## INTRODUCTION

## General Introduction

The Pennsylvania Department of Education (PDE) provides districts and schools with tools to assist in delivering focused instructional programs aligned to the Pennsylvania Core Standards. These tools include the standards, assessment anchor documents, Keystone Exams Test Definition, Classroom Diagnostic Tool, Standards Aligned System, and content-based item and scoring samplers. This 2018 Algebra I Item and Scoring Sampler is a useful tool for Pennsylvania educators in preparing students for the Keystone Exams.

This Item and Scoring Sampler contains released operational multiple-choice and constructed-response items that have appeared on previously administered Keystone Exams. These items will not appear on any future Keystone Exams. Released items provide an idea of the types of items that have appeared on operational exams and that will appear on future operational Keystone Exams. Each item has been through a rigorous review process to ensure alignment with the Assessment Anchors and Eligible Content statements. This sampler includes items that measure a variety of Assessment Anchor or Eligible Content statements, but it does not include sample items for all Assessment Anchor or Eligible Content statements.

The items in this sampler may be used as examples for creating assessment items at the classroom level and may also be copied and used as part of a local instructional program. ${ }^{1}$ Classroom teachers may find it beneficial to have students respond to the constructed-response items in this sampler. Educators can then use the sampler as a guide to score the responses either independently or together with colleagues.

This Item and Scoring Sampler is available in Braille format. For more information regarding Braille call (717)-901-2238.

## ABOUT THE KEYSTONE EXAMS

The Keystone Exams are end-of-course assessments currently designed to assess proficiencies in Algebra I, Biology, and Literature. For detailed information about how the Keystone Exams are being integrated into the Pennsylvania graduation requirements, please contact the Pennsylvania Department of Education or visit the PDE website at http://www.education.pa.gov.

## Alignment

The Algebra I Keystone Exam consists of exam questions grouped into two modules:
Module 1-Operations and Linear Equations \& Inequalities, and Module 2-Linear Functions and Data Organizations. Each module corresponds to specific content, aligned to statements and specifications included in the course-specific assessment anchor documents. The Algebra I content included in the Keystone Algebra I multiple-choice items will align with the Assessment Anchors as defined by the Eligible Content statements. The process skills, directives, and action statements will also specifically align with the Assessment Anchors as defined by the Eligible Content statements.

The content included in Algebra I constructed-response items aligns with content included in the Eligible Content statements. The process skills, directives, and action statements included in the performance demands of the Algebra I constructed-response items align with specifications included in the Assessment Anchor statements, the Anchor Descriptor statements, and/or the Eligible Content statements. In other words, the verbs or action statements used in the constructed-response items or stems can come from the Eligible Content, Anchor Descriptor, or Assessment Anchor statements.

[^0]
## Depth of Knowledge

Webb's Depth of Knowledge (DOK) was created by Dr. Norman Webb of the Wisconsin Center for Education Research. Webb's definition of depth of knowledge is the cognitive expectation demanded by standards, curricular activities, and assessment tasks. Webb's DOK includes four levels, from the lowest (basic recall) level to the highest (extended thinking) level.

| Depth of Knowledge |  |
| :--- | :--- |
| Level 1 | Recall |
| Level 2 | Basic Application of Skill/Concept |
| Level 3 | Strategic Thinking |
| Level 4 | Extended Thinking |

Each Keystone item has been through a rigorous review process and is assigned a DOK level. For additional information about depth of knowledge, please visit the PDE website at http://static.pdesas.org/content/ documents/Keystone Exams Understanding Depth of Knowledge and Cognitive Complexity.pdf.

## Exam Format

The Keystone Exams are delivered in a paper-and-pencil format as well as in a computer-based online format. The multiple-choice items require students to select the best answer from four possible answer options and record their answers in the spaces provided. The correct answer for each multiple-choice item is worth one point. The constructed-response items require students to develop and write (or construct) their responses. Constructed-response items in Algebra I are scored using item-specific scoring guidelines based on a $0-4$-point scale. Each multiple-choice item is designed to take about one to one-and-a-half minutes to complete. Each constructed-response item is designed to take about 10 minutes to complete. The estimated time to respond to a test question is the same for both test formats. During an actual exam administration, students are given additional time as necessary to complete the exam.

## INFORMATION ABOUT ALGEBRA I

## ITEM AND SCORING SAMPLER FORMAT

This sampler includes the test directions, scoring guidelines, and formula sheet that appear in the Keystone Exams. Each sample multiple-choice item is followed by a table that includes the alignment, the answer key, the DOK, the percentage ${ }^{2}$ of students who chose each answer option, and a brief answer option analysis or rationale. Each constructed-response item is followed by a table that includes the alignment, the DOK, and the mean student score. Additionally, each of the included item-specific scoring guidelines is combined with sample student responses representing each score point to form a practical, item-specific scoring guide. The General Description of Scoring Guidelines for Algebra I used to develop the item-specific scoring guidelines should be used if any additional item-specific scoring guidelines are created for use within local instructional programs.

Example Multiple-Choice Item Information Table

| Item Information |  |
| :--- | :--- |
| Alignment | Assigned AAEC |
| Answer Key | Correct Answer |
| Depth of Knowledge | Assigned DOK |
| $p$-value A | Percentage of students who selected each option |
| $p$-value B | Percentage of students who selected each option |
| $p$-value C | Percentage of students who selected each option |
| $p$-value D | Percentage of students who selected each option |
| Option Annotations | Brief answer option analysis or rationale |

Example Constructed-Response Item Information Table

| Alignment | Assigned AAEC | Depth of <br> Knowledge | Assigned <br> DOK | Mean Score |  |
| :--- | :--- | :--- | :--- | :--- | :--- |

## ALGEBRA I EXAM DIRECTIONS

## Directions:

Below are the exam directions available to students. These directions may be used to help students navigate through the exam.

Formulas that you may need to solve questions in this module are found on page 7 of this test booklet. You may refer to the formula page at any time during the exam.

You may use a calculator on this module. When performing operations with $\pi$ (pi), you may use either calculator $\pi$ or the number 3.14 as an approximation of $\pi$.

There are two types of questions in each module.

## Multiple-Choice Questions:

These questions will ask you to select an answer from among four choices.

- First read the question and solve the problem on scratch paper. Then choose the correct answer.
- Only one of the answers provided is correct.
- If none of the choices matches your answer, go back and check your work for possible errors.
- Record your answer in the Algebra I answer booklet.

## Constructed-Response Questions:

These questions will require you to write your response.

- These questions have more than one part. Be sure to read the directions carefully.
- You cannot receive the highest score for a constructed-response question without completing all the tasks in the question.
- If the question asks you to show your work or explain your reasoning, be sure to show your work or explain your reasoning. However, not all questions will require that you show your work or explain your reasoning. If the question does not require that you show your work or explain your reasoning, you may use the space provided for your work or reasoning, but the work or reasoning will not be scored.
- All responses must be written in the appropriate location within the response box in the Algebra I answer booklet. Some answers may require graphing, plotting, labeling, drawing, or shading. If you use scratch paper to write your draft, be sure to transfer your final response to the Algebra I answer booklet.

## INFORMATION ABOUT ALGEBRA I

If you finish early, you may check your work in Module 1 [or Module 2] only.

- Do not look ahead at the questions in Module 2 of your exam materials.
- After you have checked your work, close your exam materials.

You may refer to this page at any time during this portion of the exam.

## GENERAL DESCRIPTION OF SCORING GUIDELINES FOR ALGEBRA I

## 4 Points

- The response demonstrates a thorough understanding of the mathematical concepts and procedures required by the task.
- The response provides correct answer(s) with clear and complete mathematical procedures shown and a correct explanation, as required by the task. Response may contain a minor "blemish" or omission in work or explanation that does not detract from demonstrating a thorough understanding.

## 3 Points

- The response demonstrates a general understanding of the mathematical concepts and procedures required by the task.
- The response and explanation (as required by the task) are mostly complete and correct. The response may have minor errors or omissions that do not detract from demonstrating a general understanding.

## 2 Points

- The response demonstrates a partial understanding of the mathematical concepts and procedures required by the task.
- The response is somewhat correct with partial understanding of the required mathematical concepts and/or procedures demonstrated and/or explained. The response may contain some work that is incomplete or unclear.

## 1 Point

- The response demonstrates a minimal understanding of the mathematical concepts and procedures required by the task.

## 0 Points

- The response has no correct answer and insufficient evidence to demonstrate any understanding of the mathematical concepts and procedures required by the task.

Special Categories within zero reported separately:
Blank Blank, entirely erased, entirely crossed out, or consists entirely of whitespace
Refusal Refusal to respond to the task
Off Task Makes no reference to the item but is not an intentional refusal
Foreign Language Written entirely in a language other than English
Illegible Illegible or incoherent

## FORMULA SHEET

Formulas that you may need to solve questions on this exam are found below.
You may use calculator $\pi$ or the number 3.14 as an approximation of $\pi$.

$V=l w h$

## Linear Equations

Slope: $\quad m=\frac{y_{2}-y_{1}}{x_{2}-x_{1}}$
Point-Slope Formula: $\quad\left(y-y_{1}\right)=m\left(x-x_{1}\right)$

Slope-Intercept Formula: $\quad y=m x+b$

Standard Equation of a Line: $\quad A x+B y=C$

## Arithmetic Properties

Additive Inverse: $\quad a+(-a)=0$

Multiplicative Inverse: $\quad a \cdot \frac{1}{a}=1$

Commutative Property: $a+b=b+a$ $a \cdot b=b \cdot a$

Associative Property: $\quad(a+b)+c=a+(b+c)$ $(a \cdot b) \cdot c=a \cdot(b \cdot c)$

Identity Property: $a+0=a$

$$
a \cdot 1=a
$$

Distributive Property: $\quad a \cdot(b+c)=a \cdot b+a \cdot c$

Multiplicative Property of Zero: $\quad a \cdot 0=0$

Additive Property of Equality:

$$
\text { If } a=b \text {, then } a+c=b+c
$$

## Multiplicative Property of Equality:

If $a=b$, then $a \cdot c=b \cdot c$

## ALGEBRA I MODULE 1 <br> Multiple-Choice Items

1. Which expression can be simplified to the form $3 \sqrt{y+3}$, where $y$ is a positive integer?
A. $\sqrt{18}$
B. $\sqrt{63}$
C. $\sqrt{75}$
D. $\sqrt{84}$

| Item Information | A1.1.1.1.2 |
| :--- | :--- |
| Alignment | B |
| Answer Key | 2 |
| Depth of Knowledge | $38 \%$ |
| $p$-value A | $41 \%$ (correct answer) |
| $p$-value B | $11 \%$ |
| $p$-value C | $10 \%$ |
| $p$-value D | A student could determine the correct answer, option B, by determining that <br> it is the only option to meet two requirements: the number under the radical <br> before it is simplified must be a multiple of 9 in order to have a 3 outside the <br> radical after it is simplified, and since $y$ is a positive integer, the number under <br> the radical before simplifying must be at least the fourth multiple of 9, or 36. <br> Option Annotations <br> A student could arrive at an incorrect answer by finding an expression which <br> only meets one of the requirements. For example, a student could arrive at <br> option A by meeting the requirement that the number under the radical before <br> it is simplified be a multiple of 9 while not using a positive integer for $y$. |

2. A dog's body temperature $(t)$, in degrees Fahrenheit $\left({ }^{\circ} \mathrm{F}\right)$, is considered normal when the value of the expression below is no more than 0.75 .

$$
|t-101.75|
$$

A dog's body temperature is $101.2^{\circ} \mathrm{F}$. Based on the expression, which statement about the dog's body temperature is true?
A. Since normal body temperature is from $100.25^{\circ} \mathrm{F}$ to $103.25^{\circ} \mathrm{F}$, the dog's body temperature is considered normal.
B. Since normal body temperature is from $100.25^{\circ} \mathrm{F}$ to $103.25^{\circ} \mathrm{F}$, the dog's body temperature is not considered normal.
C. Since normal body temperature is from $101^{\circ} \mathrm{F}$ to $102.5^{\circ} \mathrm{F}$, the dog's body temperature is considered normal.
D. Since normal body temperature is from $101^{\circ} \mathrm{F}$ to $102.5^{\circ} \mathrm{F}$, the dog's body temperature is not considered normal.

| Item Information |  |
| :--- | :--- |
| Alignment | A1.1.1.3.1 |
| Answer Key | 2 |
| Depth of Knowledge | $15 \%$ |
| $p$-value A | $9 \%$ |
| $p$-value B | $61 \%$ (correct answer) |
| $p$-value C | $15 \%$ |
| $p$-value D | A student could determine the correct answer, option C, by setting up the <br> inequality $\|t-101.75\| \leq 0.75$ and solving for $t$ to find $101 \leq t \leq 102.5$ and <br> comparing the given temperature, 101.2, to this range. <br> Aption Annotations |
| A student could arrive at an incorrect answer by misinterpreting the meaning |  |
| of the given context. For example, a student could arrive at option D by |  |
| interpreting normal as being outside the range given by the context. |  |

3. Over one week, a snack booth at a fair sold 362 cans of soft drinks for $\$ 1.75$ each and 221 hot dogs for $\$ 2.35$ each. Which calculation will give the closest estimate of the sales of soft drinks and hot dogs?
A. $300(2)+200(2)$
B. $400(2)+200(2)$
C. $400(2)+200(3)$
D. $400(2)+300(3)$

| Item Information | A1.1.1.4.1 |
| :--- | :--- |
| Alignment | B |
| Answer Key | 2 |
| Depth of Knowledge | $17 \%$ |
| $p$-value A | $69 \%$ (correct answer) |
| $p$-value B | $10 \%$ |
| $p$-value C | $4 \%$ |
| $p$-value D | A student could determine the correct answer, option B, by rounding each <br> quantity of items to the nearest hundred and each price to the nearest dollar. <br> A student could arrive at an incorrect answer by rounding incorrectly. For <br> example, a student could arrive at option A by rounding 362 down to 300 <br> instead of up to 400. |
| Option Annotations |  |

4. When $x^{3}-2 x^{2}-15 x$ is factored completely, which expression is one of the factors?
A. $x-5$
B. $x+5$
C. $x^{2}-5 x$
D. $x^{2}-2 x-15$

| Item Information | A1.1.1.5.2 |
| :--- | :--- |
| Alignment | A |
| Answer Key | 1 |
| Depth of Knowledge | $36 \%$ (correct answer) |
| $p$-value A | $12 \%$ |
| $p$-value B | $23 \%$ |
| $p$-value C | $29 \%$ |
| $p$-value D | A student could determine the correct answer, option A, by factoring an $x$ out <br> of each term to arrive at $x\left(x^{2}-2 x-15\right)$, and then factoring the quadratic inside <br> the parentheses. <br> Option Annotations <br> A student could arrive at an incorrect answer by not factoring completely. For <br> example, a student could arrive at option D by stopping after the $x$ is factored <br> out of each term. |

5. A clothing company sells hats online to its customers. The price of each hat is $p$ dollars. The shipping cost is $s$ dollars. The equation shown below can be used to find the total cost (c), in dollars, when $n$ hats are purchased.

$$
c=n p+s
$$

Which equation can be used to find the price of each hat when 5 hats are purchased, the shipping cost is $\$ 6$, and the total cost is $\$ 41$ ?
A. $\quad c=5(6)+41$
B. $\quad c=6(41)+5$
C. $41=5 p+6$
D. $41=6 p+5$

| Item Information | A1.1.2.1.1 |
| :--- | :--- |
| Alignment | C |
| Answer Key | 2 |
| Depth of Knowledge | $7 \%$ |
| $p$-value A | $4 \%$ |
| $p$-value B | $84 \%$ (correct answer) |
| $p$-value C | $5 \%$ |
| $p$-value D | A student could determine the correct answer, option C, by replacing the <br> variables in the given equation with the corresponding numbers given in the <br> context: $n$ is replaced with 5, $s$ is replaced with 6, and $c$ is replaced with 41. <br> A student could arrive at an incorrect answer by assigning given numbers <br> to incorrect variables. For example, a student could arrive at option A by <br> replacing $n$ with 5, $p$ with 6, and $s$ with 41. |

6. An equation and some of the steps used to solve the equation are shown below. One step is missing.

$$
\begin{aligned}
& 2(x-3)+10 x=5(3+x) \\
& ? \\
& 2 x-5 x+10 x=15+6 \\
& 7 x=21 \\
& x=3
\end{aligned}
$$

Which set of statements is most likely the missing step and the property that justifies the step?
A. $2 x-(3+10 x)=5(3+x)$

This step is justified by the associative property.
B. $2(x-3)=5(3+x)-10 x$

This step is justified by the associative property.
C. $2 x-6+10 x=15+5 x$

This step is justified by the distributive property.
D. $2 x-3+10 x=15+x$

This step is justified by the distributive property.

| Item Information | A1.1.2.1.2 |
| :--- | :--- |
| Alignment | C |
| Answer Key | 2 |
| Depth of Knowledge | $6 \%$ |
| $p$-value A | $7 \%$ |
| $p$-value B | $81 \%$ (correct answer) |
| $p$-value C | $6 \%$ |
| $p$-value D | A student could determine the correct answer, option C, by applying the <br> distributive property to arrive at an equation that is equivalent to the given <br> equation and leads to the equation after the question mark in one more step. <br> A student could arrive at an incorrect answer by applying an incorrect <br> property. For example, a student could arrive at answer B by applying the <br> additive property of equality, resulting in an equivalent equation which does <br> not lead to the equation after the question mark in one step. |
| Option Annotations | notion |

7. A student is selling small and large frozen pizzas for a school fund-raiser.

- The student earns \$3 for each small pizza sold.
- The student earns \$4 for each large pizza sold.
- The student has sold exactly 30 pizzas.
- The student has earned $\$ 100$.

How many small pizzas and large pizzas has the student sold?
A. 10 small pizzas
B. 14 small pizzas
20 large pizzas
16 large pizzas
C. 18 small pizzas
D. 20 small pizzas
12 large pizzas
10 large pizzas

## Item Information

| Alignment | A1.1.2.2.1 |
| :--- | :--- |
| Answer Key | D |
| Depth of Knowledge | 2 |
| $p$-value A | $6 \%$ |
| $p$-value B | $4 \%$ |
| $p$-value C | $3 \%$ |
| $p$-value D | $87 \%$ (correct answer) |
| Option Annotations | A student could determine the correct answer, option D, by setting up a <br> system of equations where $x$ is the number of small pizzas and $y$ is the number <br> of large pizzas: $x+y=30$ and $3 x+4 y=100$, and then solving for $x$ and $y$. <br> A student could arrive at an incorrect answer by switching the association <br> of values. For example, a student could arrive at option A by switching the <br> meaning of the variable assigned to the number of small pizzas with the <br> variable assigned to the number of large pizzas. |

8. The system of equations below describes the relationship between the time $(t)$, in seconds, two objects have been traveling and each object's velocity $(v)$, in feet per second.

$$
\begin{aligned}
& v=-32 t \\
& v=-32 t+16
\end{aligned}
$$

Based on the system of equations, which statement about the velocity of the objects is true?
A. The objects never travel at the same velocity.
B. The objects always travel at the same velocity.
C. The objects travel at the same velocity only after they have been traveling for $\frac{1}{4}$ second.
D. The objects travel at the same velocity only after they have been traveling for $\frac{1}{2}$ second.

| Item Information | A1.1.2.2.2 |
| :--- | :--- |
| Alignment | A |
| Answer Key | 2 |
| Depth of Knowledge | $55 \%$ (correct answer) |
| $p$-value A | $13 \%$ |
| $p$-value B | $14 \%$ |
| $p$-value C | $18 \%$ |
| $p$-value D | A student could determine the correct answer, option A, by setting the <br> two equations equal to each other, solving to find the false statement $0=16$, <br> and interpreting this as indicating no solution. <br> Option Annotations <br> A student could arrive at an incorrect answer by finding the zero of one of the <br> equations. For example, a student could arrive at option D by setting $v=0$ in <br> the second equation and solving for $t$. |

9. The solution set of an inequality is shown below.

Which inequality has this solution set?
A. $1<3 x<2$
B. $1<x+2<4$
C. $6<2 x<9$
D. $6<x+3<9$

| Item Information |  |
| :--- | :--- |
| Alignment | A1.1.3.1.1 |
| Answer Key | D |
| Depth of Knowledge | 1 |
| $p$-value A | $10 \%$ |
| $p$-value B | $12 \%$ |
| $p$-value C | $11 \%$ |
| $p$-value D | $67 \%$ (correct answer) |
| Option Annotations | A student could determine the correct answer, option D, by identifying the <br> solution set as $3<x<6$ and finding the inequality with the same solution set. <br> A student could arrive at an incorrect answer by not correctly manipulating <br> the inequalities. For example, a student could arrive at option B by adding 2 to <br> cancel the +2. |

10. Sandy has at least 2 times as many pencils as David has. David has 3 pencils more than Pietro has. Pietro has 4 pencils. Which number line shows the solution set for the possible numbers of pencils that Sandy has?
A.

B.

C.

D.

Item Information

| Alignment | A1.1.3.1.2 |
| :--- | :--- |
| Answer Key | A |
| Depth of Knowledge | 2 |
| $p$-value A | $65 \%$ (correct answer) |
| $p$-value B | $12 \%$ |
| $p$-value C | $18 \%$ |
| $p$-value D | $5 \%$ |
| Option Annotations | A student could determine the correct answer, option A, by adding 4 and 3 <br> to find the number of pencils David has and then multiplying the sum by 2 to <br> find the minimum number of pencils Sandy has (14) and identifying the number <br> line with a closed circle at 14 and shading to the right of the closed circle to <br> represent the situation. <br> A student could arrive at an incorrect answer by applying operations in the <br> wrong order. For example, a student could arrive at option C by multiplying 4 <br> by 2 and then subtracting 3 to find a minimum number of 5. |

11. The graph of the solution set for a system of inequalities is shown below.

Which system of inequalities is represented by the graph?
A. $-2 x+y \leq 4$
$2 x+3 y \leq 6$
B. $-2 x+y \geq 4$
$2 x+3 y \geq 6$
C. $-2 x+y \leq 4$
$2 x+3 y \geq 6$
D. $-2 x+y \geq 4$
$2 x+3 y \leq 6$

| Item Information | A1.1.3.2.1 |
| :--- | :--- |
| Alignment | D |
| Answer Key | 1 |
| Depth of Knowledge | $23 \%$ |
| $p$-value A | $18 \%$ |
| $p$-value B | $23 \%$ |
| $p$-value C | $36 \%$ (correct answer) |
| $p$-value D | A student could determine the correct answer, option D, by determining that <br> the shaded region is above the line $-2 x+y=4$ and below the line $2 x+3 y=6$. <br> Aption Annotations |
| A student could arrive at an incorrect answer by switching the direction of the <br> inequalities. For example, a student could arrive at option C by switching the <br> direction of both inequalities. |  |

12. A teacher is buying word games and board games for his students.

- Each word game can be played by up to 4 students.
- Each board game can be played by 2 students.
- The teacher needs enough games for 30 students to play at the same time.
- The maximum amount that the teacher can spend on the games is $\$ 200$.

The number of word games $(x)$ and the number of board games $(y)$ the teacher buys must satisfy the system of linear inequalities below.

$$
\begin{gathered}
4 x+2 y \geq 30 \\
14.5 x+18 y \leq 200
\end{gathered}
$$

The teacher plans to buy 5 word games and 8 board games. Which statement about the number of games the teacher plans to buy is true?
A. There will be enough games for 30 students to play at the same time, but the total cost will be greater than the maximum amount.
B. There will be enough games for 30 students to play at the same time, and the total cost will be less than the maximum amount.
C. There will not be enough games for 30 students to play at the same time, and the total cost will be greater than the maximum amount.
D. There will not be enough games for 30 students to play at the same time, but the total cost will be less than the maximum amount.

| Item Information | A1.1.3.2.2 |
| :--- | :--- |
| Alignment | A |
| Answer Key | 2 |
| Depth of Knowledge | $63 \%$ (correct answer) |
| $p$-value A | $19 \%$ |
| $p$-value B | $12 \%$ |
| $p$-value C | $6 \%$ |
| $p$-value D | A student could determine the correct answer, option A, by substituting 5 for $x$ <br> and 8 for $y$ in the inequalities and then solving to find that the first inequality is <br> satisfied but the second is not. <br> Option Annotations <br> A student could arrive at an incorrect answer by not performing all operations <br> after substituting numbers for variables. For example, a student could arrive at <br> option B by not multiplying the number of games by the cost per game. |

## CONSTRUCTED-RESPONSE ITEM

13. In a science experiment, a scientist records the wavelengths of six waves. The wavelengths, in nanometers, are listed below.

$$
0.0001 \quad \frac{5}{100} \quad 10^{-3} \quad 1.0001 \quad \frac{1}{1,000} \quad 2 \times 10^{-2}
$$

A. Which two wavelengths are equal to one another?
equal wavelengths: $\qquad$ and $\qquad$
B. Which wavelength is the shortest?
shortest wavelength: $\qquad$
13. Continued. Please refer to the previous page for task explanation.

To find the speed of a wave, the scientist uses the formula shown below.
speed = (wavelength) • (frequency)

The wave with wavelength $10^{-3}$ nanometer has a frequency of $10^{x}$. The speed of the wave is $10^{y}$, where $y>3$.
C. Write an inequality in terms of $x$ to represent all possible values of $x$.
inequality: $\qquad$

The wavelength of a seventh wave is recorded. The wavelength is greater than $2 \times 10^{-2}$ nanometer and less than $\frac{5}{100}$ nanometer.
D. Write a possible wavelength, in nanometers, for the seventh wavelength. Write the possible wavelength as a fraction with a denominator of 100.
possible wavelength: $\qquad$ nanometer

## Item-Specific Scoring Guideline

## \#13 Item Information

| Alignment | A1.1.1 | Depth of Knowledge | 2 | Mean Score | 1.97 |
| :--- | :--- | :--- | :--- | :--- | :--- |

## Assessment Anchor this item will be reported under:

A1.1.1-Operations with Real Numbers and Expressions

## Specific Anchor Descriptor addressed by this item:

A1.1.1.1-Represent and/or use numbers in equivalent forms (e.g., integers, fractions, decimals, square roots, and exponents).
A1.1.1.3-Use exponents, roots, and/or absolute values to solve problems.

## Scoring Guide

| Score | Description |
| :---: | :--- |
| $\mathbf{4}$ | The student demonstrates a thorough understanding of operations with real numbers <br> and expressions by correctly solving problems with clear and complete procedures and <br> explanations when required. |
| $\mathbf{3}$ | The student demonstrates a general understanding of operations with real numbers and <br> expressions by solving problems and providing procedures and explanations with only minor <br> errors or omissions. |
| $\mathbf{2}$ | The student demonstrates a partial understanding of operations with real numbers and <br> expressions by providing a portion of the correct problem solving, procedures, and <br> explanations. |
| $\mathbf{1}$ | The student demonstrates a minimal understanding of operations with real numbers and <br> expressions. |
| $\mathbf{0}$ | The response has no correct answer and insufficient evidence to demonstrate any <br> understanding of the mathematical concepts and procedures as required by the task. Response <br> may show only information copied from the question. |

## Top-Scoring Student Response and Training Notes

The response provides a correct answer.
B. Which wavelength is the shortest?
0.0001

0.0001

0.001

0.02
shortest wavelength: 0.0001
The response provides a correct answer.
13. Continued. Please refer to the previous page for task explanation.

To find the speed of a wave, the scientist uses the formula shown below.
speed = (wavelength) • (frequency)

The wave with wavelength $10^{-3}$ nanometer has a frequency of $10^{x}$. The speed of the wave is $10^{y}$, where $y>3$.
C. Write an inequality in terms of $x$ to represent all possible values of $x$.

$$
\begin{aligned}
& 10^{y}=10^{-3} \cdot 10^{x} \quad x>6 \\
& 10^{3}=1,000 \\
& 10^{-3} \cdot 10^{6}=10^{3} \text { K cant work } \\
& 10^{y} \text {, where } y>3
\end{aligned}
$$

$x$ has to be inequality: $x>6$ greater than 6 The response provides a correct inequality.

The wavelength of a seventh wave is recorded. The wavelength is greater than $2 \times 10^{-2}$ nanometer and less than $\frac{5}{100}$ nanometer.
D. Write a possible wavelength, in nanometers, for the seventh wavelength. Write the possible wavelength as a fraction with a denominator of 100.

$$
\begin{array}{lll}
2 \times 10^{-2} & \frac{5}{100} \\

## CONSTRUCTED-RESPONSE ITEM

14. Four people each deliver food to people's homes.

Curtis charges a flat fee of $\$ 2.50$ for each delivery plus $\$ 0.20$ per mile for each mile he drives. For one delivery, Curtis drives 6 miles.
A. How much does Curtis charge to deliver the food?

Audrey charges a flat fee of $\$ 4$ for each delivery plus a certain amount, in dollars per mile, for each mile she drives. For a distance of 30 miles, Curtis and Audrey charge the same amount.
B. How much does Audrey charge, in dollars per mile? Show or explain all your work.
14. Continued. Please refer to the previous page for task explanation.

The amounts of money Peter and Maria each charge to deliver food are described below.

- Peter charges a flat fee of $\$ 3.75$ for each delivery plus $\$ 0.10$ per mile for each mile he drives.
- Maria charges a flat fee of $\$ 2.25$ for each delivery plus $\$ 0.25$ per mile for each mile she drives.

Peter says there are two distances for which he and Maria charge the same amount. To prove Peter is not correct, Maria graphs a line for her delivery charges and a line for Peter's delivery charges. Each line represents the relationship between the amount $(y)$, in dollars, each person charges for a delivery and the distance $(x)$, in miles, each drives for the delivery.
C. Without showing the graph, explain how Maria's graph of the two lines proves Peter is not correct.

14. Four people each deliver food to people's homes.

Curtis charges a flat fee of $\$ 2.50$ for each delivery plus $\$ 0.20$ per mile for each mile he drives. For one delivery, Curtis drives 6 miles.
A. How much does Curtis charge to deliver the food?

The response provides a correct answer.

Audrey charges a flat fee of $\$ 4$ for each delivery plus a certain amount, in dollars per mile, for each mile she drives. For a distance of 30 miles, Curtis and Audrey charge the same amount.
B. How much does Audrey charge, in dollars per mile? Show or explain all your work.

$$
\begin{aligned}
& \text { Curtis: }: 2.50+.2(30) \\
& \text { Aubrey: } 4+30 x=8.5 \\
& 4.5 \\
& \frac{4.5}{4.5} \\
& \\
& .15
\end{aligned}
$$

$$
8.5
$$

$$
\frac{30 x}{30}=\frac{4.5}{30}
$$

$$
\frac{4.5}{30}=.15
$$

The response provides an incorrect answer with correct and complete support.
Go to the next page to finish question 14.
14. Continued. Please refer to the previous page for task explanation.

The amounts of money Peter and Maria each charge to deliver food are described below.

- Peter charges a flat fee of $\$ 3.75$ for each delivery plus $\$ 0.10$ per mile for each mile he drives.
- Maria charges a flat fee of $\$ 2.25$ for each delivery plus $\$ 0.25$ per mile for each mile she drives.

Peter says there are two distances for which he and Maria charge the same amount. To prove Peter is not correct, Maria graphs a line for her delivery charges and a line for Peter's delivery charges. Each line represents the relationship between the amount (y), in dollars, each person charges for a delivery and the distance ( $x$ ), in miles, each drives for the delivery.
C. Without showing the graph, explain how Maria's graph of the two lines proves Peter is not correct.

The two lines only intersect once meaning that there is only one distance that Maria and Peter overlap, which is at 10 miles.

The response provides a correct and complete explanation.

| Depth of Knowledge | $28 \%$ |
| $p$-value A | $18 \%$ |
| $p$-value B | $15 \%$ |
| $p$-value C | $39 \%$ (correct answer) |
| $p$-value D | A student could determine the correct answer, option D, by setting up an <br> equation for the line in the form $y-y_{1}=m\left(x-x_{1}\right)$. <br> Option Annotations <br> A student could arrive at an incorrect answer by using coordinates incorrectly <br> when setting up an equation for the line. For example, a student could arrive at <br> option A by using the wrong signs (or operation) when setting up the equation <br> for the line. |

7. Martha earns money sewing curtains. She charges a flat fee to meet with a customer and take window measurements and an hourly rate to sew the curtains. The graph below shows the relationship between the time, in hours, Martha works on a sewing project and the total amount, in dollars, she charges.

What is the hourly rate that Martha charges for sewing curtains?
A. $\quad \$ 10.00$
B. $\$ 12.50$
C. $\$ 15.00$
D. $\$ 20.00$

## Item Information

| Alignment | A1.2.2.1.4 |
| :--- | :--- |
| Answer Key | A |
| Depth of Knowledge | 2 |
| $p$-value A | $63 \%$ (correct answer) |
| $p$-value B | $6 \%$ |
| $p$-value C | $8 \%$ |
| $p$-value D | $23 \%$ |
| Option Annotations | A student could determine the correct answer, option A, by finding the slope <br> of the graph. <br> A student could arrive at an incorrect answer by not considering the flat <br> fee. For example, a student could arrive at option D by not subtracting the <br> constant before dividing to find slope. |

8. The scatter plot below shows the relationship between the number of video files $(x)$ stored on a computer and the number of gigabytes $(y)$ of storage space available on the computer.

Based on the scatter plot, which equation represents a line of best fit that could be used to predict the number of gigabytes of storage space available on the computer based on the number of video files that could be stored on the computer?
A. $y=-14 x+250$
B. $y=-9 x+116$
C. $y=-8 x+227$
D. $y=-4 x+189$

| Item Information | A1.2.2.2.1 |
| :--- | :--- |
| Alignment | C |
| Answer Key | 2 |
| Depth of Knowledge | $23 \%$ |
| $p$-value A | $13 \%$ |
| $p$-value B | $46 \%$ (correct answer) |
| $p$-value C | $18 \%$ |
| $p$-value D | A student could determine the correct answer, option C, by estimating the <br> slope and $y$-intercept of a line that is close to all the given points. <br> A student could arrive at an incorrect answer by incorrectly estimating <br> slope. For example, a student could arrive at option A by using the difference <br> between the smallest and the largest number of video files as the slope. |

9. A data set shows a basketball team's final scores for one season. Some information about the scores in the data set is listed below.

- The minimum value is 42 .
- The lower quartile value is 54 .
- The median is 60 .
- The upper quartile value is 72 .
- The maximum value is 90 .

Of the team's final scores for the season, $75 \%$ of them are most likely between which two values?
A. 42 and 66
B. 42 and 72
C. 60 and 72
D. 72 and 90

## Item Information

| Alignment | A1.2.3.1.1 |
| :--- | :--- |
| Answer Key | B |
| Depth of Knowledge | 2 |
| $p$-value A | $11 \%$ |
| $p$-value B | $57 \%$ (correct answer) |
| $p$-value C | $21 \%$ |
| $p$-value D | $11 \%$ |
| Option Annotations | A student could determine the correct answer, option B, by recognizing that <br> the quartile values divide a set into subsets which each include about $25 \%$ of <br> the data points, so $75 \%$ of the data points are most likely in a range of three <br> quartiles. <br> A student could arrive at an incorrect answer by incorrectly interpreting the <br> meaning of a quartile. For example, a student could arrive at option D by <br> only selecting the single quartile which is greater than about $75 \%$ of the data <br> points. |

10. The owner of an ice-cream stand conducts a random survey of 50 people to determine which ice-cream flavor customers prefer to buy. The bar graph below shows the results of the survey.

## Ice-Cream Survey Results

The ice-cream stand is expected to serve 350 customers on the first day of summer. Based on the results of the survey, which value is most likely the number of customers who will buy an ice-cream flavor other than chocolate on the first day of summer?
A. 56
B. 126
C. 168
D. 224

## Item Information

| Alignment | A1.2.3.2.1 |
| :--- | :--- |
| Answer Key | D |
| Depth of Knowledge | 2 |
| $p$-value A | $17 \%$ |
| $p$-value B | $22 \%$ |
| $p$-value C | $18 \%$ |
| $p$-value D | $43 \%$ (correct answer) |
| Option Annotations | A student could determine the correct answer, option D, by using the graph to <br> determine that 64\% of customers buy a flavor other than chocolate and then <br> finding 64\% of 350. |
| A student could arrive at an incorrect answer by calculating a value other than <br> the most likely number of customers who buy a flavor other than chocolate. <br> For example, a student could arrive at option B by calculating the number of <br> customers most likely to order chocolate. |  |

11. A scatter plot shows the relationship between the distances $(x)$, in miles, from a local airport to airports in various cities and the time ( $y$ ), in minutes, a flight between the airports takes. The equation below describes the line of best fit for the scatter plot.

$$
y=0.16 x+58.62
$$

Based on the equation, which value is the most likely distance, in miles, between two airports when a flight between the airports takes 240 minutes?
A. 1,134
B. 1,441
C. 1,866
D. 2,251

Item Information

| Alignment | A1.2.3.2.3 |
| :--- | :--- |
| Answer Key | A |
| Depth of Knowledge | 2 |
| $p$-value A | $69 \%$ (correct answer) |
| $p$-value B | $15 \%$ |
| $p$-value C | $9 \%$ |
| $p$-value D | $7 \%$ |
| Option Annotations | A student could determine the correct answer, option A, by substituting 240 <br> for $y$ in the given equation and solving for $x$. <br> A student could arrive at an incorrect answer by incorrectly solving the <br> equation for $x$. For example, a student could arrive at option B by dividing by <br> 0.16 before subtracting 58.62. |

12. There are 28 students whose last names begin with the letters $G, H, J$, or $K$. Information about the probability of randomly selecting one of these students is listed below.

- probability of selecting a student whose last name begins with $\mathrm{G}: \frac{1}{7}$
- probability of selecting a student whose last name begins with G or $\mathrm{H}: \frac{5}{14}$

How many of these students have a last name that begins with H ?
A. 4
B. 5
C. 6
D. 7

Item Information

| Alignment | A1.2.3.3.1 |
| :--- | :--- |
| Answer Key | C |
| Depth of Knowledge | 2 |
| $p$-value A | $30 \%$ |
| $p$-value B | $16 \%$ |
| $p$-value C | $38 \%$ (correct answer) |
| $p$-value D | $16 \%$ |
| Option Annotations | A student could determine the correct answer, option C, by subtracting <br> the probability of G from the probability of G or H and then multiplying the <br> difference by 28. <br> A student could arrive at an incorrect answer by calculating the incorrect <br> number of students. For example, a student could arrive at option A by finding <br> the number of students whose last name begins with G. |

## CONSTRUCTED-RESPONSE ITEM

13. Jerry sells a particular type of coin online. The amount he charges his customers for the coins includes shipping. Jerry uses the equation shown below to determine the total amount $(y)$, in dollars, he will charge for $x$ coins.

$$
y=32.95 x+12.95
$$

A. How much does Jerry charge a customer for 10 coins?
B. Explain what the number 32.95 means in the context of the problem.
13. Continued. Please refer to the previous page for task explanation.

Zack and Dave each bought some coins from Jerry online. Dave bought 5 more coins than Zack bought.
C. Explain why it is not necessary to know how many coins Zack bought to determine how much more Dave paid than Zack paid.

Jerry has a sale on his website. During the sale, Kerry bought twice as many coins as Lou bought. Kerry's total cost is twice Lou's total cost.
D. Explain how you know that Jerry charged $\$ 0$ for shipping during the sale.

## Item-Specific Scoring Guideline

## \#13 Item Information

| Alignment | A1.2.2 | Depth of Knowledge | 3 | Mean Score | 1.76 |
| :--- | :--- | :--- | :--- | :--- | :--- |

## Assessment Anchor this item will be reported under:

A1.2.2-Coordinate Geometry

## Specific Anchor Descriptor addressed by this item:

A1.2.2.1 - Describe, compute, and/or use the rate of change (slope) of a line.

## Scoring Guide

| Score | Description |
| :---: | :--- |
| $\mathbf{4}$ | The student demonstrates a thorough understanding of coordinate geometry by correctly <br> solving problems with clear and complete procedures and explanations when required. |
| $\mathbf{3}$ | The student demonstrates a general understanding of coordinate geometry by solving problems <br> and providing procedures and explanations with only minor errors or omissions. |
| $\mathbf{2}$ | The student demonstrates a partial understanding of coordinate geometry by providing a <br> portion of the correct problem solving, procedures, and explanations. |
| $\mathbf{1}$ | The student demonstrates a minimal understanding of coordinate geometry. |
| $\mathbf{0}$ | The response has no correct answer and insufficient evidence to demonstrate any <br> understanding of the mathematical concepts and procedures as required by the task. Response <br> may show only information copied from the question. |

## Top-Scoring Student Response and Training Notes

| Score | Description |
| :---: | :--- |
| $\mathbf{4}$ | Student earns 4 points. |
| $\mathbf{3}$ | Student earns 3.0-3.5 points. |
| $\mathbf{2}$ | Student earns 2.0-2.5 points. |
| $\mathbf{1}$ | Student earns $0.5-1.5$ points. <br> OR <br> Student demonstrates minimal understanding of coordinate geometry. |
| $\mathbf{0}$ | Response is incorrect or contains some correct work that is irrelevant to the skill or concept <br> being measured. |

## Top-Scoring Response

## Part A (1 point):

1 point for correct answer

| What? | Why? |
| :--- | :--- |
| $\$ 342.45$ |  |

## Part B (1 point):

1 point for correct and complete explanation
OR $\frac{1}{2}$ point for correct but incomplete explanation

| What? |  |
| :--- | :--- |
|  | Sample Explanation: |
|  | The cost per coin. |
|  | OR equivalent |

## Part C (1 point):

1 point for correct and complete explanation
OR $\frac{1}{2}$ point for correct but incomplete explanation

| What? | Why? |
| :---: | :--- |
|  | Sample Explanations: <br> Dave just has to pay the additional cost for the 5 coins and the cost per coin is always the <br> same. <br> OR |
| Dave just has to pay the additional cost for the 5 coins and the shipping fee is always the <br> same. <br> OR equivalent |  |

## Part D (1 point):

1 point for correct and complete explanation
OR $\frac{1}{2}$ point for correct but incomplete explanation

| What? | Why? |
| :--- | :--- |
|  | Sample Explanations: <br> Since Kerry paid twice as much for twice as many coins, the total cost is directly <br> proportional to the number of coins bought. This means the shipping charge must have <br> been reduced to \$0.00. <br> OR <br> If there was a shipping charge, Kerry's total cost would have been less than twice as much <br> as Lou's total cost. <br> OR equivalent |

## THIS PAGE IS INTENTIONALLY BLANK.

## STUDENT RESPONSE

## Response Score: 4 points

13. Jerry sells a particular type of coin online. The amount he charges his customers for the coins includes shipping. Jerry uses the equation shown below to determine the total amount ( $y$ ), in dollars, he will charge for $x$ coins.

$$
y=32.95 x+12.95
$$

A. How much does Jerry charge a customer for 10 coins?

$$
\begin{aligned}
& \text { he charges } \$ 342.45 \\
& \text { for } 10 \text { coins }
\end{aligned}
$$

## $\$ 342.45$

The response provides a correct answer.
B. Explain what the number 32.95 means in the context of the problem.

The cost of the coin excluding the shipping fee.

The response provides a correct and complete explanation (the cost of the coin).
13. Continued. Please refer to the previous page for task explanation.

Zack and Dave each bought some coins from Jerry online. Dave bought 5 more coins than Zack bought.
C. Explain why it is not necessary to know how many coins Rack bought to determine how much more Dave paid than Zack paid.

It is not necessary to know how many coins Back bought to determine how much more Dave paid than Lack paid because we know that after the inital fee, each coin costs $\$ 32.95$ so we know Dave paid (5) $\$ 32.95$ more than Zqck because Zqck didnt buy those five coins.

The response provides a correct and complete explanation.

Jerry has a sale on his website. During the sale, Kerry bought twice as many coins as Lou bought. Kerry's total cost is twice Lou's total cost.
D. Explain how you know that Jerry charged $\$ 0$ for shipping during the sale.
we know Jerry charged to for shipping because if they had paid for shipping, Kerry's would cost less than double what Lou bought because the shipping fee was aflat fee.

The response provides a correct and complete explanation.

## STUDENT RESPONSE

## Response Score: 3 points

## PARTS A AND B

STUDENT RESPONSE
Response Score: 2 points
13. Jerry sells a particular type of coin online. The amount he charges his customers for the coins includes shipping. Jerry uses the equation shown below to determine the total amount (y), in dollars, he will charge for $x$ coins.

$$
y=32.95 x+12.95
$$

A. How much does Jerry charge a customer for 10 coins?

$$
\begin{aligned}
& y=32.95(10)+12.95 \\
& y=329.5+12.95 \\
& y=342.45
\end{aligned}
$$

The response provides a correct answer.
B. Explain what the number 32.95 means in the context of the problem.

32.95 is the price per coin

The response provides a correct and complete explanation (the price per coin).

Go to the next page to finish question 13.
13. Continued. Please refer to the previous page for task explanation.

Zack and Dave each bought some coins from Jerry online. Dave bought 5 more coins than Lack bought.
C. Explain why it is not necessary to know how many coins Rack bought to determine how much more Dave paid than Back paid.
We can just figure out how much he paid then using the formula we can find how many he bought. Then add 5 to get what Dare bought.

The response provides an incorrect explanation.

Jerry has a sale on his website. During the sale, Kerry bought twice as many coins as Lou bought. Kerry's total cost is twice Lou's total cost.
D. Explain how you know that Jerry charged $\$ 0$ for shipping during the sale.

Because kerry payed twice Lou

The response provides an incorrect explanation. YOU ARE FINISHED.

## STUDENT RESPONSE

Response Score: 1 point $\quad \square$

## PARTS A AND B

STUDENT RESPONSE
Response Score: 0 points
13. Jerry sells a particular type of coin online. The amount he charges his customers for the coins includes shipping. Jerry uses the equation shown below to determine the total amount ( $y$ ), in dollars, he will charge for $x$ coins.

$$
y=32.95 x+12.95
$$

A. How much does Jerry charge a customer for 10 coins?

He charges $\$ 129.50$ for 10 coins
B. Explain what the number 32.95 means in the context of the problem.

The 32.95 means the amount of money it will cost to ship.

The response provides an incorrect explanation.
13. Continued. Please refer to the previous page for task explanation.

Zack and Dave each bought some coins from Jerry online. Dave bought 5 more coins than Lack bought.
C. Explain why it is not necessary to know how many coins Rack bought to determine how much more Dave paid than Jack paid.

It is not necessary because you can
youse the same equation to find out how much Dave spent.

The response provides an incorrect explanation.

Jerry has a sale on his website. During the sale, Kerry bought twice as many coins as Lou bought. Kerry's total cost is twice Lou's total cost.
D. Explain how you know that Jerry charged $\$ 0$ for shipping during the sale.

Because Kerry bought stuff that was
on sale and the stuff that was on sale got free shipping,

The response provides an incorrect explanation. YOU ARE FINISHED.

## CONSTRUCTED-RESPONSE ITEM

14. Ann records the number of different colored beads in a package in the table shown below.

> Beads in the Package

| Color | Number |
| :--- | :---: |
| blue | 5 |
| brown | 4 |
| green | 3 |
| orange | 5 |
| red | 4 |
| yellow | 4 |

Ann will randomly select a bead from the package and then, without replacing it, randomly select a second bead.
A. Based on the information in the table, what is the probability Ann will first select a green bead and then an orange bead from the package?
probability: $\qquad$

Ann has a jar containing 375 colored beads. The beads in the jar have the same distribution as the one shown in the table.
B. Based on the information in the table, determine the number of red beads in Ann's jar.
answer: $\qquad$ red beads
14. Continued. Please refer to the previous page for task explanation.

Ann has some marbles in five bags. Some information about the number of marbles in each of Ann's five bags is listed below.

- The fewest number of marbles in a bag is 21.
- The greatest number of marbles in a bag is 29.
- The mean number of marbles in the bags is 27 .
- There are two modes for the number of marbles in a bag.
C. How many marbles are in each of Ann's five bags?
$\qquad$
$\qquad$
$\qquad$
$\qquad$
$\qquad$

## Item-Specific Scoring Guideline
