pearson Prentice Hall. All rights reserved.

Lesson 6: Magnets and Magnetic Fields

Objectives:
- Describe the effects of magnetic forces and magnetic fields and explain how magnetic poles determine the direction of magnetic force
- Interpret diagrams of magnetic field lines around one or more bar magnets
- Describe Earth's magnetic field and its effect on compasses
- Explain the behavior of ferromagnetic materials in terms of magnetic domains

Objectives derived from Pearson Education, Inc. © Pearson Education, Inc., publishing as Pearson Prentice Hall. All rights reserved.

Lesson 7: Electromagnetism (two-day lesson)

Objectives:
- Describe how a moving electric charge creates a magnetic field and determine the direction of the magnetic field based on the type of charge and the direction of its motion
- Relate the force a magnetic field exerts on a moving electric charge to the type of charge and direction of its motion
- Explain how solenoids and electromagnets are constructed and describe factors that affect the field strength of both
- Describe how electromagnetic devices use the interaction between electric currents and magnetic fields

Objectives derived from Pearson Education, Inc. © Pearson Education, Inc., publishing as Pearson Prentice Hall. All rights reserved.

Lesson 8: Electrical Energy Generation and Transmission

Objectives:
- Describe how electric current is generated by electromagnetic induction
- Compare AC and DC generators and explain how they work
- Analyze factors that determine the output voltage and current produced by a transformer
- Summarize how electrical energy is produced, transmitted, and converted for use in the home

Objectives derived from Pearson Education, Inc. © Pearson Education, Inc., publishing as Pearson Prentice Hall. All rights reserved.
Lesson 9: Electricity and Magnetism Unit Review (two-day lesson)

Objectives:
- Review concepts covered in this unit

Objectives derived from Pearson Education, Inc. © Pearson Education, Inc., publishing as Pearson Prentice Hall. All rights reserved.

Lesson 10: Electricity and Magnetism Unit Test

Unit 5: Earth in the Universe

In this unit, you will explore various aspects of the solar system, including the different models of the solar system, the Earth-moon system, the eight planets, and the origin of the solar system. You will also study the sun and stars. By completing this unit, you will have a better understanding of how the sun produces energy for the solar system and how stars form.

Objectives:
- Define the geocentric and heliocentric models of the solar system
- Identify the components of the solar system
- Explain what the moon’s surface looks like
- Explain why the moon has phases and why tides occur
- Identify and compare the terrestrial planets and gas giants

Lesson 1: Exploring the Solar System

Objectives:
- Compare and contrast the geocentric and heliocentric models of the solar system
- Describe the orbits of the planets around the sun and explain how gravity and inertia keep the planets in orbit
- Name the components of the solar system
- Identify different technologies used for exploring the solar system

Objectives derived from Pearson Education, Inc. © Pearson Education, Inc., publishing as Pearson Prentice Hall. All rights reserved.

Lesson 2: The Earth-Moon System

Objectives:
- Explain why the moon lacks an atmosphere and the effect this has on the range of temperatures on the moon
- Describe the features of the moon’s surface
- State a theory about the formation of the moon
- Explain why phases of the moon, eclipses, and tides occur and interpret diagrams of the relative positions of the sun, moon, and Earth during these events

Objectives derived from Pearson Education, Inc. © Pearson Education, Inc., publishing as Pearson Prentice Hall. All rights reserved.

Lesson 3: Inner Solar System

Objectives:
- Compare the terrestrial planets and describe characteristics of each
- Define asteroids and state alternative hypotheses about how they formed

Objectives derived from Pearson Education, Inc. © Pearson Education, Inc., publishing as Pearson Prentice Hall. All rights reserved.

Lesson 4: Outer Solar System (two-day lesson)

Objectives:
- Compare the gas giants and describe characteristics of each
- Distinguish between planets and dwarf planets
- Distinguish between comets and meteoroids and describe their characteristics
- Locate and describe the Kuiper belt and the Oort cloud

Objectives derived from Pearson Education, Inc. © Pearson Education, Inc., publishing as Pearson Prentice Hall. All rights reserved.
Lesson 5: Lab: Measuring Orbital Speed of the Planets (two-day lesson)

Objectives:
- Determine how fast Earth and the other planets are moving

Objectives derived from Pearson Education, Inc. © Pearson Education, Inc., publishing as Pearson Prentice Hall. All rights reserved.

Lesson 6: The Origin of the Solar System

Objectives:
- State the nebular theory
- Relate the nebular theory to the orbits, composition, and size of the planets

Objectives derived from Pearson Education, Inc. © Pearson Education, Inc., publishing as Pearson Prentice Hall. All rights reserved.

Lesson 7: The Sun

Objectives:
- Describe how the sun produces energy
- Explain why the sun remains stable over time
- Diagram and describe the interior structure and atmospheric features of the sun

Objectives derived from Pearson Education, Inc. © Pearson Education, Inc., publishing as Pearson Prentice Hall. All rights reserved.

Lesson 8: Stars (two-day lesson)

Objectives:
- Demonstrate how distance to a star is measured
- Classify stars according to chemical and physical properties
- Interpret the H-R diagram

Objectives derived from Pearson Education, Inc. © Pearson Education, Inc., publishing as Pearson Prentice Hall. All rights reserved.

Lesson 9: Life Cycle of Stars

Objectives:
- Describe how stars form
- Estimate how long a star remains on the main sequence
- Predict what happens to a star when it runs out of fuel

Objectives derived from Pearson Education, Inc. © Pearson Education, Inc., publishing as Pearson Prentice Hall. All rights reserved.

Lesson 10: Earth in the Universe Unit Review (two-day lesson)

Lesson 11: Earth in the Universe Unit Test

Unit 6: Semester Exam and Review

In this unit, you will prepare for and take the final exam. The exam may include any material that has been presented throughout the semester. Since the final exam is comprehensive, it may be helpful to organize your notes and answers to section and chapter assessments before you begin to review.

Objectives:
- Identify strategies that will help you prepare for the final exam
- Organize your time and study materials
- Review your notes, answers to lesson questions and assessments, and essential vocabulary terms

Lesson 1: Physical Science Semester B Review (two-day lesson)

Objectives:
- Review the concepts presented throughout the course

Lesson 2: Physical Science Semester B Exam
APPENDIX A
CURRICULUM

A.2 COURSE GUIDES

d. SOCIAL STUDIES
This document is part of Appendix A: Curriculum.

It includes course guides for each Social Studies class for students in Kindergarten through Grade 12.

- Social Studies K A
- Social Studies K B
- Social Studies 1 A
- Social Studies 1 B
- Social Studies 2 A
- Social Studies 2 B
- Social Studies 3 A
- Social Studies 3 B
- Social Studies 4 A
- Social Studies 4 B
- Pennsylvania State History 4
- Social Studies 5 A
- Social Studies 5 B
- Social Studies 6 A
- Social Studies 6 B
- Social Studies 7 A
- Social Studies 7 B
- Social Studies 8 A
- Social Studies 8 B
- US History A
- US History B
- World History A
- World History B
- American Government A
- American Government B
- Economics
- Geography & Society

Course guides provide detailed information on the curriculum including course descriptions, unit summaries, lesson objectives, activities, and assessment types. Course guides include information on:

- Planned instruction (provided in the unit summary of each unit within individual Course Guides)
- Course objectives (provided in the unit and lesson objectives within individual Course Guides)
- Activities (provided in the unit summary and lesson objectives of each unit within individual Course Guides)
SOCIAL STUDIES K A
Social Studies KA

Students learn the concepts of community, nation, and world in this course. They answer essential questions including: "How do people get what they need?"; "How is culture shared?"; and "How does life change throughout history?" A combination of interactive and hands-on exercises teaches students about personal responsibility, good citizenship, and basic geography. While learning about America’s past and important historical figures, students research their personal history and heroes.

Unit 1: My Family, My School

This unit will introduce your student to the role of a good citizen and the importance of cooperating with others, being responsible and truthful, following rules and laws to stay safe, and using good manners to be respectful of others. Your student will distinguish between problems and solutions, exploring how to make decisions and solve problems that are fair, respectful, and that adhere to rules and laws. The unit makes distinctions between the home and the community, considering both the rights and responsibilities of citizens and the types of leaders in both settings. Your student will explore forms of patriotism, the nation’s symbols and monuments, and the role of government in creating laws. At the conclusion of this unit, your student should be able to explain why citizens must cooperate and be respectful of each other. He will evaluate a series of problems and brainstorm original ideas for solving them as a good citizen.

Objectives:
- Describe how people cooperate when they make decisions and work together to get a job done
- Explain that people are good citizens when they follow rules and laws
- Show how people cooperate, share ideas, listen to others, and interact positively with many different people, such as family, friends, and classmates
- Explain that U.S. symbols and monuments stand for and remind us of our country

Lesson 1: How Do People Best Cooperate? (two-day lesson)

Objectives:
- Define and describe cooperation
- Identify how you have cooperated in the past
- Identify examples of cooperation

Lesson 2: What Makes a Good Citizen?

Objectives:
- Explain that a good citizen takes turns, tells the truth, cooperates, takes part in patriotic activities, and respects others

Lesson 3: What Are Rights? What Are Responsibilities?

Objectives:
- Describe roles and responsibilities we have with our family at home and in the community
- Identify personal rights, such as the right to food, clothing, and shelter, and the right to go to school

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 4: How Do We Get Along with Others?

Objectives:
- Explain how cooperating with others and being respectful is part of being a good citizen
- Distinguish between problems and solutions
- Identify solutions for problems

Lesson 5: How Do We Find Main Ideas and Supporting Details?

Objectives:
- Identify the main idea and retell key details

Lesson 6: What Rules Do We Follow? (two-day lesson)
Objectives:
• Explain why good citizens follow rules and laws
• Describe rules at home and in the community
• Identify the sequence of events, characters, and setting in a story about rules

Lesson 7: Who Are Our Leaders? (two-day lesson)
Objectives:
• Identify leaders at home and in the community
• Explain how leaders help people

Lesson 8: How Do We Make Decisions? (two-day lesson)
Objectives:
• Describe how a person makes decisions and weighs consequences
• Explain that groups make decisions by discussing and voting on choices
• Make decisions about example problems

Lesson 9: How Do We Solve Problems as Good Citizens?
Objectives:
• Propose solutions to problems that are fair and consistent with good citizenship

Lesson 10: What Are Our Country’s Symbols? (two-day lesson)
Objectives:
• Identify important symbols that stand for our country
• Describe why we have symbols

Lesson 11: What Are Our Country’s Monuments?
Objectives:
• Identify why U.S. monuments and buildings are important
• Identify where the President of the United States lives and works

Lesson 12: My Family, My School Unit Test
Objectives:
• Describe how people cooperate when they make decisions and work together to get a job done
• Explain that people are good citizens when they follow rules and laws
• Show how people cooperate, share ideas, listen to others, and interact positively with many different people, such as family, friends, and classmates
• Explain that U.S. symbols and monuments stand for and remind us of our country

Unit 2: Everybody Works
This unit will introduce your student to the basic economic fundamentals of wants and needs and how to meet them, making choices when there is scarcity. Your student will focus on different types of jobs, the tools that workers use, various job locations, and how people choose the right job to earn money and provide for their wants and needs. Some jobs provide goods while others provide services, and your student will distinguish between these types of work. Your student will also explore the bills and coins in our currency and use them to buy, sell, or trade, making choices about what needs and wants to satisfy based on a budget, considering how saving could improve purchasing power in the future, and exploring how scarcity impacts the pricing of goods and services. At the end of this unit, your student will participate in a buy, sell, and trade simulation and should be able to explain how people get what they need.

Objectives:
• Explain why people make choices about needs and wants
Lesson 1: How Do People Get What They Need? (two-day lesson)

Objectives:
• Explain that people have jobs to get the things that they need

Lesson 2: What Do We Need? What Do We Want?

Objectives:
• Distinguish between needs and wants

Lesson 3: How Do We Get What We Need or Want? (two-day lesson)

Objectives:
• Recognize that people work to earn money to buy things they need or want
• Explain that people buy, sell, and trade to get what they want or need

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 4: How Do We Use Money? (two-day lesson)

Objectives:
• Recognize that United States currency comes in different forms
• Recognize that people work to earn money to buy things they need or want

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 5: How Do Good Citizens Speak and Listen to Others?

Objectives:
• Speak to others using a clear voice and eye contact
• Listen politely and attentively as a good citizen when others speak

Lesson 6: What Are Jobs That People Do? (two-day lesson)

Objectives:
• Describe jobs that people do and the tools that they need to work
• Explain that people work to earn money to pay for things that they want and need

Lesson 7: How Do We Compare and Contrast Two Things?

Objectives:
• Compare and contrast different jobs and their tools

Lesson 8: Why Do We Make Choices?

Objectives:
• Recognize that there is a limit to money and goods
• Explain that people must make choices because they cannot have everything they want

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 9: What Are Goods and Services?

Objectives:
• Distinguish between goods and services

Lesson 10: How Do We Buy, Sell, and Trade?

Objectives:
• Act out buying, selling, and trading
• Discuss choices made when buying, selling, and trading
Lesson 11: Everybody Works Unit Test

Objectives:
• Explain why people make choices about needs and wants.
• Describe how people do many kinds of work making goods or providing services.
• Infer that people buy things because they cannot make everything themselves.
• Explain that people sell things because others want to buy them.

Unit 3: Where We Live

This unit will address concepts about where your student lives. Your student will consider his exact address and how maps and globes represent this address, neighborhoods, and other landforms and bodies of water. He will use cardinal directions and positional words to describe objects’ relative locations on maps and globes, and he will classify common map representations, like land and water, into categories. At the end of this unit, your student should be able to describe where he lives and how to use a map to understand his neighborhood or the land and water around him.

Objectives:
• Explain how maps and globes are simple representations of places on Earth
• Identify that the world is made up of landforms and bodies of water
• Describe how the weather and seasons affect what people wear and do
• Describe how physical features are located in specific places and how words can be used to describe the locations of human and physical features
• Identify that people use the world’s natural resources to satisfy basic needs

Lesson 1: What Is the World Like? (two-day lesson)

Objectives:
• Explain that the place where a person or animal lives affects how he/it lives

Lesson 2: Where Do We Live? (two-day lesson)

Objectives:
• Identify your address
• Describe places in your neighborhood and community

Lesson 3: Where Are Places Located?

Objectives:
• Describe the relative location of people, places, and things by using positional words
• Use directions and positional words to describe the locations of one place relative to another
• Locate and describe places in the school and in the community

Lesson 4: What Do Maps Show? (two-day lesson)

Objectives:
• Explain that maps are simple, pictorial representations of large and small places on Earth
• Explain that maps help to locate different places
• Locate and distinguish between land and water on maps
• Identify physical and human characteristics of a place on a map
• Identify map symbols

Lesson 5: What Are Cardinal Directions?

Objectives:
• Identify cardinal directions
Lesson 6: What Are Landforms?

Objectives:
- Identify basic landforms on a map and in images

Lesson 7: What Are Bodies of Water?

Objectives:
- Identify basic bodies of water (oceans, rivers, lakes)
- Differentiate between land and water on a map

Lesson 8: What Do Globes Show?

Objectives:
- Explain that a globe helps to locate different places and is a model of the Earth
- Differentiate land and water features on globes

Lesson 9: Where We Live Unit Test

Objectives:
- Explain how maps and globes are simple representations of places on Earth
- Identify that the world is made up of landforms and bodies of water
SOCIAL STUDIES K B
**Social Studies K B**

Students learn the concepts of community, nation, and world in this course. They answer essential questions including: "How do people get what they need?"; "How is culture shared?"; and "How does life change throughout history?" A combination of interactive and hands-on exercises teaches students about personal responsibility, good citizenship, and basic geography. While learning about America’s past and important historical figures, students research their personal history and heroes.

**Unit 1: More Where We Live**

This unit addresses concepts about where your student lives. Your student will explore the four seasons and types of weather in terms of how they affect what people wear and how they behave. Earth is full of natural resources that people use to meet their needs. Your student will learn to differentiate man-made from natural resources and consider how the location of physical features and natural resources affect where people live and work. Your student will complete a culminating activity linking seasons, weather, physical features of Earth, and resources that people need in those scenarios. At the end of this unit, your student should be able to recognize how features of weather and resources affect the way he behaves.

Objectives:
- Describe how the weather and seasons affect what people wear and do
- Describe how physical features are located in specific places
- Identify how people use the world’s natural resources to satisfy basic needs

**Lesson 1: What Is Weather Like? (two-day lesson)**

Objectives:
- Identify weather as a physical characteristic of a place
- Describe daily weather and its effects on people and places

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

**Lesson 2: What Are the Seasons?**

Objectives:
- Identify the four seasons
- Describe patterns of weather and the effects on people and places
- Describe how seasonal changes affect people

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

**Lesson 3: How Do We Identify Cause and Effect? (two-day lesson)**

Objectives:
- Identify how weather and landforms/bodies of water affect the way that people live in their communities

**Lesson 4: How Do We Use Earth’s Resources? (two-day lesson)**

Objectives:
- Describe how human and physical characteristics of a place affect how and where people live
- Identify ways people use natural resources to satisfy basic needs
- Identify human-made and natural resources

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

**Lesson 5: How Does Our Environment Affect Us?**

Objectives:
- Explain how the weather and Earth’s natural resources affect our behavior

**Lesson 6: More Where We Live Unit Test**

Objectives:
- Describe how the weather and seasons affect what people wear and do
• Describe how physical features are located in specific places and how words can be used to describe the locations of human and physical features
• Identify that people use the world’s natural resources to satisfy basic needs

Unit 2: Our Traditions

This unit will introduce your student to the diversity among cultures around the world. Your student will define culture and recognize its impact on groups of people and its many forms such as dress, music, traditions, and celebrations. During this course, your student will recognize that people, families, communities, and cultures can be alike and different, and that people must respect each other’s differences. Your student will explore family celebrations as well as a selection of important American holidays and folk heroes. She will complete a culminating activity that will explore a familiar holiday and its importance in greater depth. At the conclusion of this unit, your student will be able to explain the value of other cultures and how her own culture may differ from other cultures around the world.

Objectives:

• Recognize that people are alike and different
• Explain that people celebrate in many ways
• Recognize that we learn about our country through stories and holidays
• Explain that we are all part of a culture
• Describe that there are many different cultures around the world

Lesson 1: What Are Your Family Traditions? (two-day lesson)

Objectives:

• Explain that you learn about your family, neighborhood, and country through stories and holidays
• Contrast ways that people celebrate

Lesson 2: How Are People Alike and Different?

Objectives:

• Explain that people have both similarities and differences
• Identify ways in which people are alike and different

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 3: How Do We Classify Objects into Categories?

Objectives:

• Classify types of communities where different people live

Lesson 4: How Are Families Alike and Different?

Objectives:

• Describe how individuals and families grow and change
• Recognize nontraditional families

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 5: What Is Culture? (two-day lesson)

Objectives:

• Recognize that there are many different cultures
• Describe how culture is shared through art, music, customs, traditions, family celebrations, and language

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 6: How Do We Celebrate? (two-day lesson)

Objectives:

• Identify celebrations as ways to show how we feel about special people and events
• Explain that people celebrate in different ways

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.
Lesson 7: What Are National Holidays? (two-day lesson)

Objectives:
• Explain that we celebrate special days to remember and honor people and events from our nation's past
• Compare our nation's holidays with holidays of other cultures

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 8: Who Are American Folk Heroes? (two-day lesson)

Objectives:
• Recognize that stories about folk heroes and legends convey traditions and values about America's past
• Distinguish fact from fiction in American folk tales

Unit 3: Life Then and Now

This unit will introduce your student to the importance of history and how we learn about it. People, families, schools, communities, and countries all have a history that we can study through books, stories, computers, and primary sources such as photographs. History follows a chronological order that we can measure and describe using sequencing words and timelines. We can learn valuable lessons from history, especially by studying the courageous lives and actions of American heroes. In this unit, your student will learn about change and continuity over time and how individuals play important roles in history. The culminating activity will challenge your student to create a personal timeline of important events over his life.

Objectives:
• Explain that things change over time
• Recognize that time can be measured
• Explain that history is the story of our past
• Identify that we learn about history from primary and secondary sources

Lesson 1: How Does Life Change Throughout History? (two-day lesson)

Objectives:
• Recognize that history describes the past
• Explain that we can learn about history from books, computers, museums, and people

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 2: What Is My Personal History?

Objectives:
Explain that every person has a history

Lesson 3: How Do We Order Events In History?

Objectives:
• Describe events of their day using sequence words
• Arrange pictures and events in sequence
• Use sequence words such as first, next, and last

Lesson 4: How Do We Talk About Time?

Objectives:
• Describe daily events in time order
• Use words related to time and chronology, such as before, after, and now, to describe events of the school day in time order

Lesson 5: How Do We Measure Time?

Objectives:
• Recognize that time can be measured
• Identify that time can be measured in days, weeks, months, and years
• Explain that calendars represent days of the week and months of the year
• Use terms related to time

Lesson 6: What Is A Timeline? (two-day lesson)

Objectives:
• Recognize that change occurs over time
• Explain what a timeline shows
• Describe how to place key events on a timeline
• Explain how to read timelines

Lesson 7: How Can We Learn About History?

Objectives:
• Describe ways people learn about the past
• Identify ways we can learn about history
• Compare information from different types of sources
• Develop an awareness of a primary source

Lesson 8: How Do We Use Illustrations?

Objectives:
• Use photographs to make predictions
• Match photographs to text content

Lesson 9: Who Are American Heroes from the Past? (two-day lesson)

Objectives:
• Identify important people in U.S. history and their contributions
• Describe actions of important individuals and how their actions affected the nation

Lesson 10: How Have Families Changed? (two-day lesson)
Lesson 11: How Has School Changed? (two-day lesson)

Objectives:
- Describe how school today is the same as and different from school in the past
- Compare photographs of schools today and schools in the past

Lesson 12: How Have Communities Changed?

Objectives:
- Describe people and places in the school and in the community
- Examine photographs of communities today and in the past and summarize changes

Lesson 13: How Has Technology Changed? (two-day lesson)

Objectives:
- Explain how technology meets people’s needs
- Identify ways we use tools and technology today
- Identify ways everyday life has both changed and remained the same

Lesson 14: How Do I Create My Personal Timeline? (two-day lesson)

Objectives:
- Create a timeline to represent important events from the student’s personal history

Lesson 15: Life Then and Now Unit Test

Objectives:
- Explain that things change over time
- Recognize that time can be measured
- Explain that history is the story of our past
- Identify that we learn about history from primary and secondary sources
SOCIAL STUDIES 1 A
Social Studies 1 A

Social Studies 1 A focuses on how people in communities work together for the common good. The course text is Scott Foresman’s All Together. Your student will learn about the various ways individuals contribute to their communities. The course emphasizes the concepts of good citizenship, neighborhoods, and economics. Your student will build reading and listening skills through the course activities. Your student will explore maps, photographs, biographies, illustrations, poetry, music, and other resources to learn more about communities. Multimedia resources, including Teachlet® tutorials, videos, and interactive Web sites, enhance and support the content.

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Unit 1: Time for School

In this unit, your student will explore the question "Why do we go to school?" He will learn that people form groups. A family is one type of group. He will discuss the rules and routines for home and school. Using biographies and stories about the past, he will understand how schools have changed over time.

Objectives:
- Explain why students go to school
- Define and give examples of rules
- Read a calendar
- Recognize changes between past and present
- Understand the meaning of the word "group"

Lesson 1: Time for School Unit Introduction

Objectives:
- Learn why children attend school

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 2: Families Long Ago

Objectives:
- Learn about families 200 years ago by using a variety of visual sources, such as artifacts and photographs
- Obtain information about a topic using pictures
- Describe the kinds of activities families from long ago did together and compare them with family activities today

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 3: Home and School

Objectives:
- Explain how selected symbols reflect an American love of individualism and freedom
- Explain how routines are part of our daily life at home and at school

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 4: Citizenship: Ruby Bridges Hall

Objectives:
- Identify characteristics of good citizenship, such as a belief in equality

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 5: Read a Calendar

Objectives:
- Read and create a calendar
Lesson 6: Rules We Follow

Objectives:
- Give examples of rules
- Identify the responsibilities of authority figures in the school and home
- Explain the need for rules and laws in the home, school, and community

Lesson 7: Learning About My School

Objectives:
- Obtain information about a topic using a variety of oral sources, such as interviews
- Compare past and present

Lesson 8: Things We Use

Objectives:
- Recognize that things change over time

Lesson 9: Unit 1 Portfolio: My School

Objectives:
- Identify activities that are part of school and learning
- Describe the student's school day

Lesson 10: Unit Review

Objectives:
- Review the main ideas and vocabulary from Unit 1

Lesson 11: Unit Test

Unit 2: In My Community

In this unit, your student will study the features of a neighborhood, focusing on her own neighborhood as well as other neighborhoods in our country. She will use maps to learn more about her community and country. She will identify how community leaders and volunteers work to improve their communities. She will explore how communities come together to celebrate.

Lesson 1: In My Community Unit Introduction

Objectives:
- Obtain information using oral sources, such as conversations, interviews, and music

Lesson 2: Welcome to My Neighborhood

Objectives:
- Identify buildings in relation to the school and neighborhood
- Recognize that communities include people who have diverse ethnic origins, customs, and traditions and who make contributions to their communities
Lesson 3: Map and Globe Skills: Use a Map Key

Objectives:
• Use map keys to identify locations on simple maps

Lesson 4: Different Kinds of Communities

Objectives:
• Explain similarities and differences between life in city, town, suburban, and farm communities
• Distinguish among the past, present, and future and identify changes in the community

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 5: Map and Globe Skills: Use Four Directions

Objectives:
• Locate places using the four cardinal directions

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 6: Special Things We Do

Objectives:
• Describe various customs and traditions and explain their importance
• Obtain information about a topic using a variety of oral sources, such as conversations
• Describe selected customs

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 7: Chinese New Year

Objectives:
• Describe community celebrations
• Describe various customs of families
• Obtain information about a topic using a variety of visual sources, such as pictures

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 8: Community Laws and Leaders

Objectives:
• Explain the need for laws in the community
• Identify the responsibilities of authority figures in the community
• Describe the role of public officials including the mayor

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 9: Where in the World Do I Live?

Objectives:
• Locate places of significance on maps

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 10: Continents and Oceans

Objectives:
• Locate continents and oceans on maps

Lesson 11: In My Community Unit Portfolio

Objectives:
• Complete the In My Community Portfolio

Lesson 12: In My Community Unit Review

© 2016 Connections Education LLC. All rights reserved.
Lesson 13: Unit 2 Test

Unit 3: Work! Work! Work!

In this unit, your student will examine the importance of work to a community. He will learn how different people contribute to the community by working. He will study basic economic concepts such as needs, wants, spending, and saving. He will examine different types of jobs. Your student will explain how different types of transportation help to move goods and people.

Objectives:
- Identify different reasons why people work
- Explain how people contribute to their community through their jobs
- Discuss the difference between a need and a want
- Identify choices that people make about spending and saving
- Describe ways that goods are transported from place to place

Lesson 1: Work! Work! Work! Introduction

Objectives:
- List the different jobs that many people do
- Determine the meanings of words
- Recognize words that help tell order
- Analyze pictures and text to identify sequence

Lesson 2: Ben's Jobs

Objectives:
- Describe the requirements of various jobs and the characteristics of a job well-performed
- Express ideas orally based on knowledge and experiences

Lesson 3: Needs and Wants

Objectives:
- Describe ways that families meet basic human needs
- Distinguish between wants and needs
- Explain how people fulfill wants and needs

Lesson 4: Then and Now: Changing Toys

Objectives:
- Distinguish among past, present, and future
- Compare and contrast toys from the past and today

Lesson 5: Spending and Saving

Objectives:
- Identify examples of people wanting more than they can have
- Explain why wanting more than they can have requires that people make choices
- Identify examples of choices families make when buying goods and services
Lesson 6: Money Around the World

Objectives:
- Obtain information about a topic using visual sources, such as pictures and maps

Lesson 7: Welcome to Job Day

Objectives:
- Identify examples of goods and services in the home, school and community
- Describe the requirements of various jobs and the characteristics of a job well-performed
- Describe how specialized jobs contribute to the production of goods and services

Lesson 8: Kid's Kitchen

Objectives:
- Understand characteristics of good citizenship as exemplified by ordinary people
- Identify characteristics of good citizenship, such as responsibility for the common good
- Explain that people can both give and receive care

Lesson 9: Meet Clara Barton

Objectives:
- Identify contributions of historical figures who have influenced the nation
- Identify historic figures such as Clara Barton who have exemplified good citizenship

Lesson 10: Interview with a Farmer

Objectives:
- Describe how specialized jobs contribute to the production of goods and services
- Obtain information about a topic using a variety of oral sources, such as interviews
- Identify the role of markets in the exchange of goods and services

Lesson 11: Map and Globe Skills: Follow a Route

Objectives:
- Use a simple map to identify the location of places
- Locate places of significance on maps

Lesson 12: George Washington Carver

Objectives:
- Identify a historic figure who has exhibited a love of individualism and inventiveness
- Identify contributions of historical figures in the period of history since 1880
Lesson 13: From Place to Place

Objectives:
- Identify the role of transportation in the exchange of goods
- Describe how technology has changed transportation

Lesson 14: Unit 3 Portfolio: Jobs in Your Community

Objectives:
- Identify the goods and services that community workers contribute to the community

Lesson 15: Work! Work! Work! Review

Objectives:
- Review the main ideas and key words of Unit 3

Lesson 16: Work! Work! Work! Test
SOCIAL STUDIES 1 B
Social Studies 1 B

Social Studies 1 B focuses on how people in communities work together for the common good. The course text is Scott Foresman's *All Together*. Your student will learn about the various ways individuals contribute to their communities. In this semester, your student will go beyond his role in the local community to the study of our country and our world. The concept of good citizenship is woven throughout the course as your student learns about caring for our environment. Your student will build reading and listening skills through the course activities. Your student will explore maps, photographs, illustrations, poetry, music, and other resources to learn more about communities. Multimedia resources, including Teachlet® tutorials, videos, and interactive Web sites, enhance and support the content.

Unit 1: Our Earth, Our Resources

In this unit, your student will learn about our environment. He will study how the weather, seasons, and resources affect our lives. He will use maps and globes to identify land and water features. He will explore how people work together to conserve resources.

Objectives:
- Explain how weather impacts place
- Identify different types of landforms and bodies of water
- Explain actions that help take care of our Earth's resources
- Define and give examples of natural resources
- Describe how farming has changed over the years

Lesson 1: Our Earth, Our Resources Introduction

Objectives:
- Obtain information about a topic using a variety of oral sources such as music
- Use pictures to obtain information
- Identify main ideas from print sources

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 2: Different Kinds of Weather

Objectives:
- Identify and describe the physical characteristics of places, such as weather and climate
- Describe how climate affects the way people live, including their clothing and recreation
- Use vocabulary related to chronology, including yesterday, today, and tomorrow

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 3: Chart and Graph Skills: Read a Time Line

Objectives:
- Distinguish among past, present, and future
- Create a time line
- Create visual and written material including time lines
- Interpret information presented in picture time lines to show sequence of events

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 4: Looking at Our Land and Water

Objectives:
- Identify and describe the physical characteristics of places such as landforms and bodies of water
- Describe how location and physical surroundings affect the way people live, including their recreation

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.
Lesson 5: Map and Globe Skills: Locate Land and Water

Objectives:
• Identify a globe as a model of Earth
• Distinguish between land and water on globes and maps
• Relate locations on globes to locations on Earth

Lesson 6: Our Earth’s Resources

Objectives:
• Identify and describe the physical characteristics of places such as natural resources
• Identify examples of and uses for natural resources in the community, state, and nation

Lesson 7: Interview about Farm History

Objectives:
• Distinguish among past, present, and future
• Identify examples of and uses for natural resources

Lesson 8: Caring for Our Resources

Objectives:
• Identify ways that natural resources can be used and reused

Lesson 9: Endangered Animals

Objectives:
• Obtain information about a topic using maps and pictures
• Identify ways that protecting natural resources helps animals
• Respond to important problems with Earth’s natural resources

Lesson 10: Our Earth, Our Resources Portfolio

Objectives:
• Identify characteristics of good citizenship such as responsibility for the common good
• Identify ordinary people who exemplify good citizenship

Lesson 11: Our Earth, Our Resources Unit Review

Objectives:
• Review the main ideas and key words of the unit

Lesson 12: Unit 4 Test

Unit 2: This Is Our Country

In this unit, your student will study our country’s history, traditions, and symbols. She will read biographies of famous Americans, including Benjamin Franklin, Abraham Lincoln, and Eleanor Roosevelt. She will learn how we choose our country’s leaders.

Objectives:
• Explain the significance of important national symbols and holidays
• Describe the Native American societies
• Discuss how citizens participate in the selection of leaders
Reach Cyber Charter School Application

- Discuss the contributions made by Ben Franklin, Eleanor Roosevelt, and Abraham
  Lincoln
- Discuss reasons for European migration to the Americas during the colonial period

Lesson 1: This Is Our Country Unit Introduction

Objectives:
- Obtain information using oral sources, such as music
- Recall and retell events or ideas
- Express ideas based on oral and written sources
- Describe various customs of families
- Describe ways that families meet basic needs

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its
affiliates. All rights reserved.

Lesson 2: Native Americans

Objectives:
- Obtain information about a topic using a variety of visual sources such
  as maps
- Describe similarities and differences in ways families meet basic needs

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its
affiliates. All rights reserved.

Lesson 3: Native American Objects

Objectives:
- Obtain information about a topic using a variety of visual sources such
  as pictures and artifacts

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its
affiliates. All rights reserved.

Lesson 4: Early Travelers to America

Objectives:
- Describe the origin of selected holidays
- Cite reasons for observing holidays that originated prior to 1880

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its
affiliates. All rights reserved.

Lesson 5: The Colonies Become Free

Objectives:
- Describe the origins of selected holidays and celebrations such as
  Independence Day
- Describe the events associated with Independence Day
- Explain how selected celebrations reflect an American love of freedom
- Identify historic figures such as Nathan Hale who have exemplified good
  citizenship
- Identify contributions of historic figures such as George Washington

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its
affiliates. All rights reserved.

Lesson 6: Benjamin Franklin

Objectives:
- Identify contributions of historical figures who have influenced the nation
- Identify historic figures who have exhibited a love of inventiveness

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its
affiliates. All rights reserved.

Lesson 7: Symbols in Our Country

Objectives:
- Identify the motto of the United States
- Explain selected national and state patriotic symbols such as the Liberty
  Bell and the eagle
- Identify symbols that represent the United States and what it stands for
Lesson 8: Our Country’s Flag

Objectives:
- Explain selected national patriotic symbols such as the United States flag
- Distinguish between past and present
- Explain how selected symbols reflect an American love of freedom

Lesson 9: We Celebrate Holidays

Objectives:
- Describe the origins of selected holidays and celebrations of the nation such as Martin Luther King, Jr. Day and Veterans Day
- Cite reasons for observing special days and holidays
- Describe the lives of people commemorated by Presidents’ Day

Lesson 10: Abraham Lincoln

Objectives:
- Identify contributions of historical figures such as Abraham Lincoln who have influenced the nation
- Describe the lives of people commemorated by Presidents’ Day

Lesson 11: Choosing Our Country’s Leaders

Objectives:
- Identify leaders in the state and nation
- Describe the roles of public officials including governor and president
- Locate Washington, D.C. and the capital of your state on a United States map

Lesson 12: Eleanor Roosevelt

Objectives:
- Identify historic figures such as Eleanor Roosevelt who have exemplified good citizenship
- Identify characteristics of good citizenship such as a belief in justice, truth, equality, and responsibility for the common good

Lesson 13: This Is Our Country Unit Review

Objectives:
- Review the main ideas and key words of the unit

Lesson 14: Unit 5 Test

Unit 3: Our Country, Our World

In this unit, your student will learn how our country is part of the global community. He will study the inventions, communication tools, and means of transportation that allow us to connect to the rest of the world. He will explore how children around the world are similar and different.

Objectives:
- Explain the purpose of markets
Identify some of the technological advances that have changed communities
Read and interpret graphs
Explain the roles that individuals have played in making technological advances
Explain how individuals and communities preserve tradition through stories

Lesson 1: Our Country, Our World
Objectives:
• Obtain information about a topic using a variety of oral sources such as songs
• Recognize words that help make a prediction
• Analyze pictures and text to make a prediction
• Make a prediction based on information given

Lesson 2: Visiting the Market
Objectives:
• Identify the role of markets in the exchange of goods and services

Lesson 3: How Things Have Changed
Objectives:
• Describe how household tools and appliances have changed
• Describe how technology has changed recreation
• Describe how technology has changed the way people work

Lesson 4: Inventors and Inventions
Objectives:
• Describe how technology has changed communication
• Identify historic figures such as Alexander Graham Bell and Thomas Edison who have exhibited a love of inventiveness

Lesson 5: Telephones
Objectives:
• Obtain information about a topic using a variety of visual sources, such as pictures
• Describe how technology has changed communication

Lesson 6: How Travel Has Changed
Objectives:
• Describe how technology has changed transportation

Lesson 7: Life Around the World
Objectives:
• Compare housing, clothes, and foods from different parts of the world

Lesson 8: Our Country, Our World Portfolio (two-day lesson)
Objectives:
• Label a map
• Identify characteristics of place
Lesson 9: Chart and Graph Skills: Read a Bar Graph

Objectives:
- Obtain information about a topic using a variety of visual sources, such as pictures
- Create visual and written material, including graphs

Lesson 10: Lawrence Yep

Objectives:
- Identify people who exhibit a love of individualism

Lesson 11: Our Country, Our World Unit Review

Objectives:
- Review the main ideas and Key Words of the unit

Lesson 12: Unit Test
SOCIAL STUDIES 2 A
Social Studies 2 A

In Social Studies 2, your student continues to be introduced to basic concepts in history, geography, economics, government, and world cultures. She will practice basic map, chart, graph, and thinking skills through structured instruction and activities. She will learn about ordinary individuals who showed good citizenship and famous people who have influenced our country and the world. Through Learning Coach-led discussions, textbook readings, interactive activities and hands-on projects, your student will continue to explore the world through the lens of Social Studies.

Unit 1: Where We Live

Unit 1 emphasizes the study of place. Starting with the home and school, your student will explore where he lives in ever growing circles of neighborhood, community, state, country, and world. He will compare rural, suburban, and urban communities. Your student will learn how to locate his community, state, and country on a map. He will learn how communities change over time. Your student will learn about individuals who have contributed to their communities. Finally, he will practice reading maps and following a process to solve a problem.

Objectives:
- Differentiate between neighborhood, community, state, country, and world
- Compare rural, suburban, and urban communities
- Read basic maps
- Solve a problem by following a process

Lesson 1: Where We Live Unit Preview

Objectives:
- Use pictures to obtain information
- Determine the meanings of words

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 2: Living in a Neighborhood

Objectives:
- Identify ways people can work together in the classroom and community by obeying rules and laws
- Explain how rules can be made and changed by voting

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 3: Citizen Heroes: Kids Care Clubs

Objectives:
- Identify people who model good citizenship

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 4: Problem Solving at the Library

Objectives:
- Use a problem-solving process

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 5: A Walk Through a Community

Objectives:
- Recognize diversity in communities

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 6: Map and Globe Skills: Read a City Map

Objectives:
Lesson 7: Then and Now: How a Community Changes

Objectives:
- Use vocabulary related to chronology, including past, present, and future
- Name several sources of information about a given period

Lesson 8: Comparing Communities

Objectives:
- Compare rural, urban, and suburban communities

Lesson 9: Our State and Country

Objectives:
- Locate communities, states, and countries on maps
- Identify state and national symbols

Lesson 10: Where We Live Unit Biography

Objectives:
- Identify contributions of contemporary figures
- Identify individuals of past and present significance to the communities and nation

Lesson 11: Our Country Is a Part of the World

Objectives:
- Demonstrate map and globe skills

Lesson 12: Where We Live Unit Portfolio

Objectives:
- Complete the Where We Live unit portfolio

Lesson 13: Where We Live Unit Review

Objectives:
- Review the main ideas and key terms from Unit 1

Lesson 14: Where We Live Unit Test

Unit 2: Our Earth

Unit 2 focuses on the landforms and resources of Earth. Your student will learn to identify basic landforms and bodies of water in pictures and on maps. She will identify how physical features such as landforms can define regions. She will learn about how farmers use Earth’s resources to produce products. Your student will define natural resources and learn the importance of conserving our natural resources. She will learn about people who have helped conserve our natural resources. Finally, your student will practice reading symbols on maps.

Objectives:
- Identify landforms and bodies of water in pictures and on maps
- Identify natural resources
- Describe how natural resources are used
Lesson 1: Our Earth Unit Preview

Objectives:
- Use pictures to obtain information
- Determine the meanings of words

Lesson 2: Interview with a Geographer

Objectives:
- Identify landforms and bodies of water
- Obtain information through interviews

Lesson 3: Map and Globe Skills: Landforms and Water on a Map

Objectives:
- Identify major landforms and bodies of water on a map

Lesson 4: Where People Live

Objectives:
- Compare similarities and differences among families in different communities
- Explain that areas can be classified as regions according to physical criteria

Lesson 5: My Country, Many Shapes: Part 1

Objectives:
- Review different bodies of water and landforms
- Invent and describe a country

Lesson 6: From My Orchard to You

Objectives:
- Distinguish between producing and consuming
- Trace the development of a product from a natural resource to a finished product

Lesson 7: Our Earth's Resources

Objectives:
- Explain how people depend on the physical environment and its resources to meet their needs
- Identify ways to conserve and replenish natural resources

Lesson 8: Caring For Our Resources

Objectives:
- Identify ways people can conserve and replenish natural resources

Lesson 9: My Country, Many Shapes: Part 2

Objectives:
Lesson 10: Our Earth Unit Biography

Objectives:
- Identify characteristics of good citizenship such as a belief in justice, truth, equality, and responsibility for the common good
- Identify ways people can conserve and replenish natural resources

Lesson 11: Citizen Heroes: The Earth's Angels

Objectives:
- Identify ordinary people who exemplify good citizenship

Lesson 12: My Country, Many Shapes: Part 3

Objectives:
- Demonstrate knowledge of landforms by creating a model of an imaginary country
- Demonstrate knowledge of symbols by explaining choices of certain materials and symbols to represent certain landforms

Lesson 13: Our Earth Unit Review

Objectives:
- Review the main ideas and key terms from Unit 2

Lesson 14: Our Earth Unit Test

Unit 3: Working Together

Unit 3 builds a basic knowledge of economic concepts. Your student will explore the choices that people make while earning, spending, and saving money. He will learn about common services provided in most communities. Your student will define producers and consumers and learn the steps that a product takes from natural resource to finished product. He will be introduced to the purpose of saving and the various services banks offer to their customers. Your student will learn about why countries trade goods among themselves. Finally, your student will practice reading pie charts and using compass roses on maps.

Objectives:
- Identify key vocabulary such as goods, services, producers, and consumers
- Discuss the choices people make while earning, spending, and saving money
- Use a compass rose on a map
- Read a pie chart
- Explain why countries trade

Lesson 1: Working Together Unit preview

Objectives:
- Determine the meanings of words

Lesson 2: Choosing Goods and Services

Objectives:
- Explain how work provides income to purchase goods and services
- Explain the choices people make about earning, spending, and saving money

Lesson 3: Thinking Skills: Make a Decision
Objectives:
- Use a decision-making process
- Explain that scarcity requires people to make choices

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 4: Citizen Heroes: Phoenix Kids Pride Program

Objectives:
- Identify ordinary people who exemplify good citizenship

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 5: Services in Our Community

Objectives:
- Identify people who provide services to our community
- Identify some governmental services in the community

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 6: Goods from the Factory to You

Objectives:
- Distinguish between producing and consuming
- Identify ways that people are both producers and consumers
- Trace the development of a product from natural resources to finished product

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 7: Map and Globe Skills: Use a Compass Rose

Objectives:
- Use a map to follow a route

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 8: A Trip to the Bank

Objectives:
- Explain the choices people can make about earning, spending, and saving money

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 9: Chart and Graph Skills: Read a Pie Chart

Objectives:
- Obtain information from a pie chart
- Construct a pie chart

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 10: Biography: Linda Alvarado or Florence Nightingale

Objectives:
- Identify historic figures who have exemplified good citizenship
- Identify ordinary people who exemplify good citizenship

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 11: Countries Trade and Move Goods

Objectives:
- Explain how countries are linked by trade and transportation

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.
Lesson 12: Then and Now: Bartering Goods

Objectives:
- Distinguish between the use of barter and money in the exchange of goods and services

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 13: Working Together Unit Portfolio

Objectives:
- Complete the Working Together portfolio

Lesson 14: Working Together Unit Review

Objectives:
- Review the main ideas and Key Words from Unit 3

Lesson 15: Working Together Unit Test
SOCIAL STUDIES 2 B
Social Studies 2 B

In Social Studies 2, your student continues to be introduced to basic concepts in history, geography, economics, government, and world cultures. She will practice basic map, chart, graph, and thinking skills through structured instruction and activities. She will learn about ordinary individuals who showed good citizenship and famous people who have influenced our country and the world. Through Learning Coach-led discussions, textbook readings, interactive activities, and hands-on projects, your student will continue to explore the world through the lens of Social Studies.

Unit 1: Our Country Today

Unit 1 builds a basic knowledge of government. Your student will learn about local, state, and federal government. He will learn about the role and purpose of government. Your student also will learn ways that public officials are chosen, including by election and by appointment. He will be introduced to famous Americans who have worked to better the government and lives of Americans. Your student will be introduced to common symbols, songs, and monuments that represent the United States. Finally, he will practice using map grids.

Objectives:
- Explain the purpose of government
- Describe local, state, and federal government
- Explain the importance of voting
- Read and interpret maps and graphs
- Identify and discuss the significance of important symbols of American freedom

Lesson 1: Our Country Today Unit Preview

Objectives:
- Use pictures to learn about a topic
- Determine the meanings of words

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 2: Local Government

Objectives:
- Identify functions of government
- Compare the roles of public officials

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 3: Citizen Heroes: Anna Beavers

Objectives:
- Identify characteristics of good citizenship

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 4: State Government

Objectives:
- Describe how governments establish order, provide security, and manage conflict

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 5: Federal Government

Objectives:
- Identify the functions of government

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 6: Voting for Leaders
Objectives:
• Identify ways that public officials are selected, including election and appointment to office

Lesson 7: Biography: Susan B. Anthony or Thurgood Marshall

Objectives:
• Identify characteristics of good citizenship such as a belief in justice, truth, equality, and responsibility for the common good
• Identify significant individuals in United States history who have worked to achieve equality and improve individual lives
• Identify contributions of historical figures who have influenced the community, state, and history

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 8: The Land of Freedom

Objectives:
• Identify patriotic songs, symbols, and mottoes
• Identify people who have worked to improve the lives of American citizens
• Identify buildings, statues, and monuments associated with national history

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 9: Use a Map Grid

Objectives:
• Find locations on maps

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 10: Map Grids

Objectives:
• Find locations on maps

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 11: Flags Around the World

Objectives:
• Identify flags as national symbols throughout the world

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 12: Our Country Today Unit Portfolio

Objectives:
• Identify parts of a letter
• Describe a problem in the community

Lesson 13: Our Country Today Unit Review

Objectives:
• Define the key words for the unit
• Explain the main ideas of the unit

Lesson 14: Our Country Today Unit Test

Unit 2: Our Country Long Ago

Unit 2 introduces your student to some common events in the United States’ past. Your student will learn about several Native American groups and how their environments affected their lifestyles. She will learn about early colonists who came to America, and how
those colonists later fought for independence. She will learn about the westward expansion of the United States. Finally, your student will practice using time lines and map scales.

Objectives:
• Describe the characteristics of different Native American groups
• Read and interpret maps and graphs
• Describe the European settlements in St. Augustine, Jamestown, and Plymouth
• Identify key leaders and events in the creation and expansion of the United States
• Explain the influence of Harriet Tubman, Frederick Douglass, and Sojourner Truth

Lesson 1: Our Country Long Ago Unit Preview

Objectives:
• Obtain information about a topic by using visual sources, such as pictures
• Determine the meanings of words

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 2: The First Americans

Objectives:
• Compare Native American cultures from different regions and times
• Explain ways climate, location, and physical surroundings affect the way people live

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 3: Citizen Heroes: Ella Clara Deloria

Objectives:
• Explain how local people have influenced local community history
• Identify significant aspects of the lives and accomplishments of selected historical figures
• Identify characteristics of good citizenship

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 4: Colonies

Objectives:
• Describe how weather patterns, natural resources, seasonal patterns, and natural hazards affect activities and settlement patterns
• Explain the significance of events honored in commemorative holidays, such as Thanksgiving

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 5: Map and Globe Skills: Use a Map Scale

Objectives:
• Use a map scale to determine distance
• Obtain information from a variety of visual sources, including maps

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 6: Thirteen Colonies, One Country

Objectives:
• Explain the significance of national celebrations, such as Independence Day
• Explain how selected customs and celebrations reflect an American love of individualism and freedom

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 7: Our Country Grows

Objectives:

Appendix A.2.d Social Studies Course Guides  Social Studies 2 B
Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 8: Chart and Graph Skills: Read a Time Line

Objectives:
• Create and interpret a time line

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 9: Then and Now: Westward Ho

Objectives:
• Describe how science and technology have changed transportation

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 10: We Remember Americans

Objectives:
• Identify contributions of historical figures who have influenced the nation
• Compare various interpretations of the same time period using evidence such as photographs

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 11: Biography: Paul Revere or Sojourner Truth

Objectives:
• Identify historic figures, such as Paul Revere and Sojourner Truth, who have exemplified good citizenship

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 12: Our Country Long Ago Unit Portfolio

Objectives:
• Identify key events in American history

Lesson 13: Our Country Long Ago Unit Review

Objectives:
• Define the key words from the unit
• Explain the main ideas of the unit

Lesson 14: Our Country Long Ago Unit Test

Unit 3: People and Places in History

Unit 3 focuses on the study of history. Your student will learn about the many immigrants that came to this country and the ways they have shaped our country. He will learn about common American traditions and celebrations. Your student will learn about the importance of landmarks, including several national and international landmarks. He will examine the contributions of ancient China and Egypt to our lives today. Your student will learn how transportation and communication have changed over time. He will learn about famous people who have contributed to the world through their inventions and designs. Finally, he will practice reading calendars and diagrams.

Objectives:
• Explain why immigrants come to the United States in search of a better life
• Explain how holidays preserve cultural heritage
• Describe the significance of important landmarks in the United States
• Explain how historians use artifacts to learn more about the past
• Discuss how technology has changed the way people communicate and travel

Lesson 1: People and Places in History Unit Preview

Objectives:
• Use pictures to learn about a topic

Appendix A.2.d Social Studies Course Guides

Social Studies 2 B
Lesson 2: Family History

Objectives:
• Explain that the United States is a land of people who have diverse ethnic origins
• Name several sources of information about a given period or event

Lesson 3: People and Places in History Unit Portfolio

Objectives:
• Learn about the past from eyewitness accounts

Lesson 4: Citizen Heroes: Ellen Ochoa

Objectives:
• Identify characteristics of good citizenship

Lesson 5: People Celebrate

Objectives:
• Explain how selected customs and celebrations reflect an American love of individualism, inventiveness, and freedom

Lesson 6: Chart and Graph Skills: Read a Calendar

Objectives:
• Describe and measure calendar time

Lesson 7: Landmarks in Our Country

Objectives:
• Identify and explain the significance of various community, state, and national landmarks

Lesson 8: Here and There: Landmarks around the World

Objectives:
• Use designations of time periods such as ancient times and modern times
• Locate Egypt and China on a world map

Lesson 9: A Step Back in Time

Objectives:
• Explain how the contributions of ancient China and Egypt have influenced the present world in terms of architecture, inventions, the calendar, and written language

Lesson 10: Chart and Graph Skills: Read a Diagram

Objectives:
• Obtain information about a topic using a diagram
Lesson 11: Linking Our World

Objectives:
- Use vocabulary related to chronology including past, present, and future
- Describe how science and technology have changed communication and transportation
- Identify historic figures who have exhibited a love of individualism and inventiveness

Lesson 12: Biography: Ieoh Ming Pei or Robert Fulton

Objectives:
- Explain how people influence communities

Lesson 13: People and Places in History Unit Review

Objectives:
- Review for unit test

Lesson 14: People and Places in History Unit Test
SOCIAL STUDIES 3 A
Social Studies 3 A

This Social Studies course focuses on the theme of community through the study of geography, history, government, and economics. The course text is Scott Foresman’s Communities. In this course, the student will explore a variety of communities, past and present, from around the world. Short stories, biographies, poetry, case studies, songs, and other resources emphasize the role of the individual in the community, as well as the influence of geography on communities. Multimedia resources including Teachlet® tutorials, videos, and interactive websites enhance and support the content. The student will learn geographic concepts such as place, location, and human interaction with the environment. Geography skills lessons are incorporated throughout the course. In addition, the student will learn the basic principles that led to the creation of the Declaration of Independence and the U.S. Constitution. The student will learn about the rights and responsibilities of citizens and the three branches of government. In the economics unit, the student will examine basic economic concepts such as money, prices, supply and demand, and taxes. The student will examine factors that contribute to personal economic decisions.

Constitution Day (L)

Objectives:
- Identify key people involved in the writing of the Declaration of Independence and the U.S. Constitution
- Identify the rights promoted by the Declaration of Independence
- Explain the purpose of the U.S. Constitution
- Recognize some of the national symbols of liberty

Unit 1: Our Community

In this unit, your student will understand the meaning of community as a place where people live, work, and have fun. He will recognize the characteristics of rural, suburban, and urban communities. He will also be able to recognize each type of community. Your student will study pictures and stories of different communities in the United States and around the world.

Objectives:
- Explain what makes communities special
- Define communities
- Give examples of different types of communities
- Read and interpret maps
- Explain how individuals contribute to communities

Lesson 1: Unit 1 Introduction

Objectives:
- Use literature to acquire information
- Use visuals and print material to acquire information

Lesson 2: Communities

Objectives:
- Define the concept of community
- Describe the geography of a community
- Describe the history of a community
- Interpret print material by identifying the main idea and details
- Identify and describe an ordinary person who exemplifies good citizenship
- Describe actions by an individual that changed and improved a community

Lesson 3: United States Communities

Objectives:
- Compare and contrast communities across the United States
• Relate the geographic location of a community to the local area, the state, and the country
• Obtain information about the geography and history of a community from print and visual sources
• Interpret print material by identifying the main idea and details
• Describe how a decision by an individual and the actions that followed changed and improved a community
• Identify and describe a person who exemplifies good citizenship

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 4: World Communities

Objectives:
• Define the concept of culture
• Assess similarities and differences among communities in different times
• Relate the history of a community
• Interpret print material by identifying the main idea and details; compare ways in which people around the world meet their needs
• Describe variations in the physical environment, including natural hazards
• Describe the effects of human processes in shaping the landscapes
• Compare the human characteristics of regions

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 5: African Communities

Objectives:
• Compare ways in which people around the world meet their needs
• Describe variations in the physical environment, including natural hazards
• Describe the effects of human processes in shaping the landscape
• Compare the human characteristics of regions

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 6: Understanding Map Scale

Objectives:
• Use a map scale to determine distance between places
• Interpret visuals including maps

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 7: A Rural Community (two-day lesson)

Objectives:
• Explain what is meant by the term rural community
• Compare the ways people in a community meet their needs for recreation
• Describe the geography of a community
• Interpret print material by identifying the main idea and details

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 8: A Suburban Community

Objectives:
• Explain what is meant by the term suburban community
• Describe how rural communities can change to suburban communities
• Identify reasons why people form communities
• Identify and explain similarities and differences among communities in different places
• Interpret print material by identifying the main idea and details
• Describe how individuals contributed to the expansion or creation of communities

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.
Lesson 9: William Levitt

Objectives:
• Describe how individuals contributed to the expansion or creations of communities

Lesson 10: An Urban Community

Objectives:
• Explain what is meant by the term urban community
• Compare and contrast urban communities and suburban communities
• Compare the way people in communities meet their needs for transportation and recreation
• Interpret print material by identifying the main idea and details
• Compare the ways people in communities meet their needs
• Use classifying to interpret visual and print material

Lesson 11: My Dream Community

Objectives:
• Interpret visuals, including maps
• Use map scale to determine distance between places

Lesson 12: Communities in Stories

Objectives:
• Identify selected individual writers and their poems from communities around the world

Lesson 13: Here and There: Another Big City

Objectives:
• Compare the ways people in communities meet their needs

Lesson 14: Unit Review

Objectives:
• Review the main ideas of Unit 1
• Review the meaning of key words from Unit 1
• Practice identifying the main ideas of a passage

Lesson 15: Unit Test

Unit 2: People in Communities

In this unit, your student will learn about those factors that inspired people to travel to America from places around the world. She will understand the experiences immigrants faced as they strived to learn new customs and start new lives. She will also understand the importance of celebrating existing and past cultures of a community.

Objectives:
• Explain how individuals contribute to the growth and well-being of a community
• Explain why people move from place to place
• Discuss how immigrants blend parts of their old culture with parts of their new community's culture

Appendix A.2.d Social Studies Course Guides

Social Studies 3 A

© 2016 Connections Education LLC. All rights reserved.
Lesson 1: Unit 2 Introduction

Objectives:
- Interpret print material by comparing and contrasting
- Use literature to acquire information
- Explain the significance of and compare different ethnic cultural celebrations in the United States

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 2: Moving to a New Community

Objectives:
- Interpret visual and print material by comparing and contrasting

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 3: New Customs

Objectives:
- Discuss ways that cultural groups are alike and different and ways they work together and cooperate
- Explain that Americans are a people of diverse ethnic origins, customs, and traditions
- Compare ways in which people in the local community meet their needs for education in the present
- Interpret print material by comparing and contrasting

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 4: Citizen Heroes: Volunteering

Objectives:
- Identify historic figures, such as Jane Addams, who have exemplified good citizenship
- Identify characteristics of good citizenship, such as a belief in responsibility for the common good

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 5: Where Did They Come From? (three-day lesson)

Objectives:
- Identify reasons people form communities
- Describe Americans as a people of diverse ethnic origins, customs, and traditions
- Identify selected individual writers and their stories and poems of cultural heritage from communities around the world
- Use vocabulary related to chronology, including "past times" and "present times"

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 6: A New Life in America (two-day lesson)

Objectives:
- Explain the importance of acts of civic responsibility, such as voting
- Identify ways people in the United States share in the cultures and customs of various ethnic groups
- Explain what is meant by the term Great Migration
- Compare and contrast education in the past and present

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 7: Map and Globe Skills: Intermediate Directions
Objectives:
• Use cardinal and intermediate directions to locate places on maps
• Identify and use a compass rose to locate places on a map
• Interpret visuals, including maps

Objective derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 8: Celebrating Cultures

Objectives:
• Explain the significance of selected ethnic and/or cultural celebrations
• Compare ethnic and/or cultural celebrations

Objective derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 9: Map and Globe Skills: Understand Hemispheres

Objectives:
• Develop map skills by using the equator and prime meridian to identify the four hemispheres
• Interpret visuals, including maps

Objective derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 10: Celebrating a Community's Past

Objectives:
• Identify factors that make the local community unique, including how the community is enriched

Objective derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 11: Celebrations Across Our Nation

Objectives:
• Identify the contributions of Dr. Martin Luther King, Jr.
• Recognize that Veterans Day and Memorial Day honor people who have served to protect the country's freedom
• Explain the significance of a Thanksgiving celebration

Objective derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 12: Unit Review

Objectives:
• Identify selected individual writers and their poems from communities around the world
• Explain the significance of individual writers and poems to communities around the world
• Explain the contributions of individual artists in enriching the culture of their community
• Examine documents from other cultures to determine their significance
• Describe a community celebration

Objective derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 13: Unit Test

Unit 3: Where Are Communities?

In this unit, your student will understand how different physical environments distinguish one community from another community. He will learn how each community differs by its climate and the types of resources that are available in that area. Your student will also understand why some communities are able to develop and grow along mountains, water systems, roads, railroads, and air routes.

Objectives:
• Explain how physical environment affects the development of communities
• Describe ways in which people adapt to the climate of their environment
Lesson 1: Unit 3 Introduction

Objectives:
- Identify reasons people form communities
- Compare ways in which people in the local community meet their needs for transportation and education in the present
- Describe and explain variations in the physical environment, including climate, landforms, natural resources, and natural hazards
- Interpret print materials by drawing conclusions

Lesson 2: What is Your Community's Environment? (two-day lesson)

Objectives:
- Identify communities in five regions in the United States
- Describe variations in the physical environment, including climate, landforms, and natural resources
- Compare how people in different communities adapt to and modify the physical environment
- Describe the effects of human processes on shaping the landscape
- Draw conclusions about how the physical environment affects life in the community

Lesson 3: Living in Different Climates

Objectives:
- Describe and explain variations in physical environment, including climate
- Compare how people in different communities adapt to the physical environment
- Draw conclusions about how climate affects people living in different communities

Lesson 4: Maria Martinez: Pottery Artist Biography

Objectives:
- Explain the significance of individual artists and their examples of cultural heritage to communities around the world

Lesson 5: Use a Line Graph

Objectives:
- Interpret visuals, including graphs
- Use appropriate mathematical skills to interpret social studies information, such as graphs

Lesson 6: Communities and Resources (two-day lesson)

Objectives:
- Compare how people in different communities modify the physical environment
- Describe ways that people can conserve resources
- Draw conclusions about the importance of natural resources and their conservation
Lesson 7: A Mountain Community

Objectives:
- Describe how individuals, events, and ideas changed a community over time
- Identify how people in a community adapt to or modify the physical environment
- Draw conclusions about the human characteristics of mountain communities

Lesson 8: Daniel Boone Biography

Objectives:
- Describe how individuals contribute to the expansion or creation of new communities

Lesson 9: A Water Community (two-day lesson)

Objectives:
- Describe how individuals and events have changed Seattle over time
- Describe and explain variations in the physical environment, including natural resources
- Explain how people used natural resources around Seattle
- Draw conclusions about effects of growth and change on Seattle

Lesson 10: Conflict Resolution

Objectives:
- Identify ways to show respect toward others
- Identify and use alternative methods of conflict resolution

Lesson 11: A Crossroads Community

Objectives:
- Identify ways people in a community meet their needs for transportation
- Describe how individuals and events changed Indianapolis over time
- Describe the role of Indianapolis in the Underground Railroad
- Draw conclusions about Indianapolis’s importance in the past and present

Lesson 12: Citizen Heroes (two-day lesson)

Objectives:
- Identify historic figures, such as Harriet Tubman, who have exemplified good citizenship
- Identify characteristics of good citizenship, such as a belief in equality

Lesson 13: Unit Review

Objectives:
- Describe how fictional characters model qualities of good leaders and citizenship
- Explain how writers and their works share a community’s culture with others
Reach Cyber Charter School Application

- Interpret oral material by identifying cause and effect

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 14: Unit Test

Appendix A.2.d Social Studies Course Guides

© 2016 Connections Education LLC. All rights reserved.
SOCIAL STUDIES 3 B
Social Studies 3 B

This Social Studies course focuses on the theme of community through the study of geography, history, government, and economics. The course text is Scott Foresman's *Communities*. In this course, the student will explore a variety of communities, past and present, from around the world. Short stories, biographies, poetry, case studies, songs, and other resources emphasize the role of the individual in the community, as well as the influence of geography on communities. Multimedia resources including Teachlet® tutorials, videos, and interactive websites enhance and support the content. The student will learn geographic concepts such as place, location, and human interaction with the environment. Geography skills lessons are incorporated throughout the course. In addition, the student will learn the basic principles that led to the creation of the Declaration of Independence and the U.S. Constitution. The student will learn about the rights and responsibilities of citizens and the three branches of government. In the economics unit, the student will examine basic economic concepts such as money, prices, supply and demand, and taxes. The student will examine factors that contribute to personal economic decisions.

**Unit 1: History of Communities**

In this unit, your student will learn how the history of present-day communities throughout North America was shaped by the migration and exploration of early groups. She will learn about early day Spanish, French, English and Native American settlements. She will also understand how technology changes a community over time through innovations in transportation, communication, and medicine, along with key inventions.

**Lesson 1: Unit Introduction**

Objectives:

- Describe how individuals, events, and ideas have changed communities
- Describe historical times in terms of years, decades, and centuries
- Interpret print materials by identifying cause and effect

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

**Lesson 2: Explorers Come to North America**

Objectives:

- Compare people, places, events, and developments in communities within the United States
- Describe the exploration of the Americas by describing the accomplishments of Christopher Colombus, Hernando de Soto, Juan Ponce de Leon, Jacques Cartier, and Samuel de Champlain
- Develop map skills by locating the regions in the Americas explored by Christopher Colombus and Juan Ponce de Leon
- Explain how the natural environment influenced the way Native Americans dressed, built houses, and obtained food

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

**Lesson 3: A Spanish Community**

Objectives:

- Describe the accomplishments of Christopher Columbus and Juan Ponce de Leon
- Explain why the community of St. Augustine was established and identify early founders and settlers
- Identify and compare people, places, and events in communities within the United States
- Describe why and how the community of Cadiz, Spain, was established

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

**Lesson 4: Use a Locator Map**

Objectives:

- Identify and use symbols to locate places on a map
Lesson 5: A French Community

Objectives:
- Describe the explorations of the Americas by Jacques Cartier
- Locate regions explored by Jacques Cartier and Samuel de Champlain
- Compare the changes brought about by explorers, such as Jacques Cartier
- Identify different points of view of characters in historical events

Lesson 6: Issues and Viewpoints: Who Owns the Land?

Objectives:
- Identify different points of view of characters in historical events
- Describe how individuals contributed to the expansion or creation of communities

Lesson 7: An English Community

Objectives:
- Describe the accomplishments of Christopher Newport (Jamestown, Virginia)
- Compare early European settlements, such as Jamestown, in terms of why they were founded, who contributed to their founding, and how they changed over time
- Identify reasons people formed communities
- Describe how Pocahontas changed a community

Lesson 8: Communities and Their Histories (two-day lesson)

Objectives:
- Review people, places, vocabulary, and events of Chapter 7
- Describe the Early European settlements in the Americas

Lesson 9: Transportation Over Time (two-day lesson)

Objectives:
- Explain how individuals such as Meriwether Lewis and William Clark contributed to the expansion or creation of communities
- Compare the ways people in a community meet their needs for transportation over time and in the present
- Identify inventors who have developed new technologies and explain their impact on daily life
- Develop simple time lines of events that have occurred

Lesson 10: Use a Time Line

Objectives:
- Develop simple time lines of events that have occurred
- Interpret time lines
- Describe historical times in terms of years, decades, and centuries

Lesson 11: Communication Over Time
Lesson 12: Inventions Over Time (two-day lesson)

Objectives:
- Identify scientists and inventors, such as Louis Daguerre, Cyrus McCormick, Thomas Edison, Lewis Latimer, and George Eastman, who invented new technology
- Identify the impact of new technology in photography on communities around the world
- Identify the impact of new technology in farm equipment on communities around the world
- Compare and contrast the methods of communication used in the 1700s with those used today

Lesson 13: Medicine Improves Over Time

Objectives:
- Identify scientists and inventors, such as Louis Pasteur, Edward Jenner, Jonas Salk, and Gertrude Elion, who have created new technology
- Identify the impact of new technology in pasteurization on communities around the world
- Identify the impact of new technology in medical vaccines on communities around the world
- Use a problem-solving process to identify a problem, gather information, list and consider options, consider advantages and disadvantages, choose and implement a solution, and evaluate the effectiveness of that solution

Lesson 14: Helen Keller

Objectives:
- Identify historic figures such as Helen Keller who have exemplified good citizenship

Lesson 15: Unit Review

Objectives:
- Identify the impact of new technology on communities around the world

Lesson 16: Unit Test

Unit 2: Communities at Work

In this unit, your student will understand how money impacts consumers’ choices and decision making regarding their earnings, spending and savings. He will learn how people’s actions are influenced by the ability to distinguish needs from wants. He will also learn how business owners are confronted with decisions and choices regarding production, services, and resources which impact profits.

Lesson 1: Unit Introduction
Objectives:

- Identify ways of spending and saving money, describe features of communities in various regions of the country
- Interpret visuals including illustrations
- Identify ways of saving money

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 2: Earning, Spending, and Saving (two-day lesson)

Objectives:

- Identify ways of earning, spending, and saving money
- Analyze a simple budget that allocates money for spending and saving
- Explain the difference between needs and wants

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 3: Choosing Wisely (two-day lesson)

Objectives:

- Identify an example of making an economic choice
- Explain how people make choices about goods and services
- Explain the idea of opportunity cost

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 4: A Community Business

Objectives:

- Explain how supply and demand affect the price of a good or a service
- Explain how the cost of production and selling price affect profits
- Give examples of how a simple business operates

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 5: Chapter 9 Review and Quiz (two-day lesson)

Objectives:

- Review vocabulary and events of Chapter 9

Lesson 6: Using Resources

Objectives:

- Explain how producers use natural resources, human resources, and capital resources to produce goods
- Describe how the cost of production affects profits
- Sequence the steps in the process of producing a bat

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 7: Resource Maps

Objectives:

- Read and interpret a resource map

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 8: Depending on Others (two-day lesson)

Objectives:

- Define and identify examples of scarcity
- Explain the impact of scarcity on the production, distribution, and consumption of goods and services
- Explain the impact of scarcity on interdependence within and among communities
- Sequence the production, distribution, and consumption of lumber

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.
Lesson 9: A World of Trade (two-day lesson)

Objectives:
• Describe the effects of modern communication and transportation on trade
• Explain that people benefit from voluntary trade with each other
• Explain how people in ancient Greece and Rome depended on others in the production of goods
• Explain the concept of a free market

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 10: Unit Review

Objectives:
• Identify individuals who have helped shape communities through their words, writing, or action
• Identify ordinary citizens who exemplify good citizenship
• Present a commercial for a good or service

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 11: Unit Test

Unit 3: Governments

In this unit, your student will learn about past government and the impact that present day government has on the rights and responsibilities of today's citizens. She will learn how citizens can become good citizens by using these rights and responsibilities on a community, state and country level. She will also learn about the structure of state government and understand how communities benefit from local government services and community leaders.

Lesson 1: Unit Introduction

Objectives:
• Describe the importance of the Pledge of Allegiance
• Analyze the contributions of specific communities to the formation of the United States, its heritage, and its traditions
• Analyze printed information by using the skill of summarizing

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 2: Governments in the Past (two-day lesson)

Objectives:
• Identify how people formed communities to gain security and to live under fair laws
• Compare the architecture of ancient Greece to that in Washington, D.C.
• Compare ways that people in communities around the world meet their needs for government
• Explain the importance of the Magna Carta and the Mayflower Compact

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 3: United States Government

Objectives:
• Explain the importance of the Declaration of Independence
• Explain the importance of the United States Constitution
• Identify the rights guaranteed in the Bill of Rights
• Identify Pierre-Charles L'Enfant as an individual who helped shape a community
• Identify how ideas have changed communities over time
• Identify characteristics of good citizenship such as a belief in justice, truth, and equality

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.
Lesson 4: Here and There: Ancient Rome and Washington D.C.

Objectives:
- Compare the architecture of ancient Rome to that in Washington D.C.

Lesson 5: Being a Good Citizen

Objectives:
- Identify characteristics of good citizenship such as a responsibility for the common good
- Identify important acts of civic responsibility such as obeying laws and voting
- Identify actions individuals can take to improve their community
- Explain why government is important in the school and classroom

Lesson 6: Chapter 11 Quiz

Objectives:
- Review the main ideas and vocabulary of Chapter 11

Lesson 7: Community Services

Objectives:
- Identify services commonly provided by local governments
- Identify ways people in the local community meet their needs for education
- Identify ways people in the local community meet their needs for transportation
- Identify ways people in the community meet their needs for recreation
- Explain how local government services are financed

Lesson 8: Community Leaders

Objectives:
- Identify the basic structure of local government
- Identify local government officials and explain how they are chosen
- Explain the importance of consent of the governed

Lesson 9: Community Building (three-day lesson)

Objectives:
- Design a community that meets the economic, social, and government needs of the people

Lesson 10: Grid Coordinates Mystery

Objectives:
- Use latitude and longitude to locate places on maps and globes

Lesson 11: State Government

Objectives:
- Understand the difference between making laws, carrying out laws, and determining if laws have been violated
- Identify the government bodies that perform these functions at the local, state, and national levels
- Understand how violations of the law produce consequences
Reach Cyber Charter School Application

- Distinguish among city, county, and state governments

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 12: Unit Review

Objectives:
- Retell the heroic deeds of characters in Greek and Roman myths
- Identify stories from communities around the world
- Describe the roles of local leaders in the community

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 13: Unit Test
SOCIAL STUDIES 4 A
Social Studies 4 A

This Social Studies course focuses on the study of five unique geographic regions of the United States: the Northeast, the Southeast, the Midwest, the Southwest, and the West. The course text is Scott Foresman’s Regions. In this course, the student will explore each region in depth in order to understand the distinctive features of the regions, as well as the common threads that unite the country. The student will explore the people, land, and events that shaped the history of each region. Short stories, biographies, poetry, case studies, songs, and other resources emphasize the role of the individual in the community, as well as the concept of change over time. Multimedia resources, including Teachlet® tutorials, videos, and interactive websites, enhance and support the content. The student will learn geographic concepts such as place, location, and human interaction with the environment. Geography skills lessons are incorporated throughout the course.

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

U.S. Constitution Day (L)

Objectives:
- Explain the importance of the U.S. Constitution
- Discuss James Madison's role in the creation of the U.S. Constitution
- Explain why the Bill of Rights was added to the Constitution

Unit 1: Living in the United States

In this unit, your student will learn about the diversity and variety of the regions, climates, landforms, resources, and people who settled the land throughout the United States. He will understand how the Constitution of the United States outlines democratic principles and the rights of its citizens. Your student will also learn how the United States’ economy provides opportunities for people to earn a living.

Objectives:
- Identify the five geographic regions of the United States
- Describe factors that make each region unique
- Identify rights and responsibilities of citizenship
- Explain how the United States became a nation of diversity
- Explain why trade is important to societies

Lesson 1: Regions and Landforms (two-day lesson)

Objectives:
- Identify the major five regions of the United States; describe the major landforms of each region in the United States
- Explain the difference between regional and state boundaries

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 2: Climate

Objectives:
- Explain the difference between weather and climate
- Describe the climate of each region in the United States; describe the major types of climates around the world
- Describe the three main factors that affect the climate of an area

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 3: Map and Globe Skills: Reading Inset Maps

Objectives:
- Identify the purpose of inset maps
- Interpret information in inset maps

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 4: Regional Resources (two-day lesson)

© 2016 Connections Education LLC. All rights reserved.
Objectives:

- Explain how each region’s resources shaped the industries that grew there
- Explain the difference between renewable and non-renewable resources
- Explain how people can be considered resources

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 5: Americans All

Objectives:

- Describe what is known about the people who were living in America when Columbus arrived
- Explain why explorers and settlers came to North America
- Explain how the land belonging to the United States grew from the Atlantic Ocean to the Pacific Ocean

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 6: We the People (two-day lesson)

Objectives:

- Explain what the Constitution is and why it is important
- Identify the three levels of government
- Describe the responsibilities of each of the three branches of government
- Explain how the Constitution can be changed

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 7: The Strengths of Our Freedoms

Objectives:

- Identify two ways that a person can become a citizen of the United States
- Identify three types of services that are paid for by taxes
- Identify at least three responsibilities of U.S. citizens
- Explain why voting is an important responsibility in the United States

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 8: The Land of Plenty

Objectives:

- Explain what might have drawn the first Americans to North America
- Explain why Americans decided to move westward in the 1800s
- Describe what happened in the late 1800s to change the way people lived and worked

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 9: Trade: Then and Now (two-day lesson)

Objectives:

- Describe how goods and services were traded by barter
- Explain how a business makes a profit
- Explain the difference between supply and demand

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 10: Transportation and Communication

Objectives:

- Explain what it means for regions to be economically interdependent
- Describe what globalization is and why countries of the world depend on each other
- Describe how fast transportation and communication have made national and world trade possible

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.
Lesson 11: Unit Review

Objectives:
- Review the main ideas and terms from Unit 1
- Prepare for the Unit 1 test

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 12: Unit Test

Unit 2: The Northeast

In this unit, your student will learn about the natural beauty of the Northeast region of the United States. Your student will examine Niagara Falls, various mountain ranges, rich resources, and important bodies of water. She will learn about past settlements and interactions of the Native Americans and immigrants in the Northeast. At the end of the unit, your student will learn how women and industrialization brought great social and economic change to the area.

Objectives:
- Identify the geographic features of the Northeast region
- Discuss the importance of the Chesapeake Bay and other bays in the region
- Describe the societies that were formed in the Northeast region
- Identify abolitionists and explain how they worked to abolish slavery
- Explain how Northeastern cities have grown and changed over time

Lesson 1: The Beautiful Northeast

Objectives:
- Identify the two Great Lakes between which Niagara Falls is located
- Identify the two main features for which Niagara Falls is known
- Identify the three main mountain ranges in the Northeastern part of the Appalachian Mountains
- Identify the two states in the Northeast that do not border the Atlantic Ocean

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 2: Resources of the Northeast (two-day lesson)

Objectives:
- Identify key steps in the production of maple syrup
- Explain why grapes grow well in certain areas of the Northeast
- Identify the largest lake of the Finger Lakes
- Explain why water is essential to the production and growth of cranberries

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 3: Plentiful Sea (two-day lesson)

Objectives:
- Define the name of the people who fish Chesapeake Bay
- Explain how pollution from a factory gets into Chesapeake Bay
- Explain why Chesapeake Bay is important to the Northeast
- Describe actions a resident of the Chesapeake Bay area could take to help preserve the bay

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 4: Then and Now

Objectives:
- Describe how and why places change over time

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.

Lesson 5: The Narragansett People

Objectives derived from Pearson Education programs © Pearson Education, Inc., or its affiliates. All rights reserved.
Objectives:
• Describe key events that affected the Narragansett way of life once European settlers arrived
• Define sachem
• Describe what goods the Europeans and Native Americans traded
• Explain why the Iroquois Confederacy was established

Lesson 6: The Land of New Beginnings

Objectives:
• Identify events leading from the colonization up to the founding of the United States
• Identify cities in the Northeast that have been capitals of the United States
• Identify the city in the Northeast where most European immigrants arrived in the 1800s
• Explain why immigrants came to the United States

Lesson 7: Using a Vertical Time Line

Objectives:
• Analyze a vertical time line to acquire information

Lesson 8: Taking a Stand

Objectives:
• Explain similarities and differences between the abolitionist movement and the women's rights movement
• Explain the meaning of the word abolitionist; identify important women's rights reformers
• Explain why reformers fought to win voting rights for women

Lesson 9: Cities Grow and Change (two-day lesson)

Objectives:
• Explain why Northeastern cities developed where they did
• Identify and explain the importance of places that make tourism a major industry in Northeastern cities
• Describe how Pittsburgh's industries, like those of other Northeastern cities, have changed over the years
• Describe the relationship between the people and the economies of Northeastern cities

Lesson 10: Northeast Landmarks

Objectives:
• Identify objects and places of interest in the Northeast

Lesson 11: Citizen Heroes: Capturing History

Objectives:
• Describe how citizens of New York City have shown responsibility on and after September 11, 2001

Appendix A.2.d Social Studies Course Guides
Social Studies 4 A
© 2016 Connections Education LLC. All rights reserved.
Lesson 12: Unit 2 Portfolio (two-day lesson)

Objectives:
